The adopted disclosure in SSAP No. 34 is not intended to change, but the proposed clarification and practical expedient guidance is intended to be captured in the annual statement instructions. This agenda item is being exposed at the SAPWG, as the source of the adopted disclosure, and will be used to subsequently provide a memo to blanks for year-end 2023 application and to revise the formal instructions for 2024.

Existing Authoritative Literature:

- **SSAP No. 34—Investment Income Due and Accrued**

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

- a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
- b. Disclose total amount excluded;
- c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;
- d. Disclose aggregate deferred interest;
- e. Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

- **A/S Instructions – Life, Accident and Health / Fraternal Companies**

7. Investment Income Instruction:

Disclose the following for investment income due and accrued in the financial statements:

- A. The bases, by category of investment income, for excluding (nonadmitting) any investment income due and accrued,
- B. The total amount excluded.
- C. The gross, nonadmitted and admitted amounts for interest income due and accrued. (1) Gross amount for interest income due and accrued. (2) Nonadmitted amount for interest income due and accrued. (3) Admitted amount for interest income due and accrued.
- D. The aggregate deferred interest.
- E. The cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2022-17: Interest Income Disclosure update was adopted March 22, 2023. This disclosure data-captured existing and incorporated new disclosures, to SSAP No. 34, which included the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. The revisions were adopted for year-end 2023 and are shown in the authoritative literature section above.

- Blanks Proposal 2023-11BWG intends to adopt instructions and illustrations for the revised disclosures in May 2023.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): NA

Recommendation:

NAIC staff recommend that the Working Group include this item on their maintenance agenda as a SAP clarification and expose this agenda item to clarify and incorporate a practical expedient, to the paid-in-kind (PIK) interest aggregate disclosure for SSAP No. 34 and annual statement instruction purposes. For annual statement purposes, this instruction will be an editorial change only and can be provided by the SAPWG in a memo posted on the Blanks Working (E) Group page if adopted after the deadline to incorporate into the annual statement instructions for 2023. Comments on this exposure are requested by June 30, 2023, to allow for adoption consideration at the 2023 Summer National Meeting.

Proposed Revisions to SSAP No. 34

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)
- The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
 - Disclose total amount excluded;
 - Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;
 - Disclose aggregate deferred interest;
 - Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance: par value^{FN}.

New Footnote: In disclosing the cumulative amount of PIK interest, identify the specific amounts of PIK interest by lot and aggregate the amounts by CUSIP/PPN that have a net increase to the original par value. The net increase includes PIK interest added to the par value less disposals (i.e., repayments; sales) that are first applied to any PIK interest outstanding. As a practical expedient, an insurer may calculate the cumulative amount of PIK interest on a bond by subtracting the original principal / par value from the current principal / par value, but not less than \$0.

Proposed instruction for inclusion in the Annual Statement Instructions (or 2023 memo to Blanks):

7. Investment Income Instruction:
- Disclose the following for investment income due and accrued in the financial statements:
- The bases, by category of investment income, for excluding (nonadmitting) any investment income due and accrued,
 - The total amount excluded.

- C. The gross, nonadmitted and admitted amounts for interest income due and accrued. (1) Gross amount for interest income due and accrued. (2) Nonadmitted amount for interest income due and accrued. (3) Admitted amount for interest income due and accrued.
- D. The aggregate deferred interest.
- E. The cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

For the PIK interest included in the current principal balance, include the amount of reported interest in which the terms permit "paid in kind" (PIK) instead of cash. The amount reported shall reflect the cumulative amount of PIK interest included in the current principal balance / par value. In disclosing the cumulative amount of PIK interest, identify the specific amounts of PIK interest by lot and aggregate the amounts by CUSIP/PPN that have a net increase to the original par value. The net increase includes PIK interest added to the par value less disposals (i.e., repayments; sales) that are first applied to any PIK interest outstanding. As a practical expedient, an insurer may calculate the cumulative amount of PIK interest on a bond by subtracting the original principal / par value from the current principal / par value, but not less than \$0.

Staff Review Completed by: Julie Gann - NAIC Staff, May 2023

Status:

On May 16, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34 and the Annual Statement Instructions to clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure. These SSAP No. 34 revisions, when adopted, will also result in editorial changes to the annual statement instructions.

August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 34 and directed that the proposed updates to the Annual Statement Instructions be forwarded to the Blanks (E) Working Group. These revisions provide a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure.

The Guidance in this Statement is Effective January 1, 2025**SCOPE OF STATEMENT**

1. The principles-based definition of a bond within this statement shall be utilized to identify whether security structures should be reported as bonds. Investments that qualify within the principles-based definition as an issuer credit obligation shall follow the accounting guidance within this statement. Investments that qualify within the principles-based definition as an asset-backed security (ABS) shall follow the accounting guidance in *SSAP No. 43R—Asset-Backed Securities*.

2. In addition to security investments that qualify under the principles-based definition as issuer credit obligations, certain specific instruments are also captured in scope of this statement:

- a. Certificates of deposit that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition;
- b. Bank loans that are obligations of operating entities issued directly by a reporting entity or acquired through a participation, syndication or assignment¹;
- c. Debt instruments in a certified capital company (CAPCO) ^(INT 06-02)
- d. Exchange Traded Funds (ETFs) that qualify for bond treatment as identified in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and included in the 'SVO-Identified Bond ETF List' published on the SVO's webpage. (These instruments are referred to as SVO-Identified Bond ETFs.)
- e. Mortgage loans in scope of *SSAP No. 37—Mortgage Loans* that qualify under an SVO structural assessment and are identified as SVO-Identified Credit Tenant Loans.

3. Securities that qualify as issuer credit obligations with a maturity date of one year or less from date of acquisition that qualify as cash equivalents or short-term investments shall follow the accounting requirements of this statement. These investments are also captured in *SSAP No. 2R—Cash, Cash*

¹ **Bank Loan** – Fixed-income instruments, representing indebtedness of a borrower, made by a financial institution. Bank loans can be issued directly by a reporting entity or acquired through an assignment, participation or syndication:

- **Assignment** – A bank loan assignment is defined as a fixed-income instrument in which there is the sale and transfer of the rights and obligations of a lender (as assignor) under an existing loan agreement to a new lender (and as assignee) pursuant to an Assignment and Acceptance Agreement (or similar agreement) which effects a novation under contract law, so the new lender becomes the direct creditor of and is in contractual privity with the borrower having the sole right to enforce rights under the loan agreement.
- **Participation** – A bank loan participation is defined as a fixed-income investment in which a single lender makes a large loan to a borrower and subsequently transfers (sells) undivided interests in the loan to other entities. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the originating lender continues to service the loan. The participating entity may or may not have the right to sell or transfer its participation during the term of the loan, depending on the terms of the participation agreement. Loan Participations can be made on a parri-passu basis (where each participant shares equally) or a senior subordinated basis (senior lenders get paid first and the subordinated participant gets paid if there are sufficient funds left to make a payment).
- **Syndication** – A bank loan syndication is defined as a fixed-income investment in which several lenders share in lending to a single borrower. Each lender loans a specific amount to the borrower and has the right to repayment from the borrower. Separate debt instruments exist between the debtor and the individual creditors participating in the syndication. Each lender in a syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender that then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is simply functioning as a servicer and shall not recognize the aggregate loan as an asset. A loan syndication arrangement may result in multiple loans to the same borrower by different lenders. Each of those loans is considered a separate instrument.

The Guidance in this Statement is Effective January 1, 2025

Equivalents, Drafts and Short-Term Investments and shall follow the reporting and disclosure requirements of that statement.

4. This statement excludes:
- a. Mortgage loans and other real estate lending activities made in the ordinary course of business. These investments are addressed in *SSAP No. 37—Mortgage Loans* and *SSAP No. 39—Reverse Mortgages*.
 - b. Investments that qualify within the principles-based definition as an ABS. These investments shall follow the guidance in *SSAP No. 43R—Asset-Backed Securities*
 - c. Securities that provide varying principal or interest based on underlying equity appreciation or depreciation, an equity-based derivative, real estate or other non-debt variable, as described in paragraph 6.d.
 - d. Securities that do not qualify as bonds pursuant to the principles-based bond definition, including first loss positions that lack contractual payments or substantive credit enhancement. These investments shall follow the appropriate guidance in *SSAP No. 21R—Other Admitted Assets*.
 - e. Replication (synthetic asset) transactions addressed in *SSAP No. 86—Derivatives*. The admissibility, classification and measurement of a replication (synthetic asset) transactions are not preemptively determined by the principles-based bond definition and should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within SSAP No. 86.
 - f. Investments that are captured specifically within other SSAPs. For example, reporting entity acquired structured settlements are captured in scope of *SSAP No. 21R—Other Admitted Assets*, held surplus notes are captured in scope of *SSAP No. 41R—Surplus Notes* and working capital finance investments are captured in scope of *SSAP No. 105—Working Capital Finance Investments*. Investments captured in scope of other SSAPs are subject to the measurement and admittance provisions of those SSAPs. Furthermore, investments that have specific reporting lines on dedicated schedules (such as with both surplus notes and WCFI) shall be reported on their dedicated lines.

SUMMARY CONCLUSION

Principles-Based Bond Definition

5. A bond shall be defined as any security² representing a creditor relationship, whereby there is a fixed schedule for one or more future payments, and which qualifies as either an issuer credit obligation or

² This statement adopts the GAAP definition of a security as it is used in FASB Accounting Standards Codification Topics 320 and 860. Evaluation of an investment under this definition should consider the substance of the instrument rather than solely its legal form.

Security: A share, participation, or other interest in property or in an entity of the issuer or an obligation of the issuer that has all of the following characteristics:

- a. It is either represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer.
- b. It is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment.
- c. It is either one of a class or series or by its terms is divisible into a class or series of shares, participations, interests or obligations.

The Guidance in this Statement is Effective January 1, 2025

an asset-backed security as described in this statement. Determining whether a security represents a creditor relationship should consider its substance, rather than solely the legal form of the instrument. The analysis of whether a security represents a creditor relationship should consider all other investments the reporting entity owns in the investee as well as any other contractual arrangements. A security that in substance possesses equity-like characteristics or represents an ownership interest in the issuer does not represent a creditor relationship. While not intended to be all-inclusive, paragraphs 6.a.-6.d. discuss specific elements that may introduce equity-like characteristics:

- a. Determining whether a debt instrument represents a creditor relationship in substance when the source of cash flows for repayment is derived from underlying equity interests inherently requires significant judgment and analysis. Unlike a debt instrument collateralized by assets with contractual cash flows, debt instruments collateralized by equity interests are dependent on cash flow distributions that are not contractually required to be made and are not controlled by the issuer of the debt. As a result, there is a rebuttable presumption that a debt instrument collateralized by equity interests does not represent a creditor relationship in substance. Notwithstanding this rebuttable presumption, it is possible for such a debt instrument to represent a creditor relationship if the characteristics of the underlying equity interests lend themselves to the production of predictable cash flows and the underlying equity risks have been sufficiently redistributed through the capital structure of the issuer. Factors to consider in making this determination include but are not limited to:
 - i. Number and diversification of the underlying equity interests
 - ii. Characteristics of the underlying equity interests (vintage, asset-types, etc.)
 - iii. Liquidity facilities
 - iv. Overcollateralization
 - v. Waiting period for distributions/paydowns to begin
 - vi. Capitalization of interest
 - vii. Covenants (e.g., loan-to-value trigger provisions)
 - viii. Reliance on ongoing sponsor commitments
- b. While reliance of the debt instrument on sale of underlying equity interests or refinancing at maturity does not preclude the rebuttable presumption from being overcome, it does require that the other characteristics mitigate the inherent reliance on equity valuation risk to support the transformation of underlying equity risk to bond risk. As reliance on sale or refinancing increases, the more compelling the other factors needed to overcome the rebuttable presumption become.
- c. Analysis of whether the rebuttable presumption for underlying equity interests is overcome shall be conducted and documented by a reporting entity at the time such an investment is acquired. The level of documentation and analysis required will vary based on the characteristics of the individual debt instrument, as well as the level of third-party and/or non-insurance company market validation to which the issuance has been subjected. For example, a debt instrument collateralized by fewer, less diversified equity interests would require more extensive and persuasive documented analysis than one collateralized by a larger diversified portfolio of equity interests. Likewise, a debt instrument that has been successfully marketed to unrelated and/or non-insurance company investors, may provide enhanced market validation of the structure compared to one held only by related party and/or insurance company investors where capital relief may be the primary motivation for the securitization.

The Guidance in this Statement is Effective January 1, 2025

- d. In order for a debt instrument to represent a creditor relationship in accordance with Paragraph 6, it must have pre-determined principal and interest payments (whether fixed interest or variable interest) with contractual amounts that do not vary based on the appreciation or depreciation (i.e., performance) of any underlying collateral value or other non-debt variable. For example, an issued security that has varying principal and interest payments based on the appreciation of referenced equity, real estate or other non-debt variable is precluded from bond treatment. This exclusion is not intended to restrict variables that are commonly related to debt instruments such as, but not limited to, plain-vanilla³ inflation or benchmark interest rate adjustments (such as with U.S. TIPs or SOFR-linked coupons, respectively), scheduled interest rate step-ups, or credit-quality related interest rate adjustments. This exclusion is also not intended to encompass nominal interest rate adjustments⁴. For clarification purposes, all returns from a debt instrument in excess of principal are required to be considered as interest. Therefore, investments with “stated” interest and then “additional returns” to which the holder of the debt instrument is entitled are collectively considered as interest and shall be assessed together in determining whether the investment has variable principal or interest due to underlying referenced non-debt variables. Examples of securities excluded from the bond definition under this guidance:
- i. Structured Notes, which are securities that otherwise meet the definition of a bond, but for which the contractual amount of the instrument to be paid at maturity (or the original investment) is at risk for other than the failure of the borrower to pay the principal amount due, are excluded from the bond definition. These investments, although in the form of a debt instrument, incorporate the risk of an underlying variable in the terms of the agreement, and the issuer obligation to return the full principal is contingent on the performance of the underlying variable. These investments are addressed in *SSAP No. 86—Derivatives*. Mortgage-referenced securities issued by a government sponsored enterprise are explicit inclusions in scope of *SSAP No. 43*. Foreign-denominated bonds subject to variation as a result of foreign currency fluctuations are not structured notes.
 - ii. Principal-protected securities, as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* are excluded from the bond definition as they have a performance component whose payments originate from, or are determined by, non-fixed income securities. These investments shall follow the guidance for non-bond securities in *SSAP No. 21—Other Admitted Assets*.

³ Inflation or benchmark interest rate adjustment mechanisms are considered plain-vanilla if based on widely recognized measures of inflation or interest rate benchmarks and excludes those that involve either leverage (such as a multiplier) or an inverse adjustment relationship.

⁴ Nominal interest rate adjustments are those that are too small to be taken into consideration when assessing the investment’s substance as a bond. Nominal adjustments are not typically influential factors in an investors’ evaluation of investment return and are often included to incentivize certain behavior of the issuer. An example would include sustainability-linked bonds where failure to achieve performance metrics could cause interest rate adjustments. In general, interest rate adjustments that adjust the total return from interest by more than 10% (e.g., >0.4% for a 4% yielding bond), would not be considered nominal. Further, any such adjustments that cause an investment to meet the definition of a structured note would not be considered nominal.

The Guidance in this Statement is Effective January 1, 2025

6. An issuer credit obligation is a bond, for which the general creditworthiness of an operating entity or entities through direct or indirect recourse, is the primary⁵ source of repayment. Operating entity or entities includes holding companies with operating entity subsidiaries where the holding company has the ability to access the operating subsidiaries' cash flows through its ownership rights. An operating entity may be any sort of business entity, not-for-profit organization, governmental unit, or other provider of goods or services, but not a natural person or "ABS Issuer" (as defined in paragraph 8). Examples of issuer credit obligations include, but are not limited to:

- a. U.S. Treasury securities, including U.S. Treasury Inflation-Indexed Securities;^(INT 01-25)
- b. U.S. government agency securities;
- c. Municipal securities issued by the municipality or supported by cash flows generated by a municipally-owned asset or entity that provides goods or services (e.g., airport, toll roads, etc.);
- d. Corporate bonds issued by operating entities, including Yankee bonds and zero-coupon bonds;
- e. Corporate bonds, issued by holding companies that own operating entities;
- f. Project finance bonds issued by operating entities;
- g. Investments in the form of securities for which repayment is fully supported by an underlying contractual obligation of a single operating entity (e.g., Credit Tenant Loans (CTLs), Equipment trust certificates (ETCs), other lease backed securities, Funding Agreement Backed Notes (FABNs), etc.). For purposes of applying this principal concept, repayment is fully-supported by the underlying operating entity obligation if it provides cash flows for the repayment of all interest and at least 95% of the principal of the security.
- h. Bonds issued by real estate investment trusts (REITs) or similar property trusts;
- i. Bonds issued by business development corporations, closed-end funds, or similar operating entities, in each case registered under the 1940 Act.
- j. Convertible bonds issued by operating entities, including mandatory convertible bonds as defined in paragraph 20.b.

⁵ "Primary" refers to the first in order of repayment source, not to a majority of the sources of repayment. For example, an issuer obligation may have secondary recourse to collateral upon default of the operating entity but would otherwise be expected to be fully repaid with cash flows of the operating entity. This differs from an asset-backed security for which the primary source of repayment is from cash flows of the collateral.

The Guidance in this Statement is Effective January 1, 2025

7. An asset-backed security⁶ is a bond issued by an entity (an “ABS Issuer”) created for the primary purpose of raising debt capital backed by financial assets⁷ or cash generating non-financial assets owned by the ABS Issuer, for which the primary source of repayment is derived from the cash flows associated with the underlying defined collateral rather than the cash flows of an operating entity⁸. In most instances, the ABS Issuer is not expected to continue functioning beyond the final maturity of the debt initially raised by the ABS Issuer. Also, many ABS Issuers are in the form of a trust or special purpose vehicle (“SPV”), although the presence or lack of a trust or SPV is not a definitive criterion for determining that a security meets the definition of an asset-backed security. The provisions in paragraphs 9-10 detail the two defining characteristics that must be present for a security to meet the definition of an asset-backed security.

8. The assets owned by the ABS Issuer are either financial assets or cash-generating non-financial assets. Cash-generating non-financial assets are defined as assets that are expected to generate a meaningful level of cash flows toward repayment of the bond through use, licensing, leasing, servicing or management fees, or other similar cash flow generation. For the avoidance of doubt, there must be a meaningful level of cash flows to service the debt, other than through the sale or refinancing of the underlying assets held by the ABS Issuer. Reliance on cash flows from the sale or refinancing of cash generating non-financial assets does not preclude a security from being classified as an asset-backed security so long as the conditions in this paragraph are met.

- a. *Meaningful Level of Cash Flows*: Determining what constitutes a “meaningful” level of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral pursuant to paragraph 9 is specific to each transaction, determined at origination, and shall consider the following factors:
- i. The price volatility in the principal market for the underlying collateral;
 - ii. The liquidity in the principal market for the underlying collateral;
 - iii. The diversification characteristics of the underlying collateral (i.e., types of collateral, geographic location(s), source(s) of cash flows within the structure, etc.);
 - iv. The overcollateralization of the underlying collateral relative to the debt obligation; and
 - v. The variability of cash flows, from sources other than sale or refinancing, expected to be generated from the underlying collateral.

⁶ The underlying collateral supporting an asset-backed security shall meet the definition of an asset by the ABS Issuer. Certain forms of collateral, such as rights to future cash flows, may not be recognized as assets by the selling entity but may be recognized as assets when sold to an ABS Issuer. These assets are permitted as the collateral supporting an asset-backed security, although they may not represent an asset that can be liquidated to provide payment toward the issued debt obligations (i.e., if the future cash flows do not materialize). The limited ability to liquidate the underlying collateral supporting an asset-backed security does not impact the structural determination of whether an issued security meets the definition of an asset-backed security but may impact the recoverability of the investment, as well as the consideration of whether there is sufficient credit enhancement.

⁷ *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* defines a financial asset as cash, evidence of an ownership interest in an entity, or a contract that conveys to one entity a right (a) to receive cash or another financial instrument from a second entity or (b) to exchange other financial instruments on potentially favorable terms with the second entity. As a point of clarity, for the purposes of this standard, financial assets do not include assets for which the realization of the benefits conveyed by the above rights depends on the completion of a performance obligation (e.g., leases, mortgage servicing rights, royalty rights, etc.). These assets represent non-financial assets, or a means through which non-financial assets produce cash flows, until the performance obligation has been satisfied.

⁸ Dedicated cash flows from an operating entity can form the underlying defined collateral in an asset-backed security. This dynamic, perhaps noted in a whole-business securitization, still reflects an asset-backed security and is not an issuer credit obligation.

The Guidance in this Statement is Effective January 1, 2025

The factors for price variability and the variability of cash flows are directly related to the “meaningful” requirement. That is, as price volatility or variability of cash flows increase, the required percentage of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral must also increase. The factors for liquidity, diversification and overcollateralization are inversely related to the “meaningful” concept. That is, as liquidity, diversification or overcollateralization increase, the required percentage of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral may decrease.

- b. As a practical expedient to determining whether a cash generating non-financial asset is expected to produce meaningful cash flows, a reporting entity may consider an asset for which less than 50% of the original principal relies on sale or refinancing to meet the meaningful criteria. In applying this practical expedient, only contractual cash flows of the non-financial assets may be considered. This practical expedient should not be construed to mean that assets cannot meet the meaningful criteria if they rely on sale or refinancing to service greater than 50% of the original principal or if they rely on cash flows that are not contracted at origination. Rather, such instances would require a complete analysis of the considerations described within the meaningful level of cash flows definition in [paragraph 9](#).

9. The holder of a debt instrument issued by an ABS Issuer is in a different economic position than if the holder owned the ABS Issuer’s assets directly. The holder of the debt instrument is in a different economic position if such debt instrument benefits from substantive credit enhancement through guarantees (or other similar forms of recourse), subordination and/or overcollateralization.

- a. *Substantive Credit Enhancement:* The intent of the criteria requiring the holder to be in a different economic position is to distinguish qualifying bonds from instruments with equity-like characteristics or where the substance of the transaction is more closely aligned with that of the underlying collateral. To qualify as an ABS under this standard, there is a requirement that there are substantive credit enhancements within the structure that absorb losses before the debt instrument being evaluated would be expected to absorb losses. This is inherent in the context of an issuer credit obligation in scope of SSAP No. 26R as the owners of the equity in the operating entity are the first to absorb any variability in performance of the operating entity. The same concept applies to asset-backed securities. If substantive credit enhancement did not exist, the substance of the debt instrument being evaluated would be more closely aligned with that of the underlying collateral than that of a bond. Credit enhancement that is merely nominal or lacks economic substance does not put a holder in a different economic position. The substantive credit enhancement required to be in a different economic position is specific to each transaction; determined at origination; and refers to the level of credit enhancement a market participant (i.e., knowledgeable investor transacting at arm’s length) would conclude is substantive.
- b. The first loss position may be issued as part of a securitization in the form of a debt or equity interest, or it may be retained by the sponsor and not issued as part of the securitization. If the first loss position (or a more senior position(s), if the first loss position(s) lacks contractual payments along with a substantive credit enhancement) is issued as part of the securitization, and does not have contractual principal and interest payments along with substantive credit enhancement and is held by a reporting entity, the investment(s) does not qualify for reporting as a bond and shall be reported on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value

The Guidance in this Statement is Effective January 1, 2025

consistent with the treatment for residuals. (These items are further addressed in *SSAP No. 21R—Other Admitted Assets*.)

10. Whether an issuer of debt represents an operating entity or ABS Issuer is unambiguous in most instances, but certain instances may be less clear. For example, an entity may operate a single asset such as a toll road or power generation facility (e.g., project finance) which serves to collateralize a debt issuance, and the cash flows produced by the operation of the assets are pledged to service the debt. In many such instances, the entity is structured as a bankruptcy-remote entity that is separate from the municipality or project sponsor. Such entities have characteristics of operating entities as the operation of the asset constitutes a stand-alone business. They also have many common characteristics of ABS Issuers as they are formed for the purpose of raising debt capital backed by the cash flows from collateral held by a bankruptcy-remote entity. When viewed more holistically, these issuing entities are typically being used to facilitate the financing of an operating component of a project sponsor or municipality. The use of a bankruptcy-remote entity facilitates the efficient raising of debt to finance the operating project, but the primary purpose is to finance an operating project. Therefore, structures in which the issuing entity represents a stand-alone business producing its own operating revenues and expenses, where the primary purpose is to finance an operating project, shall be considered operating entities despite certain characteristics they may share with ABS Issuers.

11. The definition of a creditor relationship, per **paragraph 6**, does not include equity/fund investments (such as mutual funds or exchanged-traded funds), or securities that possess equity-like characteristics or that represent an ownership interest in the issuer. However, as identified in **paragraph 2**, exchange traded funds (ETFs), which qualify for bond treatment, as identified in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and included in the ‘SVO-Identified Bond ETF List’ published on the SVO’s webpage are provided special statutory accounting treatment and are included within the scope of this statement. These investments shall follow the guidance within this statement, as if they were issuer credit obligations, unless different treatment is specifically identified in **paragraphs 32-38**.

12. Investments within the scope of this statement issued by a related party, or acquired through a related party transaction, are also subject to the provisions, admittance assessments and disclosure requirements of *SSAP No. 25—Affiliates and Other Related Parties*.

13. Investments within the scope of this statement meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and *SSAP No. 25*.

Accounting and Reporting Guidance for Investments that Qualify as Issuer Credit Obligations⁹

Acquisitions, Disposals and Changes in Unrealized Gains and Losses

14. A bond acquisition or disposal shall be recorded on the trade date (not the settlement date) except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees. The reported cost of a bond received as a property dividend or capital contribution shall be the initial recognized value. *SSAP No. 25* shall be used to determine whether a transfer is economic or noneconomic for initial recognition.

15. For reporting entities required to maintain an interest maintenance reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with *SSAP No. 7—Asset*

⁹ For all references to “bond” investments beginning in **paragraph 15**, this term intends to refer to investments that are permitted accounting and reporting treatment within scope of this standard.

The Guidance in this Statement is Effective January 1, 2025

Valuation Reserve and Interest Maintenance Reserve. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7.

16. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

Amortized Cost

17. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.¹⁰ (INT 07-01) Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion), except "make-whole" call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

Application of Yield-to-Worst

18. For callable bonds¹¹, the first call date after the lockout period (or the date of acquisition if no lockout period exists) shall be used as the "effective date of maturity." Depending on the characteristics of the callable bonds, the yield-to-worst concept in [paragraph 18](#) shall be applied as follows:

- a. For callable bonds with a lockout period, premium in excess of the next call price¹² (subsequent to acquisition¹³ and lockout period) shall be amortized proportionally over the length of the lockout period. After each lockout period (if more than one), remaining premium shall be amortized to the call or maturity value/date which produces the lowest asset value.
- b. For callable bonds without a lockout period, the book adjusted carrying value (at the time of acquisition) of the callable bonds shall equal the lesser of the next call price (subsequent to acquisition) or cost. Remaining premium shall then be amortized to the call or maturity value/date which produces the lowest asset value.
- c. For callable bonds that do not have a stated call price, all premiums over par shall be immediately expensed. For callable bonds with a call price at par in advance of the maturity date, all premiums shall be amortized to the call date.

¹⁰ For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.

¹¹ Callable bonds within the scope of [paragraph 19](#) excludes bonds with make-whole call provisions unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision. [Exhibit C](#) includes illustrations for the amortization of callable bonds.

¹² Reference to the "next call price" indicates that the reporting entity shall continuously review the call dates/prices to ensure that the amortization (and resulting BACV) follows the yield-to-worst concept throughout the time the reporting entity holds the bond.

¹³ The reporting entity shall only consider call dates/prices that occur after the reporting entity acquires the bond. If all of the call dates had expired prior to the reporting entity acquiring the bond, the reporting entity would consider the bond continuously callable without a lockout period.

The Guidance in this Statement is Effective January 1, 2025

Balance Sheet Amount

19. Bonds shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the NAIC *Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).

- a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. For perpetual bonds which do not possess or no longer possess an effective call option, the bond shall be reported at fair value regardless of NAIC designation.
- b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of *SSAP No. 30R—Unaffiliated Common Stock*, if converted to preferred stock, the security will be in scope of *SSAP No. 32R—Preferred Stocks*.)

20. The premium paid on a zero coupon convertible bond that produces a negative yield as a result of the value of a warrant exceeding the bond discount shall be written off immediately so that a negative yield is not produced. The full amount of the premium should be recorded as amortization within investment income on the date of purchase.

Impairment

21. An other-than-temporary^(INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition.¹⁴ A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

¹⁴ If a bond has been modified from original acquisition, the guidance in *SSAP No. 36—Troubled Debt Restructuring* and paragraph 22 of *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the modified contractual terms of the debt instrument.

The Guidance in this Statement is Effective January 1, 2025

22. In periods subsequent to the recognition of an other-than-temporary impairment loss for a bond, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the bond on the measurement date shall become the new cost basis of the bond and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than temporary shall be recorded as realized losses.

Income

23. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

24. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

25. The amount of prepayment penalty and/or acceleration fee to be reported as investment income or loss shall be calculated as follows:

- a. For called or tendered bonds in which the total proceeds (consideration) received exceeds par:
 - i. The amount of investment income reported is equal to the consideration received less the par value of the investment; and
 - ii. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses, subject to the authoritative literature in SSAP No. 7.
- b. For called or tendered bonds in which the consideration received is less than par¹⁵:
 - i. To the extent an entity has in place a process to identify an explicit prepayment penalty or acceleration fee, these should be reported as investment income. (An entity shall consistently apply their process. Once a process is in place, an entity is required to maintain a process to identify prepayment penalties for called bonds in which consideration received is less than par.)
 - ii. After determining any explicit prepayment penalty or acceleration fee, the reporting entity shall calculate the resulting realized gain as the difference between

¹⁵ This guidance applies to situations in which consideration received is less than par but greater than the book adjusted carrying value (BACV). Pursuant to the yield-to-worst concept, bonds shall be amortized to the call or maturity date that produces the lowest asset value. In the event a bond has not been amortized to the lowest value prior to the call, or in cases of an accepted tender bond offer (BACV is greater than the consideration received), the entire difference between consideration received and the BACV shall be reported to investment income.

The Guidance in this Statement is Effective January 1, 2025

the remaining consideration and the BACV, which shall be reported as realized capital gain, subject to the authoritative literature in SSAP No. 7.

Origination Fees

26. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points) shall be amortized into income over the term of the bond consistent with paragraph 18 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition and Commitment Costs

27. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 15 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.

Commitment Fees

28. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

29. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 18 of this statement over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Exchanges and Conversions

30. If a bond is exchanged or converted into other securities (including conversions of mandatory convertible securities addressed in paragraph 20.b.), the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered, then it shall become the cost basis for the new securities.

SVO-Identified Bond Exchange –Traded Funds

31. SVO-identified bond exchange-traded fund (ETF) investments, as discussed in paragraph 2.d., are captured within the scope of this statement for accounting and reporting¹⁶ purposes only. The inclusion of these investments within this statement is not intended to contradict state law regarding the classification

¹⁶ With the inclusion of these SVO-identified investments as bonds, specific guidelines are detailed in the annual statement instructions for reporting purposes.

The Guidance in this Statement is Effective January 1, 2025

of these investments and does not intend to provide exceptions to state investment limitations involving types of financial instruments (e.g., equity/fund interests), or with regards to concentration risk (e.g., issuer).

32. SVO-identified bond ETF investments shall be initially reported at cost, including brokerage and other related fees. Subsequently, SVO-identified bond ETF investments shall be reported at fair value,¹⁷ with changes in fair value recorded as unrealized gains or losses) unless the reporting entity has elected use¹⁸ of a documented systematic approach to amortize or accrete the investment in a manner that represents the expected cash flows from the underlying bond holdings. This special measurement approach is referred to as the “systematic value” measurement method and shall only be used for the SVO-identified bond ETF investments within the scope of this statement.

33. Use of the systematic value for SVO-identified bond ETF investments is limited as follows:

- a. Systematic value is only permitted to be designated as the measurement method for AVR filers acquiring qualifying investments that have an NAIC designation of 1 to 5, and for non-AVR filers acquiring qualifying investments with an NAIC designation of 1 or 2. SVO-identified investments that have an NAIC designation of 6 for AVR filers or 3-6 for non AVR filers shall be measured at fair value.
- b. Designated use of a systematic value is an irrevocable election per qualifying investment (by CUSIP) at the time investment is originally acquired¹⁹. Investments owned prior to being identified by the SVO as a qualifying SSAP No. 26R investment are permitted to be subsequently designated to the systematic value measurement method. This designation shall be applied as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors*, which requires the reporting entity to recognize a cumulative effect to adjust capital and surplus as if the systematic value measurement method had been applied retroactively for all prior periods in which the investment was held. The election to use systematic value for investments shall be made before the year-end reporting of the investment in the year in which the SVO first identifies the investment as a qualifying SSAP No. 26R investment.
- c. Once designated for a particular investment, the systematic value measurement method must be retained as long as the qualifying investment is held by the reporting entity and the investment remains within the scope of this statement with an allowable NAIC designation per paragraph 34.a. Upon a full sale/disposal of an SVO-identified investment (elimination of the entire CUSIP investment), after 90 days the reporting entity can reacquire the SVO-identified investment and designate a different measurement method. If the reporting entity was to reacquire the same investment within 90 days after it was sold/disposed, the reporting entity must utilize the measurement method previously designated for the investment. Subsequent/additional purchases of the same SVO-identified investment (same CUSIP) already held by a reporting entity must follow the election previously made by the reporting entity. If an investment no longer qualifies for a systematic value

¹⁷ For these investments, net asset value (NAV) is allowed as a practical expedient to fair value.

¹⁸ The election to use systematic value is not a permitted or prescribed practice as it is an accounting provision allowed within this SSAP. Similarly, this election does not override state statutes, and if a state does not permit reporting entities the election to use systematic value as the measurement method, this is also not considered a permitted or prescribed practice. SVO-identified investments reported at fair value (NAV) or systematic value, if in accordance with the provisions of this standard, are considered in line with SSAP No. 26R and do not require permitted or prescribed disclosures under *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*.

¹⁹ This guidance requires investments purchased in lots to follow the measurement method established at the time the investment was first acquired.

The Guidance in this Statement is Effective January 1, 2025

measurement because the NAIC designation has declined, then the security must be subsequently reported at the lower of “systematic value” or fair value. If the security has been removed from the SVO-identified listings, and is no longer in scope of this statement, then the security shall be measured and reported in accordance with the applicable SSAP.

- d. Determination of the designated systematic value must follow the established²⁰ approach, which is consistently applied for all SVO-identified bond ETF investments designated for a systematic value. In all situations, an approach that continuously reflects “original” or “historical cost” is not an acceptable measurement method. The designated approach shall result with systematic amortization or accretion of the equity/fund investment in a manner that represents the expected cash flows from the underlying bond holdings.

34. Income distributions received from SVO-identified bond ETF investments (cash or shares) shall be reported as interest income in the period in which it is earned. For those SVO-identified bond ETF investments where the systematic value method is applied, interest income shall be recognized based on the book yield applied to the carrying value each period, similar to bonds.

35. For reporting entities required to hold an IMR and AVR reserve, realized and unrealized gains and losses for the SVO-identified bond ETF investments shall be consistent with bonds within the scope of this standard. With this guidance, recognition of gains/losses (and corresponding AVR/IMR impacts) will be based on the ETF, and not activity that occurs within the ETF (e.g., such as changes in the underlying bonds held within the ETF). Also consistent with the guidance for bonds, recognized losses from other-than-temporary impairments shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

36. SVO-identified bond ETF investments reported at systematic value shall recognize other-than-temporary impairments in accordance with the following guidance:

- a. A decision to sell an SVO-identified bond ETF investment that has a fair value less than systematic value results in an other-than-temporary impairment that shall be recognized.
- b. In situations in which an SVO-identified bond ETF investment has a fair value that is less than systematic value, the reporting entity must assess for other-than-temporary impairment. For these investments, a key determinant, along with other impairment indicators in *INT 06-07: Definition of Phrase “Other Than Temporary,”* shall be whether the net present value of the projected cash flows for the underlying bonds in the SVO-identified investment have materially²¹ declined from the prior reporting period (most recent issued financial statements) or from the date of acquisition. In calculating the net present value of the projected cash flows for each reporting period, entities shall discount cash flows using a constant purchase yield, which is the initial book yield at acquisition. Consistent with INT 06-07, a predefined threshold to determine whether the decline in projected cash flows (e.g., percentage change) shall result in an other than temporary impairment has not been set, as exclusive reliance on such thresholds removes the ability of management to apply its judgement.

²⁰ Exhibit B details the established systematic value approach.

²¹ The net present value of cash flows will decline in a declining interest rate environment. Reporting entities shall use judgment when assessing whether the decline in cash flows is related to a decline in interest rates or the result of a non-interest related decline, and determine whether the decline represents an OTTI pursuant to INT 06-07.

The Guidance in this Statement is Effective January 1, 2025

- c. Upon identification of an SVO-identified investment as OTTI, the reporting entity shall recognize a realized loss equal to the difference between systematic value and the current fair value. (Although the determination of OTTI is likely based on projected cash flows, the realized loss recognized for the OTTI is based on the difference between systematic value and fair value.) The fair value of the SVO-identified investment on the date of the OTTI shall become the new cost basis of the investment.
- d. Subsequent to recognition of an OTTI, the SVO-identified bond ETF investment is required to be reported at the lower of the then-current period systematic value or fair value. As the underlying bonds can be replaced within an ETF, it is possible for a subsequent period systematic value and fair value to recover above the fair value that existed at the time an OTTI was recognized. As such, the requirement for subsequent reporting at the lower of systematic value or fair value is intended to be a current period assessment. For example, in reporting periods after an OTTI, the systematic value for an SVO-identified investment may exceed the fair value at the time of the OTTI, but in no event shall the reported systematic value exceed the then-current period fair value. If current calculated systematic value is lower than the current fair value, systematic value is required.

37. Impairment guidance for SVO-identified bond ETF investments reported at fair value is consistent with impairment guidance for investments captured under SSAP No. 30R. Pursuant to this guidance, realized losses are required to be recognized when a decline in fair value is considered to be other-than-temporary. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses. A decision to sell an impaired security results with an other-than-temporary impairment that shall be recognized.

Disclosures

38. The financial statements shall include the following disclosures:
- a. Fair value in accordance with *SSAP No. 100R—Fair Value*;
 - b. Concentrations of credit risk in accordance with *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures*;
 - c. The basis at which the bonds, mandatory convertible securities, and SVO-identified bond ETF investments identified in **paragraph 2.d.**, are stated;
 - d. Amortization method for bonds and mandatory convertible securities, and if elected by the reporting entity, the approach for determining the systematic value for SVO-identified securities per **paragraph 33**. If utilizing systematic value measurement method approach for SVO-identified investments, the reporting entity must include the following information:
 - i. Whether the reporting entity consistently utilizes the same measurement method for all SVO-identified investments²² (e.g., fair value or systematic value). If

²² As identified in **paragraph 34.d.**, a consistent approach must be followed for all investments designated to use the systematic value method. As such, this disclosure is limited to situations in which a reporting entity uses both fair value and systematic value for reported SVO-identified investments.

The Guidance in this Statement is Effective January 1, 2025

different measurement methods are used²³, information on why the reporting entity has elected to use fair value for some SVO-identified investments and systematic value for others.

- ii. Whether SVO-identified investments are being reported at a different measurement method from what was used in an earlier current-year interim and/or in a prior annual statement. (For example, if reported at systematic value prior to the sale, and then reacquired and reported at fair value.) This disclosure is required in all interim reporting periods and in the year-end financial statements for the year in which an SVO-identified investment has been reacquired and reported using a different measurement method from what was previously used for the investment. (This disclosure is required regardless of the length of time between the sale/reacquisition of the investments, but is only required in the year in which the investment is reacquired.)
- iii. Identification of securities still held that no longer qualify for the systematic value method. This should separately identify those securities that are still within the scope of SSAP No. 26R and those that are being reported under a different SSAP.
- e. For each balance sheet presented, the book/adjusted carrying values, fair values, excess of book/carrying value over fair value or fair value over book/adjusted carrying values for each pertinent bond or assets in scope of this statement.
- f. For the most recent balance sheet, the book/adjusted carrying values and the fair values of bonds and assets in scope of this statement, reported in statutory Annual Statement Schedule D – **Part 1A** due:
 - i. In one year or less (including items without a maturity date which are payable on demand and in good standing);
 - ii. After one year through five years;
 - iii. After five years through ten years;
 - iv. After ten years (including items without a maturity date which are either not payable on demand or not in good standing).
- g. For each period for which results of operations are presented, the proceeds from sales of bonds and assets in scope of this Statement and gross realized gains and gross realized losses on such sales.
- h. For each balance sheet presented, all items in scope of this Statement in an unrealized loss position for which other-than-temporary declines in value have not been recognized:
 - i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and
 - ii. The aggregate related fair value of bonds with unrealized losses.

²³ The guidance in this statement allows different measurement methods by qualifying investment (CUSIP), but it is anticipated that companies will generally utilize a consistent approach for all qualifying investments.

The Guidance in this Statement is Effective January 1, 2025

- i. The disclosures in paragraphs 39.h.i. and 39.h.ii. should be segregated by items that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100R.
- j. As of the most recent balance sheet date presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.
- k. When it is not practicable to estimate fair value in accordance with SSAP No. 100R, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:
 - i. The aggregate carrying value of the investments not evaluated for impairment, and
 - ii. The circumstances that may have a significant adverse effect on the fair value.
- l. For securities sold, redeemed or otherwise disposed as a result of a call or tender offer feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

39. Refer to the Preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 39.b., 39.e., 39.f., 39.g., 39.h., 39.i., 39.j. and 39.k. shall be included in the annual audited statutory financial reports only.

Relevant Literature

40. This statement adopts *AICPA Statement of Position 90-11, Disclosure of Certain Information by Financial Institutions About Debt Securities Held as Assets*, and *AICPA Practice Bulletin No. 4, Accounting for Foreign Debt/Equity Swaps*. This statement also adopts *FASB Staff Position 115-1/124-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*, paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements. This statement adopts the GAAP definition of “security” as it is used in FASB Codification Topic 320 and 860. This statement refers to the definition of “financial assets” captured in SSAP No. 103R adopted from U.S. GAAP. As noted in footnote 7, for purposes of this statement, and in applying the principles-based bond definition, financial assets do not include assets that depend on the completion of a performance obligation. When there is a performance obligation, the asset represents non-financial assets, or a means through which non-financial assets produce cash flows, until the performance obligation has been satisfied.

41. This statement rejects the GAAP guidance for debt securities, which is contained in *ASU 2020-08, Codification Improvements to Subtopic 310-20, Receivables – Nonrefundable Fees and Other Costs*, *ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities*, *ASU 2017-08, Premium Amortization on Purchased Callable Debt Securities*, *ASU 2016-01, Financial Instruments – Overall*, *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities*, *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, *FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA*, and *FASB Emerging Issues Task Force No. 96-10, Impact of Certain Transactions on Held-to-Maturity Classifications Under FASB Statement No. 115*.

The Guidance in this Statement is Effective January 1, 2025

Effective Date and Transition

42. Revisions to SSAP No. 26R, adopted August 2023, to incorporate the principle-based bond concepts are effective January 1, 2025. These revisions incorporate principle concepts on what should be reported as a long-term bond. Securities that qualify as issuer credit obligations within the principle concepts are captured within scope of SSAP No. 26R. Securities that qualify as asset-backed securities within the principle concepts are captured within scope of SSAP No. 43R. Securities that do not qualify as issuer credit obligations or ABS, unless specifically permitted in scope of these statements, are not permitted to be reported as a bond.

43. At the time of transition, reporting entities shall make their best efforts to assess investments to determine whether they qualify within the bond definition for reporting on Schedule D-1. The bond definition requires assessments at the time of acquisition (as of the origination date), and it is recognized that reporting entities may not have the means to complete historical assessments for securities held at the time of transition. For these instances, if information is not readily available for reporting entities to assess a security as of the date at origination, reporting entities may utilize current or acquisition information in concluding that a security qualifies for reporting as a bond as either an issuer obligation or asset-backed security.

44. Investments that were reported as a bond on Schedule D-1: Long-Term Bonds as of December 31, 2024, that do not qualify under the principle-based bond concepts shall be reported as a disposal from that schedule, with a reacquisition on the appropriate reporting schedule as of January 1, 2025. These investments shall be accounted for in accordance with the resulting SSAP that addresses the specific investment structure. For securities that are reported at the lower of amortized cost or fair value under the new applicable guidance, this could result with an unrealized loss in the measurement of the investment at the time of the reclassification. Although the adoption of this guidance is considered a change in accounting principle under SSAP No. 3, the following transition guidance shall be applied on January 1, 2025, to ensure consistency in reporting and to allow investment schedules to roll appropriately:

- a. Securities reclassified from Schedule D-1 as they no longer qualify under the bond definition shall be reported as a disposal from Schedule D-1 at amortized cost. Although no proceeds are received, amortized cost at the time of disposal shall be reported as consideration on Schedule D-4.
 - i. For securities held at amortized cost at the time of disposal, book adjusted carrying value and amortized cost shall agree, preventing gain or loss recognition at the time of reclassification.
 - ii. For securities held at fair value under the lower of amortized cost or fair value measurement method, previously reported unrealized losses shall be reversed on Jan. 1, 2025, prior to disposal, resulting with a reported value that mirrors amortized cost at the time of disposal. This action prevents realized loss recognition at time of reclassification.
- b. Securities reclassified from Schedule D-1 shall be recognized on the subsequent schedule (e.g., Schedule BA) with an actual cost that agrees to the disposal value (amortized cost). Immediately subsequent to recognition on the resulting schedule, the securities shall be reported in accordance with the measurement method prescribed by the applicable SSAP:
 - i. For securities previously reported at fair value on Schedule D-1 (under a lower of amortized cost or fair value measurement method), the reporting entity will

The Guidance in this Statement is Effective January 1, 2025

recognize an unrealized loss to match the previously reported book adjusted carrying value. Subsequently, the security will continue to reflect a lower of amortized cost or fair value measurement method.

- ii. For securities previously reported at amortized cost on Schedule D-1, if the subsequent statement requires a lower of amortized cost or fair value measurement method, then the reporting entity shall recognize an unrealized loss to the extent fair value is less than amortized cost.
- iii. After application of paragraph 45.b.i. and 45.b.ii. all securities shall reflect either the same reported value as of December 31, 2024 (amortized cost or fair value) or a lower reported value (if the security is subject to the lower of amortized cost or fair value measurement method). There should be no instances that result with a security having a greater reported value than what was presented on December 31, 2024. Subsequent to transition, securities reported at fair value may incur unrealized gains or losses due to fair value fluctuations, but should never have unrealized gains that result with a book adjusted carrying value that exceeds amortized cost.

45. With this transition guidance, changes in measurement for securities reclassified under the bond definition will be reported as a change in unrealized capital gains (losses) in the first quarter 2025 financial statements (unless sold in the interim with a realized gain or loss) and not as a change in accounting principle. To enable regulators the ability to identify the impact of securities reclassified under the bond definition, the following disclosure for the 2025 first quarter financial statement is required:

- a. Aggregate book adjusted carrying value for all securities reclassified off Schedule D-1.
- b. Aggregate book adjusted carrying value after transition for all securities reclassified off Schedule D-1 that resulted with a change in measurement basis. (This shall be a subset of paragraph 46.a. and captures the securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.)
- c. Aggregate surplus impact for securities reclassified off Schedule D-1. This shall include the difference between book adjusted carrying value as of December 31, 2024, and book adjusted carrying value after transition for those securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.

46. For clarification purposes, the transition guidance shall be applied prospectively beginning with the first year of adoption (Jan. 1, 2025). For disclosures that provide comparative information, reporting entities shall not restate the prior year's information in the 2025 disclosure.

Historical Adoption and Revisions to Original SSAP No. 26R

47. For historical reference, the original adoption, and subsequent revisions to SSAP No. 26R prior to the adoption of the principles-based bond definition are detailed below:

- a. SSAP No. 26R was originally effective for years beginning January 1, 2001.
- b. Guidance for the accounting of securities subsequent to other than temporary impairments was originally effective for reporting periods beginning on January 1, 2009, with early

The Guidance in this Statement is Effective January 1, 2025

adoption permitted. This guidance was incorporated from *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* in 2010. The original impairment guidance included in this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes in Issue Paper No. 131.

- c. Guidance pertaining to the accounting for zero-coupon convertible bonds was originally effective December 8, 2002, and was subsequently incorporated into this statement from *INT 02-05: Accounting for Zero Coupon Convertible Bonds*.
- d. Guidance adopted in December 2013 clarifying the ‘yield-to-worst’ concept for bonds with make-whole call provisions was initially effective January 1, 2014, unless the company had previously been following the guidance. (Companies that have previously been following the original intent, as clarified in the revisions, were not impacted by these changes.)
- e. The guidance on the calculation of investment income for prepayment penalties and/or acceleration fees was effective January 1, 2017, on a prospective basis and was required for interim and annual reporting periods thereafter, with early application permitted.
- f. In April 2017, revisions were incorporated in accordance with the investment classification project. These revisions are detailed in Issue Paper No. 156 and were effective December 31, 2017. These revisions clarified the scope of the bond definition as well as incorporated new guidance for SVO-Identified Bond ETFs identified in scope of this statement. Retained transition / application guidance is captured as follows:
 - i. For situations in which there is an interval of time between when a company purchases an investment and when the investment is designated as an SVO-identified investment eligible for systematic value, the book yield should be calculated by equating the book/adjusted carrying value at that time to the portfolio’s aggregate cash flows (ACF). For these situations, the ETF shall be reported as a disposed security on the prior reporting schedule and reported as an acquisition.
 - ii. In accordance with the systematic value methodology, at the next reporting period date, the reporting entity shall amortize or accrete the carrying value by the difference between the effective interest using the initial book yield, and the distributions received, and shall recalculate the new effective book yield using the new carrying value and ACF as of the last day of the reporting period.
 - iii. As the necessary historical ACF data is not available for calculating the initial book yield at acquisition for the net present value constant purchase yield (NPV-CPY) method for impairment recognition, reporting entities shall use recently published yield-to-maturity (YTM) as their constant purchase yield to be applied for NPV-CPY impairment recognition.
 - iv. If the investment no longer qualifies as an SVO-Identified Bond ETF in scope of statement, this change shall be reflected prospectively from the effective date. Investments previously captured in this statement, that will move within the scope of another SSAP and reporting schedule shall be shown as dispositions on and shown as an acquisition on the schedule for which it will be subsequently reported.

The Guidance in this Statement is Effective January 1, 2025

- g. The guidance to explicitly exclude securities for which the contract amount of the instrument to be paid at maturity (or the original investment) is at risk for other than failure of the borrower to pay the contractual amount due, were effective December 31, 2019.
- h. Revisions to clarify existing guidance that all prepayment penalties and acceleration fees for when a bond is liquidated prior to its scheduled maturity date, including those from tendered bonds, shall follow the guidance in SSAP No. 26R was effective January 1, 2021. Reporting entities that have historically applied this guidance shall not change historical practices, but the effective date of January 1, 2021, with early application permitted, was allowed for reporting entities to make systems changes to capture tendered bonds in scope of this guidance.

EXHIBIT A - EXAMPLES OF ANALYSIS FOR ASSET-BACKED SECURITIES

1. As detailed in paragraphs 9-10, the holder of an asset-backed securities is 1) required to be in a different economic position than if the holder owned the ABS Issuer's assets directly, and 2) if the assets owned by the ABS Issuer are cash generating non-financial assets, then the assets are expected to generate a meaningful level of cash flows towards repayment of the bond through use, licensing, leasing servicing or management fees, or other similar cash flow generation. (This guidance requires a meaningful level of cash flows to service the debt other than through the sale or refinancing of the assets.) This appendix details example analysis for these meaningful cash flow and substantive credit enhancements.

2. **Example 1:** A reporting entity invests in debt instruments issued from a SPV sponsored by the Government National Mortgage Association (GNMA), the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (Freddie Mac) (collectively, "Agency or Agencies"). These debt instruments pass through principal and interest payments received from underlying mortgage loans held by the SPV to the debtholders proportionally, with principal and interest guaranteed by the Agencies. While there is prepayment and extension risk associated with the repayment of the underlying mortgage loans, the credit risk associated with the mortgage loans is assumed by the Agencies.

3. **Example 1 Rationale:** Although the reporting entity participates on a proportional basis in the cash flows from the underlying mortgage loans held by the SPV, the reporting entity is in a different economic position than if it owned the underlying mortgage loans directly because the credit risk has been redistributed and assumed by the Agencies. This is a substantive credit enhancement because a market participant (i.e., a knowledgeable investor transacting at arm's length) would conclude the Agency guarantee is expected to absorb all losses before the debt instrument being evaluated. Therefore, the holder of the debt instrument is in a substantively different economic position than if the holder owned the ABS Issuer's unguaranteed assets directly, in accordance with the requirements in paragraph 10. When guarantees do not cover 100% of principal and interest as the Agency guarantees do in this example, it is still appropriate to determine if the guarantee is substantive in accordance with the requirements in paragraph 10, to determine if the holder is in a substantively different economic position than if the holder held the ABS Issuer's assets directly.

4. **Example 2:** A reporting entity invested in a debt instrument issued by a SPV. Payments under the instrument are secured by a note, a legal assignment from the borrower of a lease for real property and an assignment of the lease payments from an operating entity tenant. Additional security is provided by a mortgage on the leased property (the "underlying collateral"). The leased property is owned by the borrower under the note -- the SPV does not have any ownership interest in the underlying collateral, though it has legal recourse to it through the mortgage. The tenant makes contractually-fixed payments over the life of the lease to the borrower, who has assigned both the lease and the lease payments to the SPV as security for the debt. While the debt is outstanding, the lease, the lease payments, and the mortgage all serve as security for the debtholders. Should a default occur, the debtholders can foreclose on and liquidate the real property as well as submit an unsecured lease claim in the lessee's bankruptcy for all or a portion of the defaulted lease payments. The loan-to-value (as a percentage of property value) at origination is 100%.

5. The existing lease payments are sufficient to cover all interest payments and all scheduled debt amortization payments over the life of the debt instrument. However, at debt maturity, there is a balloon payment due, totaling 50% of the original outstanding debt principal amount. The corresponding lease has no balloon payment due at lease maturity, so the SPV will either need to refinance the debt or sell the underlying collateral to service the final debt balloon payment. The property has a high probability of appreciating in value over the term, however ignoring any potential for appreciation, the 50% loan-to-value at maturity is the expected figure at the end of the debt term based solely on scheduled amortization payments. The real property is expected to be subject to some market value volatility and periods of lower

The Guidance in this Statement is Effective January 1, 2025

liquidity at certain points in time but has a predictable value range and ready market over a longer period of time, such that the property could be liquidated over a reasonable period of time, if necessary.

6. **Example 2 Rationale:** The reporting entity determined that the debtholder was in a fundamentally different position than if the real estate was owned directly. The lease is a cash generating non-financial asset which is expected to generate a meaningful level of cash flows for the repayment of the bonds which covers all interest payments and 50% of the principal payments. The level of reliance on the collateral value for sale or refinancing is just over the cutoff for using the practical expedient (<50%), so a full analysis is required. In reaching its determination, the reporting entity considered the predictable nature of the cash flows, which are contractually fixed for the life of the debt instrument, as well as the ability of the underlying collateral value to provide for the balloon payment through sale or refinancing in light of its characteristics. While the real property may have some market value volatility and periods of lower liquidity at points in time, the cash flows produced by the lease were concluded to reduce the loan balance to a level (50% loan-to-value) that would be able to be recovered by sale or refinancing at the maturity of the loan.

7. The reporting entity also determined that the structure provides substantive credit enhancement in the form of overcollateralization to conclude that investors are in a different economic position than holding the real property directly, in accordance with the requirements in paragraph 10. In reaching this conclusion, the reporting entity noted that although the debt instrument starts with a 100% loan-to-value (not including the value of the contractually required lease payments), contractual fixed payments from the lease provide additional security such that the reporting entity is in a different economic position than owning the property directly. Lease cash flows are sufficient to cover the payment of all interest and 50% of the outstanding principal over the term of the lease. In the context of the predictable nature of the cash flows and collateral value range over time, the reporting entity concluded that a market participant (i.e., knowledgeable investor transacting at arm's length) would consider this level of overcollateralization to put the investor in a substantively different economic position than owning the underlying property directly.

8. For the purposes of determining whether there is substantive overcollateralization, it is appropriate to consider any expected economic depreciation, if it is reasonably expected, but it is not appropriate to consider any expected economic appreciation. Note that a debt instrument with a loan-to-value that is expected to decrease over time is not necessarily deemed to have substantive overcollateralization.

9. **Example 3:** A reporting entity invested in a debt instrument with the same characteristics as described in Example 2, except that the existing lease at the time of origination has a contractual term that is shorter than that of the debt instrument. It is expected with a high degree of probability that the lease will be renewed, and a substantial leasing market exists to replace the lessee should they not renew. However, in the unlikely circumstance that the property cannot be re-leased, there would not be enough cash flows to service the scheduled principal and interest payments, and the property would have to be liquidated to pay off the debt upon default.

10. **Example 3 Rationale:** All details of Example 3, including the expected collateral cash flows, are consistent with those in Example 2, except that the cash flows in Example 2 are contractually fixed for the duration of the debt while the cash flows in Example 3 are subject to re-leasing risk. Notwithstanding the involvement of re-leasing risk, the reporting entity concluded that the ability to re-lease the property was highly predictable and supported the conclusion that the underlying collateral was expected to produce meaningful cash flows to service the debt.

11. This distinction is to highlight that the expected cash flows of a cash-generating non-financial asset may or may not be contractually fixed for the term of the bond. Certain securitized cash flow streams may not by their nature lend themselves to long-term contracts (e.g., single-family home rentals), but may nevertheless lend themselves to the production of predictable cash flows. While the non-contractual nature of the cash flows is an important consideration in determining whether a non-financial asset is expected to

The Guidance in this Statement is Effective January 1, 2025

produce meaningful cash flows to service the debt, it does not, in and of itself, preclude a reporting entity from concluding that the assets are expected to produce meaningful cash flows.

12. **Example 4:** A reporting entity invested in a debt instrument issued by a SPV that owns equipment which is leased to an equipment operator. The equipment operator makes lease payments to the SPV, which are passed through to service the SPV's debt obligation. While the debt is outstanding, the equipment and lease are held in trust and pledged as collateral for the debtholders. Should a default occur, the debtholders can foreclose on and liquidate the equipment as well as submit an unsecured lease claim in the lessee's bankruptcy for any defaulted lease payments. The loan-to-value at origination is 70%.

13. The existing lease payments are sufficient to cover all interest payments and all scheduled debt amortization payments over the life of the debt instrument. However, at maturity, there is a balloon payment due, totaling 80% of the original outstanding principal amount. The corresponding lease has no balloon payment due at lease maturity, so the SPV will either need to refinance the debt or sell the underlying equipment to service the final debt balloon payment. The loan-to-value at maturity is expected to increase to 95% considering the scheduled principal amortization payments net of the expected economic depreciation in the equipment value over the term of the debt. The equipment is expected to be subject to some market value volatility and periods of lower liquidity at certain points in time, but has a predictable value range and ready market over a longer period of time, such that the equipment could be liquidated over a reasonable period of time, if necessary.

14. **Example 4 Rationale:** The equipment is a cash generating non-financial asset which is not expected to generate a meaningful level of cash flows for the repayment of the bonds via the existing lease that covers all interest payments and 20% of principal payments. In reaching this determination, the reporting entity considered that, while the cash flows being produced are predictable, the ability to recover the principal of the debt investment is almost entirely reliant on the equipment retaining sufficient value to sell or refinance to satisfy the debt.

15. The reporting entity also determined that the structure lacks substantive credit enhancement to conclude that investors are in a different economic position than holding the equipment directly, in accordance with the requirements in [paragraph 10](#). In reaching this conclusion, the reporting entity noted that the debt starts with a 70% loan-to-value, but the overcollateralization is expected to deteriorate over the term of the debt as the equipment economically depreciates more quickly than the debt amortizes. This results in a high loan-to-value (i.e., 95%) at maturity, relative to the market value volatility of the underlying collateral. Despite the predictable nature of the cash flows, the reporting entity concluded that the debt instrument lacked a substantive level of overcollateralization to conclude that the investor is in a different economic position than owning the underlying equipment directly. It was determined that the level of overcollateralization, as determined by a market participant (i.e., a knowledgeable investor transacting at arm's length), is nominal. Therefore, the reporting entity concluded that it was in a substantively similar position as if it owned the equipment directly.

16. For the purposes of determining whether there is substantive overcollateralization, it is appropriate to consider any expected economic depreciation, if it is reasonably expected, but it is not appropriate to factor in any expected economic appreciation. Note that a debt instrument with a loan-to-value that is expected to increase over time is not necessarily deemed to have nominal overcollateralization.

The Guidance in this Statement is Effective January 1, 2025

EXHIBIT B – SYSTEMATIC VALUE CALCULATION

The established systematic value method is considered an “aggregated cash flow” (ACF) method in which the cash flow streams from the individual bond holdings are aggregated into a single cash flow stream. These cash flows are scaled such that, when equated with the market price at which the ETF was purchased or sold, an internal rate of return is calculated, representing the investor’s initial book yield for the ETF. Although the initial book yield is utilized to determine the current period effective yield, and the resulting adjustments to the ETF’s reported (systematic) value, the book yield is recalculated at least quarterly in order to adjust the investor’s book yield to reflect current cash flow projections of the current bond holdings within the ETF.

The following calculation shall be followed by reporting entities electing systematic value:

1. Download cash flows file from <u>ETF provider website</u> .	
NAV:	\$115.07 (Official end-of-day NAV found on <u>ETF provider website</u>)
Maturity:	12/8/2027 = SUMPRODUCT (CASHFLOW_DATE column, PRINCIPAL column)/SUM (PRINCIPAL column)
When Paid:	Monthly
Par Value:	2,500 # shares purchased
Monthly Effective Interest:	\$0.40 = (Recalculated Effective Book Yield from prior month x Prior Month Ending Book Value /12)
Distribution:	\$0.34 Found on <u>provider website</u>
Net Amortization/Accretion:	\$0.06 = (Monthly Effective Interest) – (Distribution)
Prior Month Ending Book Value:	\$115.35
NPV Constant Yield Method:	\$117.10 = XNPV (Initial Book Yield, CASHFLOW column, CASHFLOW_DATE column) / 1000000
Initial Book Yield:	4.15%
Book (Systematic) Value:	\$115.41 = (Prior Period Ending Book Value) + (Net “amortization/ accretion”)
Expense Ratio:	0.1500%
Recalculated Effective Book Yield:	4.1639% =XIRR(CASHFLOW column, CASHFLOW_DATE column, 0.05)

All formulas on the left are at a per share level (excepting “Par Value” which represents the number of shares purchased for this lot).

The resulting values calculated on the left are aggregated to reflect the total number of shares held on the previous tabs reflecting how one might populate the reporting schedule with these values.

Additionally, the cash flows in the data file are based on 1 million shares. This was done in order to make the cash flows easier to observe and work with (i.e., at a single share level, cash flows would be at fractional dollar levels). Therefore, in order to calculate the yield, investors must multiply the price of the ETF by 1 million shares and then use that value as a cash outflow against the positive cash inflows from the bond portfolio in order to calculate the IRR.

CUSIP	ASOF_DATE	CALL_TYPE	CASHFLOW_DATE	INTEREST	PRINCIPAL	CASHFLOW
2. Insert a row in between the column headings and the cash flow data.						
		3. Filter for “Call Type” is WORST. (Click “Data” at the top of Excel sheet, then click “Filter” and click the new dropdown box in the “Call Type” cell and select only “WORST.”)				5. Under the column “CASHFLOW” enter the following formula in Excel: =(-Ending Book Value)*1000000
			8/31/20X1			(115,414,059.56)
“Ticker”	8/31/20X1	WORST	9/8/20X1	136,538.564	81,472.372	218,010.937
“Ticker”	8/31/20X1	WORST	9/9/20X1	5,990.106	0	5,990.106
“Ticker”	8/31/20X1	WORST	9/10/20X1	9,706.324	0	9,706.324

The Guidance in this Statement is Effective January 1, 2025

EXHIBIT C – AMORTIZATION TREATMENT FOR CALLABLE BONDS

Example 1: Call Price Less Than BACV Throughout the Life of the Bond

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)

01/01/2009 – Call Date/Call Price 107

12/15/2010 – Reporting Entity Acquires Bond. Cost = 106

01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 104

01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 103

01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102

General Note for Examples: The reporting entity purchased the bond at a premium (cost was greater than par). The 1/1/2009 call date and price is ignored as it occurred prior to the reporting entity acquiring the bond. The bolded numbers represent the lowest asset value at each reporting period. The bond is amortized to the lowest asset value, which in this scenario is amortizing to the call dates and prices. (The standard amortization to the maturity date is shown as it should be compared to the amortization to the call date/price to verify that the BACV at any given reporting date reflects the lowest asset value.)

Date	Action	Cost	Call Price	BACV (Under Call Date/Price)	Amortization to the Lowest Value	BACV Under Standard Amortization
12/15/2010	Acquired	106		106		106
12/31/2011	Lockout Period			104	2	105.25
01/01/2012	Call Date		104	104		
12/31/2012	Year-End Reporting			103.5	0.5	104.50
12/31/2013	Year-End Reporting			103	0.5	103.75
01/01/2014	Call Date		103	103		
12/31/2014	Year-End Reporting			102.5	0.5	103
12/31/2015	Year-End Reporting			102	0.5	102.25
01/01/2016	Call Date Exercised		102	102		

Standard Amortization

This table shows the amortization with a purchase date of 12/15/2010 at \$106 through the maturity date of 12/31/2018.

	12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization		.75	.75	.75	.75	.75	.75	.75	.75
BACV		105.25	104.50	103.75	103	102.25	101.50	100.75	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	102	100	102	(2)

* Per paragraph 26, the entity would recognize a \$(2) loss (BACV less par), and investment income of \$2 (consideration less par).

The Guidance in this Statement is Effective January 1, 2025**Example 2: Call Price Could be Greater Than BACV**

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)

01/01/2009 – Call Date/Call Price 107

12/15/2010 – Reporting Entity Acquires Bond. Cost = 104

01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 106

01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 103

01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102

The bolded numbers represent the lowest asset value:

Date	Action	Cost	Call Price	BACV (Under Call Date / Price)	Amortization To the Lowest Asset Value	BACV Under Standard Amortization
12/15/2010	Acquired	104		104		104
12/31/2011	Lockout Period		106	104	0.5	103.50
01/01/2012	Call Date		106	104		103.50
12/31/2012	Year-End Reporting			103.5	0.5	103
12/31/2013	Year-End Reporting			103	0.5	102.50
01/01/2014	Call Date		103	103		102.50
12/31/2014	Year-End Reporting			102.5	0.5	102
12/31/2015	Year-End Reporting			102	0.5	101.50
01/01/2016	Call Date Exercised		102	102		101.50

Standard Amortization

This table shows the amortization with a purchase date of 12/15/2010 at \$104 through the maturity date of 12/31/2018.

	12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization		0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV		103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	102	100	101.50	(1.50)

* Per paragraph 26, the entity would recognize a \$(1.50) loss (BACV less par), and investment income of \$2 (consideration less par).

The Guidance in this Statement is Effective January 1, 2025**Example 3: Call Price Could be Greater Than BACV**

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)

01/01/2009 – Call Date/Call Price 107

12/15/2010 – Reporting Entity Acquires Bond. Cost = 104

01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 106

01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102

01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 101

Note – This illustration shows that the evaluation of whether standard amortization (to the maturity date) or the call date price may change over the time. The bolded numbers represent the lowest asset value:

Date	Action	Cost	Call Price	BACV (Under Call Date / Price)	Amortization To the Lowest Asset Value	BACV Under Standard Amortization
12/15/2010	Acquired	104		104		
12/31/2011	Lockout Period		106	104	0.5	103.50
01/01/2012	Call Date		106	104		103.50
12/31/2012	Year-End Reporting			103	0.5	103
12/31/2013	Year-End Reporting			102	1	102.50
01/01/2014	Call Date		102	102		102.50
12/31/2014	Year-End Reporting			101.5	0.5	102
12/31/2015	Year-End Reporting			101	0.5	101.50
01/01/2016	Call Date Exercised		101	101		101.50

Standard Amortization

This table shows the amortization with a purchase date of 12/15/2010 at \$104 through the maturity date of 12/31/2018.

12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV	103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	101	100	101	(1)

* Per paragraph 26, the entity would recognize a \$(1) loss (BACV less par), and investment income of \$1 (consideration less par).

The Guidance in this Statement is Effective January 1, 2025

Example 4: Continuously Callable Bond – Callable at Par After Initial Lockout Period

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)
 01/01/2009 – Call Date / Call Price 107 – Continuously Callable Thereafter at Par
 12/15/2010 – Reporting Entity Acquires Bond. Cost = 104

The bolded numbers represent the lowest asset value:

Date	Action	Cost	Call Price	BACV (Under Call Date/Price)	Amortization To the Lowest Asset Value	BACV Under Standard Amortization
12/15/2010	Acquired	104		100	4	
12/31/2010	Year-End Reporting		100	100	There is no subsequent amortization as the premium was fully expensed at acquisition.	104
12/31/2011	Year-End Reporting		100	100		103.50
12/31/2012	Year-End Reporting		100	100		103
12/31/2013	Year-End Reporting		100	100		102.50
12/31/2014	Year-End Reporting		100	100		102
12/31/2015	Year-End Reporting		100	100		101.50
01/01/2016	Year-End Reporting		100	100		101.50

Standard Amortization								
This table shows the amortization with a purchase date of 12/15/2010 at \$104 through the maturity date of 12/31/2018.								
12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV	103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	100	100	100	0

* Since the call price is par and could occur immediately after acquisition, the premium is immediately expensed. When the bond is called, there is no gain or loss as the consideration received equals the BACV.

The Guidance in this Statement is Effective January 1, 2025

Example 5: Determination of Prepayment Penalty When Call Price is Less Than Par

Call Price Less than Par				
Entity 1			Entity 2	
Par	100		Par	100
BACV	24		BACV	25
Consideration	26		Consideration	26
Explicit fee	1		Explicit fee	1
Remaining consideration	25		Remaining consideration	25
Gain	2		Gain	0
Income*	0		Income**	1

*Entity 1 does not have in place a process to identify explicit an prepayment penalty or acceleration fee.

**Entity 2 has in place a process to identify an explicit prepayment penalty or acceleration fee.

EXHIBIT A – QUESTION AND ANSWER IMPLEMENTATION GUIDE	18

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for each security investment that qualifies as an asset-backed security (ABS) under the principles-based bond definition detailed in *SSAP No. 26R—Bonds*. Each security shall be individually assessed under the bond definition to determine applicability as an asset-backed security and reported separately regardless of whether the security was issued in combination or as a unit with other investments. Items captured in scope of this statement are collectively referred to as asset-backed securities.

The Guidance in this Statement is Effective January 1, 2025

2. In addition to security investments that qualify under the principles-based definition as an asset-backed security, certain specific investments are also captured in scope of this statement:

- a. Mortgage Referenced Securities that do not meet the definition of an asset-backed security. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise¹ or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer.” In these situations, the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions within this standard apply to mortgage-referenced securities.
- b. Freddie-Mac When Issued K-Deal (WI Trust) Certificates fully guaranteed by Freddie Mac are included in scope of this statement from original acquisition, and not initially reported as a derivative forward contract. ^(INT 22-01)

3. Securities captured in scope of this statement are not permitted to be reported as cash equivalents or short-term investments in scope of *SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments* even if acquired within one year or less from the maturity date. Investments captured in scope of SSAP No. 2R are intended to reflect situations in which limited risk remains, either from changes in credit quality or interest rates, due to the short-duration until maturity. As ultimate cash flows from asset-backed securities may have other risks beyond default risk or interest rate risk (such as performance factors, balloon payments, collateral quality) reporting as a cash equivalent or short-term investment is not permitted to prevent inappropriate assumptions of the investment’s remaining potential risk.

4. This statement excludes:

- a. Securities captured in scope of *SSAP No. 26R—Bonds*.
- b. Mortgage loans in scope of *SSAP No. 37—Mortgage Loans* that qualify under an SVO structural assessment as SVO-Identified Credit Tenant Loans. These investments are excluded as these are captured as issuer credit obligations under SSAP No. 26R.
- c. Securities that do not qualify as Asset-Backed Securities per the bond definition in *SSAP No. 26R—Bonds*. This exclusion includes residual or interests, as well as first loss positions, that do not have contractual payments or substantive credit enhancement. Debt securities that do not qualify and residual interests shall follow guidance in *SSAP No. 21R—Other Admitted Assets*.

¹ Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

The Guidance in this Statement is Effective January 1, 2025

SUMMARY CONCLUSION

Principles-Based Bond Definition - Asset-Backed Security

5. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements of *SSAP No. 25—Affiliates and Other Related Parties*. In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. Asset-backed securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and *SSAP No. 25*.

- a. Although an asset-backed security may be acquired from a non-related issuer, if the assets held in trust predominantly² reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as affiliates, these securities shall be identified as related party investments in the investment schedules.
- b. An asset-backed security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the asset-backed security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, including control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with *SSAP No. 25—Affiliates and Other Related Parties*.

Initial Reporting Value and Recognition of Origination and Commitment Fees & Costs

6. Items in scope of this statement shall initially be reported at cost, including brokerage and related fees, unless otherwise detailed in [paragraph 8](#). Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement asset-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

² In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a *SSAP No. 43R* structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or *SSAP No. 43R* security issuer. As identified in *SSAP No. 25—Affiliates and Other Related Parties*, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

The Guidance in this Statement is Effective January 1, 2025

7. For assets that qualify in scope of this statement that result from a securitization or transfer of assets by the reporting entity captured in SSAP No. 103R, the guidance in that SSAP determines the initial reporting value:

- a. For asset-backed securities resulting from transfers of participating interests that qualify as a sale, the participating interests in financial assets that continue to be held by the reporting entity transferor shall be measured and reported at the date of transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continue to be held by the reporting entity, based on their relative fair values.
- b. For asset-backed securities resulting from transfers of an entire financial asset or group of entire financial assets that qualify as a sale, assets obtained, including beneficial interests, shall be initially recognized at fair value.
- c. For asset-backed securities resulting from the transfer of assets that do not qualify as sales, the reporting entity transferor shall continue to report the transferred financial assets with no change in measurement.

8. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the asset-backed security. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase asset-backed securities, shall be charged to expense when incurred.

9. Origination fees represent fees charged to the borrower (paid to the reporting entity) in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the asset-backed security consistent with **paragraph 12** of this statement. Other origination fees shall be recorded as income upon receipt.

10. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition:

- a. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future is generally refundable only if the asset-backed security is issued. If the security is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.
- b. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement is generally not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with **paragraph 12** of this statement over the life of the asset-backed security as an adjustment to the investment income on the security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

The Guidance in this Statement is Effective January 1, 2025

Subsequent Carrying Value Method, Amortization, Accruals and Prepayment Penalties

11. After initial recognition, the carrying value shall be determined in accordance with the reported NAIC designation. The determination of NAIC designations shall be in accordance with the requirements detailed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)*³:

- a. For reporting entities that maintain an Asset Valuation Reserve (AVR), asset-backed securities, excluding residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.
- b. For reporting entities that do not maintain an AVR, asset-backed securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.
- c. For residual tranches or interests⁴, all reporting entities shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses. For reporting entities that maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. These items are captured in *SSAP No. 21R—Other Admitted Assets* and subject to admittance restrictions detailed in that statement.

12. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income.^(INT 07-01) The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the asset-backed securities is expected to occur, not the stated maturity period. (P9)

13. Interest shall be accrued using the effective-yield method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of asset-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

³ Paragraphs 39-40 provide guidance on the NAIC financial modeling approach applicable to certain securities in determining NAIC designations.

⁴ Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

The Guidance in this Statement is Effective January 1, 2025

14. An asset-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

15. The amount of prepayment penalty and/or acceleration fees to be reported as investment income shall be calculated as follows:

- a. The amount of investment income reported is equal to the total proceeds (consideration) received less the par value of the investment; and
- b. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses subject to the authoritative literature in SSAP No. 7.

Assessment of Cash Flows and Impact of Prepayments

16. Prepayments can be a significant variable element in the cash flows received from asset-backed securities because they may affect the yield and determine the expected maturity against which the yield is evaluated. For example, with a mortgage-backed security, falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created when rising interest rates slow repayment and can significantly lengthen the duration of the security. In addition to interest rate risk, other factors can influence the cash flows generated from an asset-backed securities. These factors include, but are not limited to, defaults of the underlying payors as well as performance requirements that must occur before cash flows can be generated from the underlying assets (such as with leases or royalty rights). If the underlying assets are delinquent or otherwise not generating expected cash flows, such items should be reflected in the cash flow analysis through diminishing security cash flows. Updated cash flow assessments shall continue to occur even if the underlying assets have not been liquidated and regardless of whether an other-than-temporary loss has been recognized.

17. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on all asset-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying assets shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all asset-backed securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

18. Asset-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions. Reporting entities may utilize the prospective adjustment method for all asset-backed securities, or they may elect to utilize the retrospective adjustment methodology to specific asset-backed securities that are reported with NAIC designations that are of high credit quality⁵ at the time of acquisition by the reporting entity. That is, the reporting entity shall determine if it will apply the retrospective or prospective method at the time of acquisition depending on the NAIC designation at that time and can only apply retrospective (as a policy election) to securities that of high credit. Subsequently,

⁵ Under U.S. GAAP, application of the retrospective method for beneficial interests in securitized financial assets, which would generally encompass most asset backed securities defined within SSAP 43R, is limited to “high quality” investments. This has been interpreted to be investments with AA or better ratings.

The Guidance in this Statement is Effective January 1, 2025

if an investment is downgraded below high credit quality, the reporting entity may continue to apply the retrospective method unless the security is other-than-temporarily impaired.

19. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the amortized cost of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

20. The retrospective methodology changes both the yield and the amortized cost so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current amortized cost basis for the asset-backed security is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Accretable Yield and Changes to Effective Yield for Application of Prospective Method

21. At initial acquisition of an asset-backed security, the reporting entity shall determine the accretable yield. The accretable yield is the excess of cash flows expected to be collected over the reporting entity's initial investment in the asset-backed security. The accretable yield shall be recognized as interest income on an effective-yield basis over the life of the asset-backed security⁶. The nonaccretable difference is the contractually required payments in excess of the cash flows expected to be collected. The nonaccretable difference shall not be recognized as an adjustment to yield, a loss accrual or a valuation allowance for credit risk. For transactions initially captured in SSAP No. 103R resulting from a reporting entity's transfer of assets, all cash flows estimated at the transaction date are defined as the holder's estimate of the amount and timing of estimated future principal and interest cash flows used in determining the purchase price or the holder's fair value for purposes of determining a gain or loss under SSAP No. 103R.

22. After the transaction date, cash flows expected to be collected are defined as the holder's estimate of the amount and timing of the estimated principal and interest cash flows based on the holder's best estimate of current considerations and reasonable and supportable forecasts. Expected cash flows are re-evaluated each quarter to determine if there has been a favorable (or an adverse) change in cash flows versus the previous estimate.

23. If upon evaluation there is a favorable (or an adverse) change in cash flows expected to be collected from the cash flows previously projected, the reporting entity shall recalculate the amount of accretable yield for the asset-backed security on the date of evaluation as the excess of cash flows expected to be collected over the asset-backed security's current amortized cost. The amortized cost is equal to the initial investment minus cash received to date, minus write-offs of the amortized cost basis (e.g., recognized other than temporary impairments) plus the yield accreted to date. If the security is in an impaired state (meaning, fair value is less than amortized cost, regardless if an unrealized loss has been recognized because the security is reported at amortized cost) and there is an adverse change in cash flows expected to be collected, an other-than-temporary impairment shall be considered to have occurred as described in [paragraph 30](#) and

⁶ An asset-backed security may be acquired at a discount because of a change in credit quality or rate or both. When a security is acquired at a discount that relates, at least in part, to the security's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the security's future cash flows with the purchase price of the security.

The Guidance in this Statement is Effective January 1, 2025

requires recognition of a realized loss pursuant to paragraph 35. However, an adverse change in cash flows due solely to changes in the interest rate of a “plain-vanilla”, variable-rate asset-backed security generally shall not result in the recognition of an other-than-temporary impairment (a plain-vanilla, variable-rate asset-backed investment does not include those variable-rate investments with interest rate reset formulas that involve either leverage or an inverse floater).

24. A favorable (or an adverse) change in cash flows expected to be collected is considered in the context of both timing and amount of the cash flows expected to be collected. Based on cash flows expected to be collected, interest income may be recognized on an asset-backed security even if the net investment in the asset-backed security is accreted to an amount greater than the amount at which the asset-backed security could be settled if prepaid immediately in its entirety. The adjustment shall be accounted for prospectively as a change in estimate in conformity with SSAP No. 3, with the amount of periodic accretion adjusted over the remaining life of the asset-backed security.

25. Determining whether there has been a favorable (or an adverse) change in cash flows expected to be collected from the cash flows previously projected (taking into consideration both the timing and amount of the cash flows expected to be collected) involves comparing the present value of the remaining cash flows expected to be collected at the initial transaction date (or at the last date previously revised) against the present value of the cash flows expected to be collected at the current financial reporting date. Both the current and previous sets of cash flows shall be discounted at a rate equal to the current yield used to accrete the asset-backed security.

Recognition of Realized and Unrealized Gains and Losses and Impairment Guidance

26. Asset-backed securities required to be reported at the lower of amortized cost or fair value shall report changes from the prior reporting period as unrealized gains or losses unless an other-than-temporary impairment has occurred. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be reported through the AVR. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus). (P29)

27. Assessment of an other-than-temporary impairment is required for all asset-backed securities when fair value is less than the amortized cost basis. The amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, and previous other-than-temporary impairments recognized as a realized loss. Reporting a security at the lower of amortized cost or fair value is not a substitute for other-than-temporary impairment recognition. For securities reported at fair value where an other-than-temporary impairment has been determined, the loss recognized reflects the realization of unrealized losses previously recorded from fluctuations in fair value. (The extent to which unrealized losses are realized depends on whether the other-than-temporary impairment is considered a full impairment or a bifurcated impairment pursuant to paragraphs 34 and 35.) After the recognition of an other-than-temporary impairment, securities reported at the lower of amortized cost or fair value shall continue to report unrealized gains and losses from fluctuations in fair value.

28. If an entity intends to sell the asset-backed security (that is, it has decided to sell the security), an other-than-temporary impairment shall be considered to have occurred.

29. If an entity does not intend to sell the asset-backed security, the entity shall assess whether it has the intent and ability⁷ to retain the investment in the security for a period of time sufficient to recover the

⁷ This assessment shall be considered a high standard due to the accounting measurement method established for the securities within the scope of this statement (amortized cost).

The Guidance in this Statement is Effective January 1, 2025

amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.

30. If the entity does not expect to recover the entire amortized cost basis of the security, the entity would be unable to assert that it will recover its amortized cost basis even if it does not intend to sell the security and the entity has the intent and ability to hold. (This includes situations in which an entity has an adverse change in cash flows expected to be collected for a security that is an impaired position (meaning, fair value is less than amortized cost, regardless of if an unrealized loss has been recognized.) In such situations, an other-than temporary impairment shall be considered to have occurred. (For mortgage-referenced securities, an OTTI is considered to have occurred when there has been a delinquency or other credit event in the referenced pool of mortgages such that the entity does not expect to recover the entire amortized cost basis of the security.) In assessing whether the entire amortized cost basis of the security will be recovered, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered, and an other-than-temporary impairment shall be considered to have occurred. A decrease in the present value of cashflows expected to be collected on an asset-backed security that results from an increase or decrease in expected prepayments on the underlying assets shall be considered in the estimate of the present value of cashflows expected to be collected.

31. In determining whether an other than-temporary impairment has occurred, an entity shall calculate the present value of cash flows expected to be collected based on an estimate of the expected future cash flows of the impaired asset-backed security, discounted at the security's effective interest rate. For securities in which there was no nonaccretable yield and for which there has been no changes to estimated cash flows since acquisition, the effective interest rate is the rate of return implicit in the security (that is, the contractual interest rate adjusted for any net deferred fees or costs, premium, or discount existing at the origination or acquisition of the security).⁸ For all other securities, the effective interest rate is the rate implicit immediately prior to the recognition of the other-than-temporary impairment. (Meaning, the effective interest rate as adjusted to reflect the last revised assessment of expected cash flows.)

32. It is inappropriate to automatically conclude that a security is not other-than-temporarily impaired because all of the scheduled payments to date have been received. However, it also is inappropriate to automatically conclude that every decline in fair value represents an other-than-temporary impairment. Further analysis and judgment are required to assess whether a decline in fair value indicates that it is probable that the holder will not collect all of the contractual or estimated cash flows from the security. In addition, the length of time and extent to which the fair value has been less than cost can indicate a decline is other than temporary. The longer and/or the more severe the decline in fair value, the more persuasive the evidence that is needed to overcome the premise that it is probable that the holder will not collect all of the contractual or estimated cash flows from the issuer of the security.

33. In making its other-than-temporary impairment assessment, the holder shall consider all available information relevant to the collectibility of the security, including information about past events, current conditions, and reasonable and supportable forecasts, when developing the estimate of future cash flows. Such information generally shall include the remaining payment terms of the security, prepayment speeds, the financial condition of the issuer(s), expected defaults, and the value of any underlying collateral. To achieve that objective, the holder shall consider, for example, industry analyst reports and forecasts, sector

⁸ An asset-backed security may be acquired at a discount because of a change in credit quality or rate or both. When a security is acquired at a discount that relates, at least in part, to the security's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the security's future cash flows with the purchase price of the security.

The Guidance in this Statement is Effective January 1, 2025

credit ratings, and other market data that are relevant to the collectibility of the security. The holder also shall consider how other credit enhancements affect the expected performance of the security, including consideration of the current financial condition of the guarantor of a security (if the guarantee is not a separate contract) and/or whether any subordinated interests are capable of absorbing estimated losses on the loans underlying the security. The remaining payment terms of the security could be significantly different from the payment terms in prior periods (such as for some securities backed by “nontraditional loans”⁹). Thus, the holder shall consider whether a security backed by currently performing loans will continue to perform when required payments increase in the future (including “balloon” payments). The holder also shall consider how the value of any collateral would affect the expected performance of the security. If the fair value of the collateral has declined, the holder needs to assess the effect of that decline on the ability of the holder to collect the balloon payment.

34. When an other-than-temporary impairment has occurred because the entity intends to sell the security or has assessed that they do not have the intent and ability to retain the investments in the security for a period of time sufficient to recover the amortized cost basis, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment’s amortized cost basis and its fair value at the balance sheet date (full impairment). For asset-backed securities held at lower of amortized cost or fair value, upon recognition of an other-than-temporary impairment, all unrealized losses would be considered realized and the current fair value becomes the new cost basis.)

35. When an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment’s amortized cost basis and the present value of cash flows expected to be collected, discounted at the security’s effective interest rate in accordance with [paragraph 31](#) (bifurcated impairment). For asset-backed securities held at lower of cost or fair value, unrealized losses would be realized for the non-interest related decline. Hence, unrealized losses could continue to be reflected for these securities based on the difference between the current fair value and the present value of cash flows expected to be collected. (After recognizing an OTTI in these situations, the present value of cash flows expected to be collected becomes the new cost basis of the security.)

36. For reporting entities required to maintain an AVR or IMR, all unrealized gains and losses shall be reported through the AVR. For realized gains and losses, an analysis is required on whether the realized loss reflects an interest or non-interest related decline¹⁰. The analysis required is the same regardless of whether a realized loss results from an impairment write-down or whether there was a gain or loss upon sale. Guidance on specific scenarios resulting in realized gains and losses are as follows:

⁹ A nontraditional loan may have features such as (a) terms that permit principal payment deferral or payments smaller than interest accruals (negative amortization), (b) a high loan-to-value ratio, (c) multiple loans on the same collateral that when combined result in a high loan-to value ratio, (d) option adjustable-rate mortgages (option ARMs) or similar products that may expose the borrower to future increases in repayments in excess of increases that result solely from increases in the market interest rate (for example, once negative amortization results in the loan reaching a maximum principal accrual limit), (e) an initial interest rate that is below the market interest rate for the initial period of the loan term and that may increase significantly when that period ends, and (f) interest-only loans that should be considered in developing an estimate of future cash flows.

¹⁰ Pursuant to INT 06-07, the term interest-related includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or the perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest-related.

The Guidance in this Statement is Effective January 1, 2025

- a. Unrealized Gains and Losses – Record all unrealized gains and losses through AVR. At the time an unrealized gain or loss is realized, allocation between AVR or IMR will depend on the analysis and bifurcation between interest or non-interest related declines. Unrealized gains or losses that are realized shall be reversed from AVR before the recognition of the realized gain or loss within AVR and IMR.
- b. Other-Than-Temporary Impairment – Non-interest related other-than-temporary impairment losses shall be recorded through the AVR and interest-related OTTI losses shall be recorded through the IMR. If the reporting entity wrote the security down to fair value due to the intent to sell or because the entity does not have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis, the entity shall bifurcate the realized loss between non-interest related (AVR) and interest related (IMR). The analysis for bifurcating impairment losses between AVR and IMR shall be completed as of the date when the other-than-temporary impairment is determined. Entities that recognized an OTTI based on the difference between amortized cost and the present value of expected cash flows shall recognize the full realized loss through AVR.
- c. Security Sold at a Loss Without Prior OTTI – An entity shall bifurcate the loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale.
- d. Security Sold at a Loss With Prior OTTI – An entity shall bifurcate the current realized loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.
- e. Security Sold at a Gain With Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale. The bifurcation between AVR and IMR that occurs as of the date of sale may be different from the AVR and IMR allocation that occurred at the time of previous other-than-temporary impairments. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.
- f. Security Sold at a Gain Without Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale.

37. This statement does not permit reversals of recognized other-than-temporary impairments based on subsequent recoveries of fair value. If there are subsequent changes to the cash flows expected to be collected, the prospective adjustment method shall be used to adjust the effective yield in future periods to reflect those changes.

38. In periods subsequent to the recognition of an other than temporary impairment loss for an asset-backed security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment at an amortized cost basis equal to the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income. A reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the asset-backed security.

The Guidance in this Statement is Effective January 1, 2025**Designation Guidance**

39. For Residential Mortgage-Backed Securities (RMBS), Commercial Mortgage-Backed Securities (CMBS) and Collateralized Loan Obligations (CLOs) securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

- a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled RMBS/CMBS legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled RMBS/CMBS non-legacy security, meaning one which closed after December 31, 2012, or modeled CLO, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those RMBS/CMBS legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled RMBS/CMBS legacy securities is as follows:
 - i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of an asset-backed security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the **initial** NAIC designation.
 - ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 11 based upon the initial NAIC designation from Step 1.
 - iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 39.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 39.a.ii.).
- b. All Other Asset-Backed Securities: For securities not subject to paragraph 39.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and

The Guidance in this Statement is Effective January 1, 2025

establishing the AVR charges). The carrying value method is established as described in paragraph 11.

40. For securities that will be financially modeled under paragraph 39, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 39, regardless of the quarterly methodology used. (P28)

- a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 39.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.
- b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 39.a.) for these securities acquired subsequent to year-end.
- c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 40.a. or 40.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 39.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.
- d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 39.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate).

Giantization/Megatization of FHLMC or FNMA Mortgage-Backed Securities

41. Giantization/megatization of mortgage-backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae “Mega” or Freddie Mac “Giant” is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

42. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the annual statement as a disposition and an acquisition.

43. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

The Guidance in this Statement is Effective January 1, 2025**Disclosures**

44. In addition to the disclosures required for invested assets in general, the following disclosures regarding asset-backed securities shall be made in the financial statements. Regardless of the allowances within paragraph 63 of the Preamble, the disclosures in paragraph 44.f., 44.g. and 44.h. of this statement are required in separate, distinct notes to the financial statements:

- a. Fair values in accordance with *SSAP No. 100R—Fair Value*.
- b. Concentrations of credit risk in accordance with *SSAP No. 27*;
- c. Basis at which the asset-backed securities are stated;
- d. The adjustment methodology used for each type of security (prospective or retrospective);
- e. Descriptions of sources used to determine prepayment assumptions.
- f. All securities within the scope of this statement with a recognized other-than-temporary impairment, disclosed in the aggregate, classified on the basis for the other-than-temporary impairment: (1) intent to sell, (2) inability or lack of intent to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, or (3) present value of cash flows expected to be collected is less than the amortized cost basis of the security.
- g. For each security with an other-than-temporary impairment, recognized in the current reporting period by the reporting entity, as the present value of cash flows expected to be collected is less than the amortized cost basis of the securities:
 - i. The amortized cost basis, prior to any current-period other-than-temporary impairment.
 - ii. The other-than-temporary impairment recognized in earnings as a realized loss.
 - iii. The fair value of the security.
 - iv. The amortized cost basis after the current-period other-than-temporary impairment.
- h. All impaired securities (fair value is less than cost or amortized cost) for which an other-than-temporary impairment has not been recognized in earnings as a realized loss (including securities with a recognized other-than-temporary impairment for non-interest related declines when a non-recognized interest related impairment remains):
 - i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and
 - ii. The aggregate related fair value of securities with unrealized losses.
- i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with *SSAP No. 100R*.

The Guidance in this Statement is Effective January 1, 2025

- j. Additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.
- k. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable:
 - i. The aggregate carrying value of the investments not evaluated for impairment, and
 - ii. The circumstances that may have a significant adverse effect on the fair value.
- l. For securities sold, redeemed or otherwise disposed as a result of a callable feature (including make whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.
- m. The items in the scope of this statement are also subject to the annual audited disclosures in *SSAP No. 26R—Bonds*, paragraphs 39.e., 39.f. and 39.g.

45. Refer to the Preamble for further discussion regarding disclosure requirements. All disclosures within this statement, except disclosures included in paragraphs 44.b., 44.k. and 44.m., shall be included within the interim and annual statutory financial statements. Disclosure requirements in paragraphs 44.b., 44.k. and 44.m. are required in the annual audited statutory financial statements only.

Relevant Literature

46. This statement reflects specific statutory accounting guidance for assets that qualify as asset-backed securities under the statutory accounting principles-based bond definition. The classification of investments as ‘bonds’ for statutory accounting and reporting purposes differs from the U.S. GAAP determination of a “debt instrument” and this statement reflects statutory specific measurement and impairment guidance for investments captured in scope. This statement does incorporate limited U.S. GAAP concepts, particularly with the determination of accretable yield and consideration of changes in expected cash flows using the retrospective or prospective method. However, due to the statutory accounting specifications on scope, measurement method and impairment, no U.S. GAAP standards are considered adopted within this statement. Concepts that converge with U.S. GAAP are limited to the extent they are detailed in this statement.

Effective Date and Transition

47. This statement adopted August 13, 2023, is effective for years beginning January 1, 2025. The revisions to this statement, and *SSAP No. 26R—Bonds*, incorporate principal concepts on what should be reported as a long-term bond. Securities that qualify as issuer credit obligations within the principal concepts are captured within scope of *SSAP No. 26R*. Securities that qualify as asset-backed securities within the principal concepts are captured within scope of *SSAP No. 43R*. Securities that do not qualify as issuer credit obligations or ABS, unless specifically permitted in scope of these statements, are not permitted to be reported as a bond.

48. At the time of transition, reporting entities shall make their best efforts to assess investments to determine whether they qualify within the bond definition for reporting as issuer credit obligations on Schedule D-1-1 or asset-backed securities on Schedule D-1-2. The bond definition requires assessments at the time of acquisition (as of the origination date), and it is recognized that reporting entities may not have the means to complete historical assessments for securities held at the time of transition. For these instances,

The Guidance in this Statement is Effective January 1, 2025

if information is not readily available for reporting entities to assess a security as of the date at origination, reporting entities may utilize current or acquisition information in concluding that a security qualifies for reporting as a bond as either an issuer obligation or asset-backed security.

49. Investments that were reported as a bond on Schedule D-1: Long-Term Bonds as of December 31, 2024, that do not qualify under the principle-based bond concepts shall be reported as a disposal from that schedule, with a reacquisition on the appropriate reporting schedule as of January 1, 2025. These investments shall be accounted for in accordance with the resulting SSAP that addresses the specific investment structure. For securities that are reported at the lower of amortized cost or fair value under the new applicable guidance, this could result with an unrealized loss in the measurement of the investment at the time of the reclassification. Although the adoption of this guidance is considered a change in accounting principle under SSAP No. 3, the following transition guidance shall be applied on January 1, 2025, to ensure consistency in reporting and to allow investment schedules to roll appropriately:

- a. Securities reclassified from Schedule D-1 as they no longer qualify under the bond definition shall be reported as a disposal from Schedule D-1 at amortized cost. Although no proceeds are received, amortized cost at the time of disposal shall be reported as consideration on Schedule D-4.
 - i. For securities held at amortized cost at the time of disposal, book adjusted carrying value and amortized cost shall agree, preventing gain or loss recognition at the time of reclassification.
 - ii. For securities held at fair value under the lower of amortized cost or fair value measurement method, previously reported unrealized losses shall be reversed on Jan. 1, 2025, prior to disposal, resulting with a reported value that mirrors amortized cost at the time of disposal. This action prevents realized loss recognition at time of reclassification.
- b. Securities reclassified from Schedule D-1 shall be recognized on the subsequent schedule (e.g., Schedule BA) with an actual cost that agrees to the disposal value (amortized cost). Immediately subsequent to recognition on the resulting schedule, the securities shall be reported in accordance with the measurement method prescribed by the applicable SSAP:
 - i. For securities previously reported at fair value on Schedule D-1 (under a lower of amortized cost or fair value measurement method), the reporting entity will recognize an unrealized loss to match the previously reported book adjusted carrying value. Subsequently, the security will continue to reflect a lower of amortized cost or fair value measurement method.
 - ii. For securities previously reported at amortized cost on Schedule D-1, if the subsequent statement requires a lower of amortized cost or fair value measurement method, then the reporting entity shall recognize an unrealized loss to the extent fair value is less than amortized cost.
 - iii. After application of **paragraph 49.b.i. and 49.b.ii.** all securities shall reflect either the same reported value as of December 31, 2024 (amortized cost or fair value) or a lower reported value (if the security is subject to the lower of amortized cost or fair value measurement method). There should be no instances that result with a

The Guidance in this Statement is Effective January 1, 2025

security having a greater reported value than what was presented on December 31, 2024. Subsequent to transition, securities reported at fair value may incur unrealized gains or losses due to fair value fluctuations, but should never have unrealized gains that result with a book adjusted carrying value that exceeds amortized cost.

50. With this transition guidance, changes in measurement for securities reclassified under the bond definition will be reported as a change in unrealized capital gains (losses) in the first quarter 2025 financial statements (unless sold in the interim with a realized gain or loss) and not as a change in accounting principle. To enable regulators the ability to identify the impact of securities reclassified under the bond definition, the following disclosure for the 2025 first quarter financial statement is required:

- a. Aggregate book adjusted carrying value for all securities reclassified off Schedule D-1.
- b. Aggregate book adjusted carrying value after transition for all securities reclassified off Schedule D-1 that resulted with a change in measurement basis. (This shall be a subset of paragraph 50.a. and captures the securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.)
- c. Aggregate surplus impact for securities reclassified off Schedule D-1. This shall include the difference between book adjusted carrying value as of December 31, 2024, and book adjusted carrying value after transition for those securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.

51. Asset-backed securities that were previously reported as short-term (Schedule DA) or as a cash equivalent (Schedule E2) shall be reclassified to be reported on Schedule D-1-2 on Jan. 1, 2025. Similar to the process detailed in paragraph 49, the securities shall be removed from DA and E2 at amortized cost, with reversal of any unrealized loss prior to the reclassification. The amortized cost shall be reported as “consideration received on disposals” on Schedule DA – Verification Between Years or Schedule E-2 – Verification Between Years, as applicable based on the prior reporting location. The security shall be recognized as an ABS acquired on Schedule D-3 at amortized cost. Immediately after initial recognition, if the security was required to be held at fair value, under the lower of amortized cost or fair value measurement method, the reporting entity shall recognize an unrealized loss.

52. For clarification purposes, the transition guidance shall be applied prospectively beginning with the first year of adoption (Jan. 1, 2025). For disclosures that provide comparative information, reporting entities shall not restate the prior year’s information in the 2025 disclosure.

EXHIBIT A – QUESTION AND ANSWER IMPLEMENTATION GUIDE

This exhibit addresses common questions regarding the valuation and impairment guidance detailed in SSAP No. 43R.

Index to Questions

No.	Question
1	Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a “non-interest” related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?
2	Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?
3	Can reporting entities change their “intend to sell” or “unable to hold” assertions and recover previously recognized other-than-temporary impairments?
4	How do the regulators intend the phrase “intent and ability to hold” as used within SSAP No. 43R to be interpreted?
5	How do contractual prepayments affect the determination of credit losses?
6	Are the disclosure requirements within paragraphs 44.f. and 44.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosure?
7	If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?
Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.	
8	Do ABS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?
9	The NAIC Designation process for ABS may incorporate loss expectations that differ from the reporting entity’s expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

The Guidance in this Statement is Effective January 1, 2025

No.	Question
10	For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.

1. Question - Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a “non-interest” related decline exists, to fair value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?

1.1 Pursuant to the guidance in SSAP No. 43R, optionality is not permitted. As such, an accounting policy that differs from SSAP No. 43R would be considered a departure from statutory accounting principles as prescribed by the NAIC *Accounting Practices and Procedures Manual*.

2. Question – Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?

2.1 Under the basis of SSAP No. 43R, an entity is not permitted to elect a write-down to fair value in lieu of assessing cash flows and bifurcating “interest” and “non-interest” impairment components. As noted in [paragraph 30](#), if the entity does not have the intent to sell, and has the intent and ability to hold, but does not expect to recover the entire amortized cost basis of the security, the entity shall compare the present value of cash flows expected to be collected with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered (a non-interest decline exists) and an other-than-temporary impairment shall be considered to have occurred. Pursuant to [paragraph 35](#), when an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment’s amortized cost basis and the present value of cash flows expected to be collected, discounted at the asset-backed security’s effective interest rate.

2.2 If the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Once an impaired security has this designation, pursuant to [paragraphs 28 or 29](#), an other-than-temporary impairment shall be considered to have occurred. As detailed in [paragraph 34](#), the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment’s amortized cost basis and its fair value at the balance sheet date.

The Guidance in this Statement is Effective January 1, 2025

- 2.3 As addressed in question 3 of this Question and Answer Guide, reporting entities are not permitted to change assertions regarding their intent to sell or their lack of intent and ability to hold. Once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold, that assertion shall not change as long as the entity continues to hold the security.
- 3. Question - Can reporting entities change their “intend to sell” or “unable to hold” assertions and recover previously recognized other-than-temporary impairments?**
- 3.1 No, a reporting entity is not permitted to change assertions and reverse previously recognized SSAP No. 43R other-than-temporary impairments. Although an entity may elect to hold a security due to a favorable change in the security’s fair value, once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold for purposes of initially recognizing an other-than-temporary impairment, that assertion shall not change as long as the entity continues to hold the security.
- 3.2 Reporting entities that have recognized an other-than-temporary impairment on a SSAP No. 43R security in a manner corresponding with an assertion on the intent to sell or the lack of the intent and ability to hold, for which a subsequent other-than-temporary impairment has been identified, shall recognize a realized loss for the difference between the current amortized cost (reflecting the previously recognized SSAP No. 43R other-than-temporary impairment) and the fair value at the balance sheet date of the subsequent impairment. Thus, bifurcation of impairment between interest and non-interest related declines is not permitted for securities in which an other-than-temporary impairment was previously recognized on the basis that the reporting entity had the intent to sell, or lacked the intent and ability to hold, regardless if the entity has subsequently decided to hold the security.
- 3.3 Reporting entities shall reclassify a security as one for which there is an intent to sell, or for which there is not an intent or ability to hold, regardless if a bifurcated other-than-temporary impairment had previously been recognized, as soon as the entity realizes that they can no longer support a previous assertion to hold the security. In making such reclassifications, if the security is impaired, the difference between the amortized cost (reflecting the initial non-interest other-than-temporary impairment recognized) and fair value at the balance sheet date of the reclassification shall be recognized as a realized loss, with fair value reflecting the new amortized cost basis. Once such a reclassification occurs, and the security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until it is no longer held by the reporting entity.
- 4. Question – How do the regulators intend the phrase “intent and ability to hold” as used within SSAP No. 43R to be interpreted?**
- 4.1 SSAP No. 43R paragraph 29 states in part “...the entity shall assess whether it has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.”

The Guidance in this Statement is Effective January 1, 2025

- 4.2 The intent of this language within SSAP No. 43R is focused on ensuring that, as of the balance sheet date, after considering the entity’s own cash or working capital requirements and contractual or regulatory obligations and all known facts and circumstances related to the impaired security, the entity does not have the intention of selling the impaired security and has the current intent and ability to hold the security to recovery. Due to impairment bifurcation provisions provided within SSAP No. 43R, and the amortized cost measurement method generally permitted for asset-backed securities, the assessment of “intent and ability” is intended to be a high standard. Despite the intent of paragraph 29, it is identified that information not known to the entity may become known in subsequent periods and/or facts and circumstances related to an individual holding or group of holdings may change thereby influencing the entity’s subsequent determination of intent and ability with respect to a security or securities.
- 4.3 If a reporting entity asserts that it has the intent and ability to hold a security, or group of securities, until recovery of the amortized cost, but sells or otherwise disposes the security or securities prior to such recovery, the reporting entity shall be prepared to justify this departure from their original assertion to examiners and auditors. SSAP No. 43R purposely does not identify specific circumstances in which a change in assertion would be justifiable, but requires judgment from management, examiners and auditors on whether future assertions warrant closer review.
- 4.4 Delaying recognition of other-than-temporary impairments is a cause of serious concern by the regulators, and entities that habitually delay such recognition through false assertions on the “intent and ability to hold” may face increased scrutiny and regulatory action by their domiciliary state. It is imperative that a reporting entity recognize the full other-than-temporary impairment as soon as the entity realizes that they will no longer be able to hold the security until recovery of the amortized cost basis. Greater scrutiny shall be placed on securities sold or otherwise disposed shortly after a financial statement reporting date if such securities had been excluded from the full other-than-temporary impairment recognition on the basis of the reporting entity’s intent and ability to hold.
- 4.5 As noted in paragraph 3.3 of this question and answer guide, once a security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until the security is no longer held by the reporting entity.
- 5. Question** – How do contractual prepayments affect the determination of credit losses?
- 5.1 Paragraph 30 of SSAP No. 43R states that "A decrease in cash flows expected to be collected on asset-backed security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of present value of cash flows expected to be collected." Paragraph 18 states that "Asset-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions. Reporting entities may utilize the prospective adjustment method for all asset-backed securities that are reported with NAIC designations that are of high credit at the of acquisition by the reporting entity."
- 6. Question** – Are the disclosure requirements within paragraphs 44.f. and 44.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosure?
- 6.1 The disclosures should reflect the year-to-date other-than-temporary impairments. The “fair value” reported within the disclosure is intended to reflect the fair value at the date of

The Guidance in this Statement is Effective January 1, 2025

the other-than-temporary impairment and shall not be updated due to the fluctuations identified at subsequent reporting dates. If a security has more than one other-than-temporary impairment identified during a fiscal reporting year, the security shall be included on the disclosure listing separately for each identified other-than-temporary impairment. Notation shall be included in the disclosure identifying the other-than-temporary impairments that were recognized for each respective reporting period.

7. Question – If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?

7.1 The guidance in **paragraph 38** of SSAP No. 43R indicates that a reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the asset-backed security. This guidance is explicit that the reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security.

7.2 As provided in paragraph 2.2 of this Q&A, if the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Reporting entities subject to the requirements of AVR and IMR should allocate the impairment loss between AVR and IMR accordingly.

8. Question – Do ABS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the "final" NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. Question – The NAIC Designation process for ABS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

9.1 In accordance with *INT 06-07: Definition of Phrase "Other Than Temporary,"* reporting entities are expected to "consider all available evidence" at their disposal, including the information that can be derived from the NAIC designation.

The Guidance in this Statement is Effective January 1, 2025

10. Question - For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

Bond Definition - Revisions to other SSAPs Adopted Aug. 13, 2023

SSAP Reference Revisions

1. ***SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments***

SSAP No. 26R: Updated reference in paragraph 18. No revisions needed to paragraph 7 or 15.

SSAP No. 43R: Adjusted title references in paragraphs 7 and 15.

2. ***SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve***

SSAP No. 43R: Adjusted reference in paragraph 3.

3. ***SSAP No. 15—Debt and Holding Company Obligations***

SSAP No. 26R: No revisions needed to paragraph 13.

4. ***SSAP No. 21—Other Admitted Assets***

SSAP No. 26R: Updated footnote 1 and clarified guidance for GICs in paragraphs 14-17.

SSAP No. 43R: Adjusted reference in paragraph 6 to asset-backed securities that qualify.

5. ***SSAP No. 36—Troubled Debt Restructuring***

SSAP No. 26R: No revisions needed to paragraph 29.

6. ***SSAP No. 43R—Asset-Backed Securities***

SSAP No. 26R: Updated disclosure reference that link to SSAP No. 26R, paragraph 51.m.

7. ***SSAP No. 86—Derivatives***

SSAP No. 26R and SSAP No. 43R: Updated the guidance for structured notes in paragraph 5.g. and replication (synthetic assets) in Footnote 5.

8. ***SSAP No. 95—Nonmonetary Transactions***

SSAP No. 26R: No revisions needed to paragraph 6.

SSAP No. 43R: Adjusted the citation to SSAP No. 43R in paragraph 6.

9. ***SSAP No. 100R—Fair Value***

SSAP No. 26R: No revisions needed to Footnote 3.

The Revisions Shown in this Document are Effective January 1, 2025

10. SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

SSAP No. 43R: Revisions remove the direct pointer of beneficial interests as in scope of SSAP No. 43R and incorporate guidance for reporting under the applicable SSAP in paragraphs 2, 11 and 18.

11. INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities

SSAP No. 26: No revisions needed.

12. 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)

SSAP No. 26: Updated paragraph reference in paragraph 5.a.

13. 06-07: Definition of Phrase “Other Than Temporary”

SSAP No. 26: No revisions needed.

SSAP No. 43R: Updated reference in list of applicable SSAPs.

14. INT 07-01: Application of the Scientific (Constant Yield) Method in Situations of Reverse Amortization

SSAP No. 26R: Removed quoted guidance.

SSAP No. 43R: Updated reference in list of applicable SSAPs and removed quoted guidance.

15. INT 19-02: Freddie Mac Single Security Initiative

SSAP No. 26R: No revisions needed.

SSAP No. 43R: Updated reference in list of applicable SSAPs and in paragraph 1.

16. INT 22-01: Freddie Mac When Issued K-Deal (WI Trust) Certificates

SSAP No. 43R: Updated reference in list of applicable SSAPs and in paragraph 1.

Summary of SAP Guidance Revisions

17. SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

Revisions preclude asset-backed securities that are in scope of SSAP No. 43R from being reported as cash equivalents or short-term investments. The revisions also identify items captured on Schedule BA as non-bond securities. (These revisions also add reference to working capital finance investments, but that is not new guidance, but was not explicitly stated in SSAP No. 2R.)

The Revisions Shown in this Document are Effective January 1, 2025

Summary of SAP Reference Revisions:

SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

7. Regardless of maturity date, related party or affiliated investments that would be in scope of *SSAP No. 26R—Bonds*, *SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities*, or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply,¹ unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

- a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.
- b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent, regardless of the updated maturity date, and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.
- c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments, regardless of the maturity date of the reacquired investment.)

Footnote 1: Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated/reacquired maturity date is within one year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

15. Regardless of maturity date, related party or affiliated investments in scope of *SSAP No. 26R—Bonds*, *SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities*, or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply,^{2, 3} unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

- a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial “less than one year” timeframe.
- b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period.

The Revisions Shown in this Document are Effective January 1, 2025

Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

- c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

Footnote 2: Reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

Footnote 3: Short-term investments subject to the provisions of paragraph 15 are not permitted to be subsequently reported as cash equivalents, even if the updated/reacquired maturity date is within 90 days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

Disclosures

18. The following disclosures shall be made for short-term investments in the financial statements:
 - a. Fair values in accordance with *SSAP No. 100R—Fair Value*;
 - b. Concentrations of credit risk in accordance with *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures*;
 - c. Basis at which the short-term investments are stated.
 - d. The items in the scope of this statement are also subject to the annual audited disclosures in *SSAP No. 26R—Bonds*, paragraph ~~39.f.30.f.~~
 - e. Identification of cash equivalents (excluding money market mutual funds as detailed in paragraph 8) and short-term investments (or substantially similar investments), which remain on the same reporting schedule for more than one consecutive reporting period. This disclosure is satisfied by use of a designated code in the investment schedules of the statutory financial statements.

SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve

3. The IMR and AVR shall be calculated and reported as determined per guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for ~~loan-backed and structured~~ asset-backed securities), or if not specifically stated in the respective SSAP, in accordance with the NAIC *Annual Statement Instructions* for Life and Accident and Health Insurance Companies.

SSAP No. 15—Debt and Holding Company Obligations - (No Changes)

13. Convertible debt securities and convertible preferred stock with beneficial conversion features are to be valued according to the appropriate statutory accounting statement; *SSAP No. 26R—Bonds* or *SSAP No. 32R—Preferred Stock*.

The Revisions Shown in this Document are Effective January 1, 2025

SSAP No. 21R—Other Admitted Assets

Collateral Loans

4. Collateral loans are unconditional obligations¹ for the payment of money secured by the pledge of an investment² and meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities [that qualify as issuer creditor obligations and SSAP No. 43—Asset-Backed Securities includes securities that qualify as asset-backed securities under the bond definition.](#) ~~(as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments.~~ Investments captured in SSAP No. 26R [or SSAP No. 43R](#) that are also secured with collateral shall continue to be captured within scope of ~~SSAP No. 26R~~ [those statements](#).

Footnote 2: Investment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities*.

6. A reporting entity that acquires (directly or indirectly) structured settlement payment rights³ through a factoring company, excluding securitizations [that qualify as asset-backed securities captured in scope of SSAP No. 43R](#), shall report the acquisition as follows:

- a. Period-certain (non-life contingent) structured settlement income streams shall be reported as other long-term invested assets⁴, and are admitted assets if the rights to the future payments from a structured settlement have been legally acquired in accordance with all state and federal requirements. If the structured settlement has not met all legal requirements, including the court-approved transfer from the original recipient, then the reporting entity shall recognize the appropriate excise tax obligation and the structured settlement shall be nonadmitted.
- b. Life-contingent structured settlement income streams shall be reported as other long-term invested assets on Schedule BA and shall be nonadmitted. (Nonadmittance is required regardless if the right to future payments has been legally transferred.)

Footnote 3: This guidance is specific to acquired structured settlement income streams (legal right to receive future payments from a structured settlement) and does not capture accounting and reporting guidance for the acquisition of any insurance product (e.g., life settlement, annuities, etc.).

Footnote 4: Reporting entities that hold qualifying structured settlement payment rights shall report the security on Schedule BA either as an “any other class of asset” or as a “fixed or variable interest rate investment with underlying characteristics of other fixed income instruments” if the structured settlement payment right qualifies for reporting within that reporting line (e.g., NAIC designation).

Guaranteed Investment Contracts

14. Guaranteed Investment Contracts (GICs) purchased for investment purposes meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement. [This includes an investment in a GIC payment stream which can be created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream.](#)

[15. GICs acquired in a security structure that qualify under the bond definition as an issuer obligation or asset-backed security shall follow the accounting guidance within SSAP No. 26R or SSAP No. 43R as applicable.](#)

The Revisions Shown in this Document are Effective January 1, 2025

~~15.16.~~ Purchases of GIC investments that do not meet the definition of a security, but for which all contractual rights and ownership of the GIC result in an investment similar to a corporate bond, shall be reported at amortized cost and accounted for in accordance with the guidance in SSAP No. 26R—Bonds included on Schedule BA: Other Long-Term Invested Assets. If, in accordance with SSAP No. 5R, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

~~16.— An investment in a GIC payment stream is created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream. These investments shall be reported as other long-term invested assets and shall be carried at amortized cost.~~

~~17.— If, in accordance with SSAP No. 5R, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a capital loss. The new cost basis shall not be changed for subsequent recoveries in fair value.~~

SSAP No. 36—Troubled Debt Restructuring (No Changes)

29. Although FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91) was rejected in SSAP No. 26R—Bonds, this statement is consistent with paragraph 14 of FAS No. 91.

SSAP No. 43R—Asset-Backed Securities**Disclosures**

51. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed and structured securities shall be made in the financial statements. Regardless of the allowances within paragraph 63 of the Preamble, the disclosures in paragraph 51.f., 51.g. and 51.h. of this statement are required in separate, distinct notes to the financial statements:

- m. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraphs ~~39.e., 30.e., 39.f., 30.f.~~ and ~~39.g., 30.g.~~

SSAP No. 86—Derivatives

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.

- g. ~~“Structured Notes” in scope of this statement are instruments defined in SSAP No. 26R—Bonds (often in the form of debt instruments),~~ in scope of this statement are instruments in which the amount of principal repayment or return of original investment is contingent on an underlying variable/interest⁵ where the terms of the agreement make it possible that the reporting entity could lose all or a portion of its original investment amount (for other than failure of the issuer to pay the contractual amounts due). ~~Structured notes that are~~

The Revisions Shown in this Document are Effective January 1, 2025

~~“mMortgage-referenced securities”~~ issued by a government sponsored enterprise in the form of credit-risk transfers where an issue security is tied to a referenced pool are mortgages are captured in *SSAP No. 43R—Loan-Backed and Structured Securities*.

Footnote 5 - ~~The “structured notes” captured within scope of this statement is specific to instruments in which the terms of the agreement make it possible that the reporting entity could lose all or a portion of its original investment amount (for other than failure of the issuer to pay the contractual amounts due).~~ These instruments incorporate both the credit risk of the issuer, as well as the risk of an underlying variable/interest (such as the performance of an equity index or the performance of an unrelated security). Securities that are labeled “principal-protected notes” are captured within scope of this statement if the “principal protection” involves only a portion of the principal and/or if the principal protection requires the reporting entity to meet qualifying conditions in order to be safeguarded from the risk of loss from the underlying linked variable. Securities that may have changing positive interest rates in response to a linked underlying variable or the passage of time, or that have the potential for increased principal repayments in response to a linked variable (such as U.S. Treasury Inflation-Indexed Securities) that do not incorporate risk of original investment/principal loss (outside of default risk) are not captured as structured notes in scope of this statement. A replication (synthetic asset) transaction addressed within this standard may reproduce the investment characteristics of an otherwise permissible investment that would not meet the principles-based bond definition (e.g., is distinct from a “structured note” as defined here); the admissibility, classification and measurement of a replication (synthetic asset) transaction are not preemptively determined by the principles-based bond definition, and should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within this standard.

SSAP No. 95—Nonmonetary Transactions

6. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be determined in accordance with *SSAP No. 26R—Bonds*, *SSAP No. 30R—Unaffiliated Common Stock*, *SSAP No. 32R—Preferred Stock*, *SSAP No. 37—Mortgage Loans*, *SSAP No. 39—Reverse Mortgages*, *SSAP No. 40R—Real Estate Investments*, *SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities*, *SSAP No. 90—Impairment or Disposal of Real Estate Investments* or other applicable statements. The guidance provided in *SSAP No. 25* shall be followed in accounting for nonreciprocal transactions with affiliates and other related parties as defined in that statement.

SSAP No. 100—Fair Value (No Changes)

48. For each class of assets and liabilities measured and reported³ at fair value or NAV in the statement of financial position after initial recognition. The reporting entity shall determine appropriate classes of assets and liabilities in accordance with the annual statement instructions.

Footnote 3: The term “reported” is intended to reflect the measurement basis for which the asset or liability is classified within its underlying SSAP. For example, a bond with an NAIC designation of 2 is considered an amortized cost measurement and is not included within this disclosure even if the amortized cost and fair value measurement are the same. An example of when such a situation may occur includes a bond that is written down as other-than-temporarily impaired as of the date of financial position. The amortized cost of the bond after the recognition of the other-than-temporary impairment may agree to fair value, but under *SSAP No. 26R* this security is considered to still be reported at amortized cost.

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

2. This statement focuses on the issues of accounting for transfers and servicing of financial assets and extinguishments of liabilities. This statement establishes statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements, repurchase financing and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside

The Revisions Shown in this Document are Effective January 1, 2025

the scope of this statement. Transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*. Additionally, retained beneficial interests from the sale of ~~loan-backed or structured~~ asset-backed securities are to be accounted for in accordance with the statutory accounting statement that is applicable to the investment retained ~~with~~ SSAP No. 43R—Loan-Backed and Structured Securities, Revised. If the retained security does not qualify for reporting as a bond under the bond definition detailed in SSAP No. 26R, it shall be reported as a debt security that does not qualify as a bond in scope of SSAP No. 21R—Other Admitted Assets.

11. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 8), the transferor (seller) shall:
- a. Derecognize the transferred financial assets;
 - b. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained (including a transferor's beneficial interest in the transferred financial assets) and liabilities incurred¹ in the sale (paragraphs 60 and 62-66).
 - c. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be determined per the guidance in the SSAP for the specific type of investment ~~(e.g., SSAP No. 43R for loan-backed and structured securities)~~, or if not specifically stated in the related SSAP, in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

Footnote 1: Some assets that might be obtained and liabilities that might be incurred include cash, put or call options that are held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations) and swaps (for example, provisions that convert interest rates from fixed to variable).

Financial Assets Subject to Prepayment

18. Financial assets, except for instruments that are within the scope of *SSAP No. 86—Derivatives*, that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be assessed in accordance with the bond definition captured in SSAP No. 26R—Bonds to determine appropriate accounting and reporting. Securities that do not qualify for bond reporting shall be captured as debt securities that do not qualify as bonds in scope of SSAP No. 21R—Other Admitted Assets. ~~subsequently measured in accordance with the statutory accounting statement that is applicable to the financial asset. subsequently measured like investments in debt securities and loan-backed and structured securities in accordance with SSAP No. 43R. Examples of such financial assets include, but are not limited to, interest-only strips, other beneficial interests, loans, or other receivables.~~

INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities

- No Change – Applies to SSAP No. 26R.

The Revisions Shown in this Document are Effective January 1, 2025

INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)

5. For Issue 1, the Working Group came to a consensus that reporting entities should account and report for investments in CAPCO's consistent with the agreement structure within the guidance provided below:

- h. Investment in a debt instrument of a CAPCO shall be reported as a bond in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 26R, paragraph ~~20~~¹¹.
- i. Investment in an equity interest of a CAPCO shall be reported as common stock and reported at fair value as stated in SSAP No. 30R, paragraph 8.
- j. Investment in preferred stock interest of a CAPCO shall be reported as preferred stock in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 32R, paragraphs 19-22.
- k. Investment in a Joint Venture, Partnership and Limited Liability Company (LLC) shall be reported in accordance with SSAP No. 48, paragraphs 5-6. The reported value of the investment shall be decreased in proportion to the premium tax credits utilized.
- l. The tax credits shall be recognized as a reduction of the tax liabilities as they are utilized. Tax credits received are not to be included in investment income.

INT 06-07: Definition of Phrase "Other Than Temporary"

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*

INT 07-01: Application of the Scientific (Constant) Yield Method in Situations of Reverse Amortizations

1. SSAP No. 26R and SSAP No. 43R both reference the use of the scientific or constant yield method of amortization of a premium or a discount. ~~SSAP No. 26R—Bonds provides the following (bolding added for emphasis):~~

~~Amortized Cost~~

~~9. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).~~

~~SSAP No. 43R—Loan-Backed and Structured Securities provides the following (bolding added for emphasis):~~

The Revisions Shown in this Document are Effective January 1, 2025

Amortization

~~8.— Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.~~

Collection of All Contractual Cashflows is Probable

~~12.— The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all contractual cash flows is not probable and paragraphs 20-24 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.~~

~~13.— Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled-affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.~~

~~14.— Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at any time during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.~~

~~15.— The prospective approach recognizes, through the recalculation of the **effective yield** to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.~~

~~16.— The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated **effective yield** will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or~~

The Revisions Shown in this Document are Effective January 1, 2025

~~decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.~~

2. This interpretation~~The following~~ identifies three situations where, using a constant yield methodology for determining amortization or accretion, changes in amortized value move in the opposite direction of what is expected. That is, if a security is purchased at a premium, the constant yield methodology will, in certain cases, cause the amortized value to move to a discount during the life of the security. Conversely, if the security were purchased at a discount, the constant yield methodology will, in certain cases, cause the amortized value to move to a premium during the life of the security.

INT 19-02: Freddie Mac Single Security Initiative

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*
 1. This interpretation has been issued to provide a limited-scope exception to the exchange and conversion guidance in *SSAP No. 26R—Bonds* as well as prescribe guidance in *SSAP No. 43R—Asset-Backed ~~Loan-Backed and Structured~~ Securities* (SSAP No. 43R) for instruments converted in accordance with the Freddie Mac Single Security Initiative. Under this initiative, reporting entities will be permitted to exchange “45-day securities” for “55-day securities” without any material change to the securities, or to the loans that back the securities. (With the exchange, there would be a 10-day delay in payment cycle.)

INT 22-01: Freddie Mac When Issued K-Deal (WI Trust) Certificates

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*
 1. This interpretation is to address questions on the accounting and reporting for Freddie Mac “When-Issued K-Deal (WI Trust) Certificates” (WI Program). Ultimately, the question is whether the structure should be initially captured in scope of *SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities* or as a forward contract in scope of *SSAP No. 86—Derivatives*.

Summary of SAP Guidance Revisions:***SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments*****Cash Equivalents**

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities¹ of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 8, and cash pooling, as detailed in paragraph 9. Regardless of maturity date, the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

¹ Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

The Revisions Shown in this Document are Effective January 1, 2025

- a. Asset-backed securities captured in scope of SSAP No. 43R.
- b. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.
- ~~a.c. , d~~ Derivative instruments in scope of SSAP No. 86 or SSAP No. 108 shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB.
- d. Working capital finance investments in scope of SSAP No. 105R.
- ~~b.c.~~ Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

Short-Term Investments

14. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition. Short-term investments can include, but are not limited to bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Short-term investments shall not include investments specifically classified as cash equivalents as defined in this statement, certificates of deposit, or derivatives. Regardless of maturity date, the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

- a. Asset-backed securities captured in scope of SSAP No. 43R.
- b. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.
- ~~c. , d~~ Derivative instruments in scope of SSAP No. 86 or SSAP No. 108 shall not be reported as short term investments and shall be reported as derivatives on Schedule DB.
- ~~a.d.~~ Working capital finance investments in scope of SSAP No. 105R.

Issue: Conceptual Framework – Updates

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In December 2021, the Financial Accounting Standards Board (FASB) issued two new chapters of its conceptual framework. The conceptual framework is a body of interrelated objectives and fundamentals that provides the FASB with a foundation for setting standards and concepts to consider when it resolves questions or develops/modifies accounting and reporting guidance.

It is important to note that the Statements of Financial Accounting Concepts are not authoritative and do not establish new or change existing U.S. GAAP. Per the FASB chair, these concepts are “a tool for the Board to use in setting standards that improve the understandability of information entities provide to existing and potential investors, lenders, donors, and other resource providers.”

This agenda item reviews and summarizes each of the two newly issued concept chapters and reviews their potential impact on statutory accounting. Again, while the conceptual framework statements are not authoritative, they are the guiding principles for standard setting and these new updates have superseded chapters currently referenced in the *Accounting Practices and Procedures Manual (AP&P Manual)*. In addition, and most notably, in the case of one of these chapters, FASB changed certain key fundamental definitions, specifically the definition of an asset and a liability, which have historically been mirrored by statutory accounting.

Update 1:

FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* introduced updated definitions of certain key elements used in financial reporting – the definition of an asset and liability. The chapter states that assets and liabilities have conceptual and definitional primacy because assets and liabilities (and changes in those elements) are foundational to all the other items reported in the financial statements. To correctly identify and represent an asset or liability is the beginning basis for all financial reporting and due to their importance, updates to both financial statement elements have been adopted. A summary of each, comparing the historical and current definitions, is provided below:

Changes regarding the definition of an ASSET:

- **Historical definition:** a probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events.
- **Historical Characteristics: Three essential characteristics:**
 1. it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows,
 2. a particular enterprise can obtain the benefit and control others' access to it, and
 3. the transaction or other event giving rise to the enterprise's right to or control of the benefit has already occurred.

- **New Definition:** a present right of an entity to an economic benefit.
- **Current Characteristics: Two essential characteristics:**
 1. it is a present right, and
 2. the right is to an economic benefit.

The combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. For clarity, an "economic benefit" represents services or other items of economic value and generally result in net cash inflows to the entity.

Commentary regarding definitional changes:

The current definition of an asset no longer includes the term *probable* or the phrases *future economic benefit* and *past transactions or events*. The FASB concluded that the term *probable* has historically been misunderstood as implying that a future benefit must be probable to a certain threshold before the definition of an asset was met. Thus, if the probability of a future benefit was low, an asset could not be recognized. FASB also struck the phrase *future economic benefit* as this phrase often was interpreted that the asset must represent a certain future economic benefit (such as eventual cash inflows), however with this update, FASB clarified that the asset represents the rights to the benefit, not the actual benefit itself – nor the probability of realization.

Finally, FASB struck the phrase as the result of *past transactions or events*. It was concluded that if the asset represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Changes regarding **the definition of a LIABILITY:**

- **Historical definition:** are [certain or] probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.
- **Historical Characteristics: Three essential characteristics:**
 1. it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand,
 2. the duty or responsibility obligates a particular enterprise, leaving it little or no discretion to avoid the future sacrifice, and
 3. the transaction or other event obligating the enterprise has already happened.
- **New Definition:** a present obligation of an entity to transfer an economic benefit.
- **Current Characteristics: Two essential characteristics:**
 1. it is a present obligation, and
 2. the obligation requires an entity to transfer or otherwise provide economic benefit to others. (For the purposes of this characteristic, *transfer* is typically used to describe obligations to pay cash or convey assets, while the term *provide* is used to describe obligations to provide services or stand by to do so).

Commentary regarding definitional changes:

The current definition of a liability no longer includes the term *probable* or the phrase *in the future as a result of past transactions or events*. The FASB concluded that the term *probable* has historically been understood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with “present obligation”), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. It concluded that while certain businesses pose risk of future events occurring that will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

However, FASB also stated situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

FASB also struck the phrase as the result of *past transactions or events*. It was concluded that if the liability represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Update 2:

FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* identifies factors that the FASB will consider when deciding **how** items should be displayed on the financial statements. Chapter 7 describes the information to be included in the financial statements and how appropriate presentation can contribute to the objective of financial reporting – to communicate financial information about an entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources (goods and services) to the entity. These decisions typically involve buying or selling of goods/services or holding equity and debt instruments as well as providing or settling loans or other forms of credit. This chapter articulates that the financial statements meet a “general purpose” and should not be considered to meet all purposes for possible users – and thus a common set of conceptual standards is appropriate.

Chapter 7 also describes the importance of financial statement notes, or supplementary information so that financial statement users are provided with a more complete picture of an entity’s accounting policy or any particular unique circumstance or event. In terms of general reporting, the conceptual statement relays that a distinction between nonhomogeneous items should be depicted in the financial statements with different reporting line items and subtotals and that the information should be provided based on recognition and measurement standards. In essence, reporting should be sufficiently aggregated, but not aggregated to a level in which the information is too consolidated for general use and understanding. Once reported, then any significant accounting policy or circumstance would further be defined with accompanying notes.

The chapter broadly states that to meet the objectives of financial reporting, line items should be distinct based on the information being provided – as the information should distinguish between various types of transactions/events

and should assist users in their estimates in the amounts and timing of future cash flows or the entity's ability to provide other economic value. The financial statements should depict the results of different types of transactions, including changes in events or other circumstances that may vary the frequency or predictability of performance based on many items, including changes in economic conditions.

In summary, while Chapter 7 does supersede sections of *Statement of Financial Accounting Concept 5*, it did not result in fundamental changes to the principal concepts of financial reporting. The chapter articulates the need for complete financial reporting, describes the interconnectedness of a 'complete set of financial statements' and relays the importance of these documents as the information in the financial statements is the primary (and typically the sole) source for analyzing current and potential future performance of an organization and its ability to meet its long-term financial objectives. At a high level, the chapter discusses what information should broadly be categorized as revenues, expenses, gains, and losses and to the extent equity is impacted by operations as well as changes in owners' equity through investments or distributions.

In terms of the impact to statutory accounting, the updated concepts in this chapter are not expected to modify current guidance, other than to update references to superseded accounting concepts.

Existing Authoritative Literature:

NAIC Staff Note – the Preamble contains reference to certain concept statements in footnotes 2 and 4 and have been bolded below for ease of identification. It is important to note that while these footnotes currently reference superseded conceptual statements, the conceptual statements noted do not represent adopted guidance - they are noted as reference for overarching guiding principles regarding financial reporting.

Preamble

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles ("SAP" or "statutory basis") and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts One, Two, Five, and Six*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

Statutory Accounting Principles Preamble and Statement of Concepts FN4

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

43. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3. Revisions to guidance in accordance with additions or revisions to the NAIC statutory hierarchy should be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*.

44. Because of developments such as new legislation or the evolution of a new type of business transaction, there sometimes are no established statutory accounting principles for reporting a specific transaction or event. In those instances, it might be possible to report the event or transaction on the basis of its substance by selecting a statutory accounting principle that appears appropriate when applied in a manner similar to the application of an established statutory principle to an analogous transaction or event. In the absence of a SSAP or another source of established statutory accounting principles, the preparer, regulator or auditor of statutory financial statements may consider other accounting literature, depending on its relevance in the circumstances. Other accounting literature includes the Statutory Accounting Principles Statement of Concepts and GAAP reference material and accounting literature identified in Level 5. The appropriateness of other accounting literature depends on its relevance to the particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, the Statutory Accounting Principles Statement of Concepts would be more authoritative than any other sources of accounting literature. Similarly, FASB Concepts Statements would normally be more influential than other sources of nonauthoritative GAAP pronouncements.

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

SSAP No. 4—Assets and Nonadmitted Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of an **Asset**. Relevant items have been bolded below for ease of identification.

2. For purposes of statutory accounting, **an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.** These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

SSAP No. 5—Liabilities, Contingencies and Impairments of Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of a **Liability**. Relevant items have been bolded below for ease of identification.

2. A liability is defined as certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

FN1 - FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): While slightly different, the updated FASB asset & liability definitions closely align with IFRS definitions. While IFRS retains the phrase “as a result of past events,” it also explicitly retains the term “control,” which is now implicit with the FASB updates. The elimination of the explicit term “control” was a deliberate action of the FASB as they noted that the notion of control has been historically misunderstood (control is to the right that gives rise to the economic benefit rather than to the economic benefits themselves). For reference *IFRS Chapter 4 – The Elements of Financial Statements*, defines an **asset** as a present economic resource controlled by the entity as a result of past events; with the economic resource representing a right that has the potential to produce economic benefits. Additionally, the chapter defines a **liability** as a present obligation of an entity to transfer an economic resource as a result of past events.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*, as illustrated below and in the issue papers, to incorporate updates from *Chapter 4, Elements of Financial Statements* and *Chapter 7, Presentation of the FASB’s Conceptual Framework for Financial Reporting*.

Proposed edits to the Preamble: proposed modifications reflect updates for superseded FASB Financial Accounting Concepts.

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles (“SAP” or “statutory basis”) and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC’s guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts ~~One, Two, Five, and Six~~Eight*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

*Statutory Accounting Principles Preamble and Statement of Concepts **FN4***

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements ~~One, Two, Five and Six~~Eight to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

Proposed edits SSAP No. 4—Assets and Nonadmitted Assets: proposed modifications reflect an updated definition of the term **Asset** – to match the newly issued definition in FASB Statement of Financial Accounting Concepts No. 8

2. For purposes of statutory accounting, an asset shall be defined as: [a present right of an entity to an economic benefit](#), ~~probable **FN1** future economic benefits obtained or controlled by a particular entity as a result of past transactions or events~~. An asset has ~~two~~three essential characteristics: (a) it [is a present right](#) ~~embodies a probable future benefit that involves a capacity, singly or in combination with other assets,~~

~~to contribute directly or indirectly to future net cash inflows, and (b) the right is to an economic benefit, a particular entity can obtain the benefit and control others' access to it **FN1 FN2**, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.~~ These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - *FASB Statement of Financial Accounting Concepts No. 86, Elements of Financial Statements*, states that the combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

Relevant Literature

9. This statement incorporates the definition of an asset from ~~adopts~~ *FASB Statement of Financial Accounting Concepts No. 86, Chapter 4, Elements of Financial Statements*, paragraphs E16-E18~~25-33~~.

Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets, as illustrated in the agenda item and in the draft issue papers, to incorporate updates from Chapter 4, Elements of Financial Statements and Chapter 7, Presentation of the FASB’s Conceptual Framework for Financial Reporting.

Staff Review Completed by: Jim Pinegar– NAIC Staff, January – 2022; Robin Marcotte, NAIC Staff, December – 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to the Preamble, SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets to incorporate 1) updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* which identifies factors to consider when deciding how items should be displayed on the financial statements, and 2) Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definitions of an asset and a liability. The Working Group also exposed two draft issue papers for historical documentation of these SAP clarifications.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to the Preamble and SSAP No. 4—Assets and Nonadmitted Assets. The revisions incorporate updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation*, which identifies factors to consider when deciding how items should be displayed on the financial statements, and Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definition of an asset. In addition, the Working Group adopted *Issue Paper No. 166—Updates to the Definition of an Asset*, which documents the revisions to SSAP No. 4.

Additionally, on August 10, 2022, the Working Group re-exposed the proposed revisions and draft issue paper related to the definition change of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets. This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. These revisions are also shown above under the SSAP No. 5R heading.

On December 13, 2022, the Working Group re-exposed the proposed revisions and draft *Issue Paper No. 16X—Updates to the Definition of a Liability* related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. NAIC staff were directed to collaborate with interested parties on proposed clarifying language.

On March 22, 2023, the Working Group exposed additional revisions to *Issue Paper No. 16X—Updates to the Definition of a Liability* related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. The revisions to: 1) add an additional footnote to the definition of a liability in *SSAP No. 5R* which defers to more topic specific contradictory guidance 2) revise the relevant literature section of *SSAP No. 5R* to note the modification and 3) note the additional exposure action in the Issue Paper paragraph 18.

These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of an asset and a liability in *SSAP No. 4* and *SSAP No. 5R*. For GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic specific liabilities guidance was incorporated to address variations from the definition of a liability. Examples of existing SAP variations from the definition of a liability include but are not limited to:

- a. *SSAP No. 7—Asset Valuation Reserves and Interest Maintenance Reserves – AVR and IMR* establish liabilities for regulatory objectives.
- b. *SSAP No. 62R—Property and Casualty Reinsurance* – contains the provision for reinsurance liability guidance which results in a liability that is a regulatory valuation allowance for overdue and slow paying reinsurance and also enforces Credit for Reinsurance (Model No. 785) collateral requirements.
- c. *SSAP No. 92—Post Retirement Benefits Other than Pensions*, provides liability recognition, which adopts several GAAP standards with modifications.

The additional exposed revisions to *SSAP No. 168* and *SSAP No. 5R* are reflected in the Issue Paper and also shown below.

- **Exposed revisions – Topic Specific Footnote** - This language is proposed for incorporation as a footnote to the liability definition in *SSAP No. 5R* and its related and *Issue Paper No. 16X—Updates to the Definition of a Liability*.

New Footnote to paragraph 3 of *SSAP No. 5R*:

The guidance in this Statement regarding the definition of a liability is applicable unless another authoritative statement of statutory accounting principles (SSAP) provides more topic specific contradictory guidance. In such cases the topic specific guidance shall apply.

- Exposed revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* and *Issue Paper No. 16X—Updates to the Definition of a Liability* (New language shaded):

Relevant Literature

39. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 and

~~paragraphs 35 and 36 of FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements.~~ FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification ASU 2013-04, *Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14. This statement incorporates the definition of a liability from FASB Statement of Financial Accounting Concepts No. 8, Chapter 4, Elements of Financial Statements, paragraphs E37 and E38 with modification reflected in this Statement regarding topic specific guidance.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated in *Issue Paper No. 168—Updates to the Definition of a Liability*, to the Preamble and SSAP No. 5R which revises the definition of a liability under statutory accounting.

and

Statutory Issue Paper No. 168

Updates to the Definition of a Liability

STATUS

Finalized August 13, 2023

Original and Current Authoritative Guidance: SSAP No. 5R

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. This issue paper documents the SAP clarification revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. The intent of the revisions is to align current statutory accounting guidance, specifically the definition of a “liability,” with the term utilized by the Financial Accounting Standards Board (FASB).

SUMMARY CONCLUSION

2. The statutory accounting principle clarifications to SSAP No. 5R (illustrated in Exhibit A), reflect that for the purposes of statutory accounting, a liability shall be defined as: a present obligation of an entity to transfer an economic benefit. A liability has two essential characteristics: (1) it is a present obligation, and (2) the obligation requires an entity to transfer or otherwise provide economic benefit to others. For the purposes of these characteristics, *transfer* is typically used to describe obligations to pay cash or convey assets, while the term *provide* is used to describe obligations to provide services or stand by to do so. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity’s financial statements when incurred.

3. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies. (The definition and recognition requirements of loss contingencies under SSAP No. 5R are not proposed to be revised and will continue as statutory accounting guidance.)

DISCUSSION

4. In December 2021, FASB issued *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which introduced updated definitions of certain key elements used in financial reporting – most notably updating the fundamental definition of a liability. Through the FASB’s adoption of Concept Statement No. 8, the original Concept Statement No. 6 has been superseded. As statutory accounting currently reflects FASB’s historical definition, this issue paper is to review the prior concept definition (currently utilized by statutory accounting) and compare it to FASB’s updated concept definition and assess whether the revised concept definition shall be reflected in statutory accounting.

5. FASB concept statements do not reflect authoritative U.S. GAAP guidance. Rather concept statements are intended to set forth objectives and fundamental concepts that will be the basis for development of financial accounting and reporting guidance. The term “liability” is not captured or defined in the FASB Accounting Standards Codification (which is the source of authoritative U.S. GAAP.) Furthermore, although the concept statement is intended to be used as a guide in establishing authoritative U.S. GAAP, the FASB is not restricted to the concepts when developing guidance, and the FASB may issue U.S. GAAP which may be inconsistent with the

objectives and fundamental concepts set forth in Concept Statements. A change in a FASB Concept Statement does not 1) require a change in existing U.S. GAAP, 2) amend, modify or interpret the Accounting Standards Codification, or 3) justify either changing existing generally accepted accounting and reporting practices or interpreting the Accounting Standards Codification based on personal interpretations of the objectives and concepts in the concepts statement.

6. Under the prior FASB concept statement, which was reflected in SSAP No. 5R, a liability was defined as a probable future sacrifice of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transactions or events. In addition, the historical definition possessed three essential characteristics in that (1) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (2) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (3) the transaction or other event obligating the entity has already happened.

7. Pursuant to the prior concept statement, and as incorporated in SSAP No. 5R, *probable*, as referenced both in the definition and essential characters, was used in a usual general meaning, rather than in a specific accounting or technical sense and referred to which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

8. With the new FASB conceptual framework chapter, a liability is now defined as a present obligation of an entity to transfer an economic benefit. In addition, the current definition has two essential characteristics in that the liability is (1) a present obligation, and (2) the obligation requires an entity to transfer or otherwise provide economic benefits to others.

9. The updated liability definition from Concept Statement No. 8 no longer includes the term *probable* or the phrase *in the future* and *as a result of past transactions or events*. The FASB concluded that the term *probable* has historically been misunderstood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with “present obligation”), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. The FASB concluded that while certain businesses have a risk that a future event will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

10. However, the FASB also stated that situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SSAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

11. The FASB also struck the phrase *as the result of past transactions or events*. With this action, the FASB clarified that if the liability represents a *present obligation*, by default, the obligation must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

12. When reviewing the substance of the revisions, the FASB concluded that the updated definition resulted in a clearer and more precise definition. Furthermore, while it did not fundamentally change the historical concept of a liability, the revised definition potentially expands the population of liabilities to include certain obligations to issue or potentially issue an entity's own shares rather than settle an obligation exclusively with assets. In essence, clarifying that instruments with characteristics of both liabilities and equity may in fact be classified as liabilities in certain situations.

13. In general, the FASB did not anticipate that the liability definition revisions would result in any material changes in instrument reclassification (e.g., items now being classified as a liability when previously they were not considered liabilities). Again, FASB Concept Statements are not authoritative and thus the guidance in any specific standard will still be utilized for instrument measurement and classification. For statutory accounting purposes, the updated definition should be viewed similarly, that is it does not change fundamental concepts, change current practices, or introduce a new, original or a modified accounting principle. The revisions to the definition of a liability clarify the definitional language and do not modify the original intent of SSAP No. 5R and thus the changes are deemed to be a statutory accounting principle clarification.

14. The remaining concepts and guidance articulated in SSAP No. 5R (e.g., contingencies, impairments, guarantees, etc.) were not proposed for revision and thus are not further discussed in this issue paper.

Actions of the Statutory Accounting Principles (E) Working Group

15. During the 2022 Spring National Meeting, the Working Group exposed this issue paper for public comment.

16. During the 2022 Summer National Meeting, the Working Group re-exposed this issue paper for public comment.

17. At the 2022 Fall National Meeting, the Working Group re-exposed this issue paper related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. NAIC staff were directed to collaborate with interested parties on proposed clarifying language.

18. At the 2023 Spring National Meeting, the Working Group exposed this issue paper with revisions to: 1) add an additional footnote to the definition of a liability in SSAP No. 5R which defers to more topic specific contradictory guidance and 2) revise the relevant literature section of SSAP No. 5R to note the modification. These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of an asset and a liability in SSAP No. 4 and SSAP No. 5R. For U.S. GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic specific liabilities guidance was incorporated to address variations from the definition of a liability. Examples of existing SAP variations from the definition of a liability include but are not limited to:

- a. *SSAP No. 7—Asset Valuation Reserves and Interest Maintenance Reserves – AVR and IMR* establish liabilities for regulatory objectives.
- b. *SSAP No. 62R—Property and Casualty Reinsurance* – contains the provision for reinsurance liability guidance which results in a liability that is a regulatory valuation allowance for overdue and slow paying reinsurance and also enforces credit for reinsurance (*Credit for Reinsurance Model Law (#785)*) collateral requirements.

- c. *SSAP No. 92—Post Retirement Benefits Other than Pensions*, provides liability recognition, which adopts several U.S. GAAP standards with modifications.

19. At the 2023 Summer National Meeting, the Working Group adopted the exposed revisions to SSAP No. 5R as documented in this issue paper and adopted this issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

20. Relevant excerpts of SSAP No. 5R, paragraphs 2-3 regarding the definition of a liability accounting are as follows:

2. A liability is defined as certain or probable¹ future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable¹ future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

Generally Accepted Accounting Principles

21. Relevant paragraphs from *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* have been included below:

Liabilities

E37. A liability is a present obligation of an entity to transfer an economic benefit

Characteristics of Liabilities

E38. A liability has the following two essential characteristics: a. It is a present obligation. b. The obligation requires an entity to transfer or otherwise provide economic benefits to others.²

E39. Liabilities commonly have features that help identify them. For example, many liabilities require the obligated entity to pay cash to one or more identified other entities. Liabilities may not require an entity to pay cash but may require the entity to convey other assets, provide services, or transfer other economic benefits or to be ready to do so. Liabilities are based on a foundation of legal rights and duties.

¹ *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

² This chapter continues the practice of describing liabilities as an obligation either to transfer or to provide economic benefits. For example, the term transfer has typically been used to describe obligations to pay cash or convey assets, and the term provide has typically been used to describe obligations to perform services or stand ready to do so.

E40. Entities routinely incur liabilities in exchange transactions to acquire the funds, goods, and services they need to operate. For example, borrowing cash (acquiring funds) obligates an entity to repay the amount borrowed, acquiring assets on credit obligates an entity to pay for the assets, and selling products with a warranty or guarantee obligates an entity to either pay cash or repair or replace any products that prove defective. Often, obligations incurred in exchange transactions are contractual based on written or oral agreements to pay cash or to provide goods or services to specified or determinable entities on demand at specified or determinable dates or on the occurrence of specified events.

Present obligation

E41. A liability requires that an entity be obligated to perform or act in a certain manner. In most cases it is apparent that liabilities are legally enforceable. Legally enforceable obligations include those arising from binding contracts, agreements, rules, statutes, or other requirements that would be upheld by a judicial system or government. Judicial systems vary in type and form, and the term judicial systems includes any such system that would enforce laws, statutes, and regulations. In the context most relevant to financial reporting, an obligation is any condition that binds an entity to some performance or action. In a financial reporting context, something is binding on an entity if it requires performance. Performance is what the entity is required to do to satisfy the obligation.

E42. Many obligations that qualify as liabilities stem from contracts and other agreements that are enforceable by courts or from governmental actions that have the force of law. Agreements, contracts, or statutory requirements often will specify or imply how an obligation was incurred and when and how the obligation is to be settled. For example, borrowing and lease agreements specify the amount of charges and the dates when the payments are due. The absence of a specified maturity date or event to require settlement may cast doubt that an obligation exists.

E43. Liabilities necessarily involve other parties, society, or law. The identity of the other party or recipient need not be known to the obligated entity before the time of settlement. An obligation of an entity to itself cannot be a liability. For example, in the absence of external requirements an entity is not obligated to repair the roof of its building or maintain its plant and equipment. Although those actions may be wise business moves, the entity may forgo or defer such activities because there is no present obligation to perform the activity.

E44. Certain obligations require nonreciprocal transfers from an entity to one or more other entities. Such obligations include taxes imposed by governments, donations pledged to charitable entities, and cash dividends declared but not yet paid.

E45. To have a liability, an entity must have a present obligation, that is, the obligation exists at the financial statement date. The settlement date of the liability may occur in the future, but the obligation must be present at the financial statement date. Transactions or other events or circumstances expected to occur in the future do not in and of themselves give rise to obligations today.

E46. An intention to purchase an item, for example, an asset, does not in and of itself create a liability. However, a contractual obligation that requires an entity to pay more than the fair value of the asset at the transaction date may create a liability before the asset is received, reflecting what the entity might have to pay to undo the unfavorable contract.

E47. Business risks result from the conduct of an entity's business activities. A business risk is not a present obligation, though at some point in the future an event may occur that creates a present obligation. Some businesses have the potential of carrying out activities and creating present obligations as a result of those activities. However, no present obligation exists even if it is virtually certain that an obligating event will occur, though at present no such event has occurred. The essence of distinguishing business risks from liabilities is determining the point in time when an entity has a present obligation.

E48. Some business risks result from an entity's transactions, for example, selling goods in overseas markets might expose an entity to the risk of future cash flow fluctuations because of changes in foreign exchange rates. Other business risks result from an entity's operating environment, for example, operating in a highly specialized industry might expose an entity to the risk that it will be unable to attract sufficient skilled staff to sustain its operating activities. Those risks are not liabilities.

E49. To be presently obligated, an entity must be bound, either legally or in some other way, to perform or act in a certain way. Most liabilities are legally enforceable, including those arising from contracts, agreements, rules, and statutes. An entity also can become obligated by other means that would be expected to be upheld by a judicial process. However, the existence of a present obligation may be less clear in those circumstances.

E50. Some liabilities rest on constructive obligations, including some that arise in exchange transactions. A constructive obligation is created, inferred, or construed from the facts in a particular situation rather than contracted by agreement with another entity or imposed by government. An entity may become constructively obligated through customary business practice. In the normal course of business, an entity conducting certain activities may not create a clear contractual obligation but may nonetheless cause the entity to become presently obligated. For example, policies and practices for sales returns and those for warranties in the absence of a contract may create a present obligation because the pattern of behavior may create an enforceable claim for performance that would be upheld in the ultimate conclusion of a judiciary process.

E51. An entity's past behavior also may give rise to a present obligation. Repeated engagement in a certain behavior may obligate the entity to perform or act in a certain way on the basis of that pattern of behavior. For example, the entity may create a constructive obligation to employees for vacation pay or year-end bonuses by paying them every year even though it is not contractually bound to do so and has not announced a policy to do so.

22. The most notable changes regarding the definition of a liability included removal of the term *probable* and the phrase *as a result of past transactions or events*. Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

BC4.11. The definitions of both an asset and a liability in Concepts Statement 6 include the term *probable* and the phrases *future economic benefit* and *past transactions or events*. The term *probable* in the definitions in Concepts Statement 6 has been misunderstood as implying that a future economic benefit or a future sacrifice of economic benefit must be probable to a certain threshold before the definition of an asset or a liability is met. In other words, if the probability of future economic benefit is low, the asset definition is not met under that interpretation. A similar interpretation could be made for liabilities. The footnotes to the Concepts Statement 6 definition of assets and liabilities also were not helpful in clarifying the application of the term *probable* as used in the definitions of assets and liabilities. Accordingly, the Board decided to eliminate that term from the definitions of both assets and liabilities.

BC4.12. The term *future* in the definitions in Concepts Statement 6 focused on identifying a future flow of economic benefits to demonstrate that an asset exists or identifying a future transfer of economic benefits to demonstrate that a liability exists. The definitions in Concepts Statement 6 were often misunderstood as meaning that the asset (liability) is the ultimate future inflow (outflow). For example, in the instance of trade receivables, the definition in Concepts Statement 6 could be misunderstood to indicate that the asset is the successful collection of the receivable in the future. When applied appropriately, however, the definition would conclude that the asset is the present right to collection. Similar misunderstandings occurred in applying the liability definition. As a result, the Board concluded that a focus on the term *present* would appropriately shift the focus from identifying a future occurrence. Therefore, the Board decided to include the term *present right* to demonstrate that an asset exists and emphasize the term *present obligation* to demonstrate that a liability exists.

BC4.13. The definitions of assets and liabilities in Concepts Statement 6 both include the phrase past transactions or events. The Board concluded that if an entity has a present right or a present obligation, one can reasonably assume that it was obtained from some past transaction or event. Therefore, that phrase is considered redundant and has been eliminated from the definitions.

23. The other significant change to the definition of a liability included changing *future sacrifices* to a *present obligation*. Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

BC4.25. The term present obligation is included in the definition of a liability, both in this chapter and in Concepts Statement 6. Because the application of the liability definition under Concepts Statement 6 did not give sufficient emphasis to the term present obligation, the definition in this chapter more appropriately emphasizes that term. Assessing whether a present obligation exists is the primary criterion in the definition of a liability in this chapter. The primacy of the term present obligation is made more evident through the removal of many of the problematic terms in the definition of a liability in Concepts Statement 6, as discussed in paragraphs BC4.11–BC4.13.

BC4.26. Almost always, the existence of a present obligation will be apparent. Most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. However, situations lacking clear legal or contractual evidence of a present obligation pose particular challenges that may make it difficult to discern whether a present obligation exists.

BC4.27. Determining when a present obligation exists has caused confusion with the existence of business risks. Business risks result from the nature of the business and where, when, and how an entity conducts its business. While certain businesses pose risks of future events occurring that will cause a transfer of economic benefits, the Board decided that the risks themselves are not present obligations because exposure to a potential negative consequence does not constitute a present obligation. Rather than viewing all business risks as liabilities, the Board decided that an entity has a present obligation only after an event occurs that demonstrates that the inherent business risk has created a present obligation. Thus, distinguishing when a business risk makes an entity presently obligated requires analysis of the facts and circumstances at the standards level.

BC4.28. Determining the existence of a present obligation is particularly challenging in evaluating constructive obligations. Interpreting constructive obligations too narrowly will tend to exclude significant actual obligations of an entity, while interpreting them too broadly will effectively nullify the definition by including items that lack an essential characteristic of liabilities.

BC4.29. Given that constructive obligations and other noncontractual obligations are created by circumstance rather than explicit agreement, it can be unclear whether a present obligation exists. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the Board decided that specific facts and circumstances at the standards level must be assessed to determine whether an entity has created a constructive obligation.

Effective Date

24. As issue papers are not authoritative and are not represented in the Statutory Hierarchy (see Section V of the Preamble), the consideration and adoption of this issue paper will not have any impact on the SAP clarifications adopted to SSAP No. 5R by the Working Group on August 13, 2023.

EXHIBIT A – SAP Clarification Revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets the other paragraphs of SSAP No. 5R are unchanged.

Statement of Statutory Accounting Principles No. 5 - Revised**Liabilities, Contingencies and Impairments of Assets**

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION**Liabilities**

2. A liability is defined as a present obligation of an entity to transfer an economic benefit. ~~certain or probable FNI future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).~~

3. A liability¹ has ~~three~~ two essential characteristics: (a) it is a present obligation ~~embodies a present duty or responsibility to one or more other entities that entails settlement by probable FNI future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, and~~ (b) the obligation required an entity to transfer or otherwise provide economic benefit to others ~~duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and~~ (c) ~~the transaction or other event obligating the entity has already happened~~. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

¹ The guidance in this statement regarding the definition of a liability is applicable unless another authoritative statement of statutory accounting principles (SSAP) provides more topic specific contradictory guidance. In such cases the topic specific guidance shall apply.

~~FN1—FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

**Statutory Accounting Principles (E) Working Group
 Maintenance Agenda Submission Form
 Form A**

Issue: Negative IMR

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item has been developed to discuss the interest maintenance reserve (IMR) within statutory accounting, specifically the current guidance for the nonadmittance of disallowed negative IMR. Although the statutory accounting guidance has been in place for several years, the rising interest rate environment has created an increased likelihood for reporting entities to move to a negative IMR position. This agenda item intends to provide information on the background of IMR, current accounting guidance, recent discussions of the Life Actuarial (A) Task Force and some broad financial results from year-end 2021 and interim 2022 financial statements. The intent is to provide this information to facilitate Working Group discussion.

The following provides a high-level overview of the use of the terms positive IMR and negative IMR for entities filing the Life, Accident & Health / Fraternal annual statement blank:

- A positive IMR means that the net realized interest related gains which are amortized in the IMR calculation are greater than net realized interest related losses which are being amortized in the IMR calculation. A positive IMR is reported as a statutory liability and amortized to income over time.
- A negative IMR means that net realized interest related losses which are amortized in the IMR calculation are greater than net realized interested related gains which are amortized in the IMR calculation. A disallowed negative IMR is reported as a nonadmitted asset and amortized to income as a loss over time.

As IMR occurs in the general and separate account, there are specific guidelines in determining whether the IMR reflects a net disallowed negative or position in the annual statement instructions. These are on page 5.

A letter from the American Council of Life Insurers (ACLI) dated Oct. 31, 2022, raised concerns with existing statutory accounting requirements on the nonadmittance of disallowed negative IMR noting negative ramifications for insurers. Key summarized positions from this ACLI letter include:

- In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.
- Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity’s financial health or its policyholders.

Background of IMR

The IMR was first effective in statutory accounting in 1992 and requires that a realized fixed income gains or losses attributable to changes in interest rates (excluding gains/losses that are credit related), be amortized into income over the remaining term to maturity of the fixed-income investments (and related hedging programs) sold rather than being reflected in income immediately.

Minutes, including adopted materials – in the Blue Book (Life Statement), from the 2002 4th Quarter NAIC Proceedings discussing IMR are provided below. Please note the last section that includes “Future Directions” which identifies recognition of negative IMR as a major area of effort.

Description and other components of IMR from the Blue Book, captured in the 2002 4th Quarter NAIC Proceedings, provides the following definition and other details: (*Only key excerpts included.*)

The Interest Maintenance Reserve (IMR): captures for all types of fixed income investments, all of the realized capital gains and losses which result from changes in the overall level of interest rates as they occur. Once captured, these capital gains or losses are amortized into income over the remaining life (period to maturity) of the investments sold. Realized gains and losses on derivative investments, which alter the interest rate characteristics of assets/liabilities, also are allocated to the IMR and are to be amortized into income over the life of the associated assets/liabilities. Note: certain significant unusual transactions may require immediate recognition of any realized capital gains or losses, as described in a later section. This reserve is not subject to any maximum.

VII. IMR MINIMUMS/MAXIMUMS: A. Minimums: **The IMR can be negative for any line of business as long as the aggregate IMR for the Company is not less than zero. Any otherwise negative IMR value is carried over to subsequent years.** B. Maximums: There is no maximum of the IMR

VIII. BACKGROUND/PERSPECTIVE: To insure solvency of a company, its assets should be invested so that the company has a very high probability of paying its contractual liabilities when they become due. In order to assess whether a company is able to fulfill its obligations, it must present its liabilities and assets on a financially integrated basis. Since the accounting practices prescribed for the life insurance annual statement are an important element in this discipline, it is imperative that the accounting practices be consistent for assets and liabilities. If they are inconsistent, then the annual statement will not reveal whether assets exceed liabilities; more importantly, neither regulators nor management can determine the risk of insolvency for the company.

The Valuation Actuary’s Opinion includes a statement that the assets backing the liabilities make adequate provision for the company’s liabilities. That is, the Actuary must look beyond the statutory valuation formulas and satisfy himself that the cash flows generated by the assets will probably be sufficient to discharge the liabilities. Prior to the AVR and IMR, there were many circumstances under which the statutory formula valuation methods gave rise to inappropriate results. Some examples were:

- Changes in values due to interest rate swings were recognized inconsistently on the asset and liability sides of the balance sheet. Liabilities are valued using interest rates fixed at issue while some assets may be valued using current interest rates through trading activity.
- When the assets are poorly matched to the liabilities, a significant adverse swing in the interest rates will reduce financial strength and could lead to insolvency even though the balance sheet value of the assets exceeds the balance sheet value of the liabilities. Using long term assets to back demand liabilities is dangerous if there is a significant upswing in interest rates. In addition, individual insurance premiums are received and invested for many years after the issue date on which the reserve interest rate is determined, creating a potential for inadequate yields that is not reflected in standard accounting procedures.

- The potential for future asset losses was not well reflected in the balance sheet or earnings statement.

It is desirable that the valuation of the assets and liabilities be made as consistent as possible to 1) minimize the instances where, in order to render a clean opinion, the actuary must establish extra reserves due to interest rate gains or potential for defaults and 2) increase the likelihood that assets supporting liabilities are sufficient even in the absence of an Actuarial Opinion. The development of an AVR and IMR will correct many of these deficiencies in consistency.

XII. AVR AND IMR BUILT ON AND COMPLEMENT EXISTING VALUATION PRACTICES: The existing framework of asset and liability valuation practices, as augmented by the NAIC Model Standard Valuation Law, played a key role in designing the AVR and IMR, including:

A. Reserve valuation standards should contain a provision for future losses. Although it is well understood that in cash flow testing provision must be made for future asset losses, it may not be as well understood that historically the minimum valuation standards implicitly contained such a provision.

B. Interest assumptions in reserve valuation generally recognize the potential for mismatch. Dynamic valuation rates are lower for ordinary life than for guaranteed investment contracts, for example, because the mismatch is almost inevitable on the former. In addition, it is required in other regulations, and in the NAIC Model Standard Valuation Law, that cash flow testing should be used and may result in the adoption of lower than the dynamic valuation rates if mismatch exists. Hence, with the one exception noted in section (c), there is no need for the IMR reserves to make provision for the risk of mismatch.

C. Asset valuations for fixed interest securities usually reflect the outlook at the time of purchase of an asset. In particular, bond amortization tends to reflect the yields available at time of purchase and the expected cash flow. Liabilities are established at the same time, and the interest rate assumptions on them are those appropriate to the outlook at that time. **But if securities are traded, a new amortization schedule is established that may be based on an entirely different yield environment, which may not be consistent with the liabilities that have been established. Using the IMR to absorb trading gains is desirable and appropriate to eliminate this subsequently created mismatch.**

D. Equities present special valuation problems. Common stocks are valued at market rather than amortized value; hence they require different treatment. Real estate and similar investments, although usually valued at depreciated value, require special consideration because of the great likelihood of major changes in yield and yield expectation after purchase.

XXII. RESERVE MAXIMUM AND MINIMUM LEVELS: No maximum is placed on the Interest Maintenance Reserve. The aggregate minimum value for the IMR for the Company is zero. The IMR may be negative for any Line of Business as long as the aggregate for all lines equals zero. Provision is made in the accounting rules that if an aggregate negative IMR is developed in the absence of the zero minimum, that negative value is carried over to subsequent years.

The basic rationale for the IMR would conclude that neither a maximum nor a minimum is appropriate. If the liability values are based on the assumption that the assets were purchased at about the same time as the liabilities were established, then there should be no bounds to the reserve which corrects for departures from that assumption; if a company has to set up a large reserve because of trading gains, it is in no worse position than if it had held the original assets. As for negative values of the IMR, the same rationale applies. However, the concept of a negative reserve in the aggregate has not been adopted.

XXVIII. EXCESSIVE WITHDRAWALS:

- A. Background: Major book-value withdrawals or increases in policy loans can occur at a time of elevated interest rates. If these withdrawals or increases are far in excess of the withdrawals provided for in the company's reserving and cash flow testing, and **if asset sales at this point are, in effect, forced sales to fund liabilities that are no longer on the books, the allocation of a negative amount to the IMR is not correct.**

A company may also experience a "run on the bank" due to adverse publicity. This could occur even during a period of low interest rates, and the sale of assets to meet a run would conceivably produce gains. It is appropriate to register the gains immediately.

If the withdrawals were scheduled payments under a GIC, then there is a presumption that any gains or losses that might occur at the time of withdrawal should be added to the IMR since the gains or losses would be spurious if the company has followed a policy of matching its assets to its liabilities. Note that many of the situations where an upsurge in withdrawal activity generates real losses arise when a company has a severe mismatch between its assets and its liabilities. Such losses can be present even in the absence of any realized gains or losses. The primary protection as to the adequacy of reserves in these circumstances is the requirement for an actuary's opinion.

- B. IMR Exclusions: All realized interest-related gains or losses which arise from the sale of investments required to meet "Excess Withdrawal Activity" as defined below will be excluded from the IMR and will be reflected in net income.

STANDARDS FOR ACTUARIAL RESERVES WITH AN IMR AND AN AVR

LXX. IMR RESERVE STANDARD The Interest Maintenance Reserve is a true actuarial reserve, and actuaries should use the assets supporting the Interest Maintenance Reserve when opining that the assets supporting the company's reserves make adequate provision for the company's obligations. **In the case of a negative IMR, the actuarial opinion should include an explicit statement that the impact of the negative IMR on reserve adequacy has been considered and that the reserves after deduction of the negative IMR still make adequate provision for the liabilities.**

LXXI. GENERAL EXPLANATION The IMR is designed to work with minimum statutory reserves based on formulas contained in laws or regulations. Where, for example, the valuation rate is based on the interest rate conditions prevailing in the year of deposit, the assets supporting the liabilities will be consistent with the liability assumptions. Disposal of the assets during a period of declining interest rates will produce interest-related gains, but these gains will be needed to support the liabilities that are still valued at the interest rate levels prevailing at time of deposit. Thus, it is appropriate in the case of positive IMR to treat the IMR as an additional reserve requirement above and beyond formula minimums.

In cash-flow-testing actuaries take future cash flows into account from existing assets. In an example such as described above, existing assets may well have been purchased at rates below those prevailing at the time reserves were established. The positive IMR that has been built up has captured the gains and not allowed them to be available for distribution. The IMR is recognized as part of the reserves available to meet future obligation cash flows.

Thus from either point of view a positive IMR is treated as a true actuarial reserve. The same arguments should apply equally well in the case of a negative IMR, but some concern has been expressed that in this case the net reserves are in effect lower than statutory formulas minimums, and therefore special considerations are required.

FUTURE DIRECTIONS

In late 2002, the interested persons (as its name had become) considered refinements of the AVR/IMR for the next several years, from that vantage point, some of the major areas of effort appear to be as follows:

1. **There should be recognition of negative values of the IMR. The group had long recognized that the philosophical basis for the IMR supports negative values of the reserve as well as positive. There is a need to have investment return match the liabilities associated with the investment; and a need to remove the incentive for a company to make investment decisions based on the short term balance sheet effect; and these needs exist also on the negative side of the IMR.**

No doubt there are concerns that a negative reserve of this type could somehow lead to an unsound condition, so there has been appended to this report a discussion entitled “Why Are Negative Values For the IMR Necessary?” It also seems as though there should be additional safeguards in the case of a negative IMR. Rather than put arbitrary limits on the amount of the negative reserve, however, consideration is being given to an actuary’s statement that an asset adequacy analysis has been carried out that demonstrates the soundness of the reserves.

(Staff Note: The NAIC library does not have a record of the report noted in the above paragraph.)

Current Accounting Guidance

The statutory accounting guidance for IMR (and the Asset Valuation Reserve – AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within that SSAP is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the Annual Statement Instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance within the Annual Statement Instructions.

The guidance in the Annual Statement instructions provides information on the net IMR balance, which takes into consideration both the positive and negative balances in the general and separate accounts. As detailed, disallowed negative IMR is reported so that it is a direct reduction to surplus on the Summary of Operations, page 4, line 41 change in nonadmitted assets:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned “Interest Maintenance Reserve” on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the “Change in Disallowed Interest Maintenance Reserve” in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

The Statutory Accounting Statement of Concepts in the Preamble to the AP&P provides the following on Recognition:

Recognition

35. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

36. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other

than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

Life Actuarial (A) Task Force 2022 Guidance

The Life Actuarial (A) Task Force considered comments from the ACLI that the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR could result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency). The Task Force identified that VM-20 Section 7.D.7.b notes that "...the company shall use a reasonable approach to allocate any portion of the total company balance that is disallowable under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)." Question 22 of the AAA's Asset Adequacy Practice Note (Attachment 2) states that "... a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis." However, Question 22 also notes a 2012 survey data that showed varying practices across companies, including some companies that allocated negative IMR.

On Nov. 17, 2022, in order to assist state regulators in achieving uniform outcomes for year-end 2022, the Task Force exposed guidance until November 30, 2022:

Recommendation In order to assist state regulators in achieving uniform outcomes for year-end 2022, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, "appropriate", and "reasonable". Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the nonadmitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, if a company was granted a permitted practice to admit negative IMR as an asset, the company should allocate the formerly non-admitted portion of negative IMR, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset. This recommended guidance is for year-end 2022, to address the current uncertainty and concerns with the "double-counting" of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. Refinement of this guidance may be considered beyond year-end 2022.

The Oct. 31, 2022 ACLI Letter also identified the following references to IMR in the valuation manual and Risk-Based Capital Calculations:

Regulation	Use	IMR references
Actuarial Opinion and Memorandum Regulation (VM-30)	Asset adequacy analysis for annual reserve opinion	An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis.
Life principle-based reserves (VM-20)	Calculation of deterministic reserve	Calculate the deterministic reserve equal to the actuarial present value of benefits, expenses, and related amounts less the actuarial present value of premiums and

		related amounts, less the positive or negative pre-tax IMR balance at the valuation date allocated to the group of one or more policies being modeled
Life principle-based reserves (VM-20)	Calculation of stochastic reserve	Add the CTE amount (D) plus any additional amount (E) less the positive or negative pre-tax IMR balance allocated to the group of one or more policies being modeled
Variable annuities principle-based reserves (VM-21)	Reserving for variable annuities	The IMR shall be handled consistently with the treatment in the company's cash-flow testing, and the amounts should be adjusted to a pre-tax basis.
C3 Phase 1 (Interest rate risk capital)	RBC for fixed annuities and single premium life	IMR assets should be used for C3 modeling.

Assessment of 2020-2022 IMR Balances:

Note – The following amounts reflect the general account IMR Reserve balance. (This is the amount shown as a liability and shows the decrease in the positive IMR reported since 2020.) This detail does not show the disallowed negative IMR reported as an asset and nonadmitted. Also, information on the separate account IMR, which is a factor in determining in disallowed negative IMR, will not be known until the year-end financial statements are filed (March 1, 2023).

	GA 2022 – Q3	GA 2022 – Q2	GA 2022 – Q1	GA YE – 2021	GA YE – 2020
Aggregate IMR	27,601,001,445	31,859,274,989	37,697,176,149	40,598,068,038	35,229,578,726
Change from Prior	(4,258,273,544)	(5,837,901,160)	(2,900,891,889)	5,368,489,312	
% Change	(13.4%)	(21.5%)	(7.1%)	15.2%	

Review of GA IMR Reserve Decrease:

- From the first quarter (Q1) to second quarter (Q2), 25 companies had decreases in the IMR reserve balance over \$50M totaling \$4,717,657,986, representing 80% of the overall change. 13 of these companies had decreases of IMR over \$100M, totaling \$3,959,569,339, representing 68% of the change. Four of these companies had decreases of IMR over \$400M. One of these companies reported a zero IMR liability and reported a disallowed IMR on the asset page of approx. \$570M.
- From the first quarter (Q1) to second quarter (Q2), 49 companies increased their prior reported positive IMR by \$61,390,564. From the second quarter (Q2) to third quarter (Q3), 56 companies increase their prior reported positive IMR by \$60,316,403
- From the second quarter (Q2) to third quarter (Q3), 16 companies had decreases in the IMR reserve balance over \$50M totaling \$3,161,570,362, representing 74% of the change. 8 of these companies had decreases of IMR over \$100M, totaling \$2,580,832,015, representing 60% of the change. All of these companies were still in a net positive IMR position.
- For the 30 companies that reflected the largest decline in reported IMR between the first to second quarter and then the second to third quarter, the following key details are noted.
 - From the first (Q1) to second quarter (Q2), the top 30 companies reflected a decrease in \$4,923,166,733, which is 84% of the total decrease.
 - From the second (Q2) to third quarter (Q3), the top 30 companies reflected a decrease in \$3,642,088,165, which is 85.5% of the total decrease.
 - 19 companies were noted as being in the population for both periods. 29 of the 30 companies reported a net positive IMR in the third quarter. One company reported a zero IMR in Q3.
- For the 15 companies that had the largest declines between the first quarter (Q1) to second quarter (Q2), eight of those companies also had the largest declines from second quarter (Q2) to third quarter (Q3).
- A limited number of companies are reporting a negative IMR on the liabilities side. Seven companies reported a net negative IMR balance in the third quarter (Q3) for a total of 11,031,998. One company made up \$10.5M of the aggregate balance and this company initially went negative in the second quarter (Q2). Six companies reported a net negative IMR balance for Q2 for a total of \$9,815,594. (The other companies

with negative IMR were immaterial amounts.) *(Under the guidance in the A/S instructions, these companies should stop at zero and report the negative as disallowed nonadmitted asset.)*

Review of Disallowed IMR:

Although the assessment of the liability balance shows the decrease in positive IMR, it no longer tracks the decline for companies that go negative, as the reserve balance on the liability page should stop at zero. (This info may be identifiable from the IMR schedule, but not within the quarterly financials from a review of the IMR reported on the liability page.) As such, NAIC staff completed a review of the data to identify the companies that moved to a zero balance (from a prior positive balance) at year-end 2021 or in the 2022 quarters:

Companies that moved from a positive IMR (liability) to a zero balance:

- Initially went to zero in 2022 – Q3: 20 companies
- Initially went to zero in 2022 – Q2: 20 companies
- Initially went to zero in 2022 – Q1: 11 companies
- Initially went to zero YE 2021 – 20 companies (This is a comparison to YE 2020.)

For these 71 companies, NAIC staff has completed a manual review to the 2022 third quarter financial statements to determine if a disallowed IMR was reported as an aggregate write-in on the asset page. For these companies, 60 were identified with a disallowed IMR for a total of \$1 Billion as of the third quarter 2022.

SSAP Authoritative Guidance:

- *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*
- Life Annual Statement Instructions

(Guidance included as part of discussion.)

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Nov. 17, 2022, Discussion by Life Actuarial (A) Task Force as discussed above.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

None

Convergence with International Financial Reporting Standards (IFRS): NA

Recommendation:

NAIC staff recommend that the Working Group include this item on their maintenance agenda as a New SAP Concept for discussion to assess the current guidance for disallowed negative IMR. NAIC staff recommend that at the Working Group's conclusion, documentation of the discussion, and resulting decisions, be captured for historical purposes in an Issue Paper.

Staff Review Completed by: Julie Gann - NAIC Staff, November 2022

Status:

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a New SAP Concept and exposed the agenda item with a request for comments by

industry on potential guardrails and details on unique considerations. The Working Group directed NAIC staff to coordinate with the Life Actuarial (A) Task Force and request regulator-only sessions with industry to receive specific company information.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group directed NAIC staff regarding the consideration of negative interest maintenance reserve (IMR) with an intent to work on both a 2023 solution and a long-term solution as follows:

- a. Draft a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within asset adequacy testing (AAT); 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT (and documentation), as well as any liquidity stress test (LST) considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data (sales of bonds because of excess withdrawals should not use the IMR process); and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.
- b. Draft a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from total adjusted capital (TAC) and the consideration of sensitivity testing with and without negative IMR.
- c. Develop guidance for future Working Group consideration that would allow the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if RBC ratio is less than 300.
- d. Review and provide updates on any annual statement instructions for excess withdraws, related bond gains/losses and non-effective hedge gains/losses to clarify that those related gains/losses are through asset valuation reserve (AVR), not IMR.
- e. Develop accounting and reporting guidance to require the use of a special surplus (account or line) for net negative IMR.
- f. Develop governance related documentation to ensure sales of bonds are reinvested in other bonds.
- g. Develop a footnote disclosure for quarterly and annual reporting.

On April 10, 2023, the Working Group exposed a limited-time, optional INT to allow admittance of net negative (disallowed) IMR in the general account up to 5% of adjusted capital and surplus. The exposed INT proposed restrictions on what is permitted to be captured in the net negative IMR balance eligible for admittance as well as reporting and disclosure requirements.

On June 28, 2023, the Working Group discussed comments received on the exposed INT and directed NAIC staff to incorporate several revisions to the INT. The revised INT reflects the following:

- Requirement for RBC over 300% after adjustment to remove admitted positive goodwill, EDP equipment and operating system software, DTAs and admitted IMR.

- Allowance to admit up to 10% of adjusted capital and surplus – first in the GA, and then if all disallowed IMR in the GA is admitted and the percentage limit is not reached, then to the SA account proportionately between insulated and non-insulated accounts. *(The adjustments are the same that occur for the RBC adjustment and reduce capital and surplus before applying the 10% percentage limit.)*
- There is no exclusion for derivatives losses included in negative IMR if the company can demonstrate historical practice in which realized gains from derivatives were also reversed to IMR (as liabilities) and amortized.
- Inclusion of a new reporting entity attestation.
- Effective date through Dec. 31, 2025, with a note that it could be nullified earlier or extended based on WG actions to establish specific guidance on net negative (disallowed) IMR.
- Application guidance for admitting / recognizing IMR in both the general and separate accounts.

On July 5, 2023, the Working Group exposed via evote the revised INT for a shortened comment period ending July 21, 2023.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed INT 23-01 which provides optional, limited-time guidance, which allows the admittance of net negative (disallowed) interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. INT 23-01 is effective through December 31, 2025.

Current:

*SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve
Annual Statement Instructions*

INT 23-01 Issue

1. The statutory accounting guidance for interest maintenance reserve (IMR) and the asset valuation reserve (AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within *SSAP No. 7* is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the annual statement instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance residing within the annual statement instructions.

2. As detailed in *SSAP No. 7*, paragraph 2, the guidance for IMR and AVR applies to life and accident and health insurance companies and focuses on IMR and AVR liability recognition and distinguishing between IMR and AVR:

2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

3. The IMR guidance in the annual statement instructions provides information on the net balance. A positive IMR represents net interest rate realized gains and is reported as a liability on a dedicated reporting line. A negative disallowed IMR represents net interest rate realized losses and is reported as a miscellaneous other-than-invested write-in asset in the general account and nonadmitted.

4. IMR balances between the general account and separate accounts are separate and distinct. Meaning, a net negative IMR in the general account only represents activity that occurred in the general account that was allocated to IMR. However, the net positive or negative balance of the general account influences how the net positive or negative balances are reported in separate account statements (and vice versa). (A net negative IMR balance in the general account may not be disallowed if there is a covering net positive IMR in the separate account. Negative IMR that is not disallowed is reported as a contra-liability.) The instructions for reporting the net negative and positive balances are detailed in the annual statement instructions:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned “Interest Maintenance Reserve” on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the “Change in Disallowed Interest Maintenance Reserve” in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement. The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

5. In October 2022, the ACLI requested the Statutory Accounting Principles (E) Working Group to reassess the guidance for net negative (disallowed) IMR, with a request to consider admittance of those amounts. The ACLI noted that the nonadmittance of disallowed negative IMR can have adverse negative ramifications for insurers with two key themes:

- a. In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.
- b. Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

6. In considering the request, the Working Group concluded that, for year-end 2022, there would be no change to statutory accounting guidance and deviations from statutory accounting principles would need to be approved via a permitted or prescribed practice. The Working Group then held company-specific educational sessions in January 2023 to receive detailed information regarding negative IMR and received a subsequent comment letter from the ACLI.

7. During the 2023 Spring National Meeting, the Working Group further discussed the topic of negative IMR and directed NAIC staff to proceed with drafting guidance for a 2023 solution and to begin work towards a long-term solution.

INT 23-01 Discussion

8. This interpretation prescribes limited-time, optional, statutory accounting guidance, as an exception to the existing guidance detailed in SSAP No. 7 and the annual statement instructions that requires nonadmittance of net negative (disallowed) IMR as a short-term solution. Specifically, this interpretation impacts the annual statement instruction rules regarding disallowed negative IMR detailed in rules 'b,' 'd' and 'f' shown in paragraph 4.

9. Reporting entities are permitted to admit net negative (disallowed) IMR with the following restrictions:

- a. Reporting entities that qualify pursuant to paragraph 9.b., are permitted to admit net negative (disallowed) IMR up to 10% of the reporting entity's adjusted general account¹ capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner. The capital and surplus shall be adjusted to exclude any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted² net negative (disallowed) IMR.
- b. Reporting entities applying this interpretation are required to have a risk-based capital (RBC) greater than 300% authorized control level (ACL) after an adjustment to total adjusted capital (TAC) that reflects a reduction to remove any net positive goodwill, EDP equipment and operating

¹ The general account capital and surplus includes surplus reflected in the separate account; therefore, an aggregation of general account and separate account surplus is not necessary.

² As the separate account does not have "admitted" assets, broad reference to "admitted net negative (disallowed) IMR" throughout this interpretation includes what is admitted in the general account and what is recognized as an asset in the separate accounts.

system software, net deferred tax assets and admitted net negative (disallowed) IMR. Compliance with this adjusted RBC calculation shall be affirmed for all quarterly and annual financial statements for which net negative (disallowed) IMR is reported as an admitted asset in the general account or recognized as an asset in the separate accounts. Reporting entities shall provide documentation to illustrate compliance with this requirement upon state regulator request. Reporting entities with an adjusted RBC calculation of 300% ACL or lower are not permitted to admit net negative (disallowed) IMR in the general account or recognize IMR assets in the separate accounts.

- c. The net negative (disallowed) IMR permitted for admittance shall not include losses from derivatives that were reported at fair value prior to derivative termination³ unless the reporting entity has historically followed the same process for interest-rate hedging derivatives that were terminated in a gain position. In other words, there is a requirement for documented, historical evidence illustrating that unrealized gains from derivatives reported at fair value were reversed to IMR (as a liability) and amortized as part of IMR. Reporting entities that do not have evidence of this past application are required to remove realized losses from derivatives held at fair value from the net negative (disallowed) IMR balance to determine the amount permitted to be admitted. Reporting entities that begin a new process for the use of hedging derivatives, perhaps with a theoretical process to treat derivative losses and derivative gains similarly, but do not have evidence illustrating the historical treatment of derivative gains through IMR are not permitted to include derivative losses in the net negative (disallowed) IMR permitted to be admitted. This evidence is required separately for the general account, insulated separate account and non-insulated separate account if losses from derivatives previously reported at fair value are currently being allocated to IMR in those accounts.

10. Reporting entities that admit net negative (disallowed) IMR shall follow the following process:

- a. All net negative (disallowed) IMR in the general account shall first be admitted until the capital and surplus percentage limit, as detailed in paragraph 9.a., is reached.
- b. If all general account net negative (disallowed) IMR has been fully admitted, and the reporting entity is still below the paragraph 9.a. capital and surplus limit, then the reporting entity can report net negative (disallowed) IMR as an asset in the separate accounts. Reporting entities that have both insulated and non-insulated separate accounts shall recognize IMR assets proportionately between the insulated and non-insulated statements until the aggregated amount recognized as an admitted asset in the general account and as an asset in the insulated and non-insulated statements reaches the percentage limit of capital and surplus detailed in paragraph 9.a.

11. Reporting entities that admit net negative (disallowed) IMR in the general account shall report the admittance in the balance sheet as follows:

- a. Reporting entities shall report the net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 25) (named as “Admitted Disallowed IMR”) on the asset page. The net negative (disallowed) IMR shall be admitted to the extent permitted per paragraph 9.a., with the remaining net negative (disallowed) IMR balance nonadmitted.

³ Reference to derivative termination throughout this interpretation includes all actions that close out a derivative, including, but not limited to, termination, expiration, settlement, or sale.

- b. Reporting entities shall allocate an amount equal to the general account admitted net negative (disallowed) IMR from unassigned funds to an aggregate write-in for special surplus funds (line 34) (named as “Admitted Disallowed IMR”). Although dividends are contingent on state specific statutes and laws, the intent of this reporting is to provide transparency and preclude the ability for admitted negative IMR to be reported as funds available to dividend.

12. Reporting entities that record net negative (disallowed) IMR as an asset in the separate account shall report the recognition in the balance sheet as follows:

- a. Reporting entities shall report the permitted net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 15) (named as “Recognized Disallowed IMR”) on the asset page.
- b. Reporting entities shall allocate an amount from surplus equal to the asset recognized as disallowed IMR as an aggregate write-in for special surplus funds (line 19) (named as “Recognized Disallowed IMR”) on the liabilities and surplus page.

13. Reporting entities admitting net negative (disallowed) IMR are required to complete the following disclosures in the annual and quarterly financial statements for IMR:

- a. Reporting entities that have allocated gains/losses to IMR from derivatives that were reported at fair value prior to the termination of the derivative shall disclose the unamortized balances in IMR from these allocations separately between gains and losses.
- b. Reporting entities shall complete a note disclosure that details the following:
 - i. Net negative (disallowed) IMR in aggregate and allocated between the general account, insulated separate account and non-insulated account,
 - ii. Amounts of negative IMR admitted in the general account and reported as an asset in the separate account insulated and non-insulated blank,
 - iii. The calculated adjusted capital and surplus per paragraph 9.a., and
 - iv. Percentage of adjusted capital and surplus for which the admitted net negative (disallowed) IMR represents (including what is admitted in the general account and what is recognized as an asset in the separate account).
- c. Reporting entities shall include a note disclosure that attests to the following statements:
 - i. Fixed income investments generating IMR losses comply with the reporting entity’s documented investment or liability management policies,
 - ii. IMR losses for fixed income related derivatives are all in accordance with prudent and documented risk management procedures, in accordance with a reporting entity’s derivative use plans and reflect symmetry with historical treatment in which unrealized derivative gains were reversed to IMR and amortized in lieu of being recognized as realized gains upon derivative termination.

- iii. Any deviation to 13.c.i was either because of a temporary and transitory timing issue or related to a specific event, such as a reinsurance transaction, that mechanically made the cause of IMR losses not reflective of reinvestment activities.
- iv. Asset sales that were generating admitted negative IMR were not compelled by liquidity pressures (e.g., to fund significant cash outflows including, but not limited to excess withdrawals and collateral calls).

INT 23-01 Status

14. The consensuses in this interpretation were adopted on August 13, 2023, to provide limited-time exception guidance to SSAP No. 7 and the annual statement instruction for the reporting of net negative (disallowed) IMR. The provisions within this interpretation are permitted as a short-term solution until December 31, 2025, and will be automatically nullified on January 1, 2026.

15. The effective date of this interpretation may be adjusted (nullified earlier or with an extended effective date timeframe) in response to Statutory Accounting Principles (E) Working Group actions to establish statutory accounting guidance specific to net negative (disallowed) IMR.

16. No further discussion is planned.

Application Guidance for Admitting / Recognizing Net Negative (Disallowed) IMRGeneral Account:

1. Net negative IMR in the general account that exceeds net positive IMR in the separate accounts is considered “disallowed” general account IMR. (Determination of the disallowed IMR in the general account shall be compared against the aggregate IMR balance in all separate accounts.)
2. Net negative disallowed IMR in the general account shall be reported as an aggregate write-in for other-than-invested assets as “Admitted Disallowed IMR” on line 25 of the asset page and nonadmitted. The change in nonadmittance shall be reported on line 41 in the summary of operations.
3. To the extent the reporting entity is permitted to admit net negative disallowed IMR pursuant to the provisions in this interpretation, the reporting entity shall admit the disallowed IMR reported on line 25 of the asset page to the extent permitted, with the change in nonadmittance reflected on line 41 in the summary of operations.
4. Reporting entities shall report an amount equal to the general account admitted net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 34 of the Liabilities, Surplus and Other Funds page) named as “Admitted Disallowed IMR.”
5. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

Separate Account:

6. Net negative IMR in the separate account (aggregated IMR in both insulated and non-insulated separate accounts) that exceeds net positive IMR in the general account is considered “disallowed” separate account IMR. If the aggregate separate account IMR is positive, with a negative IMR in the insulated separate account and positive IMR in non-insulated separate account (or vice versa), then the negative IMR in the insulated separate account is not permitted to be reported as an asset. In those situations, the separate account has an aggregate positive IMR balance.
7. Net negative (disallowed) IMR in the separate account permitted to be recognized as an asset, as the admittance in the general account did not utilize the full percentage of adjusted capital and surplus permitted within this interpretation, shall be proportionately divided between insulated and non-insulated separate accounts if both separate accounts are in a negative position. If the separate account IMR is an aggregate net negative, but only one separate account blank is in a negative position, then only the separate account blank with a net negative position can recognize disallowed IMR as an asset.
8. If negative IMR in the separate account has previously been recognized as a direct charge to surplus, the reporting entity shall recognize an asset as an aggregate write-in for other-than-invested assets as “Recognized Disallowed IMR” on line 15 of the separate account asset page, with an offsetting credit to surplus. This credit to surplus shall reverse the charge previously recognized. This process shall continue in subsequent quarters if additional separate account IMR is permitted as an asset to the extent IMR was previously taken as a direct charge to surplus. Once prior surplus impacts have been fully eliminated, then the entity shall follow the guidance for new net negative (disallowed) IMR as detailed in the following paragraph. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.

9. If the reporting entity enters a net negative (disallowed) IMR position (meaning, there has not been a prior charge to surplus for net negative (disallowed) IMR), then the entity shall recognize the asset as an aggregate write-in for other-than-invested assets as “Disallowed IMR” on line 15 of the separate account balance sheet, with an offsetting credit to IMR (line 3 of the liability page) until the IMR liability equals zero. This process shall continue in subsequent quarters if additional net negative IMR is generated from operations and is permitted as an asset under the provisions of this interpretation. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.
10. Reporting entities shall report an amount equal to the asset recognized reflecting net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 19) (named as “Recognized Disallowed IMR.” This shall be included in each separate account statement (insulated and non-insulated) if net negative disallowed IMR is recognized as an asset in that statement.
11. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

**Statutory Accounting Principles (E) Working Group
 Maintenance Agenda Submission Form
 Form A**

Issue: Additional Updates on ASU 2021-10, Government Assistance

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04: ASU 2021-10, Government Assistance. The revisions incorporate certain disclosures, adopted with modification from ASU 2021-10, to supplement existing disclosures regarding unusual or infrequent items.

This agenda item is to provide additional clarifications to SSAP No. 24, regarding follow-up questions, that NAIC staff received regarding the adoption of the disclosures about government assistance in ASU 2021-10. The primary questions were regarding whether the adoption with modification of the ASU disclosures intended to allow insurers to use the grant and contribution model. If the intent was not to allow for the use of the grant and contribution model, then the question becomes in what situation would these disclosures be required. Because NAIC staff understanding is that the grant and contribution model is not intended to be permitted for statutory accounting, additional modifications to clarify this point have been proposed which reject ASU 2021-10 but still incorporate government assistance disclosures.

In November 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update (ASU) 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance* to increase financial statement transparency regarding certain types of government assistance by increasing the disclosure of such information in the notes to the financial statements.

The new disclosure aims to increase transparency by enhancing the identification of 1) the types of assistance received, 2) an entity’s accounting for said assistance, and 3) the effects of the assistance in an entity’s financial statements. The disclosures will contain information about the nature of the transactions, which includes a general description of the transaction and identification of the form (cash or other) in which the assistance was received. In terms of the effects on the financial statement, disclosure will include identification of the specific line items in both the balance sheet and income statement and a description of the extent to which they have been impacted by any government assistance. In addition, an entity will be required to disclose information about any significant terms of the transaction with a government entity, with items including durations of such agreements and any provisions for potential recapture.

ASU 2021-10 defines “government assistance,” in a comprehensive manner to capture most types of assistance from governmental entities and includes examples of tax credits, cash grants, or grants of other assets. ASU 2021-10 does not apply to not-for-profit entities or benefit plans, and only applies to government assistance transactions analogizing either a grant or contribution model.

With the specificity of these additional disclosures only applying in certain circumstances (only applicable in cases where the government assistance is not accounted for in accordance with other accounting standards – i.e., revenue

in the normal course of business or debt), NAIC staff believe the occurrence of such items requiring disclosure per ASU 2021-10 will likely be relatively infrequent.

NAIC Staff Note – as mentioned above, NAIC staff believe that as these additional disclosures are not applicable for transactions that are in scope of other accounting standards, and only apply when the transaction is accounted for by analogy using the grant or contribution model, the prevalence of such items will be infrequent. As such, the most appropriate location for these items is reflected in SSAP No. 24.

Existing Authoritative Literature:

The following revisions were adopted to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04

Disclosures [Unusual/Infrequent Items]

16. The nature, [including a general description of the transactions](#), and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. [If the unusual or infrequent item is as the result of government assistance \(as defined in ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance\) disclosure shall additionally include the form in which the assistance has been received \(for example, cash or other assets\), and information regarding significant terms and conditions of the transaction, with items including, to the extent applicable, the duration or period of the agreement, and commitments made by the reporting entity, provisions for recapture, or other contingencies.](#)

Relevant Literature

24. [This statement adopts ASU 2021-10, Government Assistance: Disclosure by Business Entities about Government Assistance, with modification to require disclosure by all entity types.](#)

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Agenda item 2022-04: ASU 2021-10, Government Assistance was adopted on August 10, 2022.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

None.

Convergence with International Financial Reporting Standards (IFRS): None.

Staff Review Completed by: Robin Marcotte – NAIC Staff

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 24 as illustrated below. These revisions will clarify the rejection of ASU 2021-10, Government Assistance and the incorporation of disclosures regarding government assistance.

17. The nature, including a general description of the transactions, and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items

which have been affected by the event or transaction considered to be unusual and/or infrequent. If the unusual or infrequent item is as the result of government assistance, ~~(as defined in ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance)~~ disclosure shall additionally include the form in which the assistance has been received (for example, cash or other assets), and information regarding significant terms and conditions of the transaction, with items including, to the extent applicable, the duration or period of the agreement, and commitments made by the reporting entity, provisions for recapture, or other contingencies.

Relevant Literature

24. This statement ~~adopts~~ rejects ASU 2021-10, *Government Assistance: Disclosure by Business Entities about Government Assistance*. However, it does incorporate general disclosures about government assistance for all reporting entity types. ~~with modification to require disclosure by all entity types.~~

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 24 to specify rejection of *ASU 2021-10, Government Assistance* but that the statutory guidance does incorporate general disclosures regarding government assistance for all entity types.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 24 which specifies the rejection of ASU 2021-10 but incorporates general disclosures regarding government assistance for all entity types.

Summer National Meeting - Review of GAAP Exposures for Statutory Accounting:

Pursuant to a 2014 direction from the SAPWG chair, there is a desire for the Statutory Accounting Principles (E) Working Group to be more proactive in considering FASB exposures that may be significant to statutory accounting and reporting. Historically, the SAPWG has commented on limited, key FASB exposures – mostly pertaining to insurance contracts and financial instruments. To ensure consideration of all FASB exposures, staff has prepared this memorandum to highlight the current exposures, comment deadlines, and to provide a high-level summary of the exposed item’s potential impact to statutory accounting. It is anticipated that this information would assist the Working Group in determining whether a comment letter should be submitted to the FASB on the issues. Regardless of the Working Group’s election to submit comments to the FASB on proposed accounting standards, under the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process, issued US GAAP guidance noted in the hierarchy within Section V of the Preamble to the *Accounting Practices and Procedures Manual* must be considered by the Statutory Accounting Principles (E) Working Group.

FASB Exposures: [Exposure Documents and Public Comment Documents \(fasb.org\)](https://www.fasb.org/exposure-documents-and-public-comment-documents)

Exposed FASB Guidance	Comment Deadline & Initial Staff Comments
Proposed Accounting Standards Update— Compensation— <i>Stock Compensation (Topic 718): Scope Application of Profits Interest Awards</i>	July 10, 2023
Proposed Accounting Standards Update—Financial Instruments— <i>Credit Losses (Topic 326): Purchased Financial Assets</i>	August 28, 2023

Proposed Accounting Standards Update—Compensation—*Stock Compensation (Topic 718): Scope Application of Profits Interest Awards*

The FASB is issuing the amendments in this proposed Update to improve generally accepted accounting principles (GAAP) by adding an illustrative example to demonstrate how an entity would apply the scope guidance in paragraph 718- 10-15-3 to determine whether profits interest and similar awards (“profits interest awards”) should be accounted for in accordance with Topic 718, Compensation— Stock Compensation.

Certain entities provide employees or other service providers with profits interest awards to align compensation with an entity’s operating performance and provide those holders with the opportunity to participate in future profits and/or equity appreciation of the entity. The term profits interest is not defined in GAAP but differentiates those interests from capital interests held by investors that provide those holders with rights to the existing net assets in a partnership. Because profits interest holders only participate in future profits and/or equity appreciation and have no rights to the existing net assets of the partnership, stakeholders have indicated that it can be complex to determine whether a profits interest award should be accounted for as a share-based payment arrangement (Topic 718) or similar to a cash bonus or profit-sharing arrangement (Topic 710, Compensation— General, or other Topics). As a result, stakeholders have highlighted existing diversity in practice.

Currently, entities evaluate the terms, conditions, and characteristics of a profits interest award and apply judgment to determine whether to account for the award under Topic 718 or Topic 710. However, stakeholders have indicated that there is diversity in practice even when evaluating similar fact patterns. Therefore, stakeholders requested examples to clarify when the guidance in Topic 718 should be applied to profits interest awards (referred to herein

as the “scope application issue”). In addition, entities accounting for economically similar awards consistently would benefit investors and other allocators of capital.

The scope application issue, along with other related issues, was identified and discussed by the Private Company Council (PCC) because of the prevalence of profits interest awards among private companies. However, given that the PCC research indicated that certain public business entities (PBEs) also may be required to account for profits interest awards, the PCC recommended that the Board add a project to address the scope application issue for PBEs and entities other than PBEs (that is, all reporting entities). The Board added that project, Scope Application of Profits Interests Awards: Compensation—Stock Compensation (Topic 718), to its technical agenda in December 2022.

The amendments in this proposed Update would apply to all reporting entities that account for profits interest awards as compensation to employees in return for goods or services.

The amendments in this proposed Update would improve GAAP by adding an illustrative example that includes four fact patterns to demonstrate how an entity would apply the scope guidance in paragraph 718-10-15-3 to determine whether a profits interest award should be accounted for in accordance with Topic 718. The fact patterns in the proposed illustrative example focus on the scope conditions in paragraph 718-10-15-3. The proposed illustrative example is intended to reduce (1) complexity in determining whether a profits interest award is subject to the guidance in Topic 718 and (2) existing diversity in practice.

The amendments in this proposed Update would be applied either (1) retrospectively to all prior periods presented in the financial statements or (2) prospectively to profits interest awards granted or modified on or after the effective date. If the proposed amendments are applied prospectively, an entity would be required to disclose the nature of and reason for the change in accounting principle. The effective date and whether early adoption of the proposed amendments should be permitted will be determined after the Board considers stakeholder feedback on the proposed amendments.

The Board invites individuals and organizations to comment on all matters in this proposed Update, particularly on the issues and questions below. Comments are requested from those who agree with the proposed guidance as well as from those who do not agree. Comments are most helpful if they identify and clearly explain the issue or question to which they relate. Those who disagree with the proposed guidance are asked to describe their suggested alternatives, supported by specific reasoning.

Question 1: Do you agree that the amendments in this proposed Update should apply to all reporting entities (including PBEs and entities other than PBEs)? Please explain why or why not.

Question 2: Is the proposed illustrative example included in paragraphs 718-10- 55-138 through 55-148 to determine whether a profits interest award should be accounted for in accordance with Topic 718 clear and operable? Please explain why or why not. Should the illustrative example include other considerations or exclude any considerations? If yes, please explain how you would change the proposed illustrative example.

Question 3: An entity would be required to apply the proposed amendments either (a) retrospectively to all prior periods presented in the financial statements or (b) prospectively to awards granted or modified on or after the effective date with an associated disclosure that describes the nature of and reason for the change in accounting principle. Do you agree with the proposed transition provisions? If not, why not, and what basis would be more appropriate and why?

Question 4: Regarding the effective date, how much time would be needed to implement the proposed amendments? Should the amount of time needed to implement the proposed amendments by entities other than PBEs be different from the amount of time needed by PBEs? Should early adoption be permitted? Please explain your response.

Staff Review and Commentary:

Comment deadline was July 10, 2023

NAIC staff recommend that ASU be reviewed under the SAP Maintenance Process as detail in *Appendix F—Policy Statements*.

Proposed Accounting Standards Update—Financial Instruments—*Credit Losses (Topic 326): Purchased Financial Assets*

Since the issuance of Accounting Standards Update No. 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments, the Board has monitored and assisted stakeholders with the implementation of Topic 326. Post-Implementation Review (PIR) activities included forming a Credit Losses Transition Resource Group (TRG); conducting outreach with a broad range of stakeholders on costs, benefits, and operability; developing educational materials and staff guidance; conducting educational workshops; and performing an archival review of financial reports.

One area that stakeholders have highlighted in connection with the PIR of Topic 326 is the accounting for acquired financial assets. Financial assets acquired through (1) a business combination, (2) an asset acquisition, and (3) the consolidation of a variable interest entity (VIE) that is not a business are initially recorded at fair value, and an allowance for expected credit losses (ACL or allowance) is separately recognized in accordance with Topic 326. Any purchase discount or premium (the difference between the purchase price and the par value of an acquired financial asset) is subsequently accreted or amortized to interest income in accordance with Topic 310, Receivables.

Topic 326 provides criteria for identifying purchased financial assets with credit deterioration (PCD or PCD assets). PCD assets have experienced a more-than insignificant deterioration in credit quality since origination based on an assessment by the acquirer as of the date of acquisition. That assessment is subjective because Topic 326 does not define what constitutes a “more-than insignificant” deterioration in credit quality. However, the Board clarified in Update 2016-13 its intent that a broad population of purchased financial assets should be eligible for PCD classification—not limited to nonaccrual loans or other “impaired” assets. Acquired financial assets that do not meet the PCD criteria (non-PCD) are accounted for in a manner consistent with originated financial assets. For non-PCD assets, the amount embedded in the purchase price that is attributable to expected credit losses is recognized as a “Day-1” credit loss expense in the income statement.

Under the PCD model, an entity records an allowance and also records the offsetting entry as an addition to the amortized cost basis. Thus, the initial amortized cost basis for PCD assets is an amount equal to the sum of the purchase price and the ACL (commonly referred to as the gross-up approach). The difference, if any, between the amortized cost basis and the par value is a noncredit 2 discount which is accreted or amortized to interest income. Applying the gross-up approach results in the amount embedded in the purchase price attributable to expected credit losses being excluded from interest income.

The initial amortized cost basis for non-PCD assets is equal to the purchase price. An ACL is separately recorded through a charge to credit loss expense equal to the total amount of expected credit losses in the period of acquisition. The purchase discount or premium, if any, is subsequently recognized as interest income using the effective interest rate as of the acquisition date.

Investors, lenders, creditors, and other allocators of capital (collectively, “investors”) and preparers noted that two acquisition accounting approaches (PCD and non-PCD) create unnecessary complexity and reduce comparability. The accounting for non-PCD assets, specifically, has been described by stakeholders as unintuitive because a loss is recorded upon the acquisition of financial assets without more-than-insignificant deterioration in credit quality since origination (non-PCD), whereas no loss is recorded upon the acquisition of financial assets with more-than-insignificant deterioration in credit quality since origination (PCD), which results in accounting that is not economically neutral. To the extent a credit discount is reflected in the fair value and again through a Day-1 allowance for non-PCD assets, the portion reflected in fair value is ultimately reversed as enhanced yield. To compensate for this result, many preparers provide supplemental non-GAAP information that excludes the acquisition accounting accretion effect on yield. In addition, investors explained that the criteria for identifying PCD assets are difficult to understand and are not applied consistently in practice. The majority of feedback (substantially all investors and a majority of practitioners and preparers) from the PIR process suggested that a uniform approach should be applied in the accounting for acquired financial assets and preferred the gross-up approach that is currently applied to PCD assets.

The amendments in this proposed Update would address the comparability and complexity concerns expressed by stakeholders by eliminating the credit deterioration criterion that currently limits the use of the gross-up approach to PCD assets. The proposed Update would require the application of that single accounting approach to all acquired financial assets (with certain limited exceptions, such as available-for-sale [AFS] debt securities).

The amendments in this proposed Update would apply to all entities subject to the guidance in Topic 326 including public business entities, private companies, and not-for-profit entities.

The amendments in this proposed Update would expand the population of financial assets subject to the gross-up approach in Topic 326 that is currently applied to PCD assets. Specifically, an acquirer no longer would be required to determine whether an acquired financial asset is a PCD or non-PCD asset upon acquisition based on the degree of credit deterioration since origination. Instead, the gross-up approach would be applied to all financial assets that are part of a business acquired in a business combination. For financial assets recognized through (1) an asset acquisition or (2) the consolidation of a VIE that is not a business, the acquirer would identify purchased financial assets on the basis of certain criteria that are intended to account for similar transactions in a similar manner. The criteria include a bright-line time-based threshold and a qualitative assessment by the acquirer of its involvement with the origination of the financial asset. When a financial asset is acquired after the bright-line time-based threshold and the acquirer was not involved with the origination, the acquired asset would be accounted for using the gross-up approach.

An acquirer’s assessment of involvement with the origination of a financial asset would consider qualitative characteristics that, if present, indicate that the transaction is economically similar to the acquirer originating the financial asset and, therefore, is required to be accounted for by the acquirer in a manner consistent with originated financial assets. The amendments in this proposed Update expand the use of the gross-up approach without affecting the measurement, presentation, or disclosure requirements.

The effective date and whether early adoption of the amendments in this proposed Update would be permitted will be determined after the Board considers stakeholders’ feedback on the proposed amendments. The proposed amendments would be applied on a modified retrospective basis to the beginning of the fiscal year that an entity has adopted the amendments in Update 2016-13. A cumulative-effect adjustment, if necessary, would be recorded as of the later of (1) the beginning of that reporting period and (2) the beginning of the earliest period presented.

The Board invites individuals and organizations to comment on all matters in this proposed Update, particularly on the issues and questions below. Comments are requested from those who agree with the proposed guidance as well as from those who do not agree. Comments are most helpful if they identify and clearly explain the issue or question to which they relate. Those who disagree with the proposed guidance are asked to describe their suggested alternatives, supported by specific reasoning.

Question 1: The amendments in this proposed Update would expand the population of acquired financial assets accounted for under the gross-up approach, which currently applies only to PCD assets. Should certain classes of financial assets or specific transactions be included (for example, AFS debt securities) or excluded (for example, credit cards or similar revolving credit arrangements)? Please explain why or why not.

Question 2: Would the proposed amendments enhance comparability and improve the decision usefulness of financial information? Are there specific disclosures related to these proposed amendments that would be useful to investors? Please explain why or why not.

Question 3: Do you foresee operability or auditing concerns in applying the grossup approach to certain classes of financial assets (for example, credit cards or other revolving arrangements), certain types of transactions (for example, business combinations, asset acquisitions, or the consolidation of a VIE that is not a business), or certain classes of financial assets in specific transactions (for example, credit cards or other revolving arrangements in an asset acquisition)? Please describe the nature of those concerns and the magnitude of associated costs, differentiating between one-time costs and recurring costs. Are there practical expedients or implementation guidance that would mitigate your concerns? Are there practical expedients or implementation guidance that would enhance comparability? For any proposed practical expedients suggested, please explain your reasoning.

Question 4: There are no proposed amendments to the gross-up approach as it is currently applied to PCD assets; rather, there are proposed amendments that would expand the population of financial assets that apply the gross-up approach at acquisition. Do you agree that no amendments are needed to the existing gross up approach? Please explain why or why not.

Question 5: Do you agree with the proposed seasoning criteria in paragraph 326- 20-30-15 and 30-16? If not, please explain why or why not and describe any potential alternatives for the Board's consideration.

Question 6: Do you agree with the modified retrospective transition guidance in this proposed Update? Should early adoption be permitted? Please explain why or why not.

Question 7: How much time would be needed to implement the proposed amendments? Is additional time needed for entities other than public business entities? Please explain your response.

Staff Review and Commentary:

Comment deadline is Aug. 28, 2023

NAIC staff recommend that ASU's be reviewed under the SAP Maintenance Process as detail in *Appendix F—Policy Statements*.

[https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/E CMTE/APPTF/2023-2 Summer/Summary and Minutes/SAPWG/Attachments/Att1W-GAAP Exposures.docx](https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/E%20CMTE/APPTF/2023-2%20Summer/Summary%20and%20Minutes/SAPWG/Attachments/Att1W-GAAP%20Exposures.docx)

Draft: 8/3/23

Blanks (E) Working Group
Virtual Meeting
July 27, 2023

The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met July 27, 2023. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); David Phifer (AK); William Arfanis (CT); N. Kevin Brown (DC); Tom Hudson (DE); Jason Reynolds (FL); Daniel Mathis (IA); Kristin Hynes (MI); Debbie Doggett (MO); Lindsay Crawford (NE); John Sirovetz (NJ); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Diana Sherman (PA); Shawn Frederick (TX); Jake Garn (UT); Nicole Bisping (WA); Mary Jo Lewis (WI); and Michael Erdman (WV).

1. Adopted its May 31 Minutes

Gosselin referenced the Working Group's May 31 minutes. Snow made a motion, seconded by Crawford, to adopt the Working Group's May 31 minutes (Attachment Two-A). The motion passed unanimously.

2. Re-Exposed a Proposal

A. Agenda Item 2023-06BWG

Bruggeman stated that this proposal pertains to the Statutory Accounting Principles (E) Working Group bond project. The proposal details the necessary revisions to: 1) split Schedule D into two separate schedules – Schedule D-1-1 for issuer credit obligations and Schedule D-1-2 for Asset-Backed Securities; 2) incorporate more granular reporting lines for those investments; 3) revise those reporting schedules (columns and instructions) for improved investment information; and 4) incorporate corresponding revisions throughout the entire blank to reflect the revised reporting lines and to update references to the new schedules. With the significant revisions being incorporated, industry provided several comments, most of which were editorial and minor in nature, to improve clarity for reporting purposes. Bruggeman said that industry's dedicated efforts to review these changes in detail are much appreciated, as industry and the Working Group are all working collectively to ensure that the process to transition to the new bond definition, and the revised reporting structure, is as smooth as possible.

Bruggeman made a motion, seconded by Doggett, to re-expose the proposal with the edits for a 75-day public comment period ending Oct. 12. The motion passed unanimously.

3. Deferred Items

A. Agenda Item 2023-05BWG

Sara Robben (NAIC) stated that this proposal was intended to: 1) make changes to the cybersecurity supplement to remove the references to identity theft from the general instructions; 2) combine the claims-made and occurrence to only have the total number of policies in force; and 3) eliminate the first-party and third-party breakdown. Robben stated that during discussions with interested parties, it was decided that additional work was needed to clarify some of the definitions and the reporting. Robben asked for the proposal to be deferred one additional time.

Hudson made a motion, seconded by Phifer, to defer the proposal to allow for further discussion for a 75-day public comment period ending Oct. 12. The motion passed unanimously.

B. Agenda Item 2023-07BWG

Bruggeman stated that this proposal details investment reporting changes that were identified with the review completed for the bond proposal. Although these revisions are not specific to the bond changes, as the changes are affecting the investment schedules, it would be cleaner if the items in this proposal were on the same timeline. Key elements within this proposal include revising the instructions for the “Code Column” to be strictly “Restricted Asset Code” consistently across the schedules, incorporating revisions for an “Investment Characteristic Column,” and then deleting the “LEI Column” for all schedules except for Schedule DB – Derivatives.

Bruggeman made a motion, seconded by Hudson, to defer the proposal to coincide with the 2023-06BWG timeline for a 75-day public comment period ending Oct. 12. The motion passed unanimously.

C. Agenda Item 2023-09BWG

Bruggeman stated that the Statutory Accounting Principles (E) Working Group requested deferral of this proposal in May. The comments regarding redundancy and a request for placement in a different location other than the notes were referred to the Life Risk-Based Capital (E) Working Group. NAIC staff have met with industry, and additional work still needs to be done on this proposal. This delay will necessitate a later effective date of at least 2024. NAIC support staff for the Life Risk-Based Capital (E) Working Group have indicated that the updates to the C-2 mortality charges can still go through for 2023 without this proposal.

Bruggeman made a motion, seconded by Hudson, to defer the proposal to allow for further discussion for a 75-day public comment period ending Oct. 12. The motion passed unanimously.

4. Adopted the Editorial Listing

Hudson made a motion, seconded by Snow, to adopt the editorial listing (Attachment Two-B). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member_meetings/e_cmte/apptf/2023-2_summer/bwg/att2-bwg_07_2023_minutes.docx

Draft: 6/23/23

Blanks (E) Working Group
Virtual Meeting
May 31, 2023

The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 31, 2023. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); Kevin Richard (AK); Michael Shanahan (CT); Yohannes Negash (DC); Tom Hudson (DE); Jason Reynolds (FL); Daniel Mathis (IA); Roy Eft (IN); Kristin Hynes (MI); Debbie Doggett (MO); TJ Addison (NE); John Sirovetz (NJ); Tom Botsko and Dale Bruggeman (OH); Holly Mills (OK); Diana Sherman (PA); Jake Garn (UT); Steve Drutz (WA); Michael Erdman (WI); and Michael Crum (WV).

1. Adopted its March 7 Minutes

Gosselin referenced the Working Group's March 7 minutes.

Hudson made a motion, seconded by Doggett, to adopt the Working Group's March 7 minutes (*see NAIC proceedings – Spring 2023, Accounting Practices and Procedures (E) Task Force, Attachment Two*). The motion passed unanimously.

2. Adopted Items Previously Exposed

A. Agenda Item 2022-17BWG

Bruggeman stated that this proposal adds a new disclosure paragraph for Note 8 – Derivative Instruments and Illustration. The new disclosure is to be data-captured. It adds some electronic-only columns related to derivatives with excluded components to Schedule DB, Part A and Part B, for Section 1 and Section 2. Bruggeman stated that the proposed revisions align with the adopted disclosures and reporting enhancements from adopted derivative revisions to address excluded components in *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives*. The Statutory Accounting Principles (E) Working Group adopted a minor editorial change to a derivative reporting category during its May 16 meeting to ensure that the derivative disclosure in SSAP No. 86 and the derivative notes match. There were comments received during the prior exposure period, which are highlighted in the proposal. There were no interested party comments received during the most recent exposure period.

Bruggeman made a motion, seconded by Hudson, to adopt the modifications to the proposal. The motion passed unanimously.

Bruggeman made a motion, seconded by Hudson, to adopt the modified proposal (Attachment Two-A1). The motion passed unanimously.

B. Agenda Item 2023-01BWG

Doggett stated that this proposal removes pet insurance from the inland marine line of business and adds a new line of business to Appendix – Property and Casualty (P/C) Lines of Business definitions. It adds a pet insurance line within the existing property/casualty (P/C) blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. It adds a new Schedule P, Part 1 through Part 4, specific to pet insurance.

Doggett stated that she and the NAIC support staff for the Working Group met with Eva Yeung (NAIC), support staff for the Property and Casualty Risk-Based Capital (E) Working Group. Yeung indicated that the memorandum intends to make it clear that the Property and Casualty Risk-Based Capital (E) Working Group does not plan to change the risk-based capital (RBC) factor as a result of this proposal. Doggett stated that the proposal separates pet insurance from inland marine and provides more regularity. This will give more insight into the line of business, and it is not intended to affect the RBC factors.

Doggett stated that for RBC purposes, the Schedule P data for inland marine and pet insurance can be added together to calculate the factor.

Botsko, chair of the Property and Casualty Risk-Based Capital (E) Working Group, stated that it is premature to add this as a line in the annual statement while there are two alternatives to retrieve data from industry. One way is to add a supplement to gather the data requested and monitor the information to see if it warrants adding a new line. The other option is to add a note to the Notes to the Financial Statement. Botsko stated that there are very few companies that write pet insurance, and this could be a disadvantage or be expensive for other companies to add this information. He stated that while this may be a growing line of business, there are other growing lines as well that are not separated out but have a supplement.

Gavin Friedman (Trupanion) stated that industry already has this data and has provided such in data calls; therefore, this should not be burdensome to the industry. The companies already produce the data internally for the trade groups every year. Friedman stated that this is perhaps why there were no opposing industry comments indicating a burden to produce the data. He stated that this industry is misclassified as inland marine. It is the opposite of where there is high frequency, very low severity, and ultra-short tail. Waiting another year, as suggested, is not logical since the data is already available. He stated that adding the line in the current blank made more sense rather than drafting an entirely new supplement. Once the data is received, it can be determined whether a new factor is needed. Friedman stated that the industry has grown 25% since the proposal was submitted.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that the rationale for the proposal is developed. He stated that according to the industry trade association, the North American Pet Health Insurance Association (NAPHIA), the premium volume on pet insurance in the U.S. has increased each year from 2018 to 2022 by 24% to 30%—i.e., \$1.3 billion to \$3.2 billion—this being a 250% increase in four years. Many of the same companies that sell in the U.S. also sell in Canada, which adds another \$375 million written premium in 2022. The number of pets insured in the U.S. has grown from 2.2 million in 2018 to 4.9 million in 2022, as well as another 500,000 in Canada. The average premium for a typical accident wellness policy averages \$640 for dogs and \$387 for cats. Birnbaum stated that this line of business is uniquely and qualitatively different from other lines of business included in inland marine. Pet insurance has recurring monthly premiums without a specified term of coverage as opposed to a typical inland marine policy for which there is a single premium paid for a longer specified term of coverage.

Tip Tipton (Thrivent Financial) stated that interested parties support the deferral of this proposal to allow more time to discuss the inclusion. This would also allow time to evaluate the Market Conduct Annual Statement (MCAS) addition of the pet insurance line and review that data. Birnbaum stated that he was involved in the discussions regarding adding pet insurance into the MCAS filing, which serves a different purpose. It highlights underwriting practices and claims settlement practices.

Connie Jasper Woodroof (CJW Associates) stated that this addition would affect other companies that do not write pet insurance in modifying their systems to adjust for the new line. She indicated that she would support a supplement.

Kerri Cutry (MetLife Government Relations and MetLife Metropolitan General Insurance Company) stated that they are a leading carrier for pet insurance, and they support the proposal. She stated that she supports the comments of Friedman. She stated that the information is available, and adding this line will benefit state insurance regulators by providing more visibility and transparency into pet insurance as a growing market.

Doggett made a motion, seconded by Sirovetz, to adopt the proposal, including quarterly reporting (Attachment Two-A2). The motion passed unanimously.

C. Agenda Item 2023-02BWG

Teresa Cooper (NAIC) stated that this proposal adds a supplement to the life, P/C, and health statements. Originally, the request was to identify reportable premiums for MCAS purposes. After discussions with interested parties, it was agreed to ask only for a yes or no response as to whether premiums met the MCAS reporting requirements. The supplement needs only to be completed for those states in which a company writes the lines of business listed on the supplement.

Doggett made a motion, seconded by Garn, to adopt the modifications to the proposal. The motion passed unanimously.

Garn made a motion, seconded by Doggett, to adopt the modified proposal (Attachment Two-A3). The motion passed unanimously.

D. Agenda Item 2023-03BWG

Mary Caswell (NAIC) stated that this proposal removes life and accident and health (A&H)/fraternal blank crosschecks for Columns 2, 6, and 10 on the Accident and Health Policy Experience Exhibit (AHPEE). The life and A&H/fraternal blank crosschecks are not working correctly because Columns 2, 6, and 10 on the AHPEE are on a direct basis, while Exhibit 6 is on an assumed basis.

Hudson made a motion, seconded by Shanahan, to adopt the proposal (Attachment Two-A4). The motion passed unanimously.

E. Agenda Item 2023-04BWG

Angela McNabb (NAIC) stated that this proposal adds instructions for the appointed actuary and qualified actuary contacts to the jurat electronic-only section. In addressing interested party comments, clarification was made to indicate that the qualified actuary would be required by life/fraternal statement filers and by those health statement filers required to file the life supplement to the health blank. The reference to the quarterly filing was also deleted. McNabb stated that there was a comment regarding redundancy since there is some actuarial information in the general interrogatory and included in the actuarial opinion. The problem is that the actuarial opinion information is not captured electronically. The general interrogatory only asks for name, address, and affiliation in an unformatted manner. State insurance regulators need an easier way to electronically locate the actuary's phone number and email address as well.

Hynes made a motion, seconded by Hudson, to adopt the modifications to the proposal. The motion passed unanimously.

Hynes made a motion, seconded by Doggett, to adopt the modified proposal (Attachment Two-A5). The motion passed unanimously.

F. Agenda Item 2023-08BWG

Bruggeman stated that this proposal includes one minor clarification for mutual insurance companies on the instructions for Schedule Y, Part 3. NAIC staff noted that one consistent question received since the adoption of Schedule Y, Part 3, was how to treat mutual insurance companies for this reporting. This blanks proposal intends to clarify that mutual insurance companies that are part of a holding company system should be included on the common schedule.

Bruggeman made a motion, seconded by Hynes, to adopt the proposal (Attachment Two-A6). The motion passed unanimously.

G. Agenda Item 2023-10BWG

Eric King (NAIC) stated that the Long-Term Care Actuarial (B) Working Group requested this proposal to fix the reporting years, which were not intended to change each year. There was a slight modification to the wording within the proposal.

Hudson made a motion, seconded by Bruggeman, to adopt the modifications to the proposal. The motion passed unanimously.

Shanahan made a motion, seconded by Garn, to adopt the modified proposal (Attachment Two-A7). The motion passed unanimously.

H. Agenda Item 2023-11BWG

Bruggeman stated that this item was developed to data-capture the existing note in *SSAP No. 34—Investment Income Due and Accrued* and expand, with data-capturing, to collect more information on interest income. Corresponding revisions to SSAP No. 34 have already been adopted by the Statutory Accounting Principles (E) Working Group. Although these revisions were noted in accordance with the bond project, with investment schedule revisions also proposed under that project, aggregate data-capturing of investment income details for 2023, particularly with items that may be reported and admitted but for which the timing of receipt is uncertain, or that was received in a form other than cash, ensures appropriate state insurance regulator assessment of expected cash flows.

Although industry has made comments proposing to limit the collection of the aggregate note data to bonds, short-term, and cash equivalents, this would be inconsistent with the adopted revisions to SSAP No. 34, as the SSAP guidance is not limited to any specific investment. Industry has also noted that the collection of this data may be duplicative of what is on the balance sheet. However, the intent of this data in a note, along with the information on aggregate deferred interest, is to allow state insurance regulators to easily identify the amount of interest income that has been accrued and admitted but for which interest payments are deferred. With the design of some investments, there are products for which the deferral of interest does not result in a past-due assessment requiring non-admittance. As such, these amounts are still admitted in the financial statements. Without this disclosure, it is not possible to identify the amount of interest being reported from these items and complete a quick comparison to the admitted investment income due and accrued. It should also be noted that these investments may be on Schedule D or Schedule BA (or may move to Schedule BA under the bond project); therefore, limiting the scope of the disclosure would hinder the state insurance regulator benefit.

Bruggeman stated that the Statutory Accounting Principles (E) Working Group has considered comments on ensuring the consistent calculation of the payment-in-kind (PIK) interest in the cumulative principal balance, and

the Working Group has a current exposure to incorporate those elements. That exposure only provides clarifying guidance and does not change the adopted disclosure. If that clarifying expedient guidance is adopted by the Working Group, it can either be subsequently added to the instructions and/or provided as a memorandum for posting on the Blanks (E) Working Group web page.

Bruggeman stated that in response to comments on potential duplication, the intent is to allow state insurance regulators to quickly assess the impact of aggregate deferred interest to admitted interest; therefore, he said he supports the note with the data-captured element included as exposed.

Bruggeman made a motion, seconded by Drutz, to adopt the modifications to the proposal. The motion passed unanimously.

Bruggeman made a motion, seconded by Drutz, to adopt the modified proposal (Attachment Two-A8). The motion passed unanimously.

3. Referenced a Proposal with a Public Comment Period Ending June 30

A. Agenda Item 2023-06BWG

Bruggeman stated that this proposal pertains to the bond project, and it incorporates several revisions to expand the bond reporting schedule into two schedules: one for issuer credit obligations and one for asset-backed securities (ABS). Although the combined total from both schedules will be reflected as "bonds" on the balance sheet, several other corresponding revisions are proposed to ensure that the new schedules and terminology are reflected properly in the various financial statement schedules, exhibits, and notes. In addition to expanding the bond schedules, more granular reporting lines are proposed to identify the type of bond investment held. These additional reporting lines also affect other schedules, and they are reflected in the revisions.

The public comment period on this item ends June 30. No action is required by the Working Group at this time.

4. Deferred Items

A. Agenda Item 2023-05BWG

Sara Robben (NAIC) stated that this proposal was intended to: 1) make changes to the cybersecurity supplement to remove the references to identity theft from the general instructions; 2) combine the claims-made and occurrence to only have the total number of policies in force; and 3) eliminate the first-party and third-party breakdown. Some definitions were also added for clarification. Robben stated that after further discussion with interested parties, she agreed with the recommendation of deferring this proposal to allow more time to work out additional details within the proposal.

Hudson made a motion, seconded by Shanahan, to defer the proposal to allow for further discussion, with a public comment period ending June 30. The motion passed unanimously.

B. Agenda Item 2023-07BWG

Bruggeman stated that this proposal includes revisions to investment schedules identified as part of the review completed under the bond project, but it does not reflect revisions driven specifically by the bond project. The key item is the removal of the legal entity identifier (LEI) reporting column for all schedules except for the derivatives schedule (Schedule DB). After a review of the reporting of the LEI, further understanding of how an LEI

is obtained, and the limited reporting of the LEI on the investment schedules, this data element is proposed to be removed from most investment schedules.

Ultimately, the LEI can only be obtained from the investment issuer or their designated representative. If an issuer does not obtain an LEI, then there is nothing that a reporting entity can do to obtain one on their behalf. Also, the issuer must recertify the LEI each year, and failing to complete that process results in an LEI that is no longer applicable. Since there is no requirement for issuers to get or maintain LEIs when issuing most investments, the information available for reporting entities is very limited. Additionally, even if there were an LEI at one time, companies would have had to manually check the LEI database annually to see if the LEI was still current. With the limited reporting that exists on most investment schedules, from the information obtained, no state insurance regulators have been identified as using the LEI from the investment schedule for any assessment purpose. The LEI for derivatives is proposed to be retained, as that is an investment in which insurers may be required to get LEIs; therefore, the information for LEIs is more prevalent and current.

Bruggeman stated that although not directly related to the bond project, the revisions were identified from the bond project review. Industry has requested for the proposal to mirror the timing of the bond proposal changes, resulting in the investment schedule revisions occurring simultaneously.

Bruggeman made a motion, seconded by Hudson, to defer the proposal to coincide with the 2023-06BWG proposal public comment period ending June 30 (Attachment Two-J). The motion passed unanimously.

C. Agenda Item 2023-09BWG

Bruggeman stated that this item was developed to provide an annual statement note that would provide crosschecks to the updates to the Life RBC C-2 Mortality risk charge. This proposal and the related Statutory Accounting Principles (E) Working Group agenda item 2023-03 were simultaneously exposed. The Statutory Accounting Principles (E) Working Group discussed comments received at its May 16 meeting, which requested moving this information to another location other than the financial statement notes, and some of the information was redundant or not needed to support the C-2 charge. Based on these comments and information received from NAIC staff supporting the Life Risk-Based Capital (E) Working Group that the note was not essential for the updated C-2 charge to go forward, the Statutory Accounting Principles (E) Working Group determined to defer this item and forward the comments received to the Life Risk-Based Capital (E) Working Group.

Bruggeman made a motion, seconded by Hudson, to defer the proposal for a 30-day public comment period ending June 30. The motion passed unanimously.

5. Adopted the Editorial Listing

Hudson made a motion, seconded by Garn, to adopt the editorial listing (Attachment Two-A9). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add new disclosure paragraph for Note 8 – Derivative Instruments and add an illustration to be data captured for the new disclosure. Add electronic only columns related to derivatives with excluded components to Schedule DB, Part A and Part B for both Section 1 and Section 2. Add new code column instructions for Schedule DB, Part A and Part B.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to modify the instructions for Note 8 and Schedule DB to reflect changes to *SSAP No. 86 – Derivatives* adopted by the Statutory Accounting Principles (E) Working Group in agenda item 2021-20.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

8. Derivative Instruments

Instruction:

Disclose the following information by category of derivative financial instrument:

A. Derivatives under *SSAP No. 86—Derivatives*

Disclose the following information by category of derivative financial instrument:

- (1) A discussion of the market risk, credit risk and cash requirements of the derivative.
- (2) A description of the reporting entity's objectives for using derivatives, i.e., hedging, income generation or replication, as well as a description of the context needed to understand those objectives and its strategies for achieving those objectives, including the identification of the category, e.g., fair value hedges, cash flow hedges, or foreign currency hedges, and for all objectives, the type of instrument(s) used.
- (3) A description of the accounting policies for recognizing (or reasons for not recognizing) and measuring the derivatives used, and when recognized and where those instruments and related gains and losses are reported.
- (4) Identification of whether the reporting entity has derivative contracts with financing premiums. (For purposes of this term, this includes scenarios in which the premium cost is paid at the end of the derivative contract or throughout the derivative contract.)
- (5) The net gain or loss recognized in unrealized gains or losses during the reporting period representing the component of the derivative instruments' gain or loss, if any, excluded from the assessment of hedge effectiveness.
- (6) The net gain or loss recognized in unrealized gains or losses during the reporting period resulting from derivatives that no longer qualify for hedge accounting.
- (7) For derivatives accounted for as cash flow hedges of a forecasted transaction, disclose:
 - a. The maximum length of time over which the entity is hedging its exposure to the variability in future cash flows for forecasted transactions excluding those forecasted transactions related to the payment of variable interest on existing financial instruments; and
 - b. The amount of gains and losses classified in unrealized gains/losses related to cash flow hedges that have been discontinued because it was no longer probable that the original forecasted transactions would occur by the end of the originally specified time period or within 2 months of that date.
- (8) Disclose the aggregate, non-discounted total premium cost for these contracts and the premium cost due in each of the following four years, and thereafter. Also disclose the aggregate fair value of

IDENTIFICATION OF ITEM(S) TO CHANGE

Remove Pet Insurance from Inland Marine line of business and add a new line of business to Appendix – P/C Lines of Business. Add Pet Insurance line within the existing P/C Blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. Add new Schedule P Parts 1 through 4 specific to Pet Insurance.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

See Page 2 for detailed reason and justification for change.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

Revised 11/17/2022

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE

Pet insurance is reported today as an Inland Marine product. Separating Pet Insurance from Inland Marine for financial reporting purposes within the existing Blank is warranted for a number of reasons, including:

- There is no public or regulator visibility into the vast majority of the pet insurance industry's financial reporting. Other than for a monoline insurer that writes only pet insurance, the rest of the industry's pet insurance business financial reporting is included in Inland Marine, along with anything else in that broadly-defined line that the respective insurer has written. In short, regulators do not have clear visibility into even the most basic information about pet insurers and the pet insurance market, such as who is underwriting pet coverage, the volume being sold, losses, and who is selling it.
- The pet insurance industry has grown rapidly, and this high growth rate continues. The industry's self-reported data shows growth in annual gross written premium from \$836.5 M in 2016 to \$2.59 B in 2021, including more than 30% annual growth from 2020 to 2021. This growth rate makes the absence of visibility into each participating company's financial information more an acute challenge with each passing year.
- Relying on regulator data calls to gather basic information such as premium written and loss information is time-consuming for all involved, and prone to inconsistencies and errors.
- The NAIC's D Committee is proceeding with MCAS for pet insurance. It would be inapposite and have potential for inconsistent data, to require MCAS reporting while not requiring dedicated pet insurance financial reporting. In addition, separate financial reporting will be a useful complement to MCAS reporting, both to supplement the MCAS information and to validate it.
- Dedicated financial reporting of pet insurance will be helpful to state regulators' assessment of the appropriate amount of surplus insurers writing this business should hold. It is anticipated that once sufficient history is obtained, a separate RBC factor for pet insurance can be established.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY/CASUALTY

APPENDIXPROPERTY AND CASUALTY LINES OF BUSINESS

These definitions should be applied when reporting all applicable amounts for the following schedules: Underwriting and Investment Exhibit Parts 1, 1A, 1B, 2, and 2A; Exhibit of Premiums and Losses (Statutory Page 14); and the Insurance Expense Exhibit. Policy fees, service charges or membership charges are to be included with the line of business or in Other Income, as determined by *SSAP No. 53—Property and Casualty Contracts – Premiums*.

**Detail Eliminated to Conserve Space**

Line 9.1 – Inland Marine

Coverage for property that may be in transit, held by a bailee, at a fixed location, a movable good that is often at different locations (e.g., off-road construction equipment) or scheduled property (e.g., Homeowners Personal Property Floater), including items such as live animals, property with antique or collector's value, etc. This line also includes instrumentalities of transportation and communication, such as bridges, tunnels, piers, wharves, docks, pipelines, power and phone lines, and radio and television towers.

Animal Mortality

Coverage that provides a death benefit to the owner of a policy in the event of the death of the insured livestock.

EDP Policies

Coverage to protect against losses arising out of damage to or destruction of electronic data processing equipment and its software.

Pet Insurance Plans

~~Veterinary care plan insurance policy providing care for a pet animal (e.g., dog or cat) of the insured owner in the event of its illness or accident.~~

Communication Equipment (Cellular Telephones)

Provides insured subscribers of Communications Equipment Service Provider replacement coverage for loss of and damage, theft or mechanical breakdown to communications equipment. Communications equipment means wireless telephones and pagers, and any other devices incorporating wireless phone and pager capabilities, including but not limited to personal digital assistants (PDA) and wireless aircards.

Line 9.2 – Pet Insurance Plans

Veterinary care plan insurance policy providing care for a pet animal (e.g., dog or cat) of the insured owner in the event of its illness or accident.

SCHEDULE P

SCHEDULE P – PART 1

Part 1 – Summary is the total of the Schedule P lines. For the property lines, it is necessary to supplement the data in the individual sections of Schedule P in order to complete the Part 1 – Summary for all lines for all years. Non-proportional assumed reinsurance – Property, Liability and Financial Lines can be summed together as reported.

↓
===== **Detail Eliminated to Conserve Space** =====
↑

Non-proportional assumed reinsurance –Property Reinsurance

Includes all the following lines: Fire, Allied Lines, Ocean Marine, Inland Marine, [Pet Insurance Plans](#), Earthquake, Group Accident and Health, Credit Accident and Health, Other Accident and Health, Auto Physical Damage, Boiler and Machinery, Burglary and Theft and International (of the foregoing).

↓
===== **Detail Eliminated to Conserve Space** =====
↑

SCHEDULE P – PARTS 1A THROUGH ~~1F~~ 1U

Reporting entities should complete Schedule P in thousands only but must report all claim counts in whole numbers.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add an exhibit to identify premiums that are reportable for Market Conduct Annual Statement (MCAS) purposes.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Addition of MCAS premium reporting will allow accurate identification of required MCAS filing submissions.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, PROPERTY, AND HEALTH**MARKET CONDUCT ANNUAL STATEMENT (MCAS) PREMIUM EXHIBIT FOR YEAR**

This exhibit is required to be filed no later than March 1.

The purpose of this exhibit is to identify premiums that are reportable for Market Conduct Annual Statement purposes. Refer to the Data Call and Definitions document for each individual line of business, found on the MCAS webpage: http://www.naic.org/mcas_main.htm. Indicate a “Yes” in the premium column for the lines of business in which the reporting entity has met the MCAS premium thresholds, otherwise indicate a “No”.

A schedule must be prepared and submitted for each jurisdiction in which the company ~~has direct written premiums or direct earned premiums for the MCAS lines of business~~ answered “Yes” to having MCAS Reportable Premiums/Considerations. ~~In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.~~

ANNUAL STATEMENT BLANK – LIFE/FRATERNAL, PROPERTY, AND HEALTH

IDENTIFICATION OF ITEM(S) TO CHANGE

Remove Life crosschecks for Columns 2, 6, and 10 on the Accident and Health Policy Experience Exhibit (AHPEE).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The Life crosschecks are not working correctly because columns 2, 6, and 10 on the Accident & Health Policy Experience Exhibit are on a direct basis and Exhibit 6 is on an assumed basis.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, PROPERTY, AND HEALTH

ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT

This exhibit is required to be filed no later than April 1.

Detail Eliminated to Conserve Space

CROSS REFERENCES AND OTHER INSTRUCTIONS

The Exhibit

Column 1 – Direct Premiums Written

The grand total reported should equal:

- Life\Fraternal Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10).
- Health Underwriting and Investment Exhibit, Part 1, Line 13, Column 1.
- Property Exhibit of Premiums and Losses, Column 1 sum of Lines 13 through 15.

Column 2 – Direct Premiums Earned

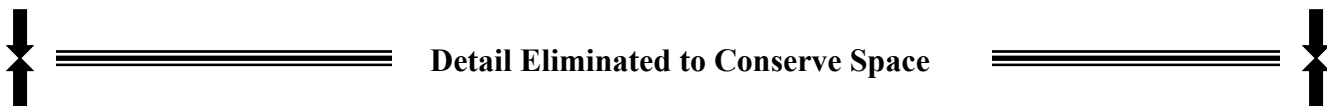

Fractional premium loadings and policy fees must be included in the Earned Premiums.

The grand total reported should equal:

- ~~Life\Fraternal Exhibit 1, Part 1, Lines (6.1+10.1+16.1), Columns (8+9+10).~~
- ~~Plus Exhibit 1, Part 1, Lines (3.1+13.1), Columns (8+9+10).~~
- ~~Minus Exhibit 6, Line 1, Column 1 CY.~~
- ~~Plus Exhibit 6, Line 1, Column 1 PY.~~
- ~~Minus Exhibit 1, Part 1, Lines (4+14), Columns (8+9+10).~~
- ~~Minus Exhibit 6, Line 5, Column 1 CY.~~
- ~~Plus Exhibit 6, Line 5, Column 1 PY.~~

- Health Underwriting and Investment Exhibit, Part 1, Line 13, Column 1
- Less Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 CY
- Plus Underwriting and Investment Exhibit Part 2D, Line 1, Column 1 PY
- Less Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 CY
- Plus Underwriting and Investment Exhibit Part 2D, Line 4, Column 1 PY

Property Exhibit of Premiums and Losses, Column 2 sum of Lines 13 through 15.

Detail Eliminated to Conserve Space

Column 6 – Direct Incurred Claims Amount

This column does not include the “Increase in Policy Reserves.”

The grand total reported should equal:

~~Life\Fraternal~~ ~~Exhibit 8, Part 2, Line 6.1, Columns (9+10+11).~~
~~Minus~~ ~~Exhibit 6, Line 14, Column 1 CY.~~
~~Plus~~ ~~Exhibit 6, Line 14, Column 1 PY.~~

Health Underwriting and Investment Exhibit, Part 2, Line 12.1, Column 1 minus Column 14.

NOTE: This excludes payments for any administrative costs.

Property Exhibit of Premiums and Losses, Column 6 sum of Lines 13 through 15.

Column 10 – Change in Contract Reserves

The Policy Experience Exhibit requires that the change in contract reserves should be on a direct basis. This is the direct basis included in the sum of:

Line 2, Grand Total Individual, Group and Other Business of “D” Total Business should equal:

A. The Change in Additional Reserves

~~Life\Fraternal: Exhibit 6, Lines 2 + 3, Column 1. Current year minus prior year.~~

Health: Underwriting and Investment Exhibit, Part 2D, Line 2, Column 1. Current year minus prior year.

B. Plus the Change in the Reserve for Future Contingent Benefits

~~Life\Fraternal: Exhibit 6, Line 4, Column 1. Current year minus prior year.~~

Health: Underwriting and Investment Exhibit, Part 2D, Line 3, Column 1. Current year minus prior year.

C. Less the Change in the Premium Deficiency Reserve

~~Life\Fraternal
and Property: Footnote (a) Schedule H Part 2. Current year minus prior year.~~

Health: Footnote (a) Underwriting and Investment Exhibit Part 2D. Current year minus prior year.

Life Experience Data Contact (Life/Fraternal companies only)

Name

List the name of the person able to facilitate communication regarding submission of company experience data to the NAIC (e.g., mortality experience data) as required by the Standard Valuation Law (SVL) and its supporting Valuation Manual (VM) included in each state’s laws.

Address

May be a P.O. Box and the associated ZIP code.

Telephone Number

Telephone number should include area code and extension.

Email Address

Email address of the life experience data contact person as described above.

Appointed Actuary Contact

Name

Life/Fraternal Companies: List the name of the Appointed Actuary appointed by the board of directors to provide the actuarial opinion required by VM-30.

Health, Property, and Title Companies: List the name of the Appointed Actuary appointed by the board of directors to provide the actuarial opinion. Refer to the actuarial opinion instructions for guidance.

Address

May be a P.O. Box and the associated ZIP code.

Telephone Number

Telephone number should include area code and extension.

Email Address

Email address of the Appointed Actuary contact person as described above.

Qualified Actuary Contact 1 (Life/Fraternal companies and Health companies required to file the Life Supplement only)Name

List the name of the Qualified Actuary assigned by the company to prepare one or more sub-reports of the PBR Actuarial Report required by VM-31.

Product Line

Indicate product lines covered by this actuary's sub-report(s).

Telephone Number

Telephone number should include area code and extension.

Email Address

Email address of the Qualified Actuary contact person as described above.

Qualified Actuary Contact 2 (Life/Fraternal companies and Health companies required to file the Life Supplement only – if not applicable, leave blank)Name

List the name of the Qualified Actuary assigned by the company to prepare one or more sub-reports of the PBR Actuarial Report required by VM-31.

Product Line

Indicate product lines covered by this actuary's sub-report(s).

Telephone Number

Telephone number should include area code and extension.

Email Address

Email address of the Qualified Actuary contact person as described above.

Qualified Actuary Contact 3 (Life/Fraternal companies and Health companies required to file the Life Supplement only – if not applicable, leave blank)

Name

List the name of the Qualified Actuary assigned by the company to prepare one or more sub-reports of the PBR Actuarial Report required by VM-31.

Product Line

Indicate product lines covered by this actuary's sub-report(s).

Telephone Number

Telephone number should include area code and extension.

Email Address

Email address of the Qualified Actuary contact person as described above.

IDENTIFICATION OF ITEM(S) TO CHANGE

Update the three primary issue periods on Long-Term Care Experience Reporting Form 2.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The issue periods are not supposed to change each year, they should have stayed fixed and not changed each year.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, PROPERTY/CASUALTY, AND HEALTH**LONG-TERM CARE INSURANCE EXPERIENCE REPORTING FORMS 1 THROUGH 5**

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: ~~Prior to 2005~~ 2002 and prior, 2006-2009, 2010-2013, and 2014-2017 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Anticipated Effective Date: Annual 2023

IDENTIFICATION OF ITEM(S) TO CHANGE

Add additional instructions and illustration to be data captured for Note 7 – Investment Income in the Notes to Financials Statement to disclose more information on interest.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to modify the instructions for Note 7 to reflect changes to *SSAP No. 34—Investment Income Due and Accrued* adopted by the Statutory Accounting Principles (E) Working Group in agenda item 2022-17.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

Although the data for Note 7C might be found elsewhere in the statement, the intent is to have information in a single location for easy comparability. Note 7D (aggregate deferred interest) is interest that is not considered past due, as there is no due date, therefore it is not nonadmitted. With having Note 7C in the updates to Note 7, it will allow regulators to compare the interest.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments: _____

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY, & TITLE

NOTES TO FINANCIAL STATEMENTS

Notes to the Annual Statement are to be filed on March 1.

Detail Eliminated To Conserve Space

7. Investment Income

Instruction:

Disclose the following for investment income due and accrued in the financial statements:

- A. The bases, by category of investment income, for excluding (nonadmitting) any investment income due and accrued,
- B. The total amount excluded.
- C. The gross, nonadmitted and admitted amounts for interest income due and accrued.

(1) Gross amount for interest income due and accrued. (Should equal Assets Page, Line 14, Column 1)

(2) Nonadmitted amount for interest income due and accrued. (Should equal Assets Page, Line 14, Column 2)

(3) Admitted amount for interest income due and accrued. (Should equal Assets Page, Line 14, Column 3)

- D. The aggregate deferred interest.

Some investments allow for interest payments to be deferred past the originally scheduled payment date without being considered past due under the agreement terms. Include the amount of interest reported as due and accrued for which the reporting entity has not received within 90 days of the originally scheduled payment date, that has not been nonadmitted under SSAP No. 34 – Investment Income Due and Accrued. For the avoidance of doubt, this should also include all accrued interest for investments that pay interest in full less frequently than annually per the agreement terms.

- E. The cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

Include the amount of reported interest in which the terms of the investment permit paid-in-kind (PIK) instead of cash. The amount captured shall reflect the cumulative amount of PIK interest included in the current principal balance.

Illustration:

- A. Due and accrued income was excluded from surplus on the following bases:

All investment income due and accrued with amounts that are over 90 days past due with the exception of mortgage loans in default.

- B. The total amount excluded was \$ _____.

THIS EXACT FORMAT MUST BE USED IN THE PREPARATION OF THIS NOTE FOR THE TABLES (7C, 7D, AND 7E) BELOW. REPORTING ENTITIES ARE NOT PRECLUDED FROM PROVIDING CLARIFYING DISCLOSURE BEFORE OR AFTER THESE ILLUSTRATIONS.

C. The gross, nonadmitted and admitted amounts for interest income due and accrued.

Multiply Column 4 by the reserve factor calculated for Columns 5, 7 and 9, and report the products in Columns 6, 8 and 10, respectively.</p>	L/F	Annual

Effective	Table Name	Description	Statement Type	Filing Type
		<p>The Line 1, Column 7 and 9 reserve factors must be at least 12.15% but not more than 24.31%. See Footnote (a) on the Annual Statement Blank for reference on the minimum and maximum reserve factors for Line 1, Column 7 and 9.</p> <p>The reserve factor is equal to 15.8% times the company's weighted average portfolio beta. The weighted average portfolio beta is the market value weighted average of four (4) portfolio betas, one from the end of the prior year and the remaining from the first three (3) quarters of the current year.</p> <p>***Detail Eliminated to Conserve Space***</p> <p>Aggregate Method</p> <p>The portfolio beta at the end of a quarter is determined by a simple linear regression using 52 weeks of time-weighted rates of return for the entire unaffiliated common stock portfolio and for the Standard & Poor's 500 Stock Index. For non-U.S. stock portfolios, a company shall use an appropriate foreign index (TSE 300 index for Canadian stock portfolios, FT ALL SHARES index for U.K. stock portfolios, and the TOPIX index for Japanese stock portfolios) to calculate beta if it has identified common stock investments that support liabilities, both of which, are in the same foreign currency.</p> <p>Companies that do not want the extra administrative complexity of calculating the beta factor may use the maximum AVR factor of 20% (see Footnote (a) for <u>maximum AVR factor</u>).</p>	L/F	Annual
2023	Supplemental Term and Universal Life Insurance Reinsurance Exhibit – Part 1 All Cessions of Term and Universal Life Insurance	<p>CHANGE TO INSTRUCTION</p> <p>Update Column 6 – Certified Reinsurer to include Reciprocal Jurisdiction Reinsurer. 2024 Proposed Charges**ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE**

The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate, and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations; modify the *Accounting Practices and Procedures Manual* (AP&P Manual) to reflect changes necessitated by Task Force action; and study innovative insurer accounting practices that affect the ability of state insurance regulators to determine the true financial condition of insurers.

Ongoing Support of NAIC Programs, Products, or Services

1. The **Accounting Practices and Procedures (E) Task Force** will:
 - A. Oversee the activities of the Blanks (E) Working Group and the Statutory Accounting Principles (E) Working Group.
2. The **Blanks (E) Working Group** will:
 - A. Consider improvements and revisions to the various annual/quarterly statement blanks to:
 - i. Conform these blanks to changes made in other areas of the NAIC to promote uniformity in reporting of financial information by insurers.
 - ii. Develop reporting formats for other entities subject to the jurisdiction of state insurance departments.
 - iii. Conform the various NAIC blanks and instructions to adopted NAIC policy.
 - iv. Oversee the development of additional reporting formats within the existing annual financial statements as needs are identified.
 - B. Continue to monitor state filing checklists to maintain current filing requirements.
 - C. Continue to monitor and improve the quality of financial data filed by insurance companies by recommending improved or additional language for the *Annual Statement Instructions*.
 - D. Continue to monitor and review all proposals necessary for the implementation of statutory accounting guidance to ensure proper implementation of any action taken by the Accounting Practices and Procedures (E) Task Force affecting annual financial statements and/or instructions.
 - E. Continue to coordinate with other task forces of the NAIC to ensure proper implementation of reporting and instructions changes as proposed by these taskforces.
 - F. Coordinate with the applicable task forces and working groups as needed to avoid duplication of reporting within the annual and quarterly statement blanks.
 - G. Consider proposals presented that would address duplication in reporting, eliminate data elements, financial schedules and disclosures that are no longer needed, and coordinate with other NAIC task forces and working groups if applicable, to ensure revised reporting still meets the needs of regulators.
 - H. Review requests for investment schedule blanks and instructions changes in connection with the work being performed by the Capital Adequacy (E) Task Force and its working groups.
 - I. Review changes requested by the Valuation of Securities (E) Task Force relating to its work on other invested assets reporting for technical consistency within the investment reporting schedules and instructions.

ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE*(Continued)*

3. The **Statutory Accounting Principles (E) Working Group** will:
 - A. Maintain codified statutory accounting principles by providing periodic updates to the guidance that address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements. Provide authoritative responses to questions of application and clarifications for existing statutory accounting principles. Report all actions and provide updates to the Accounting Practices and Procedures (E) Task Force.
 - B. At the discretion of the Working Group chair, develop comments on exposed GAAP and International Financial Reporting Standards (IFRS) pronouncements affecting financial accounting and reporting. Any comments are subject to review and approval by the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee.
 - C. Coordinate with the Life Actuarial (A) Task Force on changes to the AP&P Manual related to the *Valuation Manual* VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other *Valuation Manual* requirements. This process will include the receipt of periodic reports on changes to the *Valuation Manual* on items that require coordination.
 - D. Obtain, analyze, and review information on permitted practices, prescribed practices, or other accounting treatments suggesting that issues or trends occurring within the industry may compromise the consistency and uniformity of statutory accounting, including, but not limited to, activities conducted by insurers for which there is currently no statutory accounting guidance or where the states have prescribed statutory accounting that differs from the guidance issued by the NAIC. Use this information to consider possible changes to statutory accounting.

Draft: 8/22/23

Capital Adequacy (E) Task Force
Seattle, Washington
August 14, 2023

The Capital Adequacy (E) Task Force met Aug. 14, 2023. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko and Dale Bruggeman (OH); Grace Arnold, Vice Chair, represented by Fred Andersen (MN); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis (AL); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Bradley Trim (FL); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Vicki Lloyd (KY); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by John Rehagen and Debbie Doggett (MO); Troy Downing represented by Erin Snyder (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Margaret Garrison and Michael Muldoon (NE); D.J. Bettencourt represented by Jennifer Li and Christian Citarella (NH); Justin Zimmerman represented by David Wolf (NJ); Glen Mulready represented by Diane Carter (OK); Michael Wise represented by Will Davis (SC); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek and Amy Malm (WI).

1. Adopted its June 30 and April 28 Minutes

Botsko said the Task Force met June 30 and April 28. During its June 30 meeting, the Task Force took the following action: 1) adopted proposals: a) 2023-02-P (MOD) (Underwriting Risk Line 1 Factor Modification); b) 2023-09-IRE (Residual Factor for Life) and 2023-10-IRE (Residual Sensitivity Test Factor for Life); c) adopted proposal 2022-09-CA (MOD) (Revised Affiliated Investments Structure and Instructions); d) 2022-16-CA (Underwriting Risk Factors – Investment Income Adjustment); and e) 2023-01-CA (Stop Loss Premiums); 2) adopted the Generator of Economic Scenarios (E/A) Subgroup charges; 3) discussed the current turmoil in the banking sector; 4) received an update from its Risk Evaluation Ad Hoc Group.

During its April 28 meeting, the Task Force took the following action: 1) adopted its Spring National Meeting minutes; 2) discussed the current turmoil in the banking sector; 3) adopted proposals: a) 2023-02-P (Underwriting Risk Line 1 Factors); b) 2023-03-IRE (Revised Residual Structure for life); c) 2023-04-IRE (Residual Sensitivity Test for Life); d) 2023-05-L (Remove Dual Trend Test); e) 2023-06-L (C-2 Mortality Risk Structure Changes); and f) 2023-07-L (CM6 & CM7 Mortgages Structures Changes); 4) exposed proposals: a) 2022-16-CA (Underwriting Risk Factors Investment Income Adjustment); and b) 2023-01-CA (Stop Loss Premiums) for a 30-day public comment period ending May 27; 3) discussed a referral from the Valuation of Securities (E) Task Force; and 4) received an update from its Risk Evaluation Ad Hoc Group.

Eft made a motion, seconded by Davis, to adopt the Task Force's June 30 (Attachment One) and April 28 minutes (Attachment Two). The motion passed unanimously.

2. Adopted the Reports of its Working Groups

A. Health Risk-Based Capital (E) Working Group

Drutz said the Health Risk-Based Capital (E) Working Group met July 25 and took the following action: 1) adopted its May 17 and April 17 minutes, which included the following action: a) adopted its Spring National Meeting minutes; b) referred proposal 2023-01-CA to the Capital Adequacy (E) Task Force for exposure; c) received

Draft Pending Adoption

an update from the American Academy of Actuaries (Academy) on the health care receivables and H2-underwriting risk review projects; d) discussed pandemic risk; and e) exposed the proposal on the health test language for a 45-day public comment period ending June 30; 2) adopted its 2023 health risk-based capital (RBC) newsletter; 3) adopted its 2022 health RBC statistics report; 4) exposed proposal 2023-11-H (XR014 Fee-for-Service & Other Risk Revenue-Medicare & Medicaid) for a 30-day public comment period ending Aug. 24. The proposal was drafted to include Medicare and Medicaid fee-for-service and other risk revenue amounts in Column (1), Lines (4) and (10) on pages XR014 and XR013; 5) received comments from the New York Department of Financial Services on the health test language proposal. The Working Group referred the proposal to the Blanks (E) Working Group; 6) received an update from the Academy on the health care receivables and H2-underwriting risk review projects. The Working Group agreed to reach out to companies where there are questions related to the reporting of health care receivables. The Working Group agreed to expose the Academy's update letter on the H2-underwriting risk review and work with the Academy to address the questions provided in its letter; 7) adopted its 2023 working agenda; 8) received an update on the work being performed by the Excessive Growth Charge Ad Hoc group; and 9) discussed a way forward on evaluating pandemic risk in the health RBC formula.

B. Risk-Based Capital Investment Risk and Evaluation (E) Working Group

Barlow said the RBC Investment Risk and Evaluation (E) Working Group met Aug. 13 and took the following action: 1) adopted its June 14, May 17, April 20, and Spring National Meeting minutes, which included the following action: a) discussed comments received on proposed structural and factor changes for residual tranches; and b) adopted structural changes and factors for the base factor and a sensitivity test for residual tranches; 2) received updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group; and 3) heard a presentation from the Academy on principles for structured securities RBC.

C. Life Risk-Based Capital (E) Working Group

Barlow also said the Life Risk-Based Capital (E) Working Group met Aug. 13 and took the following action: 1) adopted its June 22, April 14, and Spring National Meeting minutes, which included the following action: a) adopted the Generator of Economic Scenarios (GOES) (E/A) Subgroup charges; b) discussed proposal 2023-08-L (Custody Control Accounts); c) discussed its working agenda; d) adopted proposals: i) 2023-05-L (C-2 Mortality Structure and Instruction Changes); ii) 2023-07-L (CM6 & CM7 Mortgage Structure Change); iii) 2023-08-L (Custody Control Accounts); and e) discussed C-2 mortality risk; 2) adopted its 2023 life RBC newsletter; 3) adopted its 2022 life RBC statistics report; 4) adopted its working agenda; 5) heard a presentation from the American Council of Life Insurers (ACLI) on repurchase agreements and exposed it for a 45-day public comment period.

D. Property and Casualty Risk-Based Capital (E) Working Group

Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met July 27 and took the following action: 1) adopted its June 16 and April 24 minutes, which included the following action: a) adopted its Spring National Meeting Minutes; b) adopted proposal 2023-02-P (UW Risk Line 1 Factors); c) adopted proposal 2023-02-P-MOD (UW Risk Line 1 Factors Modification), which updated the H/F, WC, and CMP reserve factors due to an incorrect calculation; 2) adopted the report of the Catastrophe Risk (E) Subgroup, which took the following action: a) adopted its Spring National Meeting minutes; b) discussed its working agenda; c) received a status update from its Catastrophe Model Technical Review Ad Hoc Group; d) discussed wildfire peril impact analysis; e) heard a presentation from Verisk on severe convective storms model update and technical review; and f) discussed the flood insurance market; 3) adopted its 2023 property/casualty (P/C) RBC newsletter; 4) discussed its 2022 P/C RBC statistics report; 5) discussed its working agenda; and 6) heard an update on current P/C RBC projects from the Academy.

Draft Pending Adoption

Drutz made a motion, seconded by Travis, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Three), the Life Risk-Based Capital (E) Working Group (Attachment Four), the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Five), and the Risk-Based Capital Investment Risk and Evaluation (E) Working Group (Attachment Six). The motion passed unanimously.

3. Adopted its Working Agenda

Botsko summarized the changes to the 2023 working agenda. He said the following items were updated in the Life Risk-Based Capital (E) Working Group section: 1) item L3 was changed to “provide recommendation for the appropriate treatment of longevity risk transfers by updated longevity factors and consider expanding the scope to include all payout annuities”; 2) item L4, which is “monitor the economic scenario governance framework, review material economic scenario generator updates, key economic conditions and metrics, support the implementation of an economic scenario generator for use in statutory reserve and capital calculations and develop and maintain acceptance criteria,” was added to the ongoing life RBC section; 3) the original item L5, which is “work with the Life Actuarial (A) Task Force and Conning to develop the economic scenario generator for implementation,” was removed; and 4) the last item of the life RBC carryover section was updated to “work with the Academy on creating guidance for the adopted C-2 mortality treatment for 2023 and next steps.” Botsko stated that there is no change on the Risk-Based Capital Investment Risk and Evaluation (E) Working Group section in the working agenda.

Regarding the Property and Casualty Risk-Based Capital (E) Working Group section, he said the working agenda included the following substantial changes: 1) update the Sept. 26 comment from “conduct a review on different convective storm models” and add an additional comment of “the SG is finishing reviewing the following SCS vendor models: RMS, Verisk, KCC and Corelogic” in the comment section in item P1; 2) remove item # P5 as the proposal 2022-07-P has been adopted at the 2022 Fall National Meeting; and 3) add a new item P8 for adding pet insurance line in the RBC formula due to the adoption of the Annual Statement Blanks proposal 2023-01BWG.

Botsko also said the Health Risk-Based Capital (E) Working Group agenda item was revised to incorporate the following changes: 1) item X1 was updated to reference the adoption of proposal 2022-16-CA; 2) item X3 was updated to reference the adoption of proposal 2023-01-CA; 3) item X4 was updated to include the work with the Academy on the health care receivables; and 4) items X5 and X10 were deleted because these items have been completed.

Lastly, Botsko stated that the Task Force working agenda was updated as follows: 1) items CA1 and CA5 were updated to reference the adoption of proposals: a) 2022-09-CA; b) 2022-09-CA-MOD; and c) 2022-13-CA. These two items will be removed from the working agenda due to the adoption of the proposal; 2) the comment for CA4 was updated to reflect that the Task Force forwarded the responses to the Restructuring Mechanism (E) Subgroup at the Spring National Meeting. This item is considered completed, and it will also be removed from the working agenda shortly; and 3) add a new item, CA6, for establishing the Risk Evaluation Ad Hoc Group at the Spring National Meeting.

Drutz made a motion, seconded by Andersen, to adopt the Task Force’s revised 2023 working agenda (Attachment Seven). The motion passed unanimously.

4. Exposed its 2024 Proposed Charges

Botsko said the only added item in the 2024 proposed charges is the establishment of a new subgroup, which is the Generator of Economic Scenarios (GOES) (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force. He encouraged the interested parties to review the charges of the new subgroup, and he welcomed any comments during the exposure period.

Draft Pending Adoption

The Task Force agreed to expose its 2024 proposed charges for a 30-day public comment period ending Sept. 13.

5. Exposed its Revised Procedures Document

Botsko said the purpose of the revision is to allow the exposure deadline to be extended to March 15 for either the Task Force or Working Groups in only rare instances when the structure is urgent. He encouraged the interested parties to review the revision and welcomed any comments during the exposure period.

The Task Force agreed to expose its revised procedure documents for a 30-day public comment period ending Sept. 13.

6. Received an Update from its Risk Evaluation Ad Hoc Group

Botsko said the Risk Evaluation Ad Hoc Group met July 26 and decided to establish three subgroups to potentially streamline the process of making progress on specific topics: 1) Asset Concentration Ad Hoc Subgroup; 2) RBC Purposes and Guidelines Ad Hoc Subgroup; and 3) Geographic Concentration Ad Hoc Subgroup. He encouraged all interested parties to contact NAIC staff if anyone is interested in joining the ad hoc subgroups. Also, Botsko announced that the ad hoc subgroups will start meeting regularly after the Summer National Meeting and will provide monthly updates to the Risk Evaluation Ad Hoc Group.

7. Discussed the Implications of the Recent Market Turmoil and Their Impact on Insurer Investments

Ed Toy (Risk & Regulatory Consulting—RRC) provided an update on the banking situation, noting that it continues to evolve. This has included banking regulators announcing increased regulation for larger banks that are below the largest bank. He stated that the July 2023 Senior Loan Officer Opinion Survey on bank lending practices reported tightening of lending to all businesses and household categories. The impact on commercial real estate also continues to evolve. There have been announcements of major investors selling properties at significant losses or letting lenders take properties upon debt defaults, and national index values of commercial real estate were already hitting a dip beginning the end of last year. Office properties have dropped as much as 30% in the last 12 months.

Toy also addressed some comments on the Fitch Ratings downgrade of the U.S. Federal Government debt from AAA to AA+ on Aug. 1. He said he believes that the ratings change does not trigger material impact within the RBC framework, as U.S. full faith and credit obligation is in an exempt category under the RBC guidance. However, agencies that are not backed by full faith and credit of the U.S. government (such as Fannie Mae and Freddie Mac) may have a change in factors, but the overall RBC impact should be relatively immaterial.

Botsko said the Task Force appreciates Toy continuing to provide updates in upcoming meetings. He also reiterated that the Task Force is open to hearing thoughts or information that affects RBC. He encouraged parties to contact him or NAIC staff if they are interested in presenting any topics during a Task Force meeting.

8. Discussed Other Matters

A. RBC Statistics Operational Risk Component

Botsko said during the Health Risk-Based Capital (E) Working Group meeting on July 25, the interested parties suggested that adding the operational risk component will provide a complete picture of the RBC formula. Without hearing any objections, the Task Force agreed to include the operational risk amount in the 2023 RBC statistics for all lines of business.

Draft Pending Adoption

B. Negative IMR

Bruggeman said the Statutory Accounting Principles (E) Working Group adopted the short-term interpretation project during its meeting at this Summer National Meeting. He stated that this project is good through year-ending 2025 to give the industry, regulators, and other interested parties time to hash out a long-term approach. Bruggeman also stated that the adopted short-term interpretation reflects the following: 1) requirement for RBC ratio over 300% after adjustment to remove admitted positive goodwill, electronic data processing (EDP) equipment and operating system software, deferred tax assets (DTAs), and admitted negative interest maintenance reserve (IMR); 2) allowance to admit up to 10% of adjusted capital and surplus; 3) application guidance for admitting/recognizing IMR in both the general and separate accounts; 4) there is no exclusion for derivatives losses included in negative IMR, if the company can demonstrate historical practice in which realized gains from derivatives were also reversed to IMR and amortized; and 5) inclusion of a new reporting entity attestation, which continues the existing practice that losses cannot be deferred as a result of a forced sale due to liquidity issues, along with commentary that assets were sold as part of prudent asset management.

In addition, Bruggeman said the Statutory Accounting Principles (E) Working Group adopted the principles-based bond definition, to be effective Jan. 1, 2025, along with creating an expanded Schedule D, Part 1 to Schedule D, Part 1, Section 1 and Schedule D, Part 1, Section 2.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/CADTF/2023-2-Summer/Aug 14 CADTF minutes.docx

Draft: 7/14/23

Capital Adequacy (E) Task Force
Virtual Meeting
June 30, 2023

The Capital Adequacy (E) Task Force met June 30, 2023. The following Task Force members participated: Judith L. French, Chair, and Tom Botsko (OH); Grace Arnold, Vice Chair, represented by David Nelson (MN); Mark Fowler represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Michael Conway represented by Keith Warburton (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Virginia Christy (FL); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark (KY); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers (MO); Mike Causey represented by Jessica Price (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Glen Mulready represented by Andrew Schallhorn (OK); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek (WI).

1. Adopted Proposal 2023-02-P(MOD)

Botsko said proposal 2023-02-P(MOD) (Underwriting Risk Line 1 Factors) provides a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula, which was adopted during the Task Force's April 28 meeting. He also stated that the purpose of this modification is to update the H/F, WC, and CMP reserve factors due to an incorrect calculation. The Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup conducted an e-vote to adopt this proposal on June 16.

Chou made a motion, seconded by Drutz, to adopt proposal 2023-02-P(MOD) (Attachment One-A). The motion passed unanimously.

2. Adopted Proposals 2023-09-IRE and 2023-10-IRE

Barlow said the purpose of proposals 2023-09-IRE (Residual Factor for Life) and 2023-04-IRE (Residual Sensitivity Test Factor for Life) is to apply RBC factors for residual tranches and sensitivity tests in the life RBC formula. He stated that during the RBC Investment Risk and Evaluation (E) Working Group's June 14 meeting, the Working Group adopted: 1) the residual tranches factor of 30% for year-end 2023 and then 45% for year-end 2024 with consideration of positive or negative adjustment based on additional information; and 2) the sensitivity factor of 15% for year-end 2023. He also indicated that both proposals passed unanimously in the Working Group's last meeting. Lastly, Botsko stated that these two proposals will only apply to the life formula. The Working Group will evaluate the P/C and health formulas in the near future.

Barlow made a motion, seconded by Hemphill, to adopt proposals 2023-09-IRE (Attachment One-B) and 2023-10-IRE (Attachment One-C). The motion passed unanimously.

3. Adopted the Generator of Economic Scenarios (E/A) Subgroup Charges

Barlow said the Life Risk-Based Capital (E) Working Group adopted the Generator of Economic Scenarios (E/A) Subgroup charges during its June 22 meeting. He asked the Task Force to consider adoption of the proposed charges.

Barlow made a motion, seconded by Yanacheak, to adopt the Generator of Economic Scenarios (E/A) Subgroup's proposed charges (see *NAIC Proceedings – Summer 2023, Financial Condition (E) Committee, Attachment One-B*). The motion passed unanimously.

4. Adopted Proposal 2022-09-CA(MOD)

Botsko said the purpose of proposal 2022-09-CA(MOD) (Revised Affiliated Investments Structure and Instructions) is to provide editorial changes to: 1) clarify the examples provided in the indirectly owned alien insurance affiliates/subsidiaries section; and 2) add a footnote to the "% owned" column in the blank.

Chou made a motion, seconded by Warburton, to adopt proposal 2022-09-CA(MOD) (Attachment One-D). The motion passed unanimously.

5. Adopted Proposal 2022-16-CA

Drutz said the purpose of proposal 2022-16-CA (Underwriting Risk Factors – Investment Income Adjustment) is to update the underwriting risk factors for the annual investment income adjustment to the comprehensive medical, Medicare supplement, and dental and vision factors. He also stated that the Task Force received no comments during a 30-day public comment period.

Drutz made a motion, seconded by Chou, to adopt proposal 2022-16-CA (Attachment One-E). The motion passed unanimously.

6. Adopted Proposal 2023-01-CA

Drutz said the purpose of proposal 2023-01-CA (Stop Loss Premiums) is to clarify the instructions for the stop loss business in the health RBC formula and align the life and P/C RBC formulas with these changes. He also stated that the Task Force received no comments during a 30-day public comment period.

Drutz made a motion, seconded by Chou, to adopt proposal 2023-01-CA (Attachment One-F). The motion passed unanimously.

7. Discussed the Current Turmoil in the Banking Sector

Ed Toy (Risk & Regulatory Consulting LLC—RRC) said the Democrats in the U.S. House of Representatives (House) have proposed a raft of bills to deal with recent banking problems. He stated that four items focus on reforms or improvements to banking regulation: 1) closing the Enhanced Prudential Standards Loophole Act; 2) closing the Chief Risk Officer Enforcement and Accountability Act; 3) closing the Effective Bank Regulation Act; and 4) closing the Secure and Fair Enforcement (SAFE) Banking Act. He said he believes the SAFE Banking Act may have the most immediate impact if the bills pass as proposed since the affected banks will need to market investments that have heretofore been exempted. Botsko said the Task Force welcomes Toy to provide constant updates regarding this issue.

Botsko said the Task Force is open to hearing thoughts or information that affects RBC. He encouraged parties to contact him or NAIC staff if they are interested in presenting any topics during a Task Force meeting.

8. Received an Update from its Risk Evaluation Ad Hoc Group

Botsko said the Risk Evaluation Ad Hoc Group met June 14 and May 22. During these two meetings, the Ad Hoc Group discussed: 1) the purpose of the RBC; and 2) the possibility of developing a process or guidelines for reviewing, adding, or deleting factors to the RBC formulas. Botsko also stated that the Ad Hoc Group agreed that it should focus on reviewing items such as risk factors in different RBC components, company size, geographic concentration, reinsurance, purpose of RBC, deferred tax asset, covariance, and benchmark. He said this Ad Hoc Group will meet once every other week before the Summer National Meeting. The next meeting is scheduled for July 12. Botsko welcomed all interested parties to actively participate in the Ad Hoc Group discussion during the upcoming meeting.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

The proposed change would provide routine annual update of the industry underwriting factors (premium and reserve) in the PCRBC formula.

Additional Staff Comments:

4-25-23 TF adopted proposal
 5-15-23 PCRBC WG re-expose the proposal for seven days due to the incorrect calculation of H/F, WC, and CMP reserve factors.
 6-30-23 TF adopted Modified proposal

 OTHER _____

DESCRIPTION OF CHANGE(S)

The proposed change would revise the instructions and structure for the Affiliated Investments for all lines.

MODIFIED: The Health and P/C instructions and blanks have been modified with an editorial change to clarify the examples provided in the Indirectly Owned Alien Insurance Affiliates/Subsidiaries section and add a footnote to the % Owned column in the blank.

REASON OR JUSTIFICATION FOR CHANGE **

The proposed revisions will improve the risk-based capital formulas and provide consistency to the treatment of affiliates for all lines of business.

Additional Staff Comments:

8/11/22 - The Task Force exposed this proposal for a 60-day public comment period ending Oct, 10.

3/23/23 – The Task Force adopted the proposal on 3/23/23

5/17/23 – EDITORIAL CHANGE to Indirectly Owned Alien Insurance Affiliates/Subsidiaries section and % owned column.

6/1/23 – The Task Force exposed this proposal for a 14-day public comment period ending Jun 14.

** This section must be completed on all forms.

Revised 2-2019

AFFILIATED/SUBSIDIARY STOCKS
XR002 – XR004

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies and Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Other Non-financial entities

Detail Eliminated to Conserve Space

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the Alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between, and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line (6) of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance affiliate/subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner’s balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company’s interest in the affiliate/subsidiary multiplied by 1.0 and adjusted to reflect the reporting company’s ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Life Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Life Insurance Company and the RBC charge for the indirect ownership of the alien insurance affiliate/subsidiary would be \$10,000,000 (4-5.1,000 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 30 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

XR002 Columns			
(1) Affiliate/Subsidiary	(2) Affiliate/Subsidiary Type	(5) Book Adjusted Carrying Value (Statement Value) of Affiliate’s Common Stock	(12) RBC Required
Alien Life Insurance Company	6c	10,000,000	10,000,000
Holder Holding Company	3	10,000,000	3,000,000

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Life Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$5,000,000 (1.0 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

<u>XR002 Columns</u>			
(1) <u>Affiliate/Subsidiary</u>	(2) <u>Affiliate/Subsidiary Type</u>	(5) <u>Book Adjusted Carrying Value (Statement Value) of Affiliate's Common Stock</u>	(12) <u>RBC Required</u>

**AFFILIATED/SUBSIDIARY STOCKS
PR003 – PR005**

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirement for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies or Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Other Non-financial entities

Detail Eliminated to Conserve Space

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line **XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance Affiliate/Subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner’s balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company’s interest in the affiliate/subsidiary multiplied by 0.500 and adjusted to reflect the reporting company’s ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Life Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Life Insurance Company and the RBC charge for the indirect ownership of the ~~a~~ Alien insurance affiliate/subsidiary would be \$5,000,000 (0.500 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 22.5 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

<u>PR003 Columns</u>			
<u>(1)</u> <u>Affiliate/Subsidiary</u>	<u>(2)</u> <u>Affiliate/Subsidiary Type</u>	<u>(5)</u> <u>Book Adjusted Carrying Value (Statement Value) of Affiliate's Common Stock</u>	<u>(12)</u> <u>RBC Required</u>
<u>Alien Life Insurance Company</u>	<u>6c</u>	<u>10,000,000</u>	<u>5,000,000</u>
<u>Holder Holding Company</u>	<u>3</u>	<u>10,000,000</u>	<u>2,250,000</u>

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Life Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$2,500,000 (0.500 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

<u>PR003 Columns</u>			
<u>(1)</u>	<u>(2)</u>	<u>(5)</u>	<u>(12)</u>
<u>Affiliate/Subsidiary</u>	<u>Affiliate/Subsidiary Type</u>	<u>Book Adjusted Carrying Value (Statement Value) of Affiliate's Common Stock</u>	<u>RBC Required</u>
<u>Alien Life Insurance Company</u>	<u>6c</u>	<u>5,000,000</u>	<u>2,500,000</u>
<u>Holder Holding Company</u>	<u>3</u>	<u>15,000,000</u>	<u>3,375,000</u>

For each affiliate/subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- ~~Total Outstanding value of common and preferred stock,~~
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's Common and preferred stock column.

DESCRIPTION OF CHANGE(S)

Update the underwriting factors for Comprehensive Medical, Medicare Supplement and Dental & Vision on pages XR013, LR019, LR020, PR019 and PR020 for the investment income adjustment.

REASON OR JUSTIFICATION FOR CHANGE **

Annual update of the underwriting factors for Comprehensive Medical, Medicare Supplement and Dental & Vision for investment income adjustment.

Additional Staff Comments:

- 2-7-23 cgb Exposed for 30-day comment period ending on March 9.
 2-28-23 cgb EDITORIAL CHANGE: An editorial correction was made to the Health portion of the instructions to change the investment income adjustment reference from 0.5% to 5.0%.
 3-9-23 cgb No comments received.
 3-21-23 cgb The WG agreed to refer the proposal to the CapAd TF for exposure for all lines of business.

February 2, 2023

Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Re: Request for Additional Analysis to Incorporate Investment Income into the Underwriting Risk Component of the Health Risk-Based Capital (HRBC) Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries¹ Health Solvency Subcommittee (the subcommittee), I am pleased to provide this response letter to the NAIC's Health Risk-Based Capital (E) Working Group request to provide additional investment return scenarios within the subcommittee's summary of the Investment Income Adjusted Health H2 Experience Fluctuation Risk Factors. These factors are included within the table below.

Investment Income Adjusted Tiered Risk-Based Capital (RBC) Factors

Assumed Investment Return	Comprehensive Medical (CM)	Medicare Supplement	Dental/Vision
	High Tier (i.e., less than \$3Million (M) or less than \$25M)		
0.0%	15.00%	10.50%	12.00%
3.5%	14.53%	10.01%	11.63%
4.0%	14.47%	9.94%	11.58%
4.5%	14.40%	9.87%	11.53%
5.0%	14.34%	9.80%	11.48%
5.5%	14.27%	9.73%	11.43%
6.0%	14.21%	9.67%	11.38%
	Low Tier		
0.0%	9.00%	6.70%	7.60%
3.5%	8.56%	6.23%	7.25%
4.0%	8.50%	6.16%	7.20%
4.5%	8.44%	6.09%	7.16%
5.0%	8.38%	6.03%	7.11%
5.5%	8.32%	5.96%	7.06%
6.0%	8.25%	5.90%	7.01%

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Please note that the subcommittee updated the claims completion pattern assumptions slightly in this analysis. The impact of this change on the RBC factors is approximately 0.01%. Otherwise, the methodology is unchanged.

If you have any questions or would like to discuss further, please contact Matthew Williams, the Academy's senior health policy analyst, at williams@actuary.org.

Sincerely,

Derek Skoog, MAAA, FSA
Chairperson, Health Solvency Subcommittee
American Academy of Actuaries

Cc: Crystal Brown, Senior Health RBC Analyst & Education Coordinator, Financial Regulatory Affairs, NAIC

HEALTH

**UNDERWRITING RISK - L(1) THROUGH L(21)
XR013**

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column (1) through (3) have incorporated an investment income yield of ~~5.04~~5%.

	\$0 - \$3 Million	\$3 - \$25 Million	Over \$25 Million
Comprehensive Medical & Hospital	0.143493	0.143493	0.083893
Medicare Supplement	0.09804043	0.060363	0.060363
Dental & Vision	0.114895	0.071155	0.071155
Stand-Alone Medicare Part D Coverage	0.251	0.251	0.151
Other Health	0.130	0.130	0.130
Other Non-Health	0.130	0.130	0.130

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will identify the yield of the 6-month Treasury bond ([U.S. Department of the Treasury](#)) on each Monday through the month of January and determine if further modifications to the ~~5.04~~5% adjustment ~~is~~ needed. Any adjustments will be rounded up to the nearest 0.5%.

 OTHER _____

DESCRIPTION OF CHANGE(S)

Clarify the instructions for stop loss premiums in the Underwriting Risk – Experience Fluctuation Risk, Other Underwriting Risk and Stop Loss Interrogatories.

REASON OR JUSTIFICATION FOR CHANGE **

Provide clarity on reporting stop loss premiums in the RBC formula.

Additional Staff Comments:

- 3-21-23 cgb The Working Group exposed the proposal for a 20-day comment period ending on 4/10/23.
 3-24-23 cgb Editorial changes to: 1) replace i.e. with e.g. and 2) corrected the reference from “treaty” to “contract” in the example provided under the Calendar Year changes.
 3-28-23 cgb Editorial correction to proposal # on proposal form from 2022-17-CA to 2023-01-CA

** This section must be completed on all forms.

Detail Eliminated to Conserve Space

UNDERWRITING RISK - L(1) THROUGH L(21)
XR013

Underwriting Risk is the largest portion of the risk-based capital charge for most reporting entities. The Underwriting Risk page generates the RBC requirement for the risk of fluctuations in underwriting experience. The credit that is allowed for managed care in this page comes from the Managed Care Credit Calculation page.

Underwriting risk is present when the next dollar of unexpected claim payments comes directly out of the reporting entity's capital and surplus. It represents the risk that the portion of premiums intended to cover medical expenses will be insufficient to pay such expense. For example, a reporting entity may charge an individual \$100 in premium in exchange for a guaranty that all medical costs will be paid by that reporting entity. If the individual incurs \$101 in claims costs, the reporting entity's surplus will decline because it did not charge a sufficient premium to pick up the additional risk for that individual.

There are other arrangements where the reporting entity is not at risk for excessive claims payments, such as when an HMO agrees to serve as a third-party administrator for a self-insured employer. The self-insured employer pays for actual claim costs, so the risk of excessive claims experience is borne by the self-insured employer, not the reporting entity. The underwriting risk section of the formula, therefore, requires some adjustments to remove non-underwriting risk business (both premiums and claims) before the RBC requirement is calculated. Appendix 1 contains commonly used terms for general types of health insurance. Refer to INT 05-05: Accounting for Revenue under Medicare Part D Cover for terms specifically used with respect to Medicare Part D coverage of prescription drugs.

Claims Experience Fluctuation

The RBC requirement for claims experience fluctuation is based on the greater of the following calculations:

A. Underwriting risk revenue, times the underwriting risk claims ratio, times a set of tiered factors. The tiered factors are determined by the underwriting risk revenue volume.

or

B. An alternative risk charge that addresses the risk of catastrophic claims on any single individual. The alternative risk charge is equal to multiple of the maximum retained risk on any single individual in a claims year. The maximum retained risk (level of potential claim exposure) is capped at \$750,000 per individual and \$1,500,000 total for medical coverage; \$25,000 per individual and \$50,000 total for all other coverage except Medicare Part D coverage and \$25,000 per individual and \$150,000 total for Medicare Part D coverage. Additionally, for multi-line organizations (e.g., writing more than one coverage type), the alternative risk charge for each subsequent line of business is reduced by the amount of the highest cap. For example, if an organization is writing both comprehensive medical (with a cap of \$1,500,000) and dental (with a cap of \$50,000), then only the larger alternative risk charge is considered when calculating the RBC requirement (i.e., the alternative risk charges for each line of business are not cumulative).

For RBC reports to be filed by a health organization commencing operations in this reporting year, the health organization shall estimate the initial RBC levels using operating (revenue and expense) projections (considering managed care arrangements) for its first full year (12 months) of managed care operations. The projections, including the risk-based capital requirement, should be the same as those filed as part of a comprehensive business plan that is submitted as part of the application for licensure. The Underwriting, Credit (capitation risk only), and Business Risk sections of the first RBC report submitted shall be completed using the health organization's actual operating data for the period from the commencement of operations until year-end, plus projections for the number of months necessary to provide 12 months of data. The affiliate, asset and portions of the credit risk section that are based on balance sheet information shall be reported using actual data. For subsequent years' reports, the RBC results for all of the formula components shall be calculated using actual data.

L(1) through L(21)

There are six lines of business used in the formula for calculating the RBC requirement for this risk: (1) Comprehensive Medical and Hospital; (2) Medicare Supplement; (3) Dental/Vision; (4) Stand-Alone Medicare Part D Coverage; ~~and~~ (5) Other Health; and (6) Other Non-Health. Each of these lines of business has its own column in the Underwriting Risk – Experience Fluctuation Risk table. The categories listed in the columns of this page include all risk revenue and risk revenue that is received from another reporting entity in exchange for medical services provided to its members. The descriptions of the items are described as follows:

Column (1) - Comprehensive Medical & Hospital. Includes policies providing for medical coverages including hospital, surgical, major medical, Medicare risk coverage (but NOT Medicare Supplement), and Medicaid risk coverage. This category DOES NOT include administrative services contracts (ASC), administrative services only (ASO) contracts, or any non-underwritten business. These programs are reported in the Business Risk section of the formula. Neither does it include Federal Employees Health Benefit Plan (FEHBP) or TRICARE, which are reported in Line 24 of this section. Medicaid Pass-Through Payments reported as premiums should also be excluded from this category and should be reported in Line 25.2 of this section. The alternative risk charge, which is twice the maximum retained risk after reinsurance on any single individual, cannot exceed \$1,500,000. Prescription drug benefits included in major medical insurance plans (including Medicare Advantage plans with prescription drug coverage) should be reported in this line. These benefits should also be included in the Managed Care Credit calculation.

Column (2) - Medicare Supplement. This is business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement and includes Medicare Select. Medicare risk business is reported under comprehensive medical and hospital.

Column (3) - Dental & Vision. This is limited to policies providing for dental-only or vision-only coverage issued as a stand-alone policy or as a rider to a medical policy, which is not related to the medical policy through deductibles or out-of-pocket limits.

Column (4) - Stand-Alone Medicare Part D Coverage. This includes both individual coverage and group coverage of Medicare Part D coverage where the plan sponsor has risk corridor protection. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. Medicare drug benefits included in major medical plans or benefits that do not meet the above criteria are not to be included in this line. Supplemental benefits within Medicare Part D (benefits in excess of the standard benefit design) are addressed separately on page XR015. Employer-based Part D coverage that is in an uninsured plan as defined in *SSAP No. 47—Uninsured Plans* is not to be included here.

Column (5) – Other Health Coverages. This includes other health coverages such as other stand-alone prescription drug benefit plans, ~~NOT INCLUDED ABOVE~~ that have not been specifically addressed in ~~the other~~ Columns (1) through (4) listed above and those lines of business addressed separately on page XR015, such as stop loss. Stop loss premiums are addressed separately in Line (25) on page XR015.

Column (6) - Other Non-Health Coverages. This includes life and property and casualty coverages.

The following paragraphs explain the meaning of each line of the table for computing the experience fluctuation underwriting risk RBC.

Line (1) Premium. This is the amount of money charged by the reporting entity for the specified benefit plan. It is the earned amount of prepayments (usually on a per member per month basis) made by a covered group or individual to the reporting entity in exchange for services to be provided or offered by such organization. However, it does not include receipts under administrative services only (ASO) contracts; or administrative services contracts (ASC); or any non-underwritten business. Nor does it include federal employees health benefit programs (FEHBP) and TRICARE. Report premium net of payments for stop-loss or other reinsurance. The amounts reported in the individual columns should come directly from Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. For Stand-Alone Medicare Part D Coverage the premium includes beneficiary premium (standard coverage portion), direct subsidy, low-income subsidy (premium portion), Part D payment demonstration amounts and risk corridor payment adjustments. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. It

does not include revenue received for reinsurance payments or low-income subsidy (cost-sharing portion), which are considered funds received for uninsured plans in accordance with Emerging Accounting Issues Working Group (EAIWG) INT. No. 05-05. Also exclude the beneficiary premium (supplemental benefit portion) for Stand-Alone Medicare Part D coverage.

NOTE: Where premiums are paid on a monthly basis, they are generally fully earned at the end of the month for which coverage is provided. In cases where the mode of payment is less frequent than monthly, a portion of the premium payment will be unearned at the end of any given reporting period.

Line (2) Title XVIII Medicare. This is the earned amount of money charged by the reporting entity (net of reinsurance) for Medicare risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicare subscribers. This includes the beneficiary premium and federal government's direct subsidy for prescription drug coverage under MA-PD plans. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement.

Line (3) Title XIX Medicaid. This is the earned amount of money charged by the reporting entity for Medicaid risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicaid subscribers. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. Stand-Alone Medicare Part D coverage of low-income enrollees is not included in this line.

Line (4) Other Health Risk Revenue. This is earned amounts charged by the reporting entity as a provider or intermediary for specified medical (e.g., full professional, dental, radiology, etc.) services provided to the policyholders, or members of another insurer or health entity. Unlike premiums, which are collected from an employer group or individual member, risk revenue is the prepaid (usually on a capitated basis) payments, made by another insurer or health entity to the reporting entity in exchange for services to be provided or offered by such organization. Payments to providers under risk revenue arrangements are included in the RBC calculation as underwriting risk revenue and are included in the calculation of managed care credits. Exclude fee-for-service revenue received by the reporting entity from another reporting entity. This revenue is reported in the Business Risk section of the formula as non-underwritten and limited risk revenue. The amounts reported in the individual columns will come directly from Page 7, Line 4 of the annual statement.

Line (5) Medicaid Pass-Through Payments Reported as Premiums. Medicaid Pass-Through Payments that are included as premiums in the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 should be reported in this line.

Line (6) Underwriting Risk Revenue. The sum of Lines (1) through (4) minus Line (5).

Line (7) Net Incurred Claims. Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the reporting entity. Paid claims include capitation and all other payments to providers for services to members of the reporting entity, as well as reimbursement directly to members for covered services. Paid claims also include salaries paid to reporting entity employees that provide medical services to members and related expenses. Do not include ASC payments or federal employees health benefit program (FEHBP) and TRICARE claims. These amounts are found on Page 7, Line 17 of the annual statement.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in INT 05-05: Accounting for Revenue under Medicare Part D Coverage). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claims liabilities should reflect expected recoveries from the reinsurance coverage, for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS. Exclude the beneficiary incurred claims (supplemental benefit portion) for Stand-Alone Medicare Part D coverage and report the incurred claims amount (supplemental benefit portion) on Line (25.1) of page XR015.

Line (8) Medicaid Pass-Through Payments Reported as Claims. Medicaid Pass-Through Payments that are included as claims in the Analysis of Operations by Lines of Business, Page 7, Line 17 should be reported in this line.

Line (9) Total Net Incurred Claims Less Medicaid Pass-Through Payments Reported as Claims, Line (7) minus Line (8).

Line (10) Fee-for-Service Offset. Report fee for service revenue that is directly related to medical expense payments. The fee for service line does not include revenue where there is no associated claim payment (e.g., fees from non-member patients where the provider receives no additional compensation from the reporting entity) and when such revenue was excluded from the pricing of medical benefits. The amounts reported in the individual columns should come directly from Page 7, Line 3 of the annual statement.

Line (11) Underwriting Risk Incurred Claims, Line (9) minus Line (10).

Line (12) Underwriting Risk Claims Ratio. For Columns (1) through (5), Line (11) / Line (6). If either Line (6) or Line (11) is zero or negative, Line (12) is zero.

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column (1) through (3) have incorporated an investment income yield of 0.5%.

	\$0 – \$3 Million	\$3 – \$25 Million	Over \$25 Million
Comprehensive Medical & Hospital	0.1493	0.1493	0.0893
Medicare Supplement	0.1043	0.0663	0.0663
Dental & Vision	0.1195	0.0755	0.0755
Stand-Alone Medicare Part D Coverage	0.251	0.251	0.151
Other Health	0.130	0.130	0.130
Other Non-Health	0.130	0.130	0.130

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will identify the yield of the 6-month Treasury bond (U.S. Department of the Treasury) on each Monday through the month of January and determine if further modifications to the 0.5% adjustment are needed. Any adjustments will be rounded up to the nearest 0.5%.

Line (14) Base Underwriting Risk RBC, Line (6) x Line (12) x Line (13).

Line (15) Managed Care Discount. For Comprehensive Medical & Hospital, Medicare Supplement (including Medicare Select) and Dental/Vision, a managed care discount, based on the type of managed care arrangements an organization has with its providers, is included to reflect the reduction in the uncertainty about future claim payments attributable to the managed care arrangements. The discount factor is from Column (3), Line (17) of the Managed Care Credit Calculation page. An average factor based on the combined results of these three categories is used for all three.

For Stand-Alone Medicare Part D Coverage, a separate managed care discount (or federal program credit) is included to reflect only the reduction in uncertainty about future claims payments attributable to federal risk arrangements. The discount factor is from Column (4), Line (17) of the Managed Care Credit Calculation page.

There is no discount given for the Other Health and Other Non-Health lines of business.

Line (16) RBC After Managed Care Discount, Line (14) x Line (15).

Line (17) Maximum Per-Individual Risk After Reinsurance. This is the maximum after-reinsurance loss for any single individual. Where specific stop-loss reinsurance protection is in place, the maximum per-individual risk after reinsurance is equal to the highest attachment point on such stop-loss reinsurance, subject to the following:

- Where coverage under the stop-loss protection (plus retention) with the highest attachment point is capped at less than \$750,000 per member, the maximum retained loss will be equal to such attachment point plus the difference between the coverage (plus retention) and \$750,000.
- Where the stop-loss layer is subject to participation by the reporting entity, the maximum retained risk as calculated above will be increased by the reporting entity's participation in the stop-loss layer (up to \$750,000 less retention).

If there is no specific stop-loss or reinsurance in place, enter \$9,999,999.

Examples of the calculation are presented below:

EXAMPLE 1 (Reporting entity provides Comprehensive Care):

Highest Attachment Point (Retention) Reinsurance Coverage	\$100,000
Maximum reinsured coverage	90% of \$500,000 in excess of \$100,000 \$600,000 (\$100,000 + \$500,000)
Maximum Ret. Risk =	\$100,000 deductible + \$150,000 (\$750,000 – \$600,000) + \$ 50,000 (10% of (\$600,000 – \$100,000) coverage layer) = \$300,000

EXAMPLE 2 (Reporting entity provides Comprehensive Care):

Highest Attachment Point (Retention) Reinsurance Coverage	\$75,000
Maximum reinsured coverage	90% of \$1,000,000 in excess of \$75,000 \$1,075,000 (\$75,000 + \$1,000,000)
Maximum Ret. Risk =	\$ 75,000 deductible + 0 (\$750,000 – \$1,075,000) + \$ 67,500 (10% of (\$750,000 – \$75,000)) coverage layer = \$142,500

Line (18) Alternate Risk Charge. This is twice the amount in Line (17) for columns (1), (2), (3) and (5) and Column (4) is six times the amount in Line (17), subject to a maximum of \$1,500,000 for Column (1), \$50,000 for Columns (2), (3) and (5) and \$150,000 for Column (4). Column (6) is excluded from this calculation.

Line (19) Alternate Risk Adjustment. This line shows the largest value in Line (18) for the column and all columns left of the column. Column (6) is excluded from this calculation.

Line (20) Net Alternate Risk Charge. This is the amount in Line (18), less the amount in the previous column of Line (19), but not less than zero. Column (6) is excluded from this calculation.

Line (21) Net Underwriting Risk RBC. This is the maximum of Line (16) and Line (20) for each of columns (1) through (5). This is the amount in Line (14), Column (6). The amount in Column (7) is the sum of the values in Columns (1) through (6).

OTHER UNDERWRITING RISK – L(22) THROUGH L(45) XR015–XR017

In addition to the general risk of fluctuations in the claims experience, there is an additional risk generated when reporting entities guarantee rates for extended periods beyond one year. If rate guarantees are extended between 15 and 36 months from policy inception, a factor of 0.024 is applied against the direct premiums earned for those guaranteed policies. Where a rate guaranty extends beyond 36 months, the factor is increased to 0.064. This calculation only applies to those lines of accident and health business, which include a medical trend risk, (i.e., Comprehensive Medical, Medicare Supplement, Dental/Vision, Stand-Alone Medicare Part D Coverage, Supplemental benefits within Medicare Part D Coverage, Stop-Loss, and Minimum Premium). Premiums entered should be earned premium for the current calendar year period and not for the entire period of the rate guarantees. Premium amounts should be shown net of reinsurance only when the reinsurance ceded premium is also subject to the same rate guarantee.

A separate risk factor has been established to recognize the reduced risk associated with safeguards built into the Federal Employees Health Benefit Program (FEHBP) created under Section 8909(f)(1) of Title 5 of the United States Code and TRICARE business. Claims incurred are multiplied by two percent to determine total underwriting RBC on this business.

The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group in 2016 to apply a tiered risk factor approach to the Stop-Loss Premium. The premiums for this coverage should not be included within Comprehensive Medical or Other Health Coverages (Page XR013). It is not expected that the transfer of risk through the various managed care credits will reduce the risk of stop-loss coverage. Medical Stop-Loss exhibits a much higher variability than Comprehensive Medical. A factor of 35 percent will be applied to the first \$25,000,000 in premium and a factor of 2.5 percent will be applied to premium in excess of \$25,000,000. Stop loss premiums should be reported on a net basis.

Line (25.1) Supplemental Benefits within Stand-Alone Medicare Part D Coverage. A separate risk factor has been established to recognize the different risk (as described in INT 05-05: Accounting for Revenue under Medicare Part D Coverage) for the incurred claims associated with the beneficiaries for these supplemental drug benefits.

Line (25.2) Medicaid Pass-Through Payments Reported as Premium. The treatment of Medicaid Pass-Through Payments varies from state to state, and in some instances is treated as premium. The Health Risk-Based Capital Working Group however, determined that the risk associated with these payments is more administrative in nature and similar to uninsured plans. As such, the Working Group determined that the charge should follow that of the uninsured plans (ASC and ASO) and apply a 2 percent factor charge to those Medicaid Pass-Through Payments reported as premiums. This amount should be equal to the amount reported on page XR013, Column (1), Line (5).

Lines (26) through (32) Disability Income. Disability Income Premiums are to be separately entered depending upon category (Individual and Group). For Individual Disability Income, a further split is between noncancellable (NC) or other (guaranteed renewable, etc.). For Group Disability Income, the further splits are between Credit Monthly Balance, Credit Single Premium (with additional reserves), Credit Single Premium (without additional reserves), Group Long-Term (benefit periods of two years or longer) and Group Short-Term (benefit periods less than two years). The RBC factors vary by the amount of premium reported such that a higher factor is applied to amounts below \$50,000,000 for similar types. In determining the premiums subject to the higher factors, Individual Disability Income NC and Other are combined. All types of Group and Credit Disability Income are combined in a different category from Individual.

STOP LOSS ELECTRONIC ONLY TABLES

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life-time maximum amounts included in the Federal Affordable Care Act.

Electronic Table 1 – Stop Loss Interrogatories

The interrogatories are designed to gather the information by product type and will be reviewed on a go-forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end 2019, will reflect the incurred data for calendar year 2018 run-out through December 31, 2019.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer’s total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

Product Type

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.

Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.

HMO Reinsurance = specific reinsurance of an HMO’s commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.

Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.

Medical Excess Reinsurance = specific reinsurance of an insurance company’s medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

Do not include quota share or excess reinsurance written on Stop Loss business.

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed, e.g., the RBC report filed for 2019 should provide experience information for calendar year 2018 with run-out through December 31, 2019. If the contract year does not follow a calendar year (i.e. 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and ~~expense~~ ~~expense~~ applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018. Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018 AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims – These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.
+

Expenses – These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance – This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =
Total Net Claims – These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.
 +

Expenses – These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio – This is equal to (Total Net Claims + Expenses)/Premiums Net of Reinsurance.

Electronic Table 2a – Calendar Year Specific Stop Loss Contracts by Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contracts by Group Size

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer’s total gross premium written are exempt from completing Table 2.

Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31st of the calendar (reporting) year. If the contract does not follow a calendar year (i.e., 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, total number of lives insured, including dependents).

Number of Groups – list the number of groups for each stop-loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (Table 2a) – The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =
 (Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives		Reason to Exclude	
			Include	Exclude	Include	Exclude
1	\$200,000	115%	90		Include	
2	\$100,000	120%	60		Include	
3	\$50,000	140%	40		Exclude	Not in Group Size Band

4 \$120,000 N/A 50 Include
 Calculation: $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50) = \$150,000$

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the expected claims within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) = $(\text{Sum of Expected Claims} \times \text{Attachment Percentage} \%) / (\text{Sum of Expected Claims})$

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Expected Claims	Number of Lives	Reason to	
					Exclude	Exclude
1	\$200,000	115%	\$ 500,000	90	Include	
2	\$100,000	120%	\$ 300,000	60	Include	
3	\$50,000	140%	\$ 200,000	40	Exclude	Not in Group Size Band
4	\$120,000	N/A	\$ 400,000	50	Exclude	Aggregate not purchased by group

Calculation: $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000) = 116.7\%$

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1st filing) in Column 13, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

Detail Eliminated to Conserve Space

APPENDIX 1 – COMMONLY USED TERMS

The Definitions of Commonly Used Terms are frequently duplicates from the main body of the text. If there are any inconsistencies between the definitions in this section and the definitions in the main body of the instructions, the main body definition should be used.

Detail Eliminated to Conserve Space

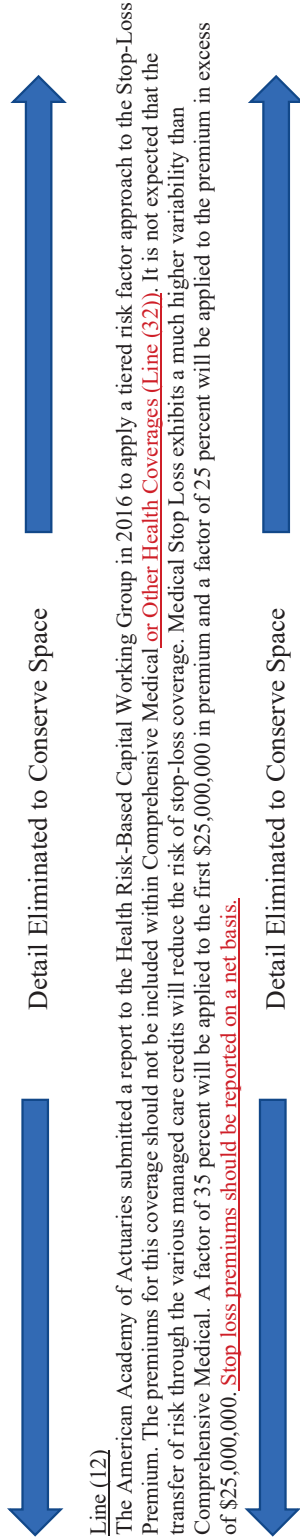

Stop-Loss Coverage – Coverage for a self-insured group plan, a provider/provider group or non-proportional reinsurance of a medical insurance product. Coverage may apply on a specific basis, an aggregate basis or both. Specific coverage means that the stop-loss carrier's risk begins after a minimum of at least \$5,000 of claims for any

one covered Life has been covered by the group plan, provider/provider group or direct writer. Aggregate coverage means that the stop-loss carrier's risk begins after the group plan, provider/provider group or direct writer has retained at least 90 percent of expected claims, or the economic equivalent.

HEALTH PREMIUMS and HEALTH CLAIMS RESERVES

LR019, LR023 and LR024

Line (12)

The American Academy of Actuaries submitted a report to the Health Risk-Based Capital Working Group in 2016 to apply a tiered risk factor approach to the Stop-Loss Premium. The premiums for this coverage should not be included within Comprehensive Medical or Other Health Coverages (Line (32)). It is not expected that the transfer of risk through the various managed care credits will reduce the risk of stop-loss coverage. Medical Stop Loss exhibits a much higher variability than Comprehensive Medical. A factor of 35 percent will be applied to the first \$25,000,000 in premium and a factor of 25 percent will be applied to the premium in excess of \$25,000,000. Stop loss premiums should be reported on a net basis.

Line (32)

It is anticipated that most health premium will have been included in one of the other lines. In the event that some coverage does not fit into any of these categories, the "Other Health" category continues the RBC factor from the 1998 and prior formula for Other Limited Benefits Anticipating Rate Increases. Stop loss premiums are addressed separately in Line (12).

Stop Loss Electronic Only Tables

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life time maximum amounts included in the Federal Affordable Care Act.

Electronic Table 1 – Stop Loss Interrogatories

The interrogatories are designed to gather the information by product type and will be reviewed on a go forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end 2018, will reflect the incurred data for calendar year 2017 run-out through December 31st, 2018.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

Product Type

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.
Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.

HMO Reinsurance = specific reinsurance of an HMO's commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.
 Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.
 Medical Excess Reinsurance = specific reinsurance of an insurance company's medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

Please do not include quota share or excess reinsurance written on Stop Loss business.

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed; e.g., the RBC report filed for 2018 should provide experience information for calendar year 2017 with run-out through December 31st, 2018. —If the contract year does not follow a calendar year (i.e. 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and the applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018. Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018, AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims - These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.

+

Expenses – These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance – This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =

Total Net Claims - These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.

+

Expenses – These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio – This is equal to I(Total Net Claims + Expenses)/Premiums Net of Reinsurance.

Table 2a – Calendar Year **Specific** Stop Loss Contracts By Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contracts by Group Size

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 2.

Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31st of the calendar (reporting) year. If the contract does not follow a calendar year (i.e. 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, **total number of lives insured, including dependents**).

Number of Groups – list the number of groups for each stop loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (**Table 2a**) – The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =
(Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives	Reason to	
				Include	Exclude
1	\$ 200,000	115%	90	Include	
2	\$ 100,000	120%	60	Include	
3	\$ 50,000	140%	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	50	Include	

Calculation: $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50) = \$150,000$

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the count of covered lives within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) =
(Sum of Expected Claims x Attachment Percentage %) / (Sum of Expected Claims)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Expected Claims	Number of Lives	Reason to	
					Include	Exclude
1	\$ 200,000	115%	\$ 500,000	90	Include	
2	\$ 100,000	120%	\$ 300,000	60	Include	

3	\$ 50,000	140%	\$ 200,000	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	\$ 400,000	50	Exclude	Aggregate not purchased by group

Calculation: $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000) = 116.7\%$

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1st filing) in Column 6, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

LRBC FORMULA APPLICATION FOR P&C COMPANY'S A&H BUSINESS
PR019 – PR026

PR019 - Health Premiums

Detail Eliminated to Conserve Space

Line (9)

The American Academy of Actuaries submitted a report to the Health Risk-Based Capital Working Group in 2016 to apply a tiered risk factor approach to the Stop-Loss Premium. The premiums for this coverage should not be included within Comprehensive Medical or Other Health Coverages (Line (25)). It is not expected that the transfer of risk through the various managed care credits will reduce the risk of stop-loss coverage. Medical Stop Loss exhibits a much higher variability than Comprehensive Medical. A factor of 35 percent will be applied to the first \$25,000,000 in premium and a factor of 25 percent will be applied to the premium in excess of \$25,000,000. Stop loss premiums should be reported on a net basis.

Detail Eliminated to Conserve Space

Line (25)

Most Health Premium will have been included in one of the prior lines. In the event that some coverage does not fit into any of these categories, “Other Health” category is applied with a 12% factor, which is from 1998 formula for Other Limited Benefits Anticipating Rate Increases. Stop loss premiums are addressed separately in Line (9).

Stop Loss Electronic Only Tables

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life-time maximum amounts included in the Federal Affordable Care Act.

Electronic Table 1 – Stop Loss Interrogatories

The interrogatories are designed to gather the information by product type and will be reviewed on a go-forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end ~~2019~~ 2018, will reflect the incurred data for calendar year ~~2018-2017~~ run-out through December 31, 2019-2018.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

Product Type

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.
 Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.
 HMO Reinsurance = specific reinsurance of an HMO's commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.
 Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.
 Medical Excess Reinsurance = specific reinsurance of an insurance company's medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

Please do not include quota share or excess reinsurance written on Stop Loss business.

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed; e.g., the RBC report filed for ~~2021-201922~~ should provide experience information for calendar year ~~2019-201824~~ with run-out through December 31, ~~2021-201922~~. If the contract year does not follow a calendar year (i.e., 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and the applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018, Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018 AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims - These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.

+

Expenses - These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance - This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =

Total Net Claims - These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.

+

Expenses - These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio - This is equal to (Total Net Claims + Expenses)/Premiums Net of Reinsurance.

Table 2a – Calendar Year Specific Stop Loss Contracts by Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contract by Group Size

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 2.

Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31st of the calendar (reporting) year. If the contract does not follow a calendar year (i.e. 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, total number of lives insured, including dependents).

Number of Groups – list the number of groups for each stop loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (Table 2a) - The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =
(Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives	Reason to	
				Include	Exclude
1	\$ 200,000	115%	90	Include	
2	\$ 100,000	120%	60	Include	
3	\$ 50,000	140%	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	50	Include	

Calculation: $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50)$
= \$150,000

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the expected claims within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) =
(Sum of Expected Claims x Attachment Percentage %) / (Sum of Expected Claims)

Insured	Specific	Aggregate	Expected	Number	Include
---------	----------	-----------	----------	--------	---------

Group	Att Point (\$)	Att (%)	Claims	of Lives	Exclude
1	\$ 200,000	115%	\$ 500,000	90	Include
2	\$ 100,000	120%	\$ 300,000	60	Include
3	\$ 50,000	140%	\$ 200,000	40	Exclude
4	\$ 120,000	N/A	\$ 400,000	50	Exclude

Calculation: $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000)$
 = 116.7%

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1st filing) in Column 13, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

Draft: 5/15/23

Capital Adequacy (E) Task Force
Virtual Meeting
April 28, 2023

The Capital Adequacy (E) Task Force met April 28, 2023. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Grace Arnold, Vice Chair, represented by Fred Andersen (MN); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Michael Conway represented by Rolf Kaumann and Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou and Jack Broccoli (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Champa Whitaker Burns (FL); Doug Ommen represented by Carrie Mears, Kevin Clark, Mike Yanacheak, and Kim Cross (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Chut Tee (KS); Sharon P. Clark represented by Russell Coy (KY); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers and Julie Lederer (MO); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Andrea Johnson and Lindsay Crawford (NE); Marlene Caride represented by David Wolf (NJ); Glen Mulready represented by Diane Carter (OK); Michael Wise represented by Thomas Baldwin, Ryan Basnett, and Daniel Morris (SC); Cassie Brown represented by Amy Garcia, Miriam Fisk, Ludi Skinner, Dan Paschal, Jamie Walker, and Rachel Hemphill (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek, Michael Erdman, Adrian Jaramillo, and Amy Malm (WI).

1. Adopted its Spring National Meeting Minutes

Chou made a motion, seconded by Eft, to adopt the Task Force's March 28 minutes (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force*). The motion passed unanimously.

2. Discussed the Current Turmoil in the Banking Sector

Ed Toy (Risk & Regulatory Consulting—RRC) provided an update on the problems in the banking sector. He noted that there has not been any major negative news since the Spring National Meeting. While this provides a respite to be able to assess what happened and why, the strong consensus among analysts is that there are fundamental issues and that those issues still exist.

There is also a building consensus on where there are probable contagion concerns. Topping the list is the commercial real estate market. There is concern about potential defaults in the bank mortgage portfolios given several overlapping factors 1) more conservative lending practices by banks given the current turmoil; 2) continuing softening of commercial real estate values; 3) higher officer vacancy rates; 4) higher interest rates, which drive up cap rates for valuing properties; and 5) expiring commercial office leases. The continuing concerns in the banking sector put downward pressure on equity values and bond valuations. This will have a near-term impact on the valuations of insurer portfolios that have significant exposure to financial institutions. Typical bond portfolios can range anywhere from 15%–40% exposure to financial institutions.

However, it is not all bad news, as some mitigating factors have developed. The Federal Home Loan Banks (FHLBs) have stepped up and provided some funding for banks that need liquidity. There has been a modest downtick in interest rates (of about 50 basis points) since the end of 2022, slightly offsetting the significant increase in interest rates in 2022. This should help a little with asset valuations. Botsko said the Task Force appreciates Toy continuing to provide updates in upcoming meetings.

3. Adopted Proposal 2023-02-P (Underwriting Risk Line 1 Factors)

Botsko said proposal 2023-02-P provides a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He also stated that the Working Group did not receive any comments during the exposure period.

Chou made a motion, seconded by Malm, to adopt proposal 2023-02-P (Attachment Two-A). The motion passed unanimously.

4. Adopted Proposal 2023-03-IRE (Revised Residual Structure for Life)

Barlow said the purpose of proposal 2023-03-IRE is to add a line to isolate residual tranches reported on Annual Statement, Schedule BA and the Asset Valuation Reserve (AVR). He stated that this is just a structure proposal: The factors proposal is currently exposed and will be considered in the Investment Risk and Evaluation (E) Working Group and brought back to the Task Force meeting in June. Walker commented that Texas is supportive of the structural change and encourages the Working Group to continue to be transparent on the data-driven process.

Barlow made a motion, seconded by Tsang, to adopt proposal 2023-03-IRE (Attachment Two-B). The motion passed unanimously.

5. Adopted Proposal 2023-04-IRE (Residual Sensitivity Test for Life)

Barlow said the purpose of this proposal is to add additional lines in the sensitivity testing exhibits for residual tranches. He also stated that the updated sensitivity testing could be an additional tool to help state insurance regulators in reviewing companies and their investments in residual tranches. He said that this is also just a structure proposal; therefore, the factors proposal is currently exposed and will be considered in the Investment Risk and Evaluation (E) Working Group and brought back to the Task Force meeting in June. Barlow also indicated that this proposal has been revised since the initial exposure in January, and no further comments have been received regarding the proposal. Botsko said the Task Force will revisit this item and make adjustments to the proposal if necessary.

Barlow made a motion, seconded by Tsang, to adopt proposal 2023-04-IRE (Attachment Two-C). The motion passed unanimously.

6. Adopted Proposal 2023-05-L (Remove Dual Trend Test)

Barlow said the current dual presentation of the Life Risk-Based Capital trend test was implemented as an interim approach while member jurisdictions transitioned to the higher 300% threshold. He stated that the dual approach is no longer needed as the transition process is now completed.

Barlow made a motion, seconded by Eft, to adopt proposal 2023-05-L (Attachment Two-D). The motion passed unanimously.

7. Adopted Proposal 2023-06-L (C-2 Mortality Risk Structure Changes)

Barlow said this proposal provides the following proposed life C-2 updates for consideration for 2023 year-end financial statements: 1) structural updates where it pertains to the treatment of group permanent life and miscellaneous other instructions updates. The proposal assigns the same factors to group permanent life as individual permanent life for categories stating with and without pricing flexibility; and 2) a new financial

statement note to provide the development of net amounts at risk for the life C-2 categories to create a direct link to a financial statement source, and accompanying life C-2 structural and instruction updates. The proposed second update includes the updates specified in the first update. He also stated that the second update was adopted by the Life Risk-Based Capital (E) Working Group with the caveat that the adoption of the new financial statement note by the Blanks (E) Working Group. Otherwise, company records will be used instead of a direct link to a financial statement source.

Barlow made a motion, seconded by Kaumann, to adopt proposal 2023-06-L (Attachment Two-E). The motion passed unanimously.

8. Adopted Proposal 2023-07-L (CM6 & CM7 Mortgages Structures Changes)

Barlow said this proposal serves the following purposes: 1) aligns the CM6 and CM7 life RBC factors for nonperforming commercial and farm mortgages with the RBC factors for the Annual Statement, Schedule A and Schedule BA investments in real estate, as those factors were adjusted in 2021; and 2) adopts the same formula for calculating RBC amounts for nonperforming and performing residential, commercial, and farm mortgages.

Barlow made a motion, seconded by Kaumann, to adopt proposal 2023-07-L (Attachment Two-F). The motion passed unanimously.

9. Exposed Proposal 2022-16-CA (Underwriting Risk Factors Investment Income Adjustment)

Drutz said the purpose of this proposal is to update the underwriting risk factors for the annual investment income adjustment to the comprehensive medical, Medicare supplement, and dental and vision factors. This proposal was originally exposed to the Health Risk-Based Capital (E) Working Group for a 30-day comment period ending March 9. No comments were received. The Working Group requests that the Task Force exposes this proposal for another 30-day comment period to address the factor changes for all three lines of business. Botsko said the Task Force and the Health Risk-Based Capital (E) Working Group welcome any comments during the exposure period.

The Task Force agreed to expose proposal 2022-16-CA for a 30-day public comment period ending May 27.

10. Exposed Proposal 2023-01-CA (Stop Loss Premiums)

Drutz said the purpose of this proposal is to clarify the instructions for the stop-loss business in the health RBC formula and align the life and P/C RBC formulas with these changes. The Health Risk-Based Capital (E) Working Group previously exposed this proposal for a 20-day comment period and only received minor editorial change suggestions. He stated that the Working Group requests that the Task Force exposes the proposal for a 30-day comment period to address the changes for all three lines of business.

The Task Force agreed to expose proposal 2023-01-CA for a 30-day public comment period ending May 27.

11. Discussed a Referral from the Valuation of Securities (E) Task Force

Botsko said the Valuation of Securities (E) Task Force and the Risk-Based Capital Investment Risk and Evaluation (E) Working Group exposed a referral jointly regarding additional market and analytical information for bond investments and requested comments from interested parties by March 31. He pointed out that the Task Force and Working Group did not receive any comments during the exposure period. Also, Botsko said the Task Force is not planning to send a response to the Valuation of Securities (E) Task Force at this time, as the information that is being proposed in the referral is not needed by the Task Force on a consistent basis. Barlow commented that

the Working Group will likely follow the same path as the Task Force. Mears said she appreciates that the Task Force and Working Group exposed the referral. She urged all interested parties to provide any further comments directly to the Valuation of Securities (E) Task Force.

12. Received an Update from its Risk Evaluation Ad Hoc Group

Botsko said the Capital Adequacy (E) Task Force established the Risk Evaluation Ad Hoc Group during the Spring National Meeting to: 1) re-evaluate some of the missing risks to determine if it should now include them in the RBC calculation or if it appropriately handles those risks utilizing other regulatory methods; and 2) review those factors and instructions that have not been reviewed since development to determine if modifications should be made. He stated that NAIC staff received more than 80 industry requests to be involved in the ad hoc group. Botsko commented that being a member of the group will require active participation in the group discussions and that status updates will be provided in every Task Force meeting. Botsko asked all interested parties to contact Eva Yeung (NAIC) if they do not plan on participating in the group discussion. Lastly, he said the ad hoc group plans to schedule its first meeting in May.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

The additional lines are to add residual tranches to the sensitivity testing exhibits for RBC.
 As regulators develop designations for asset back securities to then be assigned appropriate C-1 RBC factors, the updated sensitivity testing could be an additional tool to help regulators in reviewing companies and there investments in residual tranches.

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

The dual presentation of the life risk-based capital trend test was adopted as an interim approach while member jurisdictions transitioned to the higher 300% threshold. That transition is now complete, so the dual presentation is no longer needed.

Re: Proposal for Life C-2 Structural and Instruction Updates and a New Financial Statement Note

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries¹, we are providing the following proposed Life C-2 updates for consideration for 2023 year-end financial statements.

1. Structural updates where it pertains to the treatment of group permanent life and miscellaneous other instruction updates. The proposal assigns the same factors to group permanent life as individual permanent life for categories stating with and without pricing flexibility.
2. A new financial statement note to provide the development of net amounts at risk for the Life C-2 categories to create a direct link to a financial statement source, and accompanying Life C-2 structural and instruction updates. The proposed second update includes the updates specified in the first update.

If you have any questions on the above topics, please contact Amanda Barry-Moilanen, life policy analyst, at barrymoilanen@actuary.org.

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group

Ryan Fleming, MAAA, FSA
Vice Chairperson, C-2 Mortality Work Group

American Academy of Actuaries

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

DESCRIPTION OF CHANGE(S)

Update 1: proposed updated blank for C2 Life Mortality on LR025, LR026, LR030 and LR031 and instruction updates.

Update 2: proposed new financial statement note and accompanying LR025 structural and instruction updates. Update 2 includes the updates included in the first update.

REASON OR JUSTIFICATION FOR CHANGE **

Update 1: Structural changes and instruction updates to address the treatment of group permanent life policies. Other instruction updates are included to add clarity.

Update 2: The new financial statement note will develop the net amounts at risk in the categories needed for the Life C-2 schedule to create a direct link to a financial statement source.

Additional Staff Comments:

** This section must be completed on all forms.

PROPOSED 2023 UPDATE 1
LIFE INSURANCE
LR025

Basis of Factors

The factors developed represent surplus needed to provide for life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience. The mortality risks included in the development of the factors were volatility, level, trend, and catastrophe. The factors were developed by stochastically simulating the run-off of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as a dollar amount, is determined as the greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released in excess of the mortality cost expected under the moderately adverse scenario minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 2, 5 and 21-~~44-47~~ are not applicable to Fraternal Benefit Societies.

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule S.

The NAR size bands apply to the total amounts for individual & industrial life and group term & credit life. The size bands are allocated proportionately to the NAR for each of the factor categories.- Size band 1 is for NAR amounts up to \$500 million. Size band 2 is for NAR amounts greater than \$500 million and up to \$2.5 billion. Size band 3 is for NAR amounts greater than \$2.5 billion.

Pricing Flexibility for Individual & Industrial Life Insurance and Group & Credit Life Permanent Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years and reflecting typical business practices. For the purposes of assessing whether business is categorized as having "Pricing Flexibility", grouping of gross amounts may be done at either the contract level or at a cohort level consistent with grouping for pricing purposes. The categorization for ceded amounts for direct insurers should be based on the terms of each reinsurance treaty. Non-affiliated reinsurers are to assess the flexibility to adjust rates on in force contracts based on the terms of each reinsurance treaty and constraints based on typical business practices. For example, if a non-affiliated

10/14/2023 1/31/2023

reinsurer has historical precedent for changing in force rates, then that may provide support for assigning policies to the category with pricing flexibility. Affiliated reinsurers are to assign the factor category based on the direct policies. In force contracts may move between categories throughout their remaining lifetime if the degree of pricing flexibility changes as of each valuation date. A material rate adjustment is defined as the ability to recover, on a present value basis, the difference in mortality risks provided for in the factors below for contracts with and without pricing flexibility. ~~These differences in factors are shown in the Line (13) table below in the Permanent Life Flexibility Factor and Term Life Flexibility Factor columns.~~ The flexibility factor for each category multiplied by the NAR results in the minimum dollar margin needed for a material rate adjustment, which can then be compared against margins available to adjust rates. In force contracts that have margin available that is greater than or equal to the minimum dollar margin needed may be assigned to the category for policies with pricing flexibility. Insurers may choose to assign contracts to the categories without pricing flexibility if the evaluation of margins is not completed or if the degree of pricing flexibility is uncertain.

Lines (11) and (12) Individual & Industrial Life Policies with Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, participating whole life insurance, universal life insurance without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed on an annual basis from the date of issue. The table below illustrates the RBC requirement calculation embedded in Line (13) for Individual & Industrial Life Policies with Pricing Flexibility.

Line (13)	<u>Individual & Industrial</u> Life Policies with Pricing Flexibility	(1) Statement Value	Factor	(2) RBC Requirement	<u>Permanent Life</u> <u>Flexibility Factor</u>	<u>Term Life</u> <u>Flexibility Factor</u>
	Allocation of First \$500 Million		X 0.00220 =		0.00230	0.00110
	Allocation of Next \$24,500 Million		X 0.00105 =		0.00120	0.00065
	Allocation of Over \$25,000 Million		X 0.00080 =		0.00085	0.00055
	Total <u>Individual & Industrial</u> Life Policies with Pricing Flexibility Net Amount at Risk					

Lines (14) and (15) Individual & Industrial Term Life Policies without Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, level term insurance with guaranteed level premiums and yearly renewable term insurance where scheduled premiums may not be changed. The table below illustrates the RBC requirement calculation embedded in Line (16) for Individual & Industrial Term Life Policies without Pricing Flexibility.

Line (16)	<u>Individual & Industrial</u> Term Life Policies without Pricing Flexibility	(1) Statement Value	Factor	(2) RBC Requirement
	Allocation of First \$500 Million		X 0.00280 =	
	Allocation of Next \$24,500 Million		X 0.00120 =	
	Allocation of Over \$25,000 Million		X 0.00085 =	
	Total <u>Individual & Industrial</u> Term Life Policies without Pricing Flexibility Net Amount at Risk			

Lines (17) and (18) Individual & Industrial Permanent Life Policies without Pricing Flexibility In Force and Reserves are derived from the aggregate amounts derived in lines (1) to (10) minus the amounts recorded in the other individual life categories. Examples of products intended for this category include, but aren't limited to, universal life with secondary guarantees and non-participating whole life insurance. Policies that aren't recorded in the other individual life categories default to this category which has the highest factors. The table below illustrates the RBC requirement calculation embedded in Line (19) for Individual & Industrial Permanent Life Policies without Pricing Flexibility.

10/14/2023/3/1/2023

<u>Line (19)</u>	<u>Individual & Industrial Permanent Life Policies without Pricing Flexibility</u>	<u>Statement Value</u>	<u>Factor</u>	<u>RBC Requirement</u>
		(1)		(2)
	Allocation of First \$500 Million		X 0.00400 =

	Allocation of Over \$25,000 Million		X 0.00120 =	
	<u>Total Individual & Industrial Permanent Life Policies without Pricing Flexibility Net Amount at Risk</u>			

Lines (35) and (36) Group & Credit Term Life In Force and Reserves with Remaining Rate Terms 36 Months and Under are derived from company records. This category includes group term life contracts where the premium terms have 36 months or fewer until expiration or renewal. Insurers may choose to assign contracts to the category for remaining rate terms over 36 months if the evaluation of remaining rate terms is not completed. The in force amount classified in this category needs to be consistent with the Exhibit of Life Insurance. The reserves amount classified in this category needs to be consistent with Exhibit 5 used for Lines (28) and (29), Separate Accounts Exhibit used for Line (30), and Schedule S used for Lines (31) and (32). Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (37) for Group & Credit Term Life ~~Net Amount at Risk~~ with Remaining Rate Terms 36 Months and Under Net Amount at Risk.

<u>Line (37)</u>	<u>Group & Credit Term Life with Remaining Rate Terms 36 Months and Under</u>	<u>Statement Value</u>	<u>Factor</u>	<u>RBC Requirement</u>

PROPOSED 2023 UPDATE 2
LIFE INSURANCE
LR025

Basis of Factors

The factors developed represent surplus needed to provide for life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience. The mortality risks included in the development of the factors were volatility, level, trend, and catastrophe. The factors were developed by stochastically simulating the run-off of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as a dollar amount, is determined as the greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released in excess of the mortality cost expected under the moderately adverse scenario minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines ~~2, 5 and 21-44-6-11~~ are not applicable to Fraternal Benefit Societies.

The NAR ~~is derived in total and~~ for each of the factor categories ~~using annual statement sources and company records are retrieved from the Notes to the Financial Statements Item 37 and are in Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule 5.~~

The NAR size bands apply to the total amounts for individual & industrial life and group term & credit life. The size bands are allocated proportionately to the NAR for each of the factor categories. Size band 1 is for NAR amounts up to \$500 million. Size band 2 is for NAR amounts greater than \$500 million and up to \$25 billion. Size band 3 is for NAR amounts greater than \$25 billion.

Pricing Flexibility for Individual & Industrial Life Insurance and Group & Credit Life Permanent Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years and reflecting typical business practices. For the purposes of assessing whether business is categorized as having "Pricing Flexibility", grouping of gross amounts may be done at either the contract level or at a cohort level consistent with grouping for pricing purposes. The categorization for ceded amounts for direct insurers should be based on the terms of each reinsurance treaty. Non-affiliated reinsurers are to assess the flexibility to adjust rates on in force contracts based on the terms of each reinsurance treaty and constraints based on typical business practices. For example, if a non-affiliated

10/14/2023 1/31/2023

reinsurer has historical precedent for changing in force rates, then that may provide support for assigning policies to the category with pricing flexibility. Affiliated reinsurers are to assign the factor category based on the direct policies. In force contracts may move between categories throughout their remaining lifetime if the degree of pricing flexibility changes as of each valuation date. A material rate adjustment is defined as the ability to recover, on a present value basis, the difference in mortality risks provided for in the factors below for contracts with and without pricing flexibility. ~~These differences in factors are shown in the Line (13) table below in the Permanent Life Flexibility Factor and Term Life Flexibility Factor columns.~~ The flexibility factor for each category multiplied by the NAR results in the minimum dollar margin needed for a material rate adjustment, which can then be compared against margins available to adjust rates. In force contracts that have margin available that is greater than or equal to the minimum dollar margin needed may be assigned to the category for policies with pricing flexibility. Insurers may choose to assign contracts to the categories without pricing flexibility if the evaluation of margins is not completed or if the degree of pricing flexibility is uncertain.

~~The table below illustrates the RBC requirement calculation embedded in Line (2) for Individual & Industrial Life Policies with Pricing Flexibility, Lines (11) and (12) Life Policies with Pricing Flexibility in Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, participating whole life insurance, universal life insurance without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed on an annual basis from the date of issue. The table below illustrates the RBC requirement calculation embedded in Line (13) for Life Policies with Pricing Flexibility.~~

<u>Line (42)</u>	<u>Individual & Industrial Life Policies with Pricing Flexibility</u>	<u>Statement Value (1)</u>	<u>Factor</u>	<u>RBC Requirement (2)</u>	<u>Permanent Life Flexibility Factor</u>	<u>Term Life Flexibility Factor</u>

Line (411) FEGLI/SGLI In Force amounts are retrieved from the Exhibit of Life Insurance. -The capital factor assigned is the same as the largest size band for group & credit term life contracts with remaining rate terms 36 months and under.

<u>Line (411)</u>	<u>FEGLI/SGLI In Force</u>	<u>(1)</u> <u>Statement Value</u>	<u>Factor</u>	<u>(2)</u> <u>RBC Requirement</u>
			X 0.00040 =	

All amounts should be entered as required. The risk-based capital software will calculate the RBC requirement for individual and industrial and for group and credit.

10/14/2023 1/31/2023

November 16, 2022

Phillip Barlow
Associate Commissioner
Chair, Life Risk-Based Capital (E) Working Group
Washington, D.C Department of
Insurance, Securities and Banking
1050 First Street, NE, 801
Washington, D.C. 20002

Dear Mr. Barlow,

Thank you for allowing the Mortgage Bankers Association (MBA) and the American Council of Life Insurers (ACLI) on behalf of our respective members the time to address the Working Group on the CM6 and CM7 RBC factor normalization. MBA and ACLI submit this letter in response to the questions raised on the October 7, 2022 call to help move this issue forward to approval.

First, Attachment 3 in the October 7, 2022, meeting agenda contained the proposed amendments to forms LR004 and LR009, but the formatting of this document was incorrect and did not show several changes that were being proposed in redline format. As a follow up, please see the attached document that has the full redline changes. The attached document's final version is not different from Attachment 3, but the full redline is more informative. John Waldeck addressed this in his remarks during the discussion.

Second, MBA and ACLI seek to provide context for the limited nature of the investments subject to this change. There is a minimal set of loans in the CM6 and CM7 categories, as shown in the below table.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acll.com

The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 400,000 people in virtually every community in the country. Headquartered in Washington, D.C., the association works to ensure the continued strength of the nation's residential and commercial real estate markets, to expand homeownership, and to extend access to affordable housing to all Americans. MBA promotes fair and ethical lending practices and fosters professional excellence among real estate finance employees through a wide range of educational programs and a variety of publications. Its membership of more than 2,200 companies includes all elements of real estate finance: independent mortgage banks, mortgage brokers, commercial banks, thrifts, REITs, Wall Street conduits, life insurance companies, credit unions, and others in the mortgage lending field. For additional information, visit MBA's website: www.mba.org.

UPB of Life Company CM6 & CM7 Loans as a Percent of Total UPB

12/31/2021	0.00%	0.04%

Source: MBA Life Company Loan Performance Database

This proprietary MBA database comprises roughly 72% of all life insurance company mortgage loans (representing 100% of the participating companies' portfolios) and is assumed to be consistent with the full population. As indicated, the percentage of CM6 & CM7 loans is very small, at less than 0.1% of total loans for each of the last 9 years. The modification to the CM6 and CM7 RBC factors being requested will have an immaterial impact on Risk Based capital.

Third, there was a request to analyze the applicability of the equity RBC factors for the CM6 and CM7 loans. To understand the applicability of equity RBC factors, it is important to understand the type of loans that are part of the CM6 and CM7 categories and why they behave similarly to equity investments. CM6 and CM7 loans are loans that are not performing (payments not being made). A CM6 loan is in process of evaluation by the lender to determine how it should be handled. If the lender believes it will likely return to performing status (Borrower makes all missed payments and begins making payments again), then they will not pursue their loan remedies to foreclose on the Borrower and will leave it in this status. This means that a CM6 is not currently performing and may or may not become current.

The distinction between CM6 and CM7 is that a CM7 loan is an asset that the Life Company lender has decided will not likely return to a performing status and has decided to foreclose out the borrower and realize on the loan security, and the lender has started that legal process to do so. At the conclusion of this process, the Lender will become the owner of the underlying real estate asset and will hold it in its portfolio as a real estate equity asset. So, a CM7 loan will quickly become an equity investment subject to equity RBC.

The requested change to the RBC factors is to have CM6 loans at an 11.0% RBC charge and CM7 loans at a 13.0% RBC charge. The highest equity RBC charge is 13.0% (for schedule BA assets), and the lowest is 11.0% (for Schedule A assets). Most companies will foreclose on a non-performing loan into a subsidiary entity, which would place the resulting equity asset on Schedule BA. The proposed charge for CM7 mortgages is consistent with the highest 13.0% equity RBC charge because after a likely foreclosure, this is the RBC charge it will be subject to.

When a loan is transitioned to become in the process of foreclosure, the lender will evaluate the value of the underlying real estate asset and impair the mortgage investment to be equal to the value of the

underlying real estate asset. In essence, the resulting STAT book value of the mortgage is the same as if the lender acquired the underlying real estate as an equity investment. Applying the same RBC charge just prior to foreclosure and after foreclosure means that the life company will have consistent risk-based capital through this transition. Prior to the change of the equity RBC from 23% to 13% (for schedule BA), the RBC charges for CM7 and equity RBC were consistent, and the requested change in RBC factors for CM6 and CM7 mortgages maintains this consistency.

The analysis done for the change in equity RBC factors is appropriate for the support of the change in the CM7 RBC factor because the CM7 mortgage asset is, as described above, soon to become an equity investment by the life company. Having the CM6 RBC factor aligned with the lowest equity RBC factor of 11% (for Schedule A assets) is appropriate because these investments may, but are not yet assumed to become an equity investment. The slight discount in the RBC factor reflects the higher likelihood of a CM6 mortgage asset returning to performing loan status.

Given the immaterial portion of life insurers' investments rated CM6 or CM7 and the logical consistency with equity RBC treatment for these assets, we believe the requested change is appropriate and consistent with best RBC practices.

Thank you for considering this request. If you have any questions, please do not hesitate to contact Mike Monahan, Senior Director of Accounting Policy, ACLI (MikeMonahan@acli.com) or Stephanie Milner, Associate Vice President, Commercial & Multifamily Policy, MBA (smilner@mba.org).

Sincerely,

Mike Monahan, American Council of Life Insurers
Mortgage Bankers Association

 Health RBC Instructions Property/Casualty RBC Instructions Life and Fraternal RBC Blanks
 OTHER _____

DESCRIPTION OF CHANGE(S)

This proposal would make the following two related changes.

1. Align the CM6 and CM7 Life RBC factors for non-performing commercial and farm mortgages with the RBC factors for Schedule A and Schedule BA investments in real estate as those factors were adjusted in 2021; and
2. Adopt the same formula for calculating RBC amounts for non-performing and performing residential, commercial and farm mortgages.

REASON OR JUSTIFICATION FOR CHANGE **

1. Revising CM6 and CM7 factors would re-align the factors for non-performing mortgages with the factors for Schedule A and Schedule BA real estate investments.

Historical alignment and the 2021 change

Prior to the 2021, the 23% factor for CM7 In Process of Foreclosure commercial and farm mortgages was perfectly aligned with the 23% factor for Schedule BA real estate assets; and the 18% factor for CM6 90-Days Delinquent commercial and farm mortgages was roughly aligned with the 15% factor for Schedule A real estate assets.

That alignment made sense as a matter of risk because the worst-case path for a non-performing mortgage loan results in the asset becoming a real estate equity investment on the insurer’s balance sheet. In 2021, however, the factor assigned to Schedule A real estate investments dropped from 15% to 11%, and the factor for Schedule BA real estate investments dropped from 23% to 13%. As a result, the 18% and 23% factors for CM6 and CM7 mortgage are no longer aligned with the factors for real estate investments.

The proposal

The proposal is to adjust the factor for CM6 mortgages from 15% to 11% and adjust the factor for CM7 mortgages from 23% to 13%. The changes necessary to implement this proposal are reflected in the attached mark-up of LR004 and LR009 RBC Reporting Instructions.

Impacts

The table below illustrates the relationships between CM6 and CM7 factors and Schedule A and Schedule BA real estate assets, historically, currently, and as proposed.

2. Adopting the same formula for calculating RBC amounts for non-performing and performing residential, commercial and farm mortgages would ensure that the effective RBC factor for non-performing residential, commercial and farm mortgages would not be less than the nominal RBC charge.

As we considered the proposal to align the factors for delinquent mortgages and for real estate investments, we also revisited the formula for computing RBC for non-performing mortgages. Based on that consideration, we concluded that there is no reasonable basis for continuing to use a different calculation formula for performing and non-performing mortgages.

The current state: non-performing mortgages

The formula for applying RBC factors to non-performing mortgages both adds in and backs out any applicable write-downs, as follows:

$$RBC_{non-perf} = [(STAT\ Book\ Value + \underline{STAT\ Write-downs} - STAT\ Invol.\ Reserves) \times CM\ 6-7\ Charge] - \underline{STAT\ Write-downs}$$

Because this formula can result in very low and even negative RBC amounts for non-performing loans, it is supplemented by a requirement that the resulting RBC amount cannot be lower than the applicable CM1-5 charge for the mortgage if the investment was performing.

The current state: performing mortgages

The formula for applying RBC factors to performing mortgages is as follows:

$$RBC_{perf} = (STAT\ Book\ Value - STAT\ Invol.\ Reserves) \times CM\ 1-5\ Charge$$

There is no need for a backstop to this formula because the effective RBC factor for a performing loan is always the same as the nominal RBC charge for the applicable CM category.

The proposal

The proposal would apply the same formula for both performing and non-performing mortgages. The changes necessary to implement this proposal are reflected in the attached mark-up of LR004 and LR009 RBC Reporting Instructions.

Impacts

Under the proposal, the RBC charge for some non-performing mortgages would increase and the RBC charge for other non-performing mortgages would decrease, depending on the amount of any write-downs.

In Table 1, the blue and brown lines illustrate that, for a CM7 mortgage under the current state, the effective RBC factor would range from 23% to 7.5% of the statutory book value less involuntary reserves (assuming the performing loan rating would be CM5), depending on the amount of any write-down. The green line in the table illustrates that, under the proposal, the effective RBC factor would be equal to the RBC charge for a CM7 mortgage (as adjusted in part 1 of this proposal) without regard to write-downs.

In Table 2, the blue and brown lines illustrate that, for a CM6 mortgage under the current state, the effective RBC factor would range from 18% to 7.5% of the statutory book value less involuntary reserves (assuming the performing loan rating would be CM5), depending on the amount of any write-down. The green line in the table illustrates that, under the proposal, the effective RBC factor would be equal to the RBC charge for a CM6 mortgage (as adjusted in part 1 of this proposal) without regard to write-downs.

Both tables illustrate that adopting the performing mortgage loans formula and the proposed CM6 and CM7 factors would reduce the required RBC amount for non-performing mortgages with smaller levels of write-downs but would increase required RBC amounts for non-performing mortgages with larger write-downs.

Attachment: Suggested mark-up of Instructions LR004 and LR009.

Notes to the mark-up:

- The attached mark-up adds the previously approved instructions for reporting 2020 NOI. See [Guidance for Troubled Debt Restructurings for December 31, 2020 and Interim Risk-Based Capital Filings \(where required\)](#) (October 9, 2020, Revised February 11, 2021).
- The attached mark-up also reflects a suggested deletion of the version number of the CREFC Methodology for Analyzing and Reporting Property Income Statements, to avoid the ongoing need to update the Instructions to reflect each new versions of that methodology. This is not part of the proposal described above, but the Life Risk-Based Capital Working Group may want to consider it.

Additional Staff Comments:

** This section must be completed on all forms.

Revised 2-2019

MORTGAGES

LR004

Basis of Factors

Mortgages in Good Standing

The pre-tax factors for commercial mortgages were developed based on analysis using the Commercial Mortgage Metrics model of Moody's Analytics and documented in a report from the American Council of Life Insurers on March 27, 2013. The factors provide for differing levels of risk, the levels determined by a contemporaneous debt service coverage ratio and the contemporaneous loan-to-value. The 0.14 percent pre-tax factor on insured and guaranteed mortgages represents approximately 30-60 days interest lost due to possible delay in recovery on default. The pre-tax factor of 0.68 percent for residential mortgages reflects a significantly lower risk than commercial mortgages. The pre-tax factors were developed by dividing the post-tax factor by 0.7375 (0.7375 is calculated by taking 1.0 less the result of 0.75 multiplied by 0.35). The pre-tax factors are not changing for 2018 due to tax reform.

Mortgages 90 Days Overdue, Not in Process of Foreclosure

The category pre-tax factor for commercial and farm mortgages of ~~48~~ 11 percent is based on ~~data taken from the Society of Actuaries' "Commercial Mortgage Credit Risk Study," the 11 percent factor for real estate investments reported on Schedule A.~~ For insured and guaranteed or residential mortgages, factors are set at twice the level for those "in good standing" to reflect the increased likelihood of default losses.

Mortgages in Process of Foreclosure

~~The category pre-tax factor of 13 percent for farm mortgages in process of foreclosure is based on the 13 percent factor for real estate investments reported on Schedule BA#re-considered to be as risky as NAIC 5 bonds and are assigned the same category pre-tax factor of 23 percent for commercial and farm mortgages.~~

Due and Unpaid Taxes on Overdue Mortgages and Mortgages in Foreclosure

The factor for due and unpaid taxes on overdue mortgages and mortgages in foreclosure is 100 percent.

Specific Instructions for Application of the Formula

Column (1)

Insured or guaranteed mortgages should be reported separately from residential and commercial mortgages. Insured or guaranteed loans include only those mortgage loans insured or guaranteed by the Federal Housing Administration, under the National Housing Act (Canada) or by the Veterans Administration (exclusive of any portion insured by FHA). Mortgage loans guaranteed by another company (affiliated or unaffiliated) are not to be included in the insured or guaranteed category.

Except for Lines (1) through (3), (17) through (19), (22) through (24), (26) and (27), calculations are done on an individual mortgage basis and then the summary amounts are entered in this column for each class of mortgage investment. ~~Refer to the mortgage calculation worksheet A (Figure 1) for how the individual mortgage calculations are completed for Other Than In Good Standing mortgages on Lines (4) through (25). Refer to the mortgage calculation worksheet – company developed (Figure 23) for how the individual mortgage calculations are completed for In Good Standing – Commercial mortgages on Lines (4) through (8) and for In Good Standing – Farm mortgages on Lines (10) through (14) and for Other Than In Good Standing mortgages on Lines (16), (20), (21), and (25). Line (28) should equal Page 2, Column 3, Lines 3.1 plus 3.2, plus Schedule B, Part 1 Footnotes 3 and 4, first of the two amounts in the footnotes.~~

Column (2)

Companies are permitted to reduce the book/adjusted carrying value of mortgage loans reported in Schedule B by any involuntary reserves. Involuntary reserves are equivalent to valuation allowances specified in SSAP No. 37 paragraph 16. These reserves are held as an offset for a particular troubled mortgage loan that would be required to be written down if

10/15/2021

10/15/2021

the impairment was permanent.

Column (3)

Column (3) is calculated as the net of Column (1) less Column (2).

Column (4)

~~Summary amounts of the individual mortgage calculations are entered in this column for each class of mortgage investments. Refer to the mortgage calculation worksheet (Figure 1). Cumulative writedowns include the total amount of writedowns, amounts non-admitted and involuntary reserves that have been taken or established with respect to a particular mortgage. No longer used. Place "XXX" in any blanks for this column.~~

Column (5)

~~For Lines (1) and (3), the pre-tax factor is equal to 0.0014
For Lines (2), the pre-tax factor is equal to 0.0068
For Lines (4) and (10), the pre-tax factor is equal to 0.0090
For Lines (5) and (11), the pre-tax factor is equal to 0.0175
For Lines (6) and (12), the pre-tax factor is equal to 0.0300
For Lines (7) and (13), the pre-tax factor is equal to 0.0500
For Lines (8) and (14), the pre-tax factor is equal to 0.0750
For Lines (16) and (20), the pre-tax factor is equal to 0.1100
For Lines (17) and (19), the pre-tax factor is equal to 0.0027
For Lines (18), the pre-tax factor is equal to 0.0140
For Lines (21) and (25), the pre-tax factor is equal to 0.1300
For Lines (22) and (24), the pre-tax factor is equal to 0.0054
For Lines (23), the pre-tax factor is equal to 0.0270~~

~~For Lines (26) and (27), the pre-tax factor is 1.0. For Lines (16) through (25), the average factor column is calculated as Column (6) divided by Column (3).~~

Column (6)

~~For Lines (4) through (8), (10) through (14), and (16), (20), (21) and (25), summary amounts are entered for Column (6) based on calculations done on an individual mortgage basis. Refer to the mortgage calculation worksheets (Figure 1) and (Figure 2). For Lines (1) through (3), (17) through (19), (22) through (24), (26) and (27), the RBC subtotal is multiplied by the factor to calculate Column (6).~~

(Figure 1)

(11)										
(12)										
(13)										
(14)										
(15)										
Total Mortgages										

This worksheet is prepared on a loan-by-loan basis for each of the mortgage categories listed in (Figure 2) that are applicable. The Column (2), (3), (5) and (10) subtotals for each category are carried over and entered in Columns (1), (2), (4) and (6) of the Mortgages (LR004) in the risk-based capital formula. Small mortgages aggregated into one line on Schedule B can be treated as one mortgage on this worksheet. NOTE: This worksheet will be available in the risk-based capital filing software.

- ‡ See (Figure 2) for factors to use in the calculation. The In-Good Standing Factor will be based on the CM category developed in the company-generated worksheet (Figure 2) and reported in Column 7a for Commercial or Farm Mortgages.
- ‡ The RBC Requirement column is calculated as the greater of Column (8) or Column (9), but not less than zero.
- § Involuntary reserves are reserves held as an offset to a particular asset that is clearly a troubled asset and are included on Page 3, Line 25 of the annual statement.
- ¶ Column (4) is calculated as Column (2) less Column (3).
- * Cumulative writedowns include the total amount of writedowns, amounts non-admitted and involuntary reserves that have been taken or established with respect to a particular mortgage.

(Figure 12)

The mortgage factors are used in conjunction with the mortgage worksheets (Figures 1 and 2) to calculate the RBC Requirement for each individual mortgage. ~~The factors are used in Columns (6), (7) and (7a) of the mortgage worksheet and are dependent on which of the 25 mortgage categories below the mortgage falls into.~~ The following factors are used for each category of mortgages:

LR004 Line Number	Mortgage Factors	Category Factor ‡	In-Good Standing Factor	MEA Factor
	<u>In Good Standing</u>			
(1)	Residential Mortgages-Insured or Guaranteed	0.0014N/A‡	0.0014	N/A
(2)	Residential Mortgages-All Other	0.0068N/A‡	0.0068	N/A

(24)	Commercial Mortgages-Insured or Guaranteed	0.0054	0.0014	-1.0 N/A
(25)	Commercial Mortgages-All Other – Category CM7	0.23000.1300	‡	N/A‡

‡-The category factor is a factor used for a particular category of mortgage loans that are not in good standing.
 †-The RBC Requirement for mortgage loans in good standing or restructured are not calculated on Figure (1). These requirements are calculated on Mortgage Worksheet (company developed) (Figure 3) and transferred to LR004 Mortgage Loans Lines (4) through (8) and (10) through (14). In addition, for Commercial and Farm mortgage loans 90 days past due or In Process of Foreclosure, the CM category is determined in Mortgage Worksheet (company developed) and transferred to Worksheet A.

The Company should develop this worksheet on a loan-by-loan basis for each commercial mortgage – other or farm loan held in Annual Statement Schedule B. This worksheet columns (7) and (9) subtotals for each category are to be carried over and entered in Columns (1) and (2) of Mortgages (LR004) in the risk-based capital formula lines (4) – (8), and (10) – (14), (16), (20), (21), and (25). Small mortgages aggregated into one line on Schedule B can be treated as one mortgage on this worksheet. ~~Accounts in Columns (7)-(9) and (12) are carried individually to Worksheet A columns (2), (3) and (7a) for loans that are 90 Days Past Due and In Process of Foreclosure.~~ NOTE: This worksheet will not be available in the risk-based capital filing software and needs to be developed by the company.

#	Column Heading	Description / explanation of item
		Price Index current is the value on 9/30 of the current year for the National Council of Real Estate Investor Fiduciaries Price Index for the United States.
(1)	Name / ID	Identify each mortgage included as in good standing.
(2)	Date of Origination	Enter the year and month that the loan was originated. If the loan has been restructured, extended, or otherwise re-written, enter that new date.
(3)	Maturity Date	Enter earlier of maturity of the loan, or the date the lender can call the loan.
(4)	Property Type	Enter 1 for mortgages with an Office, Industrial, Retail or multifamily property as collateral. Enter 2 for mortgages with a Hotel and Specialty Commercial as property type. For properties that are multiple use, use the property type with the greatest square footage in the property. Enter 3 for Farm Loans.
(5)	Farm Sub-type	If Property Type=3 (Farm Loans), then you must enter a Sub Category: 1=Timber, 2=Farm and Ranch, 3=Agribusiness Single Purpose, 4=Agribusiness All Other (See Note 8).
(6)	Postal Code	Enter zip code of property for US. If multiple properties or zip codes, enter multiple codes. If foreign address, use postal code. If not available, N/A.
(7)	Book / Adjusted Carrying Value	Enter the value that the loan is carried at on the company ledger.
(8)	Statutory Write-downs	Enter the value of any write-downs taken on this loan due to permanent impairment.
(9)	Involuntary Reserve	Enter the amount of any involuntary reserve amount. Involuntary reserves are reserves that are held as an offset to a particular asset that is clearly a troubled asset and are included on Page 3 Line 25 of the Annual Statement.
(10)	Original Loan Balance?	Enter the loan balance at the time of origination of the loan.
(11)	Principal Balance to Co.	Enter the value of the loan balance owed by the borrower.
(12)	Balloon Payment at Maturity	Enter the amount of any balloon or principal payment due at maturity.
(13)	Principal Balance Total	Enter the total amount of mortgage outstanding including debt that is senior to or pari passu with the company's mortgage (Note 2)
(14)	NOI Second Prior	Enter the NOI from the year prior to the value in (15). See Note 1.
(15)	NOI Prior	Enter the NOI from the prior year to the value in (16). See Note 1.
(16)	NOI	Enter the Net Operating Income for the most recent 12 month fiscal period with an end-date between July 1 of the year prior to this report and June 30 of the year of this report. The NOI should be reported following the guidance of the Commercial Real Estate Finance Council Investor Reporting Profile v.5.0. Section VII. See Notes 1, 3, 4, 5, and 6 below.

10/15/2021

(17)	Interest Rate	Input	Enter the annual interest rate at which the loan is accruing. -If the rate is floating, enter the larger of the current month rate or the average rate of interest for the prior 12 months, or -If the rate is fixed by the contract, not level over the year, but level for the next 12 months, use current rate. If the 'Total Loan Balance' consists of multiple loans, use an average loan interest rate weighted by principal balance.
(18)	Trailing 12 Month Debt Service	Input	Enter actual 12 months debt service for prior 12 months
(19)	Original Property Value	Input	Enter the Property Value at the time of origination of the loan. (Note 9)
(20)	Property Value	Input	Property Value is the value of the Property at time of loan origination, or at time of revaluation due to impairment underwriting, restructuring, extension, or other re-writing. (Note 9)
(21)	Year of Valuation	Input	Year of the valuation date defining the value in (20). This will be either the date of origination, or time of restructuring, refinance, or other event which precipitates a new valuation.
(22)	Quarter of Valuation	Input	Calendar quarter of the valuation date defining the value in (20).
(23)	Credit Enhancement	Input	Enter the full dollar amount of any credit enhancement. (see Note 5)
(24)	Senior Debt?	Input	Enter yes if senior position, no if not. (see Note 7.)
(25)	Construction Loan?	Input	Enter 'Yes' if this is a construction loan. (see Note 4.)
(26)	Construction – not in balance?	Input	Enter 'Yes' if this is a construction loan that is not in balance. (see Note 4)
(27)	Construction – Issues?	Input	Enter 'Yes' if this is a construction loan with issues. (see Note 4)
(28)	Land Loan?	Input	Enter 'Yes' if this is a loan on non-income producing land. (see Note 6)
(29)	90 days past due?	Input	Enter 'Yes' if payments are 90 days past due.
(30)	In process of foreclosure?	Input	Enter 'Yes' if the loan is in process of foreclosure.
(31)	Is current payment lower than a payment based on the loan interest?	Input	Yes / No
(32)	Is loan interest a floating rate?	Input	Yes / No
(33)	If not floating, does loan reset during term?	Input	Yes / No - Some fixed rate loans define in the loan document a change to a new rate during the life of the loan, which may be a pre-determined rate or may be the then current market rate. Generally any such changes are less frequent than annual.
(34)	Is negative amortization allowed?	Input	Yes / No
(35)	Amortization type?	Input	1 = fully amortizing 2 = amortizing with balloon 3 = full I/O 4 = partial I/O, then amortizing
(36)	Rolling Average NOI	Computation	For 2013 – 100% of NOI For 2014 – 65% NOI + 35% NOI Prior For 2015 – 50% NOI + 30% NOI Prior + 20% NOI 2 nd Prior For loans originated or valued within the current year, use 100% NOI. For loans originated 2013 or later and within 2 years, use 65% NOI and 35% NOI Prior

10/15/2021

(37)	RBC Debt Service	Computation	This amount is the amount of 12 monthly principal and interest payments required to amortize the Total Loan Balance (13) using a Standardized Amortization period of 300 months and the Annual Loan Interest Rate (17).
(38)	RBC DCR	Computation	This is the ratio of the Net Operating Income (36) divided by the RBC Debt Service (37) rounded down to 2 decimal places. See Note 3 below for special circumstances.
(39)	NCREIF Price Index at Valuation	Computation	The value of the NCREIF Price Index on the last day of the calendar quarter that includes the date defined in (21) and (22).
(40)	Contemporaneous Property Value	Computation	The Property Value (20) times the ratio (rounded to 4 decimal places) of the Price Index current to the Price Index at valuation (39).
(41)	RBC LTV	Computation	The Total Loan Value (13) divided by the Contemporaneous Value (40) rounded to the nearest percent.
(42)	CM Category	Computation	The risk category determined by either being not in good standing (either 90 Days Past Due or In Process of Foreclosure) or the loan being in good standing or restructured and applying the DCR (38) and the LTV (41) to the criteria in Figure (34), Figure (45) or Figure (56). See Notes 2, 3, 4, 5, and 6 below for special circumstances.

Note 1: Net Operating Income (NOI): The majority of commercial mortgage loans require the borrower to provide the lender with at least annual financial statements. The NOI would be determined at the RBC calculation date based on the most recent annual period from financial statements provided by the borrower and analyzed based on accepted industry standards. The most recent annual period is determined as follows:

- If the borrower reports on a calendar year basis, the statements for the calendar year ending December 31 of the year prior to the RBC calculation date will be used. For example, if the RBC calculation date is 12/31/2012, the most recent annual period is the calendar year that ends 12/31/2011.
- If the borrower reports on a fiscal year basis, the statements for the fiscal year that ends after June 30 of the prior calendar year and no later than June 30 of the year of the RBC calculation date will be used. For example, if the RBC calculation date is 12/31/2012, the most recent annual period is the fiscal year that ends after 6/30/2011 and no later than 6/30/2012.
- The foregoing time periods are used to provide sufficient time for the borrower to prepare the financial statements and provide them to the lender, and for the lender to calculate the NOI.

The accepted industry standards for determining NOI were developed by the Commercial Mortgage Standards Association now known as CRE Financial Council (CREFC). The company must develop the NOI using the standards provided by the CREFC Methodology for Analyzing and Reporting Property Income Statements ~~v.5.4~~ (www.crefc.org/irp). These standards are part of the CREFC Investor Reporting Package (CREFC IRP Section VII.) developed to support consistent reporting for commercial real estate loans owned by third party investors. This guidance would be a standardized basis for determining NOI for RBC.

The NOI will be adjusted to use a 3 year rolling average for the DSC calculation. For 2013, a single year of NOI will be used. For 2014, 2 years will be used, weighted 65% most recent year and 35% prior year. Thereafter, 3 years will be used weighted 50% most recent year, 30% prior year, and 20% 2nd prior year. This will apply when there is a history of NOI values. For new originations, including refinancing, the above schedule would apply by duration from origination. For the special circumstances listed below, the specific instructions below will produce the NOI to be used, without further averaging.

For purposes of the NOI inputs at (14), (15), (16), and the computation of a Rolling Average NOI at (36), an insurer may report 2020 NOI (i.e., NOI for any 12-month fiscal period ending after June 30, 2020 but not later than June 30, 2021) as the greater of: (1) actual NOI as determined under the CREFC-C IRP Standards or (2) 85% of NOI determined for the immediate preceding fiscal year's annual report. This guidance with respect to 2020 NOI applies to the application of the 2020 NOI in risk-based capital reporting for 2021, 2022, and 2023. In cases where an insurer reports 85% of 2019 NOI as the 2020 NOI input, the insurer should retain information about actual 2020 NOI in its workpapers so that the information can be readily available to regulators.

Note 2: The calculation of debt service coverage and loan to value will include all debt secured by the property that is (1) senior to or pari passu with the insurer's investment; and (2) any debt subordinate to the insurer's investment that is not (a) subject to an intercreditor, standstill or subordination agreement with the insurer provided that the agreement does

10/15/2021

not grant the subordinate debt holder any rights that would materially affect the rights of the insurer and provided that the subordinate debt holder is prohibited from taking any action against the borrower that would materially affect the insurer's priority lien position with respect to the property without the prior written consent of the insurer, or (b) subject to governing laws that provide that the insurer's investment holds a senior position to the subordinated debt holder and provide substantially similar protections to the insurer as in (2)(a) above.

Note 3: *Unavailable Operating Statements*

There are a variety of situations where the most recent annual period's operating statement may not be available to assist in determining NOI. These situations will occur in distinct categories and each category requires special consideration. The categories are:

1. Loans on owner occupied properties
 - a. For properties where the owner is the sole or primary tenant (50% or more of the rentable space), property level operating statements may not be available or meaningful. If the property is occupied and the loan, taxes and insurance are current, it will be acceptable to derive income and a reasonable estimate of expenses from the most recent appraisal or equivalent and additional known actual expenses (e.g., real estate taxes and insurance).
 - b. For properties where the owner is a minority tenant (49% or less of the rentable space), the owner-occupied space should be underwritten at the average rent per square foot of the arm's length tenant leases. This income estimate should be added to the other tenant leases and combined with a reasonable estimate of expenses based on the most recent appraisal or equivalent and additional known actual expenses (e.g., real estate taxes and insurance).
2. Borrower does not provide the annual operating statement
 - a. Borrower refuses to provide the annual operating statements
 - i. If the leases are in place and evidenced by estoppels and inspections, NOI would be derived from normalized underwriting in accordance with the CREFC Methodology for Analyzing and Reporting Property Income Statements.
 - ii. If there is evidence from inspection that the property is occupied, but there is no evidence of in place leases (e.g., lease documents or estoppels), NOI would be set equal to the lesser of calculated debt service (DSC=I.0) or the NOI from the normalized underwriting.
 - iii. If there is no evidence from inspection that the property is occupied and no evidence of in place leases (e.g., lease documents or estoppels), assume NOI = \$0.
 - b. If the borrower does not have access to a complete previous year operating statement, determine NOI based on the CREFC guidelines for analyzing a partial year income statement.

Note 4: Construction loans:

Construction loans would be categorized as follows, based on a determination by the loan servicer whether the loan is in balance and whether construction issues exist:

- a. In balance, no construction issues: DSC = 1.0, LTV determined as usual
- b. Not in Balance, no construction issues: CM4
- c. Construction issues: CM5

A loan is "*in balance*" if the committed amount of the construction loan plus any lender held reserves and unfunded borrower equity is sufficient to cover the remaining costs of the development project, including debt service not anticipated to be paid from property operations.

A "*construction issue*" is a problem that may reasonably jeopardize the completion of the project. Examples of construction issues include the abandonment of construction and construction defects that are not being addressed.

10/15/2021

Note 5: Credit enhancements: Where the loan payments are secured by a letter of credit from an investment grade financial institution or an escrow account held at an investment grade financial institution, NOI less than the debt service may be increased by these amounts until it is equal to but not exceeding the debt service. These situations are typically short term in nature and are intended to bridge the lease-up following renovation or loss of a major tenant.

Note 6: Non-income-producing land: NOI = \$0

Note 7: Non-senior financing:

- a. The company should first calculate DSC and LTV for non-senior financing using the standardized debt service and aggregate LTV of all financing *pari passu* and senior to the position held by the company.
- b. The non-senior piece should then be assigned to the next riskier RBC category. For example, if the DSC and LTV metrics determined in (a) indicate a category of CM2, the non-senior piece would be assigned to category CM3. However, it would not be required to assign a riskier category than CM5 if the loan is not at least 90-days delinquent or in foreclosure.

Note 8: Definitions of each type of Farm Mortgage:

Timber: A loan is classified as a timber loan if more than 50% of the collateral market value (land and timber) of the security is attributable to land supporting a timber crop that is or will be of commercial value.

Farm & Ranch: Farm and ranch land utilized in the production of agricultural commodities of all kinds, including grains, cotton, sugar, nuts, fruits, vegetables, forage crops, and livestock of all kinds, including, beef, swine, poultry, fowl and fish. Loans included in this category are those in which agricultural land accounts for more than 50% of total collateral market value.

Agribusiness Single Purpose: Specialized collateral utilized in the production, further processing, adding value or manufacturing of an agricultural commodity or forest product. In order for a loan to be classified as such, the market value of the single-purpose (special use) collateral would account for more than 50% of total collateral market value.

This collateral is generally not multi-functional and can only be used for a specific production, manufacturing and/or processing function within a specific sub-sector of the food or agribusiness industry and whereby such assets are not strategically important in nature to the overall industry capacity. These assets can be shut down or replicated easily in other locations, or existing plants can be expanded to absorb shuttered capacity. The assets are not generally limited in nature by environmental or operational permits and/or regulatory requirements. An example would be a poultry processing plant located in the Southeast of the United States where there is excess capacity inherent to the industry and production capacity is easily replaceable.

Other loans included in this category are those collateralized by single purpose (special use) confinement livestock production facilities in which the special use facilities account for more than 50% of total collateral market value.

Agribusiness All Other: Multiple-use collateral utilized in the production, further processing, adding value or manufacturing of an agricultural commodity or forest product. In order for a loan to be classified as such, the market value of any single use portion may not be greater than 50% of total collateral market value.

This collateral is multi-functional in nature, adaptable to other manufacturing, processing, or servicing food or agribusiness industries or sub-industries. Assets could also be very strategic in nature and not easily replaceable either due to cost, location, environmental permitting and/or government regulations. These assets may be single purpose in nature, but so vital to the industry capacity needs that they will be generally purchased by another like processing company or strategic or financial buyer. An example of these types of assets are strategically located and highly automated cold storage facilities whereby they can be used for dry storage, distribution centers or converted into

10/15/2021

warehouse or other type uses. Another example may be a cheese processing plant that is strategically located within the heart of the dairy industry, limited permits, environmental restrictions that would limit added capacity, or high barriers to entry to build a like facility within the industry. For example, one of the largest cheese plants in the industry is located in California and it is not easily replicated within the cheese processing industry due to its location, capacity, costs, access to fluid milk supply and related feed and water, as well as highly regulated environmental and government restrictions.

Other loans included in this category are those in which more than 50% of the collateral market value is accounted for by chattel assets or other assets related to the business and financial operations of agribusinesses, including inventories, accounts, trade receivables, cash and brokerage accounts, machinery, equipment, livestock and other assets utilized for or generated by agribusiness operations.

Note 9. The origination value is developed during the underwriting process using appropriate appraisal standards.

- a. If values were received from a qualified third-party appraiser, those values must be used.
- b. If the company performs internal valuations using standards comparable to an external appraisal, then the internal valuation may be used.

(Figure 3-4)

For Office, Industrial, Retail and Multi-family:

RISK CATEGORY	DSC LIMITS		LTV LIMITS
CM1	1.50 ≤ DSC	and	LTV < 85%
CM2	0.95 ≤ DSC < 1.50	and	LTV < 75%
CM2	1.15 ≤ DSC < 1.50	and	75% ≤ LTV < 100%
CM2	1.50 ≤ DSC	and	85% ≤ LTV < 100%
CM2	1.75 ≤ DSC	and	100% ≤ LTV
CM3	DSC < 0.95	and	LTV < 85%
CM3	0.95 ≤ DSC < 1.15	and	75% ≤ LTV < 100%
CM3	1.15 ≤ DSC < 1.75	and	100% ≤ LTV
CM4	DSC < 0.95	and	85% ≤ LTV < 105%
CM4	0.95 ≤ DSC < 1.15	and	100% ≤ LTV
CM5	DSC < 0.95	and	105% ≤ LTV
CM6	Loans 90 days past due but not yet in process of foreclosure		
CM7	Loans in process of foreclosure		

For Hotels and Specialty Commercial:

(Figure 45)

RISK CATEGORY	DSC LIMITS	LTV LIMITS
CM1	1.85 ≤ DSC	LTV < 60%
CM2	1.45 ≤ DSC < 1.85	LTV < 70%
CM2	1.85 ≤ DSC	60% ≤ LTV < 115%
CM3	0.90 ≤ DSC < 1.45	≤ LTV < 80%
CM3	1.45 ≤ DSC < 1.85	70% ≤ LTV
CM3	1.85 ≤ DSC	115% ≤ LTV
CM4	DSC < 0.90	LTV < 90%
CM4	0.90 ≤ DSC < 1.10	80% ≤ LTV < 90%
CM4	1.10 ≤ DSC < 1.45	80% ≤ LTV
CM5	1.10 ≤ DSC	90% ≤ LTV
CM6	Loans 90 days past due but not yet in process of foreclosure	
CM7	Loans in process of foreclosure	

Farm Mortgages (Agricultural Loans):

(Figure 56)

	Timber	Farm & Ranch	Agribusiness Single Purpose	Agribusiness All Other
CM1	LTV ≤ 55%	LTV ≤ 60%		LTV ≤ 60%
CM2	55% < LTV ≤ 65%	60% < LTV ≤ 70%	LTV ≤ 60%	60% < LTV ≤ 70%
CM3	65% < LTV ≤ 85%	70% < LTV ≤ 90%	60% < LTV ≤ 70%	70% < LTV ≤ 90%
CM4	85% < LTV ≤ 105%	90% < LTV ≤ 110%	70% < LTV ≤ 90%	90% < LTV ≤ 110%
CM5	105% < LTV	110% < LTV	90% < LTV	110% < LTV
CM6	Loans 90 days past due but not yet in process of foreclosure			
CM7	Loans in process of foreclosure			

SCHEDULE BA MORTGAGES

LR009

Basis of Factors

For Affiliated Mortgages, Line 12999999, the factors used are the same as for commercial mortgages and are defined in Figure 9. Risk categories and factors are determined using a company generated worksheet ~~for In Good Standing (Figure 10) and (Figure 9) for Past Due or In Process of Foreclosure.~~

For Unaffiliated Mortgages, Line 11999999, the factors used are the same as for commercial mortgages and are defined in Figure 9. Risk categories and factors are determined as follows:

- 1) For Investments that contain covenants whereby factors of maximum LTV and minimum DSC, or equivalent thresholds must be complied with and it can be determined that the Investments are in compliance, these investments would use the process for directly held mortgages using the maximum LTV and minimum DSC using the company generated worksheet and transferred to LR009 line (2) for mortgages with covenants that are in compliance.
- 2) Investments that are defeased with government securities will be assigned to CM1 and transferred to LR009 line (3).
- 3) Other investments comprised primarily of senior debt will be assigned to CM2 and transferred to LR009 line (4).
- 4) All other investments in this category will be assigned CM3 and transferred to LR009 line (5). This would include assets such as a mortgage fund that invests in mezzanine or sub debt, or investments that cannot be determined to be in compliance with the covenants.

Specific Instructions for Application of the Formula

Column (1)

Except for Lines (1), (12), and (16), calculations are done on an individual mortgage basis and then the summary amounts are entered in this column for each class of mortgage investment. Refer to the Schedule BA mortgage calculation worksheets ~~(Figure 9) and (Figure 10)~~ for how the individual mortgage calculations are completed. Line (20) should equal Schedule BA Part 1, Column 12, Line 11999999 plus Line 12999999.

Column (2)

Companies are permitted to reduce the book/adjusted carrying value of mortgage loans reported in Schedule BA by any involuntary reserves. Involuntary reserves are equivalent to valuation allowances specified in the codification of statutory accounting principles. They are non-AVR reserves reported on Annual Statement Page 3, Line 25. These reserves are held as an offset for a particular troubled Schedule BA mortgage loan that would be required to be written down if the impairment was permanent.

Column (3)

Column (3) is calculated as the net of Column (1) less Column (2).

Column (4)

~~No longer used. Place "XXX" in any blanks for this column. For Lines (12) through (14) and Lines (16) through (19), summary amounts of the individual mortgage calculations are entered in this column for each class of mortgage investments. Refer to the Schedule BA mortgage calculation worksheet (Figure 9).~~

Column (5)

For Line (1), the pre-tax factor is 0.0014.

~~For Line (2), the average factor column is calculated as Column (6) divided by Column (3).~~

~~For Line (3), the pre-tax factor is 0.0090.~~

~~For Line (4), the pre-tax factor is 0.0175.~~

~~For Line (5), the pre-tax factor is 0.0300.~~

10/15/2021

For Line (6), the pre-tax factor is 0.0090.
 For Line (7), the pre-tax factor is 0.0175.
 For Line (8), the pre-tax factor is 0.0300.
 For Line (9), the pre-tax factor is 0.0500.
 For Line (10), the pre-tax factor is 0.0750.
 For Line (12), the pre-tax factor is 0.0027.
 For Lines (13) through (14), the pre-tax factor is 0.1100.
 For Line (15), the pre-tax factor is 0.0054.
 For Lines (13) through (14), the pre-tax factor is 0.1300.

See Figure 9 for computation of appropriate factors.

Column (6)

For Lines (1), (3) through (10), (12) through (14), and (16) through (18), the RBC subtotal in Column (3) is multiplied by the average factor to calculate Column (6). The categories and subtotals will be determined in the company developed worksheet Figure (10).

For Lines (4) through (4) and Lines (16) through (18), summary amounts are entered for Column (6) based on calculations done on an individual mortgage basis as determined in the company developed worksheet Figure (10). Refer to the Schedule BA mortgage calculation worksheet (Figure 8).

Construction Loan out of Balance (26)	Construction Loan Issues (27)	Land Loan (28)	90 Days Past Due (29)	In Process of Foreclosure? (30)	Current payment lower than based on Loan Interest? (31)	Is loan interest floating? (32)	Is fixed rate reset during term? (33)
Is negative amortization allowed? (34)	Amortization Type (35)	Schedule BA mortgage? (36)	Affiliated Mortgage (37)	Covenant – Max LTV (39)	Covenant – Min DCR (40)	Loan Covenants in compliance? (41)	Deceased with government securities? (42)

Primarily Senior positions? (43)	Rolling Average NOI (44)	RBC DCR (45)	Price Index at Valuation (46)	Contemporaneous Property Value (47)	RBC - Loan to Value Ratio (48)	RBC Risk Category (49)
----------------------------------	--------------------------	--------------	-------------------------------	-------------------------------------	--------------------------------	------------------------

This worksheet is prepared on a loan-by-loan basis for each commercial mortgage – other or farm loan held in Schedule BA. The Column (7) and (9) subtotals for each category are carried over and entered in Columns (1) and (2) of the Mortgages (LR009) in the risk-based capital formula lines (2) – (10), (13) – (14), and (17) – (18). Small mortgages aggregated into one line on Schedule BA can be treated as one mortgage on this worksheet. ~~Amounts in Columns (7), (9) and (49) are entered individually to Worksheet-A columns (2), (3) and (7) for loans that are 90 Days Past Due and in Process of Foreclosure.~~ NOTE: This worksheet will not be available in the risk-based capital filing software and must be developed by the Company.

Column #	Heading	Description / Explanation of Item
(1)	Name / ID	Price Index current is the value on 9/30 of the current year for the National Council of Real Estate Investor Fiduciaries Price Index for the United States.
(2)	Date of Origination	Identify each mortgage included as in good standing.
(3)	Maturity Date	Enter the year and month that the loan was originated. If the loan has been restructured, extended, or otherwise re-written, enter that new date.
(4)	Property Type	Enter earlier of maturity of the loan, or the date the lender can call the loan.
(5)	Farm Sub-type	Enter 1 for mortgages with an Office, Industrial, Retail or multifamily property as collateral. Enter 2 for mortgages with a Hotel and Specialty Commercial as property type. For properties that are multiple use, use the property type with the greatest square footage in the property. Enter 3 for Farm Loans.
(6)	Postal Code	Sub-category – If Property Type=3 (Farm Loans), then you must enter a Sub Category: 1=Timber, 2=Farm and Ranch, 3=Agribusiness Single Purpose, 4=Agribusiness All Other. (See Note 8)
(7)	Book / Adjusted Carrying	Enter zip code of property for US properties. If multiple properties or zip codes, enter multiple codes. If foreign, enter postal code. If not available, N/A. Enter the value that the loan is carried at on the company ledger.

10/15/2021

	Value		
(8)	Statutory Writedowns	Input	Enter the value of any writedowns taken on this loan due to permanent impairment.
(9)	Involuntary Reserve	Input	Enter the amount of any involuntary reserve amount. Involuntary reserves are reserves that are held as an offset to a particular asset that is clearly a troubled asset and are included on Page 3 Line 25 of the Annual Statement.
(10)	Original Loan Balance?	Input	Enter the loan balance at the time of origination of the loan.
(11)	Principal Balance to Co.	Input	Enter the value of the loan balance owed by the borrower.
(12)	Balloon Payment at Maturity	Input	Enter the amount of any balloon or principal payment due at maturity.
(13)	Principal Balance Total	Input	Enter the total amount of mortgage outstanding that is senior to or pari passu with the company's mortgage
(14)	NOI Second Prior	Input	Enter the NOI from the year prior to the value in (15). See Note 1.
(15)	NOI Prior	Input	Enter the NOI from the prior year to the value in (16). See Note 1.
(16)	NOI	Input	Enter the Net Operating Income for the most recent 12 month fiscal period with an end-date between July 1 of the year prior to this report and June 30 of the year of this report. The NOI should be reported following the guidance of the Commercial Real Estate Finance Council Investor Reporting Profile v.5.0. Section VII. See Notes 1, 2, 3, 4, 5 and 6 below.
(17)	Interest Rate	Input	Enter the annual interest rate at which the loan is accruing. -If the rate is floating, enter the larger of the current month rate or the average rate of interest for the prior 12 months, or -If the rate is fixed by the contract, not level over the year, but level for the next 12 months, use current rate. If the 'Total Loan Balance' consists of multiple loans, use an average loan interest rate weighted by principal balance. Enter actual 12 months debt service for prior 12 months.
(18)	Trailing 12 Month Debt Service	Input	Enter the loan balance at the time of origination of the loan.
(19)	Original Property Value	Input	The value of the Property at time of loan origination, or at time of revaluation due to impairment underwriting, restructure, extension, or other re-writing.
(20)	Property Value	Input	Year of the valuation date defining the value in (20). This will be either the date of origination, or time of restructure, refinace, or other event which precipitates a new valuation.
(21)	Year of Valuation	Input	Calendar quarter of the valuation date defining the value in (20).
(22)	Quarter of Valuation	Input	Enter the full dollar amount of any credit enhancement. (see Note 5)
(23)	Credit Enhancement	Input	Enter 'Yes' if senior position, 'No' if not. (see Note 7)
(24)	Senior Loan?	Input	Enter 'Yes' if this is a construction loan. (see Note 4)
(25)	Construction Loan?	Input	Enter 'Yes' if this is a construction loan that is not in balance. (see Note 4)
(26)	Construction - not in balance	Input	Enter 'Yes' if this is a construction loan with issues. (see Note 4)
(27)	Construction - Issues	Input	Enter 'Yes' if this is a loan on non-income producing land. (see Note 6)
(28)	Land Loan?	Input	Enter 'Yes' if payments are 90 days past due.
(29)	90 days past due?	Input	Enter 'Yes' if the loan is in process of foreclosure.
(30)	In process of foreclosure?	Input	Yes / No
(31)	Is current payment lower than a payment based on the Loan Interest?	Input	Yes / No
(32)	Is loan interest a floating	Input	Yes / No

10/15/2021

	rate?			
(33)	If not floating, does loan reset during term?	Input	Yes / No - Some fixed rate loans define in the loan document a change to a new rate during the life of the loan, which may be a predetermined rate or may be the then current market rate. Generally any such changes are less frequent than annual.	Yes / No
(34)	Is negative amortization allowed?	Input		Yes / No
(35)	Amortization type?	Input	1 = fully amortizing 2 = amortizing with balloon 3 = full I/O 4 = partial I/O, then amortizing	Yes / No
(36)	Schedule BA mortgage?	Input		Yes / No
(37)	Affiliated Mortgage?	Input		Yes / No
(38)	Covenant Max LTV	Input	For mortgage investments with covenants, what is the maximum LTV allowed?	Yes / No
(39)	Covenant Min DCR	Input	For mortgage investments with covenants, what is the minimum DCR allowed?	Yes / No
(40)	Covenants in compliance?	Input	Yes / No – for mortgage investments with covenants, is the investment in compliance with the covenants?	Yes / No
(41)	Defeased with government securities	Input	Yes / No – has the mortgage loan been defeased using government securities?	Yes / No
(42)	Primarily Senior Mortgages	Input	Is the mortgage pool primarily senior mortgage instruments? {If yes, assign to CM2}	Yes / No
(43)	Rolling Average NOI	Computation	For 2012 – 100% of NOI For 2014 – 65% NOI + 35% NOI Prior For 2015 – 50% NOI + 30% NOI Prior + 20% NOI 2 nd Prior For loans originated or valued within the current year, use 100% NOI. For loans originated 2012 or later and within 2 years, use 65% NOI and 35% NOI Prior.	Yes / No
(44)	RBC Debt Service	Computation	RBC Debt Service Amount is the amount of 12 monthly principal and interest payments required to amortize the Total Loan Balance (13) using a Standardized Amortization period of 300 months and the Annual Loan Interest Rate (17).	Yes / No
(45)	RBC - DCR	Computation	Debt Coverage Ratio is the ratio of the Net Operating Income (43) divided by the RBC Debt Service (44) rounded down to 2 decimal places. See Note 3 below for special circumstances. For loan pools with covenants, this will be the minimum DCR by covenant.	Yes / No
(46)	NCREIF Index at Valuation	Computation	Price index is the value of the NCREIF Price Index on the last day of the calendar quarter that includes the date defined in (21) and (22).	Yes / No
(47)	Contemporaneous Property Value	Computation	Contemporaneous Value is the Property Value (11) times the ratio (rounded to 4 decimal places) of the Price Index current to the Price Index (46).	Yes / No
(48)	RBC - LTV	Computation	The Loan to Value ratio is the Loan Value (13) divided by the Contemporaneous Value (47) rounded to the nearest percent. For Loan Pools with covenants, this will be the max LTV by covenant.	Yes / No
(49)	CM Category	Computation	Commercial Mortgage Risk category is the risk category determined by either being not in good standing (either 90 Days Past Due or In Process of Foreclosure) or the loan being in good standing and by applying the DCR (45) and the LTV (48) to the criteria in Figure (11), Figure (12) or Figure (13). See Notes 2, 3, 4, 5, and 6 below for special circumstances. If (41) = yes, CM1. If (42) = yes, CM2. If no LTV and DCR, and (41) = no and (42) = no, CM3.	Yes / No

10/15/2021

Note 1: Net Operating Income (NOI): The majority of commercial mortgage loans require the borrower to provide the lender with at least annual financial statements. The NOI would be determined at the RBC calculation date based on the most recent annual period from financial statements provided by the borrower and analyzed based on accepted industry standards. The most recent annual period is determined as follows:

- If the borrower reports on a calendar year basis, the statements for the calendar year ending December 31 of the year prior to the RBC calculation date will be used. For example, if the RBC calculation date is 12/31/2012, the most recent annual period is the calendar year that ends 12/31/2011.
- If the borrower reports on a fiscal year basis, the statements for the fiscal year that ends after June 30 of the prior calendar year and no later than June 30 of the year of the RBC calculation date will be used. For example, if the RBC calculation date is 12/31/2012, the most recent annual period is the fiscal year that ends after 6/30/2011 and no later than 6/30/2012.
- The foregoing time periods are used to provide sufficient time for the borrower to prepare the financial statements and provide them to the lender, and for the lender to calculate the NOI.

The accepted industry standards for determining NOI were developed by the Commercial Mortgage Standards Association now known as CRE Financial Council (CREFC). The company must develop the NOI using the standards provided by the CREFC Methodology for Analyzing and Reporting Property Income Statements ~~v. 5.1~~ (www.crefc.org/irp). These standards are part of the CREFC Investor Reporting Package (CREFC IRP Section VII.) developed to support consistent reporting for commercial real estate loans owned by third party investors. This guidance is a standardized basis for determining NOI for RBC.

The NOI will be adjusted to use a 3-year rolling average for the DSC calculation. For 2013, a single year of NOI will be used. For 2014, 2 years will be used, weighted 65% most recent year and 35% prior year. Thereafter, 3 years will be used weighted 50% most recent year, 30% prior year, and 20% 2nd prior year. This will apply when there is a history of NOI values. For new originations, including refinancing, the above schedule would apply by duration from origination. For the special circumstances listed below, the specific instructions below will produce the NOI to be used, without further averaging.

For purposes of the NOI inputs at (14), (15), (16), and the computation of a Rolling Average NOI at (43), an insurer may report 2020 NOI (i.e., NOI for any 12-month fiscal period ending after June 30, 2020 but not later than June 30, 2021) as the greater of: (1) actual NOI as determined under the CREFC-C IRP Standards or (2) 85% of NOI determined for the immediate preceding fiscal year's annual report. This guidance with respect to 2020 NOI in risk-based capital reporting for 2021, 2022, and 2023. In cases where an insurer reports 85% of 2019 NOI as the 2020 NOI input, the insurer should retain information about actual 2020 NOI in its workpapers so that the information can be readily available to regulators.

Note 2: The calculation of debt service coverage and loan to value will include all debt secured by the property that is (1) senior to or pari passu with the insurer's investment; and (2) any debt subordinate to the insurer's investment that is not (a) subject to an intercreditor, standstill or subordination agreement with the insurer provided that the agreement does not grant the subordinate debt holder any rights that would materially affect the rights of the insurer and provided that the subordinate debt holder is prohibited from taking any action against the borrower that would materially affect the insurer's priority lien position with respect to the property without the prior written consent of the insurer, or (b) subject to governing laws that provide that the insurer's investment holds a senior position to the subordinated debt holder and provide substantially similar protections to the insurer as in (2)(a) above.

Note 3: *Unavailable Operating Statements:*

There are a variety of situations where the most recent annual period's operating statement may not be available to assist in determining NOI. These situations will occur in distinct categories and each category requires special consideration. The categories are:

1. Loans on owner occupied properties

10/15/2021

- a. For properties where the owner is the sole or primary tenant (50% or more of the rentable space), property level operating statements may not be available or meaningful. If the property is occupied and the loan, taxes and insurance are current, it will be acceptable to derive income and a reasonable estimate of expenses from the most recent appraisal or equivalent and additional known actual expenses (e.g., real estate taxes and insurance).
 - b. For properties where the owner is a minority tenant (49% of less of the rentable space), the owner-occupied space should be underwritten at the average rent per square foot of the arm's length tenant leases. This income estimate should be added to the other tenant leases and combined with a reasonable estimate of expenses based on the most recent appraisal or equivalent and additional known actual expenses (e.g., real estate taxes and insurance).
2. Borrower does not provide the annual operating statement
- a. Borrower refuses to provide the annual operating statements
 - i. If the leases are in place and evidenced by estoppels and inspections, NOI would be derived from normalized underwriting in accordance with the CREFC Methodology for Analyzing and Reporting Property Income Statements.
 - ii. If there is evidence from inspection that the property is occupied, but there is no evidence of in place leases (e.g., lease documents or estoppels), NOI would be set equal to the lesser of calculated debt service (DSC=I.0) or the NOI from the normalized underwriting.
 - iii. If there is no evidence from inspection that the property is occupied and no evidence of in place leases (e.g., lease documents or estoppels), assume NOI = \$0.
 - b. If the borrower does not have access to a complete previous year operating statement, determine NOI based on the CREFC guidelines for analyzing a partial year income statement.

Note 4: Construction loans

Construction loans would be categorized as follows, based on a determination by the loan servicer whether the loan is in balance and whether construction issues exist:

- a. In balance, no construction issues: DSC = 1.0, LTV determined as usual
- b. Not in Balance, no construction issues: CM4
- c. Construction issues: CM5

A loan is "in balance" if the committed amount of the construction loan plus any lender held reserves and unfunded borrower equity is sufficient to cover the remaining costs of the development project, including debt service not anticipated to be paid from property operations.

A "construction issue" is a problem that may reasonably jeopardize the completion of the project. Examples of construction issues include the abandonment of construction and construction defects that are not being addressed.

Note 5: Credit enhancements: Where the loan payments are secured by a letter of credit from an investment grade financial institution or an escrow account held at an investment grade financial institution, NOI less than the debt service may be increased by these amounts until it is equal to but not exceeding the debt service. These situations are typically short term in nature, and are intended to bridge the lease-up following renovation or loss of a major tenant.

Note 6: Non-income-producing land: NOI = \$0

Note 7: Non-senior financing

10/15/2021

- a. The company should first calculate DSC and LTV for non-senior financing using the standardized debt service and aggregate LTV of all financing *pari passu* and senior to the position held by the company.
- b. The non-senior piece should then be assigned to the next riskier RBC category. For example, if the DSC and LTV metrics determined in (a) indicate a category of CM2, the non-senior piece would be assigned to category CM3. However, it would not be required to assign a riskier category than CM5 if the loan is not at least 90-days delinquent or in foreclosure.

Note 8: Definitions of each type of Farm Mortgage:

Timber: A loan is classified as a timber loan if more than 50% of the collateral market value (land and timber) of the security is attributable to land supporting a timber crop that is or will be of commercial value.

Farm & Ranch: Farm and ranch land utilized in the production of agricultural commodities of all kinds, including grains, cotton, sugar, nuts, fruits, vegetables, forage crops and livestock of all kinds, including, beef, swine, poultry, fowl and fish. Loans included in this category are those in which agricultural land accounts for more than 50% of total collateral market value.

Agribusiness Single Purpose: Specialized collateral utilized in the production, further processing, adding value or manufacturing of an agricultural commodity or forest product. In order for a loan to be classified as such, the market value of the single-purpose (special use) collateral would account for more than 50% of total collateral market value.

This collateral is generally not multi-functional and can only be used for a specific production, manufacturing and/or processing function within a specific sub-sector of the food or agribusiness industry and whereby such assets are not strategically important in nature to the overall industry capacity. These assets can be shut down or replicated easily in other locations, or existing plants can be expanded to absorb shuttered capacity. The assets are not generally limited in nature by environmental or operational permits and/or regulatory requirements. An example would be a poultry processing plant located in the Southeast of the United States where there is excess capacity inherent to the industry and production capacity is easily replaceable.

Other loans included in this category are those collateralized by single purpose (special use) confinement livestock production facilities in which the special use facilities account for more than 50% of total collateral market value.

Agribusiness All Other: Multiple-use collateral utilized in the production, further processing, adding value or manufacturing of an agricultural commodity or forest product. In order for a loan to be classified as such, the market value of any single use portion may not be greater than 50% of total collateral market value.

This collateral is multi-functional in nature, adaptable to other manufacturing, processing, or servicing food or agribusiness industries or sub-industries. Assets could also be very strategic in nature and not easily replaceable either due to cost, location, environmental permitting and/or government regulations. These assets may be single purpose in nature, but so vital to the industry capacity needs that they will be generally purchased by another like processing company or strategic or financial buyer. An example of these types of assets are strategically located and highly automated cold storage facilities whereby they can be used for dry storage, distribution centers or converted into warehouse or other type uses. Another example may be a cheese processing plant that is strategically located within the heart of the dairy industry, limited permits, environmental restrictions that would limit added capacity, or high barriers to entry to build a like facility within the industry. For example, one of the largest cheese plants in the industry is located in California and it is not easily replicated within the cheese processing industry due to its location, capacity, costs, access to fluid milk supply and related feed and water, as well as highly regulated environmental and government restrictions.

Other loans included in this category are those in which more than 50% of the collateral market value is accounted for by chattel assets or other assets related to the business and financial operations of agribusinesses, including inventories, accounts, trade receivables, cash and brokerage accounts, machinery, equipment, livestock and other assets utilized for or generated by agribusiness operations.

For Office, Industrial, Retail and Multi-family

(Figure 11)

Risk Category	DSC Limits	LTV Limits
CM1	1.50 ≤ DSC	and LTV < 85%
CM2	0.95 ≤ DSC < 1.50	and LTV < 75%
CM2	1.15 ≤ DSC < 1.50	and 75% ≤ LTV < 100%
CM2	1.50 ≤ DSC	and 85% ≤ LTV < 100%
CM2	1.75 ≤ DSC	and 100% ≤ LTV
CM3	DSC < 0.95	and LTV < 85%
CM3	0.95 ≤ DSC < 1.15	and 75% ≤ LTV < 100%
CM3	1.15 ≤ DSC < 1.75	and 100% ≤ LTV
CM4	DSC < 0.95	and 85% ≤ LTV < 105%
CM4	0.95 ≤ DSC < 1.15	and 100% ≤ LTV
CM5	DSC < 0.95	and 105% ≤ LTV
CM6	Loans 90 days past due but not yet in process of foreclosure	
CM7	Loans in process of foreclosure	

For Hotels and Specialty Commercial

(Figure 12)

Risk category	DSC limits	LTV limits
CM1	1.85 ≤ DSC	and LTV < 60%
CM2	1.45 ≤ DSC < 1.85	and LTV < 70%
CM2	1.85 ≤ DSC	and 60% ≤ LTV < 115%
CM3	0.90 ≤ DSC < 1.45	and ≤ LTV < 80%
CM3	1.45 ≤ DSC < 1.85	and 70% ≤ LTV
CM3	1.85 ≤ DSC	and 115% ≤ LTV
CM4	DSC < 0.90	and LTV < 90%
CM4	0.90 ≤ DSC < 1.10	and 80% ≤ LTV < 90%
CM4	1.10 ≤ DSC < 1.45	and 80% ≤ LTV
CM5	1.10 ≤ DSC	and 90% ≤ LTV
CM6	Loans 90 days past due but not yet in process of foreclosure	
CM7	Loans in process of foreclosure	

For Farm Loans:

(Figure 13)

Timber	Farm & Ranch	Agribusiness Single Purpose	Agribusiness All Other

10/15/2021

CM1	LTV <= 55%	LTV <= 60%	LTV <= 60%	LTV <= 60%
CM2	55% < LTV <= 65%	60% < LTV <= 70%	LTV <= 60%	60% < LTV <= 70%
CM3	65% < LTV <= 85%	70% < LTV <= 90%	60% < LTV <= 70%	70% < LTV <= 90%
CM4	85% < LTV <= 105%	90% < LTV <= 110%	70% < LTV <= 90%	90% < LTV <= 110%
CM5	105% < LTV	110% < LTV	90% < LTV	110% < LTV
CM6	Loans 90 days past due but not yet in process of foreclosure			
CM7	Loans in process of foreclosure			

Draft: 8/10/23

Health Risk-Based Capital (E) Working Group
Virtual Meeting
July 25, 2023

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 25, 2023. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard, Vice Chair, Aaron Hodges, and Caroline Choi (TX); Wanchin Chou and Sarah Mu (CT); Benjamin Ben (FL); Chut Tee (KS); Debbie Doggett (MO); Lindsay Crawford and Michael Muldoon (NE); and Tom Dudek and Matt Ryan (NY). Also participating was: Tom Botsko (OH).

1. Adopted its May 17 and April 17 Minutes

Drutz said the Working Group met May 17 and April 17. During these meetings, the Working Group took the following action: 1) adopted its Spring National Meeting minutes; 2) referred proposal 2023-01-CA to the Capital Adequacy (E) Task Force for exposure; 3) heard an update from the American Academy of Actuaries (Academy) on the health care receivables and H2-underwriting risk review projects; 4) discussed pandemic risk; and 5) exposed the proposal on the health test language for a 45-day public comment period ending June 30.

Chou made a motion, seconded by Doggett, to adopt the Working Group's May 17 (Attachment Three-A) and April 17 (Attachment Three-B) minutes. The motion passed unanimously.

2. Adopted its 2023 Health Risk-Based Capital Newsletter

Drutz said the 2023 health risk-based capital newsletter includes all proposals that the Working Group adopted for year-end 2023, along with editorial changes to the health risk-based capital (RBC) forecasting and instructions publication. He said the purpose of this adoption is to consider the content of the newsletter, and the format will later be revised. The adopted version of the newsletter will be posted to the Working Group's web page, with the final formatted version posted around Sept. 1.

Dudek made a motion, seconded by Chou, to adopt the Working Group's 2023 health risk-based capital newsletter (Attachment Three-C). The motion passed unanimously.

3. Adopted its 2022 Health RBC Statistics

Drutz said the 2022 health RBC statistics were run July 5. There were 1,143 health RBC filings loaded onto the NAIC database, up from 1,095 in 2021. Twenty-eight companies triggered an action level in 2022, of which six were in a company action level, 10 were in a regulatory action level, and 12 were in a mandatory control level. There were 13 companies that triggered the trend test. The authorized control level and total adjusted capital amounts increased from 2021 to 2022. Chou said that the number of companies in an action level rose from 12 to 28 and asked if there were any significant reasons for the change. Drutz asked NAIC staff to review the companies at an action level and try to identify the cause of the action level. He said the Working Group could review this during its next meeting. Botsko said the number of companies that filed on the health blank grew by about 48 over the prior year and asked if it would be possible to identify how many new companies triggered an action level. Drutz agreed and said this was also something that could be investigated further. Jim Braue (UnitedHealth Group—UHG) suggested incorporating the operational risk component into the statistical report in future years. Crystal Brown (NAIC) said this could be added to the report beginning with 2023, but it would not include previous years because the report is run at a specific point in time, as the numbers can fluctuate due to

amendments and late filings. The Working Group agreed to incorporate this into the report. Botsko asked that it also be added to the life and property/casualty (P/C) statistics beginning with 2023.

Doggett made a motion, seconded by Dudek, to adopt the 2022 health RBC statistics (Attachment Three-D). The motion passed unanimously.

4. Exposed Proposal 2023-11-HI

Drutz said proposal 2023-11-H was developed to include Medicare and Medicaid fee-for-service and other risk revenue amounts in column (1), lines (4) and (10) on pages XR013 and XR014. This change creates consistency across column (1), lines (2), (3), (4), (7), and (10) since Medicare and Medicaid premiums and claims are already included in column (1), line (2), (3), and (7). Brown said that only page XR014 is referenced in the proposal because it references the annual statement pulls for the calculation used on XR013.

Hearing no objections, the Working Group agreed to expose proposal 2023-11-H for a 30-day public comment period ending Aug. 24.

5. Referred the Health Test Proposal to Blanks (E) Working Group

Drutz said the health test language proposal was exposed to all RBC working groups for a 45-day comment period that ended June 30. The Working Group received one comment letter from the New York Department of Financial Services (DFS). Ryan said the New York DFS believes any insurer that writes life business should file on the life blank and be regulated by the Life Bureau, and the Health Bureau agreed. He said the main concern is that the New York DFS has some domestics that cede a large portion of their life business. As a result, the net basis approach makes it appear that the company has a majority of health business when it actually has a significant amount of life business. He said that in those situations, they would want those companies to be filed on a life blank.

Drutz said the ad hoc group considered either an all-net or all-gross basis for the premium and reserve ratios due to the inconsistencies in the current calculation, where both net and gross basis amounts are included in the calculation of the reserve ratio. The ad hoc group also discussed lowering the 95% ratio to capture more companies. However, the group determined it best to leave the ratios at 95% and use an all-net basis. The group determined that if needed, it could re-evaluate in the future, given that more data is being captured on health business in the life blank and that the health blank includes the life supplement. Drutz said the ad hoc group intended to fix the ratio, but New York DFS' comments are strong arguments for using an all-gross basis. He noted that points have been made for both raising and lowering the ratio thresholds, and as a result, the group may need to consider revisions to the threshold in the future.

Doggett made a motion, seconded by Chou, to refer the health test proposal to the Blanks (E) Working Group (Attachment Three-E). The motion passed unanimously.

6. Received an Update from the Academy on the Health Care Receivables Project

Kevin Russell (American Academy of Actuaries—Academy) said Other Health Care Receivables included in line 06xxxxx on Exhibit 3 are part of incurred claims. He said those and four additional types of health care receivables (pharmaceutical rebates receivable, claim overpayment receivables, capitation arrangement receivables, and risk-sharing receivables) enter the calculation of incurred claims on the U&I Exhibit Part 2 line 6. He said loans and advances to providers are another type of health care receivable, but they are excluded from incurred claims if not yet expensed. He said the Academy has concerns that some filing companies may be using the other health

care receivables line when another would be more appropriate—either a different type of health care receivable or some other type of receivable (one that is not a health care receivable). He said that because of differences in receivable factors, this is affecting the calculation of RBC. Russell said the Academy is looking at other health care receivables where the filing company provided a name of the debtor or a description of the receivable in that field. He noted that many filing companies do not provide a description of the receivable, so the Academy is grateful for those that did. Russell said the Academy is looking for the Working Group's approval for NAIC staff to contact the filing companies to ask questions related to the other health care receivable amounts. He said the expectation is that their answers will help guide improvements to the Instructions for filing or improvements to guidance. Russell said the Academy would provide recommendations on the questions to ask particular companies, and NAIC staff would contact the filing companies and compile their responses.

Drutz said the plan is to notify all states that the Working Group may be contacting some of their companies and is just looking for additional clarity and understanding of the reporting.

The Working Group approved the Academy's request to reach out to the filing companies. It directed NAIC staff to work with the Academy to begin reaching out to the companies for further clarification on the questions.

7. Received an Update from the Academy on the H2 – Underwriting Risk Review

Derek Skoog (Academy) said the Health Solvency Work Group is working on getting a better understanding of the definitions for claims and revenue in the health RBC formula. He summarized the Academy's letter regarding the nuances identified (Attachment Three-F). He said proposal 2023-11-H does help to address nuance 1 and 2. He said there are a couple of questions the proposal does not address, including: 1) how we should think about the fee for service revenue in the context of the RBC formula; and 2) whether the fee for service revenue should be netted. He said the annual statement instructions define the fee for service at a high level. He said the Academy noted that the reporting conventions appeared varied for those issuers who report a substantial portion of fee for service revenue. He said the Academy has looked at historical loss ratios by line of business, and a change to the calculation could result in a significant change.

Skoog noted one caveat is that few issuers report fee for service revenue, and it appears more unique to provider-sponsored plans. He said that when an issuer reports fee for service revenue, it tends to be a pretty material portion of the total revenue. He said the reason the Academy feels this is important is that there was a case where an issuer reported a substantial amount of fee for service revenue to its total revenue, and when it is netted out (fee for service revenue is not included in revenue nor claims), the observed loss ratio is very high. When it is not netted out, it is still high but has a more reasonable loss ratio.

Skoog said the Academy's view is to look at this on a gross basis and not net out the fee for service revenue. He said using Total Revenue (Line 7) in the Analysis of Operations would allow for a more simplistic approach to the calculation. He also noted that using line 7 would include aggregate write-in revenues (health and non-health). He said line 6 for aggregate write-in revenue for non-health was basically blank across the entire industry, and aggregate write-in revenue for health comprised a tiny portion of total revenue. He asked the medical loss ratio should use total revenue as the denominator or continue to use the nuanced view of net premium revenue plus unearned premium revenue plus fee for service revenue plus risk revenue but not include aggregate write-ins. Skoog asked if the Working Group preferred a net or gross-basis approach for total revenue. He said that from a results perspective, it does not appear to have too much of an impact.

Braue said the fee for service business is where the reporting entity is basically acting like a provider or provider intermediary. They are being paid directly for specific services, and it is not a prepaid sort of coverage like the

premium and other risk revenue are. He asked that given that, while it might be that the entity is reflecting the potential gains from that business in its pricing, in terms of potential fluctuation in the results (not an RBC concern), wouldn't there be a much different pattern of fluctuation for that fee for service business versus the prepaid business. Skoog said that is what the Academy was expecting. However, based on the filings, the results in practice did not match that intuition. He said that it appeared after looking at several issuers that there was some relationship where they were pricing this into the products, but it was not obviously clear without reaching out to the issuer directly.

Braue asked if some are reporting losses on the fee for service business itself. Skoog said it is hard to parse that out because the fee-for-service component is included in other lines, and one does not see a stand-alone amount for fee-for-service profit or losses. Braue said he thought that the entity was supposed to report the number of claims netted against the revenue on that line. Skoog said companies are not doing that particularly well.

Drutz suggested meeting in regulator-to-regulator session to discuss specific companies to address the Academy's questions and possibly contacting specific companies to request additional clarification on the reporting.

The Working Group agreed to move forward with a regulator-to-regulator meeting and to expose the Academy letter for 30 days.

Hearing no objections, the Working Group agreed to expose the Academy letter for a 30-day public comment period ending Aug. 24.

8. Adopted its Updated Working Agenda

Drutz said its working agenda was revised to incorporate the following changes: 1) line X1 was updated to reference the adoption of proposal 2022-16-CA; 2) line X3 was updated to reference the adoption of proposal 2023-01-CA; 3) line X4 was updated to include the work with the Academy on the health care receivables; and 4) lines X5 and X10 were deleted because these items have been completed.

Dudek made a motion, seconded by Chou, to adopt its revised working agenda (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Seven*). The motion passed unanimously.

9. Received an Update on the Excessive Growth Charge Ad Hoc Group

Drutz said the Excessive Growth Charge Ad Hoc Group has continued to meet and move forward on its work of evaluating the existing health RBC excessive growth charge. He said the group has performed an extensive analysis of various data pieces, and based on the analysis to date, it appears that the current excessive growth charge is working at a reasonable level in identifying companies that incur an underwriting loss in the following year after revenue growth in excess of 10% is reported in the current year. He said there seem to be some limitations with the current charge in that it has a very narrow focus because the trigger is based on the RBC charge and does not seem to identify all companies that incur an underwriting loss in the following year. The group continues to meet generally monthly to determine the best approach to move forward. The group will continue to provide the Working Group with updates.

10. Discussed Pandemic Risk

Drutz said the Working Group has discussed pandemic risk and its effect on the health RBC formula in the last several meetings. During its April 17 meeting, the Working Group discussed some of the questions to think about, and some suggestions were made to look at any work done by the Society of Actuaries (SOA) on the COVID-19

public health emergency (PHE) and evaluate the RBC filings from 2020 to 2022. He suggested asking NAIC staff to: 1) reach out to the SOA on any work it has done on pandemic risk; 2) reach out to modeling firms to see if any model pandemic risk; 3) look at the templates for the calculation used by Solvency II; and 4) review the RBC filings from 2020 to 2022 to see if there are any discernable differences from year to year. Chou suggested also looking at the exposure by the Life Actuarial (A) Task Force on the historical mortality index, which included a discussion on pandemic risk.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Health Risk-Based Capital (E) Working Group
Virtual Meeting
May 17, 2023

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 17, 2023. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard, Vice Chair, and Aaron Hodges (TX); Wanchin Chou and Sarah Mu (CT); Benjamin Ben (FL); Danielle Smith and Debbie Doggett (MO); and Tom Dudek (NY).

1. Exposed the Health Test Proposal

Drutz said the Working Group established the Health Test Ad Hoc Group in 2018 to review the existing health test language in the Annual Statement Instructions for all lines of business. He said the Working Group initially identified the concern when pulling the data for the Health Care Receivables (HCR) factor review. In 2016, approximately 28% of the overall health premiums were reported on the life blank, and 72% reported on the health blank, with less than 1% reported in the property/casualty (P/C) blank.

Drutz said in 2016, the life blank did not provide the same level of detail on health business and risks as the health blank. He said the following concerns were identified from a risk-based capital (RBC) perspective: 1) factor development; and 2) differences between the formulas. From a factor development perspective, only the data contained within the health blank could be used due to inconsistencies between the blanks. An example is HCRs, for which the factors are developed from data in Exhibit 3, Exhibit 3a, and Underwriting and Investment (U&I) Part 2B of the annual statement. These schedules were previously only available in the Health Annual Statement Blank. Drutz noted that there are also formula differences to consider; i.e., the health formula is driven primarily by the Underwriting Risk component, which in 2018 made up approximately 60–70% of the overall risk within the formula, while the life formula was driven more by asset risk. He also noted that the risk components are not accounted for identically between the health and life formulas. An example is that the health formula includes an excessive growth and HCR charge not included in the life RBC formula.

Drutz said prior to the establishment of the Ad Hoc Group, the Working Group reached out to other NAIC groups, such as the Financial Analysis (E) Working Group, the Financial Stability (E) Task Force, and the Blanks (E) Working Group to garner their feedback. From a financial analysis perspective, issues identified as concerns were group analysis and health insurance industry research and reporting. The Working Group established the Ad Hoc Group to consider the health test language, as it was included in the Annual Statement Instructions in 2018. The Ad Hoc Group was made up of state insurance regulators, industry, and NAIC staff. The health test language at the time the Ad Hoc Group was developed was as follows:

An entity is deemed to have passed the current test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year AND The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less AND At least seventy-five percent (75%) of the entity's current year premiums are written in its domiciliary state OR The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

Drutz said the Ad Hoc Group considered two approaches: 1) a bright line test, which was rules-based and maintained the current “test” concept. That is, if the test is passed, the presumption is that the insurer would switch to the health blank unless the state insurance regulator vetoed that move. Additional tests and considerations would be outlined to determine if special consideration should be given to the reporting entity moving to the health blank (e.g., separate accounts, large book of long-term care (LTC) business, etc.); or 2) an analysis/risk-based approach that would change the “test” concept to become an “analysis” process. The “test” would instead provide metrics to the state insurance regulator. When a metric exceeds the guideline, the state insurance regulator should consider whether the insurer should be reporting on the health blank. Drutz said the Ad Hoc Group always maintained that with either approach, the full authority and discretion in determining the blank to be filed by the reporting entity would remain with the domiciliary state. He said the Ad Hoc Group ultimately agreed to move forward and maintain a bright line test approach.

Drutz said the Phase 1 proposal was developed and exposed by the Working Group in December 2021. The primary components of this proposal included the following revisions: 1) removal of the requirements for licensed and actively writing in five states or less; 75% of current premiums are written in the domiciliary state; and the “or” statement for the premium and reserve ratio equal to 100%; 2) added a clarifying sentence to the Life and P/C portion of the Health Test language instructions that companies that report separate accounts or protected cells are not subject to the results of the health test but should continue to report on the existing blank; and 3) the General Interrogatory references for Life were updated to pull from the current Analysis of Operations by Line of Business—Accident and Health instead of the Life RBC.

Drutz said the Ad Hoc Group also discussed the premium and reserve ratios during the Phase 1 work. At one point, consideration was given to removing the reserve ratio as a requirement. Drutz said the Ad Hoc Group determined to maintain the existing 95% premium and reserve ratios for the time being and evaluate any changes to this requirement as part of Phase 2. The Working Group referred the Phase 1 proposal to the Blanks (E) Working Group in February 2022, and it was adopted for year-end 2022 reporting by the Blanks (E) Working Group.

Drutz said the Ad Hoc Group began its review of the premium and reserve ratios after the referral of the Phase 1 proposal. The primary discussion revolved around the reserve ratio. The focus of consideration and discussion by the Ad Hoc Group was on asset valuation reserve (AVR)/interest maintenance reserve (IMR), the actuarial opinion and asset adequacy testing (AAT), and the reserve ratio calculation itself. He said a question was raised on AAT when a reporting entity transitions from the life blank to the health blank and if the entity must continue to submit a Statement of Actuarial Opinion (SAO) based on asset adequacy analysis. The Ad Hoc Group worked closely with the Health Actuarial (B) Task Force and identified that there was not a general requirement that would require a health insurer to perform AAT, but there were other requirements that could compel such an analysis. The Ad Hoc Group also worked with the Working Group to draft a referral letter to ask the Health Actuarial (B) Task Force to consider adding a sentence to *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) that says AAT must be completed regardless of statement type if such requirements are met.

Drutz said the discussion around calculating the life reserve ratio was multi-faceted. He said the initial concern identified in the existing calculation was that the numerator pulled from Exhibits 5, 6, and 8, while the denominator pulled from the Liabilities page. The Ad Hoc Group noted that using the varying schedules between the numerator and denominator was a less straightforward approach to the calculation. Drutz said the Ad Hoc Group started its initial review by identifying equivalent lines in Exhibits 5, 6, or 8 to the Liabilities reference in the denominator. After identifying these, the Ad Hoc Group recalculated the results to ensure consistency. However, as the Ad Hoc Group worked through this exercise, it identified an inconsistency in the lines used in the calculation. Some were reported on a net basis, while others were reported on a gross basis. As a result, the Ad Hoc Group identified and analyzed the results of the reserve ratio to be calculated on an all-net or all-gross basis. It

determined that there was no material effect to one over the other, and it moved forward with a net basis approach, which will keep the premium and reserve ratio on a net basis.

Drutz said based on the analysis of the Ad Hoc Group, a Phase 2 proposal was drafted. This proposal includes revisions to the General Interrogatories, Part 2, Health Test Premium and Reserve Ratio calculations for life, property, and health. The changes reflected in this proposal were to clarify and create greater transparency in the calculation of both the numerator and the denominator in both the premium and reserve calculation. In both the premium and reserve ratios, the numerator and the denominator were calculated using separate schedules. Drutz said the changes align the denominator to pull from the same schedules as the numerator where possible. For example, the denominator in the calculation of the reserve ratio in the life general interrogatories was calculated using the Liabilities page, but the numerator utilized Exhibits 6 and 8. For greater transparency, the Ad Hoc Group then utilized those same schedules to now calculate the denominator. He said the current calculation of the reserve ratio utilizes both gross and net amounts, creating inconsistencies in the calculation. It was concluded that the net basis was the best way to move forward. This allowed for both the premium and reserve ratio to be calculated on a net basis. Drutz said additional clarifying instructions were also incorporated into the health test language on the timing of when a company would move if it has passed the test.

Drutz said the Ad Hoc Group also discussed whether the 95% ratio should be lowered, but it determined that no changes should be made at this time due to the extensive changes in the life and property annual statement filings for capturing health data. He said the Ad Hoc Group felt that all health data changes should be implemented, as well as the proposed health test changes, and then re-evaluated in a few years.

Hearing no objections, the Working Group exposed the proposal to the Health Risk-Based Capital (E) Working Group, the Property and Casualty Risk-Based Capital (E) Working Group, and the Life Risk Based-Capital (E) Working Group for a 45-day public comment period ending June 30.

2. Discussed Other Matters

Drutz said proposal 2022-09-CA was adopted for year-end 2023 reporting, and it revises the affiliated investment portion of the health RBC formula. He said as NAIC staff worked through the implementation of the changes, it was found that some clarifications were needed in the form of editorial changes, specifically for indirectly owned alien insurance subsidiaries and affiliates. He said the Working Group will work with the Capital Adequacy (E) Task Force on these editorial changes.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Draft: 7/10/23

Health Risk-Based Capital (E) Working Group
Virtual Meeting
April 17, 2023

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 17, 2023. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard, Vice Chair (TX); Wanchin Chou, Qing He, and Sarah Mu (CT); Frances Tay and Benjamin Ben (FL); Tish Becker (KS); Danielle Smith and Debbie Doggett (MO); Lindsay Crawford, Michael Muldoon, and Margaret Garrison (NE); and Tom Dudek (NY).

1. Adopted its Spring National Meeting Minutes

Chou made a motion, seconded by Muldoon, to adopt the Working Group's March 18 minutes (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Three*). The motion passed unanimously.

2. Referred Proposal 2023-01-CA to the Capital Adequacy (E) Task Force for Exposure

Drutz said the intent is to refer proposal 2023-01-CA to the Capital Adequacy (E) Task Force for exposure, which the Working Group exposed at the Spring National Meeting for 20 days. No comments were received. Drutz said the purpose of the proposal was to clarify the instructions for stop loss business in the health risk-based capital (RBC) formula and align the life and property/casualty (P/C) RBC formulas with these changes. The following minor editorial changes were made to the proposal: 1) the "i.e." references were replaced with "e.g."; 2) the reference to "treaty" in the example provided under the Calendar Year was corrected to "contract"; and 3) the proposal number on the proposal form was corrected.

Hearing no objections, the Working Group agreed to refer proposal 2023-01-CA to the Capital Adequacy (E) Task Force for exposure.

3. Received an Update from the Academy on the Health Care Receivables Project

Kevin Russell (American Academy of Actuaries—Academy) provided an overview and update to the Working Group on the status of the health care receivable (HCR) factor review project. He provided a brief history, noting that Exhibit 3A was implemented in the Health Annual Statement Blank in 2013, which provides a follow-up study on HCRs, and an analogous exhibit was implemented in the Life, Accident and Health (A&H)/Fraternal Annual Statement Blank in 2021. He said the original RBC factor for all types of HCRs was 0.05. He said in 2016, the Academy recommended a change to the factors based on an analysis of amounts collected against receivables compared to admitted receivable assets. He said there was a separate analysis of drug rebates versus the other five types combined. For drug rebates, the 0.05 factor provides a likelihood of between 90% and 95% that the collected amounts would cover the admitted asset plus the amount added to the H3 credit risk calculation. Russell noted that the second largest category of receivables is claim overpayment receivables, and a separate analysis was considered but rejected in favor of including them with the other four types. The Academy recommended the following current factors: 0.05 for drug rebates and 0.19 for all other HCRs.

Russell noted that HCRs have been changing over the years, and drug rebate receivables continue to be the largest portion and still growing; i.e., 48% in 2014 and 65% in 2021. He said claim overpayment receivables have always been the second largest, but their percentage is shrinking—20% in 2014 to 14% in 2021—and risk-sharing receivables are growing as a percentage—3% in 2014 to 7% in 2021.

Russell said the Academy has looked at the 2018–2021 data provided for the Other HCRs, and less than one-third of the Other HCR (for 2018 through 2021) dollars have any description. He said a good amount have descriptions consistent with expectations, such as government programs (e.g., Medicare, Medicaid, and the Children’s Health Insurance Program [CHIP]). However, there is a good amount where the descriptions do not seem to be appropriate for items that become a portion of incurred claims via the Underwriting and Investment (U&I) Exhibit Part 2. Examples are: 1) Reinsurance – Reinsurance receivables are part of the H3 Credit Risk but in a different section than HCRs; reinsurance is separately accounted for on the U&I Exhibit Part 2; 2) Interest – Investment income receivables are part of the H3 Credit Risk but in a different section than HCRs; and 3) Admin Fee – The H4 Business Risk covers administrative expenses. Russell said the Academy is considering making inquiries through the NAIC to better understand why these receivables are being reported as such, and the goal would be to produce recommendations to improve instruction clarity or provide additional guidance.

Russell said the Academy is investigating the following questions: 1) whether performance is better for drug rebates compared to the other five categories of HCRs for the filing companies whose receipts do not cover their accrual; 2) whether company performance has improved over time for the filing companies whose receipts do not cover their accrual (an outlier poor performance year might be excluded from the analysis to produce new recommended factors); 3) whether larger companies perform better than smaller ones for the filing companies whose receipts do not cover their accrual (this could indicate that smaller factors could be appropriate for larger receivable amounts, similar to the treatment of the Experience Fluctuation Risk component of the H2 Underwriting Risk).

David Quinn (Academy) shared a graphical representation of the initial analysis results with the Working Group (Attachment Three-B1). He said the density plots show how well companies collected if they did not collect at least 100%. Taller peaks towards 100% are desirable, while masses above 0% could be poor reporting or failure to collect on the receivable. The left-side charts are by year. The overlapping suggests that reporting is consistent across years. The right-side charts are by company size measured by total HCR dollars. The medium and large tiers are defined by \$1 million and \$10 million, respectively. Each tier is noticeably different in its distribution and thus may have different H3 risks as a function of size. Quinn said larger HCR companies typically did better than smaller ones, which has given rise to the consideration of using a tiered factor approach.

Muldoon said it is interesting that claims overpayment appears to be a much bigger group getting no collections in the prior year, and it could have been estimated erroneously, or there is a dispute with a company that thinks they have made overpayments, but the provider disagrees. Quinn agreed that this is very plausible, and he said it could be the size, as fewer companies hold this type of receivable, so there is more volatility from a small sample size. Russell said the receivable is set up, but the collection often does not come as a separate payment against the accruals. Rather, it comes as an offset made against future claim payments. This may be difficult for companies to quantify because it looks like an adjustment to a claim. He said a large portion is not reporting any collections against the accruals made, and this may be an inquiry to be made.

Drutz asked if the items identified in the analysis as questionable or incorrect were omitted from the analysis. Russell said they were not omitted, and in many cases, they had recoveries reported. The question was the propriety of the receivable type that they were reported as and if it was truly an HCR or some other type of receivable. Drutz asked if the clarification of the Annual Statement Instructions provided any improvement in the data integrity in the last several years. Russell said the Academy did not see much difference in the data integrity in the last four years.

Robin Marcotte (NAIC) asked if it was not a true reinsurance recoverable but instead perhaps related to Medicare or Medicaid. Russell said that is something that has been considered, and it is not uncommon on the Medicaid side for states to keep out of their managed care capitations; i.e., claims in excess of \$500,000 for the plan year.

Russell said the state may ask the health plan to pay the whole claim and then submit a stop loss request back to the state, so the HCR could be mislabeled.

The Working Group agreed that it wants the Academy to continue its work on the HCR factor review and prepare a list of possible inquiries.

4. Received an Update from the Academy on the H2 – Underwriting Risk Review

Derek Skoog (Academy) said the Health Solvency Work Group has been working in several different subgroups to advance the following topics: 1) redesigning the structure of the underwriting risk formula; 2) data analysis; and 3) redesigning the managed care credit. He said the Work Group continues to work towards providing more analyses related to where it is seeing volatility in the performance of various lines of business over time and what that may imply for initial underwriting risk factors and structural changes.

5. Discussed Pandemic Risk

Drutz said the Working Group agreed to begin discussing pandemic risk at the Spring National Meeting, and he asked if state insurance regulators consider it to be a missing risk. Muldoon said he has not seen any definitive studies about the impact on RBC because of the pandemic. He said in 2020, the government stepped in and shut down all elective surgeries, and because health companies did not have to cover them, many had a big underwriting gain; however, many companies experienced an increase in telehealth and mental health services, as well as the COVID-19 vaccine. He asked if the assumption is that there would be the same type of government action to step in when the next pandemic hits, and if so, the risk of many health companies becoming insolvent could be minimized. He said he was not clear on what could be changed in the RBC at this time. Drutz noted the limited hospital space during the pandemic, and he asked how the limited space could affect the risk. He also noted the pent-up demand for medical care following the worst of the pandemic, and he asked if this demand could have a bigger effect than the pandemic. He said there appeared to be more volatility for some carriers in 2021 and 2022 because of this pent-up demand.

Drutz asked if anyone has any knowledge or information on modeling pandemic risk and if any industry participants model for pandemic risk. Muldoon said Nebraska has not seen much on modeling pandemic risk in its reviews of companies. Drutz asked if anyone has any information related to the Solvency II requirements for modeling pandemic risk. Richard said he has seen some requirements for Solvency II for the United Kingdom (UK). He said the approach was as follows: if the number of policyholders is X, assume X percent will have an office visit, X will have a more severe case, and X will have a higher severity case. Then, there is an assumed frequency for each of the three levels of severity multiplied by the corresponding costs. Richard said the templates for the calculation are all public through the European Insurance and Occupational Pensions Authority (EIOPA).

Drutz asked if the Working Group feels it should dive deeper into pandemic risk, and if so, if there are any thoughts on how to begin this work or questions to consider. Muldoon suggested looking at what work the Society of Actuaries (SOA) is still doing with its monitoring spreadsheets. He also suggested looking at the RBC filings from 2020–2022 to see if any discernable differences were noted. Drutz suggested looking to see if there was a general decline in RBC results. Muldoon also suggested segregating the companies into groups, such as major medical.

The Working Group agreed to begin looking at pandemic risk.

6. Discussed Other Matters

Drutz said the Health Test Ad Hoc Group met April 12, and a question was raised on the proposal's effective date and when a company would move if they passed the health test based on the language currently included in it. The Ad Hoc Group determined that that language was not overly clear, and it would be beneficial to look at it further. As a result, the Ad Hoc Group will meet again April 26 to look at clarifications for the language on "Passing the Test" and "Failing the Test."

Drutz said the Capital Adequacy (E) Task Force established an ad hoc group at the Spring National Meeting to review or analyze current non-investment charges, missing risks, and modernizing asset concentration instructions. He said if anyone has any thoughts on non-investment charges or missing risks in the health RBC formula, they should reach out to him or Crystal Brown (NAIC).

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Newsletter Items for Adoption for 2023 for Health RBC:

Date: July 2023

Volume: 25.1

Page 1: Intro Section:

What Risk-Based Capital Pages Should Be Submitted?

For the year-end 2023 health risk-based capital (RBC) filing, submit hard copies of pages **XR001 through XR027** to any state that requests a hard copy in addition to the electronic filing. Beginning with year-end 2007, a hard copy of the RBC filings was not required to be submitted to the NAIC. Other pages, outside of pages XR001 through XR027, do not need to be submitted. Those pages would need to be retained by the company as documentation.

Page 1+: Items Adopted for 2023:

Modification to the Affiliated Investment Structure and Instructions

The Capital Adequacy (E) Task Force adopted proposal 2022-09-CA during its March 23 meeting to revise the instructions and structure of the Affiliated Investment pages (pages XR002-XR004) to provide consistent treatment of affiliated investments between the Health, Life, and Property/Casualty (P/C) RBC formulas. The Capital Adequacy (E) Task Force adopted proposal 2022-09-CA (MOD) during its June 30 call. The modified proposal clarified the examples provided for the Indirectly Owned Alien Insurance Affiliates/Subsidiaries section within the instructions and added a footnote for the "% Owned" column within the blank.

Preferred Stock Instructions

The Capital Adequacy (E) Task Force adopted proposal 2022-10-H during its Dec. 14, 2022, meeting to delete the reference to bond factors and revise for consistency with the P/C RBC preferred stock instructions.

Underwriting Risk - Annual Statement - Analysis of Operations References

The Capital Adequacy (E) Task Force adopted proposal 2022-11-H during its Dec. 14, 2022,

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

meeting. The purpose of this proposal was to update the annual statement source descriptions and align the lines of business on pages XR013 and XR014 with the changes in the Annual Statement Analysis of Operations based on Blanks proposal 2021-17BWGMOD.

Trend Test Instructions

The Capital Adequacy (E) Task Force adopted proposal 2022-14-H during its March 23 meeting to remove the informational-only trend test instructions.

Renumbering of Page XR008

The Capital Adequacy (E) Task Force adopted proposal 2022-15-H during its March 23 meeting to renumber the lines on page XR008 so it starts with line number 1.

Underwriting Risk Factors - Investment Income Adjustment

The Capital Adequacy (E) Task Force adopted proposal 2022-16-CA during its June 30 meeting. This proposal updated the comprehensive medical, Medicare supplement, and dental and vision factors to include a 5% investment yield adjustment. The revised factors are:

	Comprehensive Medical	Medicare Supplement	Dental & Vision
\$0-\$3 Million	0.1434	0.0980	0.1148
\$3-\$25 Million	0.1434	0.0603	0.0711
Over \$25 Million	0.0838	0.0603	0.0711

Stop Loss Premiums

The Capital Adequacy (E) Task Force adopted proposal 2023-01-CA during its June 30 meeting. This proposal clarifies the instructions for stop loss premiums in the Underwriting Risk - Experience Fluctuation Risk, Other Underwriting Risk, and Stop Loss Interrogatories.

Page 2+: Editorial Changes:

1. An editorial change was made to the Annual Statement Source column on page XR014 for the following:
 - a. Column (1), Line (7) was updated to reference "Pg. 7, Col. 2+3+8+9, Line 17."
 - b. Column (7), Line (2) was updated to reference "Pg. 7, Col. 8, Lines 1+2."
 - c. Column (7), Line (3) was updated to reference "Pg. 7, Col. 9, Lines 1+2."
2. An editorial change was made to the instructions for Affiliated Investments to remove the reference "and Line 93999999" from the end of the following sentence: "The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999."
3. An editorial change was made to the Annual Statement Source on page XR023, Lines (5) and (13), to update the line reference to Line 7.
4. An editorial change was made to remove the page number reference from the electronic-only stop loss tables on page XR015 of the forecasting file.

Last Page: RBC Forecasting & Warning:**Risk-Based Capital Forecasting and Instructions**

The Health RBC forecasting spreadsheet calculates RBC using the same formula presented in the *2023 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies*, and it can be downloaded from the NAIC Account Manager. The *2023 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies* publication is available for purchase in an electronic format through the NAIC Publications Department. This publication is available for purchase on or about Nov. 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

WARNING: The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

IDENTIFICATION OF ITEM(S) TO CHANGE

Revise the Health Test Language and General Interrogatories.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this change is to clarify and create better transparency in the calculation of the premium and reserve ratios in the health test.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

Revised 7/18/202

INSTRUCTIONS**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

If a reporting entity is a) licensed as a life and health insurer; b) completes the Life, Accident and Health annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter's statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end. **For example, if the reporting entity reports premium and reserve ratios of 95% or greater in 20X1 and again reports premium and reserve ratios of 95% or greater in 20X2, the reporting entity is deemed to have passed the Health Statement Test as of 20X2. Therefore, the reporting entity would begin completing the health statement in the first quarter of 20X4. (As noted above, the domiciliary state regulator maintains full discretion in determining which annual statement blank must be filed and when the reporting entity is to move.)**

	<u>20X1</u>	<u>20X2</u>	<u>20X3</u>	<u>20X4</u>
<u>Premium Ratio</u>	<u>95% or greater</u>	<u>95% or greater</u>	<u>Work with domestic regulators to move effective Quarter 1 20X4</u>	<u>Move to Orange Blank Quarter 1</u>
<u>Reserve Ratio</u>	<u>95% or greater</u>	<u>95% or greater</u>		

As noted above, the domiciliary state regulator maintains full discretion in determining which annual statement blank must be filed and when the reporting entity is to move.

Variations from following these instructions:

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

PART 2 – LIFE ACCIDENT HEALTH COMPANIES/FRATERNAL BENEFIT SOCIETIES INTERROGATORIES

Life and Accident Health Companies/Fraternal Benefit Societies:

- This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test; however, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

Premium and reserve information is obtained from the annual statement sources referenced on the form ~~or from the related risk-based capital report for the corresponding premium descriptions~~ relating to the current and prior reporting periods. The premium and reserve ratios are calculated on the net basis reporting.

(a) Alternative Reserve Numerator – Company records may be used to adjust the reserve numerator to provide consistency between the values reported in the reserve numerator (2.4) and the premium numerator (2.1).

INSTRUCTIONS**For Completing Health Annual Statement Blank****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if the values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year and will continue to report on the Health Statement

Failing the Test:

If a reporting entity, licensed as a life, accident and health or property and casualty insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it will revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of the second year following the reporting year. For example, if the reporting entity reports a premium or reserve ratio below 95% in 20X1, the reporting entity is deemed to have not passed the Health Statement Test. Therefore, the reporting entity would revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of 20X3. However, if the reporting entity reports premium and reserve ratios of 95% or greater in 20X2, it should work with its domiciliary regulator to determine the appropriate blank to file on to avoid movement back and forth between blanks. (As noted above, the domiciliary state regulator maintains full discretion in determining which annual statement blank must be filed and when the reporting entity is to move.)

If a reporting entity, licensed as a health insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it should continue to file the health annual statement.

Variances from following these instructions:

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

PART 2 – HEALTH INTERROGATORIES

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form ~~or from the related risk-based capital report for the corresponding premium descriptions~~ relating to the current and prior reporting periods. The premium and reserve ratios are calculated on the net basis reporting.

- (a) Alternative Reserve Numerator – Alternative Reserve Numerator – Company records may be used to adjust the reserve numerator to provide consistency between the values reported in the reserve numerator (2.4) and the premium numerator (2.1).

INSTRUCTIONS**For Completing Property and Casualty Annual Statement Blank****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Protected Cell Statement is not subject to the results of the Health Statement Test and should continue to complete the property blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

If a reporting entity is a) licensed as a property and casualty insurer; b) completes the property and casualty annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter's statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end. For example, if the reporting entity reports premium and reserve ratios of 95% or greater in 20X1 and again reports premium and reserve ratios of 95% or greater in 20X2, the reporting entity is deemed to have passed the Health Statement Test as of 20X2. Therefore, the reporting entity would begin completing the health statement in the first quarter of 20X4. (As noted above, the domiciliary state regulator maintains full discretion in determining which annual statement blank must be filed and when the reporting entity is to move.)

	<u>20X1</u>	<u>20X2</u>	<u>20X3</u>	<u>20X4</u>
<u>Premium Ratio</u>	<u>95% or greater</u>	<u>95% or greater</u>	<u>Work with domestic</u>	<u>Move to Orange</u>
<u>Reserve Ratio</u>	<u>95% or greater</u>	<u>95% or greater</u>	<u>regulator to move</u>	<u>Blank Quarter 1</u>
			<u>effective Quarter 1</u>	
			<u>20X4</u>	

As noted above, the domiciliary state regulator maintains full discretion in determining which annual statement blank must be filed and when the reporting entity is to move.

Variances from following these instructions:

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

PART 2 – PROPERTY AND CASUALTY INTERROGATORIES

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test; however, a reporting entity that is required to also file the Protected Cell Statement is not subject to the results of the Health Statement Test and should continue to complete the property blank.

Premium and reserve information is obtained from the annual statement sources referenced on the form ~~or from the related risk based capital report for the corresponding premium descriptions~~ relating to the current and prior reporting periods. The premium and reserve ratios are calculated on the net basis reporting.

Item	Description	Reporting Year Annual Statement Data	Prior Year Annual Statement Data

Part 2A, Unpaid Losses and Loss Adjustment Expenses, (Line 35, Columns 8+9) Unpaid Loss and LAE (Page 3, Column 1, Lines 1+2+3) plus Part 1A, Recapitulation of all Premiums (Line 35, Columns 1+2) of the prior year's annual statement.
2.6	Reserve Ratio	2.4/2.5	2.4/2.5

- (a) Alternative Reserve Numerator – Company records may be used to adjust the reserve numerator to provide consistency between the values reported in the reserve numerator (2.4) and the premium numerator (2.1).

July 13, 2023

Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Re: Request for Comprehensive Review of the H2—Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula

Dear Chair Drutz:

On behalf of the Health Underwriting Risk Factors Analysis Work Group of the Health Solvency Subcommittee of the American Academy of Actuaries (Work Group),¹ I appreciate the opportunity to provide these updates to the National Association of Insurance Commissioners (NAIC) Health Risk-Based Capital (E) Working Group in response to the request to comprehensively review the H2—Underwriting Risk Component and the Managed Care Credit Calculation in the Health Risk-Based Capital (HRBC) formula.

As part of the work group's review of the H2—Underwriting Risk Component, we identified several components of the current formula that merit discussion within the NAIC HRBC Working Group. We have described the issues below and would appreciate the opportunity to discuss them with the Working Group at the July 25, 2023, NAIC HRBC Working Group meeting.

For background, the critical source of the Experience Fluctuation Risk (EFR) formula within Underwriting Risk is the Analysis of Operations by Lines of Business (page 7 of the annual statutory financial statements). The page includes a buildup of underwriting gain/(loss), starting with net premium income, adding various other sources of revenue, then subtracting claims and administrative expenses. Some lines within the exhibit, including Fee-for-service and Risk revenue, are not broadly applicable, and the proportion of filers that utilize these fields is relatively small. Still, they often make up a material portion of revenue for those filers.

Those smaller components of the Analysis of Operations by Lines of Business have nuanced treatment within the current EFR formula that is likely not broadly understood. This nuanced treatment includes:

Nuance #1: Fee-for-service revenue is netted against incurred claims for Comprehensive Major Medical but not Medicare or Medicaid.

- The RBC instructions do not include the rationale for the distinction between lines of business.
- We do not see an intuitive rationale for the distinction and believe it may have been an inadvertent drafting error.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Nuance #2: The fee-for-service revenue netting can result in erratic net loss ratio experience for health plans with significant fee-for-service revenue levels.

- After investigating several instances of health plans reporting fee-for-service revenue, it appears that filer understanding of the field is mixed.
- Additionally, if health plans report a significant amount of fee-for-service revenue, the net loss ratio may look problematic:
 - For example, we observed a health plan with an approximately 100% gross loss ratio and a 140% net loss ratio; the gross loss ratio is more likely to resemble the “priced” loss ratio.
 - The risk charge is effectively applied to the net claims level, which is tantamount to a managed care credit discount of 1.0.

Nuance #3: Other Health Risk Revenue is included in the revenue calculation for Comprehensive Major Medical but not for Medicare or Medicaid.

- The RBC instructions do not include a rationale for the distinction between lines of business.
- We do not see an intuitive rationale for the distinction and believe it may have been an inadvertent drafting error.

Nuance #4: Aggregate write-in revenue (health and non-health) is excluded from the calculation.

- “Aggregate write-ins for other health care related revenues” is commonly populated and often represents pass-through revenue related to Aggregate write-ins for other hospital and medical (line 14), which is included in line 17.
- “Aggregate write-ins for other non-health care revenues” are infrequently populated and generally immaterial.

These nuances may need to be addressed within the existing formula but should be considered as part of any significant change to the EFR formula. For simplicity, one option to change the formula may be to use lines 7 and 17 for revenue and claims for each applicable line of business; however, we welcome additional suggestions based on feedback from the Working Group.

If you have any questions or would like to discuss further, please contact Matthew Williams, the Academy’s senior health policy analyst, at williams@actuary.org.

Sincerely,

Derek Skoog, MAAA, FSA
Chairperson, Health Solvency Subcommittee, Health Underwriting Risk Factors Analysis Work Group

Life Risk-Based Capital (E) Working Group
Seattle, Washington
August 13, 2023

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task met Aug. 13, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Sanjeev Chaudhuri (AL); Thomas Reedy (CA); Qing He (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Michael Muldoon and Margaret Garrison (NE); Jennifer Li (NH); Seong-min Eom (NJ); Michael Cebula (NY); Andrew Schallhorn (OK); Iris Huang (TX); and Tomasz Serbinowski (UT).

1. Adopted its June 22, April 14, and Spring National Meeting Minutes

Yanacheak made a motion, seconded by Leung, to adopt the Working Group's June 22 (Attachment Four-A), April 14 (Attachment Four-B), and March 23 (see *NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Four*) minutes. The motion passed unanimously.

2. Adopted the 2023 RBC Newsletter

Yanacheak made a motion, seconded by Muldoon, to adopt the 2023 Life Risk-Based Capital (RBC) Newsletter (Attachment Four-C). The motion passed unanimously.

3. Adopted the 2022 Life RBC Statistics

Muldoon made a motion, seconded by Reedy, to adopt the 2022 Life RBC Statistics (Attachment Four-D). The motion passed unanimously.

4. Adopted its Working Agenda

Andersen made a motion, seconded by Yanacheak, to adopt the Working Group's working agenda (see *NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Seven*). The motion passed unanimously.

5. Discussed Repurchase Agreements

Brian Bayerle (American Council of Life Insurers—ACLI) and Martin Mair (ACLI) presented a proposal on the repurchase agreement charge. Mair walked through the proposal and talked through some of the enhancements and additional changes necessary. Barlow asked whether it is possible that repos presumably open the possibility of 364 days of nonconforming repos and one day of conforming repos at the end of the year since they are a series of short-term transactions. He asked whether it is a program or a series of unrelated transactions. Mair said it is a program that must be set up with appropriate financial disclosures ahead of time. He said a transaction cannot be rolled over from a nonconforming program to a conforming program. Muldoon asked whether the risk would be the same for state-sponsored funds, asset managers, and money market funds. He also asked about the asset manager risk. Mair said all of them would typically be very highly rated. He said asset managers have extra cash, which is a good, collateralized way for them to lend out their cash in a low-risk way. The Working Group agreed to expose the ACLI's proposal for a 45-day public comment period.

6. Discussed C-2 Mortality Risk

Barlow said the C-2 mortality risk will be discussed on a call in September to provide clarity on the proposal for year-end 2023.

Tip Tipton (Thrivent), said interested parties are proposing some modifications to the annual statement blanks for 2024, which would subsequently feed the RBC formula and they are working with Dave Fleming (NAIC) and NAIC support staff for the Blanks (E) Working Group on this. Fleming said the Statutory Accounting Principles (E) Working Group received comments, and there have been some decisions on possible changes to the placement of the data in the annual statement. He said what will be in place for 2023 is not contingent upon the note.

7. Discussed Other Matters

Barlow said one of the items that the Life Risk-Based Capital (E) Working Group plans to look at is the covariance. He said the American Academy of Actuaries (Academy) is working on something related to the covariance that it will present to the Working Group when it is ready.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Draft: 8/7/23

Life Risk-Based Capital (E) Working Group
Virtual Meeting
June 22, 2023

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 22, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Hannah Howard (FL); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen and Ben Slutsker (MN); William Leung (MO); Seong-min Eom (NJ); Bill Carmello and Roberto Paradis (NY); Andrew Schallhorn (OK); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted the Generator of Economic Scenarios (E/A) Subgroup Charges

Barlow said a new joint subgroup of the Working Group and the Life Actuarial (A) Task Force has been formed, and the charges need to be adopted by both groups.

Hemphill made a motion, seconded by Yanacheak, to adopt the charges of the Generator of Economic Scenarios (E/A) Subgroup (see *NAIC Proceedings – Summer 2023, Financial Condition (E) Committee, Attachment One-B*). The motion passed unanimously.

2. Discussed Proposal 2023-08-L

Barlow said one comment letter was received on proposal 2023-08-L (Custody Control Accounts) (Attachment Four-A1). Paradis said this is not a credit for reinsurance issue but whether the security interest is sufficient to mitigate the counterparty risk and results in the risk-based capital (RBC) charge. He said the proposal leaves control over the supporting assets with the reinsurer, and it does not seem to mitigate the counterparty credit exposure for the cedant. Andrew Holland (Sidley Austin LLP) said the intention is that a security interest is affected either through the reinsurance agreement or a separate security agreement. Barlow asked if Holland and Paradis would be willing to discuss this further to come to a consistent understanding so the Working Group can move forward with the proposal. Both agreed.

3. Discussed the Working Agenda

Slutsker suggested adding all payout annuities to the scope of the work on longevity. Barlow asked Slutsker to work with NAIC staff on changing the wording.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Revised 2-2023

RBC Proposal Form – Custody Control Accounts

Background

- Life reinsurance transactions with Reinsurers which are licensed, accredited or approved as reciprocal jurisdiction reinsurers in a Cedant’s state of domicile generally do not require a collateral mechanism to provide credit for reinsurance (CFR).
- In many life reinsurance transactions, however, the parties nonetheless negotiate and agree to collateral arrangements for commercial reasons.
 - Such collateral arrangements are common in a variety of life reinsurance transactions, including block acquisitions, embedded value and reserve financings, and pension risk transfers.
- The Life RBC Manual instructions currently allow a Cedant to avoid an overstatement of RBC charges that would otherwise be applied for credit exposure to reinsurance counterparties if such collateral is held by the Cedant as funds withheld or a “comfort” reinsurance trust is established by the Reinsurer.
- Other collateral mechanisms can provide the same level of security to Cedants with lower costs and greater flexibility.
 - The Finance industry widely supports and leverages custodial control accounts (“Custody Control Accounts”) where segregated collateralization under third-party control is required (e.g., pledges of assets to Federal Home Loan Banks, posting of initial margin and variation margin on derivatives transactions).
- A Custody Control Account can similarly hold assets pledged by a Reinsurer for the benefit of a Cedant in connection with a reinsurance transaction.
- A Custody Control Account can provide the same protections to the Cedant as would be provided by a trust arrangement. However, a Custody Control Account operates at a reduced cost due to increased scale and automation.
- This proposal would amend the Life RBC formula to similarly avoid overstatement of credit risk on a reinsurance transaction when collateral is held by the Cedant in a Custody Control Account.
 - No changes to the Credit for Reinsurance Model Law or Credit for Reinsurance Model Regulation are being proposed.

Proposed Changes to Life RBC Instructions

From Risk-Based Capital Forecasting & Instructions – Life and Fraternal, 2019

REINSURANCE

LR016 (p. 53 of the 2019 Edition)

There is a risk associated with recoverability of amounts from reinsurers. The risk is deemed comparable to that represented by bonds between risk classes 1 and 2 and is assigned a pre-tax factor of 0.78 percent. To avoid an overstatement of risk-based capital, the formula gives a 0.78 percent pre-tax credit for reinsurance with non-authorized and certified companies, for reinsurance among affiliated companies, for reinsurance with funds withheld or reinsurance with authorized reinsurers that is supported by equivalent trusted **or custodied** collateral ~~that meets the requirements of the types~~ stipulated in **paragraph 18 of** Appendix A-785 (Credit for Reinsurance), where there have been regular bona fide withdrawals from such trusted **or custodied** collateral to pay claims or recover payments of claims during the calendar year covered by the RBC report, and for reinsurance involving policy loans. Withdrawals from trusted **or custodied** collateral that are less than the amounts due the ceding company shall be deemed to not be bona fide withdrawals. **For purposes of these instructions, “custodied collateral” shall mean assets held pursuant to a custodial arrangement with a qualified U.S. financial institution (as defined in Appendix A-785 (Credit for Reinsurance)) pursuant to which the underlying assets are segregated from other assets of the reinsurer and are subject to the exclusive control of, and available to, the ceding company in the event of the reinsurer’s failure to pay under, and otherwise pursuant to the terms of, the subject reinsurance agreement.**

Life Risk-Based Capital (E) Working Group
Virtual Meeting
April 14, 2023

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 14, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak and Carrie Mears (IA); Fred Andersen and Ben Slutsker (MN); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted Proposal 2023-05-L

Barlow said the dual presentation is no longer needed, and one comment letter was submitted in support of proposal 2023-05-L (Remove Dual Trend Test). Brian Bayerle (American Council of Life Insurers—ACLI) confirmed that the ACLI supports the proposal.

Chou made a motion, seconded by Andersen, to adopt proposal 2023-05-L (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Two-D*). The motion passed unanimously.

2. Adopted Proposal 2023-06-L

Barlow said one comment letter (Attachment Four-B1) was received. Bayerle said the two items the ACLI noted are a minor edit and a request for clarification on some of the language. The ACLI requests that the American Academy of Actuaries (Academy) provide that clarification in writing or on a future call. Dave Fleming (NAIC) said the first item the ACLI noted has already been addressed. He said while the Academy provided two alternatives for the Working Group to consider, one, noted as update two, that included the introduction of a new financial statement note to facilitate the population of the schedule, is not contingent upon the note being in place, and it could be adopted with a simple line description change to company records, along with a guidance document from the Working Group.

Barlow asked Bayerle if he had any questions or concerns. Bayerle said the ACLI is comfortable with the note if it is adopted, but the path that Fleming suggests in terms of clarifying the sources makes sense. Connie Jasper Woodroof (CJW Associates) said she submitted a comment letter to both the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group, but she should have included the Life Risk-Based Capital (E) Working Group. She said she does not have a problem with having a note to pull information for risk-based capital (RBC), but she believes the proposed note goes above and beyond the proposed purpose of the note. Additionally, she said the proposed note includes information that is already available in the annual statement, and one of the things the Blanks (E) Working Group has been charged with is reducing redundant reporting. She said she had submitted an alternative to the proposed note that would address those pieces needed for RBC that cannot be pulled from the annual statement. To be clear, Barlow said it sounds like the proposed note might change, but that will not affect what the Working Group needs to decide. Fleming agreed and said if the note changes or is not in place, the dynamic is the same and requires only a simple line description change to company records, along with a guidance document from the Working Group.

Andersen made a motion, seconded by Reedy, to adopt proposal 2023-06-L (C-2 Mortality Structure and Instruction Changes) (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Two-E*). Slutsker said his understanding of the new language in the Academy's proposal is that the RBC treatment and

categorization could differ depending upon reinsurance, and he suggested that this be part of discussions about the proposed note. The motion passed unanimously.

3. Adopted Proposal 2023-07-L

Barlow said no comments were received on proposal 2023-07-L (CM6 & CM7 Mortgage Structure Change).

Andersen made a motion, seconded by Leung, to adopt proposal 2023-07-L (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Two-F*). The motion passed unanimously.

4. Exposed Proposal 2023-08-L for Comment

The Working Group agreed to expose proposal 2023-08-L (Comfort Trusts) for a 45-day public comment period.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Phillip Barlow

Chair, NAIC Life Risk-Based Capital (E) Working Group (LRBC)

Re: Academy Proposal for Life C-2 Structural and Instruction Updates and a New Financial Statement Note

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on the American Academy of Actuaries' (Academy) Proposal for Life C-2 Structural and Instruction Updates and a New Financial Statement Note which was made available for public comment on January 26, 2023.

ACLI has no opposition to this proposal and is supportive of its adoption during a future LRBC call. With that said, there was one issue we seek clarification on in addition to one minor change we feel should be made help mitigate any potential uncertainty brought about by this APF:

1. What was the reasoning behind the change "in excess of the mortality cost expected under the moderately adverse scenario"?
2. Should the word "term" be removed from the group life reference (highlighted portion below)? This would make it consistent with our understanding of how the size band tiers have been done historically and avoid confusion with the Group & Credit Term Life bucket.

*The NAR size bands apply to the total amounts for individual & industrial life and **group term & credit life**. The size bands are allocated proportionately to the NAR for each of the factor categories. Size band 1 is for NAR amounts up to \$500 million. Size band 2 is for NAR amounts greater than \$500 million and up to \$25 billion. Size band 3 is for NAR amounts greater than \$25 billion.*

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

Page 1: Intro Section:

What RBC Pages Should Be Submitted?

For year-end 2023 life and fraternal risk-based capital (RBC), submit hard copies of pages LR001 through LR049 to any state that requests a hard copy in addition to the electronic filing. Starting with year-end 2007 RBC, a hard copy was not required to be submitted to the NAIC. However, a portable document format (PDF) file representing the hard copy filing is part of the electronic filing.

If any actuarial certifications are required per the RBC instructions, those should be included as part of the hard copy filing. Starting with year-end 2008 RBC, the actuarial certifications were also part of the electronic RBC filing as PDF files, similar to the financial annual statement actuarial opinion.

Other pages, such as the mortgage and real estate worksheets, do not need to be submitted. However, they still need to be retained by the company as documentation.

Page 1+: Items Adopted for 2023:

Removal of Dual Trend Test

The Capital Adequacy (E) Task Force adopted proposal 2023-05-L to remove the dual presentation of the trend test during its April 28 meeting. This proposal eliminates the presentation of the test at the former 2.5 threshold while member jurisdictions transitioned to the current 3.0 threshold. That transition is now complete, so the dual presentation is not needed.

www.naic.org

CM6 and CM7 Mortgages

The Capital Adequacy (E) Task Force adopted proposal 2023-07-L during its April 28 meeting. This proposal aligns the CM6 and CM7 factors for non-performing commercial and farm mortgages with the factors for Schedule A and Schedule BA investments in real estate as those factors were adjusted in 2021. It also adopts the same formula for calculating RBC amounts for non-performing and performing residential, commercial and farm mortgages.

Structure and Instruction Changes to Update the Treatment of C-2 Mortality Risk

The Capital Adequacy (E) Task Force adopted update 2 in proposal 2023-06-L during its April 28 meeting. This proposal makes structural changes and instructional changes for LR025, Life Insurance. The proposal assigns the same factors to group permanent life as individual permanent life for categories stating with and without pricing flexibility. The proposal also included a new financial statement note to develop the net amounts at risk in the categories needed for the Life C-2 schedule to create a direct link to a financial statement source. The new note was deferred for yearend 2023 which will necessitate the line references to the new note to be company records for 2023 and will be supplemented by guidance from the Life Risk-Based Capital (E) Working Group.

Residual Tranches

The Capital Adequacy (E) Task Force adopted proposals 2023-03-IRE and 2023-04-IRE during its April 28 meeting. These proposals added a line to isolate residual tranches reported on Schedule BA and the asset valuation reserve for a specific base factor and to add lines for residual tranches to the sensitivity testing exhibits, respectively. During its June 30 meeting, the Capital Adequacy (E) Task Force adopted proposals 2023-09-IRE and 2023-10-IRE. The first proposal applies a base factor of .30 for yearend 2023 and a base factor for yearend 2024 of .45 which is subject to adjustment based on additional information. The second proposal applies a .15 factor for sensitivity testing for yearend 2023 to be adjusted for yearend 2024.

Modification to the Affiliated Investment Structure and Instructions

The Capital Adequacy (E) Task Force adopted proposal 2022-09-CA during its March 23, 2023 meeting, to revise the instructions and structure of the Affiliated Investment pages to provide consistent treatment of affiliated investments between the Health, Life and Property and Casualty Risk-Based Capital formulas.

Underwriting Risk Factors - Investment Income Adjustment

The Capital Adequacy (E) Task Force adopted proposal 2022-16-CA during its June 30, 2023 meeting. This proposal updated the comprehensive medical, Medicare supplement and dental and vision factors to include a 5% investment yield adjustment. The revised factors are:

	Comprehensive Medical	Medicare Supplement	Dental & Vision
\$0-\$3 Million	0.1434	0.0980	0.1148
\$3-\$25 Million	0.1434	0.0603	0.0711
Over \$25 Million	0.0838	0.0603	0.0711

Stop Loss Premiums

The Capital Adequacy (E) Task Force adopted proposal 2023-01-CA during its June 30 meeting. This proposal clarifies the instructions for stop loss premiums in the Underwriting Risk - Experience Fluctuation Risk, Other Underwriting Risk and Stop Loss Interrogatories.

Last Page: RBC Forecasting & Warning:**RBC Forecasting and Instructions**

The Life and Fraternal RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2023 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies, and it is available to download from the NAIC Account Manager. The 2023 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies publication is available for purchase in electronic format through the NAIC Publications Department. This publication is available on or about November 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

Warning: The RBC Forecasting Spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

Property and Casualty Risk-Based Capital (E) Working Group
Virtual Meeting
July 27, 2023

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 27, 2023. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair, Jack Broccoli, and Amy Waldhauer (CT); Rolf Kaumann and Mitchell Bronson (CO); Jane Nelson (FL); Judy Mottar (IL); Sandra Darby (ME); Anna Krylova (NM); HauMichael Ying (NY); Will Davis (SC); Miriam Fisk (TX); and Darcy Paskey and Jody Ullman (WI). Also participating were: Elizabeth Perri (AS); Giovanni Muzzarelli, Mitra Sanandajifar, and Rebecca Armon (CA); Travis Grassel (IA); Julie Lederer and Danielle Smith (MO); Lindsay Crawford (NE); Jesse Kolodin (NJ).

1. Adopted its June 16 and April 24 Minutes

Botsko said the Working Group met June 16 and April 24. During these meetings, the Working Group took the following action: 1) adopted its Spring National Meeting minutes; 2) adopted proposal 2023-02-P, which provided a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula; and 3) adopted proposal 2023-02-P-MOD, which updated the H/F, WC, and CMP reserve factors due to an incorrect calculation.

Chou made a motion, seconded by Darby, to adopt the Working Group's June 16 (Attachment Five-A) and April 24 (Attachment Five-B) minutes. The motion passed unanimously.

2. Adopted the Report of the Catastrophe Risk (E) Subgroup

Chou said the Subgroup met July 18. During this meeting, the Subgroup took the following action: 1) adopted its Spring National Meeting minutes; 2) discussed its working agenda; 3) received an update from its Catastrophe Model Technical Review Ad Hoc Group; 4) discussed the wildfire peril impact analysis; 5) heard a presentation from Verisk on a severe convective storms model update and technical review; and 6) discussed the flood insurance market.

Chou made a motion, seconded by Davis, to adopt the report of the Catastrophe Risk (E) Subgroup (Attachment Five-C). The motion passed unanimously.

3. Adopted the 2023 P/C RBC Newsletter

Botsko said the 2023 P/C RBC newsletter reflects the adopted proposals for year-end 2023. He said as mentioned last year, the purpose of the adoption is to consider the content of the newsletter, and the format will later be revised. He said when the formatting of the newsletter is complete, it will be posted to the Working Group's web page.

Chou made a motion, seconded by Darby, to adopt the 2023 P/C RBC newsletter (Attachment Five-D). The motion passed unanimously.

4. Discussed 2022 RBC Statistics

Botsko said the 2022 P/C RBC statistics were run on June 29. He said there were 2,522 P/C RBC filings loaded onto the NAIC database, up from 2,511 in 2021. He stated that there were 54 companies that triggered an action level in 2022: 1) 27 were in company action level; 2) seven were in regulatory action level; 3) three were in an authorized control level (ACL); and 4) 17 were in a mandatory control level. Also, there were 19 companies that triggered the trend test. However, the aggregate RBC percentage decreased from 617% in 2021 to 586% in 2022 due to the decrease of both ACL and total adjusted capital (TAC) amounts. Botsko also stated that the interested parties suggested that adding the operational risk component will provide a complete picture of the RBC formula. Without hearing any objections, the Working Group agreed to include the operational risk amount in the 2023 RBC statistics.

5. Discussed its Working Agenda

Botsko summarized the changes of the Working Group's 2023 working agenda, which included the following substantial changes: 1) update the Sept. 26 comment from conduct a review on different convective storm models to conduct a review on severe convective storm models, and add an additional comment of "the SG is finishing reviewing the following SCS vendor models: RMS, Verisk, KCC and Corelogic" in the comment section in item P1; 2) remove item #P5 as the proposal 2022-07-P has been adopted at the 2022 Fall National Meeting; and 3) add a new Item P8 for adding pet insurance line in the RBC formula due to the adoption of the Annual Statement Blanks proposal 2023-01BWG.

6. Discussed the Possibility of Reviewing and Analyzing the P/C RBC Charges That Have Not Been Reviewed Since Developed

Botsko said the Risk Evaluation Ad Hoc Group has met a few times since established. During the last meeting, the Ad Hoc Group decided to create three subgroups to potentially streamline the process of making progress on specific topics: 1) Asset Concentration Ad Hoc Subgroup; 2) RBC Purposes and Guidelines Ad Hoc Subgroup; and 3) Geographic Concentration Ad Hoc Subgroup. He encouraged all the interested parties to contact NAIC staff if anyone is interested in joining the ad hoc subgroups. Also, Botsko anticipated that the ad hoc subgroups will start meeting regularly after the Summer National Meeting.

7. Heard Updates on Current P/C RBC Projects from the Academy

Ron Wilkins (American Academy of Actuaries—Academy) said the purpose of the presentation (Attachment Five-E) is to provide: 1) the background of the report that will be released in the coming days; 2) a summary of the results; and 3) adjustment for catastrophe risk. He stated that the report is currently undergoing final public policy review by the Academy; it should be formally sent to the Working Group in a few days. Botsko said the Working Group is planning to expose the report for a 60-day comment period upon receiving it from the Academy.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Property and Casualty Risk-Based Capital (E) Working Group
E-Vote
June 16, 2023

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote that concluded June 16, 2023. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair (CT); Rolf Kaumann (CO); Sandra Darby (ME); Anna Krylova (NM); Will Davis (SC); and Miriam Fisk (TX).

1. Adopted Proposal 2023-02-P-MOD

The Working Group and the Subgroup conducted an e-vote to consider adoption of proposal 2023-02-P-MOD. The purpose of this modification is to update the H/F, WC, and CMP reserve factors due to an incorrect calculation.

Darby made a motion, seconded by Kaumann, to adopt proposal 2023-02-P-MOD (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment One-A*). The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Draft: 4/26/23

Property and Casualty Risk-Based Capital (E) Working Group
Virtual Meeting
April 24, 2023

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 24, 2023. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair, Jack Broccoli, and Qing He (CT); Virginia Christy and Nicole Crockett (FL); Judy Mottar (IL); Sandra Darby (ME); Anna Krylova (NM); HauMichael Ying (NY); Will Davis (SC); Miriam Fisk and Monica Avila (TX); and Adrian Jaramillo and Michael Erdman (WI). Also participating were: Jeff Cordell and Leo Liu (AR); Kevin Clark (IA); Julie Lederer (MO); Lindsay Crawford (NE); Doug Hartz (OR); Trey Hancock (TN); and Steve Drutz (WA).

1. Adopted its Spring National Meeting Minutes

Botsko said the Working Group met March 22.

Chou made a motion, seconded by Darby, to adopt the Working Group's March 23 minutes (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Five*). The motion passed unanimously.

2. Adopted Proposal 2023-02-P

Botsko said proposal 2023-02-P (Underwriting Risk Line 1 Factors) provided a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He also stated that the Working Group did not receive any comments during the exposure period.

Darby made a motion, seconded by Krylova, to adopt proposal 2023-02-P (*see NAIC Proceedings – Summer 2023, Capital Adequacy (E) Task Force, Attachment Two-A*). The motion passed unanimously.

3. Forwarded the Referral Regarding the Deferral of Adoption of Blanks Proposal 2023-01BWG

Botsko said the Blanks (E) Working Group exposed proposal 2023-01BWG (Attachment Five-B1) on March 7. The purpose of this proposal is to remove pet insurance from the Inland Marine line within the existing P/C Annual Statement Blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit and add new Schedule P Parts 1 through 4 specifically to pet insurance. Botsko said the Working Group reviewed the proposal and suggested sending a referral (Attachment Five-B2) to the Blanks (E) Working Group to delay this proposal for at least one year to allow state insurance regulators time to collect more industry information through other means. He also commented that cyber is also a significantly growing line of business, and it is using the supplemental data option. He indicated that while pet insurance seems to have grown significantly in the past few years, there are only a few carriers that write this line of business, and it is not clear if this supports adding an additional line of business without sufficient data support. Tip Tipton (Thrivent) said the Blanks (E) Working Group interested parties group supports a delayed implementation of at least one year as indicated in the attached memo. He stated that the interested parties group raised concerns about how the new line of business would address RBC and Market Conduct Annual Statement (MCAS) items.

After reviewing the referral, the Working Group agreed to forward the referral regarding the deferral of adoption of Blanks proposal 2021-01BWG to the Blanks (E) Working Group.

4. Discussed Annual Statement Blanks Proposal 2022-15BWG

Botsko said the Blanks (E) Working Group adopted proposal 2022-15BWG (Attachment Five-B3) during its March 7 meeting, which removes the current 5% of premium filing exemption (FE) on the Schedule H, Part 5 for P/C annual statement filing. He stated that the Working Group had a discussion at the Spring National Meeting on whether the same 5% rule should be removed from the P/C RBC formula to be consistent with the change in the annual statement. Connie Jasper Woodroof (CJW Associates) commented that both items are not related at all. It is just a coincidence that 5% is mentioned in both circumstances. She also stated that it would lose some valuable information in the P/C RBC health section by removing the 5% accident and health (A&H) threshold. The Working Group agreed with Woodroof's comment; no adjustment will be made to the P/C RBC formula.

5. Heard Updates on Current P/C RBC Projects from the Academy

Botsko said the Property and Casualty Risk-Based Capital Committee of the American Academy of Actuaries (Academy) provided a presentation at the Spring National Meeting on the following: 1) an overview of the methodology used to determine premium and reserve risk factors; and 2) the adjustment for investment income to the Working Group. Also, he said the Academy will need the NAIC's assistance to perform different impact analyses before sharing the report with the Working Group. He said the Academy anticipates that the report will be delivered in June 2023. Then, the Academy will focus on additional analysis related to premium and reserve risk.

6. Discussed the Possibility of Reviewing and Analyzing the P/C RBC Charges That Have Not Been Reviewed Since Developed

Botsko said the Capital Adequacy (E) Task Force established the Risk Evaluation Ad Hoc Group at the Spring National Meeting to: 1) re-evaluate some of the missing risks to determine if it should now include them in the RBC calculation or whether it appropriately handles those risks utilizing other regulatory methods; and 2) review those factors and instructions that have never been reviewed since development to determine if modifications should be made. He stated that NAIC staff received more than 80 industry requests to be involved in the ad hoc group. He commented that being a member of the group will require active participation in the group discussions, and status updates will be provided in every Task Force meeting. He asked all the interested parties to contact Eva Yeung (NAIC) if they do not plan on participating in the group discussion. Lastly, he said the ad hoc group plans to schedule the first meeting in May.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

IDENTIFICATION OF ITEM(S) TO CHANGE

Remove Pet Insurance from Inland Marine line of business and add a new line of business to Appendix – P/C Lines of Business. Add Pet Insurance line within the existing P/C Blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. Add new Schedule P Parts 1 through 4 specific to Pet Insurance.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

See Page 2 for detailed reason and justification for change.

*****IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL*****

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

Revised 11/17/2022

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE

Pet insurance is reported today as an Inland Marine product. Separating Pet Insurance from Inland Marine for financial reporting purposes within the existing Blank is warranted for a number of reasons, including:

- There is no public or regulator visibility into the vast majority of the pet insurance industry's financial reporting. Other than for a monoline insurer that writes only pet insurance, the rest of the industry's pet insurance business financial reporting is included in Inland Marine, along with anything else in that broadly-defined line that the respective insurer has written. In short, regulators do not have clear visibility into even the most basic information about pet insurers and the pet insurance market, such as who is underwriting pet coverage, the volume being sold, losses, and who is selling it.
- The pet insurance industry has grown rapidly, and this high growth rate continues. The industry's self-reported data shows growth in annual gross written premium from \$836.5 M in 2016 to \$2.59 B in 2021, including more than 30% annual growth from 2020 to 2021. This growth rate makes the absence of visibility into each participating company's financial information more an acute challenge with each passing year.
- Relying on regulator data calls to gather basic information such as premium written and loss information is time-consuming for all involved, and prone to inconsistencies and errors.
- The NAIC's D Committee is proceeding with MCAS for pet insurance. It would be inapposite and have potential for inconsistent data, to require MCAS reporting while not requiring dedicated pet insurance financial reporting. In addition, separate financial reporting will be a useful complement to MCAS reporting, both to supplement the MCAS information and to validate it.
- Dedicated financial reporting of pet insurance will be helpful to state regulators' assessment of the appropriate amount of surplus insurers writing this business should hold. It is anticipated that once sufficient history is obtained, a separate RBC factor for pet insurance can be established.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY/CASUALTY

APPENDIX

PROPERTY AND CASUALTY LINES OF BUSINESS

These definitions should be applied when reporting all applicable amounts for the following schedules: Underwriting and Investment Exhibit Parts 1, 1A, 1B, 2, and 2A; Exhibit of Premiums and Losses (Statutory Page 14); and the Insurance Expense Exhibit. Policy fees, service charges or membership charges are to be included with the line of business or in Other Income, as determined by *SSAP No. 53—Property and Casualty Contracts – Premiums*.

Line 9.1 – Inland Marine

Coverage for property that may be in transit, held by a bailee, at a fixed location, a movable good that is often at different locations (e.g., off-road construction equipment) or scheduled property (e.g., Homeowners Personal Property Floater), including items such as live animals, property with antique or collector’s value, etc. This line also includes instrumentalities of transportation and communication, such as bridges, tunnels, piers, wharves, docks, pipelines, power and phone lines, and radio and television towers.

Animal Mortality

Coverage that provides a death benefit to the owner of a policy in the event of the death of the insured livestock.

EDP Policies

Coverage to protect against losses arising out of damage to or destruction of electronic data processing equipment and its software.

Communication Equipment (Cellular Telephones)

Provides insured subscribers of Communications Equipment Service Provider replacement coverage for loss of and damage, theft or mechanical breakdown to communications equipment. Communications equipment means wireless telephones and pagers, and any other devices incorporating wireless phone and pager capabilities, including but not limited to personal digital assistants (PDA) and wireless aircards.

Line 9.2 – Pet Insurance Plans

Veterinary care plan insurance policy providing care for a pet animal (e.g., dog or cat) of the insured owner in the event of its illness or accident.

SCHEDULE P

SCHEDULE P – PART 1

Part 1 – Summary is the total of the Schedule P lines. For the property lines, it is necessary to supplement the data in the individual sections of Schedule P in order to complete the Part 1 – Summary for all lines for all years. Non-proportional assumed reinsurance – Property, Liability and Financial Lines can be summed together as reported.

↓
===== **Detail Eliminated to Conserve Space** =====
↑

Non-proportional assumed reinsurance –Property Reinsurance

Includes all the following lines: Fire, Allied Lines, Ocean Marine, Inland Marine, Pet Insurance Plans, Earthquake, Group Accident and Health, Credit Accident and Health, Other Accident and Health, Auto Physical Damage, Boiler and Machinery, Burglary and Theft and International (of the foregoing).

↓
===== **Detail Eliminated to Conserve Space** =====
↑

SCHEDULE P – PARTS 1A THROUGH 1U

Reporting entities should complete Schedule P in thousands only but must report all claim counts in whole numbers.

W:\QA\BlanksProposals\2023-01BWG.docx

MEMORANDUM

TO: Pat Gosselin (NH), Chair of the Blanks (E) Working Group

FROM: Tom Botsko (OH), Chair of the Property and Casualty Risk-Based Capital (E) Working Group

DATE: April 24, 2023

RE: Request for Deferral of Adoption of Blanks Proposal 2023-01BWG

Thank you for the opportunity to provide feedback on the blanks proposal 2023-01BWG.

We suggest that this proposal be delayed for at least one year. This will allow us to collect industry information through other means. Collecting industry data through the Supplemental Data option is one alternative. This information is also provided on March 1 with the annual statement submittal, and it provides industry information for analysis.

Please keep in mind that cyber is also a significantly growing line of business and has not been added to the annual statement but is currently using the Supplemental Data option.

Another option would be to use an Interrogatory for this data. This data will be available on March 1, along with the other annual statement information. The data provided under the Interrogatory is accessible through the annual statement databases.

While pet insurance seems to have grown significantly in the past few years, no data has been shared to evaluate this specific line of business. The data will provide valuable insight and potential support for separating this product.

In addition, it appears there are only a few carriers that write this line of business. At this time, it is not clear if this supports adding an additional line of business, which may be costly to the industry.

If industry data is available, it would be helpful to share this information to better understand the significance of this line and determine if the data supports the separation of this line of business.

One additional recommendation is removing the word "insurance" from the added line. No other lines of business include the word "insurance" in their description.

Thank you for the opportunity to provide input to this exposure. We are happy to discuss this with you and the Working Group at your convenience.

Anticipated Effective Date: Annual 2023

IDENTIFICATION OF ITEM(S) TO CHANGE

Revise the language of the Schedule H, Part 5 to remove the 5% of premiums filing exemption (FE).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to remove the 5% of premium filing exemption on the Schedule H, Part 5. Before Schedule H was updated for Annual 2022 to bring uniformity in the accident and health lines of business, the Property/Casualty instructions for Schedule H, Part 5 had the less than 5% filing exemption and the Life/Fraternal instructions did not have the 5% filing exemption. The removal of the 5% exemption would require both Property/Casualty and Life/Fraternal filers to file the Schedule H, Part 5.

Draft: 8/10/23

Catastrophe Risk (E) Subgroup
Virtual Meeting
July 18, 2023

The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 18, 2023. The following Subgroup members participated: Wanchin Chou, Chair, Jack Broccoli, and Amy Waldhauer (CT); Jane Nelson, Vice Chair (FL); Rolf Kaumann and Mitchell Bronson (CO); Kevin Clark (IA); Judy Mottar (IL); Sandra Darby (ME); Anna Krylova (NM); HauMichael Ying (NY); Tom Botsko (OH); and Miriam Fisk, Rebecca Armon, and Monica Avila (TX). Also participating were: Elizabeth Perri (AS); Mitra Sanandajifar, Lynne Wehmueller, and Giovanni Muzzarelli (CA); Julie Lederer and Danielle Smith (MO); Jesse Kolodin (NJ); Liz Ammerman and Elizabeth Kelleher Dwyer (RI); and Darcy Paskey and Jody Ullman (WI).

1. Adopted its Spring National Meeting Minutes

Darby made a motion, seconded by Botsko, to adopt the Subgroup's March 22 minutes (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Five-A*). The motion passed unanimously.

2. Discussed its Working Agenda

Chou summarized the changes to the Subgroup's 2023 working agenda, which included the following changes in item P1: 1) update the Sept. 26 comment from conducting the review on different convective storm models to conduct a review on severe convective storm models; and 2) add an additional comment of "the SG is finishing reviewing the following SCS vendor models: RMS, Verisk, KCC and CoreLogic" in the comment section. He said the working agenda will be forwarded to the Property and Casualty Risk-Based Capital (E) Working Group for consideration.

3. Received an Update from its Catastrophe Model Technical Review Ad Hoc Group

Chou said the Catastrophe Model Technical Review Ad Hoc Group had three separate meetings with three different modelers—Karen Clarke & Company (KCC), Risk Management Solutions (RMS), and Verisk—to discuss the technical questions after the Spring National Meeting. He also said the Ad Hoc Group will schedule one for CoreLogic shortly after the Summer National Meeting. Jason Butke (Travelers) said the Ad Hoc Group submitted a list of technical questions to the three modeling companies, which covered hazard, vulnerability, and financial model components. He also stated that the modeling companies have been engaged in discussions and helpful in understanding the models. Chou said the goal of this reviewing process is to gain a better understanding of each vendor model to determine whether each model's results are in a reasonable range.

4. Discussed Wildfire Peril Impact Analysis

Chou said as discussed at the Spring National Meeting, the Subgroup members are required to sign nondisclosure agreements (NDAs) with the vendor modeling companies to ease the catastrophe modelers' concerns regarding their proprietary information while evaluating the impacts and determining the appropriate risk-based capital (RBC) catastrophe risk charge for wildfire peril. He stated that five state members have submitted responses so far. He encouraged the rest of the state members to submit their responses to NAIC staff by the end of July so the Subgroup can start the discussion soon.

5. Heard a Presentation from Verisk on a Severe Convective Storms Model Update and Technical Review

Julia Borman (Verisk) said this presentation (Attachment Five-C1) provides a more in-depth technical presentation to the Subgroup, which includes the following items: 1) an introduction to Verisk extreme event solutions and catastrophe modeling; and 2) approaching severe conductive storm risk with the Verisk severe thunderstorm model for the U.S. Chou said he appreciates that Verisk presented twice to the Subgroup to provide a better understanding on its model. He encouraged all the interested parties to review the materials and provide feedback to the Subgroup during its next meeting.

6. Discussed the Flood Insurance Market

Shana Oppenheim (NAIC) provided a brief update on the National Flood Insurance Program (NFIP) (Attachment Five-C2), which includes the following topics: 1) a brief overview of the NFIP review; 2) inaccurate flood maps causing disparity in NFIP payments; and 3) what is floating around the U.S. Congress (Congress).

Nancy Watkins (Milliman) provided a presentation on the U.S. private flood market (Attachment Five-C3), which includes the following items: 1) the market is underserved; 2) a shift in the market; and 3) private flood market dynamics.

Chou expressed appreciation to the presenters for speaking to the Subgroup. He said he believes the presentation will provide some ideas to the Subgroup to determine the possibility of adding Flood into the catastrophe risk component.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

- Modeled Perils:
 - Straight-line wind
 - Hail
 - Tornado
- Model Domain:
 - Contiguous United States
- Model Resolution:
 - 90-meter

Hazard Module: Event Generation

Hazard Module: Intensity Calculation

Data is a Key Component of the Model

Observation Data Sets

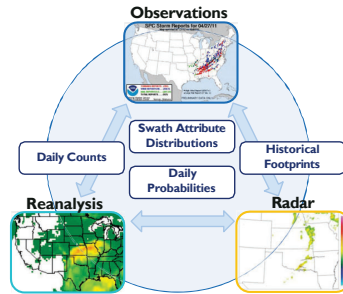

- Storm Prediction Center (SPC) – 40 years
- Community Collaborative Rain, Hail and Snow Network (CoCoRaHS) – 21 years
- Severe Hazards Analysis and Verification Experiment (SHAVE) – 10 years
- Insurance Institute for Business and Home Safety (IBHS)

Reanalysis Data Sets

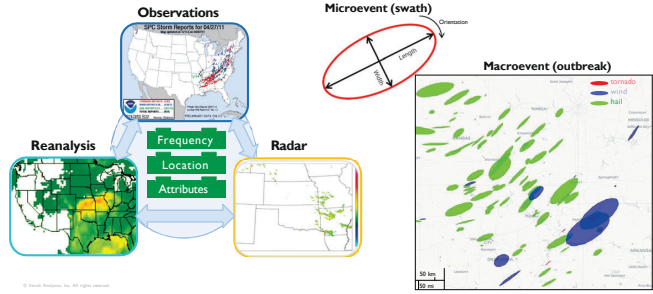

- Climate Forecast System Reanalysis (CFSR) – 40 years

Radar Data Sets

- 20 years of continuous data
- Verisk's Respond® data

Complementary Data Sources Inform All Hazard Components

Realistic Hazard Models Are Necessary to Study Impacts of Vulnerability and Mitigation

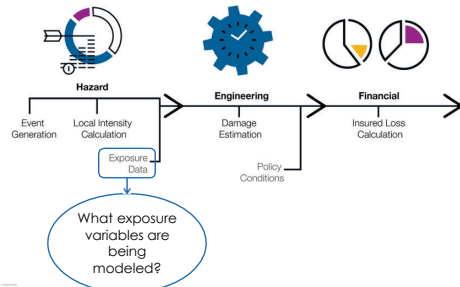

Tornado Damage Analyzed by TTU and Verisk

Respond: Expected Hail Size (in)

Hazard Module: Exposure Data Input

How does the User Define their Exposure Data?

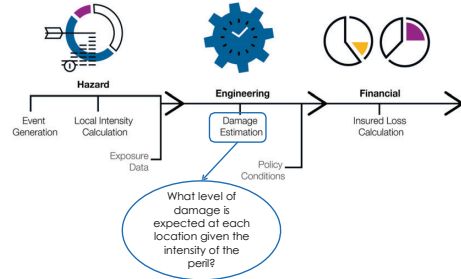

Primary Features: Construction, Occupancy, Height, Year Built, Gross Area

Key Model Outputs for Risk Assessment

- Average Annual Loss (AAL)**
 - The loss that can be expected to occur per year, on average, over a period of many years
- Exceedance Probability (EP)**
 - The likelihood that a loss of any given size (or greater) will occur in the coming year
- Occurrence Loss**
 - The largest loss in each simulated year
- Aggregate Loss**
 - The sum of all loss-causing events in each simulated year

NAIC GOVERNMENT AFFAIRS

What's Floating Around Congress?

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 8/23/2023 4

NAIC GOVERNMENT AFFAIRS

Bipartisan & Bicameral National Flood Insurance Program Reauthorization (NFIP-RE) Act of 2023

- Reauthorize NFIP for five-years and impose changes:
- Cap annual premium increase at 7% (down from 18%)
- Provide funding for mitigation
- Freeze interest payments on NFIP debt
- Offer means-tested vouchers to boost flood insurance affordability for low- and middle-income homeowners and renters
- Create oversight measures targeting "write-your-own" insurance companies that handle NFIP policies and revamp the claims process

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/23/2023 5

NAIC GOVERNMENT AFFAIRS

Other Bills (1 of 2)

- Senate:**
- National Flood Insurance Program Consultant Accountability Act of 2023 (S. 1039)
 - Risk Rating 2.0 Transparency Act (S. 602)
 - Flood Insurance Affordability Act (S. 601)
 - Repeatedly Flooded Communities Preparation Act (S. 1417)
 - Homeowner Flood Insurance Transparency and Protection Act (S. 721)

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Newsletter Items for Adoption for 2023 for Property and Casualty RBC:

Date: July 2023

Volume: 27.1

Page 1: Intro Section:

What Risk-Based Capital Pages Should Be Submitted?

For year-end 2023 property/casualty (P/C) risk-based capital (RBC), hard copies of pages PR001–PR035, as well as pages PR038 and PR039, should be submitted to any state that requests a hard copy. Beginning with year-end 2011 RBC, a hard copy was not required to be submitted to the NAIC, but a portable document format (PDF) file representing the hard copy filing is part of the electronic filing with the NAIC.

Page 1+: Items Adopted for 2023:

Underwriting Risk

Underwriting and Investment Exhibit – Premiums Written (PR035)

The Capital Adequacy (E) Task Force adopted proposal 2022-07-P to modify the lines of business categories in PR035 during its Dec. 14, 2022, meeting. The purpose of this proposal is to provide consistency in the granularity of the Property and Casualty Underwriting Investment Exhibit pages.

New Industry Average Risk Factors – Annual Update

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

During its April 25 meeting, the Capital Adequacy (E) Task Force adopted the annual update of industry average development factors. However, the Property and Casualty Risk-Based Capital (E) Working Group noticed the incorrect calculation of the reserve factors of H/F, WC, and CMP lines of business after the Task Force's adoption. The Working Group re-exposed the following updated factors for seven days. No comments were received during the exposure period. The Task Force re-adopted the modified proposal during its June 30 meeting.

PR017 Underwriting Risk - Reserves				PR018 Underwriting Risk - Net Written Premiums

Catastrophe Risk

Modification to the Instructions of Obtaining Permission to Use the Own Model

As a result of the adoption of proposal 2022-08-CR by the Capital Adequacy (E) Task Force during its Dec. 14, 2022, meeting, the revised instructions to: 1) capture the spirit of the own model permission review; and 2) clarify the requirements expected from the company who submits its own model for permission are included in the PR027 instructions.

Affiliated Investments

Modification to the Affiliated Investment Structure and Instructions

The Capital Adequacy (E) Task Force adopted proposal 2022-09-CA during its March 23 meeting to revise the instructions and structure of the Affiliated Investment pages (pages PR003-PR005) to provide consistent treatment of affiliated investments between the Health, Life, and Property/Casualty (P/C) RBC formulas. The Capital Adequacy (E) Task Force adopted proposal 2022-09-CA (MOD) during its June 30 call. The modified proposal clarified the examples provided for the Indirectly Owned Alien Insurance Affiliates/Subsidiaries section within the instructions and added a footnote for the “% Owned” column within the blank.

Accident and Health Business

Health Premiums (PR019) and Health Underwriting Risk (PR020) References

As a result of the adoption of proposal 2022-13-CA by the Capital Adequacy (E) Task Force during its March 23 meeting, the Health Premiums (PR19) and the Health Underwriting Risk (PR020) references in the instructions and structure will be updated to provide consistent categories used in the Annual Statement, Schedule H, Part 1.

Underwriting Risk Factors

The Capital Adequacy (E) Task Force adopted proposal 2022-16-CA during its June 30 meeting. This proposal updated the comprehensive medical, Medicare supplement, and dental and vision factors to include a 5% investment yield adjustment. The revised factors are:

	Comprehensive Medical	Medicare Supplement	Dental & Vision
\$0-\$3 Million	0.1434	0.0980	0.1148
\$3-\$25 Million	0.1434	0.0603	0.0711
Over \$25 Million	0.0838	0.0603	0.0711

Stop Loss Premiums

The Capital Adequacy (E) Task Force adopted proposal 2023-01-CA to clarify the instructions to provide clarity on reporting stop loss premiums in the RBC formula during its June 30 meeting.

Last Page: RBC Forecasting & Warning:

Risk-Based Capital Forecasting and Instructions

The P/C RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2023 NAIC *Property & Casualty Risk-Based Capital Report Including Overview & Instructions for Companies*. The entire RBC publication, including the forecasting spreadsheet, can be downloaded from the [NAIC Account Manager](#) through the NAIC Publications Department. The User Guide is no longer included in the RBC publications.

WARNING: The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual financial statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

Discussion of Report on Investment Income Adjustment Factors and Catastrophe-Adjusted Risk Factors

July 27, 2023

Topics Covered Today

- Background
- Summary of Results
- Adjustment for Catastrophe Risk

© 2023 American Academy of Actuaries. All rights reserved.
This report is confidential and for internal use only.

© 2023 American Academy of Actuaries. All rights reserved.
This report is confidential and for internal use only.

Status of Final Report

- In the coming days, the American Academy of Actuaries will publish on its website a final report to this working group.
- The report is currently undergoing public policy review by the Academy.

Please refer to the final report for explanations of the methodology and implications of the analysis which produced the results presented here.

Key Topics Covered in Report

1. Summary of Results
 - And impacts to industry ACL
2. Interest Rates
 - Use of recent and historical U.S. Treasury rates
3. Payment Patterns
 - 40-year runoff payment pattern
 - Risk development horizon/40-year truncated payment pattern
4. Present Value Method
 - Discount historical datapoints by then-prevailing U.S. Treasury interest rates, which have declined across the experience period
5. Safety Level Calculations
 - These calculations are included to support potential future discussions and should not be used as the basis for increasing the safety margin
6. Adjustment for Catastrophe Risk Captured in Rcat

Draft: 8/22/23

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group
Seattle, Washington
August 13, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met Aug. 13, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Qing He (CT); Carolyn Morgan (FL); Carrie Mears and Kevin Clark (IA); Vincent Tsang (IL); Roy Eft (IN); Fred Andersen (MN); Debbie Doggett (MO); Lindsay Crawford (NE); Bob Kasinow (NY); Dale Bruggeman and Tom Botsko (OH); Jamie Walker (TX); David Smith and Greg Chew (VA); Steve Drutz (WA); and Amy Malm (WI). Also participating was: Mike Yanacheak (IA).

1. Adopted its June 14, May 17, April 20, and Spring National Meeting Minutes

Botsko made a motion, seconded by Drutz, to adopt the Working Group's June 14 (Attachment Six-A), May 17 (Attachment Six-B), April 20 (Attachment Six-C), and March 22 (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Six*) minutes. The motion passed unanimously.

2. Received Updates from the Valuation of Securities (E) Task Force and Statutory Accounting Principles (E) Working Group

Mears said the Valuation of Securities (E) Task Force was going to review progress on the work of a definition of a designation, and she talked about how the concept of how a designation works within the insurance regulatory process. In addition, it was going to discuss a proposal for the Securities Valuation Office (SVO) to have some discretion of individual ratings that come from credit rating providers (CRPs) and the ability to challenge those via a due process that has been laid out. The Task Force will also discuss the comment letters received and the next steps from there.

Bruggeman said the Statutory Accounting Principles (E) Working Group adopted the principle-based bond definition that would become effective Jan. 1, 2025. It also updated *Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities*, and some of the references in other SSAPs for issuer credit obligations and asset-backed securities (ABS). The project included updating Schedule D1 for those that meet the bond definition, which was almost completed by the Blanks (E) Working Group. Along with exposing the project issue paper, the Statutory Accounting Principles (E) Working Group also exposed an update to *SSAP No. 21R—Other Admitted Assets* for debt-related securities that do not meet the definition. The exposure also included a new concept for the measurement method of residual tranches, in which they would initially be reported at cost, with all cashflows received reducing the reported value until the value reaches zero. Any additional cash flows received once the value is reduced to zero would be reported as income. The Statutory Accounting Principles (E) Working Group is going to sponsor the Blanks (E) Working Group's proposal to revise Schedule BA for ABS and debt-related securities that do not meet the definition. The Statutory Accounting Principles (E) Working Group plans to have separate reporting lines based on why it did not meet the definition under three categories. Part of the Schedule D1 break-up setup will make it easier for the RBC schedules to pull collateralized loan obligation (CLO) information directly from blanks.

3. Heard a Presentation from the Academy

Steve Smith (American Academy of Actuaries—Academy) presented principles for structured securities risk-based capital (RBC) (Attachment Six-D). There are two main sections of the presentation. The first section, which is on

asset modeling, covers how granular C-1 should be in terms of asset classes. Smith walked through the C-1 modeling flow chart. Mears asked how state insurance regulators should assess the information available in the designation if the rating itself is informative enough. Smith said it is interconnected with the second section of the presentation. It depends on what C-1 is specifically measuring. Barlow said he is not clear on whether ratings for corporate bonds mean the same thing for CLOs. Smith said the Academy does not believe a given rating in terms of the tail risk on a corporate bond means the same thing for a CLO. Yanacheak asked whether it is right to say a risk measure of the same percentile could have different meanings between two completely different asset types. Smith said he agrees with him on this.

For the second section of the presentation, Smith started off with defining terminologies, one of which being definitions of RBC arbitrage. According to Smith, there is a narrow-scope and a broad definition for RBC arbitrage. Smith then talked about seven candidate principles that would govern structured securities for RBC. He explained what these candidate principles are and how they work. Barlow made a comment on the first principle. He said it is worthwhile for the Working Group to consider how easy it is to adjust the RBC when considering the extent of precision with a particular component. Mears asked a question on the fifth principle. She asked whether there is a need to have a separate set of factors for CLOs compared to other ABS due to the active management incorporated into the CLO rating. Smith said it depends on the situation. In a filing-exempt (FE) world, no additional work would be needed for CLOs to satisfy this candidate principle. However, an awareness of this principle should be kept in modeling assets for CLOs individually. Clark asked a question on the last candidate principle. He asked whether the Academy asked state insurance regulators to provide feedback on whether the conditional tail expectation (CTE) would be a better measure or an endorsement of the CTE (90) versus CTE (96). Smith said that feedback is requested regarding whether the Working Group supports using different risk measures for different assets.

The Academy asked the Working Group to provide its feedback on these principles, based on which the Academy would work to produce a general framework around the principles.

4. Discussed its Next Steps

Barlow said the next step for the Working Group would be to have a follow-up call to get questions and comments from the state insurance regulators and interested parties on the principles presented. Then, the questions and comments will be exposed for a public comment period.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group
Virtual Meeting
June 14, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met June 14, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Carrie Mears and Kevin Clark (IA); Vincent Tsang (IL); Roy Eft (IN); Fred Andersen (MN); Debbie Doggett (MO); Lindsay Crawford (NE); Bob Kasinow and Bill Carmello (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill and Jamie Walker (TX); Doug Stolte (VA); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Discussed Comment Letters Received on Residual Factor and Sensitivity Test Factor

Clark presented the comment letter submitted by Iowa and Connecticut (Attachment Six-A1). He said there have been comments that there is more information supporting a 45% charge than a 30% charge. He said that, presumably, the support being referred to is the example of a broadly syndicated loan (BSL) collateralized loan obligation (CLO), which shows a two-thirds reduction in capital pre- and post-securitization. While it may be true that this serves as a data point supporting an increase in the charge for BSL CLOs, he said there is no evidence supporting this singular example being representative of all asset-backed securities (ABS) residuals. Clark said that based on the information available, it is believed that the population of ABS that are not BSL CLOs makes up a significant portion of the residual tranche population. It is not believed that they constitute outliers or merely 10% of the population. Clark said it is not believed that there is sufficient analysis to support an increase in RBC charge at this time. Iowa and Connecticut still believe that such an increase lacks sufficient supporting analysis. Therefore, unless the alternative proposal, which is to delay the implementation, includes a process or mechanism to consider further information that may be available prior to implementing an increase, they continue to not support an automatic increase.

Walker presented the comment that Texas submitted (Attachment Six-A2). She said she looked for a solution that would address the direction of the Financial Condition (E) Committee regarding an interim charge, something that acknowledges that the factor established for traditional equity investments did not anticipate residual tranche investments, which have a different risk profile, allows time for companies to address any investment changes needed in their asset mix and provides for the most efficient use of regulatory tools. She said changing the charge for year-end 2023 would be too disruptive to companies and may even result in companies divesting assets at suppressed prices because of the timing. She said they are trying to avoid that outcome in the deterioration of company surplus. However, leaving the charge at 30% until a final solution for all tranches is developed would not address the concerns raised by segments of the industry and some regulators. Therefore, she said a compromise is to align the residual tranche base charge with the current charge of 30% for 2023 and propose a 15% sensitivity rate for 2023 to get more information and understanding about the potential concentration on these types of investments for companies. Additionally, Walker proposed that the 2024 base charge be raised to 45% to get more certainty for future years. She said it would allow time for all parties to adjust and plan as if that charge will be in place. She said any action taken today needs to be qualified such that if the Working Group receives or develops information that indicates that a 45% charge is not appropriate for the segment of structured securities residual tranche investments, the Working Group commit to act on that information and set the appropriate charge as soon as practical.

Jeff Johnson (Global Atlantic Financial Group—Global Atlantic) presented Global Atlantic's comment letter (Attachment Six-A3). He said Global Atlantic supports the proposal made by Iowa and Connecticut for reasons

presented in their comment letter from May 12. Global Atlantic stands by the principles described in its letter, which are fundamental to developing charges and reflect equal capital for equal risk. Johnson said Global Financial's June 9 comment letter is focused on explaining why the proposed 45% percent factor should not apply to all residual tranches, and two examples are included to illustrate this point.

John Golden (Athene) presented Athene's comment letter (Attachment Six-A4). He said Athene's main concern is regarding the need for an overarching, consistent, reliable system, ensuring fairness across all asset classes. It recommends that the Working Group and the NAIC take a holistic approach, meaning they take a step back and review this workstream in the context of the broader NAIC framework for consistency. He said Athene is supportive of any further efforts to study any asset class, including residuals, in this context.

2. Adopted the Residual Tranche Base Factor and Sensitivity Test Factor

Andersen said that while Minnesota prefers a 45% charge for the residual tranche being implemented for year-end 2023, he said the Texas alternative could be considered a strong and practical approach. He made a motion to adopt the Texas proposal, which contains the 30% charge and an additional 15% sensitivity test for year-end 2023, which is to be replaced by the 45% charge applied beginning year 2024 with a consideration of positive or negative adjustments based on the additional information as mentioned by Walker and her oral and written comments. This motion was seconded by Walker.

Clark suggested that NAIC staff summarize the sensitivity data when it becomes available, which could be provided to the Financial Analysis (E) Working Group on an informational basis for their possible use. Bruggeman said he is pleased with the Texas commentary, and Ohio would support the motion as it stands now. Stolte expressed concern that they are out of step with other financial service regulators regarding the capital charge for this asset class.

A roll call vote was taken, and the motion passed unanimously.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

Re: Residual Tranche Exposures

Dear Mr. Barlow:

The Connecticut Insurance Department (“CID”) and Iowa Insurance Division (“IID”) are jointly submitting this letter to supplement those comments discussed in our previous letters dated May 12, 2023. Both letters are attached as appendices for ease of reference and should be read together with this letter in order to understand the basis for our position. As a brief summary of the points made in our previous letters:

- Absent a material and pressing solvency concern requiring immediate action, changes in RBC factors should be supported by fulsome, data-driven analysis.
- Changes that lack such analysis may not be warranted and therefore risk unforeseen and unintended consequences.
- The reported level of insurer investment in residual tranches does not reflect a material and pressing solvency concern, either in the aggregate, or for individual insurers.
- The basis for the proposed factor is based on a singular example of a subset of the asset-backed security (“ABS”) population, though it is intended to apply broadly to the entire population. No analysis has been performed to assess whether this subset is representative of other types of ABS.
- There is an alternative option (“Alternative Interim Proposal”) that would fully address the noted concerns without the risk of unintended consequences, as described again at the end of this letter.

In addition to expressing our joint support for the Alternative Interim Proposal, we would also provide the following comments in regards to remarks made on the May 17, 2023 Working Group call:

- In response to concerns raised by several Working Group members around the lack of analytical support for a change in factor, a comment was made that “we have better support for the 45% than the 30%”. Presumably, the support being referred to is the example of a broadly-syndicated CLO (“BSL CLO”) which shows a 2/3 reduction in capital pre- and post- securitization.
- We would like to reiterate, to the extent that this example serves as adequate support for an increase in factor, **it only provides support for BSL CLOs**. No analysis has been done to determine whether it is reasonable to extrapolate this singular observation to all types of ABS, which the 45% factor is proposed to apply to.
- Likewise, the sole comment letter received in support of the 45% factor continued to focus on the same example showing the reduction in RBC for BSL CLOs pre- and post-securitization, noting non-CLO holdings as “outliers”.

- Another comment made was that RBC is always blunt and imperfect and that it should generally be assumed that factors are off by at least 10%.
- Based on the information we have, we believe that the population of ABS that are not BSL CLOs makes up a significant portion of the residual tranche population. We do not believe they constitute outliers or merely 10% of the population.

Alternative Interim Step

In order to address the regulatory concerns raised around residual tranches, without the risk of unintended consequences of a temporary increase in RBC charge, the CID and IID support the following alternative:

- Set the previously-adopted sensitivity disclosure factor for residual tranches to 15%. This added to the existing 30% charge will allow regulators the ability to easily observe companies' RBC position using a 45% factor.
- Request NAIC staff to generate a summary report that includes the RBC ratio pre- and post-sensitivity test, by company. This report can be provided to both the RBC IRE Working Group and Financial Analysis Working Group ("FAWG") for review in regulator-only session.
- Upon review of this report, FAWG can identify any individual companies that have higher concentration in residual tranches, and through coordination with the domiciliary state, request additional information from the insurer.
- This information could include, though is not limited to: 1) detail around the structure and underlying collateral, 2) summary of the insurer's risk management processes and how it determines its risk appetite for its asset allocation to residual tranches, and 3) detail around how the company models its residual tranches and the projected impact to the company's solvency in stress scenarios.
- Additionally, if upon review, the RBC IRE Working Group determines that the growth in holdings significantly alters the urgency of action, whether by organic growth or refinement to reporting guidance, it can revisit an interim step to increase the charge. The structure to accommodate such an increase has already been adopted.
- It is also possible that, at the time revisiting an interim charge may be warranted, work on the longer-term project will have provided better clarity around: 1) what the charge should be and 2) whether an increased charge should apply to all ABS residual tranches.
- To the extent that regulators desire more timely reporting of this data, semi-annual or quarterly supplemental filings could be requested to be confidentially submitted to FAWG for any companies where more frequent monitoring is desired.

The CID and IID believe the process described here would adequately address the regulatory concerns around investments in residual tranches while the longer-term, data-driven, analytical process plays out. It would avoid any potential for unforeseen and unintended consequences of adopting a change without the usual amount of supporting analysis.

Thank you for your consideration,

RE: Structured securities – Proposed 45% interim RBC factor for residual tranches

Dear Mr. Barlow,

I understand the concerns as a regulator that some companies are investing more in the residual tranches and the RBC factor has not reflected the risk charge properly yet for the residual tranches. However, on behalf of CID I would like to propose a delay in implementing the proposed 45% interim RBC factor for residual tranches for the following reasons:

1. Most of us actuaries agree that a more detailed analysis is needed to meet our professional standards in communication per ASOP 41.
2. We have not completed the cost and benefit analysis for the proposed 45% interim RBC factor for residual tranches to clearly define the impacts to some companies, and the benefits in regulation to avoid any unexpected capital risk if incurred.
3. With many uncertainties in the current high inflation high interest rate environment and with a small probability of potential recession in the market in 2023, we should avoid any potential disruptions to the market.
4. We have discussed with companies; some of them in favor of the 45% interim proposal but some against. Although they have different views, they mostly agreed that they could deliver a better study to support their arguments within a year.

CID appreciates your attention to the issues raised in this letter and looks forward to discussing with you further.

Re: Residual Tranche Exposures

Dear Mr. Barlow:

The Iowa Insurance Division appreciates the opportunity to comment on the two items related to residual tranches in securitizations which are currently exposed for comment. The majority of our comments relate to the proposal for an interim increase in the risk-based capital (“RBC”) factor that applies for residual tranches from 30% to 45%, followed by an alternative interim proposal utilizing the sensitivity disclosures adopted during the April 20 meeting.

Background

Upon establishment of the Risk-Based Capital Investment Risk and Evaluation (“RBC IRE”) Working Group, the Financial Condition (E) Committee charged the working group with two initial mandates. The first was to proceed with Phase II of the bond factor project to develop new factors tailored specifically to structured securities / asset backed securities (“ABS”). The second was to review the factor for residual tranches in ABS structures specifically.

For the avoidance of doubt, **the Iowa Insurance Division continues to support both of these projects in the strongest of terms.** Without question, ABS now make up a significant portion of life insurers’ investment portfolios. The bond factors that are currently applied for ABS were derived from historical corporate bond data. Due to the nature by which cash flows are distributed through the capital stack of a structured asset, it would be reasonably expected that loss experience, particularly during tail stress scenarios, would be different between equivalently rated corporate bonds and ABS. This was acknowledged at the time the bond factors were reassessed as a necessary Phase II of the bond factor project. Through data-driven modeling, these differences can be quantified and tailored factors can be developed. The Working Group has kicked off efforts for such a project, leveraging assistance from the American Academy of Actuaries.

While the current bond factors are likely not sufficiently well fit-to-purpose, they are at least risk-sensitive based on the assigned NAIC Designation. The same cannot be said for the residual tranche of securitized assets. The factor that currently applies is a flat default charge of 30%, which was developed to apply to equity investments. This factor is neither risk-sensitive, nor was it developed based on any data that could reasonably be expected to correlate to the risks of residual tranches. As a result, it is likely that the current

factor for residual tranches is a particularly poor fit. Similar to the debt tranches, it is possible to develop more tailored factors through data-driven modeling, which is incorporated into the working plan of the project mentioned above.

Because of the particularly poor fit of the current capital framework as it applies to residual tranches, the Working Group has been considering an interim step to increase the RBC factor temporarily, while the longer-term analytical project plays out. This step is based on the strong intuition that the charge that applies should be higher based on review of two types of ABS: Collateralized Fund Obligations (“CFOs”) and Broadly-Syndicated Collateralized Loan Obligations (“BSL CLOs”). In these examples, a clear reduction in RBC is observable pre- and post-securitization.

Several unknowns have existed throughout Working Group discussions. These include 1) what factor should apply based on the risk of the investment, 2) whether the observations from the two ABS examples referenced above are representative of all ABS, and 3) whether insurers hold material amounts of residual tranches. With the exception of #3, the answers to these questions remain unknown.

Beginning with the filing of the 2022 Annual statement, residual tranches became separately reported for the first time. Upon NAIC staff’s review of the reported data as summarized in the public materials, Life insurers hold approximately \$4.7B of residual tranches as of 12/31/22, in aggregate. This makes up approximately 0.06% of the \$8.5T+ of life industry assets. Larger concentrations in individual insurers exist, with no single insurer investing greater than 3% of their total assets in residual tranches. From an RBC perspective, some high-level analysis of insurers with the largest holdings indicates no individual insurer would have an RBC ratio reduction of greater than 8% (e.g. 400% CAL RBC to 368% CAL RBC) using a 45% factor. Two insurers would have their RBC impacted by 4-8%, while four others would be impacted 1-3%. All others were under 1%.

The proposal to apply an interim charge applies to residual tranches of all types of ABS and is currently exposed using a 45% factor.

45% Interim Factor

The Iowa Insurance Division does not support an interim increase in the RBC charge at this time for the following reasons:

- It is our view that changes in capital requirements should be developed and supported through data-driven, analytical processes. This allows all stakeholders an opportunity to provide input into the methodology and assumptions used in developing capital requirements, and provides a process for surfacing the direct and indirect consequences of proposed changes.
- As this process is often long, it has the drawback of being slow to respond to pressing regulatory concerns. For this reason, rare circumstances may require temporary action without the usual amount of analytical support. While we believe that certain circumstances may warrant a temporary approach, we also believe such an approach should be limited to situations that present a material and pressing solvency concern. Absent these infrequent, urgent situations, we believe that changes in capital requirements should follow the usual analytical process.
- Based on our review of the current data as referenced above, we do not believe the level of investment in residual tranches constitutes a material and pressing solvency concern, currently or in the near-term future, in the aggregate or for individual insurers. No individual company would have

its RBC ratio in relation to Company Action Level meaningfully impacted by increasing the charge to 45%.

- Taking a temporary step in situations where there is no material and pressing solvency concern risks unforeseen consequences which have the potential to negatively impact financial markets, insurers, and policyholders.
- The proposal to apply an interim charge applies to residual tranches of all types of ABS. The view that a higher charge is warranted is primarily informed by a review of CFOs and BSL CLOs where a clear reduction in RBC is observable pre- and post-securitization. However, it remains unknown whether the same applies to all types of ABS, and many of the reported residual tranches appear to fall into this “other” category
- Various types of ABS have varying thicknesses or sizes of the residual tranche. A fixed charge will result in a higher RBC requirement for thicker tranches. Larger, thicker tranches are by definition less leveraged than smaller, thinner ones. While more analysis would be needed to understand the impact of this dynamic on the various types of ABS, it is possible that the RBC reduction observed for BSL CLOs would not be observed to the same extent in other types of ABS. If this is the case, increasing the factor to 45% for any such investments may be not be warranted.
- We believe alternative regulatory tools exist that would be effective in mitigating the risks that are of concern, without the potential for unintended consequences, as detailed in the next section.

Alternative Interim Step

As an alternative interim step to increasing the RBC charge for residual tranches at this time, we would propose the following:

- Set the sensitivity factor for residual tranches to 15%. This added to the existing 30% charge will allow regulators the ability to easily observe companies’ RBC position using a 45% factor.
- Request NAIC staff to generate a summary report that includes the RBC ratio pre- and post-sensitivity test.
- This report can be provided to both the RBC IRE Working Group and Financial Analysis Working Group (“FAWG”) for review in regulator-only session.
- Upon review of this report, FAWG can identify any individual companies that have higher concentration in residual tranches, and through coordination with the domiciliary state, request additional information from the insurer.
- This information could include, though is not limited to: 1) detail around the structure and underlying collateral, 2) summary of the insurer’s risk management processes and how it determines its risk appetite for its asset allocation to residual tranches, and 3) detail around how the company models its residual tranches and the projected impact to the company’s solvency in stress scenarios.
- Additionally, if upon review, the RBC IRE Working Group determines that the growth in holdings significantly alters the urgency of action, whether by organic growth or refinement to reporting guidance, it can revisit an interim step to increase the charge. The structure to accommodate such an increase has already been adopted.
- It is also possible that, at the time revisiting an interim charge may be warranted, work on the longer-term project will have provided better clarity around the remaining unknowns mentioned earlier in

this letter: 1) what the charge should be and 2) whether an increased charge should apply to all ABS residual tranches.

- To the extent that regulators desire more timely reporting of this data, semi-annual or quarterly supplemental filings could be requested to be confidentially submitted to FAWG for any companies where more frequent monitoring is desired.

Iowa believes the process described here would adequately address the regulatory concerns around investments in residual tranches while the longer-term, data-driven, analytical process plays out. It would avoid any potential for unforeseen and unintended consequences of adopting a change without the usual amount of supporting analysis.

Closing

The ongoing work to address the capital treatment of ABS is among the most important initiatives currently in process at the NAIC. Iowa offers its full support of these ongoing efforts, including the potential outcome of higher RBC factors for certain assets, when supported by deliberative, data-driven analysis.

Thank you for your consideration,

RE: Residual tranche base and sensitivity test factors

Dear Mr. Barlow,

The Texas Department of Insurance appreciates the opportunity to comment on the residual tranche factors currently exposed by the working group. Texas would like to offer a way forward regarding the residual tranche factors that we feel accomplishes the following:

- Addresses the direction from the Financial Condition (E) Committee to develop an RBC factor for residual tranches;
- Acknowledges that the factor established for traditional equity investments did not anticipate residual tranche investments, which have a different risk profile;
- Allows time for companies to address any investment changes needed in their asset mix; and
- Provides for the most efficient use of regulatory tools.

TDI supports a compromise that would set the residual tranche base factor at 30% and a sensitivity test factor at 15% for the 2023 risk-based capital formula. Then, in 2024 the base factor would move to 45% and the sensitivity test factor would drop to 0%.

This approach would give companies time to evaluate or divest assets in a manner that preserves surplus to meet future obligations. It would also provide additional information to the regulators in 2023 regarding the potential impact of each company's residual tranche holdings with the additional capital being required in 2024 so that there is a seamless consideration of this risk within the risk-focused solvency surveillance framework adopted for the U.S. state-based system of insurance regulation. This approach would also reduce any financial market disruption because the base rate is modified with more than a year's notice.

Phillip Barlow
June 9, 2023
Page 2

Most importantly, this approach will conclude the consideration of the interim solution for residual tranches so that the work on the charges for all tranches can start.

Thank you for consideration of our comments.

Sincerely,

Re: Global Atlantic Response to 2023-09-IRE Residual Factor

Dear Mr. Barlow:

Global Atlantic¹ appreciates another opportunity to comment on [2023-09-IRE Residual Factor \(“Interim Solution”\)](#), which proposes to set the Risk Based Capital (“RBC”) charge at 45% for all residual tranches on an interim basis.

We stand by the principles from our prior letter, but the purpose of this letter is to explain why the proposed 45% factor is not appropriate for many residual tranches. The Interim Solution with the proposed increase in capital charges for residual tranches was originally designed to address the perceived regulatory capital “arbitrage” associated with Broadly Syndicated Collateralized Loan Obligations (“BSL CLOs”). The concern expressed with insurance company ownership of BSL CLO residuals is that the weighted average capital charge of the underlying collateral is much higher than the blended capital charge of the rated notes. Thus, a higher charge on the residual tranche was proposed to close the gap between the capital charge on the underlying assets and the notes.

To date, the proponents for adoption of the Interim Solution have sought to conflate concerns around the perceived “capital arbitrage” in BSL CLOs with residuals related to other asset classes without any credible justification or analysis. These other asset classes include those that are a meaningful portion of insurance company assets, potentially more so than BSL CLOs, and for which there is no evidence of “arbitrage.”

We urge the RBCIRE to consider adoption of the Iowa proposal that would apply a sensitivity test to residual tranches, and targeted regulatory company review for 2023. This would allow regulators the time to determine, based on appropriate data and analysis, which asset classes should be in scope for an adjustment to capital charges, and what those new capital charges should be.

¹ Global Atlantic Financial Group is a leading insurance company meeting the retirement and life insurance needs of individuals and institutions. With a strong financial foundation and risk and investment management expertise, the company delivers tailored solutions to create more secure financial futures. The company’s performance has been driven by its culture and core values focused on integrity, teamwork, and the importance of building long-term client relationships. Global Atlantic is a majority-owned subsidiary of KKR, a leading global investment firm. Through its relationship, the company leverages KKR’s investment capabilities, scale, and access to capital markets to enhance the value it offers clients. KKR’s parent company is KKR & Co. Inc. (NYSE: KKR).

Data and analysis were provided to the RBCIRE in an attempt to demonstrate that a 45% capital charge on all residuals is appropriate. We believe that analysis is flawed. However, even if this analysis were free of criticism, conflating BSL CLOs with the high-quality assets that we highlighted in our prior letter (e.g., student loans to prime consumers and financing for core US commercial and industrial infrastructure, such as railcar leases) is inappropriate.

To demonstrate that point, we have provided two examples of transactions completed in the securitization market where we attempted to provide a capital charge on the underlying assets of (1) a securitization of railcar leases² and (2) a securitization of student loans³. In contrast to BSL collateral of a CLO, neither of these assets have a native capital charge. Yet, we have attempted to lay out a simplistic framework to demonstrate that assets outside of BSL CLOs do not present the same “arbitrage” concern that has been used to justify the 45% charge.

In the first example, we show that an insurer would hold more capital under a securitization of railcar leases than holding underlying railcar leases directly, based on the imputed ratings of the lessee.

Example 1: Securitization of railcar leases

Underlying Lessee Rating				Securitization Structure			
Lessee Rating (S&P)	Railcars	% of Total	c1	30% Residual Charge			
AAA	223	5.0%	0.2%	Class Rating	Rating	Balance	c1
AA-	1,099	24.5%	0.5%	Class A	A	302,560,000	0.8%
A+	124	2.8%	0.7%	Class B	BBB	20,720,000	1.5%
A	250	5.6%	1.0%	Class C	NR	89,382,752	30.0%
BBB+	538	12.0%	1.3%	Blended C1			7.17%
BBB	861	19.2%	1.5%				
BBB-	257	5.7%	2.2%				
BB	74	1.7%	6.0%				
B	100	2.2%	9.5%				
B-	10	0.2%	12.4%				
C+	100	2.2%	30.0%				
Not Rated	479	10.7%	30.0%				
Off Lease	246	5.5%	30.0%				
Blended C1			6.70%				

On the left of the chart, we show what the capital charge would be if each railcar in a sample securitization were capitalized based on the rating of the lessee. Note that the RBC framework does not permit an investor to use a lessee’s rating for capital purposes and, as noted previously, railcars have no native capital charge (which is what makes securitization necessary). Of course, a lessee’s rating is not the same as a rating on the underlying asset, but the ratings of relevant lessees do provide a measure for the level of risk inherent in a securitization of leased assets.

On the right of the chart, we show the resulting capital charges associated with a securitization of rail car leases, including the residual tranche. Both the ratings on the left and the ratings on the right were assigned by S&P. Note that the capital charge for the securitization structure (including the residual tranche) is already higher than the implied rating of the “underliers,” in this case developed using the rating of each lessee (obligor). This example does not appear to present an “arbitrage” opportunity for insurance company investors. However, it seems to be inappropriately subject to the Interim Solution.

² Sources: GBX Leasing 2022-1, LLC Series 2022-1 KBRA New Issue Report, February 9, 2022; Intex; GBX Leasing 2022-1, LLC Final Offering Circular, February 1, 2022

³ Sources: SMB Private Education Loan Trust 2023-A DBRS Morningstar Presale Report, March 2, 2023; Intex; SMB Private Education Loan Trust 2023-A Offering Memorandum, March 8, 2023

The second example to demonstrate this point is the private student loan market. While again there is no native capital charge for this asset, the closest proxy in the existing RBC framework for student loans issued to, or guaranteed by, prime (750+ FICO) borrowers could be the 0.68% charge for residential mortgage loans⁴. The below bullets attempt to calibrate the residential mortgage charge to student loans based on historical performance of worst performing crisis vintage collateral.

Example 2: Securitization of student loans

Asset Charge Proxy	Securitization Structure																															
<ul style="list-style-type: none"> - Peak cumulative defaults of prime student loan collateral reached 18.5% for the 2008 vintage which is slightly higher than peak prime mortgage defaults of 14.5% for the 2007⁵ vintage - Comparing mortgage loans and student loans, one must acknowledge that mortgage loans are secured by real estate and will have lower loss once a default occurs than a student loan - Cumulative loss for 2007 prime vintage mortgage loans was 7.9%⁵ - Assuming that there was no recovery on all defaulted student loans that would mean student loan losses were 18.5% - 2.3x higher than the losses of the worst performing mortgage vintage - Based on the above a proxy capital charge for student loans would be 1.59% which is 2.3x the mortgage loan charge of 0.68% 	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #1a3a7a; color: white;"> <th style="text-align: center;">Rating</th> <th style="text-align: center;">Tranche Size</th> <th style="text-align: center;">Residual at 30%</th> <th style="text-align: center;">Residual at 45%</th> </tr> </thead> <tbody> <tr style="border-top: 1px dashed black;"> <td style="text-align: center;">AAA</td> <td style="text-align: center;">82%</td> <td style="text-align: center;">0.16%</td> <td style="text-align: center;">0.16%</td> </tr> <tr style="border-top: 1px dashed black;"> <td style="text-align: center;">AA</td> <td style="text-align: center;">7%</td> <td style="text-align: center;">0.42%</td> <td style="text-align: center;">0.42%</td> </tr> <tr style="border-top: 1px dashed black;"> <td style="text-align: center;">Residual</td> <td style="text-align: center;">11%</td> <td style="text-align: center;">30.00%</td> <td style="text-align: center;">45.00%</td> </tr> <tr style="border-top: 1px dashed black;"> <td colspan="2">Blended c1 Charge</td> <td style="text-align: center;">3.46%</td> <td style="text-align: center;">5.11%</td> </tr> <tr style="border-top: 1px dashed black;"> <td colspan="2">Residential Mortgage Charge</td> <td style="text-align: center;">0.68%</td> <td style="text-align: center;">0.68%</td> </tr> <tr style="border-top: 1px dashed black;"> <td colspan="2">Multiple of Mortgage</td> <td style="text-align: center;">5.1x</td> <td style="text-align: center;">7.5x</td> </tr> </tbody> </table>				Rating	Tranche Size	Residual at 30%	Residual at 45%	AAA	82%	0.16%	0.16%	AA	7%	0.42%	0.42%	Residual	11%	30.00%	45.00%	Blended c1 Charge		3.46%	5.11%	Residential Mortgage Charge		0.68%	0.68%	Multiple of Mortgage		5.1x	7.5x
Rating	Tranche Size	Residual at 30%	Residual at 45%																													
AAA	82%	0.16%	0.16%																													
AA	7%	0.42%	0.42%																													
Residual	11%	30.00%	45.00%																													
Blended c1 Charge		3.46%	5.11%																													
Residential Mortgage Charge		0.68%	0.68%																													
Multiple of Mortgage		5.1x	7.5x																													

The table on the right again demonstrates that the securitization charge is higher than the underlying asset charge assuming the residual capital charge stays at 30%. Adopting the Interim Solution would exacerbate this impact even further. Given the comparable peak cumulative defaults between student loans and mortgage loans, it is difficult to support the premise that capital “arbitrage” exists and represents a material risk that requires the Interim Solution.

We recognize that residual tranches are complex and would require detailed modeling and analysis to arrive at a new capital framework. This is exactly why we believe rushing to impose an arbitrary capital charge derived without the benefit of any credible data, analysis, or field testing is inappropriate and will result in unintended consequences.

We reiterate our strong support of the Iowa proposal which would allow the NAIC to spend the appropriate time defining these assets and evaluating their risks. The sooner that proposal is adopted,

⁴ Under the RBC framework, a 0.68% charge applies to all residential mortgage loans, regardless of credit quality of the borrower.

⁵ Bank of America Securities, Sectors-Historical loss rates, March 2023

the sooner regulators partnering with industry can begin gathering the necessary data and performing the required analysis to ensure appropriate capital charges and “equal capital for equal risk”.

Thank you very much for your consideration and we look forward to participating on the NAIC’s June 14th RBCIRE call and working on this important issue going forward.

Sincerely,

A handwritten signature in cursive script that reads "Lauren Scott".

RE: IRE Residual Factor (the "Proposal")

Dear Mr. Barlow:

We write again to reiterate concerns regarding the Proposal and the need for an overarching system that leads to comprehensive and consistent capital calibration across all asset classes and investments.

We believe the NAIC should use the same careful and considered approach it has historically taken as it considers residuals for asset backed securities and the several parallel NAIC workstreams concerning structured securities. We are concerned that the NAIC has rapidly begun to make systemic changes to many aspects of the regulatory capital model without comprehensive empirical analyses to ensure statistical consistency across asset classes.

Consumers are facing a retirement income crisis with fewer available options. Honorably, the NAIC has been addressing this issue as a top priority. Inconsistent and punitive capital frameworks will necessarily impede insurers' offering of products that address this crisis, and may ultimately result in market disruptions similar to those that resulted from the European Union's adoption of Solvency II in 2016. To date, the NAIC has refrained from adopting similar measures to avoid these negative impacts.

We recommend that the Working Group and the NAIC more broadly step back and conduct a fair, data-driven, holistic review of the capital framework, including with respect to designations and capital charges, for all asset classes before making decisions that could influence competition and harm consumers, insurers, and investors.

Sincerely

A handwritten signature in black ink, appearing to read "D. Niemann", written over a light blue horizontal line.

Doug Niemann
Executive Vice President and Chief Risk Officer

Draft: 8/9/23

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group
Virtual Meeting
May 17, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met May 17, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Carrie Mears and Kevin Clark (IA); Vincent Tsang (IL); Roy Eft (IN); Fred Andersen (MN); William Leung and Debbie Doggett (MO); Lindsay Crawford (NE); Bill Carmello (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill (TX); Greg Chew and David Smith (VA); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Discussed 2022 Data Reported for Residual Tranches

Julie Gann (NAIC) presented an NAIC staff review of the information reported for residuals by life companies on Schedule BA for year-end 2022 (Attachment Six-B1). This review included the size of residuals held, residuals involving related parties, residuals as a percentage of surplus and invested assets, and the impact of a 45% risk-based capital (RBC) factor.

Barlow said when a new type of asset is added to an insurer's portfolio, they decide where they think it goes in the annual statement, and, based on that reporting and rating, if it has one, it gets an RBC factor. At some point, regulators recognize the new asset and may move it someplace else in the annual statement, which will generate a new RBC charge. None of that involves any analysis of the appropriate RBC charge. While it is true that neither 30% nor 45% factors for residuals have had a full RBC review, there is a difference in the factor that was generated solely by where the asset landed in the annual statement and the review that has been done of residual tranches, which has included: 1) understanding how the structured assets and residual tranches work; 2) seeing how structuring assets could cause a loss of two-thirds of the RBC charge without a change to the underlying risk; 3) the capital charge that bank regulators use, which is effectively 100%; and 4) the data just presented that shows, among other things, the growth of residual tranches and that no insurers would fall into an action level as a result. Barlow said that the analysis has led him to conclude that the 30% charge is not sufficient. He also said the Working Group also does not have the option of deferring this decision because a factor has to be adopted for the new bucket of residual tranches created.

2. Discussed Comment Letters on the Residual Factor and Sensitivity Test

The Working Group discussed the comment letters received on the residual tranche factor and the sensitivity test (Attachments Six-B2).

Tsang said that if it takes a long time to come up with a more thorough analysis for collateralized loan obligation (CLO) residual tranches, an interim solution is needed. Barlow said that what is being addressed are residual tranches generally rather than CLO residual tranches. Carmello said New York supports 45% and asked whether there is another NAIC group that looks at whether a given asset should be admitted because he questions whether this is appropriate for an insurance company.

Eft said he agreed that something needs to be done to address the disparity in the factor currently charged and the 45% that is being proposed. However, he supports the sensitivity factor as an interim solution rather than changing the RBC factor for these residual tranches because there are so many variations in the residual tranches.

Andersen said there is some variation within an asset class, which happens to all asset classes. He said data shows holdings of these assets have increased by a multiple of 10 over the past three years. His concern is that the sensitivity test alone is not going to change the trajectory at all. He said having liabilities supported by an under-capital-charged asset class does not seem to be the way to go.

Barlow said there is an exposure for 45%, and a call for the middle of June will be scheduled to get additional feedback before a final decision is to be made on a factor to be set. He said any new comments will be taken through June 9.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Committees/E Committee/CADTF/2023-2-Summer/RBCIREWG/RBC Investment Risk 05-17-23
Minutes.docx

MEMORANDUM

TO: Members of the RBC Investment Risk and Evaluation (E) Working Group
 FROM: NAIC Staff
 DATE: May 10, 2023
 RE: Residual Data – Life Companies

This memo has been developed to provide information on the reporting of residuals by life companies on Schedule BA for year-end 2022. Summaries of information are provided for the following aspects:

- Residual Acquisition Dates
- Residual Investments Involving Related Parties
- Size of Residuals Held by Reporting Entity
- Residuals as a Percentage of Surplus and Invested Assets
- Impact of 45% Residual Factor

Note: Investments identified as misreported as residuals have been removed from the data.

Residual Acquisition Dates

A vast majority in terms of count (67%) and BACV (80%) reported were acquired in the last three years.

Year Acquired	Count	Reported BACV	Percentage of Total BACV
2022	247	1,783,005,489	38%
2021	191	1,246,440,600	27%
2020	75	682,486,811	15%
2019	36	171,991,877	3.7%
2018	49	146,490,438	3.2%
2017	29	56,481,661	1.2%
2016	32	128,910,951	2.8%
2015	4	1,827,971	0.04%
2014	84	420,424,276	9.0%
2013	2	708,750	0.02%
2002 -2012	5	0	
No Date	11	10,675,518	0.23%
Total	762	4,649,444,342	

Notes:

- Amount shown is book adjusted carrying value (BACV) as of year-end 2022.
- The count includes all reported investments, including those with zero BACV.
- 76 of the 2014 residuals identified the same vendor.
- For the securities without a reported acquisition date, all had a zero BACV except 1.

Residual Investments Involving Related Parties:

As shown below, 56% of residuals involve related parties in some form. Most of these are from securitizations (or similar structures) with a small percentage of the underlying collateral in direct credit exposure. The full description is as follows:

3. *Securitization or other similar investment vehicles, such as mutual funds, limited partnerships, and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in direct credit exposure to related parties.*

This description generally means that a related party was involved in originating the investments. This could be another company within the group or other affiliate that serves as an asset manager.

As detailed in SSAP No. 25, paragraph 1, related party transactions can be subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair or reasonable to the reporting entity or its policyholders.

In addition to these concerns, specifically for investments that may be formed and held completely within a single group or by related parties, there may be no market validation on the investment in terms of price, fair value, fees, or overall structure. *(It is uncertain the extent these investments are 100% owned by related parties or have non-related party investors.)*

Related Party Code		Count	Reported BACV	Percentage of Total BACV
1	Direct credit exposure.	43	306,533,214	6.6%
2	Securitization with related party with 50% or more of the underlying collateral in direct credit exposure.	1	5,039,607	0.1%
3	Securitization with related party with less than 50% of the underlying collateral in direct credit exposure.	236	2,280,012,224	49%
4	Securitization where structure reflects an in-substance related party transaction, but does not involve a related party as sponsor, originator, manager, servicer, etc.	0		
5	Investment is identified as related party, but the role is a different arrangement from the prior options.	1	13,960,500	0.3%
6	Investment does not involve a related party.	478	2,035,403,345	44%
No Entry		3	8,495,452	0.2%
Total		762	4,649,444,342	

Size of Residual Investments Held by Each Reporting Entity:

The individual BACV for each reported residual investment also varies significantly. As detailed below, over 50% of reported residuals reflect less than \$2M BACV and over 80% are reported at less than \$10M.

122 investments were reported with a BACV greater than \$10M, and 9 investments were reported with a BACV of \$50M or greater.

BACV	Count	Running Total	Percentage of Total
0	60	60	7.87%
0 - \$500,000	161	221	29.00%
\$500K - \$1M	76	297	38.98%
\$1M - \$2M	115	412	54.07%
\$2M - \$3	61	473	62.07%
\$3M - \$5M	65	538	70.60%
\$5M - \$7M	48	586	76.90%
\$7M - \$10M	54	640	83.99%
\$10M - \$20M	51	691	90.68%
\$20M - \$30M	38	729	95.67%
\$30M - \$50M	24	753	98.82%
\$50M - \$70M	3	756	99.21%
\$70M - \$100M	4	760	99.74%
> \$100M	2	762	100%
Total	762		

Residuals as a Percentage of Surplus and Total Invested Assets

The amount of residuals held as a percentage of surplus varies significant by company:

Count	% of Surplus	Count	% of Invested Assets
1	Over 50%	7	1-3%
2	20-30%	4	0.5%-1%
7	10-20%	67	< 0.5%
2	5-10%		
32	1-5%		
34	< 1%		
78 Companies		78 Companies	

For the 12 companies with residuals over 5% of surplus, \$1.36 billion was noted to have underlying collateral of fixed income and \$1.69 billion was noted with 'other' underlying collateral.

Impact of 45% RBC Factor

Although company specific information cannot be shared publicly, estimated individual company calculations of RBC, after removing the impacts of the 30% factor on the risk component totals going into the covariance adjustment and replacing them with the results of a 45% factor, was noted to have the following impact to RBC results:

Number of Companies	Percentage Change*
3	4.0% - 8.0%
5	1.0% - 3.0%
8	0.50% - 1.0%
6	0.20% - 0.50%
6	0.10% - 0.20%
6	Less than 0.10%

** These numbers have been calculated by determining the difference between current and estimated RBC and then calculating the percentage of the change. For example, if a company had an 860% RBC and the application of the 45% factor within the estimation decreased RBC to 859%, this would represent a change of 1, and a 0.12% percentage change in the calculated RBC ratio.*

This exercise was completed for 34 of the reporting entities with residuals. The companies represent those with the largest amounts of residuals and those whose residual balances are a greater percentage of surplus and/or total invested assets. The analysis also made certain simplifying assumptions such as excluding any change to the impact of concentration or reinsurance included in the actual RBC result.

Although significant discussion has occurred regarding the impact of the factor increase, this information illustrates that the underlying concern of the factor increase is likely not the actual impact to RBC for most companies.

RE: Structured securities – Proposed 45% interim RBC factor for residual tranches

Dear Mr. Barlow,

I understand the concerns as a regulator that some companies are investing more in the residual tranches and the RBC factor has not reflected the risk charge properly yet for the residual tranches. However, on behalf of CID I would like to propose a delay in implementing the proposed 45% interim RBC factor for residual tranches for the following reasons:

1. Most of us actuaries agree that a more detailed analysis is needed to meet our professional standards in communication per ASOP 41.
2. We have not completed the cost and benefit analysis for the proposed 45% interim RBC factor for residual tranches to clearly define the impacts to some companies, and the benefits in regulation to avoid any unexpected capital risk if incurred.
3. With many uncertainties in the current high inflation high interest rate environment and with a small probability of potential recession in the market in 2023, we should avoid any potential disruptions to the market.
4. We have discussed with companies; some of them in favor of the 45% interim proposal but some against. Although they have different views, they mostly agreed that they could deliver a better study to support their arguments within a year.

CID appreciates your attention to the issues raised in this letter and looks forward to discussing with you further.

Re: Residual Tranche Exposures

Dear Mr. Barlow:

The Iowa Insurance Division appreciates the opportunity to comment on the two items related to residual tranches in securitizations which are currently exposed for comment. The majority of our comments relate to the proposal for an interim increase in the risk-based capital (“RBC”) factor that applies for residual tranches from 30% to 45%, followed by an alternative interim proposal utilizing the sensitivity disclosures adopted during the April 20 meeting.

Background

Upon establishment of the Risk-Based Capital Investment Risk and Evaluation (“RBC IRE”) Working Group, the Financial Condition (E) Committee charged the working group with two initial mandates. The first was to proceed with Phase II of the bond factor project to develop new factors tailored specifically to structured securities / asset backed securities (“ABS”). The second was to review the factor for residual tranches in ABS structures specifically.

For the avoidance of doubt, **the Iowa Insurance Division continues to support both of these projects in the strongest of terms.** Without question, ABS now make up a significant portion of life insurers’ investment portfolios. The bond factors that are currently applied for ABS were derived from historical corporate bond data. Due to the nature by which cash flows are distributed through the capital stack of a structured asset, it would be reasonably expected that loss experience, particularly during tail stress scenarios, would be different between equivalently rated corporate bonds and ABS. This was acknowledged at the time the bond factors were reassessed as a necessary Phase II of the bond factor project. Through data-driven modeling, these differences can be quantified and tailored factors can be developed. The Working Group has kicked off efforts for such a project, leveraging assistance from the American Academy of Actuaries.

While the current bond factors are likely not sufficiently well fit-to-purpose, they are at least risk-sensitive based on the assigned NAIC Designation. The same cannot be said for the residual tranche of securitized assets. The factor that currently applies is a flat default charge of 30%, which was developed to apply to equity investments. This factor is neither risk-sensitive, nor was it developed based on any data that could reasonably be expected to correlate to the risks of residual tranches. As a result, it is likely that the current

factor for residual tranches is a particularly poor fit. Similar to the debt tranches, it is possible to develop more tailored factors through data-driven modeling, which is incorporated into the working plan of the project mentioned above.

Because of the particularly poor fit of the current capital framework as it applies to residual tranches, the Working Group has been considering an interim step to increase the RBC factor temporarily, while the longer-term analytical project plays out. This step is based on the strong intuition that the charge that applies should be higher based on review of two types of ABS: Collateralized Fund Obligations (“CFOs”) and Broadly-Syndicated Collateralized Loan Obligations (“BSL CLOs”). In these examples, a clear reduction in RBC is observable pre- and post-securitization.

Several unknowns have existed throughout Working Group discussions. These include 1) what factor should apply based on the risk of the investment, 2) whether the observations from the two ABS examples referenced above are representative of all ABS, and 3) whether insurers hold material amounts of residual tranches. With the exception of #3, the answers to these questions remain unknown.

Beginning with the filing of the 2022 Annual statement, residual tranches became separately reported for the first time. Upon NAIC staff’s review of the reported data as summarized in the public materials, Life insurers hold approximately \$4.7B of residual tranches as of 12/31/22, in aggregate. This makes up approximately 0.06% of the \$8.5T+ of life industry assets. Larger concentrations in individual insurers exist, with no single insurer investing greater than 3% of their total assets in residual tranches. From an RBC perspective, some high-level analysis of insurers with the largest holdings indicates no individual insurer would have an RBC ratio reduction of greater than 8% (e.g. 400% CAL RBC to 368% CAL RBC) using a 45% factor. Two insurers would have their RBC impacted by 4-8%, while four others would be impacted 1-3%. All others were under 1%.

The proposal to apply an interim charge applies to residual tranches of all types of ABS and is currently exposed using a 45% factor.

45% Interim Factor

The Iowa Insurance Division does not support an interim increase in the RBC charge at this time for the following reasons:

- It is our view that changes in capital requirements should be developed and supported through data-driven, analytical processes. This allows all stakeholders an opportunity to provide input into the methodology and assumptions used in developing capital requirements, and provides a process for surfacing the direct and indirect consequences of proposed changes.
- As this process is often long, it has the drawback of being slow to respond to pressing regulatory concerns. For this reason, rare circumstances may require temporary action without the usual amount of analytical support. While we believe that certain circumstances may warrant a temporary approach, we also believe such an approach should be limited to situations that present a material and pressing solvency concern. Absent these infrequent, urgent situations, we believe that changes in capital requirements should follow the usual analytical process.
- Based on our review of the current data as referenced above, we do not believe the level of investment in residual tranches constitutes a material and pressing solvency concern, currently or in the near-term future, in the aggregate or for individual insurers. No individual company would have

its RBC ratio in relation to Company Action Level meaningfully impacted by increasing the charge to 45%.

- Taking a temporary step in situations where there is no material and pressing solvency concern risks unforeseen consequences which have the potential to negatively impact financial markets, insurers, and policyholders.
- The proposal to apply an interim charge applies to residual tranches of all types of ABS. The view that a higher charge is warranted is primarily informed by a review of CFOs and BSL CLOs where a clear reduction in RBC is observable pre- and post-securitization. However, it remains unknown whether the same applies to all types of ABS, and many of the reported residual tranches appear to fall into this “other” category
- Various types of ABS have varying thicknesses or sizes of the residual tranche. A fixed charge will result in a higher RBC requirement for thicker tranches. Larger, thicker tranches are by definition less leveraged than smaller, thinner ones. While more analysis would be needed to understand the impact of this dynamic on the various types of ABS, it is possible that the RBC reduction observed for BSL CLOs would not be observed to the same extent in other types of ABS. If this is the case, increasing the factor to 45% for any such investments may be not be warranted.
- We believe alternative regulatory tools exist that would be effective in mitigating the risks that are of concern, without the potential for unintended consequences, as detailed in the next section.

Alternative Interim Step

As an alternative interim step to increasing the RBC charge for residual tranches at this time, we would propose the following:

- Set the sensitivity factor for residual tranches to 15%. This added to the existing 30% charge will allow regulators the ability to easily observe companies’ RBC position using a 45% factor.
- Request NAIC staff to generate a summary report that includes the RBC ratio pre- and post-sensitivity test.
- This report can be provided to both the RBC IRE Working Group and Financial Analysis Working Group (“FAWG”) for review in regulator-only session.
- Upon review of this report, FAWG can identify any individual companies that have higher concentration in residual tranches, and through coordination with the domiciliary state, request additional information from the insurer.
- This information could include, though is not limited to: 1) detail around the structure and underlying collateral, 2) summary of the insurer’s risk management processes and how it determines its risk appetite for its asset allocation to residual tranches, and 3) detail around how the company models its residual tranches and the projected impact to the company’s solvency in stress scenarios.
- Additionally, if upon review, the RBC IRE Working Group determines that the growth in holdings significantly alters the urgency of action, whether by organic growth or refinement to reporting guidance, it can revisit an interim step to increase the charge. The structure to accommodate such an increase has already been adopted.
- It is also possible that, at the time revisiting an interim charge may be warranted, work on the longer-term project will have provided better clarity around the remaining unknowns mentioned earlier in

this letter: 1) what the charge should be and 2) whether an increased charge should apply to all ABS residual tranches.

- To the extent that regulators desire more timely reporting of this data, semi-annual or quarterly supplemental filings could be requested to be confidentially submitted to FAWG for any companies where more frequent monitoring is desired.

Iowa believes the process described here would adequately address the regulatory concerns around investments in residual tranches while the longer-term, data-driven, analytical process plays out. It would avoid any potential for unforeseen and unintended consequences of adopting a change without the usual amount of supporting analysis.

Closing

The ongoing work to address the capital treatment of ABS is among the most important initiatives currently in process at the NAIC. Iowa offers its full support of these ongoing efforts, including the potential outcome of higher RBC factors for certain assets, when supported by deliberative, data-driven analysis.

Thank you for your consideration,

Kevin Clark, Chief Accounting Specialist, Iowa Insurance Division

Re: Exposure 2023-09-IRE—Interim Residual Tranche C1 Factor

Dear Chair Barlow,

On behalf of the American Academy of Actuaries¹ C1 Work Group (C1WG), thank you for the opportunity to comment on the interim residual tranche C1 factor of 45% that was exposed at the April 20 meeting of RBCIRE WG.

We are continuing our work toward a rigorous approach for setting collateralized loan obligation (CLO) C1 factors, including for CLO residual tranches.

As outlined in our [December CLO report](#) to the RBCIRE WG, the 30% C1 factor that currently applies to residual tranches is based on an analysis of the S&P 500, which is unrelated to residual tranches of structured securities. The same is true for the exposed 45% C1 factor proposal.² This is the case not only for CLOs, but for effectively all residual tranches.

We understand that regulators have a concern regarding residual tranche C1 and have exposed a new residual factor to be applied on an interim basis.

We agree with interested parties² that equities and residual tranches have materially different risk profiles. For this reason, we believe equities and residual tranches should not automatically share the same C1 factor.

Any factor that is adopted on an interim basis will be the product of regulator judgment, which we respect is at the discretion of regulators. We encourage a directed effort to substitute appropriate analytical basis for regulator discretion to establish statistically justified capital requirements for structured securities.

We look forward to supporting regulators in the broader objective of developing an appropriate basis for structured security C1 factors.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

² A 45% factor was first introduced in a Feb. 3 interested party letter by a coalition of life insurers. An April 12 letter by the same group of interested parties elaborated further on their support for a factor equal to at least 45%. The Feb. 3 letter justifies the level of 45% by applying a 1.5-beta adjustment to the current equity factor of 30%. The April 12 letter supplements this with historical loss data on the collateral of structured securities compared against typical sizes for residual tranches.

Sincerely,

Stephen Smith

Re: 2023-09 IRE Residual Factor Exposure

Dear Mr. Barlow:

Thank you for the opportunity to provide these initial comments on the proposed residual factor (the “factor”) that was exposed on April 20, 2023.

ACLI continues to support regulators’ efforts to assess the potential need for determining capital charges associated with securitized investments that better reflect the actual risk of the various tranches. ACLI appreciates the Working Group’s recent adoption of a structure for a single interim factor approach, rather than a three-bucket approach.

While we understand some regulators’ desire to develop an interim solution with some level of expediency, we do have concerns that 45% was recommended without the typical level of rigor provided when making RBC changes.

ACLI members have a variety of views on the proposed factor of 45%. Some ACLI members suggest that the factor chosen should not be more conservative than complete non-admittance of the asset for the average industry participant, and likely less so, given the risk premium already contained in policy reserves. For example, using 2021 aggregated life RBC data, ACLI calculated that on average, due to covariance, approximately 57% of a C1cs factor ends up impacting the RBC requirement. Thus, a 45% factor would result in an ultimate after-tax RBC charge of 20.26%. This seems to suggest that for a company with a CAL RBC of 486%, a 45% factor is the rough

Re: 2023-10-IRE Sensitivity Test Factor

Dear Mr. Barlow:

The American Council of Life Insurers (“ACLI”) appreciates the opportunity to provide comments on the NAIC’s exposure of the sensitivity test factor. ACLI continues to think that sensitivity testing for residual tranches could be an important tool for regulators. The importance varies depending on the decision for the interim solution for residual tranches.

Originally, ACLI suggested a 10% factor as it will provide regulators with a 10% increase as well as a 10% reduction for an insurer’s sensitivity testing with the current 30% residual tranche factor. (We note that the factor on the RBC sensitivity testing is additive, e.g., a 30% residual tranche factor would have the .1 (10%) “added” for sensitivity testing.)

Knowing that there is current exposure and discussion to potentially change the interim factor for residual tranches, if the residual tranche factor is increased, ACLI does not see the need for a sensitivity factor at this time; however, the exhibit could include a factor in the future as the work on asset-backed securities continues and this sensitivity testing can be used for future calculations and future impact assessments for the permanent solution (i.e., the results of decisions made once modeling is complete). If regulators decide to continue with the current year-end 2022 factor, we suggest the 10% factor, such that sensitivity testing could occur.

RE: Structured securities – Proposed 45% interim RBC factor for residual tranches

Dear Mr. Barlow,

On behalf of the undersigned life insurance companies (“the companies”), we are writing to express our continued support for an interim RBC factor for the residual tranches of structured securities. The process for consideration of interim RBC charges has been transparent, thorough, and provided adequate time for interested parties to review and respond to these issues over the last year.¹ Accordingly, we strongly feel that the RBC Investment Risk & Evaluation (E) Working Group (“RBC IRE”) should adopt the proposed single, interim RBC factor of 45% without delay.

Adoption of a higher interim RBC factor for securitized residuals represents an important first step in reducing capital arbitrage—as identified and discussed in the May 25, 2022 IAO Issue Paper (the “IAO Issue Paper”) on the “Risk Assessment of Structured Securities – CLOs”—between securitized tranches of structured securities and the underlying collateral. To that end, based on the results of the last several years of SVO-led CLO stress testing, the IAO Issue Paper suggested the adoption of new NAIC Designation Categories (i.e., 6.A, 6.B and 6.C) with recommended RBC factors of 30%, 75% and 100% respectively, to address tail risk in structured finance tranches and any unintended arbitrage opportunities. The August 20, 2022 referral from the Valuation of Securities Task Force (“VoSTF”) to the Capital Adequacy Task Force (“CATF”) and RBC IRE endorsed these recommendations as an appropriate interim step while the SVO began modeling CLOs to help determine potential loss risk under stressed scenarios.

In our previous letters to the Working Group on February 3, 2023 and April 12, 2023 (attached), the companies provided support for a single 45% interim RBC charge for the residual tranches of structured securities as a data driven compromise in lieu of the SVO’s proposal, which we believe achieves the same goals of better addressing underlying risk and appropriately narrowing the capital arbitrage gap. The companies’ February 3 letter also noted that sensitivity testing can provide regulators with valuable information, but sensitivity testing alone will not provide data on what appropriate RBC factors should be nor will it meet the regulators’ goals of reducing RBC arbitrage while

¹ The Securities Valuation Office (SVO) recommendation surrounding three suggested interim RBC charges for the NAIC 6 designation (30%, 75%, and 100%) was initially included in the IAO “Issue Paper on the Risk Assessment of Structured Securities – CLOs,” which was released on May 25, 2022 and exposed as part of the VoSTF’s June 9, 2022 meeting activities. The RBC IRE exposed the SVO interim RBC proposal on December 14, 2022, the proposed single interim RBC charge framework on March 23, 2023, and the companies’ suggested 45% interim RBC charge on April 20, 2023. The companies’ suggested 45% interim RBC charge was initially proposed in the February 27, 2023 Working Group materials.

more refined charges are developed. As such, immediate adoption of the interim 45% RBC factor is warranted regardless of whether regulators decide to employ sensitivity testing.

The companies further note that without a measurable increase in the RBC factor for residual tranches there is mathematically no logical way to narrow the capital arbitrage gap. That is, in order to have the RBC of the assets supporting a CLO (“Collateral RBC”) be comparable to the RBC of the combined CLO bonds (“Blended RBC”), mathematically we need to have a greater than 30% RBC assigned to the residual tranche of the CLO in order to reasonably match the risk of each CLO tranche and its RBC. If the RBC factor for residual tranches were to remain at the current 30% level, then in order to eliminate the opportunities for capital arbitrage the BB, BBB and A-rated tranches would also need to receive a 30% RBC factor (NAIC 6 designation) and the AA-rated tranche would need a 16.9% factor (NAIC 5A designation):

Current CLO RBC Arbitrage				Solving Arbitrage without Interim Factor			
Tranche	% of CLO	Designation	RBC	Tranche	% of CLO	Designation	RBC
AAA	63%	1A	0.158%	AAA	63%	1A	0.158%
AA	12%	1C	0.419%	AA	12%	5A	16.942%
A	6%	1F	0.816%	A	6%	6	30%
BBB	6%	2B	1.523%	BBB	6%	6	30%
BB	5%	3B	4.537%	BB	5%	6	30%
Residual	8%	6	30%	Residual	8%	6	30%
Blended RBC [A]			2.917%	Blended RBC [A]			9.633%
Collateral RBC [B]			9.535%	Collateral RBC [B]			9.535%
Arbitrage [B-A]			6.618%	Arbitrage [B-A]			-0.098%

Sources, Barclays, MIM.

As demonstrated above, attempting to solve the capital arbitrage issue without changing the RBC factor for the residual tranche is not logical: the tranches are sequentially subordinated and RBC factors should be proportional to the varying degrees of risk. In the table above the RBC factor for multiple tranches senior to the residual tranche would need to share the same flat 30% level instead of a declining level of RBC as would be expected given their declining levels of risk. The only logical, mathematically feasible way to reduce the capital arbitrage problem is to significantly increase the RBC factor for the residual tranche. Furthermore, this change aligns with an RBC framework that was derived in a **data-driven fashion** by the NAIC in developing of factors for corporate credits – which serve as the collateral and sole source of repayment in CLOs.

The interim factor solution addresses a present and *growing* risk. In this current environment of economic uncertainty, it is critical for regulators to enact an interim RBC factor that better protects insurers (and by extension policyholders) from potential losses associated with the riskiest tranches of structured securities as soon as possible. As discussed in our February 17, 2023 letter to VoSTF, we note that, in particular, U.S. life insurer CLO investments have grown 20% per year over the last decade, whereas General Account assets have only grown 5% per year. We expect to see additional growth in CLOs as a percentage of general account assets this year. The companies also believe the application of an interim factor will provide regulators with additional information for facilitating the long-term

solution to address the remaining tranches (which will remain at the C-1 bond factor levels in the interim) and provide more granular capital considerations for the residual and mezzanine tranches.

The companies agree with regulators that the process of determining an interim RBC charge should be both transparent and data driven. To that end, we provided analysis to support an interim RBC charge of at least 45% for the residual tranches in our April 12, 2023 letter to the Working Group. In that letter, we noted that when historical collateral losses are compared to typical residual tranche thickness, it demonstrates a likely potential residual tranche loss in excess of 45% in stress events. In 2020, some CLO residuals saw losses exceeding 60%, far greater than the losses experienced by public equities. We would also note the SVO is currently running the first “proof of concept” tests of the CLO modeling methodology with six different types of actual CLOs based on the stress levels it uses for its own stress tests. We would encourage the Working Group to review the results of those findings to help its final decisions on the appropriate level of the interim RBC charge.

Additionally, ACLI’s May 12 letter identifies CATF procedures for proposed amendments to RBC blanks and instructions as requiring an impact analysis for any factor change. We believe that our data can help to inform that impact analysis; further, it is the companies’ understanding that such analysis does not need to be completed before approval of any factor and therefore does not present a hurdle to continued expedient action on this issue.

The companies are aware of concerns that an interim 45% RBC factor may be inappropriate for the residual tranches of some structured securities due to differing underlying risks and/or thicknesses. We believe concerns about any such outliers are best addressed through increased transparency as we work toward a permanent solution. For this to be a data driven process, those who believe there are “low-risk” residual tranches should identify the securities in question and provide clear justification for different treatment.

Some parties have also raised concerns that a 45% RBC charge held at 300%+ redundancy will result in a capital holding of over 100% or an incentive to non-admit the asset. However, this is an overly simplistic conclusion, as RBC charges are pre-diversification with other risks (C-2 through C-3) and it also ignores other negative effects of non-admitting an asset.² More importantly, regulatory capital requirements are intended to identify weakly capitalized companies, not to incentivize investment choices under “normal” circumstances.

Finally, the current 30% RBC factor does not meet regulators’ commitment to a transparent and data driven interim charge. The existing RBC treatment of the residual tranche is based arbitrarily on public equity experience. However, public equities and the residual tranche of structured securities have materially different risk profiles. We have not seen **any** data that justifies maintaining a 30% RBC factor for the residual tranche.

The companies strongly believe the proposed single interim RBC factor of 45% should be adopted as exposed. As discussed in our April 12 letter, such a charge is consistent with the existing high-beta equity RBC charge and a directionally appropriate outcome demonstrated by the data.

² Regulators should consider if it is appropriate to assume diversification benefit with credit for a residual tranche when its underlying collateral is comprised of credit assets.

Respectfully Submitted,

RE: Exposure 2023-09-IRE Residual Factor

Dear Mr. Barlow:

Thank you for the opportunity to comment on the April 20, 2023, proposal by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group (the "Working Group") to establish an interim 45% Risk-Based Capital ("RBC") charge for "residual tranches or interests" of all asset-backed securities (the "RBC Proposal").

Overview

We have listed below several concerns in this letter followed by a detailed discussion of each concern and concluding remarks.

1. There is no evidence of an urgent need for the NAIC to depart from its required diligent, fact-based, and thoughtful process that it uses to establish C1 risk-based factors. Overall RBC levels among life insurers have been very robust and relatively stable in recent years. In the one specific type of asset-backed security (ABS) that the NAIC has been closely examining for years, namely collateralized loan obligations (CLOs), the NAIC has consistently concluded that there is no material risk to the life insurance industry at large.
2. The proposed level of the charge has been chosen arbitrarily based on scant, misleading, and superficial analysis that contradicts recent studies by the NAIC, the American Academy of Actuaries ("AAA"), academics and market analysts.
3. The proposal reflects a lack of understanding of the inherent risk-mitigation structure of ABS investments and instead focuses on one aspect of them without any analysis of its potential impact on the industry as a whole.
4. ABS risk must be comprehensively studied as CLOs have been able to outperform and experience lower losses than comparable corporate bonds with the same risk rating.
5. Regulators must undertake their own neutral study of risks associated with ABS residuals before unintentionally creating artificial barriers and unintentionally choosing sides in a competitive battle.
6. Regulators have significant supervisory tools today to address concerns regarding specific ABS investments without adopting a punitive RBC charge and causing significant disruption to the larger ABS market.
7. The proposed 45% RBC charge is not within the Financial Condition (E) Committee's charge to the Working Group.

8. The charge would likely be more than “Interim” and would bias the longer-term analysis that should properly be completed before establishing the appropriate charge for ABS.

Before the NAIC imposes the highest capital charge on any asset in its entire history, we urge the NAIC to follow its typical thorough and rigorous analytical process.

As a standard setting body, the NAIC should be cautious about advancing a proposal supported by one segment of the industry in an April 12, 2023, letter that may cause competitive distortions not reflective of risk. The RBC Proposal may tilt competition in favor of insurers that have direct equity exposure versus ABS residuals exposure and does not reflect a thoughtful analysis of whether ABS residuals are safer or not than direct equity exposure.

Finally, as an alternative to an interim charge, we urge the NAIC to form a working group and retain neutral experts to study the structural and risk mitigation features of ABS and report back to the Working Group. We commit to efficiently and effectively working with the NAIC to analyze the various types of ABS, their loss experience, and risk mitigation features to determine appropriate capital charges.

Detailed Discussion

- 1. There is no evidence of a need for urgent action as RBC levels are robust and all analysis to date indicates no material risks to the life insurance industry.**

A recent analysis of YE2022 life insurer’s regulatory filings found the industry to be very well capitalized, with the average RBC level for mutual insurance companies at 514%, PE-owned insurers at 465%, publicly owned insurers at 415%, and reinsurers at 298%.¹

(This section intentionally left blank)

¹ Colin Devine, “U.S. Life Insurer RBC Trends Confirm Industry Capital Levels Remain Strong,” the Alliance for Lifetime Income's Retirement Income Institute, April 16, 2023, <https://www.linkedin.com/pulse/us-life-insurer-rbc-trends-suggest-industry-capital-levels-devine/>

This annual study confirmed that life insurance RBC levels have remained relatively stable over the last few years. Also, a recent Fitch analysis found that the insurance sector has only “modest exposure” to the recent bank failures and that its “liability profiles support stability.”²

Further, ABS do not present a material risk to life insurers. Indeed, the RBC Proposal is completely contrary to data and risk analysis by the NAIC which is made available to regulators through the NAIC. Over the past five years, regulators have received the following studies by or through the NAIC with specific findings regarding the limited risk in ABS investments.

- The NAIC has been stress testing CLOs since 2019 and has repeatedly found that they do **not** pose a material risk. In the most recent January 5, 2023, NAIC Capital Markets Bureau Special Report, it was determined that, “Based on the NAIC’s stress test results, U.S. insurer investments in CLOs remain an insignificant risk.”³

- A December 2022 American Academy of Actuaries (“AAA”) C1 Working Group presentation to the NAIC said that CLOs do not present a material risk to the industry: “In the C1WG’s view, CLOs do not present a material risk to the aggregate solvency of the life insurance industry currently.”⁴
- In 2019, the NAIC’s Capital Markets Bureau published reports on Consumer ABS⁵ and Auto ABS⁶, which again did not identify any urgent need for regulatory action.

The AAA presentation to the Working Group in December 2022 indicated that a limited number of life insurance companies held CLO interests, and even fewer held CLO residuals. The study recommended the AAA’s C-1 Working Group should review CLO and ABS interests further, especially since ABS instruments are being identified in more detail starting in the 2022 Annual Financial Statement Blanks. We see no reason the NAIC should not wait for the results of the AAA’s additional analytical work and instead accelerate for adoption the single largest capital charge in the history of the RBC system based on anecdotal background.

2. The proposed charge level of 45% was established arbitrarily and without analytical support

The RBC Proposal’s 45% factor appears to have been developed through a short, less than two-page letter from a limited number of insurers rather than the objective study, modeling and analysis that is the usual and customary practice for the Working Group and other Capital Adequacy (E) Task Force (“CATF”) working groups. Prior to exposing the RBC Proposals, the NAIC and the Working Group were not presented with any data, studies, or other evidence that demonstrated that 45% percent is the appropriate charge on ABS residual investments.

A much more thorough analysis of CLOs and their equity performance was conducted by Larry Cordell, an economist at the Federal Reserve Bank of Philadelphia, Professor Michael Roberts of the Wharton School at the University of Pennsylvania, and Michael Schwert.⁷ That study compared the risk-adjusted performance of CLO equity to the S&P 500 from 1997 to 2016 and found that CLO equity outperformed common stock.⁸ Importantly, one of the key findings of this study was the relative stability of CLO equity during two periods of significant market instability, including the 2008 financial crisis, which led the

⁸ *Id.* at 2. "Our central finding is that CLO equity tranches provide statistically and economically significant abnormal returns, or "alpha," against a variety of public benchmarks" during the sample period of 1997 to 2016.

⁹ *Id.* at 20.

¹⁰ *Id.* at 20.

and embedded options to reinvest principal proceeds.”¹¹ This analysis directly addresses the question of whether CLO equity is more or less risky than common stock, whereas the April 12 letter only has data on total CLO losses without any precise information about actual CLO equity performance. An article about CLOs issued by Western Asset found similar results for both the 2008 and 2020 economic downturns, finding that, based on median CLO equity cash flow returns, “CLOs that were originated before the last two recessions produced better returns for shareholders than in other years.”¹²

¹² Jeff Helsing, Can CLO Equity Outperform if the Economy Tips into Recession?, September 26, 2022, [Can CLO Equity Outperform If the Economy Tips Into Recession? | Western Asset](#) (See Appendix for a full copy of this article.)

The additional analysis of CLO equity in Exhibit 3 below looks at data from 2016 to 2023 to corroborate the Journal of Finance study’s conclusion about the overall outperformance of CLO equity compared to the 50th-tile of Nasdaq stock.

Source: Bloomberg

The chart in Exhibit 3 provides a better perspective on the two CLO equity ETFs, (ECC and OXLC), than the April 12 letter as it only provides data from the year 2020, which is very unique given that was the year of the government-mandated shutdowns due to COVID-19. This longer time frame provides a better sense of how CLO equity outperforms the 25th and 50th %-tile of the NASDAQ index components as of YE 2016 and tracks the performance of such stocks from YE 2016 to YE 2022, showing that CLO equity is less volatile than single-name stocks.

Note that the ECC and OXLC performance here is shown net of fees. Actual performance of the underlying CLOs would have been even higher.

Use of anecdotal evidence supplied by a segment of the industry, rather than credible data, study, or evaluation to support the RBC Proposal is contrary to the foundational principles established by regulators regarding RBC charges. The *NAIC Life & Fraternal RBC Instructions* (the “Instructions”) state that:

“the [Capital Adequacy Task Force (CATF)] and its RBC working groups are charged with evaluating refinements to the existing NAIC RBC formula. . . .The CADTF will consider different methods of determining whether a particular risk should be added as a new risk to be studied and selected for a change to the applicable RBC formula, but due consideration will be given to the materiality of the

risk to the industry, as well as the very specific purpose of the RBC formula to develop regulatory threshold capital levels.¹³

3. The proposed 45% charge does not take into account the risk mitigation features of ABS or the variety of ABS collateral types

ABS investments were originally designed with risk mitigation features in mind without any consideration of insurance capital charges. Because of their risk mitigation features and structural protections, insurers have invested in various types of ABS for decades without material issue. As noted above, the NAIC has been monitoring and studying the insurance industry's exposure to ABS investments for several years, and particularly closely since 2019. Not once in all these many years did the NAIC find a material risk to the insurance industry related to ABS residual tranches.

Two recent publications—Guggenheim's most recent annual report on the ABCs of ABS¹⁴ and the Western Asset Management article on CLO equity¹⁵—identify the following risk mitigation and structural features of ABS:

1. Over-collateralization
2. Bankruptcy remoteness
3. Diversification of underlying borrowers/payers
4. Amortization ahead of expected maturity
5. Duration matching between the investment assets and financing liabilities
6. Covenants not based on the market price
7. Active management, which in some cases can include buying in or out of the underlying, or in other cases where the investment manager can reinvest or refinance depending on market conditions and individual component performance.

The Western Asset article notes that CLO equity originated prior to the 2008 financial crisis and the 2020 Covid recession outperformed both credit and stocks, which it attributes to several of the structural features of CLOs.¹⁶ Given these findings, we think the NAIC needs to closely study these structural features of ABS before imposing an interim charge.

We also think the NAIC should consider the types of underlying collateral for the primary types of ABS, such as auto and student loans, before imposing such a high interim charge. For instance, in the NAIC's capital charges for bonds, the portfolio adjustment factor recognizes that diversification of a bond portfolio can reduce risk. In a similar manner, some ABS have thousands of underlying loans. In addition, over-collateralization, duration matching, and especially active management can significantly reduce risk for the entire security at issue and should be fully analyzed before determining an

¹³ NAIC Life & Fraternal RBC Instructions at iii, ¶¶16-17.

¹⁶ *Id*

appropriate charge. Taken as a whole, these ABS features if sufficient analysis concludes higher charges are appropriate for residual tranches, it may also conclude that lower charges are appropriate for higher tranches given they have a much better track record of fewer losses than stand-alone bonds.

As illustrated in the exhibit below, ABS are specifically designed to include risk mitigation features such as over-collateralization, excess spread protection, and refinancing optionality. These features combine to create a risk profile significantly different from any one of the individual components—including the residual tranche. Isolating the residual tranche ignores the inherent economics of this ABS structure as a whole.

CLO Structure / Structural Protection

4. ABS risk must be comprehensively studied as CLOs have been able to outperform and experience lower losses than comparable corporate bonds with the same risk rating.

As demonstrated in the chart below, the improved performance covers all rating categories.

(This section intentionally left blank)

CLO OVERVIEW - STRUCTURE AND RISK PROFILE

- CLO tranches benefit from (i) overcollateralization, (ii) excess spread protection and (iii) refinancing optionality, which again, differentiates CLO structures from holding individual loans
- CLO fixed income tranches have experienced fewer losses historically than corporate bonds of comparable ratings, an asset class for which the SVO accepts NRSRO ratings
- Over the long term, CLO debt has experienced lower losses than corporate bonds while the residual equity has delivered consistent cash on cash returns and return on capital, even during the GFC

Historical CLO Losses vs Corporate Credit		
Rating / Tranche	Historical Corp Credit Losses ⁽¹⁾	Historical CLO Losses ⁽²⁾
AAA	0.00%	0.00%
AA	0.03%	0.00%
A	0.04%	0.01%
BBB	0.11%	0.09%
BB	0.42%	0.35%

Sources: S&P Global Default, Transition, and Recovery: 2020 Annual Global Leveraged Loan CLO Default and Rating Transition Study. Moody's Investor Service
 (1) S&P Default and Rating Transition Study. Corp credit losses assume average default rate from 1998 to 2020, and 35% recovery rate based on historical market performance
 (2) Moody's US CLO impairment rates since 1998 through 2020

Developing appropriate structured security RBC factors must be carefully developed to avoid unintended consequences. The debt and the residual risk analysis must be studied comprehensively and together. The appropriate solution is for the NAIC to take the requisite time to understand the types of ABS, their relevant risk mitigation features, and the overall resulting risk before deciding what charge to impose on all tranches, including the residual tranches—this would better reflect the actual economic risks and historical loss experience, and avoid creating market and competitive distortions.

5. Regulators must undertake their own neutral study of risks associated with ABS residuals before unintentionally creating artificial barriers and unintentionally choosing sides in a competitive battle.

Members of our coalition have talked with several regulators regarding the performance and risk history of ABS residuals. In many of these conversations, we have heard that concerns regarding arbitrage in ABS structures are primarily based on concerns from certain market participants unrelated to quantifiable investment risks. We believe that this observation may be correct.

Over the past decade, insurance company ownership and investments have witnessed new market entrants who bring new business models and competition to the market. In its September 27, 2022, Special Report, AM Best states “PE insurers tend to offer more attractive rates on their products than other insurers, in the belief that through their investment expertise, they can earn a higher yield on investments and still make an adequate spread. This competitive pricing puts more pressure on

traditional insurer that lack the same scale and find growing the business more difficult because of their more conservative crediting rates.”¹⁷ These new entrants are required to operate their businesses in the same regulatory environment (*e.g. AG 53 regarding Higher Yielding Assets in Asset Adequacy Testing*) as existing businesses. Everyone is operating under the same rules in a changing business environment and innovation that benefits consumers should be supported by NAIC rulemaking.

In a recent comment letter, one group of companies has suggested that the NAIC disregard well-accepted and tested historical data to support a 50% increase in the capital charge based on a misleading analysis. The letter makes the incongruous suggestion that CLO data from the Great Financial Crisis of 2008 is insufficient to support stress testing of data. Data from the Great Financial Crisis is widely accepted to represent an atypical and extreme stress scenario for the industry, and the studies cited above provide concrete evidence of the resilience of ABS equity even during periods of financial stress.

The NAIC must avoid unintended consequences and undertake its own neutral study of risks associated with ABS residuals. For instance, direct investments in bank loans are explicitly authorized in SSAP 26R and thus qualify for a C1 bond charge. However, in most cases the underlying collateral for CLOs are bank loans. Should the NAIC move forward with a 45% charge on CLO residuals, the effect would be a higher charge based on the form rather than the substance and would ignore the ABS structural mechanisms that make them safer than direct ownership. Additionally, a 45% charge would effectively be worse than making ABS residuals a non-admitted asset.

6. Regulators have significant supervisory tools today to address concerns regarding specific ABS investments without adopting a punitive RBC charge and causing significant disruption to the larger ABS market.

State Insurance regulators have significant authority to address any concerns they may have regarding a company’s solvency, as well as any individual investments that may be of concern to them. They utilize a variety of solvency testing and analysis tools to monitor insurer solvency and can demand a company take corrective action to address any anomaly or concern associated with the company’s financial condition. Sensitivity testing can be used to review equity tranche holdings and take supervisory action if needed, without punitively and arbitrarily assessing increase charges on all ABS and all insurers, which is unjustified.

Per NAIC accreditation standards, domiciliary regulators can call a targeted examination of an insurance company at any time, as can foreign state regulators working through the Financial Analysis (E) Working Group (“FAWG”).¹⁸ If regulators have concerns regarding the solvency of any insurance company holding

¹⁷ “Best’s Special Report, Private Equity Continues to Make Inroads in the Life/Annuity Segment,” AM Best, September 27, 2022

¹⁸ See NAIC Model Law 380, “On Examinations,” <https://content.naic.org/sites/default/files/MO390.pdf> and Model Law 385, “Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition,” <https://content.naic.org/sites/default/files/MO385.pdf>

ABS residuals or the ratings on individual investments held by insurers, regulators can demand additional information regarding the investment.

Considering the significant regulatory authority and the historic risk analysis on ABS investments described above, the suggested basis for the proposed RBC charge as being necessary to limit “arbitrage” occurring with ABS instruments is specious. During the debate leading up to the RBC Proposal, concerns regarding “arbitrage” were raised by NAIC staff in the Securities Valuation Office (“SVO”) which is not responsible for addressing capital charges. Even as regulators responded to these concerns raised by the SVO, no specific examples have been provided to the industry or the NAIC or exposed publicly to demonstrate how existing regulatory tools are insufficient to address these arbitrage concerns. Even if isolated examples regarding “arbitrage” do exist, a punitive and excessive RBC charge is a blunt instrument to address the concern. Instead, state insurance regulators should apply their existing and substantial regulatory authority to address and correct isolated examples of questionable or inappropriately classified assets.

7. The proposed 45% is not within the Financial Condition (E) Committee’s charge to the Working Group

In prior meetings, the RBC Proposal has been labeled as being directed by the Financial Condition (E) Committee (the “E Committee”). The RBC Proposal, however, does not align with the standing E Committee instructions. The E Committee established the Working Group with the authority to establish a proposed RBC charge with suggested assistance from an outside advisor. The specific proposal of adopting an increased factor for the residual tranches has been developed within the Working Group, whose charge to the Working Group was more general. The 2023 RBCIRE Working Agenda, disclosed as part of the Fall 2022 meeting materials for the RBCIRE lists item 12 as

“Evaluate the appropriate RBC treatment of Asset-Backed Securities (ABS), including Collateralized Loan Obligations (CLO), collateralized fund obligations (CFOs), or other similar securities carrying similar types of tail risk (Complex Assets)”

as a request from E Committee, SAPWG, and VOSTF added 1/12/2022. The comment states

“Per the request of E committee comments were solicited asking if these types of assets should be considered a part of the RBC framework.”

A change in the factor was never suggested or adopted formally by the E Committee.¹⁹ At no time did the E Committee approve of the Working Group developing a proposed RBC charge based on anecdotal evidence rather than on professionally developed data or a professional study. There was no direction from the E Committee exposed to public comment to impose an interim charge

¹⁹ Minutes of Financial (E) Committee Meeting, April 5, 2022, https://content.naic.org/sites/default/files/national_meeting/Financial%20Condition%20%28E%29%20Committee%20Agenda%204-5-22_2.pdf

8. The charge would likely be more than “Interim” and would bias the longer-term analysis that should properly be completed before establishing the appropriate charge for ABS.

The Working Group has suggested that the RBC Proposals would be implemented on an interim basis. However, the RBC Proposal makes no reference to whether the Proposed Charge is being recommended on an interim or permanent basis. In Working Group discussions, the “interim” nature of the charge seems to be the justification for adopting the Proposed Charge without any supporting data. The RBC Proposal does not include a workplan or reference how or when the proposed 45% charge would be studied, modeled, or evaluated in the future to finalize the recommendation. Based on historical precedent, this so-called “interim” charge could last years or decades. For example, the NAIC established a 15% and 23% charge, respectively, on real estate equity charges for wholly owned and joint venture equity charges. Only after over a decade of industry discourse, roughly from 2012 to 2021, did the NAIC update those charges.

Concluding Remarks

Market participants operate under the understanding that the regulatory environment will reflect true risk and historical experience. Imposing a 45% charge on ABS residuals with no evidence of significant investment or solvency risk runs counter to the integrity of the RBC system and fair competition. We respectfully request that regulators withdraw the RBC Proposal until a thorough analysis by a respected third party can be conducted to better inform sound regulatory decision-making and avoid significant unintended consequences and competitive distortions. In the meantime, we encourage regulators to use the robust tools at their disposal to address any concerns with specific insurance company investments.

We appreciate the opportunity to provide these comments. We stand ready to engage with regulators and neutral experts in continued study and evaluation of ABS residuals, and we request that the Working Group table the RBC Proposals pending the completion of a thorough study and evaluation.

Kind Regards,

Can CLO Equity Outperform If the Economy Tips Into Recession?

September 26, 2022

By Jeff Helsing

Our base case is not for a US recession in 2022, but the risks of a mild recession are increasing as higher borrowing costs and tighter credit conditions will likely weigh on investment and consumption.

If the recession is mild, where unemployment doesn't rise substantially and defaults don't pick up materially, then credit spreads may not rise to levels seen in previous recessions as in 2009 or 2020. If the recession is worse, then equity multiples will likely decline further and defaults will likely rise above historical averages—both will negatively impact the returns in equity and credit markets.

With yields around 9% in below-investment-grade-credit markets, credit is looking attractive compared to equity in a slower-growth or mild-recession scenario. However, the equity of collateralized loan obligations (CLOs) may perform even better than both of those sectors if market pricing resembles those of a recession similar to the last two.

What may be counterintuitive when reviewing business cycles and the impact they have on market returns is that the equity of an actively managed CLO—which invests in bank loans—may outperform both credit and stocks should the US tip into recession. With history providing some guidance, it's worth noting that CLOs that were originated before the last two recessions produced better returns for shareholders than in other years.

Exhibit 1: CLOs—Pre Global Financial Crisis and 2020 Covid Recession Vintages Outperformed

Source: JPMorgan. Cash flow returns are annualized for the median actively managed CLO equity invested in syndicated bank loans. “Average” represents 2002 through 2021. As of 30 Jun 22. Select the image to expand the view.

Heads I Win, Tails You Lose

Why would the equity of a CLO perform better if we head into a recession? For background, a CLO issues debt and equity securities, then the proceeds are invested in a diversified portfolio of syndicated bank loans. The bank loans provide income to pay interest and other expenses, then the remainder is distributed to equity holders. [CLOs feature structural advantages](#) that other investment vehicles don’t. They include two main sources of optionality for a CLO manager that typically enhance returns for the CLO equity holder: the option to refinance in bull markets and to reinvest in bear markets. This is akin to flipping a coin to guess the business cycle, but where both investment outcomes are positive.

When bank loan prices are falling (i.e., credit spreads are widening)—as they did during the global financial crisis and Covid-induced lockdown—a conservatively positioned CLO manager will reinvest their portfolio into higher-yielding securities. Reinvesting as spreads widen is why some CLO managers structure their portfolios conservatively at origination, as they will have several years to wait for an opportunity to swap into higher-yielding securities. On the other hand, when bank loan prices are rising (i.e., credit spreads are tightening), a CLO manager can often reduce their borrowing costs by refinancing their debt securities.

Capitalizing on the option to reinvest in bearish markets or refinance in bullish markets are two ways to increase the returns to CLO equity holders. The median manager that issued CLOs in 2006/2007 as well as in 2019/2020 locked in financing before volatility rose, then swapped into higher-yielding securities as prices declined in the respective recessions—subsequently increasing the returns to equity holders.

What Reduces CLO Equity Returns?

There are several other advantages to investing in CLOs that have historically supported attractive equity returns relative to other asset classes. These include covenants that aim to reduce default risk and, importantly, the covenants aren’t based on market prices.

One of the most relevant risks to CLO equity returns are defaults in the underlying bank loans. As the bank loan cash flow (i.e., the CLO’s assets) are reduced when defaults happen, there is typically less available cash to distribute to equity holders, so avoiding defaults through active selection and credit research is the goal for managers.

Also, it is worth noting that covenants in CLOs typically limit the concentration in CCC and lower-rated issues. The lower-rated and riskier company limits are typically capped at 7.5% of a CLO’s holdings. For comparison, CCCs and lower-rated issues exceeded 15% in broad loan indices in 2009 (according to the Morningstar LSTA US Leveraged Loan Index). The covenants that limit CCC and lower-rated issues’ risk may help explain why defaults in CLOs were about 50% lower than defaults in the overall bank loan market for the last two recessions.

Exhibit 2: CLO Defaults Historically Are About Half as Frequent as in the Bank Loan Market

Source: BAML, Intex, LCD. As 31 Aug 22. Select the image to expand the view.

Benefits of the CLO Structure

"The investor's chief problem—and even his worst enemy—is likely to be himself." ~Benjamin Graham

While CLO equity may outperform other asset classes, the outsized returns accrued to investors that commit to holding the securities until the CLO matures or is called may be even greater than the historical average if the market tilts into recession.

As mentioned earlier, there are several benefits to the CLO structure that have historically led to outperformance versus other asset classes. The three main structural factors that support CLO equity outperformance are: optionality to reinvest or refinance in bear and bull markets, robust match between investment assets and financing liabilities, and covenants that aren't based on market prices.

Based on the analysis of Cordell, Roberts and Schwert in 2021, the option to reinvest alone may explain about a third of CLO equity's historical outperformance versus other sectors, especially for vintages before recessions. The next two structural advantages are also meaningful to CLO equity returns as they reduce the behavior risk of both the investor and the manager. In other words, these advantages help reduce the risk of the investor or manager becoming their own enemy. For example, liability financing is essentially to the term of the investment so the CLO doesn't subject itself to the possibility of the lender changing terms when volatility rises. Also, as the capital is committed for the life of the investment, and covenants in the CLO aren't based on market prices, the CLO manager can then focus on investment fundamentals rather than being influenced or coerced into selling assets in the portfolio due to market-price fluctuations.

All of these factors may help explain why CLO equity has historically performed better than other sectors, and even more so following the last two recessions.

May 12, 2023

Mr. Philip Barlow, Chair
Risk-Based Capital Investment Risk and Evaluation (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Re: Global Atlantic Response to 2023-09-IRE Residual Factor

Dear Mr. Barlow:

Global Atlantic¹ appreciates the opportunity to comment on [2023-09-IRE Residual Factor \(“Interim Solution”\)](#) which proposes to set the Risk Based Capital (“RBC”) charge at 45% for all residual tranches on an interim basis. Our comments reflect the following three principles:

- I. The RBC factors for all assets should be based on a rigorous, data-driven analysis that incorporates both historical performances, where applicable, and the relevant substantive structural features of any investment.
- II. The RBC framework should be derived using consistent criteria across assets and risk profiles - a concept we refer to as “equal capital for equal risk.”
- III. The process employed to reach important decisions, such as the Interim Solution, should follow the traditional, transparent, and deliberative process that has been a hallmark of insurance regulation under the NAIC.

We would like to highlight that the principles above do not appear to have been followed regarding the evaluation of the Interim Solution for Residual Tranches. In conclusion, we offer an alternative to the current proposal.

I. Rigorous Work, Grounded in Data and Analytics, Not Undertaken:

The timeline to implement new RBC charges effective for all residual tranches for year-end 2023 did not allow for the quantitative rigor normally deployed prior to making changes to

¹ Global Atlantic Financial Group is a leading insurance company meeting the retirement and life insurance needs of individuals and institutions. With a strong financial foundation and risk and investment management expertise, the company delivers tailored solutions to create more secure financial futures. The company's performance has been driven by its culture and core values focused on integrity, teamwork, and the importance of building long-term client relationships. Global Atlantic is a majority-owned subsidiary of KKR, a leading global investment firm. Through its relationship, the company leverages KKR's investment capabilities, scale, and access to capital markets to enhance the value it offers clients. KKR's parent company is KKR & Co. Inc. (NYSE: KKR).

RBC. The precedential nature of setting capital charges without any analysis and data should be of concern to both the industry and regulators alike.

This approach deviates sharply from previous changes to RBC factors, such as the C-1 corporate bond factors, C-1 factor for Real Estate, C-2 Longevity factor, and C-3 factor for interest rate risk, all of which involved field testing and were supported by strong data and analytics. We are not aware of any analysis, field testing or data used to develop the “45%” factor proposed in the Interim Solution. It would be the 1) highest capital charge applied to any eligible asset; 2) would apply to a wide range of assets given the lack of clarity provided as to the intended scope of the Interim Solution, and; 3) does not appear to be linked either to an analysis of historical losses in respect of the relevant assets or to the specific risk-mitigating features that may apply to certain of the potentially in-scope investments.

The most comparable capital charge currently available is the capital charge applicable to public equities. While it was developed using a seemingly sensible approach for evaluating historical data with respect to the asset class, industry participants have also raised the possibility that given the data backing this analysis is largely out of date, it could be revisited for all equity-type investments. *See Exhibit 1* for more detail. The more recent development of updated C-1 bond factors also followed a data-gathering exercise and an analysis of the impact on insurance companies. This approach lent transparency, credibility, and predictability to the process.

As a result of the decision to forego any of the usual analysis associated with potential capital charge changes, the impact on the industry is very unclear. In 2023, for the first time, regulators received enhanced transparency related to investments in residual tranches. Insurance companies were required to report these tranches in a separate category of Schedule BA as of December 31, 2022. Unfortunately, it appears that industry participants applied these instructions with a wide range of interpretations. The total amount of residual tranches disclosed was ~\$5bn. This is less than 1.5% of the assets on Schedule BA and 0.10% of the assets on life insurance company balance sheets. Some carriers chose to disclose any tranche that could be considered a “first loss” tranche across asset classes. Some, it appears, interpreted the guidance much more narrowly, and scoped far fewer assets into the disclosure. If, indeed, only those assets disclosed in early 2023 are those that concern regulators, one would conclude that these assets do not present a pressing solvency issue for the industry.

This discrepancy in disclosure is just one of the many issues that a rigorous, data-driven field-testing approach would resolve. The stated practice of the Capital Adequacy Task Force is that “an impact analysis will be required for any factor change”. To date, to our knowledge, no studies or analysis have been performed.

II. “Equal Capital for Equal Risk” Not Upheld:

The goal of “equal capital for equal risk” is fundamental to regulating the solvency of insurance companies and protecting policy holders against risk of loss in stress scenarios. Consequently, the capital required for a given investment, or other activity, should be proportional to the risk posed by that activity.

Given the broad scope and lack of specificity as to what constitutes a “residual tranche,” this goal is unlikely to be achieved even among investments that could plausibly be considered “residual tranches.” It is even less likely to be achieved across the other categories of Schedule BA assets.

“Residual tranches” could be backed by cashflows from a wide variety of investments in everything from broadly syndicated non-investment grade rated loans to seemingly non-controversial investments in student loans, prime consumer loans, and investments backed by aircraft, railcars, infrastructure, and other “hard assets.”

Also, investments that would generally be perceived as posing far greater risk of loss, including venture capital funds, private equity funds, and hedge funds, would all now receive a lower capital charge than these “residuals.” Note that even CLO “residuals” are, by definition, structurally senior to the equity-type investments referenced in this paragraph. See *Exhibit 2* for an illustration. In the private equity example, the loans held in the CLOs are often to the very same companies as are held in the private equity fund, creating the paradoxical outcome that the first dollar of loss will appear, by necessity, in the investment receiving the lower capital charge.

If the appropriate field testing and data analysis is undertaken, the return profile of the investment would need to be considered. Given the features of structured products transactions as well as the ability to underwrite the pool of assets, residual tranches can provide cashflow day one de-risking an investment in its earliest years. *Exhibit 3* illustrates that CLO equity/residuals provide return on investment much earlier than other Schedule BA investments that are subject to a 30% charge. In fact, CLO residuals, on average, have returned 50% of their initial investments in ~3 years while, historically, other equity-like BA investments have taken ~4-6 years to return the same 50%.

At the very least, applying a 45% factor only to a portion of the assets on Schedule BA simply favors certain types of investments – and thus certain insurance companies for reasons not based on differences in the relative risk of the assets in question. This has implications for competition, asset selection, and risk management, with the potential for unintended consequences.

III. Transparent Process Not Followed:

The process to impose an interim capital charge has been a departure from the normal methodical NAIC process. A recent public call of the RBC IRE Working Group was held on April 20 and a discussion of the capital charge for residual tranches was not on the agenda. Nevertheless, this group voted to expose the 45% factor for a short 21-day comment period.

There could be significant unintended consequences arising from a capital charge factor that has not been well vetted. The increased charge might deter insurance companies from holding certain lower-risk residuals associated with stable fixed income assets, and instead steering them toward other investments with equity-like properties that could pose greater risk. This is one implication of failing to adhere to “equal capital for equal risk.”

Another implication may be a push to invest in similar risk, but under different structures. Consider that certain assets that have been presented to the NAIC as representative of residual performance, such as the CLO ETF cited, as underperforming relative to the S&P during a 1-year period of the COVID lockdown, would still require only a 30% charge as it is structured as an equity investment not as a direct investment in residual tranches.

We are also concerned that assets that have exhibited very strong performance over many cycles, including student loans, prime consumer loans, and investments backed by aircraft, railcars, infrastructure, and other “hard assets,” will become more difficult for insurance companies to hold, even though they do not pose the risk of “RBC arbitrage.” The investment structures associated with these assets are not intended to reduce capital requirements. The underlying individual assets are too small and too numerous to be rated individually, and there is no “prescribed RBC treatment for the assets (as there may be for commercial mortgage or residential mortgage loans). Instead, the aggregation of many underlying student loans, for example, into a large pool that can be rated pursuant to a securitization is the conventional way for an insurance company to participate in a valuable asset class.

Because no field testing has been done, it is also not clear what effect these changes will have on the industry. They may be applied inconsistently across jurisdictions, and even across companies within jurisdictions.

Proposed Alternative Interim Solution:

We recognize and understand that the types of investments that insurance companies make evolve over time, as an inevitable consequence of participating in dynamic financial markets. In serving our policyholders, it is incumbent upon us to identify and capitalize investments in a manner that enables us to offer security to our customers. We support the mission of regulators to ensure a stable industry that can reliably fulfill its promises through cycles.

We continue to recommend sensitivity testing as a first step in providing regulators with more clarity into the residual tranches that companies hold and those assets’ performance in stress situations. We do not believe the ownership of residual tranches poses an imminent solvency threat to the industry, and we are not aware of any information that suggests otherwise.

We support the development of a clear definition of a “residual tranche” such that a complete population can be analyzed. Once a population is defined, the appropriate framework and modeling can be identified. This should include both a historical analysis of realized losses and consideration of any structural features present in particular investments that may influence risk. The industry-wide impact of any proposed change should be evaluated, along with the risk of unintended consequences.

We believe it is critical for any proposal to be developed in a manner that supports the principle of “equal capital for equal risk.” Only once the analysis above has been completed will it be possible to determine whether the proposed capital charges are commensurate with the risk of the in-scope investments.

Conducting an appropriately transparent and deliberative process is critical. However, we acknowledge that some regulators desire to move quickly before sufficient analysis is completed. While we would argue that the low prevalence of residual tranches across the industry permits an appropriately rigorous and data-driven analysis, we expect that with clear goals, the benefit of experience gained from the recent C-1 bond project, and a group of incentivized participants, the process for developing a robust proposal can be expedited.

Thank you for the opportunity to comment on 2023-09-IRE Residual Factor and we look forward to working with you to study residual tranche risk and provide data which promotes a thoughtful development of appropriate capital charges. For all the reasons stated in this letter, we respectfully request that the current charge of 30% remains in effect until further analysis is completed.

Sincerely,

A handwritten signature in cursive script that reads "Lauren Scott".

RE: Working Group Exposure – IRE Residual Interim Factor

Dear Mr. Barlow:

The RBC Investment Risk & Evaluation (E) Working Group has exposed a proposed interim 0.45 base RBC factor in the life RBC formula for residual tranches of CLOs and other ABS. The proposal did not include a quantitative analysis.

As you know, this process is undertaken at a time when retirement needs in our country are tremendous, while retirees are experiencing declining guaranteed income choices. With these structural demographics, our industry should be rapidly expanding and attracting capital from other parts of the financial system. However, over the past decade, U.S. life and annuity insurers have returned capital equal to 89% of today's market capitalization through share buybacks and dividends, a trend directly contrary to consumer needs. Fundamentally, this trend is due to the complex and often inconsistent frameworks that govern insurers, effectively constituting prohibitive obstacles for many investors. Capital framework inconsistencies are a key underpinning to equity capital frustrations. While RBC has performed well in ensuring life companies' solvency since the 1990s, an acknowledgement of its limitations is a first step in improving outcomes for policyholders. Under that principle, we write to express our concern with the process and express no opinion on the ultimate level of the factor. We are not active residual investors.

As we and others have written in the past, the data demonstrates that investment grade structured securities present safer credit risk than investment grade corporate bonds.¹ After more than two decades of data—decades that included major economic disruptions including the dotcom bubble, the financial crisis, and COVID—that conclusion is robust. It is no mark against the reliability of this data that it does not stretch back as long as the data concerning corporate bonds. Nonetheless, on the basis of stated concerns regarding arbitrage in residual tranches, we are observing a rapid structural shift in a significant but incomplete portion of the regulatory framework for insurer investments through concurrent changes to NAIC designations, RBC capital factors, regulatory processes and the role and oversight of NRSROs.

¹ E.g., Athene "[Understanding Structured Credit: Perspectives for Insurance Capital Requirement](#)", December 2, 2022; Professor Robert Jarrow and Donald R. van Deventer, "[A Bottom-up, Reduced Form Credit Risk Model Approach for the Determination of Collateralized Loan Obligation Capital](#)", January 2023.

We believe these processes, including any on an expedited basis, should be data-driven and result in asset capital factors that align with risk across all asset classes in a comprehensive ‘equal capital for equal risk’ framework. The fact that RBC is a “blunt instrument” does not mitigate the management incentives created by the RBC model, which of course involves broad regulatory intervention rights upon control-level triggers. Our comments below identify our concerns with the increasingly inconsistent regulatory framework, as well as third party information that influenced the proposed factor.

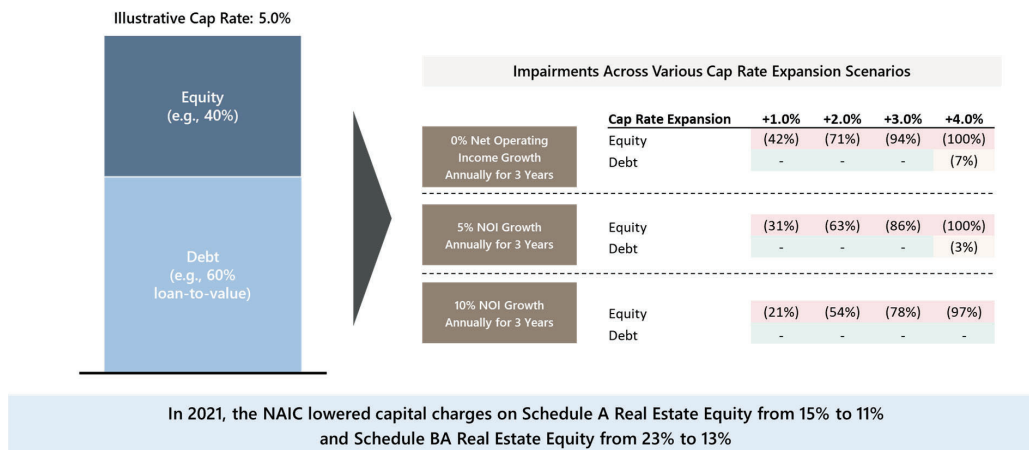

Equal Capital for Equal Risk

We highlight two examples below that illustrate our concerns across asset classes.

Real Estate Equity

As you probably are aware, heightened risks have developed in commercial real estate markets. We believe that equity investments in certain subsectors of commercial real estate represent significant capital risks to insurers. Real estate valuations are often measured through ‘capitalization rates’ (or “cap rates”), which represent a net operating income-to-value ratio for a given property.² As illustrated below, in the current market, where cap rates are rising and there is little or negative net operating income growth, a significant quantum of commercial real estate equity holdings may be impaired when debt on these properties matures.

There Has Been a Massive Change in the Real Estate Markets

In light of these metrics, it is difficult to discern why, in 2021 the NAIC lowered capital factors on Schedule A Real Estate Equity from 15% to 11% and Schedule BA Real Estate Equity from 23% to 13%. We are unaware of any consistent, data-driven approach that would lower capital

² Cap rate is a measure of yield earned on a commercial real estate property (calculated by dividing NOI by property value). See [Athene Perspectives on Real Estate: Cap Rates, Explained | JPMorgan Chase](#).

requirements for real estate equity in 2021, and raise capital requirements for residual tranches of CLOs today.

Moreover, the charges for commercial real estate are inherently procyclical, reaching a minimum at the market peak. The capital requirements for commercial real estate vary based on prescribed metrics, including debt service coverage ratio (“DSCR”).³ The DSCR is measured using three-year trailing income on the properties, resulting in capital requirements that are lowest at the peak of the market. This feature is, in general, avoided by other rulemaking bodies in the United States and globally.⁴

Corporate Equity

Since the time of the initial “no-arbitrage” dialogue in 2022, some have considered why the principle has not been applied to corporate securities. Like structured credit, corporations issue different tranches of securities to investors with different risk tolerances – senior secured debt, senior unsecured debt, junior debt, preferreds, and equity. The insurance capital framework for corporate bonds uses ratings to determine the appropriate capital charges for the debt and preferred tranches, and then assigns a flat “equity” charge for all corporate equity. But, similar to the different types of collateral pools for structured credit (with auto loans, airplane leases, and consumer loans as collateral), there are many different types of companies with different underlying risk profiles (for example, car manufacturers and technology companies with negative free cashflow).

The chart below illustrates how the equity risk in five different companies held by U.S. insurers can differ materially despite carrying the same capital charge. A true application of the “no-arbitrage” principle would also apply differentiated equity capital charges on corporate securities based on the underlying business model, financial profile, and risks of the corporations that issued those securities. This principle should also be examined and applied across every class of equity and debt within the RBC framework.

³ DSCR measures the amount of income generated in excess of interest payment obligations.

⁴ See for example, [Federal Reserve Board votes to affirm the Countercyclical Capital Buffer \(CCyB\)](#), or [The capital buffers in Basel III - Executive Summary](#).

A Comparison of Similarly Rated Companies⁵

					
Market Cap (\$bn)	\$457.7	\$260.1	\$327.8	\$47.2	\$7.4
Price Change Since 52 Wk High	(7)%	(11)%	(5)%	(14)%	(85)%
Ratings (S&P/Moody's/Fitch)	AAA/Aaa/NA	A+/A1/A	AA-/Aa2/NA	BBB-/Baa3/BBB-	NR
2021 EBITDA (\$bn)	\$32.6	\$12.8	\$33.4	\$6.4	(\$0.3)
Net Debt / EBITDA	0.6x	2.7x	0.9x	3.0x	NM
Implied LTV ¹	7%	15%	10%	32%	21%
Commentary	Better credit rating than the U.S. government	Strong post-pandemic recovery, with revenue up 4% from pre-pandemic levels	S&P downgraded in 2021. Idiosyncratic exposure to climate change and oil prices	Downgraded to high yield in 2020	Affirm is down ~85% from its 52-week high and has negative EBITDA

We highlight these examples to illustrate our concerns with consistency across asset classes. We are not advocating for increasing or decreasing capital requirements, only that the NAIC and stakeholders should take the time to develop overarching principles that are designed to achieve appropriate, data-driven charges and “equal capital for equal risk”. Without such a comprehensive framework, distortions will endure, and there will continue to be industry risk-taking incentives divorced from true economic risk.

Third Party Data

We also write regarding certain data that has been cited in support of the interim factor from one group of companies (“Equitable Letter”, dated April 12, 2023).

A 25 Year Time Period Is More Conservative

The Equitable Letter suggested that securitization markets have a history that is “less robust than the 40-year history used to develop the corporate bond factors.” Using a 25-year estimation period to determine capital charges may actually be more conservative than using longer periods given that substantial market disruptions (e.g., dot com downturn, the great financial crisis, COVID and the recent banking crisis). In the spirit of equal capital for equal risk, we utilized the C-1 framework to analyze the 95% two-year capital factor on the S&P 500 over different windows ranging from 20 to 70 years. Perhaps not surprisingly, the highest implied capital factor resulted when the most recent 25-year window was used rather than a longer 40- or 70-year window.

Changes in the Financial Markets Since 2008

The Equitable Letter included structured credit issued before and after the financial crisis. As discussed in our whitepaper on structured credit (available [here](#)), terms in the structured credit market have changed materially since the financial crisis. The letter does not account for these

⁵ Market Data as of May 19th, 2022. ‘Implied LTV’ represents an illustrative concept for comparison to securitization calculated as Debt / (Debt plus Market Capitalization). Source: company filings, Bloomberg.

changes, and included losses for a securitization market that is non-existent today (Pre-GFC Non-Agency RMBS). Diagram 1 set forth in the Appendix, using CMBS as an example, illustrates that structured products issued post-crisis (2.0) experienced significantly lower cumulative losses from structural protections⁶ than pre-crisis (1.0).

Residual Tranches Earn Income, Which Can Offset Losses

The letter’s graph “Historical Collateral Losses vs. Residual Tranche Size” fails to acknowledge a fundamental aspect of the investment proposition of residual tranches by overlooking income in the form of excess spread. The income or excess spread received operates to shield losses and is highly relevant to an accurate presentation of the concept in that graph.

If Calibrated Within the C-1 Framework, the Analysis Would Imply a Different Factor Than 45%

The Equitable Letter points to Oxford Lane Capital Corp. (OXLC) and Eagle Point Credit Company (ECC) as proxies for the underlying residuals and the 60% price loss over the first few months of 2020 as evidence of the need for a higher capital charge. However, this is divorced from the C-1 Framework, capturing risks not intended to be covered by C-1 – in particular, liquidity. In addition, the chart uses a maximum loss over a 1-year calculation window, rather than the 95% worst 2-year return that was used to calibrate the 30% equity factor, and excludes other items (e.g., income offsets) that are contemplated within the framework.⁷

In the interest of highlighting the materiality of different features within the C-1 framework, we performed a simple exercise of comparing the 60% loss with the 95% 2-year loss and then considered the impact of dividend income resulting in a 35% factor, which would need to be further adjusted for other aspects of the C-1 framework, such as taxes.⁸ The results of this analysis appear in the Appendix, Diagram 2. We are not proposing such a factor; rather we are highlighting the need for a thoughtful process when estimating the charges.

* * * * *

⁶ See Athene “[Understanding Structured Credit: Perspectives for Insurance Capital Requirement](#)”, p. 17.

⁷ These companies are incrementally leveraged with preferred shares, and shareholders bear significant fees. Therefore, performance of the common stock is not equal to the performance of underlying residuals. It would be expected that the stock would perform adversely relative to the underlying residuals given the presence of these additional factors in declining conditions.

⁸ These numbers represent the weighted average across ECC and OXLC with the ECC time series starting on 10/9/2014 and OXLC on 1/202011.

As noted, we express no view on the proposed 0.45 interim factor other than our significant concerns with the process and the absence of a comprehensive framework. We believe any review, even an expedited one, should be data-driven and result in asset capital factors that align to an 'equal capital for equal risk' framework across asset classes. We appreciate the opportunity to comment.

Sincerely

RE: Exposure 2023-09-IRE Residual Factor

Dear Mr. Barlow:

Thank you for the opportunity to comment on the April 20, 2023, proposal by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group (the "Working Group") to establish an interim 45% Risk-Based Capital ("RBC") charge for "residual tranches or interests" of all asset-backed securities. We very much appreciate the hard work that the members of the Working Group, NAIC staff and others have dedicated to studying this issue. However, we believe that implementing the proposed interim charge for 2023 would amount to a "rush to judgment" given that there is still much work and analysis that needs to be done to meet the NAIC's high standards of scrutiny that characterizes its prior work on issues like this one.

For the reasons described below we respectfully submit that the performance data for CLOs does not support a higher risk charge.

- The performance of CLOs demonstrates that they **do not** present the same investment risk as the underlying investments comprising CLOs.
 - CLO performance since 1999 demonstrates that they have had lower default rates than other loans or high yield investments, including during the financial crisis of 2008-2009.
 - CLOs' historically low default rates compare favorably overall to corporate debt.
 - The break-even underlying default rate for CLO equity is equivalent to BB corporate rating.
 - CLO equity investments have held up well in adverse stress scenarios; median equity IRRs for redeemed deals issued 2005-2007 were higher than 20% and for 2020 deals, higher than 40%.
- CLO performance data does not support higher capital charges, including on the equity tranche of CLOs. Yet, the proposed 45% interim charge would cause insurers to carry a disproportionate amount of capital (i.e., a 50% increase) relative to the risk of these investments.

For the foregoing reasons, we urge the Working Group to reject the proposed 45% interim charge. There is no data supporting that specific charge. On the other hand, the performance data for CLOs indicate that the current risk charge is appropriate. We would be happy to provide you and the Working Group with the data referenced in our letter. Given the volume of comments we expect you to receive, we wanted this letter to be as concise as possible.

Sincerely,

Nassau Financial Group

May 12, 2023

Dear Chair Barlow, Mr. Fleming, and members of Risked-Based Capital Investment Risk and Evaluation (E) Working Group (the “Working Group”):

We appreciate the opportunity to comment on the proposed interim Risk-Based Capital (“RBC”) solution for residual interests [exposed by the Working Group in April 2023](#).^{1 2} We believe a more thorough process is needed before adopting the proposed 45% RBC for CLO equity,³ even on an interim basis. Additionally, robust analysis is desirable to provide a sound basis to revise the RBC treatment broadly for other asset classes.

We recommend allowing the NAIC CLO Ad Hoc working group to complete its detailed analysis and modeling process for CLOs prior to implementing an interim change to CLO equity RBC. A comprehensive analysis would provide a sound basis. We support the analytical work undertaken by the NAIC. In fact, PineBridge has been actively participating in the modeling efforts led by the NAIC CLO Ad Hoc working group. We expect CLO equity loss rates to be driven by a variety of factors such as collateral composition, leverage, and manager profile. We believe active collateral management, portfolio diversification, and structural protections have all contributed to the strong track record of CLOs as stated in our [July 15, 2022 response letter to the NAIC](#).⁴

Given that the analytical work to date has been largely focused on CLOs, we are concerned that assigning the CLO equity risk charge (to be determined), or the proposed interim RBC of 45%, to the residual interests of other types of structured assets is unsupported. CLOs are not necessarily comparable to other securitizations. As seen in other comment letters and prior modeling work for other securitized products (e.g., CMBS and RMBS), there are significant differences in deal structure and performance across structured assets. CMBS, RMBS, and sub-prime autos experienced more severe losses during times of extreme stress such as the 2008 global financial crisis as compared to CLOs.⁵ A logical sequencing for determining appropriate RBC treatment for other asset classes is to continue the NAIC’s analytical efforts on CLOs (including the modeling work led by the NAIC CLO Ad Hoc working group). After the CLO results have been thoroughly analyzed, we would recommend applying a consistent framework regarding cashflow analysis and stress testing to determine an appropriate solution for other structured asset classes.

We support having a sound basis for any RBC revision and do not believe that it is prudent to increase RBC for residual interests broadly due to the NAIC’s concern around capital arbitrage, which was cited as one of the primary reasons for the proposed RBC increase. While it is possible certain residual interests could warrant RBC factors greater than 45% due to capital arbitrage or other reasons, not all structures create capital arbitrage. In [our February 2023 comment letter](#) to the Valuation of Securities Task Force (“VOSTF”),⁶ we shared a framework to help fret out adverse cases. Below is an example of a structure held by various insurers demonstrating that some structures are not aimed at achieving RBC arbitrage, and in fact, they may have higher RBC than that for the underlying assets, i.e., the sum can be greater than the parts.

¹ [2023-09-IRE residual factor.pdf \(naic.org\)](#).

² [Materials - Risk-Based Capital Investment Risk and Evaluation \(E\) Working Group \(naic.org\)](#), April 20, 2023.

³ For purposes of this letter, we only refer to broadly syndicated loan (“BSL”) CLOs.

⁴ [Agenda - VOSTF \(naic.org\)](#), 2022 Summer National Meeting, Valuation Of Securities (E) Task Force, August 11, 2022.

⁵ [Agenda - VOSTF \(naic.org\)](#), 2022 Summer National Meeting, Valuation Of Securities (E) Task Force, August 11, 2022.

⁶ Materials for 2023 NAIC Spring National Meeting, Valuation of Securities (E) Task Force Thursday, March 23, 2023.

PineBridge Investments
65 E 55th St, New York, NY 10022

In conclusion, we strongly recommend allowing the working groups to collaborate with industry and properly model CLO residuals first, and then apply a consistent modeling framework to other structured assets, before implementing any changes to residual interest RBC broadly.

Sincerely yours,
PineBridge Insurance Solutions and Strategies, CLO team, Leveraged Finance team

Mr. Philip Barlow, Chair
Risk-Based Capital Investment Risk and Evaluation (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

**Re: Comments regarding Risk-Based Capital Investment Risk and Evaluation (E)
Working Group 2023-09-IRE Residual Factor Proposal**

Dear Mr. Barlow,

The American Investment Council (“AIC”)¹ welcomes the opportunity to comment on the National Association of Insurance Commissioners (“NAIC”) Risk-Based Capital Investment Risk and Evaluation (E) Working Group (“RBCIRE WG” or “Working Group”) exposure of *RBC Proposal Form 2023-09-IRE Residual Factor* regarding the proposed 45% risk-based capital (“RBC”) factor for Residual Tranches or Interests reported on Schedule BA of the Annual Statement for life insurance companies and fraternal benefit societies.

The AIC appreciates the NAIC’s objective of promoting insurer solvency and policyholder protection by ensuring that the various tranches of asset-backed securities (“ABS”) are assigned appropriate RBC capital charges. We also understand that certain external stakeholders are advocating for state insurance regulators to take action on perceived issues regarding insurer ABS investments, which, as you know, have historically performed quite well.

¹ The American Investment Council, based in Washington, D.C., is an advocacy, communications, and research organization established to advance access to capital, job creation, retirement security, innovation, and economic growth by promoting responsible long-term investment. In this effort, the AIC develops, analyzes, and distributes information about private equity and private credit industries and their contributions to the US and global economy. Established in 2007 and formerly known as the Private Equity Growth Capital Council, the AIC’s members include the world’s leading private equity and private credit firms which have experience with the investment needs of insurance companies. As such, our members are committed to growing and strengthening the companies in which, or on whose behalf, they invest, to helping secure the retirement of millions of pension holders and to helping ensure the protection of insurance policyholders by investing insurance company general accounts in appropriate, risk-adjusted investment strategies. For further information about the AIC and its members, please visit our website at <http://www.investmentcouncil.org>.

AMERICAN INVESTMENT COUNCIL

For example, collateralized loan obligations (“CLOs”) have historically performed – and continue to perform – better than equivalently rated corporate debt instruments. Along with the performance of CLOs, it is significant to note that studies conclude that CLO default rates are substantially lower than default rates for corporates with equivalent ratings. In fact, studies indicate that the number of cumulative losses that would have had to occur with respect to the loans underlying CLOs for CLOs to have suffered significant defaults during the 2008-2012 financial crisis is significantly higher than what actually occurred during such time (assuming a reasonable recovery rate).² These consistent returns, including the performance of ABS residuals, have been important in supporting insurers’ core mission of meeting policyholder obligations.

For those reasons, we support a thoughtful, methodological approach to assessing residual tranche capital charges (and ABS considerations more broadly), characteristics which, as a standard setting organization, have long been hallmarks of the NAIC and its consensus-driven process. Furthermore, while we can see the utility of the proposed sensitivity analysis as an additional regulatory tool, we do not believe changing capital charges prior to completion of data driven analysis will improve policyholder protection, but rather will unduly increase costs for both insurers and policyholders.

Life insurers also face risks when they are discouraged from accessing appropriate investments that support policyholder obligations. The consequence of this is typically to increase costs for policyholders, reduce availability of products, and/or place downward pressure on insurance company capital. Consequently, we strongly recommend against taking hasty action that could constrain insurer liquidity, or otherwise disrupt the capital markets, during an uncertain economic environment.

To date, the NAIC has not conducted a rigorous, data-focused assessment of what might constitute a proper residual tranche capital charge.³ The lack of a supporting quantitative analysis was observed by the American Academy of Actuaries (“Academy”) during the RBCIRE WG’s December 2022 meeting, which, in the same context, stated that it had “zero confidence” in the accuracy of the RBCIRE WG’s December 2022 capital charge proposal. The issue of what constitutes a “residual tranche or interest” also seems to be unresolved.⁴

The Working Group appears to be considering an untested capital charge on an ill-defined asset class. What we do know at this stage is that the “interim” RBC solution for residual tranches is expected to last in perpetuity for any asset class for which a dedicated modeling methodology is not developed (a process that, for CLOs, is proving to be more complex than may have been initially anticipated). We also know that, to the extent that ABS investment risk has been assessed more broadly, the NAIC has routinely concluded that insurer aggregate ABS

² See e.g., Moody’s *Impairment and Loss Rates of Global CLOs* (June 2021) at pp. 14-19 (Appendix I: List of CLO material impairments worldwide).

³ Subsequent to the December 14, 2022 RBCIRE WG meeting, the Working Group agreed to reduce the number of RBC factors for ABS residual tranches from three to one – again, seemingly without quantitative analysis or support.

⁴ See e.g., RBCIRE WG February 27, 2023 *Meeting Minutes* at page 4 (page 3 of Attachment A), available at: https://content.naic.org/sites/default/files/national_meeting/RBCIREWG_2023SpringNM_Materials.pdf.

AMERICAN INVESTMENT COUNCIL

exposure is small and does not currently present a solvency risk to the industry.⁵ State regulators have tools available to them to address concerns about individual company investments. These facts alone support a more methodological approach to the “interim solution” work stream.

Importantly, the RBCIRE WG recently gained access to new ABS investment data that was included for the first time in insurers’ 2022 year-end reports. That data should facilitate a proper analysis of, or otherwise serve as a starting point for, a number of the considerations referenced above, including how to appropriately define a “residual tranche or interest” for purposes of Schedule BA. Careful analysis of that data is also essential for the consideration of other issues, such as: the impact that a single RBC capital charge could have on insurer RBC; whether such a charge might disproportionately or unintentionally impact certain investments or asset classes; and, at the most fundamental level, whether the baseline assumptions underpinning the Financial Condition (E) Committee’s mandate to the RBCIRE WG to develop an “interim solution” continues to be fit for purpose.

In light of the foregoing considerations, we encourage the RBCIRE WG to leave the RBC factor at 30%, while undertaking a more quantitative and methodological approach to any potential “interim” solution with the benefit of stakeholder engagement. We welcome the opportunity to serve as a resource to the RBCIRE WG as it considers both “interim” and “long-term” regulatory frameworks for ABS and would be pleased to present or otherwise provide insight into our members’ perspective on these issues.

Thank you for the opportunity to comment. We look forward to continuing to work with you on these important issues.

Sincerely,

/s/ Rebekah Goshorn Jurata
General Counsel
American Investment Council

Here, too, the Academy has reached a similar conclusion in the context of CLOs.

Draft: 8/9/23

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group
Virtual Meeting
April 20, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met April 20, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Kevin Clark (IA); Roy Eft (IN); Fred Andersen (MN); Debbie Doggett (MO); Lindsay Crawford (NE); Bob Kasinow and Bill Carmello (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill (TX); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Discussed Comment Letters Received on Residual Tranches

Connie Jasper Woodroof (CJW Associates) said her only comment was that the proposal was strictly for the life risk-based capital (RBC) formula, but property and health companies could also have residual tranches, and those would only be subject to a 20% charge for the RBC. She said this may need to be addressed in the other formulas. Barlow said they did not intend to ignore the health and property/casualty (P/C) formulas, but the issue is most pronounced for life companies, and the current proposal is only for the life formula. He believes the initial referral received from the Financial Condition (E) Committee indicated a focus on life first.

Christopher Halldorson (Prudential Financial—Prudential) said there is currently no theoretical foundation for the current capital treatment of residual tranches, and the 30% capital charge was developed based on Standard & Poor's 500 index (S&P 500) experience between 1960 and 1991. He said there were not any residual collateralized loan obligation (CLO) tranches included in that analysis. He said there has been some analysis since that indicates 30% seems quite low, given the volatility of the underlying collateral of these types of transactions.

Kim Welsh (Athene) said Athene is not opposed to the proposal to employ one factor instead of three, but it continues to have concerns about the interim solution. She said Athene believes everything should be viewed through the principle of equal capital for equal risk, and structured products need to be reviewed holistically with respect to the risk in other asset classes.

Hemphill said she appreciated the comments from and dialogue with all the interested parties on both sides, which really helped her understand the issues. She said she understands there is a lot of sensitivity on this topic, and it is important to have an inclusive and transparent delivery process so that decisions that best represent the relevant facts will be made.

2. Adopted the Residual Tranche Structure Change

Barlow said the proposal is revised from the recommendation from the Valuation of Securities (E) Task Force, which included three buckets for residuals and only one bucket for the interim proposal. He said this is for all residual tranches that are reported in the annual statement and are not limited to CLOs or any other particular type of structure.

Chou made a motion, seconded by Botsko, to adopt the residual tranche structure change. The motion passed unanimously.

3. Adopted the Sensitivity Test

Steve Clayburn (American Council of Life Insurers—ACLI) said the proposal adds a line to incorporate the residual tranches into the sensitivity test. Barlow said the Working Group was not able to expose this structural change for the sensitivity test by the normal timeline but asked for and did not get any comments from vendors on their ability to handle this.

Clark made a motion, seconded by Crawford, to adopt the sensitivity test structure change. The motion passed.

4. Exposed a Residual Tranche Factor for Comment

Andersen made a motion, seconded by Stolte, to expose a 45% interim RBC charge for the residual tranches. The motion passed unanimously.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

Principles for Structured Securities RBC

Presentation to NAIC's RBCIRE
 August 13, 2023
 Steve Smith, MAAA, FSA, CFA
 Academy C-1 Subcommittee, Chairperson

Executive Summary— C-1 Asset Modeling

- The American Academy of Actuaries proposes a flowchart to determine whether (a) an asset class needs to be modeled and (b) whether securities within an asset class need to be modeled individually to determine C-1 factors.
- Preference is given toward simpler solutions—if an existing factor can be used, it should be used. Individual security modeling for C-1 determination is a last resort.

Executive Summary— Principles-Based Approach for Structured Securities

- If the result of the flowchart is that an asset class requires modeling, the Academy would support a principles-based approach to the derivation of C-1 factors
- A principles-based approach to RBC for structured securities will allow regulators flexibility in adapting to new structures as they emerge in the marketplace
- This presentation proposes several candidate-principles
 - The Academy supports each of these candidate-principles, but we believe reasonable and informed people may disagree and are seeking guidance from regulators
 - We request that regulators identify which candidate-principles accurately reflect their views—these can then be incorporated into a principles-based approach to structured securities RBC

Discussion Topics

- I. C-1 Modeling Flowchart
- II. Structured Securities C-1 Principles
- III. Appendices
 - a) Appendix A—RBC Arbitrage
 - b) Appendix B—Definitions of Terms

C-1 Modeling Flowchart

Threshold Questions

- For an asset class to be considered using this flowchart, it should first be verified as having all of the following attributes:
 - Materiality or likely materiality in the future across the industry. Allocations from a small handful of companies would not justify changes to the RBC formula.
 - The risk that would be modeled needs to be incorporated in C-1. For example, illiquidity alone would not be a sufficient justification because C-1 does not measure illiquidity risk.
 - The expected benefits of a more precise calculation should outweigh the expected costs of building and using a new model. Costs include both time and energy spent to build the model as well as the negative effect of added complexity within the RBC formula.
- The burden to verify these attributes falls on the party asking for a more exact determination of RBC

C-1 Modeling Flowchart

Decision: similar risk vs. existing C-1 asset models

- Answer "yes" if the relative risk differences between risk categories (usually ratings or designations for fixed income) is similar to that of an existing set of C-1 factors.
- For example, municipal bonds and bank loans would each likely have an answer of "yes," because relative increase in risk as ratings decrease is similar to that of corporate bonds.
- CLOs and some other structured securities would likely have an answer of "no," because tail risk increases more quickly as the rating decreases compared to corporate bonds.

Decision: sufficient data

- Answer “yes” if data exist to enable risk modeling, and in particular tail risk modeling.
- For example, CLOs would likely have an answer of “yes,” because their bank loan collateral has ample historical loss data and the waterfall structure is well documented.
- Some esoteric ABS, especially residual tranches, may have an answer of “no” if insufficient data are available.

Decision: comparable attributes

- Answer “yes” if most individual assets within this asset class have an easily identifiable attribute that can be used to sort the assets into risk buckets.
- For example, CLOs would likely have an answer of “yes,” because most CLOs are rated by CRPs and those ratings can reasonably sort each individual CLO security into a risk bucket.
- Asset classes that are typically not rated by CRPs may have an answer of “no” here, but don’t automatically. For example, commercial mortgage loans are also a likely “yes” because DSCR and LTV substitute for CRP ratings as comparable attributes.

Initialism guide: CLO = collateralized loan obligation, CRP = credit rating provider, DSCR = debt service coverage ratio, LTV = loan-to-value

Decision: practical to model individually

- Answer “yes” if individual assets within the asset class have several attributes that differentiate individual assets and can be used for risk modeling or if existing modeling software can be used.
- For example, CLOs would likely have an answer of “yes” because off-the-shelf software exists that can model individual CLOs (however, CLOs may never have arrived at this decision point if they were deemed to have comparable attributes).
- If modeling cannot reasonably be done in a timely and cost-effective manner for RBC filing, then the answer here must be “no.”
- Some esoteric ABS may have an answer of “no” if the relevant risk is so specific to each deal that a common modeling framework does not apply across a reasonably large share of securities.

Outcome: use existing C-1 factors

- This outcome can either mean to use existing C-1 factors directly, without adjustment, or it can mean to make slight adjustments to existing C-1 factors.
- For example, municipal bonds and bank loans currently use corporate bond C-1 factors without adjustment.
- Schedule BA real estate currently uses Schedule A real estate C-1 factors but with an upward adjustment resulting in a proportionately higher C-1 factor for BA real estate.

Outcome: create new C-1 factors

- This outcome means that a new set of C-1 factors should be developed for this asset class.
- For example, CLOs may retain the 20 possible designations that they are currently mapped into. But instead of those 20 designations corresponding to the 20 corporate bond C-1 factors, CLOs may instead have their own set of 20 C-1 factors.
- Instead of just a slight adjustment to existing C-1 factors, this outcome requires fundamental modeling work to derive new factors.

Outcome: model asset individually

- This outcome means that each asset within this asset class needs to be modeled individually in order to generate a C-1 factor.
- In practice, this is currently how non-agency RMBS and CMBS are treated. The modeling work is done by the Structured Securities Group to determine the NAIC designation, after which point corporate bond factors are used. This is functionally similar to modeling each RMBS and CMBS security individually to determine its C-1 factor.
- Because of the significant operational complexity involved, this outcome is a last resort.

Structured Securities C-1 Principles

Glossary of Terms

- **ABS**: bonds falling within the emerging definition of ABS in SSAP 26, most recently exposed November 16, 2022
- **Vertical Slice**: an investment in all tranches of an ABS in equal proportion to the total outstanding
- **RBC-transformative ABS**¹: ABS where a vertical slice draws a lower aggregate C-1 requirement, considering only base factors (before portfolio adjustment and covariance adjustment), than its underlying collateral would draw if held directly by a life insurer
- **RBC Arbitrage (narrower)**: Holding a vertical slice of an RBC-transformative ABS
- **RBC Arbitrage (broad)**: Holding any part of an RBC-transformative ABS

¹ Conversely, one could then define RBC-neutral ABS as ABS where a vertical slice draws aggregate C1 equal to that which would be drawn by its underlying collateral

Candidate-Principle #1.
 The RBC Formula Is a Blunt Filtering Tool

- **The purpose of RBC is to help regulators identify weakly capitalized insurers, therefore small inaccuracies in RBC formulaic requirements will seldom justify a change to the RBC formula**
 - A structure that is close to RBC-neutral may not require a change in C-1 requirements.
 - Small allocations to RBC-transformative ABS may not require a change in C-1 requirements.
 - Small allocations to RBC-transformative ABS at the industry level will not avoid regulatory scrutiny.

Candidate-Principle #2.
 RBC Is Based on Statutory Accounting

- **RBC measures the impact of risk on statutory surplus. Changes in accounting treatment will affect C-1 requirements**
 - All else equal, assets that are marked to market (“MTM”) may have higher C-1 requirements because C-1 on MTM assets incorporates price fluctuations in addition to credit losses.

Candidate-Principle #3.
 C-1 Established for Underlying Collateral

- **RBC arbitrage can only be measured for ABS where the underlying collateral has an established asset-class-specific C-1 requirement**
 - ABS collateral may include unrated debt securities that would be either NAIC-6 or non-admitted if held directly by insurers—NAIC-6 assets draw a 30% pre-tax C-1 factor regardless of risk.
 - This unrated collateral, often non-corporate, typically does not have an established asset-class-specific framework for assigning C-1 (e.g., auto loans or credit card receivables).
 - ABS including such collateral is very often RBC-transformative because it converts NAIC-6 or non-admitted assets into rated paper.
 - Because the underlying collateral does not have an established asset-class-specific C-1 requirement, forcing C-1 on the ABS to be RBC-neutral would likely result in a C-1 requirement that is more conservative than C-1 for comparable risk in other asset classes.

Candidate-Principle #4.
 Intentions Don’t Matter For C-1 Requirements

- **The motivation behind creating an ABS structure should have no bearing on its C-1 requirements.** Even a structure designed with the explicit intent of reducing C-1 requirements should be treated like any other ABS. C-1 requirements represent a quantitative assessment of risk.
 - For many structures, it may be impractical or even impossible to objectively determine the intention of the design.
 - Even structures not designed to reduce C-1 may nevertheless lead to insufficient C-1 requirements.

Candidate-Principle #5. C-1 Requirements Reflect Likely Future Trading Activity

- **C-1 requirements on ABS should treat the collateral as a dynamic pool of assets, incorporating future trading activity that is likely to occur based on historical data or mandated by the structure's legal documents.**
 - If C-1 requirements on ABS acknowledge the evolving nature of the collateral pool, the total C-1 of the structure may not equal the C-1 of a snapshot of the collateral pool at any one point in time.
 - Specific to CLOs, management of the collateral is a known factor impacting risk that can be modeled with reference to historical data.
 - While the Academy supports this candidate-principle, we acknowledge that the current C-1 framework generally does not incorporate likely future changes to a portfolio, except indirectly in cases where Credit Rating Providers have assigned a rating that incorporates assumptions about portfolio management.
 - The RBCIRE WG have expressed concerns with incorporating active management in C-1 requirements for CLOs.
 - This candidate-principle does not imply incorporating credit selection on the part of the ABS manager. In other words, this candidate-principle is separate from the concept of active management as commonly understood.

Candidate-Principle #6. C-1 Requirement for Each Tranche Is Independent

- **RBC is based on the holdings of an insurer; assets not owned by an insurer should not impact its RBC**
 - This principle would imply RBC arbitrage depends on which tranche is held, even if an insurer holds a tranche issued by an RBC-transformative ABS.
 - This principle would imply that RBC arbitrage exists only in the tranches whose C-1 requirement is inadequate relative to the measured risk.
 - This principle would avoid tainting an entire structure with the label of RBC arbitrage in cases where C-1 is already sufficient for the particular tranche held by an insurer.
 - One practical drawback to this principle is it requires measuring risk at each tranche. The broad definition is simpler; showing that a structure is RBC-transformative is sufficient to identify RBC arbitrage per the broad definition. However, a C-1 requirement is still needed for each tranche held by an insurer, so the apparent simplicity under the broad definition is illusory.

Candidate-Principle #7. Different Risk Measures

- Each C-1 factor is based on the asset class's risk profile. However, the risk profile for at least some ABS is quite different from the risk profile for bonds. Therefore, **C-1 requirements for ABS** should be calibrated to **different risk measures** where appropriate.
 - In our December 2022 report to RBCIRE WG, the Academy recommended adopting a different risk measure for CLOs—Conditional Tail Expectation (“CTE”)—because CTE may better capture tail risk inherent in CLOs.
 - While different risk measures are appropriate, each asset's C-1 factor aims for a similar magnitude: For example, because most bonds use a 96th percentile, a CTE-96 for CLOs would be overly conservative. CTE-90 would be more consistent with the 96th percentile.
 - It is impossible to simultaneously reject this candidate-principle and require that all ABS structures are RBC-neutral, because in this case the collateral and the ABS would have C-1 requirements set to different statistical safety levels.

Summary of Candidate-Principles

1. The purpose of RBC is to help regulators identify weakly capitalized insurers, therefore small inaccuracies in RBC requirements may not justify a change to the RBC formula.
2. RBC measures the impact of risk on statutory surplus. Changes in accounting treatment will affect C-1 requirements.
3. RBC arbitrage can only be measured for ABS where the underlying collateral has an established asset-class-specific C-1 requirement.
4. The motivation behind creating an ABS structure should have no bearing on its C-1 requirements.
5. C-1 requirements on ABS should treat the collateral as a dynamic pool of assets, incorporating future trading activity that is likely to occur based on historical data or mandated by the structure's legal documents.
6. RBC is based on the holdings of an insurer; assets not owned by an insurer should not impact its RBC.
7. C-1 requirements for ABS should be calibrated to different risk measures where appropriate.

Key Questions for Regulators

- Which candidate-principles do regulators support?
- Are there additional principles not outlined herein that also ought to be incorporated into RBC for ABS?

Appendix A—RBC Arbitrage

Impact of Principles on Definition of RBC Arbitrage

- By discussing broader principles, this presentation seeks to spark conversation on the definition of Risk-Based Capital (RBC) arbitrage in Asset Backed Securities (ABS) and clarify the implications of conflicting RBC arbitrage definitions.
- The NAIC's Investment Analysis Office (IAO) has proposed a constraint in the model used to determine designations, and therefore RBC requirements, for CLOs. This constraint would eliminate RBC arbitrage, as defined by the IAO, that the IAO believes is present in CLOs.
- Competing definitions among interested parties and regulators have been used in some formal and informal discussions, so far without a forum for being discussed directly.
- This presentation attributes differences in RBC arbitrage definitions to underlying principles of RBC. The C1WG is requesting guidance from regulators on which principles should be followed. Once the principles have been identified, RBC arbitrage can be more clearly defined and more effectively mitigated. These principles will also guide a broader effort around improving the C-1 framework for all ABS.

Asset Classes With Greatest Potential for RBC Arbitrage

Established asset-class-specific C-1	CLO Non-Agency RMBS/CMO CMBS CFO	Agency RMBS
No established asset-class-specific C-1	Consumer Finance Asset-based Lending Credit feeder fund	
	Tranched	Pass-Through

- Quantifying RBC arbitrage is most direct when the underlying collateral has an explicit C-1 factor
- Tranched structures are more likely to produce RBC arbitrage than pass-through structures because tranching transforms risk
- RBC arbitrage discussions should focus on tranched structures with established asset-class-specific C-1

Definitions of RBC Arbitrage

- IAO has expressed its view that holding **any tranche** of a securitization whose vertical slice carries a different aggregate C-1 requirement compared to the underlying collateral constitutes RBC arbitrage—we term this the **broad**¹ definition of RBC arbitrage
- An alternative, **narrower**¹ definition of RBC arbitrage includes only instances where an insurer holds a **vertical slice**¹
- Many other possible definitions lie somewhere in between

IAO Usage of the Term “RBC Arbitrage”

- A [letter from IAO to VOSTF](#) dated May 25, 2022, introduces the concept of RBC arbitrage within the context of CLOs: “The aggregate RBC factor for owning all of the CLO tranches should be the same as that required for owning all of the underlying loan collateral. If it is less, it means there is RBC arbitrage.”
- SVO’s Structured Equity & Funds Proposal dated November 28, 2022, also uses the term “RBC arbitrage” with effectively the same meaning but expanding the scope from CLOs to include certain feeder fund structures.

¹ Please see Appendix B—Definitions of Terms for precise definitions of technical terms.

Academy Usage of “RBC Arbitrage”

- In our presentation to RBCIREWG dated December 14, 2022, the Academy disagreed with the concept that the existence of RBC arbitrage, as defined by IAO, necessarily implied an incorrect C-1 requirement
- The Academy believes dialogue among all parties will be improved if we first collectively agree on a definition of RBC arbitrage before discussing its implications for C-1 requirements

Related Regulatory Concerns

- IAO has also pointed out the possibility of RBC-transformative ABS being used to reclassify investments to technically comply with investment limits set forth in state insurance law, for example converting equity to debt for statutory purposes
- RBC-transformative ABS may also be used to reclassify investment returns or losses from an accounting perspective
- While we acknowledge these related potential issues, this presentation focuses only on C-1 implications of RBC-transformative ABS

Appendix B—Definitions of Terms

ABS Definition

- RBC arbitrage discussions typically involve structured securities, for example CLOs and rated note feeder fund structures.
- Within this presentation, we refer to all such structured securities as **ABS**, and we intend for the definition of ABS to align with the emerging definition of ABS in **SSAP 26**, [most recently exposed November 16, 2022](#). Under this definition, ABS has a primary purpose of raising debt capital backed by collateral that provides the cash flows to service the debt.

ABS Definition, Continued

Bond Principles Flowchart

- Exposed principles-based definition of ABS is illustrated here
- Image taken from "Assets: Regulatory Updates in Life Insurance" April 4, 2023, [webinar](#) by the American Academy of Actuaries

Vertical Slice Definition

A vertical slice is an investment in all tranches of an ABS in equal proportion to the total outstanding. A vertical slice is economically equivalent to a direct investment in the underlying collateral at any one point in time.

RBC-Transformative ABS Definition

An RBC-transformative ABS is any ABS where a vertical slice draws a lower aggregate C-1 requirement than its underlying collateral would draw if held directly by a life insurer.

Narrowly Defined RBC Arbitrage

- **Holding a vertical slice of an RBC-transformative ABS** constitutes RBC arbitrage under the narrow definition.
- In this case, it is unambiguously true that absent the structure of the ABS a life insurer would be required to hold a higher level of C-1 capital.
- Even under the narrow definition of RBC arbitrage, C-1 requirements for the collateral may be inappropriately high rather than the ABS C-1 requirements being inappropriately low. Also, C-1 for the ABS and its collateral may be calibrated precisely to the prescribed risk measures despite the ABS being RBC-transformative. Regardless, in such cases holding a vertical slice of an RBC-transformative ABS would still constitute RBC arbitrage.

Broadly Defined RBC Arbitrage

- **Holding any part of an RBC-transformative ABS** constitutes RBC arbitrage under the broad definition
- For example, any CLO holdings would constitute RBC arbitrage under this definition, because CLOs are an RBC-transformative ABS (as discussed in the Academy's [December 2022 presentation to RBCIREWG](#))
- IAO letters written to VOSTF during 2022 employ the broad definition of RBC arbitrage

Examination Oversight (E) Task Force
Virtual Meeting (*in lieu of meeting at the 2023 Summer National meeting*)
July 24, 2023

The Examination Oversight (E) Task Force met July 24, 2023. The following Task Force members participated: Judith L. French, Chair, represented by Dwight Radel (OH); Karima M. Woods, Vice Chair, represented by N. Kevin Brown (DC); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Blase Abreo (AL); Ricardo Lara represented by Laura Clements (CA); Michael Conway represented by Carol Matthews (CO); Andrew N. Mais represented by Michael Estabrook (CT); Trinidad Navarro represented by Tom Hudson (DE); Michael Yaworsky represented by Jane Nelson (FL); Doug Ommen represented by Daniel Mathis (IA); Dean L. Cameron represented by Eric Fletcher (ID); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Levi Nwasoria (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by James A. McCarthy (MA); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Mike Chaney represented by Mark Cooley (MS); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Andrea Johnson (NE); D.J. Bettencourt represented by Colin Wilkins (NH); Glen Mulready represented by Eli Snowbarger (OK); Michael Humphreys represented by Diana Sherman (PA); Elizabeth Kelleher Dwyer represented by John Tudino (RI); Michael Wise represented by Gwendolyn McGriff (SC); Larry D. Deiter represented by Johanna Nickelson (SD); Cassie Brown represented by Shawn Frederick (TX); Scott A. White represented by Greg Chew (VA); Mike Kreidler represented by Tarik Subbagh (WA); and Nathan Houdek represented by John Litweiler (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Orth made a motion, seconded by Eft, to adopt the Task Force's Dec. 14, 2022, minutes (*see NAIC Proceedings – Fall 2022, Examination Oversight (E) Task Force*). The motion passed unanimously.

2. Adopted the Reports of its Working Groups and Technical Group

A. Financial Analysis Solvency Tools (E) Working Group

Radel provided the report of the Financial Analysis Solvency Tools (E) Working Group. He stated that the Working Group met June 1 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters) of the NAIC Policy Statement on Open Meetings, to continue work on its goals. The Working Group also conducted a regulator-only e-vote, pursuant to paragraph 4 (internal or administrative matters) of the NAIC Policy Statement on Open Meetings, that concluded July 12 to adopt revisions to the *Insurer Profile Summary Sharing Best Practices Guide*.

B. Financial Examiners Coordination (E) Working Group

Radel provided the report of the Financial Examiners Coordination (E) Working Group. He stated that the Working Group met April 17 and March 22 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

C. Electronic Workpaper (E) Working Group

Radel stated that although the Electronic Workpaper (E) Working Group had not met this year, it wanted to provide a brief update regarding the TeamMate+ transition. Clements provided the update for the Working Group and said that it continues to oversee the transition to TeamMate+. She noted that the transition is progressing at a steady pace and as of July 20, 23 states have signed the rider agreement, 13 states have access to live databases, and 10 states are in the transition process. There are currently 18 states in the Gold Team Cloud environment and four states in the FedRAMP environment. She said the Working Group expects to have enough states online by year-end to facilitate exam coordination.

D. Financial Examiners Handbook (E) Technical Group

Snowbarger provided the report of the Financial Examiners Handbook (E) Technical Group. He stated that the Technical Group met June 20 to expose updates related to Exhibit G – Consideration of Fraud and a memorandum of understanding for a 30-day public comment period. He noted that Exhibit G was updated to further align with the risk-focused examination approach and encouraged regulators to leverage the work performed by others (especially external auditors) in this area. Revisions clarified that if the auditor’s fraud testing is deemed to be reliable, the examination team is not expected to complete the Fraud Risk Factor Checklist part of the exhibit.

Additionally, in response to a Receivership Law (E) Working Group referral, Section 1-3 of the *Financial Condition Examiners Handbook* was updated to include a reference to the memorandum of understanding template. This template can be used to facilitate transitional planning and preparation, communication, and information sharing in a pre-liquidation situation. As no comments were received, the Technical Group will consider adoption of this guidance during its next meeting.

Snowbarger said that the Technical Group also discussed its other 2023 projects, which include proposed revisions to incorporate: 1) consideration of climate-related risks; and 2) takeaways from the May 2023 Examination Peer Review. The Technical Group expects these proposed revisions to be considered for exposure during its next meeting, which is anticipated in late August.

Finally, Snowbarger mentioned that the Technical Group has formed a drafting group to address the referral from the Financial Analysis (E) Working Group related to strategic and operational risks faced by health insurers.

E. Information Technology (IT) Examination (E) Working Group

Ehlers provided the report of the IT Examination (E) Working Group. He stated that the Working Group met April 11 to discuss a referral received from the Cybersecurity (H) Working Group, which requests that the Working Group consider adding and/or revising IT review guidance within the *Financial Condition Examiners Handbook* to better prioritize cybersecurity risks and to consider a variety of sources in developing such guidance. The Working Group formed a drafting group to begin researching different frameworks that could be leveraged in the development of this guidance. He stated that the drafting group also plans to review the current procedures within Exhibit C to determine if there are any areas that can be streamlined to become more effective. Due to the nature of this project, the Working Group anticipates its efforts to carry over into 2024.

Cooley made a motion, seconded by Mathis, to adopt reports of the Financial Analysis Solvency Tools (E) Working Group, the Financial Examiners Coordination (E) Working Group, the Electronic Workpaper (E) Working Group, the Financial Examiners Handbook (E) Technical Group including its June 20 minutes (Attachment One), and the

IT Examination (E) Working Group, including its April 11 minutes (Attachment Two). The motion passed unanimously.

Having no further business, the Examination Oversight (E) Task Force adjourned.

Draft: 7/11/23

Financial Examiners Handbook (E) Technical Group
Virtual Meeting
June 20, 2023

The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met June 20, 2023. The following Technical Group members participated: Susan Bernard, Chair (CA); John Litweiler, Vice Chair (WI); Blase Abreo (AL); William Arfanis (CT); N. Kevin Brown (DC); Cindy Andersen (IL); Grace Kelly (MN); Shannon Schmoeger (MO); Lindsay Crawford (NE); Colin Wilkins (NH); Nancy Lee Chice (NJ); Eli Snowbarger (OK); Diana Sherman (PA); and Tarik Subbagh (WA).

1. Exposed Handbook Guidance

A. Exhibit G – Consideration of Fraud

Bernard said the first set of revisions to consider for exposure relates to Exhibit G – Consideration of Fraud and related guidance. She noted that Exhibit G is structured in a way that is more conducive to the former exam approach, similar to a financial statement audit, instead of being aligned with the present risk-focused exam approach. Additionally, some state insurance regulators have mentioned that the exhibit, as it stands now, requires very detailed and specific knowledge of various aspects of the company to complete the Fraud Risk Factors checklist portion of the exhibit.

In response, a drafting group was formed to revise Exhibit G and corresponding references. Bernard stated that the proposed revisions emphasize that state insurance regulators are encouraged to leverage the work performed by others, specifically the external auditors, to the fullest extent possible when completing this exhibit. If the certified public accountant (CPA) testing is deemed reliable, the exam team is not expected to complete the Fraud Risk Factor Checklist within the exhibit. However, if the CPA work is deemed insufficient, incomplete, or at the incorrect level—i.e., holding company or legal entity level—the exam team may use the checklist to conduct and document fraud risk factors. Bernard added that related guidance was updated to ensure consistency throughout the *Financial Condition Examiners Handbook* (Handbook).

B. Receivership Law (E) Working Group Referral

Bernard introduced the next set of proposed revisions related to a referral received late last year from the Receivership Law (E) Working Group. She noted that the Working Group adopted a template for a memorandum of understanding that can be utilized to facilitate transitional planning and preparation, communication, and information sharing in a pre-liquidation situation.

Bernard mentioned that proposed revisions add a reference to the memorandum into Sections 1–3 of the Handbook, stating that it is an optional tool available for state insurance regulator use.

As there were no objections, the Technical Group exposed the revisions for a 30-day public comment period ending July 20.

2. Received a Referral from the Financial Analysis (E) Working Group

The Technical Group received a referral from the Financial Analysis (E) Working Group. Litweiler said the referral suggests considering additional guidance that would encourage examiners to review strategic/operational risks

faced by health insurers during an on-site examination. He noted that some examples of these unique risks include failure to maintain an adequate federal Centers for Medicare and Medicaid Services (CMS) star rating, failure to properly identify/code member health status, failure to plan for variation in membership levels, and challenges in provider contracting. He stated that the Technical Group would like to create a drafting group to address this referral, and he directed members to contact NAIC staff to volunteer to be a part of the drafting group. Tom Finnell (America's Health Insurance Plans—AHIP) asked if industry members would be allowed to participate in this drafting group. Elise Klebba (NAIC) clarified that the drafting group is only open to state insurance regulators and contractors at the moment.

3. Received an Update on the Climate and Resiliency (EX) Task Force Referral and Proposed Revisions

Bernard said NAIC staff are in the midst of drafting revisions to multiple areas of the Handbook to further integrate the consideration of climate change risks into the financial examination process. Working revisions include the following sections of the Handbook: Investments, Reinsurance (Assuming and Ceding), Underwriting Repositories, Exhibit A (Planning Procedures), Exhibit B (Planning Questionnaire), Exhibit I (Planning Memo), Exhibit V (Prospective Risks), Exhibit Y (Interview Questions), and Exhibit DD (Critical Risk Categories). Bernard stated that revisions are anticipated to be finalized later this year, at which time they will be brought before the Technical Group to consider for exposure and adoption.

4. Discussed Other Matters

Bernard announced that she would be retiring from the California Department of Insurance (DOI). Her last day at the DOI will be June 30. As such, she announced that Snowbarger would join Litweiler as co-chair of the Technical Group for the remainder of the year.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/EOTF

Draft: 4/17/23

Information Technology (IT) Examination (E) Working Group
Virtual Meeting
April 11, 2023

The IT Examination (E) Working Group of the Examination Oversight (E) Task Force met April 11, 2023. The following Working Group members participated: Jerry Ehlers, Chair (IN); Ber Vang, Vice Chair (CA); Blase Abreo (AL); Mel Anderson (AR); William Arfanis and Michael Shanahan (CT); Ginny Godek (IL); Shane Mead (KS); Dmitriy Valekha (MD); Kim Dobbs and Cynthia Amann (MO); Colton Schulz (ND); Lindsay Crawford (NE); Eileen Fox (NY); Metty Nyangoro (OH); Eli Snowbarger (OK).

1. Discussed a Referral from the Cybersecurity (H) Working Group

Vang led the discussion on a referral received from the Cybersecurity (H) Working Group, which asks the IT Examination (E) Working Group to consider making cybersecurity a higher priority in the examination process. The Cybersecurity (H) Working Group is willing to support the IT Examination (E) Working Group, acknowledging that the project may take longer than a year. Vang presented a few options for addressing the referral, and he requested feedback from the Working Group. Those options were to: 1) enhance the current Exhibit C by interlacing additional cybersecurity procedures into existing procedures; and 2) create a separate document or appendix to Exhibit C to specifically house the cybersecurity-focused procedures.

Mead said Exhibit C already has a plethora of cybersecurity procedures. He asked the Working Group if it is sure carving out a separate cybersecurity appendix is warranted. Ehlers said he agrees that there are cybersecurity procedures in Exhibit C already, but Exhibit C was written several years ago, and bad actors are continuously creating new threats, so another look at the cybersecurity procedures may be beneficial.

Mead acknowledged the importance of a cybersecurity assessment, but he expressed his uncertainty about the approach of creating a separate evaluation document. He suggested that the Working Group could focus on strengthening the current procedures that are already present in Exhibit C instead of creating a new document.

Vang agreed with Mead's point of view, but he explained that the purpose of Exhibit C is to focus on internal controls. He added that creating a new document would help fill the gaps that are present in the current cybersecurity procedures.

Schulz said he had been following the National Institute of Standards and Technology (NIST) Cybersecurity Framework (CSF) 2.0 transition, and he pointed out the importance of governance and vendor management type risks. He also suggested that the Working Group should consider a refresh or a bolt-on approach to incorporate cybersecurity into the existing Exhibit C.

Ehlers shared that some states like New York have implemented cybersecurity models such as its Regulation 500. He stated that Indiana has implemented the NAIC *Insurance Data Security Model Law* (#668) and is beginning to use additional cybersecurity procedure steps on complex companies. However, Ehlers is not sure if a document similar to the New York Regulation 500 would work best as a separate document or included in Exhibit C and the examination report.

Ehlers believes the process of addressing cybersecurity in financial examination reports is an evolutionary process. He suggested starting by identifying what needs to be added to Exhibit C, determining that as a stand-alone item, and then integrating it into Exhibit C in the future.

Godek and Dobbs agree that Exhibit C and the work done by the examiners are substantial, and she emphasized the importance of examiner's ability to rely on the company's data. She expressed that adding cybersecurity to Exhibit C may not be necessary.

Miguel Romero (NAIC) suggested that among the options available for the state insurance regulators, the Working Group should consider redoing the exhibits used to document the IT Review and specifically focus on cybersecurity, as it is the most significant risk in today's world. He believes that the current work program does not facilitate a cohesive examination, and he suggested leveraging new resources outlined in the referral, such as the Center for Internet Security (CIS) controls or the Cybersecurity and Infrastructure Security Agency's (CISA) Cross-Sector Performance Goals, to make the program more efficient. Both the CIS and CISA resources include components that could enable state insurance regulators to more nimbly scale the extent of work performed based on the size of the company being examined.

Fox said she agrees with Romero's point that the current process needs to be reviewed to remove any unnecessary steps. She suggested coordinating with other states and reviewing the IT process to update and combine it with cybersecurity measures. She believes this will help to ensure the reliability of the information technology general controls (ITGC) before beginning Phase 2 and will help IT examiners review cybersecurity developments throughout the course of the examination.

Ehlers reiterated that the intention is not to delay the ITGC review conclusion beyond Phase 2, but it is important to assess the current and future cybersecurity weaknesses and the impact they could have on the company going forward.

Bruce Jenson (NAIC) said he agrees with Fox's suggestion, and he mentioned that it could be difficult to fully assess cybersecurity risks before beginning Phase 2.

Vang asked if the referral anticipates that an assessment of a company's cybersecurity will be expected, in addition to the assessment of IT general controls that is currently performed using Exhibit C.

Jenson suggested that the Working Group first conduct a gap analysis that compares the current Exhibit C procedures against the cybersecurity frameworks referenced in the referral (i.e., CISA, CIS, NIST).

Fox said that conducting an analysis to identify the extent of possible gaps in the current guidance would help the Working Group determine whether it would be appropriate to update Exhibit C or create a standalone document for assessing cybersecurity.

Jacob Steilen (NAIC) proposed forming a drafting group to perform the gap analysis and develop a response to the referral.

Jenson said that it may be appropriate to implement a separate approach for cybersecurity related risks. Currently, the IT review is focused on evaluating a company's IT general controls so that the financial examiner knows the extent to which company data and corresponding reports can be relied upon to support control and detail testing in later phases of the exam. On the other hand, a company's preparedness to manage cybersecurity events and attacks in the future is more of a prospective concern. Although the outcome of assessing the company's cybersecurity protocols and processes is important and relevant to the company's overall solvency, the results of that review would not likely impact the examiner's ability to test and rely on automated controls or system reports

in later phases of the exam. Therefore, it may be appropriate to allow for the conclusion on cybersecurity related risks to be finalized separately from the conclusion regarding IT general controls.

Ehlers asked Fox if she sees any additional information coming out of the New York State Department of Financial Services (NYDFS) reports on compliance with New York Regulation 500 that would not be addressed through Exhibit C procedures.

Fox replied that she has not seen any recommendations related to Regulation 500 cybersecurity events that were not covered by Exhibit C. She stated that she has not seen anything come out of any exams she has dealt with so far that should be added to Exhibit C.

Ehlers asked that Working Group members who may be familiar with the resources referenced in the referral (i.e., CISA, NIST, and CIS), share their experience and/or preference with using these frameworks that could be considered by the drafting group to bolster cybersecurity procedures.

Brian de Vallance (CIS) emphasized the importance of the federal government updating its guidance to allow CIS members to take advantage of the innovations in the world of cyber defense. He also mentioned that the CIS is a nonprofit organization that provides cybersecurity best practices and is willing to assist the Working Group as a free resource.

Having no further business, the IT Examination (E) Working Group adjourned.

Financial Stability (E) Task Force
and the Macroprudential (E) Working Group
Seattle, Washington
August 13, 2023

The Financial Stability (E) Task Force met in Seattle, WA, Aug. 13, 2023, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Nathan Houdek, Chair (WI); Judith L. French, Vice Chair (OH); Alan McClain represented by Chris Erwin (AR); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Virginia Christy (FL); Doug Ommen represented by Carrie Mears (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott represented by Vanessa Sullivan (ME); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Justin Zimmerman represented by David Wolf (NJ); Adrienne A. Harris represented by John Finston (NY); Andrew R. Stolfi represented by Kristen Anderson (OR); Michael Humphreys represented by Diana Sherman (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise represented by Will Davis (SC); Cassie Brown represented by Jamie Walker (TX); and Scott A. White (VA). The following Working Group members participated: Bob Kasinow, Chair (NY); Carrie Mears, Vice Chair (IA); William Arfanis (CT); Philip Barlow (DC); Charles Santana (DE); Virginia Christy (FL); Roy Eft (IN); John Turchi (MA); Lynn Beckner (MD); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); Lindsay Crawford (NE); Jennifer Li (NH); David Wolf (NJ); Kristen Anderson (OR); Diana Sherman (PA); Elizabeth Kelleher Dwyer (RI); Jamie Walker (TX); Dan Bumpus (VA); and Amy Malm (WI).

1. Heard Opening Remarks

Commissioner Houdek said materials for consideration and discussion for this meeting were sent via email Aug. 7, and they are available on the NAIC website in the “Committees” section under the Financial Condition (E) Committee.

2. Adopted the Task Force’s June 20 and Spring National Meeting Minutes

Mears made a motion, seconded by Superintendent Dwyer, to adopt the Task Force’s June 20 (Attachment One) and March 22, 2023 minutes (*see NAIC Proceedings– Spring 2023, Financial Stability (E) Task Force*). The motion passed unanimously.

3. Heard an Update on FSOC Developments

Superintendent Dwyer reported on a few Financial Stability Oversight Council (FSOC) discussions identified publicly that are most directly related to the NAIC’s work:

- On April 21, the FSOC released its new proposed guidance and analytic framework for designating nonbanks that potentially pose financial stability risks, which are the policies and documents that would guide the FSOC should it decide to “designate” a non-bank entity. This could potentially include insurers. After a brief extension, the comment period closed July 27.
- A designation means the FSOC has determined that the particular entity poses a systemic risk to the entire financial system and, therefore, should be subject to enhanced supervision by the Federal Reserve, in addition to any existing functional oversight by another state insurance regulator, which is the authority

that led to the designations of American International Group Inc. (AIG), MetLife, and Prudential Financial after the 2008 financial crisis.

- The designations were eventually removed from all three companies, with MetLife winning a lawsuit that challenged the FSOC’s ability to designate a company without specific findings.
- In the intervening years, the FSOC was encouraged to focus more on an “activities-based” approach to dealing with systemic risk; i.e., focusing on the type of activities that lead to contagion and catastrophe regardless of which entities may be engaged in them.
- While the NAIC prefers the “activities-based” approach to designating individual firms, the designations authority is a function of law, and it remains a potent tool in the FSOC’s toolbox.
- The FSOC has not indicated whether there are particular firms or insurers on its radar. However, recent public work of the FSOC has focused on broad areas of the financial sector, including non-bank lenders, hedge funds, crypto firms, and asset managers.
- In keeping with past precedent, the NAIC did not comment publicly on the FSOC’s internal guidance, given its role as a sitting member of the FSOC. However, the NAIC has long argued that the business of insurance is not inherently systemic, and while insurers can be affiliated with other parts of the financial system that could create risk, state insurance regulation has evolved significantly since the 2008 financial crisis, and the NAIC has spent the last decade further refining and improving what was already an effective system. The NAIC now has far deeper and broader insights into non-insurance entities within a group, better risk management, reporting and liquidity tools, and enhanced disclosure to further limit the potential for systemic risk in the insurance sector.
- While the non-bank designation guidance has gotten most of the attention, the FSOC has continued to make progress on other important projects, like enhancing data sharing among FSOC agencies related to climate risk, banking sector supervision due to recent regional bank failures, hedge fund vulnerabilities, and non-bank mortgage servicing concerns.

4. Received a Working Group Update

Kasinow provided a brief update on the liquidity stress test (LST) project:

- The 2022 LST filings were due June 30, and NAIC staff are continuing to review the filings and will provide summarized results and insights soon.
- Work on the 2023 Liquidity Stress Testing Framework (LST Framework) will begin soon. State insurance regulators will once again consider whether to modify the scope criteria used to identify life insurers and their groups for potential participation in the LST project, as well as consider any modifications to the stress scenarios and other requirements to be included in the 2023 LST Framework.
- Separate account liquidity concerns, other than the guaranteed portion included in the general account, are excluded from the current LST Framework. The LST Study Group is in the process of considering how to address potential separate account asset sales in a stress scenario. The Study Group is working on a data call for lead states to require their participant life insurance groups to provide some context around the dollar amount of specific asset types included in separate accounts, which are not already subject to U.S. Securities and Exchange Commission (SEC) liquidity stress requirements.
- Once the Study Group has access to the results of this data call, state insurance regulators will be in a better position to consider the potential impact of this universe of assets. If deemed significant, state insurance regulators will move on to constructing a methodology for assessing the potential asset sales, which could occur in likely stress scenarios.

Kasinow reported that NAIC staff recently posted a new status update document on the referrals of the Working Group’s list of 13 private equity (PE) and related considerations (Attachment Two), which includes a brief title for

each of the 13 considerations, the initial status when referrals were sent to other groups, the March 22 status update, and the recently added Aug. 13 status update.

Kasinow summarized some key developments of the 13 PE and related considerations:

- For items 1 and 2, addressing concerns around holding company structures, ownership, and control, the Group Solvency Issues (E) Working Group formed a drafting group to develop best practices for regulatory review in this area.
- For items 4 and 10, Andersen’s update on *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53) (Attachment Two-A) will provide insights into efforts, which involve ensuring that long-term liabilities are appropriately supported and the complex and/or privately structured securities’ risks are appropriately modeled.
- For item 5, which raises questions about operational, governance, and market conduct practices, the Working Group will soon begin considering this item now that the Task Force has completed the Reinsurance Worksheet to address the offshore/complex reinsurance topic in item 13.
- Item 7, which concerns identifying related party-originated investments, has been addressed by the 2022 adoption of additional related party codes for investment reporting and the more recent adoption of revisions in the Statutory Accounting Principles (E) Working Group’s Ref #2022-15. These revisions clarify that any invested asset held by a reporting entity that is issued by an affiliated entity, or which includes the obligations of an affiliated entity, is an affiliated investment.
- The revisions for item 7 also address many of the considerations for item 8, which concerns identifying underlying affiliated/related party investments and/or collateral in structured securities, and item 9, which concerns asset manager affiliates and disclaimers of affiliation. There may be additional work as state insurance regulators gain more insights from reviewing statutory financial statements, including these new disclosures and accounting clarifications.
- For item 11, reliance on rating agencies, the Valuation of Securities (E) Task Force has had a lot of discussion and activity around this consideration, which is expected to continue and possibly expand in scope.
- For item 12 and its considerations around pension risk transfers (PRTs), it is the NAIC’s understanding that the U.S. Department of Labor (DOL) has had many meetings with trade associations and insurers, along with many other groups to work to update the fiduciary requirements under 95-1.

Kasinow also reported that the Working Group will be working on the following items before the Fall National Meeting:

- Updating the Macprudential Risk Assessment (MRA) dashboard, including incorporating additional climate risk metrics.
- The MRA work will also include comparing the NAIC’s framework to the FSOC’s framework to identify any gaps and propose a way forward.
- Continue counterparty identification and an enhancement project.

Andersen reported that in 2022, the NAIC adopted AG 53, with its main purpose being to help ensure claims-paying ability even if complex assets do not perform as expected. He added that it requires disclosure for most life insurers over a size threshold of asset-related information with first submissions due April 2023. He added that the disclosures provide an opportunity for companies to tell their stories regarding their complex assets and associated risks, as well as how their cash-flow testing models address those risks. He said the NAIC has received AG 53 filings from 246 life insurers. He added that the Valuation Analysis (E) Working Group formed an AG 53 Review Group consisting of a team of actuaries, investment experts, and other financial staff to perform reviews. He said the review process has started with company prioritization based on prior knowledge and template

information. He explained that the Review Group meets frequently to identify companies with outlier net yield assumptions and engage with state insurance regulators for companies with outlier assumptions.

Andersen explained that the Valuation Analysis (E) Working Group considered a review of net yield assumptions to be its top priority due to the implications if a company is assuming high investment returns:

- More favorable asset adequacy analysis results.
- With more favorable asset adequacy results, a lower amount of assets could be held for reserves to be considered adequate.
- The concern is if risk is understated and assets underperform, reserves will turn out to be inadequate, and previously released money may have been needed.

Andersen explained the table in his presentation:

- Listed are examples of cash-flow testing results showing adequate reserving amounts, with the only difference being a change in the net yield assumptions. As the net yield assumption increases, the cash-flow testing indicates that a lower reserve amount is adequate.
- From a state insurance regulator's perspective, companies with high net yield assumptions would be vulnerable to not having sufficient reserves if their assets do not perform as expected. Companies assuming aggressively high net yields may be perceived as being dependent on that level of return to be able to pay all future claims.
- This illustrates why the Review Group first focused on net yield assumptions.

Andersen reported some findings related to AG 53 net yield assumptions:

- AG 53 filings for companies that are active and have outlier net yield assumptions have been reviewed, and the Review Group has the following concerns:
 - Reserve adequacy using moderately adverse conditions criteria is not met for companies that rely on high investment returns over a long period of time to be able to pay future claims.
 - Other companies may feel a need to assume unreasonably high yields to compete.
- Separated companies with above 7% and below 7% net returns for a variety of asset classes, but 7% is not meant as a safe harbor, rather just a demonstration of companies with outlying assumptions.
- A vast majority of life insurers assume reasonable returns on their assumptions; i.e., 85% to 95% of companies are in the below 7% category.
- There is a sizable number of companies that assumed net yields above 7% with more widespread assumptions of yields for Schedule BA assets and equities.

Andersen reported some of the upcoming activities of the Review Group:

- Reviewing reinsurance counterparty risk by sending requests for additional information from a targeted set of ceding companies, as relevant:
 - Description and reason for significant reinsurance-related ceded transactions.
 - Process and metrics used to evaluate the counterparty's asset risk and financial health.
- Continuing efforts to help ensure claims-paying ability even if complex assets do not perform as expected.

5. Heard an International Update

Tim Nauheimer (NAIC) reported that the International Association of Insurance Supervisors (IAIS) has completed numerous data calls and analyses as part of the Global Monitoring Exercise (GME), which includes individual insurer monitoring (IIM) and sector-wide monitoring (SWM). He added that the GME is part of the IAIS's holistic

framework for systemic risk identification, which takes a broader approach to financial stability and macroprudential surveillance.

Nauheimer summarized with respect to the GME that the IAIS has done the following:

- Completed the IIM quantitative data analysis of about 60 insurers.
- Completed the quantitative and qualitative SWM data collection, which includes additional data on reinsurance and climate risk.
- Continues to analyze SWM reinsurance data.
- Continues to analyze SWM data to compare to IIM data.
- Published the Global Insurance Market Report (GIMAR) mid-year update in July that provides a summary of the initial outcomes of this year's data collections and highlights key themes identified for the 2023 GME as being:
 - Risks faced by insurers in light of the challenging macroeconomic backdrop, notably interest rate, liquidity, and credit risk.
 - Structural shifts in the life insurance sector, specifically the use of cross-border asset-intensive reinsurance.
 - The increased allocation of capital to alternative assets.
- Will complete the annual GIMAR publication in November, for which the NAIC will continue to monitor and contribute to the development of the report.

Nauheimer stressed that the IIM and SWM data collections help determine the scope for an annual collective discussion by the IAIS on potential systemic risk issues. He added that the IAIS held a global seminar in Seattle in June, where this year's collective discussion of insurers and SWM themes was approved. He said for the IIM collective discussion, the focus will be on firms identified by quantitative scoring, as well as some overarching themes related to financial stability that were identified through expert judgment. He added that the process resulted in the identification of six insurers for this year's collective discussion: two firms were included due to quantitative scoring; three firms were included due to expert judgment; and one firm as a top-up for regional balance. He said identification of the insurers is confidential, and the group-wide supervisors were sent questionnaires, which were due Aug. 11. He said the collective discussion will take place at the Macroprudential (E) Working Group and Executive (EX) Committee meetings at the end of September, in which the group-wide supervisors will provide an overview of the supervision of their insurers.

Nauheimer reported that the IAIS has approved the updated IIM Assessment Methodology after the resolution of comments, but work on the following ancillary indicators to refine systemic monitoring will continue this year: 1) level 3 assets; 2) credit risk; 3) derivatives; and 4) reinsurance. He added that the IAIS Liquidity Workstream will meet at the end of August to analyze data received as part of the GME to continue to develop liquidity metrics, especially regarding an LST.

Nauheimer said the SWM overarching themes this year are:

- Managing increased interest rate, credit, and liquidity risks against a challenging macroeconomic backdrop.
- Cross-border reinsurance.
- Alternative assets.

Nauheimer reported that NAIC staff completed extensive questionnaires on each of the above risk themes that were due Aug. 11 and describe how the NAIC takes these risk themes into account in the U.S. regulatory system, including identification and monitoring tools in place. He added that NAIC staff shared the questionnaires with the Working Group for its input as well.

Nauheimer also reported that some of the additional climate data was proposed by the IAIS Climate Risk Steering Group (CRSG). He added that the IAIS released its first public consultation that covers the addition of new material into the IAIS Insurance Core Principles (ICPs) Introduction, work related to climate risk and governance, and the IAIS's plans to address climate more broadly. He said the CRSG met June 28 to discuss initial observations on the feedback received from the public consultation and initial feedback on the latest draft Application Paper materials on both climate-related market conduct considerations and climate scenario analysis. He added that the Application Paper, which is scheduled to be published for consultation by the end of 2023, contains guidance on scenario analysis in ICP 16 on enterprise risk management and ICP 24 on macroprudential supervision.

Nauheimer said the IAIS Macroprudential Supervision Working Group (MSWG) is conducting a holistic framework review of supervisory standards with a number of subcommittees of the MSWG reviewing SWM themes and future data collection points. He added that the MSWG has been engaged in providing educational sessions on asset-intensive reinsurance/cross-border reinsurance, including hearing many presentations from insurers and supervisors from across the globe that are similar to the ones heard by the Working Group and Task Force over the past year, but if new information is provided at the IAIS, NAIC staff will inform the Working Group and the Task Force.

Having no further business, the Financial Stability (E) Task Force and Macroprudential (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Committees/E Committee/FSTF/2023_2 Summer/Minutes

Draft: 7/10/23

Financial Stability (E) Task Force
and the Macroprudential (E) Working Group
Virtual Meeting
June 20, 2023

The Financial Stability (E) Task Force met June 20, 2023, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Marlene Caride, Chair, represented by John Sirovetz (NJ); Nathan Houdek, Vice Chair (WI); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Virginia Christy (FL); Doug Ommen represented by Mike Yanacheak (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Vanessa Sullivan (ME); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented by Lindsay Crawford (NE); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Tim Biler (OH); Michael Humphreys represented by Diana Sherman (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise represented by Thomas Baldwin (SC); Cassie Brown represented by Rachel Hemphill (TX); and Scott A. White represented by Dan Bumpus (VA). The following Working Group members participated: Bob Kasinow, Chair (NY); Mike Yanacheak, Vice Chair (IA); Susan Bernard (CA); William Arfanis (CT); Philip Barlow (DC); Tom Hudson (DE); Virginia Christy (FL); Roy Eft (IN); Christopher Joyce (MA); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); John Sirovetz (NJ); Diana Sherman (PA); Elizabeth Kelleher Dwyer (RI); Rachel Hemphill (TX); Dan Bumpus (VA); and Amy Malm (WI). Also participating were: David Phifer (AK); Mark Fowler (AL); David Lee (AZ); Rolf Kaumann (CO); Russell Coy (KY); Pat Gosselin (NH); Leatrice Geckler (NM); Carter Lawrence (TN); Jon Pike (UT); Kevin Gaffney (VT); and Tim Hays (WA).

1. Heard Opening Remarks

Commissioner Houdek said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee. He added that the materials were intentionally released two weeks in advance of the Task Force call to allow participants extra time to review and the option to express any major concerns. He summarized that the purpose of the call is to ensure comments received on the draft Reinsurance Worksheet have been addressed by the Working Group and to consider the draft for adoption, which the Task Force will be considering jointly with the Working Group.

2. Adopted the Reinsurance Worksheet

Kasinow summarized the clarifications of the Reinsurance Worksheet from comment letters received:

- **OPTIONAL TOOL:** This worksheet is designed as an **OPTIONAL** tool to assist lead state/domiciliary regulators when reviewing reinsurance transactions to allow them to obtain the information necessary to understand the economic impacts, typically upon initial review of the proposed transaction but also potentially when the lead state/domiciliary regulator is performing a historical review of the transaction for some specific purpose.
- **NOT AN ONGOING FILING:** This worksheet is **NOT** for use as an ongoing filing with the NAIC and/or the lead/domiciliary state. It is an **EDUCATIONAL** tool for lead state/domiciliary regulators to use on an ad hoc basis as needed.

- **ONLY USED IF NEEDED:** The worksheet is **NOT** designed to be used with **EVERY** reinsurance transaction. It is designed as a consistent tool for lead state/domiciliary regulators to use when reviewing reinsurance transactions for which they need to determine the economic impacts of said reinsurance transactions. If a reinsurance transaction is easily understood without the use of this worksheet, then a worksheet would not be used by the lead state/domiciliary regulator.
- **NOT A FIXED TEMPLATE:** The worksheet is **NOT** a fixed template that **MUST** be used to answer the lead state/domiciliary regulators' information needs. If an insurer has materials used in its own assessment of the reinsurance transaction that answer the information needs of the lead state/domiciliary regulator expressed in the worksheet, then those materials may be accepted by the lead state/domiciliary regulator rather than requiring the insurer to use the worksheet format. Every effort should be made to **avoid duplicate requests** for information.
- **OPEN TO REINSURANCE TYPE:** The worksheet **was designed with life reinsurance transactions** as the initial focus, but there is **no reason to limit this tool to life reinsurance transactions**. If the lead state/domiciliary regulator has a property/casualty (P/C) reinsurance transaction for which they are struggling to understand the economic impact (despite any existing notes, interrogatories, and Schedule F disclosures for already approved transactions), the lead state/domiciliary regulator would be able to use the worksheet to request the needed information, with appropriate edits. Again, this worksheet should not be used if the lead state/domiciliary regulator has a clear understanding of the transaction from data already provided.
 - Similarly, the worksheet was designed with affiliated transactions as the initial focus, but a lead state/domiciliary regulator should use the template for unaffiliated transactions if existing information does not provide a clear understanding of the transaction.
- **NOT REINSURANCE POLICY:** The Working Group is working in coordination with the Reinsurance (E) Task Force. This optional, informational tool is **not intended to affect any of its reinsurance policies or procedures**, such as the qualified/reciprocal jurisdiction evaluation process or the "Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance" (EU Covered Agreement).
- **ONLY REFERENCED IN HANDBOOKS:** The worksheet is **not included in the *Financial Analysis Handbook* or the *Financial Condition Examiners Handbook***; although, it may be referenced there as an optional tool. The worksheet will be available on StateNet.
- **CONFIDENTIALITY:** The worksheet would be confidential under a lead/domiciliary state's existing confidentiality laws and regulations in place to allow the lead state/domiciliary regulator to assess such transactions.

Kasinow asked the following interested parties that provided comment letters if there were any remaining concerns: Swiss Re; the American Council of Life Insurers (ACLI); a representative for jointly made comments from the National Association of Mutual Insurance Companies (NAMIC), the Reinsurance Association of America (RAA), and American Property Casualty Insurance Association (APCIA); the Bermuda International Long Term Insurers and Reinsurers (BILTIR); and the Association of Bermuda Insurers and Reinsurers (ABIR).

Steve Clayburn (ACLI) said concerns expressed in the ACLI's comment letter were addressed in a positive direction in the resolution of comments, with confidentiality and avoiding duplication being the most important. He stressed that the Task Force should be working collaboratively with the Reinsurance (E) Task Force on any future enhancements.

Belfi asked if the questions on the transaction being requested by the lead or ancillary state would be the direct writer or ceding regulator or the reinsurance regulator. Kasinow responded that the ceding regulator would initiate questions to understand the economics of the transaction. He added that some states are already using

something similar to the Reinsurance Worksheet as part of their financial analysis and review of transactions, and the intent was only to capture information for states that did not previously have that information.

Tim Nauheimer (NAIC) summarized the resolution of comments received:

- Indiana and Nebraska suggested that a fair amount of terminology should be defined; the other jurisdiction should be named; a summary description of key elements of that jurisdiction's accounting basis should be provided. Nauheimer said the Task Force would incorporate those suggestions.
- Swiss Re said the information requested in the Reinsurance Worksheet, such as cross-border reinsurance transaction details, is already available through existing filings.
- Nauheimer said state insurance regulators' use of the Reinsurance Worksheet is primarily intended for life but may be used for P/C. He added that the Reinsurance Worksheet is intended as needed not as an ongoing disclosure requirement, and it is intended for specific transaction approval. He concluded that state insurance regulators will leverage existing information, but they do not get all the data needed from annual statements.
- Swiss Re said the Working Group expressed concerns emanating from the Cayman Islands and/or Bermuda, and it asked for additional clarity on those specific concerns.
- Nauheimer responded that the Working Group never stated concerns with these jurisdictions. He added that the Working Group met with these jurisdictions to better understand their regulatory regime and their process for reviewing reinsurance deals to better coordinate with them.
- Swiss Re said the NAIC has already established a process for evaluating qualified and reciprocal jurisdictions, which is a means to recognize key NAIC solvency initiatives, including group supervision and group capital standards, and it recommends involving the established process and expertise of other NAIC groups.
- Nauheimer responded that the Task Force agrees that any broader issues that arise during a specific transaction approval should be raised to the groups responsible for the qualified and reciprocal process. He added that the Working Group is also closely coordinating with the Reinsurance (E) Task Force, but it is merely overseeing the 13 private equity (PE) and other considerations.
- The ACLI said the Reinsurance Worksheet should not be duplicative of other sources already available to state insurance regulators, and established confidentiality protections should be maintained.
- Nauheimer responded that the Working Group data may be used to complete a Form D, not in addition to, and it would be confidential under existing confidentiality state laws and regulations in place to assess such transactions; i.e., a tool for state insurance regulators to use and not filed with the NAIC.
- The BILTIR agreed with the ACLI letter, so Nauheimer said no additional response is needed.
- The RAA, the APCIA, and NAMIC recommended the following suggestions:
 - The Working Group should identify and limit the proposal to the types of cross-border reinsurance transactions that are of concern to state insurance regulators.
 - Simple and straightforward reinsurance transactions should not be subject to data requested in the Reinsurance Worksheet.
 - The brief introductory guidance on page 1 of the Reinsurance Worksheet is insufficient and should not be adopted until additional guidance in the *Financial Analysis Handbook* or a similar reference document is developed to provide context on the information that state insurance regulators need.
 - P/C reinsurance contracts subject to existing requirements from the scope of contracts should be exempt from the Reinsurance Worksheet.
 - The Reinsurance Worksheet appears to be required to be completed by the ceding company, but it is unclear whether the option to request it resides primarily with the domestic state of the cedent or whether the option is available to any state in which the cedent is licensed.

- Clarification is needed regarding the date the balance sheet effects are measured, the time period, and the intended retrocession details of the Reinsurance Worksheet.
- Consider whether the Working Group considered the Reinsurance Summary Supplemental Filing and related Reinsurance Attestation Supplement in its development of the Reinsurance Worksheet.
- It is unclear whether the proposal is intended to apply to only affiliated off-shore reinsurance transactions or to any cessions to third parties.
- Provide a reasonable minimum timeframe for the completion of the worksheet.
- Nauheimer responded that state insurance regulators may use the Reinsurance Worksheet as they see fit, as it is a tool for states, and the clarification summary should address those concerns. He added that:
 - The Working Group will enhance guidance and instructions, but it is not intended for the *Financial Analysis Handbook*.
 - Companies should add the transaction date and specify before and immediately after the reinsurance transaction, and the retrocession details are intended to understand the structure.
 - The clarification summary should address the other comments.
 - The Reinsurance Worksheet:
 - May be used for any purpose (e.g., affiliated and unaffiliated deals).
 - Would be confidential under existing confidentiality state laws and regulations in place to assess such transactions.
 - Is for state insurance regulator use and not intended to be required filing by a company with a filing deadline.
- The ABIR recommends:
 - Avoiding impeding the solid work on the existing and future U.S. Covered Agreements and NAIC qualified reinsurance designation by one-off interventions into international reinsurance.
 - Assigning further considerations of the Reinsurance Worksheet exclusively to the Reinsurance (E) Task Force.
 - Using the Reinsurance Worksheet in traditional, unaffiliated P/C reinsurance transactions has not been identified as necessary.
 - Further consultation and discussion are required to address:
 - Questions on context and clarity are needed before being considered further by state insurance regulators, i.e., where the Reinsurance Worksheet would reside in the regulatory framework.
 - Whether the Reinsurance Worksheet should be part of the *Financial Condition Examiners Handbook*.
 - Whether the Reinsurance Worksheet should be considered a desk drawer rule; i.e., what outcomes of the calculations suggest.
 - What action is being considered upon completion of the Reinsurance Worksheet.
 - What the safeguards are to protect confidential and proprietary information.
- Nauheimer responded that the Reinsurance Worksheet will not be part of the *Financial Condition Examiners Handbook*, and it will not be considered a desk drawer rule. He added that the Reinsurance Worksheet may be used as state insurance regulators deem necessary, and it will be used to educate state insurance regulators on the economics of a deal and to analyze a transaction. He said as noted earlier, the Reinsurance Worksheet will be confidential under the existing confidentiality state laws and regulations in place to assess such transactions.

Mayhew made a motion, seconded by Arfanis, to adopt the Reinsurance Worksheet. The motion passed unanimously by the Working Group.

Yanacheak made a motion, seconded by Sherman, to adopt the Reinsurance Worksheet (Attachment One-A). The motion passed unanimously by the Task Force.

Commissioner Houdek said there is no urgency after adopting the Reinsurance Worksheet, as the Financial Condition (E) Committee will consider it for adoption during its Summer National Meeting and due to it being an optional tool that state insurance regulators may already choose to use if needed.

Having no further business, the Financial Stability (E) Task Force and Macprudential (E) Working Group adjourned.

Capital and Surplus					
Net Income					
Change in Liability for Unauthorized Reinsurance					
Aggregate Write Ins for gains and losses in surplus					
Capital Contribution/(Dividends)					
Other Changes in surplus					
TOTAL LIABILITIES & CAPITAL					
SOLVENCY RATIO					
* Supported by listings of asset categories and amounts to highlight differences in supporting assets after the transaction.					
NOTES SECTION:					
(e.g., explain product line, describe transaction and any unique aspects)					
(If Asset Adequacy Testing is included in "Other Liabilities," additional regulatory guidance may be needed, e.g., on counterparty asset assumptions where access is limited.)					

Transaction Details			
Please identify the following transaction details if applicable:			
Contract 1 (if needed)	Contract 2 (if needed)	Contract 3 (if needed)	Contract 4 (if needed)
Which party of the contract are you (assuming or retroceding)?			
Description risk category covered (mortality, longevity, Cat Risk, etc.)			
Start date			
End date			
Currency			
Sum Insured / Gross Notional amount / PML			
Capital at risk			
Line of Business (e.g. annuities, term, participating guarantee, etc.)			
Risks covered (e.g. longevity, mortality, etc.)			
Type of reinsurance treaty (XOL, Quota share – proportionate, etc.)			
Collateral value			
Value of guarantee			
Names(s) of the reinsurer(s) (please only include top 3 by premium share if more than one)			
Rating of reinsurer(s)			
Countries of reinsurer(s)			
Assets pledged by reinsurer			
Initial premium			
Initial fees			
Value of reserves			
Ceding commission structure			
Any experience refund or loss carryforward features			
Do you use or plan to use any form of derivatives for reinsurance purposes (e.g. longevity or mortality swaps)?			
If yes, please provide a brief description			
Was any debt or surplus note issued in connection with the transaction? Ex: Such as in an embedded value securitization			
If yes, please provide a brief description			
If yes, provide description of these derivatives			
If yes, please provide a brief description			
Please describe Exit mechanism if known			
Please identify and describe if any of the following types of arrangements are associated with this transaction:			
Trust			
Funds Withheld			
Coinsurance			
Modified Coinsurance			
Sidecars			
Any other Joint Venture or SPV			
Third-party capital			
Ceded and Retroceded Details			
If ceding to an offshore affiliate please identify the assuming affiliated reinsurer(s) and their regulatory jurisdiction			
If ceding to an offshore affiliate and that affiliate is going to retrocede to another reinsurer, please identify the ultimate assuming reinsurer(s) and their regulatory jurisdiction			
Key Definitions			
PML-Probable Maximum Loss			
Capital at risk-required capital or capital charge.			
Collateral value-the market value of securities pledged as collateral if a trust is set up in connection with the transaction.			
Value of the guarantee - For example, third party guarantees in non-standard types of reinsurance e.g. an MGA owns affiliated insurers, an unaffiliated reinsurer reinsures with the MGA affiliate with a guarantee from the MGA.			

Plan for the List of MWG Considerations – PE Related and Other

Some of these Working Group projects will continue for several years. The status of the 13 MWG Considerations is as follows as of **August 13, 2023**:

1. Holding Company Structures:

Sent a referral for new work to the Group Solvency Issues (E) Working Group.

GSIWG Update 3/22/23: *The GSIWG plans to discuss this issue at its Dec. 14 meeting to determine next steps in addressing the referral.*

GSIWG Update 8/13/23: *The GSIWG formed a drafting group to develop best practices for regulatory review in this area. The drafting group has met multiple times and continues to work on the development of written best practices. After the best practices are developed, the drafting group will consider whether any should be proposed for inclusion in NAIC Handbooks or other action should be considered.*

2. Ownership and Control:

Sent a referral for new work to the Group Solvency Issues (E) Working Group.

GSIWG Update 3/22/23: *The GSIWG plans to discuss this issue at its Dec. 14 meeting to determine next steps in addressing the referral.*

GSIWG Update 8/13/23: *The GSIWG formed a drafting group to develop best practices for regulatory review in this area. The drafting group has met multiple times and continues to work on the development of written best practices. After the best practices are developed, the drafting group will consider whether any should be proposed for inclusion in NAIC Handbooks or other action should be considered.*

3. Investment Management Agreements (IMAs):

Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and Form D filings. Also sent a referral to the Valuation of Securities (E) Task Force (VOSTF) to highlight the regulatory discussion involving topics it administers.

RFSWG Update 3/22/23: *The RFSWG received and discussed this referral during its Nov. 1 interim meeting. During the meeting, the RFSWG agreed to defer further work on this issue until its*

ongoing project to update general guidance in NAIC handbooks related to affiliated service agreements is completed in early 2023.

RFSWG Update 8/13/23: *The RFSWG is nearing the completion of its project to update general guidance in NAIC handbooks related to affiliated service agreements, which is expected to be completed by the 2023 Summer National Meeting. After the general guidance is completed, the Working Group plans to begin work on more targeted guidance related to affiliated investment management agreements.*

4. Owners of Insurers with Short-Term Focus and/or Unwilling to Support a Troubled Insurer:

Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and fees. Also sent a referral to the Life Actuarial (A) Task Force recognizing its existing work to ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.

RFSWG Update 3/22/23: *The RFSWG received and discussed this referral during its Nov. 1 interim meeting. During the meeting, the RFSWG agreed to defer further work on this issue until its ongoing project to update general guidance in NAIC handbooks related to affiliated service agreements is completed in early 2023.*

RFSWG Update 8/13/23: *No update.*

LATF Update 3/22/23: *Asset adequacy analysis requirements in NAIC Model #820 and VM-30 require that company Appointed Actuaries perform testing to ensure that the reserves held for the company's liabilities are adequate in light of the assets supporting the business. Regulators review associated company Statements of Actuarial Opinion periodically.*

LATF Update 8/13/23: *Actuarial Guideline 53 – Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves (AG 53) became effective for year-end 2022. AG 53 requires additional disclosures related to life insurance and annuity company investment return assumptions for complex and high yielding assets. Regulators are conducting targeted reviews of the AG 53 disclosures to ensure that company investment returns for complex and high-yielding assets are not overly optimistic.*

5. Operational, Governance and Market Conduct Practices:

The MWG will keep developing more specific suggestions before likely referring this consideration to the Risk-Focused Surveillance (E) Working Group.

MWG Update 3/22/23: *No new action has occurred for this consideration as the regulators have focused on the reinsurance consideration.*

MWG Update 8/13/23: *No new action has occurred for this consideration as the regulators have focused on the reinsurance consideration.*

6. Definition of Private Equity (PE):

No action was deemed necessary for this consideration.

No update.

7. Identifying Related Party-Originated Investments (Including Structured Securities):

Sent a referral to the Statutory Accounting Principles (E) Working (SAPWG) Group recognizing its existing work regarding disclosures for related-party issuance/acquisition. Once MWG regulators work with these SAPWG disclosures and regulatory enhancements from referrals to other groups, further regulatory guidance may be considered as needed.

SAPWG Completed Actions 3/22/23:

- *Ref #2021-21 included revisions that clarified guidance for related parties and developed a blanks proposal which provided new investment schedule column with reporting codes to identify investments that involve related parties. (Adopted May 2022)*
- *Ref #2021-22BWG added six related party reporting codes effective for year-end 2022. The investment schedule disclosures include codes that identify the role of the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments. (Adopted May 2022)*

SAPWG Completed Actions 8/13/23:

- *Ref #2022-15, included revisions to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity, is an affiliated investment. (Adopted March 2023)*

8. Identifying Underlying Affiliated/Related Party Investments and/or Collateral in Structured Securities:

Sent a referral to the Statutory Accounting Principles (E) Working Group in recognition of existing work to develop disclosures to identify the role of the related party in the investment and codes for relationships in securitizations or similar investment. Also sent a referral for new work to the Examination Oversight (E) Task Force for the CLO/structured security considerations.

SAPWG Completed Actions 3/22/23:

- See above descriptions (Ref # 2021-21 and Ref #2021-22 BWG) on investment reporting codes for year end 2022 reporting.
- Ref #2019-34 included revisions that clarify: 1) identification of related parties; 2) a non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or affiliation; 3) a disclaimer of control or affiliation does not eliminate the classification as a “related party” and the disclosure of material transactions. This agenda item also resulted in the creation of a new Schedule Y Part 3, which was effective for year-end 2021. This schedule identifies all entities with greater than 10% ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation and identifies the ultimate controlling party. (Ref #2019-34 and Ref #2020-37BWG, both adopted March 2021)

SAPWG Completed Actions 8/13/23:

- See above descriptions (Ref # 2021-21, Ref #2022-15 and Ref #2021-22 BWG).

EOTF Update 3/22/23: The EOTF delegated work on this referral to its Financial Analysis Solvency Tools (E) Working Group and its Financial Examiners Handbook (E) Technical Group. Both groups developed new guidance for inclusion in 2023 NAIC handbooks related to the new related party investment disclosures developed by SAPWG and the AG 53 standards developed by LATF that will be in place for 12/31/22 reporting. The groups may develop additional guidance for NAIC handbooks, as well as supporting regulatory reports and tools, as work proceeds in this area.

9. Asset Manager Affiliates and Disclaimers of Affiliation:

MWG regulators are comfortable waiting to realize the benefits of the recently implemented Schedule Y, Part 3, along with the changes other NAIC committee groups will make for several of the previously listed referrals, before determining if additional work is needed. Also, a referral was sent to the Statutory Accounting Principles (E) Working Group recognizing its existing work to

revamp Schedule D reporting along with the previously mentioned code disclosures will assist with this consideration.

SAPWG Completed Actions 3/22/23:

- See above descriptions of Schedule Y Part 3. (Ref #2019-34 and Ref #2020-37BWG).

SAPWG Ongoing Work 3/22/23:

- Ref #2022-15, which clarifies affiliated investment reporting, is planned for exposure at the 2022 Fall National Meeting. It adds guidance on reporting of affiliated investments.
- As part of a project known as the bond project, the SAPWG is developing a proposal to revise Schedule D reporting, which intends to determine what is considered a qualifying bond and to identify different types of investments more clearly. For example, the current bond proposal would divide Schedule D-1 into a Schedule D-1-1 for issuer credit obligations and a Schedule D-1-2 for asset-backed securities. The proposal includes more detailed reporting lines to provide more granularity on the actual types of investments held. The effective date of the bond proposal, and the reporting changes, is anticipated for January 1, 2025. The Ref #2019-21 is the primary Form A; however, the project has several documents.
- Ref #2022-17, which clarifies interest income disclosures, is planned for exposure at the 2022 Fall National Meeting.

SAPWG Completed Actions 8/13/23:

- See above descriptions Ref # 2021-21, Ref #2022-15 and Ref #2021-22 BWG; Ref #2022-17, incorporated revisions to data-capture interest income disclosures, and established new disclosures for aggregate paid-in-kind interest and deferred interest. (Adopted March 2023). SAPWG Ongoing Work: Reporting changes to reflect the Schedule D-1 proposed changes were exposed by the Blanks (E) Working Group on March 7, 2023, and updated revisions are anticipated for exposure shortly after the 2023 Summer National Meeting. The statutory accounting revisions to incorporate a new principles-based bond definition in SSAP No. 26R—Bonds and SSAP No. 43R—Asset Backed Securities will be presented for adoption at the 2023 Summer National Meeting.

10. Privately Structured Securities:

Sent a referral to the Life Actuarial (A) Task Force recognizing its existing work on an Actuarial Guideline including disclosure requirements for the risks of privately structured securities and how the insurer is modeling the risks. Sent a referral to the VOSTF highlighting the MWG

regulators' support for the blanks proposal to add market data fields for private securities being considered by the Valuation of Securities (E) Task Force (VOSTF). MWG regulators will wait on any further work or referrals until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project. Sent a referral for new work to the RBC Investment Risk and Evaluation (E) Working Group to address the tail risk concerns not captured by reserves.

LATF Update 3/22/23: *Actuarial Guideline 53 (AG 53) has been adopted by the Life Actuarial (A) Task Force and will be effective for year-end 2022 reporting. Regulators on the Valuation Analysis (E) Working Group will be conducting AG 53 reviews.*

VOSTF Update 3/22/23: *The VOSTF will be sending referrals to a number of NAIC committee groups requesting feedback on a replacement proposal to have the NAIC produce analytical risk metrics for bond investments. These groups will also be asked if they support the proposal and to describe different ways they envision being able to take advantage of such a capability within the NAIC.*

SAPWG Ongoing Work 8/13/23:

- *As discussed above, the Schedule D bond proposal is planned for 2025 reporting.*

RBCIREWG Update 8/13/23: *The Risk-Based Capital Investment Risk and Evaluation (E) Working Group added this item to its working agenda. While not specifically addressing privately structured securities, the Working Group's current work on collateralized loan obligations may contribute to addressing this item.*

11. Reliance on Rating Agencies:

Sent a referral to the VOSTF indicating the MWG regulators' agreement to monitor the work of its ad hoc group addressing various rating agency considerations.

VOSTF Update 3/22/23:

- *The Task Force adopted an amendment at its Feb. 21 meeting that effective Jan. 1, 2024, financially modeled collateralized loan obligations (CLO) will not be eligible to use credit rating provider ratings to determine an NAIC Designation.*

- *The Task Force has drafted a list of questions to discuss with each rating agency in future regulatory-only meetings. The questions are in the materials for the Spring National Meeting and will likely being exposed for public comment.*
- *The Securities Valuation Office (SVO) has proposed an amendment to remove Structured Equity and Funds transactions from being eligible to use credit rating provider (CRP) ratings to assign an NAIC Designation. The SVO has proposed defining Structured Equity and Funds investments as investments which, through the insertion of an intervening entity such as a special purpose vehicle (SPV) or limited partnership, enable underlying assets that may not qualify as 'bonds' or be eligible to receive an NAIC Designation under the current regulatory guidance, to be reported as 'bonds' because the intervening entity issues notes and those notes receive a credit rating provider rating. The SVO identified multiple regulatory reporting arbitrage opportunities with these investments that circumvent regulatory guidance using a CRP rating to accomplish that result.*
- *The Task Force adopted a new charge for 2023 to stablish criteria to permit staff's discretion over the assignment of NAIC designations for securities subject to the FE process (the use of CRP ratings to determine an NAIC designation) to ensure greater consistency, uniformity, and appropriateness to achieve the NAIC's financial solvency objectives. The criteria have not yet been proposed.*

VOSTF Update 8/13/23:

- *VOSTF received referral responses from the Financial Condition (E) Committee, the Life Actuarial (A) Task Force, the Financial Analysis (E) Working Group and the Valuation Analysis (E) Working Group. The Life Actuarial Task Force and Valuation Analysis Working Group supported the proposal and provided examples of risk metrics which would be useful to their groups. The Financial Analysis Working Group supported the VOSTF investigating various products because it said the risk metrics could be more effective in helping financial analysts and examiners to fully evaluate and assess investment risks. The Financial Condition Committee said it was worthwhile for the VOSTF to continue to investigate the various products which could be made available to the SVO staff and state regulators that provide some of the alternative investment risk measures as they could obviate the need for the NAIC to collect that information form NAIC Annual Statements. However, the E Committee said that before it could sponsor the proposal it would need more information to fully understand the costs and benefits of such products. This is an ongoing initiative.*

- *VOSTF has drafted a list of questions to discuss with each rating agency in future regulator-only meetings. The SVO has received comments from certain rating agencies and is incorporating those comments into a final list of questions to be agreed to by the Task Force. At the 2023 Spring National, during the discussion of the proposed amendment on Structured Equity and Funds, the Task Force deferred action on the Structured Equity and Funds amendment and directed the SVO staff to draft a distinct process on how it would recommend challenging an NAIC Designation assigned from a credit rating provider (“CRP”) rating pursuant to the Filing Exemption (“FE”) process which the SVO thinks is not a reasonable assessment of risk for regulatory purposes. The SVO subsequently proposed an amendment which would grant the SVO staff a limited amount of discretion over the FE process to address the NAIC’s current blind reliance on credit ratings. The amendment would establish strict due process requirements before the SVO could over-ride a CRP rating including a materiality threshold of a 3-notch difference in order to flag a CRP rating and sufficient notice to insurers to provide time for insurers to appeal SVO assessments. This amendment will continue to be discussed by the Task Force and interested parties.*

12.

Pension Risk Transfer (PRT) Business Supported by Complex Investments.

a. LATF’s Actuarial Guideline:

Sent a referral to the LATF recognizing its work on an Actuarial Guideline which should address the reserve considerations of pension risk transfer (PRT) business. Sent a referral to the SAPWG to address the related disclosure considerations as the goal was to have them in the Notes to Financial Statements.

LATF Update 3/22/23: *The PRT Drafting Group of the VM-22 SG is considering the development of PRT/longevity risk mortality factors. The DG hopes to share data with the Longevity Risk Subgroup of LATF that the Subgroup could consider for C-2 RBC for PRT products and longevity risk transactions.*

SAPWG Completed Actions 3/22/23:

- *Ref #2020-37: Separate Account – Product Identifiers and Ref #2020-38: Pension Risk Transfer - Separate Account Disclosure, which did not result in statutory accounting revisions but instead resulted in modifications to the reporting of PRT transactions in the annual financial statements, was adopted by the SAPWG May 2021. Ref #2021-03BWG was adopted by Blanks (E) Working Group in 2021.*

Comment – *The 2022 review of the initial 2021 disclosures noted that although the instructions were clarified to require by product reporting including the use of a distinct disaggregated product identifier for each product represented; most entities are still broadly grouping PRT activity in the disclosures.*

LATF Update 8/13/23: *The PRT drafting group hasn't met since January, and the Longevity Risk Subgroup is holding off on meeting until the VM-22 Subgroup finalizes the VM-22 methodology*

b. Department of Labor Protections:

MWG Update 8/13/23: *Discussions with DoL continue. DoL is in the process of updating their fiduciary requirements under 95-1, which require due diligence in assessing an insurer prior to a PRT transaction.*

c. State Guaranty Funds Compared to PBGC Protection – NOLHGA 2016 Study:

No further action was deemed necessary.

MWG Update 8/13/23: *No update necessary.*

d. RBC Treatment of PRT Business:

Sent a referral to the Longevity Risk (E/A) Subgroup recognizing its work will also address PRT business and indicating the MWG regulators will monitor this work.

LATF Update 3/22/23: *The Longevity Risk (E/A) Subgroup has not met since the Summer National Meeting. The subgroup will resume the meetings once the currently exposed VM-22 PBR methodology is finalized and adopted to develop and recommend longevity risk factor(s) for the product(s) that were excluded from the application of the current longevity risk factors.*

LATF Update 8/13/23: *No change in this item as the VM-22 framework is not final yet.*

13.

Offshore/Complex Reinsurance:

MWG Update 12/13/22: *MWG regulators are wrapping up the confidential discussions with industry participants and other jurisdictions regarding the use of offshore reinsurers and complex affiliated reinsurance vehicles. They are continuing discussions to identify the best mechanism to ensure reviewing/approving regulators can identify the true economic impacts of the reinsurance*

transaction. MWG regulators will consider further work and/or referrals once they have concluded these discussions.

MWG Update 3/22/23: *At the Spring NM 2023 The Working Group released for comment the reinsurance comparison worksheet designed for regulators to assess cross-border reinsurance treaties where there are different regulatory systems involved. We believe the cross-border reinsurance worksheet will enhance state insurance regulators' ability to monitor these transactions. The comment period ended Apr 28 and the MWG is in the process of addressing comments received.*

MWG Update 8/13/23: *The Reinsurance Worksheet was adopted on a joint FSTF/MWG virtual meeting on June 20, 2023.*

Updates on Actuarial Guideline 53

Fred Andersen, FSA, MAAA

8/13/2023

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related supporting documents are to be prepared in accordance with the NAIC Actuarial Guideline 53. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

AG 53 Background

- Actuarial Guideline 53 was adopted in 2022
- Main purpose: help ensure claims paying ability even if complex assets do not perform as expected
- Requires disclosures and asset-related information for most life insurers over a size threshold
 - An opportunity for companies to tell their stories regarding:
 - Their complex assets & associated risks
 - How their cash-flow testing models address those risks
- First submissions were due April 2023

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 36 of the NAIC Standard Valuation Law (#620) and VM-30 of the Valuation Manual, Section 34A of Model #820 provides that actuarial opinions and related disclosures are required to be reviewed by the appropriate regulatory agencies of the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

AG 53 Reviews – activity to date

Done:

- ✓ AG 53 filings received from 246 life insurers
- ✓ AG 53 Review Group (within the Valuation Analysis Working Group) formed
 - Team of actuaries, investment experts, and other financial staff to perform reviews
- ✓ Review process started with company prioritization, based on prior knowledge and template information

In Progress:

- AG 53 Review Group meeting frequently, with various state regulators-presenting their review findings
- Identifying companies with outlier net yield assumptions
- Engaging with domestic regulators with the goal of decreasing highest net yield assumptions to remove companies from outlier list

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related supporting information are to be prepared in accordance with the NAIC's asset adequacy testing and reporting requirements. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

Implications of Higher Investment Net Yield Assumptions

- More favorable asset adequacy analysis results
- Lower amounts of assets needed for reserves to be considered adequate
 - A signal that more money could be released (dividends or other)
- Concern is, if risk is understated and assets underperform, reserves will turn out to be inadequate and that previously released money may have been needed

Amount to fund \$1 Billion liability in 15 years

Company assumption type	Assumed net yield for high-yield assets	Adequate reserve per company's CFT	Adequate reserve per average conservative company's CFT	Amount (in excess of adequate reserve) available to be released per company's CFT
Most conservative	4.5%	\$ 520,000,000	\$ 520,000,000	\$ -
Moderately conservative	5.8%	\$ 430,000,000	\$ 520,000,000	\$ 90,000,000
Fairly aggressive	6.5%	\$ 390,000,000	\$ 520,000,000	\$ 130,000,000
Outlying / aggressive	7.8%	\$ 320,000,000	\$ 520,000,000	\$ 200,000,000

8/13/2023

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related analyses are to be prepared in accordance with the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

Net Yield Assumptions

A majority of companies assumed Net Yields < 7% for Initial Assets,
but a sizable number of companies assumed Net Yields ≥ 7%

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related supporting documents are to be reviewed by the appropriate regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

AG 53 Reviews – upcoming activities

- Review reinsurance counterparty risk
 - Send requests for additional information, as relevant:
 - Description and reason for significant reinsurance ceded transactions
 - Process and metrics used to evaluate the counterparty's asset risk and financial health
- Review other AG 53-related issues

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related supporting information are to be prepared in accordance with the requirements of the Valuation Manual. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

Draft: 8/21/23

Receivership and Insolvency (E) Task Force
Seattle, Washington
August 14, 2023

The Receivership and Insolvency (E) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: James J. Donelon, Chair (LA); Glen Mulready, Vice Chair, represented by Donna Wilson and Jamin Dawes (OK); Mark Fowler represented by Ryan Donaldson (AL); Andrew N. Mais represented by Jane Callanan (CT); Doug Ommen represented by Kim Cross and Daniel Mathis (IA); Dana Popish Severinghaus represented by Jacob Stuckey, Bruce Sartain and Susan Berry (IL); Vicki Schmidt represented by Philip Michael (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by Shelley Forrest (MO); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented by Lindsay Crawford (NE); Justin Zimmerman represented by David Wolf (NJ); Judith L. French represented by Matt Walsh (OH); Andrew R. Stolfi represented by Brian Fjeldheim (OR); Michael Humphreys represented by Laura Lyon Slaymaker and Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Michael Wise represented by Ryan Basnett (SC); Carter Lawrence represented by Stephanie Cope (TN); Cassie Brown represented by Brian Riewe (TX); Mike Kreidler represented by Charles Malone (WA); and Nathan Houdek represented by Levi Olson (WI).

1. Adopted its Spring National Meeting Minutes

Crawford made a motion, seconded by Biehn, to adopt the Task Force's March 23 minutes, which includes one edit (Attachment One). The motion passed unanimously.

2. Adopted the Report of the Receivership Financial Analysis (E) Working Group

Wilson said the Receivership Financial Analysis (E) Working Group plans to meet Aug. 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership.

Slaymaker made a motion, seconded by Biehn, to adopt the report of the Receivership Financial Analysis (E) Working Group. The motion passed unanimously.

3. Adopted the Report of the Receivership Law (E) Working Group

Slaymaker said the Receivership Law (E) Working Group held two conference calls on July 24 and May 23. On the May 23 call, the Working Group exposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act (#540)* related to coverage of policies that are subject to restructuring mechanisms, specifically insurance business transfers (IBTs) and corporate divisions (CDs), as well as revisions related to clarifying coverage for cybersecurity insurance.

Slaymaker said the Working Group received comments from three interested parties on the restructuring mechanisms amendments, which were discussed on the July 24 call. The focus of those comments was primarily on the assumed claims transaction provisions that are removed and the inclusion of related optional provisions for the few states that feel the need to include that language. The Working Group adopted the amendments to Model #540 on the July 24 call. Slaymaker said the Working Group is not asking the Task Force to adopt the amendments at this meeting.

Slaymaker said on the July 24 call, the Working Group also heard a presentation from a data archeologist that requested that states consider extending their records retention of closed receivership estate records or transferring records to university libraries after the estate closes. The presentation raised some interesting topics, but no action was discussed.

Patrick Cantilo (Cantilo and Bennett LLP) said he submitted comments on the amendments to Model #540 (Attachment Two). He said his views are his own and not his clients. He said the goals of the IBT and CD amendments are to assure that the implementation of those transactions does not result in the loss of guaranty association coverage for policyholders. He said he supports that goal. The second goal, which will not be found in the description of the proposed amendments is to create an optional removal of amendments already adopted in 2009 for providing policyholder's guaranty association coverage in what are called assumed claims transactions. If this Task Force or the Receivership Law (E) Working Group has determined that there should be consideration of reversing the 2009 amendments, that should be described openly. He said the amendments that are represented do not readily identify that the purpose is to remove that 2009 coverage. He said he submitted to the Working Group a much simpler amendment that would accomplish the charge. He said the amendments as proposed go much further and create a mechanism to remove the 2009 extension of protection for the assumed claims transactions. He said that should be deliberated and interested parties encouraged to express their views on the removal of those protections.

Joe Torti (Fairfax U.S.) said he is vice president of regulatory affairs for Fairfax U.S. and chairman of the board of directors for the National Conference of Insurance Guaranty Funds (NCIGF). He said he is speaking at this meeting on behalf of the American Property Casualty Insurance Association (APCIA) and the National Association of Mutual Insurance Companies (NAMIC). He said he urges the Task Force to expose the draft restructuring and cyber amendments and move forward to adoption expeditiously. He said he is in favor of the coverage neutrality concept for claims resulting from restructured business, such that the guaranty association coverage should remain in place for claims that would have had guaranty association coverage if they had not been transferred from the original issuer, or conversely, coverage should not be created for claims that would not have been covered before the transaction. This concept is embodied in the draft amendments presented at this meeting. Restructuring transactions, while a useful tool, were never intended to afford coverage by guaranty associations on policy claims that were not covered before the transaction.

Cope made a motion, seconded by Biehn, to adopt the report of the Receivership Law (E) Working Group (Attachment Three). The motion passed unanimously.

4. Exposed Model #540 Amendments

Slaymaker said subsequent to the Receivership Law (E) Working Group call on July 24, Wake, a member of the drafting group, identified a few conflicts where certain assumed claims language in the drafting notes conflicts with the new optional provisions in Section 5G(3) and Section 8A(3). The exposure draft reflects removing those conflicting paragraphs, while still maintaining the key portions of the 2009 assumed claims transaction language in the drafting notes. The exposure draft also includes the correction of references in certain sections. She said while most of these changes are only to drafting notes, given past discussion over the assumed claims provisions, she recommends exposing these subsequent edits for a further 30-day public comment period.

Commissioner Donelon said hearing no objection, the amendments to Model #540 would be exposed for a 30-day public comment period ending Sept. 14, 2023.

5. Exposed a U.S. Resolution Template

Jane Koenigsman (NAIC) said a template has been drafted that may be used by a U.S. lead state to describe the U.S. receivership regime within resolution plans or to facilitate dialogue with international supervisors during supervisory colleges and crisis management group (CMG) discussions. It is intended to be a summary to provide enough information to the international jurisdiction to gain an understanding of the U.S. receivership process. The template does not constitute a complete resolution plan. There are other aspects of a resolution plan that are specific to a company and its unique risks. It is the responsibility of the group-wide supervisor in consultation with the CMG to determine if the group-wide supervisor should develop a resolution plan and what to include in it.

Koenigsman said a state would need to modify the template for the individual state's laws, regulations, and receivership practices and supplement it with any regulations that apply to the insurer (e.g., life insurance versus property insurance, product types, or investment types).

Koenigsman asked states to review and provide feedback on the template, especially if the state has an internationally active insurer and understands what information would be most valuable to share with international regulators.

Commissioner Donelon said hearing no objection, the draft U.S. resolution template would be exposed for a 30-day public comment period ending Sept. 14, 2023.

6. Heard an Update on International Activities

Wake said the International Association of Insurance Supervisors (IAIS) Resolution Working Group met at the end of May 2023 to work on the policyholder protection issues paper. The Working Group has also been discussing updates to the IAIS Insurance Core Principles (ICPs) that deal with resolution. Wake said this review of ICPs is in progress, and the Working Group is near to reaching a consensus to have a more topic-focused and outcomes-oriented approach to the appropriate resolution powers rather than a list of resolution powers.

Wake said he is pleased to welcome William Arfanis (CT) as a second NAIC representative on the IAIS Resolution Working Group. The Working Group is meeting next in September 2023.

Wake said the work on the holistic framework progress monitoring continues. One accomplishment is the work in progress that we exposed today on the U.S. resolution template.

7. Discussed Part A Financial Regulation and Accreditation Standards for Receivership and Guaranty Association Laws

Commissioner Donelon asked NAIC staff to explain the Part A Financial Regulation and Accreditation standards for states' receivership and guaranty association laws and the historical review performed by the Task Force.

Koenigsman said the Task Force has undertaken a review of the *Insurer Receivership Model Act* (#555), the *Life and Health Insurance Guaranty Association Model Act* (#520), and Model #540. Beginning in 2009, the former Critical Elements (E) Advisory Group reviewed these models to identify provisions that were non-controversial and critical for states to adopt. In 2014, the former Receivership Model Law (E) Working Group began with the previous work and narrowed the focus of the review to those provisions that were specific to a multi-state receivership. The Working Group further focused on reviewing U.S. laws in comparison to the Financial Stability Board's (FSB) *Key Attributes of Effective Resolution Regimes for Financial Institutions*. A memo was sent to states by the Financial Condition (E) Committee in 2017 to provide guidance and encourage states to adopt improvements in state laws regarding the recognition of stays and injunctions.

Koenigsman said in 2018, the Task Force undertook further review of the U.S. receivership laws related to macroprudential surveillance. This work resulted in several recommendations, including:

- The new *Guideline for Definition of Reciprocal State in Receivership Laws* (#1985).
- Amendments to the *Insurance Holding Company System Regulatory Act* (#440) for the continuity of essential services and functions by affiliated entities.
- Updated guidance in the *Receiver's Handbook for Insurance Company Insolvencies*.
- Updated guidance for the implementation of the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), including resolution plans, which include the U.S. resolution template the Task Force exposed for public comment during this meeting.

Koenigsman said in 2020, an ad hoc group was formed to discuss Part A Financial Regulation and Accreditation standards, specifically interpretive guidance in the accreditation interlineations. Concerns were raised at that time that making any changes could be misinterpreted or have unintended consequences. The Task Force did not make any proposals to clarify the accreditation interlineations at that time.

Dan Schelp (NAIC) summarized the Part A Financial Regulation and Accreditation standards for receivership and guaranty association laws. He said substantially similar standards mean a state's laws, regulations, or administrative practices are substantially similar to the significant elements identified in the model. Receivership and guaranty association laws do not fit into this category. Substantially similar does not mean a state is required to adopt every significant element of the law or regulation. He said the standards are not a uniformity requirement but rather a minimum financial standards requirement. It is required that states demonstrate that the law, regulation, or administrative practice results in solvency regulation that is similar in force and no less effective than the model upon which it is based. A substantially similar standard does not result in uniformity; although, in a practical matter, that is often the case. There are some Part A standards that do not require substantially similar standards. These are regulatory framework standards, which include the guaranty fund models. A regulatory framework provides for a state to detect the occurrence of the solvency-related event or activity contemplated by the model law and to exercise appropriate oversight when such an activity or event occurs. It also states that if potential harm or activity occurs, a regulatory framework would have sufficient resources, including regulatory tools, vested in the state insurance department to take appropriate action.

Schelp said with respect to the guaranty fund models, a state must have a regulatory framework that addresses the payment of policyholder obligations when a company is deemed to be insolvent. There is a requirement that a guaranty fund addresses obligations owed to policyholders, but there is no significant element as to the amount of the obligation. Although many states are uniform, there is some variation among states on claims limits, as some are higher or lower than the model.

Schelp said the receivership standard is not substantially similar, nor is it a regulatory framework. State law must set forth a receivership scheme for the administration of an insurance company found to be insolvent, similar to Model #555. Although there is not much guidance on the definition of a scheme, historically, it has been interpreted to mean a regulatory framework. The benefit limit in Model #540 is \$500,000.

Commissioner Donelon asked what the lowest and highest guaranty association benefit limit is in states for property/casualty (P/C) insurance.

Doug Hartz (Private Citizen) said worker's compensation is unlimited.

Barbara Cox (Barbara Cox LLP), outside counsel for the NCIGF, said Michigan has a benefit limit that is a certain percentage of direct written premium, which could be upwards of \$5 million. New York has a \$1 million benefit

limit. California has a homeowners benefit limit that includes various coverage components of \$1 million, resulting from recent catastrophe activity. Cox said workers' compensation has no limit in the 50 U.S. states.

8. Heard an Update on a Receivership Tabletop Exercise

Koenigsman said the NCIGF, and the National Organization of Life and Health Guaranty Associations (NOLHGA) proposed a receivership tabletop exercise at the Spring National Meeting. NAIC staff reached out to the states to get feedback on their interest and preferences for an exercise. Koenigsman said of the 29 states that responded most preferred an in-person session at the beginning of an NAIC national meeting. She said NAIC staff will look at the availability of time and space to schedule the exercise at the Fall National Meeting.

9. Heard an Announcement of the IAIR Technical Development Series

Wilson said the International Association of Insurance Receivers (IAIR) will host its annual Technical Development Series (TDS) Sept. 27–29 in San Diego, CA. TDS topics will include legal challenges in receivership, how to resolve them, and other issues of interest to receivers.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/RITF/2023 Summer NM/RITF_Minutes081423.docx

Draft: 3/28/23

Receivership and Insolvency (E) Task Force
Louisville, Kentucky
March 23, 2023

The Receivership and Insolvency (E) Task Force met in Louisville, KY, March 23, 2023. The following Task Force members participated: James J. Donelon, Chair, and Stewart Guerin (LA); Glen Mulready, Vice Chair, represented by Donna Wilson and Jamin Dawes (OK); Mark Fowler represented by Ryan Donaldson (AL); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais (CT) ~~represented by Jon Arsenaault~~; Doug Ommen represented by Daniel Mathis (IA); Dana Popish Severinghaus represented by Kevin Baldwin and Bruce Sartain (IL); Vicki Schmidt represented by Levi Nwasoria (KS); Sharon P. Clark represented by Rodney Hugle (KY); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by Shelley Forrest (MO); Troy Downing represented by Steve Matthews (MT); Mike Causey represented by Monique Smith (NC); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by David Wolf (NJ); Andrew R. Stolfi represented by Doug Hartz (OR); Michael Humphreys represented by Laura Lyon Slaymaker and Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Michael Wise represented by Ryan Basnett (SC); Cassie Brown represented by Brian Riewe (TX); and Nathan Houdek represented by Mark McNabb (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Smith made a motion, seconded by Donaldson, to adopt the Task Force's Dec. 14, 2022, minutes (*see NAIC Proceedings – Fall 2022, Receivership and Insolvency (E) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Receiver's Handbook (E) Subgroup

Baldwin said the Receiver's Handbook (E) Subgroup met Dec. 21, 2022, and took the following action: 1) adopted revisions to Chapters Three, Four, and Five of the *Receiver's Handbook for Insurance Company Insolvencies* (Receiver's Handbook); and 2) exposed Chapters Six and Seven of the Receiver's Handbook for a 45-day public comment period ending Feb. 6, 2023. The Subgroup received helpful clarifications.

The Subgroup plans to schedule a meeting to adopt Chapters Six and Seven. The drafting groups are continuing their work to complete the remaining chapters. The Subgroup is expected to complete the Receiver's Handbook project by the fall of 2023.

Hartz made a motion, seconded by Slaymaker, to adopt the report of the Receiver's Handbook (E) Subgroup, including its Dec. 21, 2022, minutes (Attachment One). The motion passed unanimously.

3. Adopted the Report of the Receivership Financial Analysis (E) Working Group

Wilson said the Receivership Financial Analysis (E) Working Group plans to meet March 23 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership.

Matthews made a motion, seconded by Crawford, to adopt the report of the Receivership Financial Analysis (E) Working Group. The motion passed unanimously.

4. Adopted the Report of the Receivership Law (E) Working Group

Slaymaker said the Receivership Law (E) Working Group exposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act* (#540) related to the coverage of policies that are subject to restructuring mechanisms, specifically insurance business transfers (IBTs) and corporate divisions (CDs). The Working Group received comments and alternative amendments. The comments raised some additional considerations and scenarios specifically around novation and assumptions, as well as which sections of the model may also be affected. A drafting group comprised of Working Group members, the National Conference of Insurance Guaranty Funds (NCIGF), and interested parties was formed. The drafting group met March 6 to discuss a revised draft of amendments. There is a remaining item to resolve, therefore, the drafting group plans to meet again before sending the draft to the Working Group.

Slaymaker said if the Executive (EX) Committee approves the Request for NAIC Model Law Development related to cybersecurity insurance at its meeting on March 23, the Working Group will also schedule a call to discuss and expose draft amendments to Model #540 for cybersecurity insurance.

Hartz made a motion, seconded by Kaumann, to adopt the report of the Receivership Law (E) Working Group. The motion passed unanimously.

5. Heard an Update on International Activities

Wake said the International Association of Insurance Supervisors (IAIS) Resolution Working Group released for public consultation the application paper on policyholder protection schemes. Comments on the public consultation are due to the IAIS on April 14. The International Insurance Relations (G) Committee will hold a meeting on April 13 to consider comments from the NAIC. Anyone wishing to submit comments for the Committee to consider should send them to NAIC staff by March 27.

Wake said in follow-up to the IAIS's Targeted Jurisdictional Assessment (TJA) for which the U.S. participated and was assessed, the IAIS will conduct a follow-up to assess each jurisdiction's progress in addressing the findings where a jurisdiction did not receive a "fully observed" assessment.

Wake said the IAIS is expected to begin a project to update the IAIS Insurance Core Principles (ICPs) and Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) provisions related to resolution and recovery issues. The ICPs and the related issue papers will be discussed at the IAIS meeting in May 2023.

6. Heard a Presentation on a Proposed Receivership Tabletop Exercise

Peter G. Gallanis (National Organization of Life and Health Insurance Guaranty Associations—NOLHGA) presented a tabletop receivership proposal. He said the NOLHGA and the NCIGF conducted a tabletop exercise on how to respond to the insolvencies of hypothetical insurance carriers. He said there has been a lot of turnover in the receivership community, and many have not had hands-on experience with how troubled insurers are identified by the financial regulators, how the domiciliary commissioner determines remediation steps, developing a rehabilitation plan, liquidation, developing a response to a nationally significant company that triggers the guaranty associations, and management of an insolvency case. The tabletop is a hands-on interactive participatory exercise to talk through various issues. Gallanis said the NOLHGA membership found it to be a very helpful training exercise. He said he spoke with Commissioner Donelon and Tom Travis (LA) about this exercise. State insurance

regulators have also seen some turnover. He said he discussed with Commissioner Donelon about the tabletop being an exercise that could provide training to financial regulators, commissioners, and states' receivership staff who may wish to participate and who attend other educational programs or the NAIC national meetings.

Gallanis said he was asked by Louisiana to develop a timeline, provide more details on how to move forward with the proposal, provide more details on who from the financial regulators, receivership staff, and possibly industry would participate, and work with the NAIC to identify a date and time for a presentation such as this (Attachment Two).

Roger Schmelzer (NCIGF) said this is a time of relative strong agreement between state insurance regulators, guaranty funds, and receivers. He said it would be important to go through issues and figure out where the disagreement is before having a real insolvency scenario where stakes become extremely high. The recent banking industry issues with Silicon Valley Bank and others and the actions of the federal banking regulators indicate an inclination for the federal government to be more involved in financial services that are regulated at the state level. This program is a way to take that seriously and be more prepared for what might come.

Bill O'Sullivan (NOLHGA) said as more practical knowledge is gained from the program, as well as a better understanding of the tools, relationships and collegiality are built to be able to better share information and strategies and agree on a common approach to protect policyholders. This program builds the foundation for those kinds of critical relationships.

Schmelzer said the NCIGF is doing more work to plan what a program would look like and get input. Connecting this program with an NAIC meeting or event would facilitate attendance by the state insurance regulators. Regarding timing, Schmelzer said some time in the fall would work if everything can be pulled together. He said the NCIGF welcomes the Task Force's support in this effort.

Guerin said he agrees that this training would be beneficial for the reason of staff turnover. He said Louisiana had not had a receivership for over 15 years and suddenly had multiple receiverships due to a hurricane. He said this training would have been beneficial and allowed Louisiana to work more expeditiously through some of the issues.

Commissioner Donelon said the receiverships in Louisiana over the past year have the Louisiana legislature and industry looking at modifications to its guaranty fund law and, in particular, the assessments and recoupment of those assessments. He said he agrees with Guerin, and he said Louisiana has been able to contract with receivership experts that have decades of experience doing receiverships. He said the banking challenge Schmelzer referenced is one that state insurance regulators need to gear-up for to be prepared.

Guerin said as the program is still in development, he requested an update at a future time. He said to let the Task Force know if the NOLGHA or the NCIGF have any requests of the Task Force.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

RE: MODEL 540 COMMENTS

Dear Commissioners Donelon and Mulready and members of the Task Force:

Please accept this letter as my comments regarding the August 7, 2023 amendments to the Property and Casualty Insurance Guaranty Association Model Act (# 540) Exposure Draft proposed by the Receivership Law (E) Working Group (RLWG). The proposed amendments address two main issues: (1) a request by the Restructuring Mechanism (E) Working Group (RMWG) that the RLWG propose amendments to Model 540 if necessary to assure that implementation of Insurance Business Transfer (IBT) and Corporate Division (CD) transactions will not result in loss by policyholders of guaranty association protection, and (2) coverage of cybersecurity insurance, approved by the Executive (EX) Committee. I address only the first issue, regarding IBT and CD transactions. I offer no comment as to the second issue, related to cybersecurity insurance.

EXECUTIVE SUMMARY

With respect to the first issue, I submit respectfully that the proposed amendments (called Version 1 by the RLWG):

1. Go far beyond the charge to the Working Group,
2. Unnecessarily scale back guaranty association protection for policyholders in certain insolvencies unrelated to IBT and CD transactions by reversing amendments of Model 540 adopted by the NAIC in 2009,

**Receivership and Insolvency (E) Task Force
August 10, 2023, page 2**

3. Solely for that reason, are unduly complicated (amending 278 lines of text and comment in Model 540), and
4. Create illogical outcomes.

The proposed amendments contrast with amendments (called Version 2 by the RLWG) I offered for the same purpose that I submit respectfully:

1. Were much simpler (4 lines of amendment compared to 278 in Version 1),
2. Would accomplish fully the charge to preserve guaranty association coverage in IBT and CD transactions,
3. Would not roll back any coverage already adopted by the NAIC, and
4. Would not have created the illogical outcomes.

The details are provided below. In evaluating this issue, I would suggest that the Task Force pose the following questions to the Working Group:

1. Would Version 2's 4-line amendment accomplish fully the preservation of guaranty association coverage in IBT and CD transactions requested by the RMWG?
2. What advantage does the adopted Version 1's 278-line proposed amendment provide?
3. Would the proposed Version 1 reverse amendments adopted the NAIC in 2009?
4. If so, who proposed this reversal to the Working Group and who charged the Working Group with taking on an amendment for this reversal?
5. On what empirical data is the Working Group basing its recommendation for this reversal and scale back in guaranty association coverage?

BACKGROUND

Last summer, the RMWG requested that the RLWG propose amendments to Model 540, if necessary to assure that implementation of IBT and CD transactions, will not result in loss by policyholders of guaranty association protection. That was the entire charge to the RLWG. Two competing proposals were submitted to RLWG by a drafting group appointed for that purpose. The first (Version 1) was drafted by Barbara Cox and Rowe Snider - associated with the National Conference of Insurance Guaranty Funds (NCIGF) - and Robert Wake of the Maine Bureau of Insurance. Concerned about issues presented by this proposal, I offered a separate proposal (Version 2). After several discussions and edits, the RLWG voted to forward Version 1, but not Version 2, to this Task Force.

I submit respectfully that this Task Force should not adopt Version 1 and should not recommend its adoption to the E Committee. There are three principal reasons for this conclusion.

First, the proposal adopted by the RLWG deliberately goes far beyond the RMWG charge, choosing to also address a self-appointed issue regarding guaranty association coverage of "assumed claims". This additional issue was not referred to it by the Task Force or the RMWG and is unrelated to assuring the continuity of guaranty association protection for policyholders in IBT and CD transactions.

Receivership and Insolvency (E) Task Force
August 10, 2023, page 3

Second, Version 1 creates a mechanism for reversing amendments to Model 540 adopted by the NAIC in 2009 that provide guaranty fund coverage for policyholders in “assumed claims” transactions (described in more detail below). Neither this Task Force nor the RMWG requested that the RLWG address this matter, let alone reverse amendments approved by the NAIC in 2009. The Working Group took on this task *sua sponte*. Not only is there no reason to “peel back” this policyholder coverage in order to assure continued protection in the case of IBTs and CDs, I submit that there is no defensible public policy in support of this reduction in policyholder coverage.

Third, Version 1 is very complicated and contemplates editing 278 lines in the Model Act text and comments. It would delete 180 lines of current text and 15 lines of current comment, add 75 lines of new text and 5 lines of new comment, and amend another 3 lines of text. In contrast, Version 2 accomplishes fully the goal of the referral, but only requires editing 4 lines of the Model Act to do so. Among other things, this unnecessary complexity will make it more difficult for individual departments to propose these changes to their own legislatures. This complexity is made necessary only by the effort to roll back “assumed claims” coverage. As demonstrated by Version 2, accomplishing the referral’s goals is much, much simpler.

Further, in scaling back guaranty fund coverage for assumed claims, Version 1 would inject new potential problems and ambiguities into Model 540. For example, Version 1:

1. Proposes to delete language (Subsection D) that already goes a long way in assuring continuity of guaranty fund coverage in the case of IBTs and CDs. In fact, it is likely that policyholders would retain guaranty fund coverage in most IBT and CD transactions without making ANY change to Model 540. But if language is desired to avoid any uncertainty, the four lines of Version 2 would accomplish this goal.
2. Gives rise to illogical outcomes. For example, consider this scenario:
 - a. Insurer A assumes a workers compensation block, (including open workers compensation claims), from a self insured trust in year 1;
 - b. In years 2 through 15, Insurer A pays premium taxes and guaranty association assessments on the workers compensation policies assumed with the block, including those under which open claims had arisen that were also assumed;
 - c. In year 16, Insurer A becomes insolvent.
 - d. Under Version 1, those assumed workers compensation claims would not be covered by the guaranty funds because the policy had not been issued originally by a member insurer. See Version 1, section G(1). It would make no difference that Insurer A will have been paying premium taxes and assessments on these policies for fifteen years.
 - e. Moreover, at that point, the assumed claim and policy are likely to be all but indistinguishable from Insurer A’s other policies and claims. Yet, Version 1 will create two classes of business, one covered the other not, though they be otherwise largely indistinguishable.

**Receivership and Insolvency (E) Task Force
August 10, 2023, page 4**

3. In response to my opposition to scaling back assumed claims coverage, the drafters of Version 1 then added a new optional section G(3) intended to revive the coverage they removed in section G(1). Notably, this optional section is opposed by NCIGF. See June 20, 2023, letter from NCIGF to RLWG. Of course, there is no justification for the convoluted complexity of the 278 line amendment that takes away assumed claims coverage in section G(1) and then adds it back in section G(3) unless the hope is that, as NCIGF advocates, section G(3) will not be adopted.

The full text of Version 1, as adopted by RLWG, is included beginning at page 7 of the August 3 materials for the Task Force’s August 14 meeting in Seattle. Despite my request, Version 2 and my comments are not included in those materials. I thank NAIC staff for distributing them now.

PROPOSED VERSION 2

Here is the entire text of Version 2, what I propose as the amendment of Model 540 to assure the continuity of guaranty association coverage for policyholders in an IBT or CD transaction. The proposed edits are underlined and in blue print.

H. *“Covered claim” means the following:*

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer’s state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...*

No other change to the Act would be needed to fulfill the goal of the referral to the RLWG. The NAIC could adopt this simple amendment thereby assuring that IBT and CD transactions would not result in the loss of guaranty association coverage.

In my effort to be as helpful to the RLWG as possible, I did note that Model 540 does not define IBT or CD transactions and offered a suggestion for doing so if it were deemed desirable.

- (c) *For purposes of this Act, an Insurance Business Transfer or Corporate Division transaction shall mean a transaction [ALTERNATIVE 1] as described in [INSERT STATE STATUTORY CITATIONS] [OR ALTERNATIVE 2] authorized by the laws of another state authorizing such transactions and as the result of which, apart from other provisions, the insurer assumed all of the obligations under the policy from a transferor which was thereby discharged from such obligations.*

To be clear, however, this definition is an optional suggestion, unrelated to the assumed claims issue and not strictly necessary to achieve the stipulated purpose.

**Receivership and Insolvency (E) Task Force
August 10, 2023, page 5**

During the discussions of my proposed Version 2, the Chair observed that, since many states have not adopted the assumed claims provisions added to Model 540 in 2009, Version 2 might not make sense in those states. That is true because Version 2 (like Version 1) was intended to amend Model 540 as it exists currently. However, given the importance of preserving guaranty association coverage in IBT and CD transactions in every state, regardless of whether they had adopted the 2009 amendments, I offered an alternative to Version 2, that could be used in states that have not adopted the 2009 assumed claims amendment:

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...*

I also offered two other two alternatives (not salient to this discussion) that would have enabled states to adopt Version 2 to preserve coverage for IBT and CD transactions depending on whether or not they also wanted to include guaranty association coverage for transactions in which the recipient company is not a member insurer. Because that essentially would mean that the recipient company would not be a licensed insurer, it is difficult for me to conceive of circumstances in which commissioners would want blocks of insurance for consumers (those implicating guaranty association coverage) transferred to them.

What is important is that all of the alternative iterations of Version 2 I offered the RLWG have the same virtue as the basic proposal: they only envision limited (3 or 4 lines) edits to Section H(1). Thus, no matter what its preference, under Version 2, a state could accomplish very simply the referral's goal of preserving coverage in the case of IBTs or CDs, whether or not they had adopted the 2009 assumed claims amendments.

The simple explanation for the difference between these competing proposals is that, unlike my Version 2, NCIGF's Version 1 is structured to permit the NAIC to reverse course now and remove the assumed claims coverage added in 2009. If it were not for that new goal, there would be no reason to prefer the 287 line edits of Version 1. That new goal, of course, was not part of the charge to the Working Group.

This point merits a bit of further explanation. Version 2 DOES enable an individual state to provide guaranty association coverage for IBT and CD transactions WITHOUT assumed claims coverage. Where it differs from Version 1, adopted by the Working Group, is that the latter enables amendment of the Act to ELIMINATE EVEN THE POSSIBILITY of assumed claims coverage for states adopting the Model. I submit respectfully that there is no public policy justification for this *sotto voce volte-face*.

**Receivership and Insolvency (E) Task Force
August 10, 2023, page 6**

THE ASSUMED CLAIMS COVERAGE

What is the assumed claims coverage that has given rise to this spirited debate? The 2009 amendments adding that coverage were the result of the Virginia receivership for Reciprocal of America (ROA), a workers compensation and professional liability insurer doing business primarily in the southeast. In the 1990s, when the workers compensation market tightened and rates increased, a number of institutional ROA workers compensation insureds moved their coverage to existing or newly formed self insured vehicles. By the turn of the millennium, when the market softened, those blocks were once again assumed by ROA in assumption reinsurance, loss portfolio transfers, or similar transactions. In 2003, ROA was placed in receivership and eventually in liquidation. A number of guaranty associations declined to provide coverage for claims arising under these blocks because they had been assumed from non-member insurers. Even more, they objected to the liquidator using estate assets to pay those same claims, asserting that they were not entitled to policyholder priority and therefore could not be paid from estate assets until guaranty association had been fully reimbursed for their payment of covered claims. The issue was litigated vigorously in Virginia courts, resulting in a ruling that these claims were obligations to policyholders just as those arising under policies issued directly by ROA. See August 24, 2005, Final Order of the Virginia State Corporation Commission, attached. While an appeal was lodged from this order, it was later abandoned. See December 22, 2005, Withdrawal of Appeal, also attached.

This litigation proved expensive for the ROA receivership and extremely injurious and disruptive to injured workers whose workers compensation benefits were interrupted by the guaranty association challenge. In an effort to avoid repetition, in 2004 the Virginia General Assembly adopted amendments to Virginia Code Section 38.2-1603, the “covered claims” definition of the Virginia Property and Casualty Insurance Guaranty Association Act (the Virginia version of Model 540). The amendments specified that assumed claims, such as those at issue in ROA, were within the scope of guaranty association coverage.

There followed efforts to accomplish the same result for the entire country, which took the form of the amendment of Model 540 adopted by the NAIC in 2009 over vigorous opposition from the NCIGF. Without speculating as to the opposition or other cause for this, it is true that few states have since adopted these amendments, just as even fewer states have done so for the Insurance Receivership Model Act (Model 555), adopted by the NAIC in 2005. Nonetheless, as of this writing, Models 540 and 555 represent the judgment of the NAIC as to how insurance insolvencies should be managed.

THE RENEWED ATTACK

Under the banner of “coverage neutrality”, the NCIGF has seized on the IBT/CD referral to the RLWG as the opportunity to renew its attacks on the assumed claims coverage incorporated by the NAIC in 2009. What is remarkable, of course, is that the assumed claims coverage issue has nothing to do with preservation of guaranty association protection for policyholders in IBT and CD transactions. Arguably, Model 540 already does that without the need for any amendment at all. It does so precisely because of the amendments adopted in 2009, though they were intended for the

**Receivership and Insolvency (E) Task Force
August 10, 2023, page 7**

narrower circumstances than in controversy. This much I pointed out to the RLMG on November 9, 2022, when I suggested that,

“[a]t most, if one wanted to adopt a “belt and suspenders” approach, the language in Section D(2) (or subsection (3) of Alternative 2) could be amended as follows:

***An assumption reinsurance or other transaction in which all of the following occurred:*”**

Among the responses to this argument, was that few states had adopted the 2009 amendments. That led me to propose the simple 4-line Version 2 that could be used in states that had not adopted the assumed claims language to assure that IBT and CD transactions would not result in loss of guaranty association protection.

So, what is really at issue in today’s debate is whether the Task Force, without having been asked to do so, wants to propose to the E Committee and then to the NAIC that it revoke its 2009 decision to provide in Model 540 the possibility of guaranty association coverage to claimants like the ROA workers compensation insureds described above. I submit respectfully that there is no defensible public policy that would be served by such an about face. I urge this Task Force to continue putting policyholder interests at the top of its list of priorities and adopt my proposed Version 2 in response to te RMWG referral.

As usual, my firm and I are not compensated for our contributions to the deliberations of the Task Force. We do not, in this matter, represent the interests of any constituency other than our effort to protect policyholders who are otherwise largely unrepresented in these discussions. The views I express are strictly my own and not offered on behalf of any client or organization. They are informed generally by my experience with troubled insurers during the last four decades, and specifically by my work on behalf of policyholders of failed insurers. I would be happy to answer any questions about these matters.

I thank you for your kindness in considering my comments.

Very truly yours,

Patrick H. Cantilo

COMMONWEALTH OF VIRGINIA
STATE CORPORATION COMMISSION
AT RICHMOND, AUGUST 24, 2005

APPLICATION OF
RECIPROCAL OF AMERICA and
THE RECIPROCAL GROUP

CASE NO. INS-2003-00239

For a Determination Whether Certain Workers'
Compensation Insurance Policy Payments May be
Made to Claimants Formerly Covered by SITs and GSIAs

FINAL ORDER

On July 11, 2003, the Deputy Receiver of Reciprocal of America¹ filed an Application for Order Authorizing the Continuation of Workers' Compensation Disability Payments by Reciprocal of America and The Reciprocal Group for Workers' Compensation Claims Denied Coverage by State Guaranty Associations ("Application") in Case No. INS-2003-00024. Therein, the Deputy Receiver of ROA sought an order from the State Corporation Commission ("Commission") authorizing him to continue payment of medical and recurring partial or total disability payments for workers' compensation claims that were assumed by ROA through assumption reinsurance, or similar transactions, and denied or likely to be denied coverage by the applicable state guaranty associations.²

In the Application, the Deputy Receiver of ROA asserted that the guaranty associations of the applicable states have refused, or likely will refuse, to make certain workers' compensation insurance policy payments for workers' compensation claims that ROA assumed from Self-Insured Trusts ("SITs") in Alabama, Arkansas, Kentucky, and Missouri and Group Self-

¹ Reciprocal of America and The Reciprocal Group are collectively referred to herein as "ROA."

DOCUMENT CONTROL

Insurance Associations ("GSIAs") in Mississippi, North Carolina, Tennessee, and Virginia (collectively referred to as the "Assumed Businesses") as a result of assumption reinsurance or similar transactions ("Assumed Claims").³ The Deputy Receiver of ROA noted that the Assumed Claims likely will not be paid because the Assumed Businesses were not member insurers and/or the policies under which the claims arose were not ROA policies. The payments purportedly totaled approximately \$125,139 weekly.

The Deputy Receiver of ROA further contended that the insureds of the Assumed Businesses are direct insureds of ROA and, due to the necessity for continued payment by the recipients thereof, requested authorization from the Commission to continue making such payments.⁴ The Deputy Receiver of ROA classified the Agreements as "assumption reinsurance."⁵ The Deputy Receiver of ROA further asserted that the livelihood of many injured workers is dependent upon continued receipt of the payments and that a discontinuation of such payments would cause the recipients to suffer a substantial hardship.⁶ Accordingly, the Deputy Receiver of ROA sought an order from the Commission authorizing the continued payment of workers' compensation insurance policy claims assumed by ROA through assumption reinsurance or similar transactions and denied or likely to be denied coverage by the applicable state insurance guaranty associations.

On August 14, 2003, the Commission entered an Order Scheduling Hearing on Application, and on August 18, 2003, the Commission entered an Order Clarifying Previous

³ Such Assumed Claims and assets of the Assumed Businesses were purportedly assumed by ROA through merger agreements or different forms of assumption agreements ("Agreements"). Application at 4.

⁵ Id. at 6-7.

⁶ Id. at 9. The Deputy Receiver stated that payments to approximately 450 injured workers are at stake. Id. at 10.

Order ("Orders"). In the Orders, the Commission scheduled a hearing for September 17, 2003, to determine whether the insureds of the Assumed Businesses are direct insureds of ROA and therefore a direct responsibility of ROA or, if not, whether such insureds' claims should be treated as "hardship" claims. The Commission further ordered that the Deputy Receiver of ROA is not directed or authorized to make any workers' compensation insurance policy payments to claimants of the SITs or GSIAAs until further order of the Commission.

A number of other parties, including the SDRs of the Tennessee Companies,⁷ the Virginia Property and Casualty Insurance Guaranty Association ("VPCIGA"), the Indiana Insurance Guaranty Association, the Kansas Insurance Guaranty Association, the Mississippi Insurance Guaranty Association, the Tennessee Insurance Guaranty Association, and the Texas Property and Casualty Insurance Guaranty Association (collectively, "Guaranty Associations"),⁸ the Coastal Region Board of Directors and the Alabama Subscribers it represents ("Coastal"), the Kentucky Hospitals,⁹ and the Virginia Workers' Compensation Commission's Uninsured

⁷ The Special Deputy Receivers of Doctors Insurance Reciprocal ("DIR"), Risk Retention Group ("RRG"), American National Lawyers Insurance Reciprocal ("ANLIR"), RRG, and The Reciprocal Alliance ("TRA"), RRG are referred to herein as the "SDRs." DIR, ANLIR, and TRA are referred to herein collectively as the "Tennessee Companies."

⁸ The Guaranty Associations no longer include the Texas Property and Casualty Insurance Guaranty Association, which was permitted to withdraw from this proceeding on April 27, 2004.

⁹ The "Kentucky Hospitals" include Appalachian Regional Healthcare, Caverna Memorial Hospital, Clinton County Hospital, Crittenden Health System, Cumberland County Hospital, Gateway Regional Medical Center, Hardin Memorial Hospital, Highlands Regional Medical Center, Jane Todd Crawford Hospital, Lincoln Trail Hospital, Livingston Hospital & Healthcare Service, Marcum & Wallace Memorial Hospital, Marshall County Hospital, Monroe County Medical Center, Murray-Calloway County Hospital, Ohio County Hospital, Owensboro Mercy Health System, Pattie A. Clay Hospital, Pineville Community Hospital, Regional Medical Center/Trover Clinic Foundation, Rockcastle Hospital, St. Claire Medical Center, T.J. Samson Community Hospital, Twin Lakes Regional Medical Center, and Westlake Regional Hospital.

Employers' Fund ("UEF")¹⁰ all joined this proceeding and have participated in some fashion, either in support of, or in opposition to, the Application.

The Commission held a hearing on this matter on September 17, 2003. Briefs were subsequently filed by the Deputy Receiver of ROA, the Guaranty Associations, the VPCIGA, Coastal, the Kentucky Hospitals, and the UEF.

On November 12, 2003, the Commission entered an Order, in which it directed the Deputy Receiver of ROA to pay the Assumed Claims insofar as they constitute indemnity and wage-replacement payments but did not authorize the payment of physician or hospital bills. In the same Order, the Commission assigned the determination of whether the SITs and GSIA's or employers thereof constitute "other policyholders arising out of insurance contracts" pursuant to § 38.2-1509 B 1 ii of the Code of Virginia¹¹ ("Code") to a hearing examiner and docketed the proceeding as Case No. INS-2003-00239.¹²

On January 8, 2004, the Commission entered an Order on Reconsideration, in which we denied the Guaranty Associations' request that we reverse our November 12, 2003 Order. The Commission also denied their request to suspend the execution of that Order pending an appeal.

¹⁰ On September 17, 2003, the Virginia Workers' Compensation Commission ("VWCC") filed a Motion to Intervene. Therein, the VWCC asserted that the UEF, which is administered by the VWCC, may become a significant creditor of ROA. On October 2, 2003, counsel for the VWCC and UEF filed a letter in which he stated that the VWCC's pleadings in this case were filed for the VWCC solely in its capacity as the administrator of the UEF, and not in its role as an adjudicative body. He stated his intention to submit future pleadings on behalf of the UEF, rather than the VWCC. The Commission granted the Motion to Intervene on October 16, 2003. For convenience of reference, the Commission will refer to the "UEF" in the remainder of this Order when discussing the "VWCC" or the "UEF."

¹¹ Statutory references are to the Code of Virginia.

¹² All three commissioners agreed with the decision to refer the underlying question involving § 38.2-1509 B 1 ii of the Code to a hearing examiner. One commissioner dissented from the decision to permit disbursements from the ROA estate to pay the Assumed Claims while such question was pending.

We reinstated our Order dated November 12, 2003, effective as of January 8, 2004.¹³ Hence, the Deputy Receiver of ROA was authorized to pay the Assumed Claims insofar as they constitute indemnity and wage-replacement payments as of January 8, 2004.¹⁴

Subsequent to the referral of this case to a hearing examiner and without objection from any party, this proceeding was expanded to include, in addition to the nine agreements involving workers' compensation coverage, two agreements covering other liability coverage.¹⁵ Unlike with the workers' compensation insurance policy payments, the Deputy Receiver of ROA did not seek to make any payment on the liability policy Assumed Claims but noted that there were approximately 128 such claims.¹⁶ The assumed workers' compensation SITs were the Healthcare Workers Compensation Self-Insured Fund (Alabama) ("HWCF"), the Arkansas Hospital Association Workers' Compensation Self-Insured Trust ("AWCT"), Compensation Hospital Association Trust (Kentucky) ("C-HAT"), and MHA/MSA Compensation Trust (Missouri) ("MHA/MSA"). The assumed liability SITs were the Alabama Hospital Association Trust ("A-HAT") and the Kentucky Hospital Association Trust ("K-HAT"). The assumed workers' compensation GSAs were MHA Private Workers' Compensation Group (Mississippi) ("MHA

¹³ By Order entered on December 2, 2003, the Commission prohibited the Deputy Receiver of ROA from making any payments pursuant to the November 12, 2003 Order until it had ruled on the Guaranty Associations' Petition for Rehearing or Reconsideration.

¹⁴ One commissioner dissented from the January 8, 2004, Order permitting payments to be made from the ROA estate prior to a decision being rendered in the INS-2003-00239 case.

¹⁵ See Amendment to Application for Order Authorizing the Continuation of Workers' Compensation Disability Payments by Reciprocal of America and The Reciprocal Group for Workers' Compensation Claims Denied Coverage by State Guaranty Associations ("Amendment") filed by the Deputy Receiver of ROA on January 21, 2004; and Order entered on January 29, 2004, in which the Commission accepted the Amendment to the Application and directed the hearing examiner to also consider and make a determination as to whether or not the liability assumed claims of ROA constitute claims of "other policyholders arising out of insurance contracts," in accordance with § 38.2-1509 B 1 ii of the Code. "Assumed Claims" hereinafter will include both the liability assumed claims and the workers' compensation assumed claims.

¹⁶ Amendment at 6.

Private"), MHA Public Workers' Compensation Group (Mississippi) ("MHA-Public"), SunHealth Self-Insurance Association of North Carolina ("SunHealth"), THA Workers' Compensation Group (Tennessee) ("THA"), and Virginia Healthcare Providers Group ("HPG").

The Guaranty Associations and the VPCIGA pursued an appeal of the November 12, 2003, and January 8, 2004, Orders to the Supreme Court of Virginia, which dismissed their appeal on July 9, 2004.¹⁷ The litigation before the hearing examiner continued while such appeal was pending. An evidentiary hearing was convened on September 22, 2004, and continued for six days thereafter. The Deputy Receiver of ROA, the Guaranty Associations, the VPCIGA, the Kentucky Hospitals, Coastal, the SDRs of the Tennessee Companies, the UEF, the Children's Hospital of Alabama, the Bureau of Insurance, and Richard W.E. Bland all participated in the hearing in one form or another. Post-hearing briefs were filed by the Deputy Receiver of ROA, the Kentucky Hospitals, Coastal, the UEF, the VPCIGA, and the Guaranty Associations.

On April 21, 2005, the hearing examiner filed his report ("Report"). The 130-page Report contains an exhaustive summary of the record of this proceeding, as well as the hearing examiner's discussion of the legal issues involved in this case, along with his findings and recommendations. The hearing examiner made the following findings and recommendations:

- (1) Virginia substantive law should control in this case to avoid exposing the ROA receivership estate to a myriad of possible conflicting state laws, to provide for the equitable payment of claims and distribution of the assets of the ROA estate among creditors of the same class no matter where the creditors may reside, and to provide for the orderly administration and wind down of the ROA estate;
- (2) Virginia law recognizes that entities such as the SITs and GSIAAs transact the business of insurance, but are exempt from regulation as insurance companies under Title 38.2 of the

¹⁷ The Supreme Court of Virginia found that the two aforesaid Orders were not final Orders and dismissed the appeals without prejudice. Indiana Ins. Guar. Ass'n v. Gross, 268 Va. 220 (2004).

- Code of Virginia, except as specifically provided for in statutes adopted by the General Assembly;
- (3) The Commission is not bound by the erroneous legal conclusions of a member of the staff in the Bureau of Insurance;
 - (4) There is no basis for judicially estopping ROA and the SITs and GSIAAs from arguing that they were self-insured trusts or group self-insurance associations that issued contracts of insurance providing coverage for their employer-members' liability or workers' compensation risks;
 - (5) The employer-members of SITs and GSIAAs pooled their risk of loss for the purpose of transferring an individual employer-member's risk of loss to the group;
 - (6) The SITs and GSIAAs were a type of reciprocal insurer in which the employer-members were both the insurer and the insured;
 - (7) The arrangement in which HWCF provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (8) The arrangement in which A-HAT provided its employer-members medical professional liability, general liability, and personal injury liability coverage was an insurance contract under Virginia law;
 - (9) The arrangement in which C-HAT provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (10) The arrangement in which K-HAT provided its employer-members hospital professional and general liability coverage was an insurance contract under Virginia law;
 - (11) The arrangement in which MHA Public provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (12) The arrangement in which MHA Private provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (13) The arrangement in which THA provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (14) The arrangement in which HPG provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law;
 - (15) The arrangements in which AWCT and MHA/MSA provided their employer-members workers' compensation liability coverage were insurance contracts under Virginia law;
 - (16) The fortuity and known loss doctrines are inapplicable in this case;

- 17) The Acquisition of Assets and Assumption of Liabilities and Merger Agreements effected an assumption reinsurance transaction in which ROA assumed the then existing insurance obligations of the SITs, GSIAAs, and their employer-members on the policies of insurance that had been written by the SITs and GSIAAs;
- 18) A novation occurred in which ROA was substituted as the insurer of the former insurance obligations of the SITs, GSIAAs, and their employer members;
- 19) The Assumed Claims are "claims of other policyholders arising out of insurance contracts" pursuant to § 38.2-1509 B 1 ii of the Code; and
- 20) The Deputy Receiver of ROA may pay the workers' compensation Assumed Claims at 100% without creating an unlawful preference.

The hearing examiner also concluded that the arrangement in which SunHealth provided its employer-members workers' compensation liability coverage was an insurance contract under Virginia law,¹⁸ even though he omitted such conclusion from his list of findings and recommendations. We thus treat it as an additional finding for purposes of our analysis. The hearing examiner recommended that the Commission adopt his findings, direct the Deputy Receiver of ROA to pay the workers' compensation Assumed Claims at 100%, and direct the Deputy Receiver of ROA to pay the Liability Assumed Claims at the same percentage as the claims of the Guaranty Associations and the VPCIGA.¹⁹

On April 26, 2005, the VPCIGA filed a Consented to Joint Motion for Extension of Time to File Responses and Objections to Hearing Examiner's Report ("Joint Motion"). On April 28, 2005, the Commission entered an Order Extending Time for Filing Comments, in which it

¹⁸ See Report at 116.

¹⁹ Report at 130. On July 20, 2004, the Deputy Receiver of ROA filed his Application for Approval of Agreement to Stay Proceedings and Tolling Agreement, in which he requests, among other things, the Commission to approve payment by the Deputy Receiver of ROA of claims of ROA direct policyholders and insureds at a 17% percentage, subject to certain limitations, conditions, and exclusions. That case is currently before a hearing examiner. See *Application of Reciprocal of America and The Reciprocal Group For Approval of Agreement to Stay Proceedings and Tolling Agreement*, Case No. INS-2004-00244 ("Case No. INS-2004-00244").

granted the Joint Motion and provided all parties with an extension to file comments on the Report until June 1, 2005.

Comments to the Report were filed by the VPCIGA, the Guaranty Associations, Coastal and the Kentucky Hospitals (comments filed jointly), and the Deputy Receiver of ROA. Generally, the VPCIGA and the Guaranty Associations requested that the hearing examiner's findings and recommendations be rejected, while the Kentucky Hospitals, Coastal, and the Deputy Receiver supported the hearing examiner's findings and recommendations. We have thoroughly considered the entire record in this proceeding.

NOW THE COMMISSION, having considered the evidence and arguments of the parties, the pleadings, the Report and the comments thereto, and the applicable law, finds as follows. We agree with the hearing examiner that the Assumed Claims, and thus the claims of the SITs and GSIA's or employers thereof, constitute "claims of other policyholders arising out of insurance contracts," pursuant to § 38.2-1509 B 1 ii of the Code. We do not agree, however, that the Code permits us to pay the Assumed Claims at 100%. Unfortunately, we find that we are constrained by the law to pay the Assumed Claims, so that such payment is "apportioned without preference." Accordingly, the Assumed Claims may not be paid until such time as the payment percentage is finalized and approved in Case No. INS-2004-00244. If and when such payment percentage is approved by the Commission, the Assumed Claims may be paid a like percentage. Accordingly, we adopt findings 1, 5-15,²⁰ and 19. We reject finding 20, as we believe it to be inconsistent with applicable law. We take no action with respect to findings 2-4 and 16-18 as they are not necessary to our decision in this case.

²⁰ We also adopt the additional finding regarding SunHealth. See note 18 and accompanying text.

Discussion

In our November 12, 2003, Order, we ordered that "[t]he determination of whether the SITs and GSIA's or employers thereof constitute 'other policyholders arising out of insurance contracts' pursuant to § 38.2-1509 B 1 ii is hereby assigned to a Hearing Examiner and is assigned Case No. INS-2003-00239." Thus, we agree with the hearing examiner that "the issue of whether the Assumed Claims are 'covered claims' may be saved for another day," and do not decide such issue here.²¹ The narrow question that we referred to the hearing examiner has spawned nearly two years of litigation before this Commission.

Section 38.2-1509 B 1 ii of the Code provides, in pertinent part, that "[t]he Commission shall disburse the assets of an insolvent insurer as they become available in the following manner: 1. Pay, after reserving for the payment of the costs and expenses of administration, according to the following priorities: . . . (ii) claims of the associations for "covered claims" and "contractual obligations" as defined in §§ 38.2-1603 and 38.2-1701 and *claims of other policyholders arising out of insurance contracts apportioned without preference. . .*" (emphasis added). We must determine if the SITs and GSIA's or employers thereof constitute "policyholders arising out of insurance contracts" to determine whether they fall within this category of the asset disbursement scheme for insolvent insurers crafted by the General Assembly.

We first determine whether the contracts between and among the SITs and GSIA's and employers thereof constitute "insurance contracts." Neither Chapter 15 nor Chapter 1 of

²¹ Report at 127. We also do not decide here whether or not the Commission has jurisdiction to determine the "covered claims" issue.

Title 38.2 of the Code contains a definition for "policyholder" or "insurance contracts."²² We find the hearing examiner's analysis employing the tests in American Surety Co. v. Commonwealth, 180 Va. 97 (1942) and Group Hospitalization Medical Service, Inc. v. Smith, 236 Va. 228 (1988), to be convincing. Both of those cases provide the essential terms of a contract of insurance. "The essential terms of a contract of insurance are (1) the subject matter to be insured; (2) the risk insured against; (3) the commencement and period of the risk undertaken by the insurer; (4) the amount of insurance; and (5) the premium and time at which it is to be paid." 180 Va. at 105, 236 Va. at 230-231. As aptly explained by the hearing examiner, each of the coverage documents issued by the SITs and the GSIA to their member-employers satisfied the American Surety and Group Health tests.²³ Accordingly, we find that those agreements constituted "insurance contracts," as those words are used in § 38.2-1509 B 1 ii of the Code.

The VPCIGA and the Guaranty Associations contend, however, that, the Commission must first determine that insurance exists before it even gets to the American Surety and Group Hospitalization tests for determining whether an insurance contract exists.²⁴ We agree that there must be insurance for an insurance contract to exist. However, we disagree with the Guaranty Associations' and the VPCIGA's arguments that no insurance existed here.

Section 38.2-100 of the Code provides a definition for insurance:

'Insurance' means the business of transferring risk by contract wherein a person, for a consideration, undertakes (i) to indemnify another person, (ii) to pay or provide a specified or ascertainable amount of money, or (iii) to provide a benefit or service upon the

²² Section 38.2-100 of the Code does provide that "[w]ithout otherwise limiting the meaning of or defining the following terms, 'insurance contracts' or 'insurance policies' shall include contracts of fidelity, indemnity, guaranty and suretyship." Because of the language "[w]ithout otherwise limiting the meaning of or defining," we must search elsewhere in order to define "insurance contracts" in the context of § 38.2-1509 B 1 ii of the Code.

²³ See Report at 114-117.

²⁴ See, e.g., Response and Objections of VPCIGA to Report of Hearing Examiner, at 14.

occurrence of a determinable risk contingency. . . . 'Insurance' shall not include any activity involving an extended service contract that is subject to regulation pursuant to Chapter 34 (§ 59.1-435 et seq.) of Title 59.1 or a warranty made by a manufacturer, seller, lessor, or builder of a product or service.

Unlike the exclusion of warranties from this definition, the General Assembly chose not to exclude specifically any of the types of contracts at issue in this case.

The essence of the definition is a contract by a *person* to indemnify or pay another upon the occurrence of a determinable risk contingency. We believe it important that the General Assembly chose to use the word "person" here, rather than "insurer." Thus, we do not take a position on whether the SITs or GSIAAs were "insurers" under any provision of the Code, as it is unnecessary for us to do so to find that "insurance" existed here.²⁵ An "insurer" is not a necessary party to an "insurance contract" under § 38.2-1509 B 1 ii of the Code.

What is required is a transfer or shifting of the risk. See Lawyers Title Ins. Corp. v. Norwest Corp., 254 Va. 388, 390, 392 (1997) (Supreme Court of Virginia affirmed Commission's determination that Title Option Plus was not insurance and stated that a "shifting of the risk is the essence of insurance."); Hilb, Rogal and Hamilton Co. v. DePew, 247 Va. 240,

²⁵ We have reviewed a number of cases in reaching our conclusion, including authorities cited by the parties. We read the Iowa Supreme Court's decision in Iowa Contractors Workers' Compensation Group v. Iowa Ins. Guar. Ass'n, 437 N.W.2d 909 (Iowa 1989) to be inapposite to our conclusion. There, the Supreme Court of Iowa found, among other things, that a self-insured group was not an "insurer" under Iowa law. The result of such finding, of course, was that the Iowa Insurance Guaranty Association was liable for certain claims. 437 N.W.2d at 916. We decline to adopt the Supreme Court of Iowa's reasoning to the extent the court determined that no risk is transferred unless all of the risk is transferred. See, 437 N.W.2d at 917.

Similarly, in South Carolina Property and Cas. Ins. Guar. Ass'n v. Carolinas Roofing and Sheet Metal Contractors Self-Insurance Fund, 446 S.E.2d 422 (S.C. 1994), the Supreme Court of South Carolina found that the self-insured roofers' fund was an "insurer" under that state's law. The court's analysis differed from the Iowa court's in that the Supreme Court of South Carolina found that the members of the group self-insurer did transfer a portion of their risk. 446 S.E.2d at 425.

In California Plant Protection, Inc. v. Zayre Corp., 659 N.E.2d 1202 (Mass. App. Ct. 1996), the court found that the self-insured group was not an "insurer" and was therefore entitled to guaranty fund protection. Id. at 1205. We are not required to decide in this case whether the SITs or GSIAAs constitute an "insurer" under our law.

248 (1994) ("Such shifting of the risk is the essence of insurance."). We find that such a risk transfer or shift took place here.

We do not believe that the existence of joint and several liability served to nullify any risk transfer that occurred among the members' pooling of their liabilities. Nor does the fact that the members could have been assessed under their policies nullify the transfer or shifting of risk. We find the hearing examiner's discussion to be persuasive in this regard. While we decline to adopt *in toto* the reasoning of the Supreme Court of South Carolina or the Supreme Court of Iowa, we agree that, in Virginia, insureds may be assessed under an insurance policy without altering the policy's essential nature as an insurance contract.

We find further support for our decision in the Court of Appeals of Maryland's decision in Maryland Motor Truck Ass'n Workers' Compensation Self-Insurance Group v. Property & Cas. Ins. Guar. Corp., 871 A.2d 590 (Md. 2005), a decision filed after the hearing examiner filed his report, but before the deadline for filing comments in this case.

In Maryland Motor Truck, the Court of Appeals of Maryland, its highest court, was faced with the question of whether the Maryland Motor Truck Association Workers' Compensation Self-Insurance Group ("MMTA") was an "insurer" under Maryland law. If the MMTA was an "insurer," the Property and Casualty Insurance Guaranty Corporation ("PCIGC") was not responsible for paying the claims of the members of the MMTA, which had an excess insurance policy with Reliance National Indemnity Company, an insurance company declared insolvent by a Pennsylvania court. The members of the MMTA were each jointly and severally liable for the workers' compensation obligations of the group and its members that were incurred during their period of membership.²⁶

²⁶ 871 A.2d at 592.

In discussing differences between self-insurance with only one entity insuring itself, and group self-insurance, with multiple members, the Maryland Court of Appeals stated,

[i]n reality, because in that situation there is no spreading of the risk for that part of a loss that is either within a deductible or over the policy limit, the policyholder is more likely *non*-insured for that segment. As we shall explain later, that is not necessarily the case with group self-insurance. There, the retained risk is transferred from the individual (member) to the group and is spread throughout the group. The member may share with the other members joint and several liability for the overall, aggregate combinations of the group, but is relieved of any direct obligation for payment of particular claims made against it. That is much more akin to the nature and concept of insurance than to that of non-insurance.

871 A.2d at 596 (emphasis in original). The Maryland Court of Appeals continued by analyzing the contract and concluded that "[t]he mere fact that the members retain joint and several liability for any remaining obligations of the [self-insured] Group does not suffice to preclude the Agreement from constituting an insurance contract. . . . Such an arrangement—joint and several liability for a deficiency and the right to recover part of the surplus funds in the form of dividends—is a traditional characteristic of assessment mutual insurance companies." *Id.* at 598.

The Court of Appeals of Maryland found that, because the contracts were insurance contracts, the self-insured group was an "insurer," and the PCIGC was not responsible for the claims under Maryland law. While we are not determining the precise question of whether the SITs or GSIAAs constitute an "insurer," and specifically decline to do so here, we find the reasoning of the Court of Appeals of Maryland persuasive as it relates to the determination that the underlying contracts were insurance contracts. Simply put, we do not believe that the existence of joint and several liability, when analyzed in the context of the remainder of the contracts among the members and the SITs and GSIAAs, nullifies the fact that risk was shifted or transferred. The VPCIGA argues that "[t]his agreement by each member to assume an obligation

it did not otherwise have and to pay and discharge the liability of every other member cannot be characterized as a transfer of risk."²⁷ We think the opposite is true. Each member assumed an obligation it did not otherwise have (accepted risk) and agreed to pay and discharge the liability of every other member (accepted risk). By the same token, each member transferred a portion of its risk to the group, while retaining or receiving back a portion of, or possibly all, of such risk upon the occurrence of certain contingencies. Nothing in the definition of "insurance" in the Code, or case law from the Supreme Court of Virginia, supports the notion that, without a complete transfer or shift of all the risk, no risk is transferred at all. We think, to the contrary, that sufficient indicia of risk transfer or shift was present here for the contracts to be insurance contracts.

Having determined that risk was transferred or shifted and shared or pooled among and between the members and the SITs and GSIAAs, we then apply the American Surety and Group Hospitalization tests to determine whether the contracts were insurance contracts under Virginia law. In this regard, we agree with the hearing examiner's analysis and findings that all 11 of the SITs' and GSIAAs' coverage documents constituted "insurance contracts."²⁸ Finally, we believe that the Assumed Claims are those of "policyholders." In this regard, while the "policyholders" may have been the employers-members of the SITs and GSIAAs rather than a third-party claimant or employee, we believe the language "arising out of" is broad enough to encompass the Assumed Claims.²⁹ Having found that the contracts between and among the SITs and GSIAAs

²⁷ Response and Objections of VPCIGA to Report of Hearing Examiner, at 20.

²⁸ Report at 114 -117, 128-129 (findings and recommendations 7-15). See also Report at 116 and note 18 and accompanying text, *supra*, regarding SunHealth.

²⁹ The parties did not spend much, if any, time disputing whether the employers-members were "policyholders" under § 38.2-1509 B 1 ii of the Code. While the employers-members were technically the "policyholders" under the contracts, see Atkinson v. Penske Logistics, LLC, 268 Va. 129, 135 (2004) ("... 'named insured' is the policyholder."), we think it is patently obvious, and the parties apparently agreed, that the employees thereof were

and their employers-members were "insurance contracts," and that the Assumed Claims constituted claims of "policyholders arising out of insurance contracts," we find it unnecessary to decide whether the Agreements constituted assumption reinsurance or whether a novation occurred. Accordingly, it is also unnecessary for us to decide whether ROA assumed "known losses" through the Agreements.

Apportioned without preference

The remaining pertinent language is that the Commission must pay "the claims of other policyholders arising out of insurance contracts *apportioned without preference*." Section 38.2-1509 B 1 ii of the Code (emphasis added). We cannot agree with the hearing examiner here that we have the authority to pay the Assumed Claims at 100%. Hence, the Assumed Claims may not be paid until a decision is rendered in the INS-2004-00244 case and then only at the percentage arrived at in such case.³⁰

The hearing examiner concluded that the General Assembly's preference for paying the full amount of a workers' compensation claim that is a "covered claim" under § 38.2-1606 A 1 a i of the Code indicates that the General Assembly "never intended that one group of workers' compensation policyholders of an insolvent insurer should receive 100% payment of their

also "policyholders" as they were the beneficiaries of the contracts. The language "arising out of" appears to be broad enough to include such claimants as "policyholders." See Trex Co., Inc. v. ExxonMobil Oil Corp., 234 F. Supp. 2d 572, 576 (E.D. Va. 2002) ("In the insurance context 'arising out of' is broader than 'caused by,' and ordinarily means 'originating from,' 'having its origin in,' 'growing out of,' 'flowing from,' or 'incident to or having connection with.'"); St. Paul Fire and Marine Ins. Co. v. Insurance Co. of North America, 501 F. Supp. 136, 138 (W.D. Va. 1980) (same, applying Virginia law).

³⁰ We recognize, and are not unmindful of the fact, that the injured workers may suffer a serious hardship as a result of our decision. We also recognize the apparent inequity in certain workers' compensation claimants receiving 100% of their claim (those that are eventually deemed "covered claims" under § 38.2-1606 A 1 a i of the Code) while others (for example, those impacted by our decision today) receive a substantially smaller percentage. Without deciding the "covered claim" issue, we note that the priority scheme for workers' compensation claimants in Chapter 16 of Title 38.2 of the Code could have been utilized in the disbursement scheme in Chapter 15 of Title 38.2 of the Code. The General Assembly, however, for whatever reason, chose not to do so.

claims; while an identical group of workers' compensation policyholders from the same insolvent insurer might receive less than 100% payment of their claims."³¹ We do not agree with the hearing examiner's *in para materia* analysis, however, as we believe that Chapters 15 and 16 of Title 38.2 of the Code, while related, pertain to different matters.

Section 38.2-1509 of the Code is part of a carefully crafted scheme for handling the disbursements of the assets of an insolvent insurer's estate, while § 38.2-1606 deals with the duties and powers of the Virginia Property and Casualty Insurance Guaranty Association. Section 38.2-1509 B of the Code controls the manner in which the Commission will pay claims out of the estate of the insolvent insurer. See Swiss Re Life Co. America v. Gross, 253 Va. 139, 146 (1997). That statute does not provide for the payment of one class of policyholders at 100%, while another policyholder receives whatever percentage may be paid by the estate as "available." Instead, it provides that all policyholder claims are to be "apportioned without preference."

The General Assembly has enumerated the order in which claimants of the insolvent insurer's assets may be paid, and we may not deviate from such legislative scheme. "When a legislative enactment limits the manner in which something may be done, the enactment also evinces the intent that it shall not be done another way." Grigg v. Commonwealth, 224 Va. 356, 364 (1982). We are not permitted to exercise our discretion here to override the General Assembly's priority scheme, because of the General Assembly's policy judgment set forth in an

³¹ Report at 127.

entirely different chapter of Title 38.2 of the Code.³² Had the General Assembly wanted to incorporate a super-priority for workers' compensation policyholders in Chapter 15 of the Code, it could have done so.³³ The legislature's determination instead that the assets are to be paid to satisfy the "claims of other policyholders apportioned without preference" is a clear command not to create exceptions for certain policyholders.

Conclusion

We find that the Assumed Claims are "claims of other policyholders arising out of insurance contracts." We also conclude that such claims must be "apportioned without preference" in accordance with the priority scheme established by the General Assembly set forth in § 38.2-1509 of the Code. Hence, we adopt findings 1, 5-15,³⁴ and 19 of the Report. We reject finding 20, as we believe it to be inconsistent with applicable law. We take no action with respect to findings 2-4 and 16-18 as they are not necessary to our decision in this case.

Accordingly, IT IS ORDERED THAT:

(1) The Application of the Deputy Receiver of ROA is APPROVED, except as modified herein.

³² If we ultimately determine that the Assumed Claims are "covered claims," as have the North Carolina Industrial Commission and the North Carolina Court of Appeals, see, Bowles v. BCJ Trucking Services, Inc., I.C. No. 821763 (North Carolina Ind. Comm'n, July 17, 2003) (Opinion of Douglas Berger, Deputy Commissioner), *aff'd*, Bowles v. BCJ Trucking Services, Inc., I.C. No. 821763 (North Carolina Indus. Comm'n, April 16, 2004) (2-1 decision by full commission), *aff'd*, Bowles v. BCJ Trucking Services, Inc., 615 S.E.2d 724 (N.C. Ct. App. 2005); In re: SunHealth GSIA/The Reciprocal Group, I.C. Nos. 402156, 467439, 822818, 734242, 902560, 426774, 705360, 616611, 734300 & 944966 (N.C. Indus. Comm'n, July 19, 2004), then the injured employees ultimately may receive 100%. We make no such determination today as the question of whether the "Assumed Claims" are "covered claims" is not before us.

³³ The General Assembly created such a super-priority for workers' compensation claimants in § 38.2-1606 of the Code.

³⁴ We also adopt the additional finding regarding SunHealth. See note 18 and accompanying text.

(2) The Assumed Claims constitute "claims of other policyholders arising out of insurance contracts" pursuant to § 38.2-1509 B 1 ii of the Code.

(3) The Deputy Receiver may not pay the Assumed Claims until such time as a payment percentage is determined by the Commission in Case No. INS-2004-00244.

(4) This matter is closed and the papers herein be passed to the file for ended causes.

AN ATTESTED COPY hereof shall be sent by the Clerk of the Commission to all persons on the official Service List in this matter. The Service List is available from the Clerk of the State Corporation Commission, c/o Document Control Center, 1300 East Main Street, First Floor, Tyler Building, Richmond, Virginia 23219.

Re: Application of Reciprocal of America and the Reciprocal Group; For a
Determination Whether Certain Worker's Compensation Insurance Policy
Payments May be Made to Claimants Formerly Covered by SITs and GSIA's,
Case No. INS-2003-00239; Notice of Withdrawal of Appeal

Dear Mr. Peck:

Enclosed for filing in the above-referenced matter are the original and fifteen copies of a Notice of Withdrawal of Appeal which has been executed in counterparts by counsel for the Guaranty Associations, the Virginia Association, the Alabama Claimants and the Kentucky Hospitals.

Thank you for your assistance in this matter.

Sincerely yours,

C. Cotesworth Pinckney

NOTICE OF WITHDRAWAL OF APPEAL

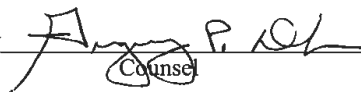

The Indiana Insurance Guaranty Association, Kansas Insurance Guaranty Association, Mississippi Insurance Guaranty Association and Tennessee Insurance Guaranty Association (the "Guaranty Associations"), the Virginia Property and Casualty Insurance Guaranty Association (the "Virginia Association"), the Coastal Region Board of Directors and the Alabama Subscribers (the "Alabama Claimants") and the Appalachian Regional Healthcare, Clinton County Hospital, Crittenden Health System, Cumberland County Hospital, Gateway Regional Medical Center, Hardin Memorial Hospital, Highlands Regional Medical Center, Livingston Hospital & Healthcare Service, Marcum & Wallace Memorial Hospital, Marshall County Hospital, Monroe County Medical Center, Murray-Calloway County Hospital, Ohio County Hospital, Owensboro Mercy Health System, Pattie A. Clay Hospital, Pineville Community Hospital, Regional Medical Center/Trover Clinic Foundation, Rockcastle Hospital, St. Claire Medical Center, T.J. Samson Community Hospital, Twin Lakes Regional Medical Center, and Westlake Regional Hospital (the "Kentucky Hospitals") each filed with the Clerk of the State Corporation Commission a notice of appeal from the Final Order of the State Corporation Commission entered on August 24, 2005 in Case No. INS-2003-00239 (the "Order").

Each of the Guaranty Associations, the Virginia Association, the Alabama Claimants and the Kentucky Hospitals (collectively, the "Claimants") has agreed with each of the other Claimants, in consideration of the similar agreements of such other Claimants, that it will abandon its appeal from the Order.

ACCORDINGLY, each of the Claimants by counsel hereby gives notice of its withdrawal of its appeal from the Order. Each of the Claimants acknowledges that this Notice of Withdrawal of Appeal may be executed in any number of counterparts (and by different parties hereto in different counterparts) each of which when so executed and delivered shall be deemed to be an original and all of which taken together shall constitute but one and the same instrument.

Dated December 21, 2005.

Draft: 8/16/23

Receivership Law (E) Working Group
Virtual Meeting
July 24, 2023

The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met July 24, 2023. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Michael Surguine (AR); Joe Holloway (CA); Jane Callanan (CT); Lorrie Arterburn (FL); Kim Cross (IA); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); Tom Mitchell (MI); Shelley Forrest (MO); Lindsay Crawford (NE); Brian Riewe (TX); and Charles Malone (WA). Also participating was: Dan Bumpus (VA).

1. Adopted its May 23 Minutes

Slaymaker said the Working Group met May 23 to expose proposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act (#540)* for a 30-day comment period ending June 23.

Crawford made a motion, seconded by Arterburn, to adopt the Working Group's May 23 minutes (Attachment Three-A). The motion passed unanimously.

2. Adopted Amendments to Model #540

Slaymaker said the amendments to Model #540 aim to address guaranty fund coverage for policies included in insurance business transfers (IBTs) and corporate divisions (CDs) and to clarify guaranty association coverage of cybersecurity insurance. Regarding the IBT and CD amendments, the exposure included the optional language and a drafting note in Section 5G(3), as well as in other sections that were proposed for those states that may want to keep the assumed language that is proposed to be deleted. Slaymaker said NAIC staff made a few edits to section references, which are included in the materials. No comments were received on the cybersecurity insurance amendments. Three comment letters were received on the IBT and CD amendments.

Patrick Cantilo (Cantilo & Bennett LLP) summarized his comments (Attachment Three-B). Cantilo said the change necessary to accomplish the charge, which is to avoid the loss of coverage, is straightforward and can be done with the changes proposed in his comment letter. Cantilo said the only difference between his approach and the approach in the draft is that the draft allows the removal of the assumed claims coverage that was adopted in 2009, which is not necessary to assure guarantee association coverage remains for a CD transaction.

Slaymaker said a comment letter was received from Joe Torti (Fairfax (US) Inc.) (Attachment Three-C).

Barbara F. Cox (Barbara F. Cox LLC) summarized the National Conference of Insurance Guaranty Funds' (NCIGF's) comments (Attachment Three-D). She said NCIGF does not support the addition of Section 5G(3) in the covered claim definition, as it is contrary to NCIGF's adopted policy that if there were coverage before the transaction, there should be coverage after, and if there were no coverage, coverage should not be created. She said Fairfax (US) Inc. is not attending this meeting, but she believes it agrees with NCIGF. She said the 2009 amendments to Model #540, which are deleted throughout the draft, have only been adopted in three states. She said 12 states have adopted either IBT or CD transaction statutory authority. She said NCIGF supports the deletion of the 2009 amendments.

Joyce said his primary concern is that the 2009 assumed claims language in the current draft of Model #540 appears to contemplate potential coverage for situations that the Working Group would now be removing in these

amendments. He said he does not know what has changed since 2009 to warrant removing the language. He said he understands that part of the concern is that state insurance regulators will likely see more of these IBT and CD transactions where one party is assuming business from another due to the adoption of IBT and CD statutes in various states. If the need for the assumed claims transaction language was recognized in 2009, he is unsure what has changed. He said he is not convinced that the referral obligates the removal of potential coverage from the current Model #540 for policyholders who are subject to IBT and CD transactions to maintain their coverage. He said he very much supports the inclusion of some sort of optional language as proposed. Baldwin asked Joyce if optional Section 5G(3) would satisfy his concern with preserving the ability to cover the assumed transaction. Joyce said it would.

Cantilo said the referral is easily met by his proposal, which preserves guarantee association coverage for IBTs and CDs. He said he does not believe that anyone has suggested to the drafting group that it does not. The contrast between the two options is simply that one does what was intended, which is to preserve guarantee association coverage for these transactions, and the other option, which affects Section 5G(2) and other changes, is intended to also remove the assumed claims coverage, which is not necessary for the purpose of discharging what the referral intended. Cantilo said guarantee association coverage could be preserved both with and without the assumed claims language depending on what a state proposes by the amendment to the definition that is described in his comment letter.

Cox said Section 5G(3) does preserve some of the assumed claim business language. Section 5G(2) also preserves it to the extent the assumed claim transaction would flow from member to member or member to non-member.

Wake said Section 5G(3) captures everything substantively that was in all of the 2009 amendments that are proposed to be deleted. This puts back the substance in a much shorter paragraph.

Wake said he would be happy with either version of the proposed amendment, either with Section 5G(3) being optional or without it.

Bumpus said he supports the language, alternative language, and the comments that Cantilo raised, as they may be a workable solution. He said the issue of assumed claims came up in Virginia with a receivership 15 years ago, and it is covered in Virginia by the guarantee funds. He said he thinks that the proposed language from Cantilo most closely aligns with the charge to make sure that the guarantee fund coverage is unchanged. He said he has not had a chance to review the proposal with the optional language.

Cantilo asked what the more extensive revision to Model #540 accomplishes that is not also accomplished by his simpler, single-paragraph edition.

Wake said Cantilo's proposal looks more like the current version of Model #540, but compared to the current draft, Cantilo's proposal has four versions of a lengthy paragraph. He said he has stated in previous comments that he does not agree with Cantilo's explanation of his language and that it would need more editing. He said that, substantively, if a state insurance department adopts the optional Section 5G(3), the state insurance department would get the substance of Cantilo's proposal. If the state insurance department does not adopt Section 5G(3), it would get what NCIGF and Torti have proposed. He said this is a topic that has already been discussed.

Cox said NCIGF continues to support Section 5G(2) as a standalone provision. While NCIGF does not support Section 5G(3), it is preferable to the 2009 draft with the modifications. If state insurance departments want to adopt the optional Section 5G(3), that gives them a choice of how far they want to go to resolving restructuring transactions.

Slymaker said the amendments were exposed with the optional language, and based on the discussion, including the optional language may be the approach to move forward with. She asked for a motion to adopt either with or without the optional language.

Wake made a motion, seconded by Travis, to adopt the amendments to Model #540 (Attachment Three-E), including the optional language. The motion passed unanimously.

3. Heard a Presentation from Arcina Risk Group on Receivership Estate Records Retention

Richard Janisch (Arcina Risk Group) said Arcina is a 15-year-old company with roots in insurance archaeology, which is mostly uncovering old insurance liability policies. However, it could involve other types of coverage, such as maritime policies and workers' compensation programs. Driving Arcina's business are legacy claims, asbestos liabilities, other emerging legacy tort matters, and other emerging claims related to polyfluoroalkyl substances (PFAS) standards that are being imposed on states involving firefighting foam and other consumer products that include PFAS.

Janisch said Arcina's objective is to ask for some guidance and present a concept for preserving insolvent insurance estate records. He said he believes there is a labor force, sophisticated technology, and data tools to preserve these records more cost-efficiently than in the past. Legacy insurance policies are current space policies. Because of claims activities in the past, the primary coverages are exhausted or insolvent, which then means moving into excess layers. The excess insurance is dependent on what the policy form language was for the underlying coverage. When the underlying coverage is with an insolvent insurer, and those records are destroyed, it becomes a difficult archaeological task to try to uncover. He said he believes preserving the insolvent estate records for the long term would be a great public service with which Arcina would like to assist.

Janisch said some universities have risk management departments or risk management schools of study that have libraries and would be willing to accept some of these historical records and provide the labor to help support organizing those records. He said Arcina is interested in the policies. Other proprietary information in these records could be filtered out, and that is where Arcina would want some guidance on how that could be done and what nuances exist. There are some key states that are very active in liquidation proceedings that could provide guidance in that regard. There are emerging risks that still implicate policies, and he believes there will be more of these kinds of claims.

Rejo Mathew (Arcina) said that having reviewed the state statutes for California, Pennsylvania, and Texas, as well as the *Insurer Receivership Model Act* (#555), Arcina believes that commissioners/receivers are bestowed with broad authorities regarding estate records and that instead of destroying them, the records should be given to libraries and other public institutions for their preservation and future use. He said the purpose is to aid the public with future claims.

Mathew said the presentation materials include the next steps that Arcina would like the Working Group to consider, including stopping the destruction of any estate records that are pending or near closure (Attachment Three-F).

Mathew described an example of the loss of records from the Reliance Insurance Company estate and United Pacific Insurance Company, which wrote business to school districts. There are no longer records of how those programs were set up or the participants in the program. He said their work helps to diversify the risk absorbed by these entities and ease the impact across the industry. He said Arcina believes there is just cause for this, specifically through the verbiage of the insurance contract.

Janisch asked if it is due to cost versus the benefit that once the estate closes and distributions are made, there is no need to retain personnel, and records are shredded. Baldwin said the Working Group may not be able to answer that question for the states. A survey might be a way to compile answers.

Baldwin asked if policyholders or brokers have copies of these policies. Janisch said they do, but not all the time. He said that most of the time, they do not find the complete policy, correspondence, or past claims activity. For brokers, it is hit and miss, as they have a 10-year document destruction policy. On occasion, certain large brokers can uncover some of the placements for these claims.

Baldwin asked if, in contemplation of the concept of archaeology libraries, Arcina has undertaken any consideration of data privacy laws that might be applicable to those policyholders. Mathew said it is covered within Model #555. He said Arcina has reviewed it in terms of evidentiary standard considerations. As received by the commissioner, the policyholder record is considered prima facie evidence of coverage. Records should not be used against an insured or have the policy affected. However, Arcina hopes to maintain policyholder protections. If the category or designation the record is recognized as were to be changed from prima facie evidence to statistical, Arcina would have a better stance on this issue. This discussion concerns legacy claims that would probably be past most statutes of limitation. He asked if a plaintiff were to bring this documentation against the defendant that they had located these records, it is not actionable by its plaintiff. It is actionable by the defendant or the insured. The contract, because of the laws of privacy, is not going to act as a shield. This is why Arcina thinks this needs further discussion of what the specific rules are. This could also be access to records for clients who would be best served.

Janisch said that regarding data privacy, the Working Group would have to come up with some sort of gatekeeper protocol. He said data privacy is state-by-state driven, and he does not want to turn this into free access for the plaintiff's bar. The libraries would need to have safeguards with parameters of access or limitations.

Surguine asked how and by whom the expansion of scanning records to an electronic format would be paid. Janisch said that universities and some private sector funds may cover it. He said he didn't know if the liquidation office would be a partial funding source. He said it is prominent for these libraries to hold these collections. They have a student workforce. Fees could be charged for the duplication of these records to essentially sustain the maintenance of this collection. He said that he did not think the cost would be a factor. He said there is also an educational purpose in looking at these insolvencies later through data analytics.

Baldwin said the Working Group would take note of the topics in the presentation. No further Working Group members had comments or questions for the presenters. Baldwin asked Arcina to send any further comments it wishes to share with the Working Group.

Having no further business, the Receivership Law (E) Working Group adjourned.

Draft: 6/20/23

Receivership Law (E) Working Group
Virtual Meeting
May 23, 2023

The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met May 23, 2023. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Michael Sarguine (AR); Joe Holloway (CA); Jack Broccoli (CT); Miriam Victorian (FL); Kim Cross (IA); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); Tom Mitchell (MI); Shelley Forrest (MO); Lindsay Crawford (NE); Shawn Martin (TX); and Charles Malone (WA).

1. Exposed Amendments to Model #540A. ITBs and CDs Amendments

Baldwin said the Working Group met Nov. 7, 2022, to discuss comments from Maine on the original exposure of proposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act* (#540). The purpose of the amendments is to address guaranty fund coverage for policies that are included in insurance business transfers (IBTs) and corporate divisions (CDs). The Working Group formed a drafting group that met four times, had many email exchanges, and went through several drafts. The drafting group has two new versions of the amendments to present to the Working Group and seeks feedback on each version to settle on a single version.

Wake summarized the proposed amendments in version one (Attachment Three-A1) and the document describing the amendments (Attachment Three-A2). He said the drafting group considered four different points of entry. There are various ways to get to the results, such as by amending the definitions of covered claim, insolvent insurer, or assumed claims transaction, or by expanding membership. The National Conference of Insurance Guaranty Funds (NCIGF) showed him a definition of a New Hampshire law that was simple and clean. After some technical work, proposed paragraph 5G(2) could be added to the definition of covered claim. He said he did not distinguish between other types of transactions because, with few exceptions, there was not any point in choosing which would get coverage preserved and which would not. He said the mandate was to start with IBTs and CDs, but he feels there is strong public policy consensus that the same thing is wanted for transactions like mergers and common law novation, except transactions where policies are commuted into a captive and still have guaranty fund coverage. Wake said the one complexity with version one is that he was asked to consider other transactions where a member insurer did not write the original coverage. Either it was self-insured or written in surplus lines or by a captive. He has not seen any real-life examples of such a transaction. Generally speaking, if an insurer wanted to bring something into the admitted market, it would write a substitute policy. Because some asked for language that did not take away anything, optional language was added with a long drafting note in paragraph 5G(3). He said version one is simpler because it gets rid of some definitions, but it does make a lot of changes to the existing model by deleting verbiage. He said his summary document includes a comparison matrix like the matrix provided for version two. He said he disagrees with what transactions in version two are covered.

Barbara F. Cox (Barbara F. Cox LLC) summarized the NCIGF comments on version one (Attachment Three-A3). She said NCIGF supports a stand-alone paragraph 5G(2) in the first paragraph of version one to the covered claim definition. She said NCIGF does not support 5G(3). She said NCIGF feels it goes beyond the charge. She said version two allows coverage for an IBT started with a nonmember insurer to a member. That is not consistent with the charge that says guaranty fund coverage should be unchanged or retained, nor is it consistent with the Restructuring Mechanisms (E) Working Group's latest drafts, which it has not finalized. She said every discussion

and document she has reviewed calls for guaranty fund coverage to remain unchanged. In the context of IBTs and CDs, version two goes beyond that. It is more than what is needed. NCIGF's support is for a stand-alone paragraph 5G(2). NCIGF does not support paragraph 5G(3). NCIGF is neutral on any idea of assessing a nonmember that becomes a member in a post-insolvency assessment context. That does not make sense. If the claim started in a member insurer, they would pay the assessment if any was due in the year the policy was issued. Version one includes an optional concept to look at the claim volume that is transferred and assess based on some percentage of that amount if it is unclear whether there was an assessment and the percentage the assessment should have been.. NCIGF is neutral on that idea and observes that it adds some complexity that would be cleaner with just a stand-alone 5G(2). Wake added that the optional assessment language was added as part of the request to keep the substance of everything in the existing model. He does not feel it is needed since few states have adopted that language.

Patrick Cantilo (Cantilo and Bennett LLP) summarized the proposed amendments in version two (Attachment Three-A4) and the document describing the amendments (Attachment Three-A5). He said version two entails only changing paragraph 5H(1). It adds the language required to include IBTs and CDs so that claims arising under a policy assumed by doing IBTs or CDs would be covered. He said version two offers alternative language that works the same way in that they amend the same section. He said the reason for the alternatives in version two is that most states have not adopted the assumed claims language. He said if a state wants to have a version of the statute that does not refer to assumed claims language, then alternatives one and two accomplish that. Alternatives also address if the transferee is a nonmember and the transferor is a nonmember. Each alternative only amends paragraph 5H(1). He said he also offers a definition for IBT and CD that may or may not be necessary. Cantilo said the main difference between his version two and Wake's version one, aside from whether one is viewed as simpler, is that version two does not overtly eliminate the possibility of coverage that arose from a non-member to within guaranty association coverage once a member assumes it. Those transactions may be rare. It was an issue for the Reciprocal of America situation in which half of the workers' compensation business had been assumed from a self-insured trust. Reciprocal of America became insolvent before replacement policies were issued for much of that business. In that case, it eventually became a covered business and was treated like any other business. That situation may or may not happen again. Cantilo said if the Working Group only wants to ensure that Model #540 preserves coverage for IBTs and CDs, version two accomplishes that. If the Working Group wants to go further and eliminate the possibility of having assumed claim language, then additional amendments would be required. He said he does not believe that is part of the charge.

Cox asked if version two carves out guaranty fund coverage for an IBT or CD originating with a nonmember going to a member. Cox said the matrix in Cantilo's explanation document shows nonmember to member would be guaranty fund covered, so she said it does include that. Cantilo said he did not think it was part of the charge, but it would be a simple change to make if the Receivership and Insolvency (E) Task Force wants to take that track.

Wake said his understanding of alternatives two and three in version two address member-to-nonmember transactions because otherwise, the insurer must be an insolvent insurer to have coverage, which means the transferee must be a member insurer to become an insolvent insurer. Cantilo said the question is if there are states that do not want to cover member-to-nonmember. The other three alternatives allow states to adopt such language consistent with their views. The first alternative for a member-to-nonmember transfer is covered. Wake said that regarding Reciprocal of America, he received from Cantilo a Virginia opinion where the insurer had issued replacement policies even if the document did not say it was a replacement policy.

Wake made a motion, seconded by Mitchell, to expose version one without the optional language for a 30-day comment period ending June 23. The motion passed with Massachusetts opposing. Joyce said he understands Cantilo's position and has concerns about exposing version one without the optional language. Wake said he could expose it either way. Mitchell said he echoes Cox's comments referring to the scope of the original request to

modify the law. It seems outside the scope to create coverage rather than retain and continue coverage. However, if it is the will of the Working Group, he does not oppose exposing the optional language. Surguine said he liked the procedure under the assumption of reinsurance laws where policyholders get notice. A transaction does not bind policyholders unless they get notice and opt-in. He does not like the part of IBT laws that can force policyholders into a transaction. However, Arkansas has already enacted an IBT statute. Wake said he is sympathetic to Surguine. He said that even if a state has not passed an IBT statute, other states have adopted such statutes. He said policyholders should not be penalized.

Wake made a motion, seconded by Joyce, to expose version one with the optional language for a 30-day comment period ending June 23. The motion passed unanimously.

B. Cybersecurity Insurance Amendments

Baldwin said the Request for NAIC Model Law Development to amend Model #540 to clarify guaranty fund coverage of cybersecurity insurance was approved by the Executive (EX) Committee at the 2023 Spring National Meeting.

Cox summarized the NCIGF's proposed amendments to Model #540 for cybersecurity insurance (Attachment Three-A6). She said cybersecurity insurance is different from what has been dealt with before in insolvencies. Along with indemnity coverage, cybersecurity insurance also includes various services such as mitigation of losses, notices to potential persons whose data have been breached, and even ransom negotiations and payments. One of the characteristics is the immediacy of the insurance company to respond. A member insurer presented to NCIGF and said the insurer is the firehouse, not the clean-up crew. If a breach occurs, the insurer needs to be prepared to respond immediately. The proposed amendments include:

- Clarification of coverage. Some may conclude that cyber may not be covered.
- A definition of cybersecurity insurance.
- Powers and duties to tie all losses paid by the guaranty funds triggered by the cyber event not to exceed \$500,000. There was no claim loss volume reporting to use. NCIGF had to use other sources to determine whether this covered claim cap would cover a small to medium size business.
- Clarification that the guaranty funds have the right to appoint and direct other services providers, such as legal, notice, mitigation, forensics, etc.
- Provides that coverage may be paid for high-net-worth insureds even if the state has high-net-worth exclusion due to the immediacy of the need to address claims. If the insured is later determined to exceed the net worth limitation, that loss could be addressed later.

Wake asked if a definition of covered services is needed and how that affects the claim limit. Cox said NCIGF would not object to further clarification on covered services. She said the \$500,000 limit is intended to be all-inclusive. Any residual amount is turned over to the estate and settled in due course. Wake said there are services under other policies, so it may not be an issue. Cox said some states have limits on defense costs.

Wake made a motion, seconded by Kaumann, to expose the proposed amendments for cybersecurity insurance for a 30-day comment period ending June 23. The motion passed unanimously.

Having no further business, the Receivership Law (E) Working Group adjourned.

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT**Table of Contents**

Section 1.	Title
Section 2.	Purpose
Section 3.	Scope
Section 4.	Construction
Section 5.	Definitions
Section 6.	Creation of the Association
Section 7.	Board of Directors
Section 8.	Powers and Duties of the Association
Section 9.	Plan of Operation
Section 10.	Duties and Powers of the Commissioner
Section 11.	Coordination Among Guaranty Associations
Section 12.	Effect of Paid Claims
Section 13.	[Optional] Net Worth Exclusion
Section 14.	Exhaustion of Other Coverage
Section 15.	Prevention of Insolvencies
Section 16.	Tax Exemption
Section 17.	Recoupment of Assessments
Section 18.	Immunity
Section 19.	Stay of Proceedings

Section 1. Title

This Act shall be known as the [State] Insurance Guaranty Association Act.

Section 2. Purpose

The purpose of this Act is to provide a mechanism for the payment of covered claims under certain insurance policies, to avoid excessive delay in payment and to the extent provided in this Act minimize financial loss to claimants or policyholders because of the insolvency of an insurer, and to provide an association to assess the cost of such protection among insurers.

Section 3. Scope

This Act shall apply to all kinds of direct insurance, but shall not be applicable to the following:

- A. Life, annuity, health or disability insurance;
- B. Mortgage guaranty, financial guaranty or other forms of insurance offering protection against investment risks;
- C. Fidelity or surety bonds, or any other bonding obligations;
- D. Credit insurance, vendors' single interest insurance, or collateral protection insurance or any similar insurance protecting the interests of a creditor arising out of a creditor-debtor transaction;
- E. Insurance of warranties or service contracts including insurance that provides for the repair, replacement or service of goods or property, indemnification for repair, replacement or service for the operational or structural failure of the goods or property due to a defect in materials, workmanship or normal wear and tear, or provides reimbursement for the liability incurred by the issuer of agreements or service contracts that provide such benefits;

MO-540-1

Property and Casualty Insurance Guaranty Association Model Act

- F. Title insurance;
- G. Ocean marine insurance;
- H. Any transaction or combination of transactions between a person (including affiliates of such person) and an insurer (including affiliates of such insurer) which involves the transfer of investment or credit risk unaccompanied by transfer of insurance risk; or
- I. Any insurance provided by or guaranteed by government.

Drafting Note: This Act focuses on property and liability kinds of insurance and therefore exempts those kinds of insurance deemed to present problems quite distinct from those of property and liability insurance. The Act further precludes from its scope certain types of insurance that provide protection for investment and financial risks. Financial guaranty is one of these. The NAIC Life and Health Insurance Guaranty Association Model Act provides for coverage of some, of the lines excluded by this provision.

For purposes of this section, "Financial guaranty insurance" includes any insurance under which loss is payable upon proof of occurrence of any of the following events to the damage of an insured claimant or obligee:

1. Failure of any obligor or obligors on any debt instrument or other monetary obligation, including common or preferred stock, to pay when due the principal, interest, dividend or purchase price of such instrument or obligation, whether failure is the result of a financial default or insolvency and whether or not the obligation is incurred directly or as guarantor by, or on behalf of, another obligor which has also defaulted;
2. Changes in the level of interest rates whether short term or long term, or in the difference between interest rates existing in various markets;
3. Changes in the rate of exchange of currency, or from the inconvertibility of one currency into another for any reason;
4. Changes in the value of specific assets or commodities, or price levels in general.

For purposes of this section, "credit insurance" means insurance on accounts receivable.

The terms "disability insurance" and "accident and health insurance," and "health insurance" are intended to be synonymous. Each State will wish to examine its own statutes to determine which is the appropriate phrase.

A State where the insurance code does not adequately define ocean marine insurance may wish to add the following to Section 5, Definitions: "Ocean marine insurance" means any form of insurance, regardless of the name, label or marketing designation of the insurance policy, which insures against maritime perils or risks and other related perils or risks, which are usually insured against by traditional marine insurance, such as hull and machinery, marine builders risk, and marine protection and indemnity. Perils and risk insured against include without limitation loss, damage, expense or legal liability of the insured for loss, damage or expense arising out of or incident to ownership, operation, chartering, maintenance, use, repair or construction of any vessel, craft or instrumentality in use in ocean or inland waterways for commercial purposes, including liability of the insured for personal injury, illness or death or for loss or damage to the property of the insured or another person.

Section 4. Construction

This Act shall be construed to effect the purpose under Section 2 which will constitute an aid and guide to interpretation.

Section 5. Definitions

As used in this Act:

[Optional:

- A. "Account" means any one of the three accounts created by Section 6.]

Drafting Note: This definition should be used by those States wishing to create separate accounts for assessment purposes. For a note on the use of separate accounts for assessments see the Drafting Note after Section 6. If this definition is used, all subsequent subsections should be renumbered.

- A. "Affiliate" means a person who directly, or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with another person on December 31 of the year immediately preceding the date the insurer becomes an insolvent insurer.
- B. "Association" means the [State] Insurance Guaranty Association created under Section 6.
- C. "Association similar to the association" means any guaranty association, security fund or other insolvency mechanism that affords protection similar to that of the association. The term shall also include any property

MO-540-2

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

and casualty insolvency mechanism that obtains assessments or other contributions from insurers on a pre-insolvency basis.

Drafting Note: There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self-insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and Q and Alternative 1b or 2b in Section 8A(3).

Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a

D. ~~_____~~ [Alternative 1] “Assumed claims transaction” means the following:

- (1) ~~_____~~ Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or
- (2) ~~_____~~ An assumption reinsurance transaction in which all of the following has occurred:
 - (a) ~~_____~~ The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
 - (b) ~~_____~~ The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) ~~_____~~ As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies

~~_____~~ [Alternative 2] “Assumed claims transaction” means the following:

- (1) ~~_____~~ Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or
- (2) ~~_____~~ Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
 - (a) ~~_____~~ Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
 - (b) ~~_____~~ For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.
 - (c) ~~_____~~ For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or
- (3) ~~_____~~ An assumption reinsurance transaction in which all of the following has occurred:
 - (a) ~~_____~~ The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
 - (b) ~~_____~~ The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.

MO-540-3

Property and Casualty Insurance Guaranty Association Model Act

D.E. "Claimant" means any person instituting a covered claim, provided that no person who is an affiliate of the insolvent insurer may be a claimant.

E.F. "Commissioner" means the Commissioner of Insurance of this State.

Drafting Note: Use the appropriate title for the chief insurance regulatory official wherever the term "commissioner" appears.

F.G. "Control" means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing that control does not exist in fact.

G.H. "Covered claim" means the following:

(1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the policy was issued by an insurer that becomes an insolvent insurer after the effective date of this Act and: ~~the policy was either issued by the insurer or assumed by the insurer in an assumed-claims transaction; and and~~

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.

(2) ~~"Covered claim" includes claim obligations that arose through the issuance of an insurance policy by a member insurer, which are later allocated, transferred, merged into, novated, assumed by, or otherwise made the sole responsibility of a member or non-member insurer if:~~

- ~~(a) The original member insurer has no remaining obligations on the policy after the transfer;~~
- ~~(b) A final order of liquidation with a finding of insolvency has been entered against the insurer that assumed the member's coverage obligations by a court of competent jurisdiction in the insurer's State of domicile;~~
- ~~(c) The claim would have been a covered claim, as defined in Paragraph (1), if the claim had remained the responsibility of the original member insurer and the order of liquidation had been entered against the original member insurer, with the same claim submission date and liquidation date; and~~
- ~~(d) In cases where the member's coverage obligations were assumed by a non-member insurer, the transaction received prior regulatory or judicial approval.~~

Optional:

(3) *"Covered claim" includes claim obligations that were originally covered by a non-member insurer, including but not limited to a self-insurer, non-admitted insurer or risk retention group, but subsequently became the sole direct obligation of a member insurer before the entry of a final order of liquidation with a finding of insolvency against the member insurer by a court of competent jurisdiction in its State of domicile, if the claim obligations were assumed by the member insurer in a transaction of one of the following types:*

Commented [Staff1]: If the Working Group agrees to include a second alternative or optional "covered claim" provision, it would be labeled as "Alternative" provisions.

MO-540-4

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (a) *A merger in which the surviving company was a member insurer immediately after the merger;*
- (b) *An assumption reinsurance transaction that received any required approvals from the appropriate regulatory authorities; or*
- (c) *A transaction entered into pursuant to a plan approved by the member insurer's domiciliary regulator.*

Drafting Note for Covered Claims definition:- TBD

Drafting Note for Alternative Two: Optional Subsection G(3) provides coverage for certain that are not within the scope of Paragraphs (1) or (2) because the original coverage was not provided by a member insurer. Subparagraphs (a) and (b) are based on Alternative 1 for the former definition of "assumed claims transaction." (below) and Subparagraph (3) is based on the additional scenario included in Alternative 2.

Regarding the Definition of "Assumed Claims Transaction": There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and O and Alternative 1b or 2b in Section 8A(3).

Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a

[Assumed Claims Transaction Definition Alternative 1] "Assumed claims transaction" means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or
- (2) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies

[Assumed Claims Transaction Definition Alternative 2] "Assumed claims transaction" means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or
- (2) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
 - (a) Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
 - (b) For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer;
 - (c) For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or
- (3) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and

Commented [Staff2]: If the Working Group agrees to include both G(3) options above rather than selecting one, they would be labeled Alternative One and Alternative Two. Staff recommends including an explanation of the differences between the two alternatives. (Yet to be drafted)

MO-540-5

Property and Casualty Insurance Guaranty Association Model Act

~~(c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.~~

(32) Except as provided elsewhere in this section, “covered claim” shall not include:

- (a) Any amount awarded as punitive or exemplary damages;
- (b) Any amount sought as a return of premium under any retrospective rating plan;
- (c) Any amount due any reinsurer, insurer, insurance pool or underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer as subrogation recoveries, reinsurance recoveries, contribution, indemnification or otherwise. No claim for any amount due any reinsurer, insurer, insurance pool, underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer may be asserted against a person insured under a policy issued by an insolvent insurer other than to the extent the claim exceeds the association obligation limitations set forth in Section 8 of this Act;
- (d) Any claims excluded pursuant to Section 13 due to the high net worth of an insured;
- (e) Any first party claims by an insured that is an affiliate of the insolvent insurer;
- (f) Any fee or other amount relating to goods or services sought by or on behalf of any attorney or other provider of goods or services retained by the insolvent insurer or an insured prior to the date it was determined to be insolvent;
- (g) Any fee or other amount sought by or on behalf of any attorney or other provider of goods or services retained by any insured or claimant in connection with the assertion or prosecution of any claim, covered or otherwise, against the association;
- (h) Any claims for interest; ~~or~~
- (i) ~~(+)~~ Any claim filed with the association or a liquidator for protection afforded under the insured’s policy for incurred-but-not-reported losses.

Drafting note: The language in this provision referring to claims for incurred-but-not-reported losses has been inserted to expressly include the existing intent of this provision and make it clear that “policyholder protection” proofs of claim, while valid to preserve rights against the ~~State-estate~~ of the insolvent insurer under the Insurer Receivership Model Act, are not valid to preserve rights against the association.

II. “Insolvent insurer” means an insurer that is licensed to transact insurance in this State, either at the time the policy was issued, ~~when the obligation with respect to the covered claim was assumed under an assumed claims transaction,~~ or when the insured event occurred, and against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile.

Drafting Note: “Final order” as used in this section means an order which has not been stayed. States in which the “final order” language does not accurately reflect whether or not the order is subject to a stay should substitute appropriate language consistent with the statutes or rules of the State to convey the intended meaning.

II. “Insured” means any named insured, any additional insured, any vendor, lessor or any other party identified as an insured under the policy.

III. (1) “Member insurer” means any person who:

- (a) Writes any kind of insurance to which this Act applies under Section 3, including the exchange of reciprocal or inter-insurance contracts; and

MO-540-6

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (b) Is licensed to transact insurance in this State (except at the option of the State).
- (2) An insurer shall cease to be a member insurer effective on the day following the termination or expiration of its license to transact the kinds of insurance to which this Act applies, however, the insurer shall remain liable as a member insurer for any and all obligations, including obligations for assessments levied prior to the termination or expiration of the insurer's license and assessments levied after the termination or expiration, which relate to any insurer that became an insolvent insurer prior to the termination or expiration of the insurer's license.

~~KL.~~ "Net direct written premiums" means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees, less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. "Net direct written premiums" does not include premiums on contracts between insurers or reinsurers.

~~[Optional]~~

~~K.~~ "Net direct written premiums" means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees and including all premiums and other compensation collected by a member insurer for obligations assumed under a transaction described in Subsection G(3), less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. "Net direct written premiums" does not include premiums on contracts between insurers or reinsurers, other than compensation received for entering into a transaction described in Subsection G(3).

Commented [Staff3]: Similar comment as above. The RLWG can determine to keep two alternative definitions of K or select one corresponding to G(3).

Drafting Note: The optional version of Subsection K is for states that have adopted optional Subsection G(3).

~~LLM.~~ "Novation" means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.

~~MN.~~ "Person" means any individual, aggregation of individuals, corporation, partnership or other entity.

~~MNO.~~ "Receiver" means liquidator, rehabilitator, conservator or ancillary receiver, as the context requires.

Drafting Note: Each State should conform the definition of "receiver" to the definition used in the State's insurer receivership act.

~~PON.~~ "Self-insurer" means a person that covers its liability through a qualified individual or group self-insurance program or any other formal program created for the specific purpose of covering liabilities typically covered by insurance.

~~Q.~~ ~~[Alternative 2b]~~ "Assumption Consideration" shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer during the three calendar years prior to the effective date of the transaction to the applicable guaranty associations if the business had been written directly by the assuming insurer.

~~In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assumed claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the calendar year of the transaction.~~

~~The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be~~

MO-540-7

Property and Casualty Insurance Guaranty Association Model Act

~~required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.~~

Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7.

[Alternate Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7. For purposes of administration and assessment, the association shall be divided into three separate accounts:

- A. *The workers' compensation insurance account;*
- B. *The automobile insurance account; and*
- C. *The account for all other insurance to which this Act applies.]*

Drafting Note: The alternate Section 6 should be used if a State, after examining its insurance market, determines that separate accounts for various kinds of insurance are necessary and feasible. The major consideration is whether each account will have a base sufficiently large to cover possible insolvencies. Separate accounts will permit assessments to be generally limited to insurers writing the same kind of insurance as the insolvent company. If this approach is adopted the provision of alternate Sections 8A(3) and 8B(6) and optional Section 5A should also be used.

Commented [Staff4]: Drafter Comment: This drafting note was written before the assumed claims provisions created a pair of "alternative alternatives." For consistency with the drafting note and "Alternate 8B(6), we should probably restore the original schematic for 8B(3)"

Section 7. Board of Directors

- A. The board of directors of the association shall consist of not less than five (5) nor more than [insert number] persons serving terms as established in the plan of operation. The insurer members of the board shall be selected by member insurers subject to the approval of the commissioner. Vacancies on the board shall be filled for the remaining period of the term by a majority vote of the remaining insurer members subject to the approval of the commissioner. If no members are selected within sixty (60) days after the effective date of this Act, the commissioner may appoint the initial members of the board of directors. Two (2) persons, who must be public representatives, shall be appointed by the commissioner to the board of directors. Vacancies of positions held by public representatives shall be filled by the commissioner. A public representative may not be an officer, director or employee of an insurance company or any person engaged in the business of insurance. For the purposes of this section, the term "director" shall mean an individual serving on behalf of an insurer member of the board of directors or a public representative on the board of directors.

Drafting Note: A State adopting this language should make certain that its insurance code includes a definition of "the business of insurance" similar to that found in the NAIC Insurer Receivership Model Act.

- B. In approving selections to the board, the commissioner shall consider among other things whether all member insurers are fairly represented.
- C. Members of the board of directors may be reimbursed from the assets of the association for reasonable expenses incurred by them as members of the board of directors.
- D. Any board member who is an insurer in receivership shall be terminated as a board member, effective as of the date of the entry of the order of receivership. Any resulting vacancies on the board shall be filled for the remaining period of the term in accordance with the provisions of Subsection A.
- E. In the event that a director shall, because of illness, nonattendance at meetings or any other reason, be deemed unable to satisfactorily perform the designated functions as a director by missing three consecutive board

MO-540-8

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

meetings, the board of directors may declare the office vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

- F. If the commissioner has reasonable cause to believe that a director failed to disclose a known conflict of interest with his or her duties on the board, failed to take appropriate action based on a known conflict of interest with his or her duties on the board, or has been indicted or charged with a felony, or misdemeanor involving moral turpitude, the commissioner may suspend that director pending the outcome of an investigation or hearing by the commissioner or the conclusion of any criminal proceedings. A company elected to the board may replace a suspended director prior to the completion of an investigation, hearing or criminal proceeding. In the event that the allegations are substantiated at the conclusion of an investigation, hearing or criminal proceeding, the office shall be declared vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

Section 8. Powers and Duties of the Association

- A. The association shall:

- (1) (a) Be obligated to pay covered claims existing prior to the order of liquidation, arising within thirty (30) days after the order of liquidation, or before the policy expiration date if less than thirty (30) days after the order of liquidation, or before the insured replaces the policy or causes its cancellation, if the insured does so within thirty (30) days of the order of liquidation. The obligation shall be satisfied by paying to the claimant an amount as follows:
- (i) The full amount of a covered claim for benefits under a workers' compensation insurance coverage;
 - (ii) An amount not exceeding \$10,000 per policy for a covered claim for the return of unearned premium;
 - (iii) An amount not exceeding \$500,000 per claimant for all other covered claims.
- (b) In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include a claim filed with the guaranty fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer.

For the purpose of filing a claim under this subsection, notice of claims to the liquidator of the insolvent insurer shall be deemed notice to the association or its agent and a list of claims shall be periodically submitted to the association or association similar to the association in another State by the liquidator.

Drafting Note: On the general subject of the relationship of the association to the liquidator, the working group/task force takes the position that since this is a model State bill, it will be able to bind only two parties, the association and the in-State liquidator. Nevertheless, the provisions should be clear enough to outline the requests being made to out-of-State liquidators and the requirements placed on in-State liquidators in relation to out-of-State associations.

Drafting Note: Because of its potential impact on guaranty association coverage, it is recommended that the legislation include an appropriate provision stating that the bar date only applies to claims in liquidation commencing after its effective date. Drafters should insure that the State's insurance liquidation act would permit, upon closure, payments to the guaranty association and any association similar to the association for amounts that are estimated to be incurred after closure for workers compensation claims obligations. The amounts should be payable on these obligations related to losses both known and not known at the point of closure.

- (c) Any obligation of the association to defend an insured shall cease upon the association's payment or tender of an amount equal to the lesser of the association's covered claim obligation limit or the applicable policy limit.

MO-540-9

Property and Casualty Insurance Guaranty Association Model Act

Drafting Note: The obligation of the association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is canceled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to \$10,000, against the association. The maximums (\$10,000 for the return of unearned premium; \$500,000 for all other covered claims) represent the working group's concept of practical limitations, but each State will wish to evaluate these figures.

- (2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent, subject to the limitations provided in this Act, shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent, including but not limited to, the right to pursue and retain salvage and subrogation recoverable on covered claim obligations to the extent paid by the association. The association shall not be deemed the insolvent insurer for the purpose of conferring jurisdiction.

- (3) ~~[Alternative 1a]~~ Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

Commented [Staff5]: Drafter Comment: The existing Model has a matrix of four options because there are two independent toggles. We're getting rid of one of them, so we don't need two-level numbering anymore, and it should now be either "1 and 2" or "A and B." Also, the Model seems to have a typo in the second "Alternative" below.

~~[Alternative 2a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those~~

MO-540-10

IBT/CD DRAFT VERSION #1

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

(3) ~~[Alternative Section 8A(3)(b)]~~

(3) Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment on the kinds of insurance in the account. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

Commented [Staff6]: Drafter Comment: See Comment to Section 6 Drafting Note

[Optional:

(4) Assess member insurers that have entered into transactions described in Section 5G(3), in addition to the assessment levied under Paragraph (3), an amount reflecting liabilities that may have arisen before the date of the transaction. The assessment under this paragraph is not subject to the annual percentage limitation under Paragraph (3) and shall be the amount that would have been paid by the assuming insurer under Paragraph (3) during the three calendar years preceding the effective date of the transaction if the business had been written directly by the assuming insurer. If the amount of the applicable premiums for the three year period cannot be determined, the assessment shall be 130% of the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the assumed claims transaction, multiplied by the applicable guaranty association assessment percentage for the calendar year of the transaction.]

Drafting Note: Optional Paragraph (4) is for states that have adopted Alternative Section 5G(2) and choose to require an additional "assumption consideration" assessment when claim obligations are assumed from an entity other than a member insurer.]

(3) ~~[Alternate 2b] Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment~~

Commented [Staff7]: Drafter Comment: Note that the bracket was never deleted from the end of 1b and 2b when it was deleted from the beginning as the four-way mix-and-match was adopted.

MO-540-11

Property and Casualty Insurance Guaranty Association Model Act

not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment on the kinds of insurance in the account. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

- (4) Investigate claims brought against the association and adjust, compromise, settle and pay covered claims to the extent of the association's obligation and deny all other claims. The association shall pay claims in any order that it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The association shall have the right to appoint and to direct legal counsel retained under liability insurance policies for the defense of covered claims.
- (5) Notify claimants in this State as deemed necessary by the commissioner and upon the commissioner's request, to the extent records are available to the association.

Drafting Note: The intent of this paragraph is to allow, in exceptional circumstances, supplementary notice to that given by the domiciliary receiver.

- (6) (a) Have the right to review and contest as set forth in this subsection settlements, releases, compromises, waivers and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation. In an action to enforce settlements, releases and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation, the Association shall have the right to assert the following defenses, in addition to the defenses available to the insurer:
 - (i) The association is not bound by a settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment entered against an insured or the insurer by consent or through a failure to exhaust all appeals, if the settlement, release, compromise, waiver or judgment was:
 - (I) Executed or entered within 120 days prior to the entry of an order of liquidation, and the insured or the insurer did not use reasonable care in entering into the settlement, release, compromise, waiver or judgment, or did not pursue all reasonable appeals of an adverse judgment; or
 - (II) Executed by or taken against an insured or the insurer based on default, fraud, collusion or the insurer's failure to defend.
 - (ii) If a court of competent jurisdiction finds that the association is not bound by a settlement, release, compromise, waiver or judgment for the reasons described in Subparagraph (a)(i), the settlement, release, compromise, waiver or judgment shall be set aside, and the association shall be permitted to defend any covered

MO-540-12

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

claim on the merits. The settlement, release, compromise, waiver or judgment may not be considered as evidence of liability or damages in connection with any claim brought against the association or any other party under this Act.

- (iii) The association shall have the right to assert any statutory defenses or rights of offset against any settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment taken against the insured or the insurer.
- (b) As to any covered claims arising from a judgment under any decision, verdict or finding based on the default of the insolvent insurer or its failure to defend, the association, either on its own behalf or on behalf of an insured may apply to have the judgment, order, decision, verdict or finding set aside by the same court or administrator that entered the judgment, order, decision, verdict or finding and shall be permitted to defend the claim on the merits.
- (7) Handle claims through its own employees, one or more insurers, or other persons designated as servicing facilities, which may include the receiver for the insolvent insurer. Designation of a servicing facility is subject to the approval of the commissioner, but the designation may be declined by a member insurer.
- (8) Reimburse each servicing facility for obligations of the association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the association and shall pay the other expenses of the association authorized by this Act.
- (9) Submit, not later than 90 days after the end of the association's fiscal year, a financial report for the preceding fiscal year in a form approved by the commissioner.

B. The association may:

- (1) Employ or retain persons as are necessary to handle claims and perform other duties of the association;
- (2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;
- (3) Sue or be sued;
- (4) Negotiate and become a party to contracts necessary to carry out the purpose of this Act;
- (5) Perform other acts necessary or proper to effectuate the purpose of this Act;
- (6) Refund to the member insurers in proportion to the contribution of each member insurer to the association that amount by which the assets of the association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association exceed the liabilities of the association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

- (6) *Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]*

Drafting Note: The working group/task force feels that the board of directors should determine the amount of the refunds to members when the assets of the association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

C. Suits involving the association:

MO-540-13

Property and Casualty Insurance Guaranty Association Model Act

- (1) Except for actions by the receiver, all actions relating to or arising out of this Act against the association shall be brought in the courts in this State. The courts shall have exclusive jurisdiction over all actions relating to or arising out of this Act against the association.
- (2) The exclusive venue in any action by or against the association is in [designate appropriate court]. The association may, at its option, waive this venue as to specific actions.

*[Optional Section 8D**D.*

- (1) *The legislature finds:*
 - (a) *The potential for widespread and massive damage to persons and property caused by natural disasters such as earthquakes, windstorms, or fire in this State can generate insurance claims of such a number as to render numerous insurers operating within this State insolvent and therefore unable to satisfy covered claims;*
 - (b) *The inability of insureds within this State to receive payments of covered claims or to timely receive the payments creates financial and other hardships for insureds and places undue burdens on the State, the affected units of local government, and the community at large;*
 - (c) *The insolvency of a single insurer in a material amount or a catastrophic event may result in the same hardships as those produced by a natural disaster;*
 - (d) *The State has previously taken action to address these problems by adopting the [insert name of guaranty association act], which among other things, provides a mechanism for the payment of covered claims under certain insurance policies to avoid excessive delay in payment and to avoid financial loss to claimants or policyholders because of the insolvency of an insurer; and*
 - (e) *In order for the association to timely pay claims of insolvent insurers in this State and otherwise carry out its duties, the association may require additional financing options. The intent of the Legislature is to make those options available to the association in the event that a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection A(3). In cases where the association determines that it is cost effective, the association may issue bonds as provided in this subsection. In determining whether to issue bonds, the association shall consider the transaction costs of issuing the bonds.*
- (2) *In the event a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection 8A(3), the association, in its sole discretion, may by resolution request the [insert name of agency] Agency to issue bonds pursuant to [insert statutory authority], in such amounts as the association may determine to provide funds for the payment of covered claims and expenses related thereto. In the event bonds are issued, the association shall have the authority to annually assess member insurers for amounts necessary to pay the principal of, and interest on those bonds. Assessments collected pursuant to this authority shall be collected under the same procedures as provided in Subsection 8A(3) and, notwithstanding the two percent (2%) limit in Subsection 8A(3), shall be limited to an additional [insert percentage] percent of the annual net direct written premium in this State of each member insurer for the calendar year preceding the assessment. The commissioner's approval shall be required for any assessment greater than five percent (5%). Assessments collected pursuant to this authority may only be used for servicing the bond obligations provided for in this subsection and shall be pledged for that purpose.*
- (3) *In addition to the assessments provided for in this subsection, the association in its discretion, and after considering other obligations of the association, may utilize current funds of the association,*

MO-540-14

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

assessments made under Subsection 8A(3) and advances or dividends received from the liquidators of insolvent insurers to pay the principal and interest on any bonds issued at the board's request.

- (4) *Assessments under this subsection shall be payable in twelve (12) monthly installments with the first installment being due and payable at the end of the month after an assessment is levied, and subsequent installments being due not later than the end of each succeeding month.*
- (5) *In order to assure that insurers paying assessments levied under this subsection continue to charge rates that are neither inadequate nor excessive, within ninety (90) days after being notified of the assessments, each insurer that is to be assessed pursuant to this subsection shall make a rate filing for lines of business additionally assessed under this subsection. If the filing reflects a rate change that, as a percentage, is equal to the difference between the rate of the assessment and the rate of the previous year's assessment under this subsection, the filing shall consist of a certification so stating and shall be deemed approved when made. Any rate change of a different percentage shall be subject to the standards and procedures of [cite appropriate statutory authority for provisions on filing and approval of rates].*

Drafting Note: This provision should only be considered by those States that have serious concerns that circumstances could result in a substantial capacity problem resulting in unpaid or pro rata payment of claims. An association intending to consider this provision should first consult with experienced bond counsel in its State to identify an appropriate State agency or bonding authority to act as vehicle for issuing the bonds. That agency or authority's statute may also have to be amended to specifically authorize these types of bonds and to cross-reference this provision in the guaranty association law. It is possible that in some situations a new bonding authority may have to be created for this purpose.

Regardless of the vehicle used, it is important that the decision-making authority on whether bonds are needed and in what amounts be retained by the association's board.

The extent of additional assessment authority under this subsection has not been specified. When considering the amount of additional authority that will be needed, a determination should be made as to the amount of funds needed to service the bonds. More specifically, consideration should be given to the amount of the bonds to be issued, interest rate and the maturity date of the bonds. The association should be able to raise sufficient funds through assessments to pay the interest and retire the bonds after some reasonable period (e.g. ten (10) years). Subsection D(2) requires the Commissioner's approval before the association can impose an additional assessment in excess of 5%. This is to assure that the additional assessment will not result in financial hardship to the member insurers and additional insolvencies.

The intent of Subsection D(4) is to permit recoupment by member insurers of the additional cost of assessments under this subsection without any related regulatory approval. A State enacting this subsection may need to revise Subsection D(4) so that it conforms to the particular State's recoupment provisions, as well as the provisions on filing and approval of rates.]

MO-540-15

Property and Casualty Insurance Guaranty Association Model Act

Section 9. Plan of Operation

- A. (1) The association shall submit to the commissioner a plan of operation and any amendments to the plan of operation necessary or suitable to assure the fair, reasonable and equitable administration of the association. The plan of operation and amendments shall become effective upon approval in writing by the commissioner.
- (2) If the association fails to submit a suitable plan of operation within ninety (90) days following the effective date of this Act, or if at any time thereafter the association fails to submit suitable amendments to the plan, the commissioner shall, after notice and hearing, adopt reasonable rules necessary or advisable to effectuate the provisions of this Act. The rules shall continue in force until modified by the commissioner or superseded by a plan submitted by the association and approved by the commissioner.
- B. All member insurers shall comply with the plan of operation.
- C. The plan of operation shall:
- (1) Establish the procedures under which the powers and duties of the association under Section 8 will be performed;
 - (2) Establish procedures for handling assets of the association;
 - (3) Require that written procedures be established for the disposition of liquidating dividends or other monies received from the estate of the insolvent insurer;
 - (4) Require that written procedures be established to designate the amount and method of reimbursing members of the board of directors under Section 7;
 - (5) Establish procedures by which claims may be filed with the association and establish acceptable forms of proof of covered claims;
 - (6) Establish regular places and times for meetings of the board of directors;
 - (7) Require that written procedures be established for records to be kept of all financial transactions of the association, its agents and the board of directors;
 - (8) Provide that any member insurer aggrieved by any final action or decision of the association may appeal to the commissioner within thirty (30) days after the action or decision;
 - (9) Establish the procedures under which selections for the board of directors will be submitted to the commissioner;
 - (10) Contain additional provisions necessary or proper for the execution of the powers and duties of the association.
- D. The plan of operation may provide that any or all powers and duties of the association, except those under Sections 8A(3) and 8B(2), are delegated to a corporation, association similar to the association or other organization which performs or will perform functions similar to those of this association or its equivalent in two (2) or more States. The corporation, association similar to the association or organization shall be reimbursed as a servicing facility would be reimbursed and shall be paid for its performance of any other functions of the association. A delegation under this subsection shall take effect only with the approval of both the board of directors and the commissioner, and may be made only to a corporation, association or organization which extends protection not substantially less favorable and effective than that provided by this Act.

Section 10. Duties and Powers of the Commissioner

MO-540-16

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- A. The commissioner shall:
- (1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;
 - (2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.
- B. The commissioner may:
- (1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than \$100 per month;
 - (2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.
 - (3) Examine, audit, or otherwise regulate the association.

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

- C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

Section 11. Coordination Among Guaranty Associations

- A. The association may join one or more organizations of other State associations of similar purposes, to further the purposes and administer the powers and duties of the association. The association may designate one or more of these organizations to act as a liaison for the association and, to the extent the association authorizes, to bind the association in agreements or settlements with receivers of insolvent insurance companies or their designated representatives.
- B. The association, in cooperation with other obligated or potentially obligated guaranty associations, or their designated representatives, shall make all reasonable efforts to coordinate and cooperate with receivers, or their designated representatives, in the most efficient and uniform manner, including the use of Uniform Data Standards as promulgated or approved by the National Association of Insurance Commissioners.

Section 12. Effect of Paid Claims

- A. Any person recovering under this Act shall be deemed to have assigned any rights under the policy to the association to the extent of his or her recovery from the association. Every insured or claimant seeking the protection of this Act shall cooperate with the association to the same extent as the person would have been required to cooperate with the insolvent insurer. The association shall have no cause of action against the insured of the insolvent insurer for sums it has paid out except any causes of action as the insolvent insurer would have had if the sums had been paid by the insolvent insurer and except as provided in Subsection B and in Section 13. In the case of an insolvent insurer operating on a plan with assessment liability, payments of claims of the association shall not operate to reduce the liability of the insureds to the receiver, liquidator or statutory successor for unpaid assessments.

MO-540-17

Property and Casualty Insurance Guaranty Association Model Act

- B. The association shall have the right to recover from any person who is an affiliate of the insolvent insurer all amounts paid by the association on behalf of that person pursuant to the Act, whether for indemnity, defense or otherwise.
- C. The association and any association similar to the association in another State shall be entitled to file a claim in the liquidation of an insolvent insurer for any amounts paid by them on covered claim obligations as determined under this Act or similar laws in other States and shall receive dividends and other distributions at the priority set forth in [insert reference to State priority of distribution in liquidation act].
- D. The association shall periodically file with the receiver or liquidator of the insolvent insurer statements of the covered claims paid by the association and estimates of anticipated claims on the association which shall preserve the rights of the association against the assets of the insolvent insurer.

Section 13 [Optional] Net Worth Exclusion

Drafting Note: Various alternatives are provided for a net worth limitation in the guaranty association act. States may choose any of the Subsection B alternatives below or may elect to not have any net worth limitation. Subsection A, which defines "high net worth insured," has two alternatives allowing States to choose different net worth limitations for first and third party claims if that State chooses alternatives 1 or 2 to Subsection B. Subsections C, D and E are recommended to accompany any of the Subsection B alternatives. In cases where States elect not to include net worth, States may either omit this section in its entirety or include only Subsection C, which excludes from coverage claims denied by other States' net worth restrictions pursuant to those States' guaranty association laws.

- A. For purposes of this section "high net worth insured" shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

[Alternate Section 13A

- A. (1) *For the purposes of Subsection B(1), "high net worth insured" shall mean any insured whose net worth exceeds \$25 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.]*
- (2) *For the purpose of Subsection B(2) [and B(4) if Alternative 2 for Subsection B is selected] "high net worth insured" shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.*

Drafting Note: Alternate Subsection A language should only be considered in cases where a State is considering Alternative 1 or 2 of Subsection B and would like to set different dollar thresholds for the first party claim exclusion provision and the third party recovery provision.

Drafting Note: States may wish to consider the impact on governmental entities and charitable organizations of the application of the net worth exclusion contained in the definition of "covered claim." The Michigan Supreme Court, in interpreting a "net worth" provision in the Michigan guaranty association statute, held that governmental entities possess a "net worth" for purposes of the provision in the Michigan guaranty association statute that prohibits claims against the guaranty association by a person who has a specified net worth. Oakland County Road Commission vs. Michigan Property & Casualty Guaranty Association, 575 N.W. 2d 751 (Mich. 1998).

[Alternative 1 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 2 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) Subject to Paragraph (3), the association shall not be obligated to pay any third party claim relating to a policy of a high net worth insured. This exclusion shall not apply to third party claims against the high net worth insured where:

MO-540-18

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (a) The insured has applied for or consented to the appointment of a receiver, trustee or liquidator for all or a substantial part of its assets;
 - (b) The insured has filed a voluntary petition in bankruptcy, filed a petition or an answer seeking a reorganization or arrangement with creditors or to take advantage of any insolvency law; or
 - (c) An order, judgment, or decree is entered by a court of competent jurisdiction, on the application of a creditor, adjudicating the insured bankrupt or insolvent or approving a petition seeking reorganization of the insured or of all or substantial part of its assets.
- (3) Paragraph (2) shall not apply to workers' compensation claims, personal injury protection claims, no-fault claims and any other claims for ongoing medical payments to third parties.
 - (4) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 3 for Section 13B

- B. The association shall not be obligated to pay any first party claims by a high net worth insured.]
- C. The association shall not be obligated to pay any claim that would otherwise be a covered claim that is an obligation to or on behalf of a person who has a net worth greater than that allowed by the insurance guaranty association law of the State of residence of the claimant at the time specified by that State's applicable law, and which association has denied coverage to that claimant on that basis.
- D. The association shall establish reasonable procedures subject to the approval of the commissioner for requesting financial information from insureds on a confidential basis for purposes of applying this section, provided that the financial information may be shared with any other association similar to the association and the liquidator for the insolvent insurer on the same confidential basis. Any request to an insured seeking financial information must advise the insured of the consequences of failing to provide the financial information. If an insured refuses to provide the requested financial information where it is requested and available, the association may, until such time as the information is provided, provisionally deem the insured to be a high net worth insured for the purpose of denying a claim under Subsection B.
- E. In any lawsuit contesting the applicability of this section where the insured has refused to provide financial information under the procedure established pursuant to Subsection D, the insured shall bear the burden of proof concerning its net worth at the relevant time. If the insured fails to prove that its net worth at the relevant time was less than the applicable amount, the court shall award the association its full costs, expenses and reasonable attorneys' fees in contesting the claim.

Section 14. Exhaustion of Other Coverage

- A. (1) Any person having a claim against an insurer, shall be required first to exhaust all coverage provided by any other policy, including the right to a defense under the other policy, if the claim under the other policy arises from the same facts, injury or loss that gave rise to the covered claim against the association. The requirement to exhaust shall apply without regard to whether the other insurance policy is a policy written by a member insurer. However, no person shall be required to exhaust any right under the policy of an insolvent insurer or any right under a life insurance policy.
- (2) Any amount payable on a covered claim under this Act shall be reduced by the full applicable limits stated in the other insurance policy, or by the amount of the recovery under the other insurance policy as provided herein. The association shall receive a full credit for the stated limits, unless the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy. If the claimant demonstrates that the claimant used

MO-540-19

Property and Casualty Insurance Guaranty Association Model Act

reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy, or if there are no applicable stated limits under the policy, the association shall receive a full credit for the total recovery.

[Alternative 1 for Section 14A(2)(a)]

- (a) The credit shall be deducted from the lesser of:
- (i) The association's covered claim limit;
 - (ii) The amount of the judgment or settlement of the claim; or
 - (iii) The policy limits of the policy of the insolvent insurer./

[Alternative 2 for Section 14A(2)(a)]

- The credit shall be deducted from the lesser of:
- (i) The amount of the judgment or settlement of the claim; or
 - (ii) The policy limits of the policy of the insolvent insurer./
- (b) In no case, however, shall the obligation of the association exceed the covered claim limit embodied in Section 8 of this Act.
- (3) Except to the extent that the claimant has a contractual right to claim defense under an insurance policy issued by another insurer, nothing in this section shall relieve the association of the duty to defend under the policy issued by the insolvent insurer. This duty shall, however, be limited by any other limitation on the duty to defend embodied in this Act.
- (4) A claim under a policy providing liability coverage to a person who may be jointly and severally liable as a joint tortfeasor with the person covered under the policy of the insolvent insurer that gives rise to the covered claim shall be considered to be a claim arising from the same facts, injury or loss that gave rise to the covered claim against the association.
- (5) For purposes of this section, a claim under an insurance policy other than a life insurance policy shall include, but is not limited to:
- (a) A claim against a health maintenance organization, a hospital plan corporation, a professional health service corporation or disability insurance policy; and
 - (b) Any amount payable by or on behalf of a self-insurer.
- (6) The person insured by the insolvent insurer's policy may not be pursued by a third-party claimant for any amount paid to the third party by which the association's obligation is reduced by the application of this section.

- B. Any person having a claim which may be recovered under more than one insurance guaranty association or its equivalent shall seek recovery first from the association of the place of residence of the insured, except that if it is a first party claim for damage to property with a permanent location, the person shall seek recovery first from the association of the location of the property. If it is a workers' compensation claim, the person shall seek recovery first from the association of the residence of the claimant. Any recovery under this Act shall be reduced by the amount of recovery from another insurance guaranty association or its equivalent.

Drafting Note: This subsection does not prohibit recovery from more than one association, but it does describe the association to be approached first and then requires that any previous recoveries from like associations must be set off against recoveries from this association.

Section 15. Prevention of Insolvencies

To aid in the detection and prevention of insurer insolvencies:

- A. The board of directors may, upon majority vote, make recommendations to the commissioner on matters generally related to improving or enhancing regulation for solvency.
- B. At the conclusion of any domestic insurer insolvency in which the association was obligated to pay covered

MO-540-20

IBT/CD DRAFT VERSION #1
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

claims, the board of directors may, upon majority vote, prepare a report on the history and causes of the insolvency, based on the information available to the association and submit the report to the commissioner.

- C. Reports and recommendations provided under this section shall not be considered public documents.

Section 16. Tax Exemption

The association shall be exempt from payment of all fees and all taxes levied by this State or any of its subdivisions except taxes levied on real or personal property.

Section 17. Recoupment of Assessments

Drafting Note: States may choose how they wish to allow member insurers to recoup assessments paid by selecting one of three alternatives for Section 17.

[Alternative 1 for Section 17]

- A. Except as provided in Subsection D, each member insurer shall annually recoup assessments it remitted in preceding years under Section 8. The recoupment shall be by means of a policyholder surcharge on premiums charged for all kinds of insurance in the accounts assessed. The surcharge shall be at a uniform percentage rate determined annually by the commissioner that is reasonably calculated to recoup the assessment remitted by the insurer, less any amounts returned to the member insurer by the association. Changes in this rate shall be effective no sooner than 180 days after insurers have received notice of the changed rate.
- B. If a member insurer fails to recoup the entire amount of the assessment in the first year under this section, it shall repeat the surcharge procedure provided for herein in succeeding years until the assessment is fully recouped or a de minimis amount remains uncollected. Any such de minimis amount shall be collected as provided in Subsection D of this section. If a member insurer collects excess surcharges, the insurer shall remit the excess amount to the association, and the excess amount shall be applied to reduce future assessments in the appropriate account.
- C. The amount and nature of any surcharge shall be separately stated on either a billing or policy declaration sent to an insured. The surcharge shall not be considered premium for any purpose, including the [insert all appropriate taxes] or agents' commission.
- D. A member may elect not to collect the surcharge from its insureds only when the expense of collecting the surcharge would exceed the amount of the surcharge. In that case, the member shall recoup the assessment through its rates, provided that:
- (1) The insurer shall be obligated to remit the amount of surcharge not collected by election under this subsection; and
 - (2) The last sentence in Subsection C above shall not apply.
- E. In determining the rate under Subsection A for the first year of recoupment under this section, under rules prescribed by the commissioner, the commissioner shall provide for the recoupment in that year, or in such reasonable period as the commissioner may determine, of any assessments that have not been recouped as of that year. Insurers shall not be required to recoup assessments through surcharges under this section until 180 days after this section takes effect.]

[Alternative 2 for Section 17]

- A. Notwithstanding any provision of [insert citation to relevant tax and insurance codes] to the contrary, a member insurer may offset against its [insert all appropriate taxes] liability the entire amount of the assessment imposed under this Act at a rate of [insert number] percent per year for [insert number of years] successive years following the date of assessment. If the assessment is not fully recovered over the [insert number of years] period, the remaining unrecovered assessment may be claimed for subsequent calendar years until fully recovered.

Drafting Note: States may choose the number of years to allow an insurer to offset an assessment against the insurer's premium tax liability.

MO-540-21

Property and Casualty Insurance Guaranty Association Model Act

- B. Any tax credit under this section shall, for the purposes of Section [insert citation to retaliatory tax statute] be treated as a tax paid both under the tax laws of this State and under the laws of any other State or country.
- C. If a member insurer ceases doing business in this State, any uncredited assessment may be credited against its [insert all appropriate taxes] during the year it ceases doing business in this State.
- D. Any sums that are acquired by refund from the association by member insurers and that have been credited against [insert all appropriate taxes], as provided in this section, shall be paid by member insurers to this State as required by the department. The association shall notify the department that the refunds have been made./

[Alternative 3 for Section 17]

The rates and premiums charged for insurance policies to which this section applies shall include amounts sufficient to recoup a sum equal to the amounts paid to the association by the member insurer less any amounts returned to the member insurer by the association. Rates shall not be deemed excessive because they contain an additional amount reasonably calculated to recoup all assessments paid by the member insurer./

Section 18. Immunity

There shall be no liability on the part of, and no cause of action of any nature shall arise against a member insurer, the association or its agents or employees, the board of directors, or any person serving as an alternate or substitute representative of any director, or the commissioner or the commissioner's representatives for any action taken or any failure to act by them in the performance of their powers and duties under this Act

Section 19. Stay of Proceedings

All proceedings in which the insolvent insurer is a party or is obligated to defend a party in any court in this State shall, subject to waiver by the association in specific cases involving covered claims, be stayed for six (6) months and such additional time as may be determined by the court from the date the insolvency is determined or an ancillary proceeding is instituted in the State, whichever is later, to permit proper defense by the association of all pending causes of action.

The liquidator, receiver or statutory successor of an insolvent insurer covered by this Act shall permit access by the board or its authorized representative to such of the insolvent insurer's records which are necessary for the board in carrying out its functions under this Act with regard to covered claims. In addition, the liquidator, receiver or statutory successor shall provide the board or its representative with copies of those records upon the request by the board and at the expense of the board.

MO-540-22

MODEL 540 IBT/CD PROPOSED AMENDMENTS

VERSION #1 DESCRIPTION

Currently, a claim can only be a “covered claim” under the Model Act if the claim is made against an “insolvent insurer” and the policy under which the claim was made “was either issued by the insurer or assumed by the insurer in an assumed claims transaction.” Both of these restrictions, in their current form, can extinguish existing guaranty fund coverage after an insurance business transfer (IBT) or corporate division (CD), as well as a wide range of other policy transfers where there is a broad consensus among most regulators and stakeholders that coverage ought to be preserved.

Two specific obstacles are: (1) even though the “assumed claims transaction” provisions of the Model Act might appear at first glance as though they were designed to address policy transfers of all kinds, the primary “Alternative 1” definition does not allow coverage for a transfer without the consent of the policyholder, which is an essential feature of IBTs and CDs; and (2) the definition of “insolvent insurer” requires the insurer to have been licensed “either at the time the policy was issued, when the obligation with respect to the covered claim was assumed under an assumed claims transaction, or when the insured event occurred.” But IBTs and CDs only require approval by the domiciliary state, and an IBT transferee insurer or a CD resulting insurer might not seek or might not qualify for licensure in the state where the claim is presented, or might not obtain licensure until after the applicable date. Furthermore, only a handful of states have adopted the either version of the Model’s “assumed claims” provisions.

Therefore, the drafters of Version 1 approached the problem from a first-principles perspective: what is the clearest and simplest way to ensure that if guaranty fund coverage exists before an IBT, CD, or other policy transfer, it will continue to exist afterward? Proposed § 5(G)(2), which was inspired by language recently adopted in New Hampshire as its starting point, codifies this principle directly, with a limited exception for transactions in which the policyholder knowingly and voluntarily takes the policy out of the admitted market. It can be added to the definition of “covered claim” in the same manner regardless of whether or not the state has chosen to adopt the Model’s assumed-claim provisions. With the addition of this paragraph, claims are covered if either (1) the claim is made against a policy that was issued by a member insurer that was placed in liquidation; or (2) the claim is made against another insurer that took on a member insurer’s claim obligations and then was placed in liquidation.

Because proposed § 5(G)(2) also preserves existing guaranty fund coverage after a merger or assumption-reinsurance transaction, it removes the need for any additional assumed-claims language unless the state chooses to provide guaranty fund coverage for transactions involving the transfer of claim obligations from a self-insurer or a non-member insurer to a member insurer in certain scenarios where the member insurer fails to issue a replacement insurance policy or where some of the “assumed claims” might not otherwise qualify as covered claims against the replacement policy. Because the vast majority of states have not chosen to cover these relatively unusual scenarios, the drafters of Version 1 believe the NAIC should acknowledge the optional nature of such coverage and provide states with a clean version of the Model Act that is readily available for their use. Accordingly, the “baseline” language of Version 1 deletes the following verbiage: both of the alternative definitions of “assumed claims transaction”; the substantive clauses where that term appears; the related definitions of “assumption consideration” and “novation”; and two of the four alternative versions of § 8(A)(3)).

In addition, some optional language was drafted to accommodate states that wish to provide coverage for the full range of nonmember-to-member assumed claims transactions that would be covered under the existing (but not widely-adopted) Model. Version 1's modular approach allows states to add this optional language without replacing any of the other "baseline" language of Version 1. The optional language highlighted in blue is based on Model Act Alternative 1. Model Act Alternative 2 would also add the language highlighted in green. The drafters do not endorse this language and would not object if the Task Force chose to eliminate it as a formal option within the Model Act and treat it instead as state-by-state variation.

The drafters of Version 1 were also asked to prepare a comparison matrix to facilitate discussions within the drafting group. Although the classic IBT/CD scenarios are straightforward, there are some weedy, lower-frequency scenarios where the two versions differ because Version 1 is not expressly limited to IBTs and CDs, and does not rely on interpretations of the assumed claims language in the Model. This is why the drafters included the footnotes below. Please note that the footnotes reflect the Version 1 drafters' analysis of Version 2, and the Version 2 drafter is not always in agreement with that analysis.

	VERSION #1
IBT/CD MEMBER TO MEMBER	Always covered
OTHER MEMBER TO MEMBER(*a)	Always covered
IBT/CD MEMBER TO NONMEMBER(*b)	Always covered
OTHER MEMBER TO NONMEMBER(*b) (*c)	Not Covered
IBT/CD NONMEMBER TO MEMBER(*d)	Not covered
OTHER NONMEMBER TO MEMBER(*d) (*e)	Optional (G3)
NONMEMBER TO NONMEMBER	Not covered

(*a) "Other" member-to-member transactions are only covered under Version #2 if the state has assumed-claims language, which leaves out Alternatives 1 & 2. Other transactions, such as common-law novations, do not qualify as assumed-claims transactions, so coverage could be lacking or could be open to dispute even under the default & Alternative 3. There could also be questions about where exactly to draw the line between "IBT/CD" and "Other" transactions, and we would agree with not making the proposed definition of IBT/CD mandatory because it might raise as many questions as it answers.

(*b) Within Version #2, Alternatives 2 & 3 provide "nonmember transferee coverage" for IBTs and CDs; in other words, claims are covered even if the transferee did not seek or was not granted a license in This State. But the default and Alternative 1 do not have that language, and thus require the transferee to be an "insolvent insurer," which by definition must be or have formerly been a member insurer at the relevant time (which also means Version #2 would require a revision to the "insolvent insurer" definition to add the time of an IBT or CD). And even under Version #2 Alternatives 2 & 3, coverage is not provided for "other" transactions, because it is only triggered by "such a" transaction, *i.e.* an IBT or CD.

(*c) Although Version #1 does not explicitly distinguish between "IBT/CD" and "Other" transactions, the reason it makes "regulatory or judicial approval" the trigger for coverage is to include IBTs/CDs and similar transactions but exclude voluntary transactions, such as a policyholder commuting an admitted policy and transferring the risk to its own captive.

(*d) Under all four variations of Version #2, coverage is provided as long as a revision to the definition of “insolvent insurer” is added to include insurers that were members at the time they picked up the claim in an IBT/CD. However, nonmember-to-member IBTs/CDs seem like a highly unusual transaction, and coverage would seem to be an unintended consequence – I’m picturing something like an insurer that’s admitted in its state of domicile and has written surplus lines in this state, and then transfers business to an insurer that purely by coincidence happens to have a license here. The “nonmember-to-member IBT/CDs” line of Version #1 is “no coverage with an asterisk” because the proposal doesn’t provide any coverage without the original policy being issued by a member insurer unless either (1) the transaction would qualify as an “assumed claims transaction” under at least one of the 2009 versions of the Model, in which case coverage is provided in states that elect “Optional G(3)” or (2) coverage already existed under the Model even before the 2009 amendments (for example, “tail coverage” clauses in claims-made policies and perhaps “take-out policies” issued when a self-insurance program is terminated), and those would not be taken away by either Version when a valid covered claim is made against such a policy. If we read the 2009 Model correctly, there’s a lot of overlap between assumed claims transactions and IBTs/CDs on the member-to-member side but very little on the nonmember-to-member side.

(*e) Finally, because coverage under Version #2’s “other” nonmember-to-member transactions depends on whether they qualify as “assumed claims transactions” under the existing language of the Model, this will in turn depend on which of the two alternate definitions the state chooses. Version #2’s Definition 2 appears, as written, to make coverage optional, on a case-by-case basis, for nonmember-to-member assumed-claims transactions. If the member chooses to buy guaranty fund coverage for the policies it has assumed, it apparently must enter into some sort of agreement to pay “assumption consideration” to all “applicable guaranty associations,” and failure to pay one of them appears as currently written to result in the loss of coverage in all states with substantially similar legislation. Version #1’s optional Paragraph 8(A)(4) takes a simpler approach, making assumption consideration obligatory but providing guaranty fund coverage even if the insurer defaults in whole or part on that obligation (the purpose of guaranty funds, after all, being to protect claimants when insurers default on their obligations). If that’s not the intended outcome, this paragraph would need to be rewritten.

NCIGF Comment on Version #1

Here are some comments on the substance of Bob's draft:

NCIGF supports the standalone g(2) language regarding divisions in the Bob Wake draft. We believe that g(2) reflects the most recent draft best practices being considered by the Restructuring Mechanisms Working Group which indicate that GA coverage should not be changed as a result of an IBT or division transaction.

Regarding g(3), while some may regard this as an option that should be made available to states, we do not support the enactment of g(3). We feel coverage for claims originating from an uncovered entity could create moral hazard. Moreover, it is unfair to charge the cost of such claims to the guaranty fund created for licensed business. If safety net coverage is desired for such claims it can, and has in some jurisdictions, been created. As a practical matter, we sense that non-member to member transactions would be rare.

Regarding the provisions in the Bob Wake draft relating to assessment consideration for cases covered in g(3), such consideration is not a part of the NCIGF policy on restructured business. While we are neutral regarding its enactment, we do observe that the language adds an additional layer of complexity to the amendment package this working group is currently considering.

We understand drafter of Version 1 would be fine with eliminating the Optional Clauses if the Working Group wants to go that route and would also be happy to get rid of the green language if they wanted to simplify it.

Section 17.	Recoupment of Assessments
Section 18.	Immunity
Section 19.	Stay of Proceedings

Section 1. Title

This Act shall be known as the [State] Insurance Guaranty Association Act.

Section 2. Purpose

The purpose of this Act is to provide a mechanism for the payment of covered claims under certain insurance policies, to avoid excessive delay in payment and to the extent provided in this Act minimize financial loss to claimants or policyholders because of the insolvency of an insurer, and to provide an association to assess the cost of such protection among insurers.

Section 3. Scope

This Act shall apply to all kinds of direct insurance, but shall not be applicable to the following:

- A. Life, annuity, health or disability insurance;
- B. Mortgage guaranty, financial guaranty or other forms of insurance offering protection against investment risks;
- C. Fidelity or surety bonds, or any other bonding obligations;
- D. Credit insurance, vendors' single interest insurance, or collateral protection insurance or any similar insurance protecting the interests of a creditor arising out of a creditor-debtor transaction;
- E. Insurance of warranties or service contracts including insurance that provides for the repair, replacement or service of goods or property, indemnification for repair, replacement or service for the operational or structural failure of the goods or property due to a defect in materials, workmanship or normal wear and tear, or provides reimbursement for the liability incurred by the issuer of agreements or service contracts that provide such benefits;

MO-540-1

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

- F. Title insurance;
- G. Ocean marine insurance;
- H. Any transaction or combination of transactions between a person (including affiliates of such person) and an insurer (including affiliates of such insurer) which involves the transfer of investment or credit risk unaccompanied by transfer of insurance risk; or
- I. Any insurance provided by or guaranteed by government.

Drafting Note: This Act focuses on property and liability kinds of insurance and therefore exempts those kinds of insurance deemed to present problems quite distinct from those of property and liability insurance. The Act further precludes from its scope certain types of insurance that provide protection for investment and financial risks. Financial guaranty is one of these. The NAIC Life and Health Insurance Guaranty Association Model Act provides for coverage of some, of the lines excluded by this provision.

For purposes of this section, "Financial guaranty insurance" includes any insurance under which loss is payable upon proof of occurrence of any of the following events to the damage of an insured claimant or obligee:

1. Failure of any obligor or obligors on any debt instrument or other monetary obligation, including common or preferred stock, to pay when due the principal, interest, dividend or purchase price of such instrument or obligation, whether failure is the result of a financial default or insolvency and whether or not the obligation is incurred directly or as guarantor by, or on behalf of, another obligor which has also defaulted;
2. Changes in the level of interest rates whether short term or long term, or in the difference between interest rates existing in various markets;
3. Changes in the rate of exchange of currency, or from the inconvertibility of one currency into another for any reason;
4. Changes in the value of specific assets or commodities, or price levels in general.

For purposes of this section, "credit insurance" means insurance on accounts receivable.

The terms "disability insurance" and "accident and health insurance," and "health insurance" are intended to be synonymous. Each State will wish to examine its own statutes to determine which is the appropriate phrase.

A State where the insurance code does not adequately define ocean marine insurance may wish to add the following to Section 5, Definitions: "Ocean marine insurance" means any form of insurance, regardless of the name, label or marketing designation of the insurance policy, which insures against maritime perils or risks and other related perils or risks, which are usually insured against by traditional marine insurance, such as hull and machinery, marine builders risk, and marine protection and indemnity. Perils and risk insured against include without limitation loss, damage, expense or legal liability of the insured for loss, damage or expense arising out of or incident to ownership, operation, chartering, maintenance, use, repair or construction of any vessel, craft or instrumentality in use in ocean or inland waterways for commercial purposes, including liability of the insured for personal injury, illness or death or for loss or damage to the property of the insured or another person.

Section 4. Construction

This Act shall be construed to effect the purpose under Section 2 which will constitute an aid and guide to interpretation.

Section 5. Definitions

As used in this Act:

[Optional:

- A. "Account" means any one of the three accounts created by Section 6.]

Drafting Note: This definition should be used by those States wishing to create separate accounts for assessment purposes. For a note on the use of separate accounts for assessments see the Drafting Note after Section 6. If this definition is used, all subsequent subsections should be renumbered.

- A. "Affiliate" means a person who directly, or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with another person on December 31 of the year immediately preceding the date the insurer becomes an insolvent insurer.
- B. "Association" means the [State] Insurance Guaranty Association created under Section 6.

MO-540-2

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- C. “Association similar to the association” means any guaranty association, security fund or other insolvency mechanism that affords protection similar to that of the association. The term shall also include any property and casualty insolvency mechanism that obtains assessments or other contributions from insurers on a pre-insolvency basis.

Drafting Note: There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and Q and Alternative 1b or 2b in Section 8A(3).

- D. **[Alternative 1]** “Assumed claims transaction” means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or
- (2) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies

- [Alternative 2]** “Assumed claims transaction” means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or
- (2) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
 - (a) Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
 - (b) For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.
 - (c) For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or
- (3) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and

MO-540-3

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.

- E. "Claimant" means any person instituting a covered claim, provided that no person who is an affiliate of the insolvent insurer may be a claimant.
- F. "Commissioner" means the Commissioner of Insurance of this State.

Drafting Note: Use the appropriate title for the chief insurance regulatory official wherever the term "commissioner" appears.

- G. "Control" means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing that control does not exist in fact.

VERSION #2 PROPOSAL

- H. "Covered claim" means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and: the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction; or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and

Drafting Note: Versions of this language can be adopted whether or not the Assumed Claim language has been adopted. The proposal deliberately doesn't remove the "assumed claims" language. However, a state that wants to adopt this remedial provision without adopting the assumed claims language can do so easily enough just by making this change to the definition:

(1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.

OPTIONAL H(c) – TO DEFINE IBT AND CD IF DEEMED NECESSARY

- (c) For purposes of this Act, an Insurance Business Transfer or Corporate Division transaction shall mean a transaction [ALTERNATIVE 1] as described in [INSERT STATE STATUTORY CITATIONS] [OR ALTERNATIVE 2] authorized by the laws of another state authorizing such transactions and as the result of which, apart from other provisions, the insurer assumed all of the obligations under the policy from a transferor which was thereby discharged from such obligations.

Commented [Staff1]: Drafter Explanation:

If IBT and CD are deemed to need further definition the attachment provides suggested optional language. It is not necessary in order to accomplish the goal but might be helpful.

A couple of notes about this proposal:

1) This language lends itself well to amendment of existing state laws. For example, 215 ILCS/534.3 (the Illinois statute, could be amended as follows:

(a) "Covered claim" means an unpaid claim for a loss arising out of and within the coverage of an insurance policy to which this Article applies, including specifically a policy assumed in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the Director, and which is in force at the time of the occurrence giving rise to the unpaid claim, including claims presented during any extended discovery period which was purchased from the company before the entry of a liquidation order or which is purchased or obtained from the liquidator after the entry of a liquidation order, made by a person insured under such policy or by a person suffering injury or damage for which a person insured under such policy is legally liable, and for unearned premium, if:

(2) This approach does not remove any actual or possible coverage from what is currently provided by Model 540; but

(3) This approach does NOT expressly provide GA coverage when the transferor is a member insurer but the transferee insurer is not a member or licensed insurer. However, if the goal of the RLWG includes providing GA coverage in those cases, that could be done by additional language as shown on the attachment.

This last point is important. It arises because the definition of "insolvent insurer" requires that it be licensed (thereby making it a member insurer). In my view, requiring GA coverage when the insolvent insurer was not a member insurer (which effectively means it was not licensed in the state) can be problematic. However, I propose language to accomplish that if the Working Group determines that it is part of their charge. (see Alternatives 2 & 3)

MO-540-4

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

[ALTERNATIVE 1: WITHOUT ASSUMED CLAIMS LANGUAGE AND NON-MEMBER TRANSFEREE COVERAGE]

H. “Covered claim” means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer’s state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and
 - (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
 - (b) The claim is a first party claim for damage to property with a permanent location in this State.

[ALTERNATIVE 2: WITHOUT ASSUMED CLAIMS LANGUAGE BUT WITH NON-MEMBER TRANSFEREE COVERAGE]

H. “Covered claim” means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if (A) the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer, or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer’s state of domicile and, if required, by the [Commissioner/Director/Superintendent]; or (B) the policy was issued by a member insurer and, in such a transaction, subsequently assumed by, or allocated to, another insurer (other than a risk retention group) against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile, and
 - (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
 - (b) The claim is a first party claim for damage to property with a permanent location in this State.

[ALTERNATIVE 3: WITH ASSUMED CLAIMS LANGUAGE AND NON-MEMBER TRANSFEREE COVERAGE]

H. “Covered claim” means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if (A) the insurer becomes an insolvent insurer after the effective date of this Act

MO-540-5

IBT/CD DRAFT VERSION #2

5/23/23

Property and Casualty Insurance Guaranty Association Model Act

and the policy was either issued by the insurer, or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; or (B) the policy was issued by a member insurer and in such a transaction subsequently assumed by, or allocated to, another insurer (other than a risk retention group) against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer's State of domicile, and

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
 - (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (2) Except as provided elsewhere in this section, "covered claim" shall not include:
- (a) Any amount awarded as punitive or exemplary damages;
 - (b) Any amount sought as a return of premium under any retrospective rating plan;
 - (c) Any amount due any reinsurer, insurer, insurance pool or underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer as subrogation recoveries, reinsurance recoveries, contribution, indemnification or otherwise. No claim for any amount due any reinsurer, insurer, insurance pool, underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer may be asserted against a person insured under a policy issued by an insolvent insurer other than to the extent the claim exceeds the association obligation limitations set forth in Section 8 of this Act;
 - (d) Any claims excluded pursuant to Section 13 due to the high net worth of an insured;
 - (e) Any first party claims by an insured that is an affiliate of the insolvent insurer;
 - (f) Any fee or other amount relating to goods or services sought by or on behalf of any attorney or other provider of goods or services retained by the insolvent insurer or an insured prior to the date it was determined to be insolvent;
 - (g) Any fee or other amount sought by or on behalf of any attorney or other provider of goods or services retained by any insured or claimant in connection with the assertion or prosecution of any claim, covered or otherwise, against the association;
 - (h) Any claims for interest; or
 - (i) Any claim filed with the association or a liquidator for protection afforded under the insured's policy for incurred-but-not-reported losses.

Drafting note: The language in this provision referring to claims for incurred-but-not-reported losses has been inserted to expressly include the existing intent of this provision and make it clear that "policyholder protection" proofs of claim, while valid to preserve rights against the ~~state~~ of the insolvent insurer under the Insurer Receivership Model Act, are not valid to preserve rights against the association.

- I. "Insolvent insurer" means an insurer that is licensed to transact insurance in this State, either at the time the policy was issued, when the obligation with respect to the covered claim was assumed under an assumed

MO-540-6

IBT/CD DRAFT VERSION #2
5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

claims transaction, or when the insured event occurred, and against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer's State of domicile.

Drafting Note: "Final order" as used in this section means an order which has not been stayed. States in which the "final order" language does not accurately reflect whether or not the order is subject to a stay should substitute appropriate language consistent with the statutes or rules of the State to convey the intended meaning.

- J. "Insured" means any named insured, any additional insured, any vendor, lessor or any other party identified as an insured under the policy.
- K. (1) "Member insurer" means any person who:
 - (a) Writes any kind of insurance to which this Act applies under Section 3, including the exchange of reciprocal or inter-insurance contracts; and
 - (b) Is licensed to transact insurance in this State (except at the option of the State).
- (2) An insurer shall cease to be a member insurer effective on the day following the termination or expiration of its license to transact the kinds of insurance to which this Act applies, however, the insurer shall remain liable as a member insurer for any and all obligations, including obligations for assessments levied prior to the termination or expiration of the insurer's license and assessments levied after the termination or expiration, which relate to any insurer that became an insolvent insurer prior to the termination or expiration of the insurer's license.
- L. "Net direct written premiums" means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees, less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. "Net direct written premiums" does not include premiums on contracts between insurers or reinsurers.
- M. "Novation" means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.
- N. "Person" means any individual, aggregation of individuals, corporation, partnership or other entity.
- O. "Receiver" means liquidator, rehabilitator, conservator or ancillary receiver, as the context requires.

Drafting Note: Each State should conform the definition of "receiver" to the definition used in the State's insurer receivership act.

- P. "Self-insurer" means a person that covers its liability through a qualified individual or group self-insurance program or any other formal program created for the specific purpose of covering liabilities typically covered by insurance.
- Q. **[Alternative 2b]** "Assumption Consideration" shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer during the three calendar years prior to the effective date of the transaction to the applicable guaranty associations if the business had been written directly by the assuming insurer.

In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assumed

MO-540-7

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the calendar year of the transaction.

The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.

Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7.

[Alternate Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7. For purposes of administration and assessment, the association shall be divided into three separate accounts:

- A. *The workers' compensation insurance account;*
- B. *The automobile insurance account; and*
- C. *The account for all other insurance to which this Act applies.]*

Drafting Note: The alternate Section 6 should be used if a State, after examining its insurance market, determines that separate accounts for various kinds of insurance are necessary and feasible. The major consideration is whether each account will have a base sufficiently large to cover possible insolvencies. Separate accounts will permit assessments to be generally limited to insurers writing the same kind of insurance as the insolvent company. If this approach is adopted the provision of alternate Sections 8A(3) and 8B(6) and optional Section 5A should also be used.

Section 7. Board of Directors

- A. The board of directors of the association shall consist of not less than five (5) nor more than [insert number] persons serving terms as established in the plan of operation. The insurer members of the board shall be selected by member insurers subject to the approval of the commissioner. Vacancies on the board shall be filled for the remaining period of the term by a majority vote of the remaining insurer members subject to the approval of the commissioner. If no members are selected within sixty (60) days after the effective date of this Act, the commissioner may appoint the initial members of the board of directors. Two (2) persons, who must be public representatives, shall be appointed by the commissioner to the board of directors. Vacancies of positions held by public representatives shall be filled by the commissioner. A public representative may not be an officer, director or employee of an insurance company or any person engaged in the business of insurance. For the purposes of this section, the term "director" shall mean an individual serving on behalf of an insurer member of the board of directors or a public representative on the board of directors.

Drafting Note: A State adopting this language should make certain that its insurance code includes a definition of "the business of insurance" similar to that found in the NAIC Insurer Receivership Model Act.

- B. In approving selections to the board, the commissioner shall consider among other things whether all member insurers are fairly represented.
- C. Members of the board of directors may be reimbursed from the assets of the association for reasonable

MO-540-8

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

expenses incurred by them as members of the board of directors.

- D. Any board member who is an insurer in receivership shall be terminated as a board *member*, effective as of the date of the entry of the order of receivership. Any resulting vacancies on the board shall be filled for the remaining period of the term in accordance with the provisions of Subsection A.
- E. In the event that a director shall, because of illness, nonattendance at meetings or any other reason, be deemed unable to satisfactorily perform the designated functions as a director by missing three consecutive board meetings, the board of directors may declare the office vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.
- F. If the commissioner has reasonable cause to believe that a director failed to disclose a known conflict of interest with his or her duties on the board, failed to take appropriate action based on a known conflict of interest with his or her duties on the board, or has been indicted or charged with a felony, or misdemeanor involving moral turpitude, the commissioner may suspend that director pending the outcome of an investigation or hearing by the commissioner or the conclusion of any criminal proceedings. A company elected to the board may replace a suspended director prior to the completion of an investigation, hearing or criminal proceeding. In the event that the allegations are substantiated at the conclusion of an investigation, hearing or criminal proceeding, the office shall be declared vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

Section 8. Powers and Duties of the Association

A. The association shall:

- (1) (a) Be obligated to pay covered claims existing prior to the order of liquidation, arising within thirty (30) days after the order of liquidation, or before the policy expiration date if less than thirty (30) days after the order of liquidation, or before the insured replaces the policy or causes its cancellation, if the insured does so within thirty (30) days of the order of liquidation. The obligation shall be satisfied by paying to the claimant an amount as follows:
 - (i) The full amount of a covered claim for benefits under a workers' compensation insurance coverage;
 - (ii) An amount not exceeding \$10,000 per policy for a covered claim for the return of unearned premium;
 - (iii) An amount not exceeding \$500,000 per claimant for all other covered claims.
- (b) In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include a claim filed with the guaranty fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer.

For the purpose of filing a claim under this subsection, notice of claims to the liquidator of the insolvent insurer shall be deemed notice to the association or its agent and a list of claims shall be periodically submitted to the association or association similar to the association in another State by the liquidator.

Drafting Note: On the general subject of the relationship of the association to the liquidator, the working group/task force takes the position that since this is a model State bill, it will be able to bind only two parties, the association and the in-State liquidator. Nevertheless, the provisions should be clear enough to outline the requests being made to out-of-State liquidators and the requirements placed on in-State liquidators in relation to out-of-State associations.

Drafting Note: Because of its potential impact on guaranty association coverage, it is recommended that the legislation include an appropriate provision stating that the bar date only applies to claims in liquidation commencing after its effective date. Drafters should insure that the State's insurance liquidation act would permit, upon closure, payments to the guaranty association and any association similar to the association for amounts that are estimated to be

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

incurred after closure for workers compensation claims obligations. The amounts should be payable on these obligations related to losses both known and not known at the point of closure.

- (c) Any obligation of the association to defend an insured shall cease upon the association's payment or tender of an amount equal to the lesser of the association's covered claim obligation limit or the applicable policy limit.

Drafting Note: The obligation of the association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is canceled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to \$10,000, against the association. The maximums (\$10,000 for the return of unearned premium; \$500,000 for all other covered claims) represent the working group's concept of practical limitations, but each State will wish to evaluate these figures.

- (2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent, subject to the limitations provided in this Act, shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent, including but not limited to, the right to pursue and retain salvage and subrogation recoverable on covered claim obligations to the extent paid by the association. The association shall not be deemed the insolvent insurer for the purpose of conferring jurisdiction.
- (3) **[Alternative 1a]** Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

[Alternative 2a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the

IBT/CD DRAFT VERSION #2

- maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.
- (3) **[Alternate 1b]** Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment on the kinds of insurance in the account. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]
- (3) **[Alternate 2b]** Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment on the kinds of insurance in the account. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the

Property and Casualty Insurance Guaranty Association Model Act

maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

- (4) Investigate claims brought against the association and adjust, compromise, settle and pay covered claims to the extent of the association's obligation and deny all other claims. The association shall pay claims in any order that it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The association shall have the right to appoint and to direct legal counsel retained under liability insurance policies for the defense of covered claims.
- (5) Notify claimants in this State as deemed necessary by the commissioner and upon the commissioner's request, to the extent records are available to the association.

Drafting Note: The intent of this paragraph is to allow, in exceptional circumstances, supplementary notice to that given by the domiciliary receiver.

- (6) (a) Have the right to review and contest as set forth in this subsection settlements, releases, compromises, waivers and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation. In an action to enforce settlements, releases and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation, the Association shall have the right to assert the following defenses, in addition to the defenses available to the insurer:
 - (i) The association is not bound by a settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment entered against an insured or the insurer by consent or through a failure to exhaust all appeals, if the settlement, release, compromise, waiver or judgment was:
 - (I) Executed or entered within 120 days prior to the entry of an order of liquidation, and the insured or the insurer did not use reasonable care in entering into the settlement, release, compromise, waiver or judgment, or did not pursue all reasonable appeals of an adverse judgment; or
 - (II) Executed by or taken against an insured or the insurer based on default, fraud, collusion or the insurer's failure to defend.

MO-540-12

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (ii) If a court of competent jurisdiction finds that the association is not bound by a settlement, release, compromise, waiver or judgment for the reasons described in Subparagraph (a)(i), the settlement, release, compromise, waiver or judgment shall be set aside, and the association shall be permitted to defend any covered claim on the merits. The settlement, release, compromise, waiver or judgment may not be considered as evidence of liability or damages in connection with any claim brought against the association or any other party under this Act.
- (iii) The association shall have the right to assert any statutory defenses or rights of offset against any settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment taken against the insured or the insurer.
- (b) As to any covered claims arising from a judgment under any decision, verdict or finding based on the default of the insolvent insurer or its failure to defend, the association, either on its own behalf or on behalf of an insured may apply to have the judgment, order, decision, verdict or finding set aside by the same court or administrator that entered the judgment, order, decision, verdict or finding and shall be permitted to defend the claim on the merits.
- (7) Handle claims through its own employees, one or more insurers, or other persons designated as servicing facilities, which may include the receiver for the insolvent insurer. Designation of a servicing facility is subject to the approval of the commissioner, but the designation may be declined by a member insurer.
- (8) Reimburse each servicing facility for obligations of the association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the association and shall pay the other expenses of the association authorized by this Act.
- (9) Submit, not later than 90 days after the end of the association's fiscal year, a financial report for the preceding fiscal year in a form approved by the commissioner.
- B. The association may:
 - (1) Employ or retain persons as are necessary to handle claims and perform other duties of the association;
 - (2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;
 - (3) Sue or be sued;
 - (4) Negotiate and become a party to contracts necessary to carry out the purpose of this Act;
 - (5) Perform other acts necessary or proper to effectuate the purpose of this Act;
 - (6) Refund to the member insurers in proportion to the contribution of each member insurer to the association that amount by which the assets of the association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association exceed the liabilities of the association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

- (6) *Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]*

MO-540-13

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

Drafting Note: The working group/task force feels that the board of directors should determine the amount of the refunds to members when the assets of the association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

C. Suits involving the association:

- (1) Except for actions by the receiver, all actions relating to or arising out of this Act against the association shall be brought in the courts in this State. The courts shall have exclusive jurisdiction over all actions relating to or arising out of this Act against the association.
- (2) The exclusive venue in any action by or against the association is in [designate appropriate court]. The association may, at its option, waive this venue as to specific actions.

[Optional Section 8D

D. (1)

The legislature finds:

- (a) *The potential for widespread and massive damage to persons and property caused by natural disasters such as earthquakes, windstorms, or fire in this State can generate insurance claims of such a number as to render numerous insurers operating within this State insolvent and therefore unable to satisfy covered claims;*
 - (b) *The inability of insureds within this State to receive payments of covered claims or to timely receive the payments creates financial and other hardships for insureds and places undue burdens on the State, the affected units of local government, and the community at large;*
 - (c) *The insolvency of a single insurer in a material amount or a catastrophic event may result in the same hardships as those produced by a natural disaster;*
 - (d) *The State has previously taken action to address these problems by adopting the [insert name of guaranty association act], which among other things, provides a mechanism for the payment of covered claims under certain insurance policies to avoid excessive delay in payment and to avoid financial loss to claimants or policyholders because of the insolvency of an insurer; and*
 - (e) *In order for the association to timely pay claims of insolvent insurers in this State and otherwise carry out its duties, the association may require additional financing options. The intent of the Legislature is to make those options available to the association in the event that a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection A(3). In cases where the association determines that it is cost effective, the association may issue bonds as provided in this subsection. In determining whether to issue bonds, the association shall consider the transaction costs of issuing the bonds.*
- (2) *In the event a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection 8A(3), the association, in its sole discretion, may by resolution request the [insert name of agency] Agency to issue bonds pursuant to [insert statutory authority], in such amounts as the association may determine to provide funds for the payment of covered claims and expenses related thereto. In the event bonds are issued, the association shall have the authority to annually assess member insurers for amounts necessary to pay the principal of, and interest on those bonds. Assessments collected pursuant to this authority shall be collected under the same procedures as provided in Subsection 8A(3) and, notwithstanding the two percent (2%) limit in Subsection 8A(3), shall be limited to an additional [insert percentage] percent of the annual net direct written premium in*

MO-540-14

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

this State of each member insurer for the calendar year preceding the assessment. The commissioner's approval shall be required for any assessment greater than five percent (5%). Assessments collected pursuant to this authority may only be used for servicing the bond obligations provided for in this subsection and shall be pledged for that purpose.

- (3) *In addition to the assessments provided for in this subsection, the association in its discretion, and after considering other obligations of the association, may utilize current funds of the association, assessments made under Subsection 8A(3) and advances or dividends received from the liquidators of insolvent insurers to pay the principal and interest on any bonds issued at the board's request.*
- (4) *Assessments under this subsection shall be payable in twelve (12) monthly installments with the first installment being due and payable at the end of the month after an assessment is levied, and subsequent installments being due not later than the end of each succeeding month.*
- (5) *In order to assure that insurers paying assessments levied under this subsection continue to charge rates that are neither inadequate nor excessive, within ninety (90) days after being notified of the assessments, each insurer that is to be assessed pursuant to this subsection shall make a rate filing for lines of business additionally assessed under this subsection. If the filing reflects a rate change that, as a percentage, is equal to the difference between the rate of the assessment and the rate of the previous year's assessment under this subsection, the filing shall consist of a certification so stating and shall be deemed approved when made. Any rate change of a different percentage shall be subject to the standards and procedures of [cite appropriate statutory authority for provisions on filing and approval of rates].*

Drafting Note: This provision should only be considered by those States that have serious concerns that circumstances could result in a substantial capacity problem resulting in unpaid or pro rata payment of claims. An association intending to consider this provision should first consult with experienced bond counsel in its State to identify an appropriate State agency or bonding authority to act as vehicle for issuing the bonds. That agency or authority's statute may also have to be amended to specifically authorize these types of bonds and to cross-reference this provision in the guaranty association law. It is possible that in some situations a new bonding authority may have to be created for this purpose.

Regardless of the vehicle used, it is important that the decision-making authority on whether bonds are needed and in what amounts be retained by the association's board.

The extent of additional assessment authority under this subsection has not been specified. When considering the amount of additional authority that will be needed, a determination should be made as to the amount of funds needed to service the bonds. More specifically, consideration should be given to the amount of the bonds to be issued, interest rate and the maturity date of the bonds. The association should be able to raise sufficient funds through assessments to pay the interest and retire the bonds after some reasonable period (e.g. ten (10) years). Subsection D(2) requires the Commissioner's approval before the association can impose an additional assessment in excess of 5%. This is to assure that the additional assessment will not result in financial hardship to the member insurers and additional insolvencies.

The intent of Subsection D(4) is to permit recoupment by member insurers of the additional cost of assessments under this subsection without any related regulatory approval. A State enacting this subsection may need to revise Subsection D(4) so that it conforms to the particular State's recoupment provisions, as well as the provisions on filing and approval of rates.]

Section 9. Plan of Operation

- A.
 - (1) The association shall submit to the commissioner a plan of operation and any amendments to the plan of operation necessary or suitable to assure the fair, reasonable and equitable administration of the association. The plan of operation and amendments shall become effective upon approval in writing by the commissioner.
 - (2) If the association fails to submit a suitable plan of operation within ninety (90) days following the effective date of this Act, or if at any time thereafter the association fails to submit suitable amendments to the plan, the commissioner shall, after notice and hearing, adopt reasonable rules necessary or advisable to effectuate the provisions of this Act. The rules shall continue in force until modified by the commissioner or superseded by a plan submitted by the association and approved by the commissioner.
- B. All member insurers shall comply with the plan of operation.

MO-540-15

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

- C. The plan of operation shall:
- (1) Establish the procedures under which the powers and duties of the association under Section 8 will be performed;
 - (2) Establish procedures for handling assets of the association;
 - (3) Require that written procedures be established for the disposition of liquidating dividends or other monies received from the estate of the insolvent insurer;
 - (4) Require that written procedures be established to designate the amount and method of reimbursing members of the board of directors under Section 7;
 - (5) Establish procedures by which claims may be filed with the association and establish acceptable forms of proof of covered claims;
 - (6) Establish regular places and times for meetings of the board of directors;
 - (7) Require that written procedures be established for records to be kept of all financial transactions of the association, its agents and the board of directors;
 - (8) Provide that any member insurer aggrieved by any final action or decision of the association may appeal to the commissioner within thirty (30) days after the action or decision;
 - (9) Establish the procedures under which selections for the board of directors will be submitted to the commissioner;
 - (10) Contain additional provisions necessary or proper for the execution of the powers and duties of the association.
- D. The plan of operation may provide that any or all powers and duties of the association, except those under Sections 8A(3) and 8B(2), are delegated to a corporation, association similar to the association or other organization which performs or will perform functions similar to those of this association or its equivalent in two (2) or more States. The corporation, association similar to the association or organization shall be reimbursed as a servicing facility would be reimbursed and shall be paid for its performance of any other functions of the association. A delegation under this subsection shall take effect only with the approval of both the board of directors and the commissioner, and may be made only to a corporation, association or organization which extends protection not substantially less favorable and effective than that provided by this Act.

Section 10. Duties and Powers of the Commissioner

- A. The commissioner shall:
- (1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;
 - (2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

MO-540-16

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- B. The commissioner may:
- (1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than \$100 per month;
 - (2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.
 - (3) Examine, audit, or otherwise regulate the association.

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

- C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

Section 11. Coordination Among Guaranty Associations

- A. The association may join one or more organizations of other State associations of similar purposes, to further the purposes and administer the powers and duties of the association. The association may designate one or more of these organizations to act as a liaison for the association and, to the extent the association authorizes, to bind the association in agreements or settlements with receivers of insolvent insurance companies or their designated representatives.
- B. The association, in cooperation with other obligated or potentially obligated guaranty associations, or their designated representatives, shall make all reasonable efforts to coordinate and cooperate with receivers, or their designated representatives, in the most efficient and uniform manner, including the use of Uniform Data Standards as promulgated or approved by the National Association of Insurance Commissioners.

Section 12. Effect of Paid Claims

- A. Any person recovering under this Act shall be deemed to have assigned any rights under the policy to the association to the extent of his or her recovery from the association. Every insured or claimant seeking the protection of this Act shall cooperate with the association to the same extent as the person would have been required to cooperate with the insolvent insurer. The association shall have no cause of action against the insured of the insolvent insurer for sums it has paid out except any causes of action as the insolvent insurer would have had if the sums had been paid by the insolvent insurer and except as provided in Subsection B and in Section 13. In the case of an insolvent insurer operating on a plan with assessment liability, payments of claims of the association shall not operate to reduce the liability of the insureds to the receiver, liquidator or statutory successor for unpaid assessments.
- B. The association shall have the right to recover from any person who is an affiliate of the insolvent insurer all amounts paid by the association on behalf of that person pursuant to the Act, whether for indemnity, defense or otherwise.
- C. The association and any association similar to the association in another State shall be entitled to file a claim in the liquidation of an insolvent insurer for any amounts paid by them on covered claim obligations as determined under this Act or similar laws in other States and shall receive dividends and other distributions at the priority set forth in [insert reference to State priority of distribution in liquidation act].
- D. The association shall periodically file with the receiver or liquidator of the insolvent insurer statements of the covered claims paid by the association and estimates of anticipated claims on the association which shall preserve the rights of the association against the assets of the insolvent insurer.

MO-540-17

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

Section 13 [Optional] Net Worth Exclusion

Drafting Note: Various alternatives are provided for a net worth limitation in the guaranty association act. States may choose any of the Subsection B alternatives below or may elect to not have any net worth limitation. Subsection A, which defines "high net worth insured," has two alternates allowing States to choose different net worth limitations for first and third party claims if that State chooses alternatives 1 or 2 to Subsection B. Subsections C, D and E are recommended to accompany any of the Subsection B alternatives. In cases where States elect not to include net worth, States may either omit this section in its entirety or include only Subsection C, which excludes from coverage claims denied by other States' net worth restrictions pursuant to those States' guaranty association laws.

- A. For purposes of this section "high net worth insured" shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

[Alternate Section 13A

- A. (1) *For the purposes of Subsection B(1), "high net worth insured" shall mean any insured whose net worth exceeds \$25 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.]*
- (2) *For the purpose of Subsection B(2) [and B(4) if Alternative 2 for Subsection B is selected] "high net worth insured" shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured's net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.*

Drafting Note: Alternate Subsection A language should only be considered in cases where a State is considering Alternative 1 or 2 of Subsection B and would like to set different dollar thresholds for the first party claim exclusion provision and the third party recovery provision.

Drafting Note: States may wish to consider the impact on governmental entities and charitable organizations of the application of the net worth exclusion contained in the definition of "covered claim." The Michigan Supreme Court, in interpreting a "net worth" provision in the Michigan guaranty association statute, held that governmental entities possess a "net worth" for purposes of the provision in the Michigan guaranty association statute that prohibits claims against the guaranty association by a person who has a specified net worth. Oakland County Road Commission vs. Michigan Property & Casualty Guaranty Association, 575 N.W. 2d 751 (Mich. 1998).

[Alternative 1 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 2 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) Subject to Paragraph (3), the association shall not be obligated to pay any third party claim relating to a policy of a high net worth insured. This exclusion shall not apply to third party claims against the high net worth insured where:
- (a) The insured has applied for or consented to the appointment of a receiver, trustee or liquidator for all or a substantial part of its assets;
 - (b) The insured has filed a voluntary petition in bankruptcy, filed a petition or an answer seeking a reorganization or arrangement with creditors or to take advantage of any insolvency law; or
 - (c) An order, judgment, or decree is entered by a court of competent jurisdiction, on the application of a creditor, adjudicating the insured bankrupt or insolvent or approving a petition seeking reorganization of the insured or of all or substantial part of its assets.

MO-540-18

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (3) Paragraph (2) shall not apply to workers' compensation claims, personal injury protection claims, no-fault claims and any other claims for ongoing medical payments to third parties.
- (4) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 3 for Section 13B

- B. The association shall not be obligated to pay any first party claims by a high net worth insured.]
- C. The association shall not be obligated to pay any claim that would otherwise be a covered claim that is an obligation to or on behalf of a person who has a net worth greater than that allowed by the insurance guaranty association law of the State of residence of the claimant at the time specified by that State's applicable law, and which association has denied coverage to that claimant on that basis.
- D. The association shall establish reasonable procedures subject to the approval of the commissioner for requesting financial information from insureds on a confidential basis for purposes of applying this section, provided that the financial information may be shared with any other association similar to the association and the liquidator for the insolvent insurer on the same confidential basis. Any request to an insured seeking financial information must advise the insured of the consequences of failing to provide the financial information. If an insured refuses to provide the requested financial information where it is requested and available, the association may, until such time as the information is provided, provisionally deem the insured to be a high net worth insured for the purpose of denying a claim under Subsection B.
- E. In any lawsuit contesting the applicability of this section where the insured has refused to provide financial information under the procedure established pursuant to Subsection D, the insured shall bear the burden of proof concerning its net worth at the relevant time. If the insured fails to prove that its net worth at the relevant time was less than the applicable amount, the court shall award the association its full costs, expenses and reasonable attorneys' fees in contesting the claim.

Section 14. Exhaustion of Other Coverage

- A. (1) Any person having a claim against an insurer, shall be required first to exhaust all coverage provided by any other policy, including the right to a defense under the other policy, if the claim under the other policy arises from the same facts, injury or loss that gave rise to the covered claim against the association. The requirement to exhaust shall apply without regard to whether the other insurance policy is a policy written by a member insurer. However, no person shall be required to exhaust any right under the policy of an insolvent insurer or any right under a life insurance policy.
- (2) Any amount payable on a covered claim under this Act shall be reduced by the full applicable limits stated in the other insurance policy, or by the amount of the recovery under the other insurance policy as provided herein. The association shall receive a full credit for the stated limits, unless the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy. If the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy, or if there are no applicable stated limits under the policy, the association shall receive a full credit for the total recovery.

[Alternative 1 for Section 14A(2)(a)

- (a) The credit shall be deducted from the lesser of:
 - (i) The association's covered claim limit;
 - (ii) The amount of the judgment or settlement of the claim; or
 - (iii) The policy limits of the policy of the insolvent insurer.]

MO-540-19

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

[Alternative 2 for Section 14A(2)(a)]

The credit shall be deducted from the lesser of:

- (i) The amount of the judgment or settlement of the claim; or
- (ii) The policy limits of the policy of the insolvent insurer./

- (b) In no case, however, shall the obligation of the association exceed the covered claim limit embodied in Section 8 of this Act.
- (3) Except to the extent that the claimant has a contractual right to claim defense under an insurance policy issued by another insurer, nothing in this section shall relieve the association of the duty to defend under the policy issued by the insolvent insurer. This duty shall, however, be limited by any other limitation on the duty to defend embodied in this Act.
- (4) A claim under a policy providing liability coverage to a person who may be jointly and severally liable as a joint tortfeasor with the person covered under the policy of the insolvent insurer that gives rise to the covered claim shall be considered to be a claim arising from the same facts, injury or loss that gave rise to the covered claim against the association.
- (5) For purposes of this section, a claim under an insurance policy other than a life insurance policy shall include, but is not limited to:
 - (a) A claim against a health maintenance organization, a hospital plan corporation, a professional health service corporation or disability insurance policy; and
 - (b) Any amount payable by or on behalf of a self-insurer.
- (6) The person insured by the insolvent insurer's policy may not be pursued by a third-party claimant for any amount paid to the third party by which the association's obligation is reduced by the application of this section.
- B. Any person having a claim which may be recovered under more than one insurance guaranty association or its equivalent shall seek recovery first from the association of the place of residence of the insured, except that if it is a first party claim for damage to property with a permanent location, the person shall seek recovery first from the association of the location of the property. If it is a workers' compensation claim, the person shall seek recovery first from the association of the residence of the claimant. Any recovery under this Act shall be reduced by the amount of recovery from another insurance guaranty association or its equivalent.

Drafting Note: This subsection does not prohibit recovery from more than one association, but it does describe the association to be approached first and then requires that any previous recoveries from like associations must be set off against recoveries from this association.

Section 15. Prevention of Insolvencies

To aid in the detection and prevention of insurer insolvencies:

- A. The board of directors may, upon majority vote, make recommendations to the commissioner on matters generally related to improving or enhancing regulation for solvency.
- B. At the conclusion of any domestic insurer insolvency in which the association was obligated to pay covered claims, the board of directors may, upon majority vote, prepare a report on the history and causes of the insolvency, based on the information available to the association and submit the report to the commissioner.
- C. Reports and recommendations provided under this section shall not be considered public documents.

MO-540-20

IBT/CD DRAFT VERSION #2

5/23/23

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

Section 16. Tax Exemption

The association shall be exempt from payment of all fees and all taxes levied by this State or any of its subdivisions except taxes levied on real or personal property.

Section 17. Recoupment of Assessments

Drafting Note: States may choose how they wish to allow member insurers to recoup assessments paid by selecting one of three alternatives for Section 17.

[Alternative 1 for Section 17]

- A. Except as provided in Subsection D, each member insurer shall annually recoup assessments it remitted in preceding years under Section 8. The recoupment shall be by means of a policyholder surcharge on premiums charged for all kinds of insurance in the accounts assessed. The surcharge shall be at a uniform percentage rate determined annually by the commissioner that is reasonably calculated to recoup the assessment remitted by the insurer, less any amounts returned to the member insurer by the association. Changes in this rate shall be effective no sooner than 180 days after insurers have received notice of the changed rate.
- B. If a member insurer fails to recoup the entire amount of the assessment in the first year under this section, it shall repeat the surcharge procedure provided for herein in succeeding years until the assessment is fully recouped or a de minimis amount remains uncollected. Any such de minimis amount shall be collected as provided in Subsection D of this section. If a member insurer collects excess surcharges, the insurer shall remit the excess amount to the association, and the excess amount shall be applied to reduce future assessments in the appropriate account.
- C. The amount and nature of any surcharge shall be separately stated on either a billing or policy declaration sent to an insured. The surcharge shall not be considered premium for any purpose, including the [insert all appropriate taxes] or agents' commission.
- D. A member may elect not to collect the surcharge from its insureds only when the expense of collecting the surcharge would exceed the amount of the surcharge. In that case, the member shall recoup the assessment through its rates, provided that:
 - (1) The insurer shall be obligated to remit the amount of surcharge not collected by election under this subsection; and
 - (2) The last sentence in Subsection C above shall not apply.
- E. In determining the rate under Subsection A for the first year of recoupment under this section, under rules prescribed by the commissioner, the commissioner shall provide for the recoupment in that year, or in such reasonable period as the commissioner may determine, of any assessments that have not been recouped as of that year. Insurers shall not be required to recoup assessments through surcharges under this section until 180 days after this section takes effect.]

[Alternative 2 for Section 17]

- A. Notwithstanding any provision of [insert citation to relevant tax and insurance codes] to the contrary, a member insurer may offset against its [insert all appropriate taxes] liability the entire amount of the assessment imposed under this Act at a rate of [insert number] percent per year for [insert number of years] successive years following the date of assessment. If the assessment is not fully recovered over the [insert number of years] period, the remaining unrecovered assessment may be claimed for subsequent calendar years until fully recovered.

Drafting Note: States may choose the number of years to allow an insurer to offset an assessment against the insurer's premium tax liability.

- B. Any tax credit under this section shall, for the purposes of Section [insert citation to retaliatory tax statute] be treated as a tax paid both under the tax laws of this State and under the laws of any other State or country.

MO-540-21

IBT/CD DRAFT VERSION #2
5/23/23

Property and Casualty Insurance Guaranty Association Model Act

- C. If a member insurer ceases doing business in this State, any uncredited assessment may be credited against its [insert all appropriate taxes] during the year it ceases doing business in this State.
- D. Any sums that are acquired by refund from the association by member insurers and that have been credited against [insert all appropriate taxes], as provided in this section, shall be paid by member insurers to this State as required by the department. The association shall notify the department that the refunds have been made./

[Alternative 3 for Section 17]

The rates and premiums charged for insurance policies to which this section applies shall include amounts sufficient to recoup a sum equal to the amounts paid to the association by the member insurer less any amounts returned to the member insurer by the association. Rates shall not be deemed excessive because they contain an additional amount reasonably calculated to recoup all assessments paid by the member insurer./

Section 18. Immunity

There shall be no liability on the part of, and no cause of action of any nature shall arise against a member insurer, the association or its agents or employees, the board of directors, or any person serving as an alternate or substitute representative of any director, or the commissioner or the commissioner's representatives for any action taken or any failure to act by them in the performance of their powers and duties under this Act

Section 19. Stay of Proceedings

All proceedings in which the insolvent insurer is a party or is obligated to defend a party in any court in this State shall, subject to waiver by the association in specific cases involving covered claims, be stayed for six (6) months and such additional time as may be determined by the court from the date the insolvency is determined or an ancillary proceeding is instituted in the State, whichever is later, to permit proper defense by the association of all pending causes of action.

The liquidator, receiver or statutory successor of an insolvent insurer covered by this Act shall permit access by the board or its authorized representative to such of the insolvent insurer's records which are necessary for the board in carrying out its functions under this Act with regard to covered claims. In addition, the liquidator, receiver or statutory successor shall provide the board or its representative with copies of those records upon the request by the board and at the expense of the board.

MO-540-22

MODEL 540 IBT/CD PROPOSED AMENDMENTS**VERSION #2 DESCRIPTION**

	VERSION #2
IBT/CD MEMBER TO MEMBER	Always covered
OTHER MEMBER TO MEMBER	Always covered
IBT/CD MEMBER TO NONMEMBER	Always covered
OTHER MEMBER TO NONMEMBER	Default and Alternative 3
IBT/CD NONMEMBER TO MEMBER	Always covered
OTHER NONMEMBER TO MEMBER	Default and Alternative 3

Overriding observations.

1. Version #2 proposal:
 - a. Is far simpler (in all cases only one section need be edited),
 - b. Accomplishes the goal of preserving IBT and CD GA coverage whether or not the state has adopted the assumed claims provision, and
 - c. Does not take away any coverage currently provided by the Model Act.
2. Where the proposals differ is that (unlike Version #2) Version #1 proposal provides a mechanism for the NAIC to reverse the 2009 inclusion of optional assumed claim coverage. That is to say, one version of their proposal can be adopted by the NAIC to achieve this result. The states already have that option and have exercised it by either adopting or not adopting that language from the 2009 amendments.
3. Version #1 highlights narrow areas in which one might interpret existing law (state or model) as excluding GA coverage, but those instances are unrelated to IBT and CD transactions and, at least in my view, are contrary to current custom and practice or so exotic as to never having arisen.

Section 1. Title

This Act shall be known as the [State] Insurance Guaranty Association Act.

Section 2. Purpose

The purpose of this Act is to provide a mechanism for the payment of covered claims under certain insurance policies, to avoid excessive delay in payment and to the extent provided in this Act minimize financial loss to claimants or policyholders because of the insolvency of an insurer, and to provide an association to assess the cost of such protection among insurers.

Section 3. Scope

This Act shall apply to all kinds of direct insurance, but shall not be applicable to the following:

- A. Life, annuity, health or disability insurance;
- B. Mortgage guaranty, financial guaranty or other forms of insurance offering protection against investment risks;
- C. Fidelity or surety bonds, or any other bonding obligations;
- D. Credit insurance, vendors' single interest insurance, or collateral protection insurance or any similar insurance protecting the interests of a creditor arising out of a creditor-debtor transaction;

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

- E. Other than coverages that may be set forth in a cybersecurity insurance policy, insurance Insuree—of warranties or service contracts including insurance that provides for the repair, replacement or service of goods or property, indemnification for repair, replacement or service for the operational or structural failure of the goods or property due to a defect in materials, workmanship or normal wear and tear, or provides reimbursement for the liability incurred by the issuer of agreements or service contracts that provide such benefits;
- F. Title insurance;
- G. Ocean marine insurance;
- H. Any transaction or combination of transactions between a person (including affiliates of such person) and an insurer (including affiliates of such insurer) which involves the transfer of investment or credit risk unaccompanied by transfer of insurance risk; or
- I. Any insurance provided by or guaranteed by government.

Drafting Note: This Act focuses on property and liability kinds of insurance and therefore exempts those kinds of insurance deemed to present problems quite distinct from those of property and liability insurance. The Act further precludes from its scope certain types of insurance that provide protection for investment and financial risks. Financial guaranty is one of these. The NAIC Life and Health Insurance Guaranty Association Model Act provides for coverage of some of the lines excluded by this provision.

For purposes of this section, “Financial guaranty insurance” includes any insurance under which loss is payable upon proof of occurrence of any of the following events to the damage of an insured claimant or obligee:

1. Failure of any obligor or obligors on any debt instrument or other monetary obligation, including common or preferred stock, to pay when due the principal, interest, dividend or purchase price of such instrument or obligation, whether failure is the result of a financial default or insolvency and whether or not the obligation is incurred directly or as guarantor by, or on behalf of, another obligor which has also defaulted;
2. Changes in the level of interest rates whether short term or long term, or in the difference between interest rates existing in various markets;
3. Changes in the rate of exchange of currency, or from the inconvertibility of one currency into another for any reason;
4. Changes in the value of specific assets or commodities, or price levels in general.

For purposes of this section, “credit insurance” means insurance on accounts receivable.

The terms “disability insurance” and “accident and health insurance,” and “health insurance” are intended to be synonymous. Each State will wish to examine its own statutes to determine which is the appropriate phrase.

A State where the insurance code does not adequately define ocean marine insurance may wish to add the following to Section 5, Definitions: “Ocean marine insurance” means any form of insurance, regardless of the name, label or marketing designation of the insurance policy, which insures against maritime perils or risks and other related perils or risks, which are usually insured against by traditional marine insurance, such as hull and machinery, marine builders risk, and marine protection and indemnity. Perils and risk insured against include without limitation loss, damage, expense or legal liability of the insured for loss, damage or expense arising out of or incident to ownership, operation, chartering, maintenance, use, repair or construction of any vessel, craft or instrumentality in use in ocean or inland waterways for commercial purposes, including liability of the insured for personal injury, illness or death or for loss or damage to the property of the insured or another person.

Section 4. Construction

This Act shall be construed to effect the purpose under Section 2 which will constitute an aid and guide to interpretation.

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

Section 5. Definitions

As used in this Act:

[Optional:

- A. *“Account” means any one of the three accounts created by Section 6.]*

Drafting Note: This definition should be used by those States wishing to create separate accounts for assessment purposes. For a note on the use of separate accounts for assessments see the Drafting Note after Section 6. If this definition is used, all subsequent subsections should be renumbered.

- A. “Affiliate” means a person who directly, or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with another person on December 31 of the year immediately preceding the date the insurer becomes an insolvent insurer.
- B. “Association” means the [State] Insurance Guaranty Association created under Section 6.
- C. “Association similar to the association” means any guaranty association, security fund or other insolvency mechanism that affords protection similar to that of the association. The term shall also include any property and casualty insolvency mechanism that obtains assessments or other contributions from insurers on a preinsolvency basis.

Drafting Note: There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and Q and Alternative 1b or 2b in Section 8A(3).

- D. **[Alternative 1]** “Assumed claims transaction” means the following:
- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or
 - (2) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies

[Alternative 2] “Assumed claims transaction” means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under

540-3

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or

- (2) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
- (a) Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
 - (b) For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.
 - (c) For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or
- (3) An assumption reinsurance transaction in which all of the following has occurred:
- (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.
- E. “Claimant” means any person instituting a covered claim, provided that no person who is an affiliate of the insolvent insurer may be a claimant.
- F. “Commissioner” means the Commissioner of Insurance of this State.

Drafting Note: Use the appropriate title for the chief insurance regulatory official wherever the term “commissioner” appears.

- G. “Control” means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing that control does not exist in fact.
- H. “Covered claim” means the following:
- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and: the policy was either issued by the insurer or assumed by the insurer in an assumed claims transaction; and

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
 - (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (2) Except as provided elsewhere in this section, “covered claim” shall not include:
- (a) Any amount awarded as punitive or exemplary damages;
 - (b) Any amount sought as a return of premium under any retrospective rating plan;
 - (c) Any amount due any reinsurer, insurer, insurance pool or underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer as subrogation recoveries, reinsurance recoveries, contribution, indemnification or otherwise. No claim for any amount due any reinsurer, insurer, insurance pool, underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer may be asserted against a person insured under a policy issued by an insolvent insurer other than to the extent the claim exceeds the association obligation limitations set forth in Section 8 of this Act;
 - (d) Any claims excluded pursuant to Section 13 due to the high net worth of an insured;
 - (e) Any first party claims by an insured that is an affiliate of the insolvent insurer;
 - (f) Any fee or other amount relating to goods or services sought by or on behalf of any attorney or other provider of goods or services retained by the insolvent insurer or an insured prior to the date it was determined to be insolvent;
 - (g) Any fee or other amount sought by or on behalf of any attorney or other provider of goods or services retained by any insured or claimant in connection with the assertion or prosecution of any claim, covered or otherwise, against the association;
 - (h) Any claims for interest; or
 - (i) Any claim filed with the association or a liquidator for protection afforded under the insured’s policy for incurred-but-not-reported losses.

Drafting note: The language in this provision referring to claims for incurred-but-not-reported losses has been inserted to expressly include the existing intent of this provision and make it clear that “policyholder protection” proofs of claim, while valid to preserve rights against the State of the insolvent insurer under the Insurer Receivership Model Act, are not valid to preserve rights against the association.

I. “Cybersecurity insurance”, for purposes of this Act, includes first and third party coverage, in a policy or endorsement, written on a direct, admitted basis for losses and loss mitigation arising out of or relating to data privacy breaches, unauthorized information network security intrusions, computer viruses, ransomware, cyber extortion, identity theft, and similar exposures.

Note: This definition is optional.

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

J. “Insolvent insurer” means an insurer that is licensed to transact insurance in this State, either at the time the policy was issued, when the obligation with respect to the covered claim was assumed under an assumed claims transaction, or when the insured event occurred, and against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile.

Drafting Note: “Final order” as used in this section means an order which has not been stayed. States in which the “final order” language does not accurately reflect whether or not the order is subject to a stay should substitute appropriate language consistent with the statutes or rules of the State to convey the intended meaning.

K. “Insured” means any named insured, any additional insured, any vendor, lessor or any other party identified as an insured under the policy.

L.(1) “Member insurer” means any person who:

- (a) Writes any kind of insurance to which this Act applies under Section 3, including the exchange of reciprocal or inter-insurance contracts; and
- (b) Is licensed to transact insurance in this State (except at the option of the State).

- (2) An insurer shall cease to be a member insurer effective on the day following the termination or expiration of its license to transact the kinds of insurance to which this Act applies, however, the insurer shall remain liable as a member insurer for any and all obligations, including obligations for assessments levied prior to the termination or expiration of the insurer’s license and assessments levied after the termination or expiration, which relate to any insurer that became an insolvent insurer prior to the termination or expiration of the insurer’s license.

M. “Net direct written premiums” means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees, less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. “Net direct written premiums” does not include premiums on contracts between insurers or reinsurers.

N. “Novation” means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.

O. “Person” means any individual, aggregation of individuals, corporation, partnership or other entity.

P. “Receiver” means liquidator, rehabilitator, conservator or ancillary receiver, as the context requires.

Drafting Note: Each State should conform the definition of “receiver” to the definition used in the State’s insurer receivership act.

SeQ. “If-insurer” means a person that covers its liability through a qualified individual or group self-insurance program or any other formal program created for the specific purpose of covering liabilities typically covered by insurance.

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

R. [Alternative 2b] “Assumption Consideration” shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer during the three calendar years prior to the effective date of the transaction to the applicable guaranty associations if the business had been written directly by the assuming insurer.

In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assumed claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the calendar year of the transaction.

The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.

Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7.

[Alternate Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7. For purposes of administration and assessment, the association shall be divided into three separate accounts:

- A. *The workers’ compensation insurance account;*
- B. *The automobile insurance account; and*
- C. *The account for all other insurance to which this Act applies.]*

Drafting Note: The alternate Section 6 should be used if a State, after examining its insurance market, determines that separate accounts for various kinds of insurance are necessary and feasible. The major consideration is whether each account will have a base sufficiently large to cover possible insolvencies. Separate accounts will permit assessments to be generally limited to insurers writing the same kind of insurance as the insolvent company. If this approach is adopted the provision of alternate Sections 8A(3) and 8B(6) and optional Section 5A should also be used.

Section 7. Board of Directors

- A. The board of directors of the association shall consist of not less than five (5) nor more than [insert number] persons serving terms as established in the plan of operation. The insurer members of the board shall be selected by member insurers subject to the approval of the commissioner. Vacancies on the board shall be filled for the remaining period of the term by a majority vote of the remaining insurer members subject to the

Property and Casualty Insurance Guaranty Association Model Act

approval of the commissioner. If no members are selected within sixty (60) days after the effective date of this Act, the commissioner may appoint the initial members of the board of directors. Two (2) persons, who must be public representatives, shall be appointed by the commissioner to the board of directors. Vacancies of positions held by public representatives shall be filled by the commissioner. A public representative may not be an officer, director or employee of an insurance company or any person engaged in the business of insurance. For the purposes of this section, the term “director” shall mean an individual serving on behalf of an insurer member of the board of directors or a public representative on the board of directors.

Drafting Note: A State adopting this language should make certain that its insurance code includes a definition of “the business of insurance” similar to that found in the NAIC Insurer Receivership Model Act.

- B. In approving selections to the board, the commissioner shall consider among other things whether all member insurers are fairly represented.
- C. Members of the board of directors may be reimbursed from the assets of the association for reasonable expenses incurred by them as members of the board of directors.
- D. Any board member who is an insurer in receivership shall be terminated as a *board member*, effective as of the date of the entry of the order of receivership. Any resulting vacancies on the board shall be filled for the remaining period of the term in accordance with the provisions of Subsection A.
- E. In the event that a director shall, because of illness, nonattendance at meetings or any other reason, be deemed unable to satisfactorily perform the designated functions as a director by missing three consecutive board meetings, the board of directors may declare the office vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.
- F. If the commissioner has reasonable cause to believe that a director failed to disclose a known conflict of interest with his or her duties on the board, failed to take appropriate action based on a known conflict of interest with his or her duties on the board, or has been indicted or charged with a felony, or misdemeanor involving moral turpitude, the commissioner may suspend that director pending the outcome of an investigation or hearing by the commissioner or the conclusion of any criminal proceedings. A company elected to the board may replace a suspended director prior to the completion of an investigation, hearing or criminal proceeding. In the event that the allegations are substantiated at the conclusion of an investigation, hearing or criminal proceeding, the office shall be declared vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

Section 8. Powers and Duties of the Association

- A. The association shall:
 - (1) (a) Be obligated to pay covered claims existing prior to the order of liquidation, arising within thirty (30) days after the order of liquidation, or before the policy expiration date if less than thirty (30) days after the order of liquidation, or before the insured replaces the policy or causes its cancellation, if the insured does so within thirty (30) days of the order of liquidation. The obligation shall be satisfied by paying to the claimant an amount as follows:
 - (i) The full amount of a covered claim for benefits under a workers’ compensation insurance coverage;

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

(ii) An amount not exceeding \$10,000 per policy for a covered claim for the return of unearned premium;

(iii) An amount not exceeding \$500,000 per claimant for all other covered claims.

(iv) In no event shall the Association be obligated to pay an amount in excess of \$500,000 for all first- and third-party claims under a policy or endorsement providing or that is found to provide cybersecurity -insurance coverage and arising out of or related to a single insured event, regardless of the number of claims made or the number of claimants.

- (b) In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include a claim filed with the guaranty fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer.

For the purpose of filing a claim under this subsection, notice of claims to the liquidator of the insolvent insurer shall be deemed notice to the association or its agent and a list of claims shall be periodically submitted to the association or association similar to the association in another State by the liquidator.

Drafting Note: On the general subject of the relationship of the association to the liquidator, the working group/task force takes the position that since this is a model State bill, it will be able to bind only two parties, the association and the in-State liquidator. Nevertheless, the provisions should be clear enough to outline the requests being made to out-of-State liquidators and the requirements placed on in-State liquidators in relation to out-of-State associations.

Drafting Note: Because of its potential impact on guaranty association coverage, it is recommended that the legislation include an appropriate provision stating that the bar date only applies to claims in liquidation commencing after its effective date. Drafters should insure that the State's insurance liquidation act would permit, upon closure, payments to the guaranty association and any association similar to the association for amounts that are estimated to be incurred after closure for workers compensation claims obligations. The amounts should be payable on these obligations related to losses both known and not known at the point of closure.

- (c) Any obligation of the association to defend an insured shall cease upon the association's payment or tender of an amount equal to the lesser of the association's covered claim obligation limit or the applicable policy limit.

Drafting Note: The obligation of the association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is canceled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to \$10,000, against the association. The maximums (\$10,000 for the return of unearned premium; \$500,000 for all other covered claims) represent the working group's concept of practical limitations, but each State will wish to evaluate these figures.

- (2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent, subject to the limitations provided in this Act, shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent, including but not limited to, the right to pursue and retain salvage and subrogation recoverable on covered claim obligations to the extent paid by the association. The association shall not be deemed the insolvent insurer for the purpose of conferring jurisdiction.
- (3) **[Alternative 1a]** Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent

540-9

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

[Alternative 2a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

(3) **[Alternate 1b]** Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member

NCIGF Suggested Amendments Cyber Liability Claims

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment on the kinds of insurance in the account. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

- (3) **[Alternate 2b]** Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment on the kinds of insurance in the account. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and

540-11

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

- (4) Investigate claims brought against the association and adjust, compromise, settle and pay covered claims to the extent of the association's obligation and deny all other claims. The association shall pay claims in any order that it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The association shall have the right to appoint and to direct legal counsel retained under liability insurance policies for the defense of covered claims- and to appoint and direct other service providers for covered services.
- (5) Notify claimants in this State as deemed necessary by the commissioner and upon the commissioner's request, to the extent records are available to the association.

Drafting Note: The intent of this paragraph is to allow, in exceptional circumstances, supplementary notice to that given by the domiciliary receiver.

- (6) (a) Have the right to review and contest as set forth in this subsection settlements, releases, compromises, waivers and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation. In an action to enforce settlements, releases and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation, the Association shall have the right to assert the following defenses, in addition to the defenses available to the insurer:
- (i) The association is not bound by a settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment entered against an insured or the insurer by consent or through a failure to exhaust all appeals, if the settlement, release, compromise, waiver or judgment was:
- (I) Executed or entered within 120 days prior to the entry of an order of liquidation, and the insured or the insurer did not use reasonable care in entering into the settlement, release, compromise, waiver or judgment, or did not pursue all reasonable appeals of an adverse judgment; or
- (II) Executed by or taken against an insured or the insurer based on default, fraud, collusion or the insurer's failure to defend.
- (ii) If a court of competent jurisdiction finds that the association is not bound by a settlement, release, compromise, waiver or judgment for the reasons described in Subparagraph (a)(i), the settlement, release, compromise, waiver or judgment shall be set aside, and the association shall be permitted to defend any covered claim on the merits. The settlement, release, compromise, waiver or judgment may not be considered as evidence of liability or damages in connection with any claim brought against the association or any other party under this Act.
- (iii) The association shall have the right to assert any statutory defenses or rights of offset against any settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment taken against the insured or the insurer.
- (b) As to any covered claims arising from a judgment under any decision, verdict or finding based on the default of the insolvent insurer or its failure to defend, the association, either on its own behalf or on behalf of an insured may apply to have the judgment, order,

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

decision, verdict or finding set aside by the same court or administrator that entered the judgment, order, decision, verdict or finding and shall be permitted to defend the claim on the merits.

- (7) Handle claims through its own employees, one or more insurers, or other persons designated as servicing facilities, which may include the receiver for the insolvent insurer. Designation of a servicing facility is subject to the approval of the commissioner, but the designation may be declined by a member insurer.
- (8) Reimburse each servicing facility for obligations of the association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the association and shall pay the other expenses of the association authorized by this Act.
- (9) Submit, not later than 90 days after the end of the association's fiscal year, a financial report for the preceding fiscal year in a form approved by the commissioner.

B. The association may:

- (1) Employ or retain persons as are necessary to handle claims, provide covered policy benefits and services, and perform other duties of the association;
- (2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;
- (3) Sue or be sued;
- (4) Negotiate and become a party to contracts necessary to carry out the purpose of this Act;
- (5) Perform other acts necessary or proper to effectuate the purpose of this Act;
- (6) Refund to the member insurers in proportion to the contribution of each member insurer to the association that amount by which the assets of the association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association exceed the liabilities of the association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

- (6) Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]*

Drafting Note: The working group/task force feels that the board of directors should determine the amount of the refunds to members when the assets of the association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

C. Suits involving the association:

- (1) Except for actions by the receiver, all actions relating to or arising out of this Act against the association shall be brought in the courts in this State. The courts shall have exclusive jurisdiction over all actions relating to or arising out of this Act against the association.

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

- (2) The exclusive venue in any action by or against the association is in [designate appropriate court]. The association may, at its option, waive this venue as to specific actions.

[Optional Section 8D

D. (1) *The legislature finds:*

- (a) *The potential for widespread and massive damage to persons and property caused by natural disasters such as earthquakes, windstorms, or fire in this State can generate insurance claims of such a number as to render numerous insurers operating within this State insolvent and therefore unable to satisfy covered claims;*
- (b) *The inability of insureds within this State to receive payments of covered claims or to timely receive the payments creates financial and other hardships for insureds and places undue burdens on the State, the affected units of local government, and the community at large;*
- (c) *The insolvency of a single insurer in a material amount or a catastrophic event may result in the same hardships as those produced by a natural disaster;*
- (d) *The State has previously taken action to address these problems by adopting the [insert name of guaranty association act], which among other things, provides a mechanism for the payment of covered claims under certain insurance policies to avoid excessive delay in payment and to avoid financial loss to claimants or policyholders because of the insolvency of an insurer; and*
- (e) *In order for the association to timely pay claims of insolvent insurers in this State and otherwise carry out its duties, the association may require additional financing options. The intent of the Legislature is to make those options available to the association in the event that a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection A(3). In cases where the association determines that it is cost effective, the association may issue bonds as provided in this subsection. In determining whether to issue bonds, the association shall consider the transaction costs of issuing the bonds.*

- (2) *In the event a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection 8A(3), the association, in its sole discretion, may by resolution request the [insert name of agency] Agency to issue bonds pursuant to [insert statutory authority], in such amounts as the association may determine to provide funds for the payment of covered claims and expenses related thereto. In the event bonds are issued, the association shall have the authority to annually assess member insurers for amounts necessary to pay the principal of, and interest on those bonds. Assessments collected pursuant to this authority shall be collected under the same procedures as provided in Subsection 8A(3) and, notwithstanding the two percent (2%) limit in Subsection 8A(3), shall be limited to an additional [insert percentage] percent of the annual net direct written premium in this State of each member insurer for the calendar year preceding the assessment. The commissioner's approval shall be required for any assessment greater than five percent (5%). Assessments collected pursuant to this authority may only be used for servicing the bond obligations provided for in this subsection and shall be pledged for that purpose.*

540-14

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (3) *In addition to the assessments provided for in this subsection, the association in its discretion, and after considering other obligations of the association, may utilize current funds of the association, assessments made under Subsection 8A(3) and advances or dividends received from the liquidators of insolvent insurers to pay the principal and interest on any bonds issued at the board's request.*
- (4) *Assessments under this subsection shall be payable in twelve (12) monthly installments with the first installment being due and payable at the end of the month after an assessment is levied, and subsequent installments being due not later than the end of each succeeding month.*
- (5) *In order to assure that insurers paying assessments levied under this subsection continue to charge rates that are neither inadequate nor excessive, within ninety (90) days after being notified of the assessments, each insurer that is to be assessed pursuant to this subsection shall make a rate filing for lines of business additionally assessed under this subsection. If the filing reflects a rate change that, as a percentage, is equal to the difference between the rate of the assessment and the rate of the previous year's assessment under this subsection, the filing shall consist of a certification so stating and shall be deemed approved when made. Any rate change of a different percentage shall be subject to the standards and procedures of [cite appropriate statutory authority for provisions on filing and approval of rates].*

Drafting Note: This provision should only be considered by those States that have serious concerns that circumstances could result in a substantial capacity problem resulting in unpaid or pro rata payment of claims. An association intending to consider this provision should first consult with experienced bond counsel in its State to identify an appropriate State agency or bonding authority to act as vehicle for issuing the bonds. That agency or authority's statute may also have to be amended to specifically authorize these types of bonds and to cross-reference this provision in the guaranty association law. It is possible that in some situations a new bonding authority may have to be created for this purpose.

Regardless of the vehicle used, it is important that the decision-making authority on whether bonds are needed and in what amounts be retained by the association's board.

The extent of additional assessment authority under this subsection has not been specified. When considering the amount of additional authority that will be needed, a determination should be made as to the amount of funds needed to service the bonds. More specifically, consideration should be given to the amount of the bonds to be issued, interest rate and the maturity date of the bonds. The association should be able to raise sufficient funds through assessments to pay the interest and retire the bonds after some reasonable period (e.g. ten (10) years). Subsection D(2) requires the Commissioner's approval before the association can impose an additional assessment in excess of 5%. This is to assure that the additional assessment will not result in financial hardship to the member insurers and additional insolvencies.

The intent of Subsection D(4) is to permit recoupment by member insurers of the additional cost of assessments under this subsection without any related regulatory approval. A State enacting this subsection may need to revise Subsection D(4) so that it conforms to the particular State's recoupment provisions, as well as the provisions on filing and approval of rates.]

Section 9. Plan of Operation

- A.
 - (1) The association shall submit to the commissioner a plan of operation and any amendments to the plan of operation necessary or suitable to assure the fair, reasonable and equitable administration of the association. The plan of operation and amendments shall become effective upon approval in writing by the commissioner.
 - (2) If the association fails to submit a suitable plan of operation within ninety (90) days following the effective date of this Act, or if at any time thereafter the association fails to submit suitable amendments to the plan, the commissioner shall, after notice and hearing, adopt reasonable rules necessary or advisable to effectuate the provisions of this Act. The rules shall continue in force until modified by the commissioner or superseded by a plan submitted by the association and approved by the commissioner.

540-15

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

- B. All member insurers shall comply with the plan of operation.
- C. The plan of operation shall:
- (1) Establish the procedures under which the powers and duties of the association under Section 8 will be performed;
 - (2) Establish procedures for handling assets of the association;
 - (3) Require that written procedures be established for the disposition of liquidating dividends or other monies received from the estate of the insolvent insurer;
 - (4) Require that written procedures be established to designate the amount and method of reimbursing members of the board of directors under Section 7;
 - (5) Establish procedures by which claims may be filed with the association and establish acceptable forms of proof of covered claims;
 - (6) Establish regular places and times for meetings of the board of directors;
 - (7) Require that written procedures be established for records to be kept of all financial transactions of the association, its agents and the board of directors;
 - (8) Provide that any member insurer aggrieved by any final action or decision of the association may appeal to the commissioner within thirty (30) days after the action or decision;
 - (9) Establish the procedures under which selections for the board of directors will be submitted to the commissioner;
 - (10) Contain additional provisions necessary or proper for the execution of the powers and duties of the association.
- D. The plan of operation may provide that any or all powers and duties of the association, except those under Sections 8A(3) and 8B(2), are delegated to a corporation, association similar to the association or other organization which performs or will perform functions similar to those of this association or its equivalent in two (2) or more States. The corporation, association similar to the association or organization shall be reimbursed as a servicing facility would be reimbursed and shall be paid for its performance of any other functions of the association. A delegation under this subsection shall take effect only with the approval of both the board of directors and the commissioner, and may be made only to a corporation, association or organization which extends protection not substantially less favorable and effective than that provided by this Act.

Section 10. Duties and Powers of the Commissioner

- A. The commissioner shall:
- (1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

a member company at the same time that the complaint is filed with a court of competent jurisdiction;

- (2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

B. The commissioner may:

- (1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than \$100 per month;
- (2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.
- (3) Examine, audit, or otherwise regulate the association.

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

- C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

Section 11. Coordination Among Guaranty Associations

- A. The association may join one or more organizations of other State associations of similar purposes, to further the purposes and administer the powers and duties of the association. The association may designate one or more of these organizations to act as a liaison for the association and, to the extent the association authorizes, to bind the association in agreements or settlements with receivers of insolvent insurance companies or their designated representatives.
- B. The association, in cooperation with other obligated or potentially obligated guaranty associations, or their designated representatives, shall make all reasonable efforts to coordinate and cooperate with receivers, or their designated representatives, in the most efficient and uniform manner, including the use of Uniform Data Standards as promulgated or approved by the National Association of Insurance Commissioners.

Section 12. Effect of Paid Claims

- A. Any person recovering under this Act shall be deemed to have assigned any rights under the policy to the association to the extent of his or her recovery from the association. Every insured or claimant seeking the protection of this Act shall cooperate with the association to the same extent as the person would have been required to cooperate with the insolvent insurer. The association shall have no cause of action against the insured of the insolvent insurer for sums it has paid out except any causes of action as the insolvent insurer would have had if the sums had been paid by the insolvent insurer and except as provided in Subsection B and in Section 13. In the case of an insolvent insurer operating on a plan with assessment liability, payments of claims of the association shall not operate to reduce the liability of the insureds to the receiver, liquidator or statutory successor for unpaid assessments.

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

- B. The association shall have the right to recover from any person who is an affiliate of the insolvent insurer all amounts paid by the association on behalf of that person pursuant to the Act, whether for indemnity, defense or otherwise.
- C. The association and any association similar to the association in another State shall be entitled to file a claim in the liquidation of an insolvent insurer for any amounts paid by them on covered claim obligations as determined under this Act or similar laws in other States and shall receive dividends and other distributions at the priority set forth in [insert reference to Statepriority of distribution in liquidation act].
- D. The association shall periodically file with the receiver or liquidator of the insolvent insurer statements of the covered claims paid by the association and estimates of anticipated claims on the association which shall preserve the rights of the association against the assets of the insolvent insurer.

Section 13 [Optional] Net Worth Exclusion

Drafting Note: Various alternatives are provided for a net worth limitation in the guaranty association act. States may choose any of the Subsection B alternatives below or may elect to not have any net worth limitation. Subsection A, which defines “high net worth insured,” has two alternates allowing States to choose different net worth limitations for first and third party claims if that State chooses alternatives 1 or 2 to Subsection B. Subsections C, D and E are recommended to accompany any of the Subsection B alternatives. In cases where States elect not to include net worth, States may either omit this section in its entirety or include only Subsection C, which excludes from coverage claims denied by other States’ net worth restrictions pursuant to those States’ guaranty association laws.

- A. For purposes of this section “high net worth insured” shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

[Alternate Section 13A

- A. (1) *For the purposes of Subsection B(1), “high net worth insured” shall mean any insured whose net worth exceeds \$25 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.]*
- (2) *For the purpose of Subsection B(2) [and B(4) if Alternative 2 for Subsection B is selected] “high net worth insured” shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.*

Drafting Note: Alternate Subsection A language should only be considered in cases where a State is considering Alternative 1 or 2 of Subsection B and would like to set different dollar thresholds for the first party claim exclusion provision and the third party recovery provision.

Drafting Note: States may wish to consider the impact on governmental entities and charitable organizations of the application of the net worth exclusion contained in the definition of “covered claim.” The Michigan Supreme Court, in interpreting a “net worth” provision in the Michigan guaranty association statute, held that governmental entities possess a “net worth” for purposes of the provision in the Michigan guaranty association statute that prohibits claims against the guaranty association by a person who has a specified net worth. Oakland County Road Commission vs. Michigan Property & Casualty Guaranty Association, 575 N.W. 2d 751 (Mich. 1998).

[Alternative 1 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- ~~(2) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise./~~
- ~~(3) The Association may also, at its sole discretion and without assumption of any ongoing duty to do so, pay any cybersecurity insurance obligations covered by a policy or endorsement of an insolvent company on behalf of a high net worth insured as defined in Section 13A(1). In that case, the Association shall recover from the high net worth insured under this Section all amounts paid on its behalf, all allocated claim adjusted expenses related to such claims, the Association's attorney's fees, and all court costs in any action necessary to collect the full amount to the Association's reimbursement under this Section.]~~

Note: This revision- would only be a consideration in states with a net worth exclusion.

[Alternative 2 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) Subject to Paragraph (3), the association shall not be obligated to pay any third party claim relating to a policy of a high net worth insured. This exclusion shall not apply to third party claims against the high net worth insured where:
- (a) The insured has applied for or consented to the appointment of a receiver, trustee or liquidator for all or a substantial part of its assets;
 - (b) The insured has filed a voluntary petition in bankruptcy, filed a petition or an answer seeking a reorganization or arrangement with creditors or to take advantage of any insolvency law; or
 - (c) An order, judgment, or decree is entered by a court of competent jurisdiction, on the application of a creditor, adjudicating the insured bankrupt or insolvent or approving a petition seeking reorganization of the insured or of all or substantial part of its assets.
- (3) Paragraph (2) shall not apply to workers' compensation claims, personal injury protection claims, no-fault claims and any other claims for ongoing medical payments to third parties.
- ~~(4) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, covered policy benefits and services, defense or otherwise./~~
- ~~(5) The Association may also, at its sole discretion and without assumption of any ongoing duty to do so, pay any third-party claims or cybersecurity insurance obligations covered by a policy or endorsement of an insolvent company on behalf of a high net worth insured as defined in Section 13A(2). In that case, the Association shall recover from the high net worth insured under this Section all amounts paid on its behalf, all allocated claim adjusted expenses related to such claims, the Association's attorney's fees, and all court costs in any action necessary to collect the full amount to the Association's reimbursement under this Section.~~

Note: This revision would only be a consideration in states with a net worth exclusion.

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

[Alternative 3 for Section 13B]

- B. The association shall not be obligated to pay any first party claims by a high net worth insured.]
- C. The association shall not be obligated to pay any claim that would otherwise be a covered claim that is an obligation to or on behalf of a person who has a net worth greater than that allowed by the insurance guaranty association law of the State of residence of the claimant at the time specified by that State's applicable law, and which association has denied coverage to that claimant on that basis.
- D. The association shall establish reasonable procedures subject to the approval of the commissioner for requesting financial information from insureds on a confidential basis for purposes of applying this section, provided that the financial information may be shared with any other association similar to the association and the liquidator for the insolvent insurer on the same confidential basis. Any request to an insured seeking financial information must advise the insured of the consequences of failing to provide the financial information. If an insured refuses to provide the requested financial information where it is requested and available, the association may, until such time as the information is provided, provisionally deem the insured to be a high net worth insured for the purpose of denying a claim under Subsection B.
- E. In any lawsuit contesting the applicability of this section where the insured has refused to provide financial information under the procedure established pursuant to Subsection D, the insured shall bear the burden of proof concerning its net worth at the relevant time. If the insured fails to prove that its net worth at the relevant time was less than the applicable amount, the court shall award the association its full costs, expenses and reasonable attorneys' fees in contesting the claim.

Section 14. Exhaustion of Other Coverage

- A. (1) Any person having a claim against an insurer,, shall be required first to exhaust all coverage provided by any other policy, including the right to a defense under the other policy, if the claim under the other policy arises from the same facts, injury or loss that gave rise to the covered claim against the association. The requirement to exhaust shall apply without regard to whether the other insurance policy is a policy written by a member insurer. However, no person shall be required to exhaust any right under the policy of an insolvent insurer or any right under a life insurance policy.
- (2) Any amount payable on a covered claim under this Act shall be reduced by the full applicable limits stated in the other insurance policy, or by the amount of the recovery under the other insurance policy as provided herein. The association shall receive a full credit for the stated limits, unless the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy. If the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy, or if there are no applicable stated limits under the policy, the association shall receive a full credit for the total recovery.

[Alternative 1 for Section 14A(2)(a)]

The credit shall be deducted from the lesser of:

- (i) The association's covered claim limit;
- (ii) The amount of the judgment or settlement of the claim; or
- (iii) The policy limits of the policy of the insolvent insurer.]

[Alternative 2 for Section 14A(2)(a)]

The credit shall be deducted from the lesser of:

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (i) The amount of the judgment or settlement of the claim; or (ii)
The policy limits of the policy of the insolvent insurer.]

(b)_____In no case, however, shall the obligation of the association exceed the covered claim limit embodied in Section 8 of this Act.

- (3) Except to the extent that the claimant has a contractual right to claim defense under an insurance policy issued by another insurer, nothing in this section shall relieve the association of the duty to defend under the policy issued by the insolvent insurer. This duty shall, however, be limited by any other limitation on the duty to defend embodied in this Act.
 - (4) A claim under a policy providing liability coverage to a person who may be jointly and severally liable as a joint tortfeasor with the person covered under the policy of the insolvent insurer that gives rise to the covered claim shall be considered to be a claim arising from the same facts, injury or loss that gave rise to the covered claim against the association.
 - (5) For purposes of this section, a claim under an insurance policy other than a life insurance policy shall include, but is not limited to:
 - (a) A claim against a health maintenance organization, a hospital plan corporation, a professional health service corporation or disability insurance policy; and
 - (b) Any amount payable by or on behalf of a self-insurer.
 - (6) The person insured by the insolvent insurer's policy may not be pursued by a third-party claimant for any amount paid to the third party by which the association's obligation is reduced by the application of this section.
- B. Any person having a claim which may be recovered under more than one insurance guaranty association or its equivalent shall seek recovery first from the association of the place of residence of the insured, except that if it is a first party claim for damage to property with a permanent location, the person shall seek recovery first from the association of the location of the property. If it is a workers' compensation claim, the person shall seek recovery first from the association of the residence of the claimant. Any recovery under this Act shall be reduced by the amount of recovery from another insurance guaranty association or its equivalent.

Drafting Note: This subsection does not prohibit recovery from more than one association, but it does describe the association to be approached first and then requires that any previous recoveries from like associations must be set off against recoveries from this association.

Section 15. Prevention of Insolvencies

To aid in the detection and prevention of insurer insolvencies:

- A. The board of directors may, upon majority vote, make recommendations to the commissioner on matters generally related to improving or enhancing regulation for solvency.
- B. At the conclusion of any domestic insurer insolvency in which the association was obligated to pay covered claims, the board of directors may, upon majority vote, prepare a report on the history and causes of the insolvency, based on the information available to the association and submit the report to the commissioner.
- C. Reports and recommendations provided under this section shall not be considered public documents.

540-21

NCIGF Suggested Amendments Cyber Liability Claims

May 23, 2023

Property and Casualty Insurance Guaranty Association Model Act

Section 16. Tax Exemption

The association shall be exempt from payment of all fees and all taxes levied by this State or any of its subdivisions except taxes levied on real or personal property.

Section 17. Recoupment of Assessments

Drafting Note: States may choose how they wish to allow member insurers to recoup assessments paid by selecting one of three alternatives for Section 17.

[Alternative 1 for Section 17]

- A. Except as provided in Subsection D, each member insurer shall annually recoup assessments it remitted in preceding years under Section 8. The recoupment shall be by means of a policyholder surcharge on premiums charged for all kinds of insurance in the accounts assessed. The surcharge shall be at a uniform percentage rate determined annually by the commissioner that is reasonably calculated to recoup the assessment remitted by the insurer, less any amounts returned to the member insurer by the association. Changes in this rate shall be effective no sooner than 180 days after insurers have received notice of the changed rate.
- B. If a member insurer fails to recoup the entire amount of the assessment in the first year under this section, it shall repeat the surcharge procedure provided for herein in succeeding years until the assessment is fully recouped or a de minimis amount remains uncollected. Any such de minimis amount shall be collected as provided in Subsection D of this section. If a member insurer collects excess surcharges, the insurer shall remit the excess amount to the association, and the excess amount shall be applied to reduce future assessments in the appropriate account.
- C. The amount and nature of any surcharge shall be separately stated on either a billing or policy declaration sent to an insured. The surcharge shall not be considered premium for any purpose, including the [insert all appropriate taxes] or agents' commission.
- D. A member may elect not to collect the surcharge from its insureds only when the expense of collecting the surcharge would exceed the amount of the surcharge. In that case, the member shall recoup the assessment through its rates, provided that:
 - (1) The insurer shall be obligated to remit the amount of surcharge not collected by election under this subsection; and
 - (2) The last sentence in Subsection C above shall not apply.
- E. In determining the rate under Subsection A for the first year of recoupment under this section, under rules prescribed by the commissioner, the commissioner shall provide for the recoupment in that year, or in such reasonable period as the commissioner may determine, of any assessments that have not been recouped as of that year. Insurers shall not be required to recoup assessments through surcharges under this section until 180 days after this section takes effect./

[Alternative 2 for Section 17]

- A. Notwithstanding any provision of [insert citation to relevant tax and insurance codes] to the contrary, a member insurer may offset against its [insert all appropriate taxes] liability the entire amount of the assessment imposed under this Act at a rate of [insert number] percent per year for [insert number of years] successive years following the date of assessment. If the assessment is not fully recovered over the [insert

NCIGF Suggested Amendments Cyber Liability Claims
May 23, 2023

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
number of years] period, the remaining unrecovered assessment may be claimed for subsequent calendar years until fully recovered.

Drafting Note: States may choose the number of years to allow an insurer to offset an assessment against the insurer's premium tax liability.

- B. Any tax credit under this section shall, for the purposes of Section [insert citation to retaliatory tax statute] be treated as a tax paid both under the tax laws of this State and under the laws of any other State or country.
- C. If a member insurer ceases doing business in this State, any uncredited assessment may be credited against its [insert all appropriate taxes] during the year it ceases doing business in this State.
- D. Any sums that are acquired by refund from the association by member insurers and that have been credited against [insert all appropriate taxes], as provided in this section, shall be paid by member insurers to this State as required by the department. The association shall notify the department that the refunds have been made.]

[Alternative 3 for Section 17

The rates and premiums charged for insurance policies to which this section applies shall include amounts sufficient to recoup a sum equal to the amounts paid to the association by the member insurer less any amounts returned to the member insurer by the association. Rates shall not be deemed excessive because they contain an additional amount reasonably calculated to recoup all assessments paid by the member insurer.]

Section 18. Immunity

There shall be no liability on the part of, and no cause of action of any nature shall arise against a member insurer, the association or its agents or employees, the board of directors, or any person serving as an alternate or substitute representative of any director, or the commissioner or the commissioner's representatives for any action taken or any failure to act by them in the performance of their powers and duties under this Act

Section 19. Stay of Proceedings

All proceedings in which the insolvent insurer is a party or is obligated to defend a party in any court in this State shall, subject to waiver by the association in specific cases involving covered claims, be stayed for six (6) months and such additional time as may be determined by the court from the date the insolvency is determined or an ancillary proceeding is instituted in the State, whichever is later, to permit proper defense by the association of all pending causes of action.

The liquidator, receiver or statutory successor of an insolvent insurer covered by this Act shall permit access by the board or its authorized representative to such of the insolvent insurer's records which are necessary for the board in carrying out its functions under this Act with regard to covered claims. In addition, the liquidator, receiver or statutory successor shall provide the board or its representative with copies of those records upon the request by the board and at the expense of the board.

INSURANCE GUARANTY ASSOCIATION MODEL ACT**

This chart is intended to provide readers with additional information to more easily access state statutes, regulations, bulletins or administrative rulings related to the NAIC model. Such guidance provides readers with a starting point from which they may review how each state has addressed the model and the topic being covered. The NAIC Legal Division has reviewed each state’s activity in this area and has determined whether the citation most appropriately fits in the Model Adoption column or Related State Activity column based on the definitions listed below. The NAIC’s interpretation may or may not be shared by the individual states or by interested readers.

This chart does not constitute a formal legal opinion by the NAIC staff on the provisions of state law and should not be relied upon as such. Nor does this state page reflect a determination as to whether a state meets any applicable accreditation standards. Every effort has been made to provide correct and accurate summaries to assist readers in locating useful information. Readers should consult state law for further details and for the most current information.

KEY:

MODEL ADOPTION: States that have citations identified in this column adopted the most recent version of the NAIC model in a **substantially similar manner**. This requires states to adopt the model in its entirety but does allow for variations in style and format. States that have adopted portions of the current NAIC model will be included in this column with an explanatory note.

RELATED STATE ACTIVITY: Examples of Related State Activity include but are not limited to: older versions of the NAIC model, statutes or regulations addressing the same subject matter, or other administrative guidance such as bulletins and notices. States that have citations identified in this column **only** (and nothing listed in the Model Adoption column) have **not** adopted the most recent version of the NAIC model in a **substantially similar manner**.

NO CURRENT ACTIVITY: No state activity on the topic as of the date of the most recent update. This includes states that have repealed legislation as well as states that have never adopted legislation.

A regulator discussed the history of revising this model in relation to the new NAIC model law process. He stated that the draft was re-exposed for new comments. **2008 Proc. 1st Quarter Vol. II 10-440.**

The Financial Condition (E) Committee adopted amendments to this model. The Committee summarized the more significant changes including the Task Force’s recommendation on the assumed business options. **2008 Proc. 4th Quarter Vol. II 10-5.**

The joint Executive Committee/Plenary adopted amendments to this model. A commissioner noted that an interested party provided a comment requesting reconsideration of the optional net worth exclusion provision. The commissioner reiterated that the provision was optional and intended to provide uniform language for states interested in implementing a net worth exclusion. **2009 Proc. 1st Quarter Vol. I 3-5.**

Section 1. Title Section 2. Purpose

In 1969 the NAIC prepared a statement of position on automobile insurance. One part of that study concerned automobile insurer insolvencies. It was stated that the “... position of the NAIC [is] that no innocent person should suffer as a result of the insolvency of an insurer...” and the association vowed to take action to assure that end. They recommended serious consideration be given to the establishment of an industry facility regulated by the states to guarantee solvency and to indemnify the public against the insolvency of any casualty insurer. A federal guaranty corporation was suggested in a congressional bill, but a resolution was adopted by the NAIC in opposition to this proposal. The resolution emphasized the fact that the NAIC was recommending a program in each state to establish a means to guarantee the payment of claims against insolvent insurers. **1969 Proc. II 549-552.**

Every insurance company failure undermines public confidence in, and the value of, the insurance institution whose continued existence is the result of the public’s desire and need to be secure from risk. Like taxes, the over-all cost of the solvency of an individual company and of such industry-wide schemes as guaranty funds ultimately falls upon the consumer. **1970 Proc. I 262.**

An insurer association recommended that Section 2 be deleted because it added no substance to the model. **1994 Proc. 2nd Quarter 510.**

The working group decided instead to retain the section, but decided to replace the word “avoid” with “the extent provided in this act, minimize.” The group also deleted a phrase that said one of the purposes was “the detection and prevention of insurer insolvencies.”

The working group felt that the two changes made the section better reflect the purpose of the guaranty association. **1994 Proc. 3rd Quarter 419.**

The Receivership Model Act Working Group voted to delete this section. A couple of regulators made a motion to restore the original language. The argument was that the clause expanded the coverages provided by the guaranty associations. The Task Force voted to retain the original language. **2008 Proc. 1st Quarter 10-440.**

Section 3. Scope

In a report comparing losses of insurance companies and banks, it was pointed out that the property/casualty insurance industry is quite different from the life insurance industry. **1969 Proc. II 564.** The first priority was drafting legislation implementing the NAIC position on automobile insurance problems. **1970 Proc. I 252.**

PC-540-1

(cont.)

Basic to drafting a model bill is the determination of its scope. What types of insurance and insurers should be included and excluded? The existing bills range from including only automobile insurance to one embracing both life and property coverages. What contacts must there be with the state before recourse may be had against the fund? **1970 Proc. I 263.**

Section 3

The task force was charged with the task of considering whether the term “direct” needed to be defined. There has been litigation and many questions arising as to the types of coverage considered “direct” by the model act language. Courts have found large self-insured groups who purchase excess and aggregate stop loss coverage to be covered by the guaranty associations since there was no underlying contract of insurance, even though the coverage was more in the nature of reinsurance coverage. **1989 Proc. II 331.**

A. The drafters intended that a state choose the term “health insurance,” “disability insurance,” or “accident and sickness insurance” to conform to the terminology found elsewhere in the insurance code of the state in question. **1973 Proc. I 157.**

Amendments proposed in 1985 were considered a “radical departure” from the original model by the task force chair. The proposed amendments excluded products unless they were specifically listed as included. That meant new products would be excluded unless they fit under a generic term. Some of the items not included under the industry-suggested approach were based on a desire to exclude them, such as financial guarantee insurance. Other exclusions resulted from the belief that, recognizing the extraordinary nature of a guaranty fund, many insured exposures did not represent an extreme hardship to the person involved. Still others may have resulted from drafting difficulties. **1985 Proc. II 473-475.**

By the time the amendments were adopted at the end of 1985, the mechanics of the scope section had changed from the earlier draft. Rather than limiting coverage only to stated types of insurance, the list excluded certain types of coverage. One listed item was removed just before adoption of the model. It had provided an exclusion from the act for errors and omissions insurance for directors and officers of for-profit organizations. **1986 Proc. I 294.**

B. The task force was unanimously in favor of excluding financial guaranty insurance from the coverage of the guaranty fund. **1986 Proc. I 431.**

C. After the insolvencies of two large writers of surety business the federal government urged the NAIC to consider coverage of surety bonds under the guaranty association. It had not been the policy to do so because such bonds were generally associated with commercial ventures. **1986 Proc. I 429.**

D. Clarification of the subsection was made in 1986. Originally the model only said “credit insurance” but the additional language was inserted to make clear other types of collateral protection insurance similar to credit insurance were also originally intended to be excluded. **1987 Proc. I 450.**

E. In 1995 the NAIC considered an amendment to Subsection E to amplify the exclusion of coverage for insurance of warranties or service contracts. This provision was included in the package of amendments adopted in 1996. **1995 Proc. 3rd Quarter 586, 1996 Proc. 1st Quarter 571.**

I. When model amendments were adopted in 1985, consideration was given to adding a subsection to exclude coverage for claims covered under a governmental insurance program. The exclusion was not adopted at that time, but instead Section 12 was amended to add a requirement to exhaust governmental benefits before the guaranty fund would be responsible for the claim. **1986 Proc. I 296, 304.** In 1986 the Section 12 limitation was deleted and the exclusion contained in Subsection I added. **1987 Proc. I 421.**

An industry association suggested that the comment at the end of the section be amended to note that the Life and Health Insurance Guaranty Association Model Act addresses some of the lines of coverage excluded by this provision. **1994 Proc. 2nd Quarter 510.**

When considering amendments to the model in the latter part of 1995, the working group agreed to add a comment at the end of Section 3. It contained a definition of ocean marine insurance for states whose codes did not contain a definition, so that there would be no question as to the coverages encompassed by the exclusion of ocean marine insurance. The working group agreed to limit the exclusion to craft used for commercial purposes. The working group also decided not to include within the **Section 3**

definition coverage written pursuant to the Jones Act or the Longshore and Harbor Worker's Compensation Act. It was the opinion of the group that these coverages were properly classified as workers' compensation insurance. **1995 Proc. 3rd Quarter 586.**

Section 4. Construction

An industry association recommended that Section 4 be deleted because it added no substance to the model act. **1994 Proc. 2d Quarter 510.**

The working group recommended that the section be retained to encourage appropriate construction of the Act by the courts and to lessen the likelihood that courts would strain to interpret the Act in a manner inconsistent with the intentions of the drafters. The group did remove one word so that the model no longer said *liberally* construed. **1994 Proc. 3rd Quarter 419.**

The Receivership Model Act Working Group voted to delete this section. A couple of regulators made a motion to restore the original language. The argument was that the clause expanded the coverages provided by the guaranty associations. The Task Force voted to retain the original language. **2008 Proc. 1st Quarter 10-440.**

Section 5. Definitions

F. "Covered claim" was considered for modification in 1985. An industry draft suggested a net worth exclusion under which no protection was extended to wealthy persons. The draft recommended exclusion of coverage for any claim in favor of a person having a net worth of \$50 million or more. It was their belief that an insured with that much net worth ought to buy insurance intelligently enough so that it would not be insured by an unsound insurer. They suggested it was not good public policy to send bills for such wealthy persons' losses or claims to all of the homeowners and small business insureds to pay. **1985 Proc. II 474.**

The net worth exclusion was adopted because of potential capacity problems for guaranty funds. The advisory committee felt the suggested change would provide a more even balance between those who really need the protection of guaranty funds and giant corporations. **1985 Proc. II 510.**

Just before adoption of the model revisions in December 1985, the Guaranty Fund Task Force voted to remove a net worth limit of \$10 million that had been included in the draft. A net worth provision was added instead to Section 11. **1986 Proc. I 294.**

The National Committee on Insurance Guaranty Funds approved a document called "Guiding Principles for Settling Disputes Between Property and Casualty Insurance Guaranty Associations as to Responsibility for Claims" and asked the NAIC's acceptance of the program. The purpose was to answer questions about which state's fund should handle the covered claim. **1986 Proc. I 457-459.**

A suggestion made to the working group considering amendments to the model in 1994 was to revise the definition of “covered claim” to make it clear that unearned premium claims are covered by the guaranty fund in the state where the policyholder resided at the time the policy was issued. **1994 Proc. 2nd Quarter 510.**

The working group did not follow the suggestion because of a concern that the proposed revised language would be construed to limit the claims that would be covered. **1994 Proc. 3rd Quarter 419.**

Just before adoption of the amendments by the working group, further discussion was held on the suggestion to assign coverage of an unearned premium claim to the guaranty association in the state where the insured resided at the time of issuance of the policy. One regulator said the proposed amendment would place an additional burden on receivers of insolvent insurers, who often must deal with policy records that are unorganized, inadequate or non-existent. Another

Section 5

regulator agreed the proposal could cause delays in paying claims and increase the workload of both receivers and guaranty associations. The working group agreed to defer action on the suggestion. **1994 Proc. 4th Quarter 575.**

Amendments were considered again later in 1995 and Paragraph (2) was revised. It clarifies which guaranty association is primarily liable for the claim for property damage and does not narrow coverage. **1995 Proc. 3rd Quarter 586.**

At a hearing on the proposed amendments held in early 1996 one regulator objected to this proposed amendment. An interested party responded that the amendment does not restrict guaranty association coverage, but only determines the guaranty association that has primary responsibility for a property damage claim. The purpose of the amendment is to clarify that the guaranty association in the jurisdiction where the property giving rise to the claim is located has primary responsibility for the claim. **1996 Proc. 1st Quarter 569.**

An association of guaranty funds recommended that the exclusion from “covered claim” be expanded to exclude claims for reinsurance recoveries, contribution and indemnification brought by other insurers and to prohibit insurers from pursuing such claims against an insured of an insolvent company up to the guaranty fund limits. **1994 Proc. 2nd Quarter 510.**

Paragraph (3)(d) was added in the 1994 revisions. It contains a net worth exclusion for first party claims by an insured whose net worth exceeds \$25 million. The association of guaranty funds had suggested \$10 million as the appropriate level. **1994 3rd Quarter 419.**

G. “Insolvent insurer” was modified in 1972 to change the definition from an insurer “authorized” to transact to one “licensed” to transact insurance. It was the intent of the NAIC committee which drafted the bill to provide coverage only for carriers licensed in the state. In other words, coverage was not to be included for unauthorized insurers since they were not subject to the state’s regulation for solvency. “Authorized” might have been construed to include eligible surplus lines insurers. **1973 Proc. I 155.**

At the June 1976 meeting the industry advisory committee submitted a recommendation for an amendment to the definition of “insolvent insurer.” They contended the law was designed to apply to companies being liquidated, but the language of the model was not sufficiently precise to accomplish that limited objective. The suggestion to add specific language to clarify this point was not acted upon at that time. **1978 Proc. I 277.** It was, however, adopted in December 1978. **1979 Proc. I 217.**

The definition was revised in 1994 to require a final order of liquidation with a finding of insolvency. A drafting note explaining that “final order” means an order that has not been stayed was also included in the amendments. **1994 Proc. 3rd Quarter 419.**

H. Paragraph (2) was added in 1994 to incorporate language concerning termination of membership and liability for assessment in the event of a termination. **1994 Proc. 3rd Quarter 419.**

Section 6. Creation of the Association Section 7. Board of Directors

A. This provision was modified to allow vacancies to be filled by a majority vote of the remaining board members. By the terms of the original model, it would have been necessary to call a meeting of all member insurers, which would have been extremely cumbersome. **1972 Proc. I 480.**

An advisory group was asked to consider the issue of public representation on guaranty association boards in 1992. The committee report recommended against it, but one member proposed that a drafting note be added to include a provision for public representation on the board where the state had a premium tax offset. **1993 Proc. IB 703.**

Section 7

One member of the advisory group submitted a minority report explaining her reasons for recommending public representation on guaranty association boards. The main reasons given by the consumer representative were because the public ultimately bears the cost of guaranty fund assessments, because a different perspective is needed, and because accountability is needed. **1993 Proc. I 707.**

As a follow-up from that minority report, the working group decided to draft amendments to both the Life and Health Insurance Guaranty Association Model Act and the Post-Assessment Property and Liability Insurance Guaranty Association Model Act, which were designed to add two public representatives as members of the board of directors of the guaranty associations without increasing the overall number of members on the boards. The amendments also addressed potential conflicts of interest by requiring that the public representatives not be employed or contracted by any entity regulated by the state insurance department or required to register as a lobbyist in the state, or related to either. **1993 Proc. 2nd Quarter 619.**

A representative from an association of guaranty funds said an earlier suggestion for public representatives failed to gain support because of a perception that the commissioner was the representative of the public. Another association representative said his organization's position was that it was a public policy question for the legislatures to determine. The underlying question related to the individual members themselves: their expertise, accountability and responsibility. **1993 Proc. 2nd Quarter 619.**

The consumer representative who authored the minority report restated her position. She believed that because the public ultimately bears the burden of insolvencies either through increased taxes or policy surcharges, the public was entitled to representation on the boards. Any problem experienced with incentive to attend meetings or structure of the board should be addressed separately from the overall issue of representation and should not result in a denial of representation of the public. **1993 Proc. 2nd Quarter 619.**

In a letter of comment on the exposure draft providing for public representation, one association said it had developed a position opposed to public representation when the model was originally drafted. The association's position was that there were substantial conflicts of interest in having consumers and other public representatives on the board. The state guaranty funds stand in the shoes of the insolvent insurer and must pay claims and decide coverage issues as the insolvent insurer would have done. Had the insolvent insurer remained solvent, it would not have had consumers involved in its internal claims process. **1993 Proc. 2nd Quarter 605.**

The consumer representative said insurers also faced a conflict of interest because their interests were not aligned with those of policyholders either, but rather with the solvent insurers who paid the assessment. **1993 Proc. 2nd Quarter 619.**

PC-540-5

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT****Proceedings Citations**Cited to the Proceedings of the NAIC

(cont.)

Another insurer association gave conditional support for the amendment. Its experience had been that qualified public representatives can make a positive contribution to board deliberations. The association expressed some concern about selecting qualified individuals who should be knowledgeable about the insurance industry. It recommended the draft be revised to require only one public member, who should not be eligible to serve as the chair of guaranty fund boards. **1993 Proc. 2nd Quarter 604.**

Before the Executive Committee voted on adoption of the amendment regarding public representatives, further discussion took place. The chair of the Financial Condition Subcommittee said the purpose of the amendment was to improve communication among regulators, the insurance industry and consumers on guaranty fund and insurer insolvency issues. The addition of public representatives to the governing boards would provide consumers with access to the guaranty fund process and a direct means to express concerns. The addition of public representatives also recognizes the impact of insurer insolvencies on the general revenues of states and taxpayers. Another commissioner stated that he occupied a position on the guaranty association boards and acted as a public representative since it was his function to protect the public interest. A third commissioner said that public input into the guaranty fund process would be valuable, and that even though the commissioner's function was protection of the consumers, the issue was one of direct public access. He did not favor inclusion of this provision in the financial regulation standards for accreditation. The chair of the subcommittee responded that this was not being recommended. **1993 2nd Quarter 32.**

Section 7

Before final adoption the NAIC plenary body considered the matter again. Concern was expressed that this amendment would be required for a state to be accredited. After assurance that the amendments were not being considered, indeed were not even related to financial solvency, the model amendment was adopted. **1993 Proc. 2nd Quarter 12.**

In 1994 language was added to Section 7A to allow the commissioner to appoint the initial members of the board of directors if not selected by the member insurers within 60 days. A provision was also added to allow the commissioner to fill any vacancies in position held by public representatives. **1994 Proc. 3rd Quarter 419.**

Late in 1995 the working group reviewing suggestions for change to the model recommended that Subsection A be amended to simplify the qualifications for serving as a public member of the board of directors of a guaranty association. **1995 Proc. 3rd Quarter 586.**

The amendment to Subsection A was adopted in 1996, as well as the drafting note following the subsection. **1996 Proc. 1st Quarter 573.**

Section 8. Powers and Duties of the Association

One of the major areas of concern when initially drafting the model was the manner in which the guaranty function was to be performed. Should the program be administered by the commissioner or through an industry association? What functions should the group perform? Shall they be authorized to delegate functions to a servicing insurer? **1970 Proc. I 263.**

A. The drafters started with the promise that the first draft should be a post-assessment rather than a prefunded plan. Then a number of decisions needed to be made in determining those assessments. Should insurers be assessed by lines of business? What, if any, should the maximum rate of assessment be? Should assessments be recognized in the making of premium rates? **1970 Proc. I 263.**

Paragraph (3) of this subsection was amended in December 1971. As the model existed before, if the amount raised by a maximum assessment was insufficient to pay all covered claims, the association would have to marshal all the claims before it

PC-540-6

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT****Proceedings Citations**Cited to the Proceedings of the NAIC

(cont.)

could make any payment on any one particular claim. Language was added giving the association the right to pay claims in the order it deemed reasonable, thus avoiding administrative problems and delay. **1972 Proc. I 480.**

A second amendment in December 1971 provided that if a company had deferred payment of an assessment due to its financial condition, that company could not pay any dividends to shareholders or policyholders during the period of deferment, and would have to pay the deferred amount as soon as payment would not reduce capital or surplus below required minimums. **1971 Proc. I 480.**

A December 1978 amendment added a sentence to the last paragraph of Subsection A(1) to eliminate claims filed after the final date set by the court for filing claims against the liquidator. **1979 Proc. I 217.**

The model originally contained a \$100 deductible provision that was deleted in December 1980. At the same time a sentence was added at the end of Subsection A(1) to pay only the amount of unearned premium over \$100. The reasoning for this was that certain consumers bore a disproportionate share of the losses; if there were no deductibles, the losses would be borne more equitably by all insureds. The administrative costs of handling the deductibles were high in relation to the amounts involved, sometimes exceeding what would have been paid out in claims. **1981 Proc. I 225, 228.**

The most notable of the amendments to the model act considered in 1994 included deletion of the \$100 deductible for unearned premium claims. **1994 Proc. 4th Quarter 574.**

The working group was asked to consider deletion of the provision that allows the guaranty fund to pay only that portion of an unearned premium claim in excess of \$100. In support of his proposal, the regulator said his state's receiver spent \$91.18 in costs to adjudicate each policyholder claim for the deductible. He said the substantial number of these claims filed also

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

INSURANCE GUARANTY ASSOCIATION MODEL ACT**

Proceedings Citations

Cited to the Proceedings of the NAIC

Section 8A (cont.)

creates an administrative burden, as well as depleting assets of the insolvent insurer. An industry spokesperson said the industry favored the deductible because it had the effect of spreading the loss due to insolvency and also reduced the cost of each insolvency to the guaranty association. The working group decided to recommend the deletion of the provision for the deductible. **1994 Proc. 3rd Quarter 419.**

Several industry associations commented on the proposal to delete the \$100 deductible and indicated a desire to retain the provision. A regulator responded that the costs to the estate associated with the deductible were out of proportion to any benefit to policyholders. Another regulator said she received numerous complaints from policyholders about the application of the deductible to their claims. Another regulator said that, although guaranty associations might initially derive some cost savings from the deductible, those savings were offset by the cost to the estate, which ultimately results in less money available for distribution to policyholders, guaranty associations and other creditors. Another added that the necessity of processing claims for the deductible unnecessarily prolongs the administration of estates, which is detrimental to the guaranty association. A guaranty association representative argued that the cost savings related to the deductible was important to guaranty associations. He said in one state it was estimated that the deductible had resulted in savings of more than \$13 million. He suggested other options for addressing the issue, including an exclusion of nominal claims from payment by the receiver and lowering the priority of claims for reimbursement of the deductible. He said costs of the guaranty associations are passed on to the public through rate surcharges and premium tax offsets, and that it was appropriate for policyholders to share some of the costs associated with an insolvency. After much discussion the working group decided to dispense with the deductible for unearned premium claims. **1994 Proc. 4th Quarter 574-575.**

The amendments adopted in December 1985 included a revision of this section, including a limit of \$10,000 per policy for claims on return of unearned premiums. The advisory committee also suggested a limit of \$50,000 on non-economic loss, but this suggestion was not adopted. **1986 Proc. I 300, 344.**

In 1986 an alternative provision was drafted to give the liquidator authority to sell a limited optional reporting period to insureds of an insolvent company that would provide coverage for the time period for filing claims with the liquidator. To prevent inconsistencies the time period was set for 18 months. **1986 Proc. II 409-411.** This provision was adopted six months later. **1987 Proc. I 421.**

Revisions were made to this section in 1994 to eliminate the alternative section that had been included for states with a provision in the liquidation law giving the liquidator authority to sell a limited extended reporting period for claims made policies. **1994 Proc. 3rd Quarter 424-425.**

The last sentence of the subsection originally read “Each member insurer may set off against any assessment authorized payments made on covered claims and expenses incurred in the payment of such claims by the member insurer.” That sentence was deleted as being unnecessary and a potential cause of conflict. **1987 Proc. I 450.**

Section 8A(1) was amended to be consistent with the revised definition in Section 5G by replacing “determination of insolvency” with “order of liquidation.” Language was added at the end of Paragraph (1) that provided that the association’s duty to defend ceased upon payment or tender of an amount equal to the lesser of the association covered claim limit or the applicable policy limit. **1994 Proc. 3rd Quarter 419.**

Late in 1995 a working group considering amendments to the model discussed a proposal from a group suggesting a change to the provision regarding the date at which liability to the guaranty association is cut off and discussed the exclusion from coverage of policyholder protection claims. After lengthy discussion the regulators decided not to recommend the proposed amendments. The group also considered amending Paragraph (1)(b) to provide for an aggregate limit of \$10 million per insured. **1995 Proc. 3rd Quarter 586.**

PC-540-8

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT****Proceedings Citations**Cited to the Proceedings of the NAIC

Members of the working group expressed their support for the idea of an aggregate limit per insured in general, but raised some specific concerns with the proposal. These concerns included the difficulty of application of the aggregate limit if not adopted uniformly by all states and whether the amendment would create an incentive for a guaranty association to delay **Section 8A** (cont.)

claim payments so that payments by other guaranty associations would satisfy the limit, thereby avoiding its statutory responsibility. Another concern was that guaranty association coverage would be exhausted by those who filed claims early, leaving other claimants without any coverage. **1996 Proc. 1st Quarter 569.**

The working group decided to adopt the proposed package of amendments without including the aggregate limit, but to consider a revised proposal in the future. **1996 Proc. 1st Quarter 570.**

A provision was added to Paragraph (2) authorizing the association to pursue and retain salvage and subrogation as to claims paid by the association. **1994 Proc. 3rd Quarter 419.**

An association of guaranty funds recommended that the guaranty funds have the exclusive right to appoint and direct legal counsel retained to defend liability claims. The working group decided to add a provision to Paragraph (4) giving the association the right to choose legal counsel for the defense of covered claims. **1994 Proc. 3rd Quarter 419. Section 8** (cont.)

B. A suggestion was made by an association of guaranty funds to amend Subsection B(3) to afford guaranty associations the right to intervene in a proceeding involving an insolvent insurer. Some members of the working group expressed concern that this provision would result in the estate incurring unnecessary litigation expenses. Another concern expressed was that other creditors would, by extension, also be granted a right to intervene. One regulator felt that guaranty associations should not have rights superior to those of other creditors. No amendments to this subsection were included in the recommendations adopted in 1996. **1995 Proc. 3rd Quarter 586, 1996 Proc. 1st Quarter.**

C. The working group agreed to create an optional Subsection C providing a method of raising funds in excess of the association's normal assessment capacity to pay claims resulting from a natural disaster. This provision was patterned after legislation already enacted in one state. **1995 Proc. 3rd Quarter 586.**

The amendments adopted in 1996 included an optional Subsection C and a comment on that subsection. **1996 Proc. 1st Quarter 576.**

Section 9. Assessments Section 10. Plan of Operation

To supplement the model bill a separate model plan of operation was also adopted. **1970 Proc. IIB 1092-1096.**

When considering revisions to the model in 1994, a suggestion was made to the working group that provision be made for disposition of dividends and other advances received by a guaranty fund from an estate. **1994 Proc. 2nd Quarter 510.**

Section 11. Duties and Powers of the Commissioner

A. The second sentence was added to Paragraph (1) in December 1972. Receipt of a copy of the commissioner's petition for insolvency upon the filing of such a petition with a court would assist the guaranty funds in beginning to prepare to handle a insolvency once declared by a court of competent jurisdiction. **1973 Proc. I 156.**

B. Subsection B contained a provision requiring the association to notify insureds and other interested parties of the insolvency. This provision was deleted in 1994. **1994 Proc. 3rd Quarter 420.**

Section 11. Effect of Paid Claims (Previous version of model)

In 1975 the drafters considered an amendment which would have given guaranty funds immediate access to insolvent company assets, declare the guaranty funds priority creditors, and offer a “rescue” funding mechanism. **1976 Proc. I 296.**

The recommendation was not adopted by the executive committee, but was sent back to the drafting task force. **1975 Proc. I 9.**

B. On a close vote the Guaranty Fund Task Force decided to include an amendment to this section limiting covered claims to claimants whose net worth was under \$50 million. All of Subsection B was new material added in December 1985. **1986 Proc. I 340, 347.**

The task force generally favored the net worth exclusion as long as third-party liability claimants who may not have a sufficient net worth were protected. This approach would serve as an incentive to risk managers for commercial insureds to shop wisely in placing their insurance. **1986 Proc. I 431.**

The footnote in Subsection B was added to clarify the original drafter’s intent that the net worth provision apply to workers’ compensation claims. **1987 Proc. I 451.**

A working group considering amendments in 1995 was asked to lower the net worth exclusion to \$25 million but declined to make that recommendation. **1995 Proc. 3rd Quarter 586.**

C. In 1994 Subsection C was substantially amended to clarify the rights of the association as claimant in the estate of an insolvent insurer and to require receivers to accept settlements of covered claims and determination of covered claim eligibility by guaranty associations. **1994 Proc. 3rd Quarter 420.**

In late 1995 an amendment was proposed to Subsection C to address the concern of some members that guaranty association determination of covered claims not affect the receiver’s adjudication of excess claims. **1995 Proc. 4th Quarter 728.**

A second issue identified by the working group was whether the receiver should be bound to accept the guaranty fund’s determination of a covered claim and the amount paid by the guaranty fund in satisfaction of the claim. The suggested amendments addressed the concerns of regulators. **1995 Proc. 4th Quarter 728.**

Section 12. Exhaustion of Other Coverage (Previous version of model)

Section 12 was titled “Nonduplication of Recovery” from the time the original model was adopted in 1962. The title was changed in 1996 to better reflect the intent of the section. **1996 Proc. 1st Quarter 570.**

A new Subsection B was added in December 1985 requiring a person with any right of recovery under a governmental insurance program to exhaust his right there first before submitting a claim to the guaranty association. **1986 Proc. I 296, 304.** A year later this paragraph was deleted and the model returned to its original language. Instead Section 3 was amended to add an additional subsection excluding any insurance provided by or guaranteed by the government. This would have the effect of excluding flood and crop hail insurance guaranteed by the federal government from covered claims. **1987 Proc. I 421.**

A. In 1994 Subsection A was amended to clarify that “other insurance” was not limited to coverage provided by a member insurer. **1994 Proc. 3rd Quarter 420.**

Section 12. Prevention of Insolvencies

PC-540-10

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT**

Proceedings Citations

Cited to the Proceedings of the NAIC

Protection against insolvency is one of the paramount objectives of insurance regulation. Two approaches are used to achieve this objective. First, insolvency funds have been created to afford protection when insolvencies actually occur. Second, statutes have armed insurance departments with various regulatory standards, procedures and tools to prevent or reduce the likelihood of insolvencies. The drafters also questioned whether additional insolvency preventive measures should be incorporated in the model bill. **1970 Proc. I 263.**

The section was rewritten in 1983 at the urging of the guaranty funds because they felt the section imposed duties on the guaranty funds boards which were more appropriately carried out by insurance departments. **1983 Proc. I 350.** The recommended changes allowed interaction between the guaranty funds and the insurance commissioners. **1984 Proc. I 326.**

A. The old Subsection A was deleted in 1994 to address antitrust concerns. It had required the board of directors to make recommendations to the commissioner for ways to detect and prevent insolvency and to discuss and make recommendations about the status of any member insurer whose financial condition might be hazardous to its policyholders. This was replaced with a provision authorizing the board of directors to make general recommendations concerning solvency regulation. **1994 Proc. 3rd Quarter 420.**

Section 13. Credits for Assessments Paid (Tax Offsets) – OPTIONAL

A regulator stated that the E Committee requested the Task Force reconsider a solution regarding assumed claims transactions. Another regulator stated that the Working Group considered the topic twice and agreed that something should be covered by the guaranty associations. A regulator suggested optional language to avoid controversy and ensure a timely response. After extensive discussion, the Task Force agreed to further study the issue. **2008 Proc. 2nd Quarter Vol. II 10-490 to 10-492.**

A regulator recommended including two options – one option where assumed business was covered, and a second option where assumed business was not covered. Another regulator explained a third option as having two parts. This alternative would be a way to take care of all assumed claims, not necessarily with guaranty fund coverage but by means of a segregated account. The Task Force discussed comments received on these options and whether drafting notes would resolve the issue. A commissioner summarized the four existing options and the potential fifth option. The Task Force decided to draft a background summary and finalize a decision at the 2008 Fall National Meeting. **2008 Proc. 3rd Quarter Vol. II 10-368 to 10-370.**

A commissioner stated that the Committee requested that the Task Force reconsider the assumed business language by considering optional language. A regulator stated that Option Three appeared to be an interim step for when insolvency takes place before a company issues their own policies. This option would be a way to handle the previous incurred losses before the assumption. The Task Force discussed issues related to this option. **2008 Proc. 4th Quarter Vol. II 10-622.**

A commissioner stated that Option Four followed Virginia Law. An interested party stated that Option Four is the mechanism by which Virginia implemented Option One. A regulator asked for clarification on the options. Another regulator said that Option Five was an attempt to be in the middle ground. The Task Force discussed the various aspects of Option Five. An interested party stated that he had an alternative that achieved Option Five's goal through a different mechanism. Another interested party stated that the option they were most supportive of was Option Three. This option leaves parties as close as possible to the position into which they put themselves while still providing relief on a going forward basis for those people finding themselves with a new insurer, but after the transaction date, their claims would be covered just as if they had been issued by the assuming carrier. The Task Force discussed the pros and cons of Option Three. A regulator polled the members on the different options. Options One and Five, received positive support from the majority. Options Two and Three did not receive support. **2008 Proc. 4th Quarter Vol. II 10-624 to 10-625.**

The Task Force voted to send Option One and Option Five to the Financial Condition (E) Committee as optional language within the model. **2008 Proc. 4th Quarter 10-626.**

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT**

Proceedings Citations

Cited to the Proceedings of the NAIC

Section 14. Miscellaneous Provisions Section 15. Examination of the Association; Annual Report Section 16. Tax Exemptions Section 16. Recognition of Assessments in Rates

At the December 1972 meeting of the NAIC Property and Liability Guaranty Fund Subcommittee, it was suggested that a task force consisting of both regulators and industry actuaries and rate-making personnel create a recoupment formula under the model law. **1973 Proc. I 395.**

The task force made the following recommendations: (1) In making rates consideration should be given to past assessments paid. It is the intent of the guaranty fund law that the assessments are to be borne by the policyholders eventually through their premium payments. (2) The language is quite clear on the point that, if assessments have been paid, rates are not to be considered excessive because they contain an amount to recoup the assessments paid. Because rate-making is prospective in nature, the rating law required that due consideration be given to prospective expenses as well as past expenses. (3) The task force recommended numeric formulas considering available information from prior insolvencies covered by guaranty funds. **1973 Proc. II 396-397.**

In 1995 the working group recommended the deletion of the assessment recoupment formula because it appeared that the formula had not been utilized by any state. **1995 Proc. 3rd Quarter 586.**

Section 17. Immunity

An amendment to this section was made in December 1986. The words "... for any action taken *or any failure to act* by them ..." were added to strengthen the immunity and reflect more clearly the intent of the drafters. **1987 Proc. I 451.**

A provision was added in 1994 amendments to extend immunity to those persons substituting for a member of the board of directors. **1994 Proc. 3rd Quarter 420.**

Section 18. Stay of Proceedings

Three years after the model was originally adopted, a change was made allowing a proceeding to be stayed for six months instead of the 60 days in the original model. It was found that the records of an insolvent company were in many cases nonexistent, and it took time to determine what actions were pending. The amendment allowed the association up to six months within which to prepare a proper defense, and such time thereafter as the court may grant in its discretion. **1973 Proc. I 156.**

The liquidator of an insolvent insurance company was reluctant, in some cases, to turn over the insolvent company's claims files to the servicing carrier. Because the association couldn't function without access to the insolvent company's files, the second paragraph of Section 18 was added. **1973 Proc. I 156-157.**

The language in the first sentence of this section was modified to remove the words "up to" which had preceded "six months." It was the view of the committee that the words "up to six months" imposed an unnecessary restriction upon the staying power of the court. **1987 Proc. I 451.**

An association of guaranty funds recommended that the stay be extended to the claim filing deadline to allow the guaranty funds more time to obtain and review claim files and determine what actions need to be taken. **1994 Proc. 2nd Quarter 511.**

The drafting group declined to follow the suggestion and recommended retention of the six-month period. The group did, however, add a provision allowing the association to waive the stay in instances where circumstances justify or require quicker action. **1994 Proc. 4th Quarter 588.**

PC-540-12

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2011

**PROPERTY AND CASUALTY
INSURANCE GUARANTY ASSOCIATION MODEL ACT****Proceedings Citations**Cited to the Proceedings of the NAIC**Section 18 (cont.)**

A set of general comments had been included after Section 18 with further suggestions for drafters. When amendments were considered in 1994, one suggestion was to omit these comments. An insurer association suggested that many comments in the model were outdated and no longer applicable and should be deleted. **1994 Proc. 2nd Quarter 521.**

Chronological Summary of Actions

June 1969: Model adopted.

December 1971: Amended Section 7 to provide method for filling board vacancies and Section 8 to allow payment of claims in any order deemed reasonable.

December 1972: Amended definition of insolvent insurer and added procedures to assist the guaranty association in its duties.

June 1973: Recoupment formula adopted.

December 1978: Revised definition of insolvent insurer and added sentence to limit covered claims to those timely filed.

December 1980: Eliminated \$100 claims deductible but added sentence to retain \$100 unearned premium deductible.

December 1983: Modified Section 13 to aid in detection and prevention of insolvencies.

December 1985: Extensive amendments adopted to clarify and limit scope of act, to add definitions of "claimant" and "control" and to expand section on limits of payments. The net worth limit in Section 11 was added.

December 1986: Amendments adopted to provide for extended reporting period endorsement of a claims-made policy, to exclude flood and crop hail damage insurance provided or guaranteed by the federal government, and to make technical amendments.

September 1993: Adopted amendment to Section 7 to provide for public representatives on the guaranty fund board.

March 1995: Adopted amendments to clarify and update the model.

June 1996: Adopted amendments to clarify and update the model.

January 2009: Adopted amendments to clarify and update the model.

RE: MODEL 540 COMMENTS

Dear Ms. Lyon Slaymaker and Mr. Baldwin:

Please accept this letter as my comments in response the May 24 Model 540 Exposure Draft. I address only the proposed amendments regarding IBT/CD transactions. I offer no comment on those related to cybersecurity insurance. This letter is not a request that you reverse the May 23 decision of the Receivership Law (E) Working Group (RLWG) to adopt the proposal submitted by Ms. Cox and Messrs. Wake and Snider (Version 1). I understand that the RLWG has already considered my comments and my proposal (Version 2). Instead, I submit this letter so that it may be included when the RLWG forwards its recommendation to the Receivership and Insolvency (E) Task Force (RITF) or the Restructuring Mechanisms (E) Working Group (RMWG).

The charge to the RLWG was to propose amendments to Model 540, the Property and Casualty Insurance Guaranty Association Model Act (the Act), to assure that implementation of Insurance Business Transfers (IBT) and Corporate Division (CD) transactions, will not result in loss by policyholders of guaranty association protection.

After extensive discussion and analysis, I proposed a straightforward amendment as follows:

H. "Covered claim" means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an*

**Ms. Lyon Slaymaker and Mr. Baldwin
June 2, 2023, page 2**

insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...

No other change to the Act would be needed to fulfill the goal of the referral to the RLWG. The NAIC could adopt this simple amendment thereby assuring that IBT and CD transactions would not result in the loss of guaranty association coverage.

Recognizing that some may conclude that a definition of IBT and CD should be included, I proposed the following:

(c) For purposes of this Act, an Insurance Business Transfer or Corporate Division transaction shall mean a transaction [ALTERNATIVE 1] as described in [INSERT STATE STATUTORY CITATIONS] [OR ALTERNATIVE 2] authorized by the laws of another state authorizing such transactions and as the result of which, apart from other provisions, the insurer assumed all of the obligations under the policy from a transferor which was thereby discharged from such obligations.

To be clear, however, this definition is an optional suggestion, not necessary to achieve the stipulated purpose.

During the discussions it emerged that, since many states have not adopted the assumed claims provisions added to the Act in 2009, an alternative should be offered that would accomplish the same goal in those states. That is true because the current Act's assumed claims provisions assure coverage even if the transferee insurer (even in an IBT or CD transaction) is not a member insurer. My initial "Default" provision (quoted above) accomplishes only the goal of assuring that IBT and CD transactions do not eliminate guaranty association coverage under the Act as it exists currently. That was the goal articulated in the referral to the RLWG. Under this provision, transactions (including IBT or CD) would be covered in most cases: member to member and non member to member, but would not be covered in IBT and CD transactions in which the transferee insurer is unlicensed (highly improbable in my view).

Although I would not recommend it, it is possible that some states may want to provide guaranty association coverage even if the transferee insurer is unlicensed. The discussions also resulted in suggestions that some states may not want to provide coverage in all the other cases encompassed within my proposal, for example when the transferee insurer is not a member insurer. While this went beyond the RLWG's charge, to address these permutations, I offered three alternatives (SEE Exhibit 1) included in the exposure draft. They would permit a state to select an option that, both, addresses the goal of the referral, and limits coverage as follows:

ALTERNATIVE 1: Does not provide coverage for assumed claims transactions or transfers to non-member insurers;

Ms. Lyon Slaymaker and Mr. Baldwin
June 2, 2023, page 3

ALTERNATIVE 2: Does not provide coverage for assumed claims transactions but retains it for transfers to non-member insurers; and

ALTERNATIVE 3: Provides coverage for assumed claims transactions and transfers to non-member insurers.

All of the alternatives have the same virtue as the default proposal: they only envision limited edits to Section H(1). Thus, no matter what its preference, under my proposal a state could accomplish the referral's goal of preserving coverage in the case of IBTs or CDs, AND also limit coverage as summarized above.

This contrasts with the very extensive and complicated edits of the Act (including extensive deletions of current provisions) required to implement Version 1, the one selected by the RLWG. The simple explanation for the difference is that, unlike my proposal, Version 1 is structured to permit the NAIC to remove now the assumed claims coverage added in 2009. If it were not for that new goal, there would be no reason to prefer Version 1. That new goal, of course, was not part of the charge to this Working Group.

This point merits a bit further explanation. My proposal DOES enable an individual state to provide guaranty association coverage for IBT and CD transactions WITHOUT assumed claims coverage. Where it differs from that adopted by the Working Group is that the latter enables amendment of the Act to ELIMINATE EVEN THE POSSIBILITY of assumed claims coverage. I submit respectfully that there is no public policy justification for this *sotto voce volte-face*.

My purpose here is simply to highlight that my proposal would enable RITF to accomplish the referral's goal with a simple amendment of the Act. I respectfully reserve further explanation as to why I think the new goal served by Version 1 is inappropriate, and other concerns I have articulated already as to Version 1, pending further deliberations following referral of the proposed amendments by the RLWG to RITF.

I thank you for your kindness in adding my comments to your referral.

Very truly yours,

Patrick H. Cantilo

EXHIBIT 1PATRICK CANTILO'S PROPOSED REVISION TO THE DEFINITION OF COVERED CLAIM
IN MODEL 5401-1 SECTION 5.

H. "Covered claim" means the following:

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...*

[OPTIONAL – to define IBT and CD if deemed necessary]

- (c) *For purposes of this Act, an Insurance Business Transfer or Corporate Division transaction shall mean a transaction [ALTERNATIVE 1] as described in [INSERT STATE STATUTORY CITATIONS] [OR ALTERNATIVE 2] authorized by the laws of another state authorizing such transactions and as the result of which, apart from other provisions, the insurer assumed all of the obligations under the policy from a transferor which was thereby discharged from such obligations.*

EXPLANATION

Versions of this language can be adopted whether or not the Assumed Claim language has been adopted. The proposal deliberately doesn't remove the "assumed claims" language. However, a state that wants to adopt this remedial provision without adopting the assumed claims language can do so easily enough just by making this change to the definition:

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an ~~assumed claims transaction or in an~~ Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and ...*

Similarly, if a state wants to add coverage when the transferee is a non-member insurer, the following edits accomplish this.

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if (A) the insurer becomes an insolvent insurer after the effective date of this Act, and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; or (B) the policy*

was issued by a member insurer and, in such a transaction, subsequently assumed by, or allocated to, another insurer (other than a risk retention group) against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer's State of domicile, and

Here's how the final would look:

WITH ASSUMED CLAIMS LANGUAGE AND WITHOUT NON-MEMBER TRANSFEREE COVERAGE

H. "Covered claim" means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was issued by the insurer or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and

ALTERNATIVE 1: WITHOUT ASSUMED CLAIMS LANGUAGE AND NON-MEMBER TRANSFEREE COVERAGE

H. "Covered claim" means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; and

ALTERNATIVE 2: WITHOUT ASSUMED CLAIMS LANGUAGE BUT WITH NON-MEMBER TRANSFEREE COVERAGE

H. "Covered claim" means the following:

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if (A) the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer, or assumed by, or allocated to, the insurer in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer's state of domicile and, if required, by the [Commissioner/Director/Superintendent]; or (B) the policy was issued by a member insurer and, in such a transaction, subsequently assumed by, or allocated to, another insurer (other than a risk retention group) against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer's State of domicile, and

ALTERNATIVE 3: WITH ASSUMED CLAIMS LANGUAGE AND NON-MEMBER TRANSFEREE COVERAGE

H. “Covered claim” means the following:

- (1) *An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if (A) the insurer becomes an insolvent insurer after the effective date of this Act and the policy was either issued by the insurer, or assumed by, or allocated to, the insurer in an assumed claims transaction or in an Insurance Business Transfer or Corporate Division transaction that was approved by the chief insurance regulator in the insurer’s state of domicile and, if required, by the [Commissioner/Director/Superintendent]; or (B) the policy was issued by a member insurer and in such a transaction subsequently assumed by, or allocated to, another insurer (other than a risk retention group) against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile, and*

- (a) *The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or*
- (b) *The claim is a first party claim for damage to property with a permanent location in this State.*

OPTIONAL

- (c) *For purposes of this Act, an Insurance Business Transfer or Corporate Division transaction shall mean a transaction [ALTERNATIVE 1] as described in [INSERT STATE STATUTORY CITATIONS] [OR ALTERNATIVE 2] authorized by the laws of another state authorizing such transactions and as the result of which, apart from other provisions, the insurer assumed all of the obligations under the policy from a transferor which was thereby discharged from such obligations.*

Kevin Baldwin and Laura Slaymaker
Co- Chairmen, Model Law Working Group

RE: Exposure Draft on Restructuring Transactions and Cyber Security-Comments due June 23

Dear Kevin and Laura:

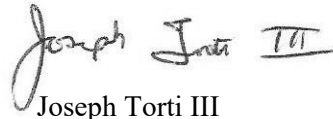

I am writing to offer comments on the aforementioned exposure draft, specifically regarding guaranty fund coverage for restructured business. As you may know, I have been a supporter at the NAIC of the concept of business restructuring. Additionally, I have served as an insurance regulator in Rhode Island for over 30 years and have been active in many NAIC initiatives. Currently I am employed by the Fairfax US Inc. as Vice President – Regulatory Affairs. Coincidentally, I also serve as the Chairman of the NCIGF Board of Directors. In this capacity I have a keen interest in supporting the protection the guaranty fund system affords to covered policyholders.

I offer a few observations that I hope will move the Working Group towards a solution that includes only 5(g)(2) of the exposure draft. First, restructuring transactions, while a useful business tool, were never intended to afford coverage on policy claims that were, before the transaction, not covered by guaranty funds. The current drafts being circulated by the Restructuring Working Group support the idea that guaranty coverage not be “changed” by the transaction. G(2) as a standalone is consistent with this approach. Second, regarding the assumption reinsurance provisions that were adopted by the NAIC in 2009, I understand that the drafting group has determined that, in current form, those provisions would not deal with IBTs and CDs – the most recent iterations of restructured business. Moreover, the 2009 amendments have only been adopted in three states – Rhode Island- the state I regulated - among them. It is appropriate to strike these provisions in the way that the current exposure draft indicates. Third, and probably most important, IBT and CD statutes continue to be enacted in the states and have already been used on several occasions in various jurisdictions. It is important to have a legislative remedy on the books to protect policyholders soon to address situations where the transferee company, despite all efforts to prevent this, becomes insolvent.

I understand that 5(g)(3) provides for an optional remedy for states to cover some transactions that did not originate from guaranty fund covered business. This, in my view, is contrary to the intent of the transactions. Further, as I understand it, there is additional “optional” language throughout the draft to clarify and permit some recoupment of guaranty fund assessments that may have been collected had the business originally been guaranty fund covered, a concept NCIGF has not put forward. This additional language adds a layer of complexity that would not be necessary if g(3) were not enacted and, sadly, has the potential to complicate legislative efforts to protect covered policyholders.

Thank you for your attention to my comments.

Sincerely yours,

A handwritten signature in black ink that reads "Joseph Torti III". The signature is written in a cursive style with a horizontal line under the "III".

Kevin Baldwin and Laura Slaymaker
Co-Chairmen of the Receivership Law (E) Working Group

Subject: May 23 Exposure Draft on Guaranty Fund Coverage for Restructured Business

Dear Kevin and Laura:

We appreciate the Receivership Law Working Group's consideration of our proposed guaranty fund model law amendment to address restructuring transactions. As you know, NCIGF's policy is coverage neutrality – that is, if there was guaranty fund coverage before the transaction the coverage should remain in place after the transaction. Conversely, coverage that did not exist prior to the transaction should not be created by the transaction. We believe this position aligns with the charge to the Model Law Working Group and the most recent drafts circulated by the Restructuring Working Group.¹

We feel that the proposed amendment to the covered claim definition at 5G(2), as a standalone revision, is consistent with the NCIGF policy. We would be comfortable recommending it to our members and others who may be involved in addressing restructured business guaranty fund coverage in the various states.

Further, we believe that the strike through of the 2009 amendments (including the adjustment to 5G(1)) intended to address assumption transactions is appropriate given that 1) as adopted in 2009 the language does not address IBTs and CDs and 2) the amendments have only been adopted in three states.

The optional paragraph 5G(3) in the exposure draft goes beyond the NCIGF coverage neutrality position and is not supported by the NCIGF. Likewise, the additional language which we understand is intended to offer options to support G(3) (such as additional definitions and options to provide for a look back to recover guaranty fund assessments that may have been collected had the business originally been covered business) is not necessary without G(3). It also may unduly complicate state efforts to amend their guaranty fund acts because of its complexity.

Note that NCIGF is not commenting on the cyber security amendments included in the exposure draft at this time. However, we do look forward to continued discussion of these amendments.

¹ See the Request for NAIC Model Law Development adopted by the E Committee 7/21/22 – “The scope of the request is limited to addressing the issue of continuity of guaranty fund coverage when a policy is transferred from one insurer to another.” See also Best Practices Procedures for IBT/Corporate Divisions discussion draft dated 4-4-23 – “For corporate divisions involving property and casualty insurance, the applicant's representation that that the laws of each U.S. jurisdiction where any such policies issued by the dividing insurer are allocated address restructuring transactions such that rights to guaranty fund coverage are not reduced, eliminated, or otherwise changed as a result of the transaction. Emphasis added. We are not aware of any objections expressed on this portion of the discussion draft.

Many thanks for considering our comments. Please feel free to contact me or Barbara Cox for additional information.

Very truly yours,

President & CEO
National Conference of Insurance Guaranty Funds

¹ See the Request for NAIC Model Law Development adopted by the E Committee 7/21/22 – “The scope of the request is limited to addressing the issue of continuity of guaranty fund coverage when a policy is transferred from one insurer to another.” See also Best Practices Procedures for IBT/Corporate Divisions discussion draft dated 4-4-23 – “For corporate divisions involving property and casualty insurance, the applicant’s representation that that the laws of each U.S. jurisdiction where any such policies issued by the dividing insurer are allocated address restructuring transactions such that rights to guaranty fund coverage are not reduced, eliminated, or otherwise changed as a result of the transaction. Emphasis added. We are not aware of any objections expressed on this portion of the discussion draft.

Section 16.	Tax Exemption
Section 17.	Recoupment of Assessments
Section 18.	Immunity
Section 19.	Stay of Proceedings

Section 1. Title

This Act shall be known as the [State] Insurance Guaranty Association Act.

Section 2. Purpose

The purpose of this Act is to provide a mechanism for the payment of covered claims under certain insurance policies, to avoid excessive delay in payment and to the extent provided in this Act minimize financial loss to claimants or policyholders because of the insolvency of an insurer, and to provide an association to assess the cost of such protection among insurers.

Section 3. Scope

This Act shall apply to all kinds of direct insurance, but shall not be applicable to the following:

- A. Life, annuity, health or disability insurance;
- B. Mortgage guaranty, financial guaranty or other forms of insurance offering protection against investment risks;
- C. Fidelity or surety bonds, or any other bonding obligations;
- D. Credit insurance, vendors' single interest insurance, or collateral protection insurance or any similar insurance protecting the interests of a creditor arising out of a creditor-debtor transaction;
- E. Other than coverages that may be set forth in a cybersecurity insurance policy, insurance ~~insurance~~ of warranties or service contracts including insurance that provides for the repair, replacement or service of goods or property, indemnification for repair, replacement or service for the operational or structural failure

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

of the goods or property due to a defect in materials, workmanship or normal wear and tear, or provides reimbursement for the liability incurred by the issuer of agreements or service contracts that provide such benefits;

- F. Title insurance;
- G. Ocean marine insurance;
- H. Any transaction or combination of transactions between a person (including affiliates of such person) and an insurer (including affiliates of such insurer) which involves the transfer of investment or credit risk unaccompanied by transfer of insurance risk; or
- I. Any insurance provided by or guaranteed by government.

Drafting Note: This Act focuses on property and liability kinds of insurance and therefore exempts those kinds of insurance deemed to present problems quite distinct from those of property and liability insurance. The Act further precludes from its scope certain types of insurance that provide protection for investment and financial risks. Financial guaranty is one of these. The NAIC Life and Health Insurance Guaranty Association Model Act provides for coverage of some, of the lines excluded by this provision.

For purposes of this section, “Financial guaranty insurance” includes any insurance under which loss is payable upon proof of occurrence of any of the following events to the damage of an insured claimant or obligee:

1. Failure of any obligor or obligors on any debt instrument or other monetary obligation, including common or preferred stock, to pay when due the principal, interest, dividend or purchase price of such instrument or obligation, whether failure is the result of a financial default or insolvency and whether or not the obligation is incurred directly or as guarantor by, or on behalf of, another obligor which has also defaulted;
2. Changes in the level of interest rates whether short term or long term, or in the difference between interest rates existing in various markets;
3. Changes in the rate of exchange of currency, or from the inconvertibility of one currency into another for any reason;
4. Changes in the value of specific assets or commodities, or price levels in general.

For purposes of this section, “credit insurance” means insurance on accounts receivable.

The terms “disability insurance” and “accident and health insurance,” and “health insurance” are intended to be synonymous. Each State will wish to examine its own statutes to determine which is the appropriate phrase.

A State where the insurance code does not adequately define ocean marine insurance may wish to add the following to Section 5, Definitions: “Ocean marine insurance” means any form of insurance, regardless of the name, label or marketing designation of the insurance policy, which insures against maritime perils or risks and other related perils or risks, which are usually insured against by traditional marine insurance, such as hull and machinery, marine builders risk, and marine protection and indemnity. Perils and risk insured against include without limitation loss, damage, expense or legal liability of the insured for loss, damage or expense arising out of or incident to ownership, operation, chartering, maintenance, use, repair or construction of any vessel, craft or instrumentality in use in ocean or inland waterways for commercial purposes, including liability of the insured for personal injury, illness or death or for loss or damage to the property of the insured or another person.

Section 4. Construction

MO-540-2

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

This Act shall be construed to effect the purpose under Section 2 which will constitute an aid and guide to interpretation.

Section 5. Definitions

As used in this Act:

[Optional:

- A. “Account” means any one of the three accounts created by Section 6.]

Drafting Note: This definition should be used by those States wishing to create separate accounts for assessment purposes. For a note on the use of separate accounts for assessments see the Drafting Note after Section 6. If this definition is used, all subsequent subsections should be renumbered.

- A. “Affiliate” means a person who directly, or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with another person on December 31 of the year immediately preceding the date the insurer becomes an insolvent insurer.
- B. “Association” means the [State] Insurance Guaranty Association created under Section 6.
- C. “Association similar to the association” means any guaranty association, security fund or other insolvency mechanism that affords protection similar to that of the association. The term shall also include any property and casualty insolvency mechanism that obtains assessments or other contributions from insurers on a pre-insolvency basis.

~~**Drafting Note:** There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and Q and Alternative 1b or 2b in Section 8A(3).~~

~~D. [Alternative 1] “Assumed claims transaction” means the following:~~

- ~~(1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or~~
- ~~(2) An assumption reinsurance transaction in which all of the following has occurred:~~
- ~~(a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and~~
- ~~(b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and~~
- ~~(c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies~~

Amendments: IBT/CD, and CyberSecurityNAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act~~—————~~ **[Alternative 2]** “Assumed claims transaction” means the following:

- (1) ~~Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or~~
- (2) ~~Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:~~
- (a) ~~Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and~~
- (b) ~~For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.~~
- (c) ~~For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or~~
- (3) ~~An assumption reinsurance transaction in which all of the following has occurred:~~
- (a) ~~The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;~~
- (b) ~~The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.~~
- (c) ~~As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.~~

DE. “Claimant” means any person instituting a covered claim, provided that no person who is an affiliate of the insolvent insurer may be a claimant.

EF. “Commissioner” means the Commissioner of Insurance of this State.

Drafting Note: Use the appropriate title for the chief insurance regulatory official wherever the term “commissioner” appears.

FG. “Control” means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing that control does not exist in fact.

GH. “Covered claim” means the following:

MO-540-4

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the policy was issued by an -insurer that becomes an insolvent insurer after the effective date of this Act and: the policy was either issued by the insurer or assumed by the insurer in an assumed claims transaction; and
- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (2) “Covered claim” includes claim obligations that arose through the issuance of an insurance policy by a member insurer, which are later allocated, transferred, merged into, novated, assumed by, or otherwise made the sole responsibility of a member or non-member insurer if:
- (a) The original member insurer has no remaining obligations on the policy after the transfer;
- (b) A final order of liquidation with a finding of insolvency has been entered against the insurer that assumed the member’s coverage obligations by a court of competent jurisdiction in the insurer’s State of domicile;
- (c) The claim would have been a covered claim, as defined in Section Paragraph 5G(1), if the claim had remained the responsibility of the original member insurer and the order of liquidation had been entered against the original member insurer, with the same claim submission date and liquidation date; and
- (d) In cases where the member’s coverage obligations were assumed by a non-member insurer, the transaction received prior regulatory or judicial approval.

[Optional Section 5G(3):

- (3) “Covered claim” includes claim obligations that were originally covered by a non-member insurer, including but not limited to a self-insurer, non-admitted insurer or risk retention group, but subsequently became the sole direct obligation of a member insurer before the entry of a final order of liquidation with a finding of insolvency against the member insurer by a court of competent jurisdiction in its State of domicile, if the claim obligations were assumed by the member insurer in a transaction of one of the following types:
- (a) A merger in which the surviving company was a member insurer immediately after the merger;
- (b) An assumption reinsurance transaction that received any required approvals from the appropriate regulatory authorities; or
- (c) A transaction entered into pursuant to a plan approved by the member insurer’s domiciliary regulator.]

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

Drafting Note: Optional –Section 5G(3) provides coverage for certain claims that are not within the scope of Paragraphs Subsections (1) or (2) because the original coverage was not provided by a member insurer. Subsections paragraphs (a) and (b) are based on Alternative 1 of the former definition of “assumed claims transaction,” (below) and Subsection paragraph (c) is based on the additional scenario included in Alternative 2 of the former definition of assumed claims transaction (below).

Former Definition of “Assumed Claims Transaction” for Optional Section 5G(3): There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 below provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 below provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1 below, it must select Alternative 1 below and Alternative 1 or 1a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 below, the former definitions of Assumption Consideration and Novation (below) and Alternative 2 or 2a in Section 8A(3).

[Assumed Claims Transaction Definition Alternative 1] “Assumed claims transaction” means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or
- (2) An assumption reinsurance transaction in which all of the following has occurred:
 - (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies

[Assumed Claims Transaction Definition Alternative 2] “Assumed claims transaction” means the following:

- (1) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or
- (2) Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
 - (a) Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
 - (b) For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.
 - (c) For purposes of this section the term non-member insurer also includes a self-insurer, non-

MO-540-6

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

admitted insurer and risk retention group; or

- (3) An assumption reinsurance transaction in which all of the following has occurred:
- (a) The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
 - (b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
 - (c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.

Former Definition for Assumption Consideration: “Assumption Consideration” shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer during the three calendar years prior to the effective date of the transaction to the applicable guaranty associations if the business had been written directly by the assuming insurer.

In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assumed claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the calendar year of the transaction.

The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.

Former Definition of Novation: “Novation” means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.

- (~~3~~) Except as provided elsewhere in this section, “covered claim” shall not include:
- (a) Any amount awarded as punitive or exemplary damages;
 - (b) Any amount sought as a return of premium under any retrospective rating plan;
 - (c) Any amount due any reinsurer, insurer, insurance pool or underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer as subrogation recoveries, reinsurance recoveries, contribution, indemnification or otherwise. No claim for any amount due any reinsurer, insurer, insurance pool, underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer may be asserted against a person insured under a policy issued by an insolvent insurer other than to the extent the claim exceeds the association obligation limitations set forth in Section 8 of this Act;
 - (d) Any claims excluded pursuant to Section 13 due to the high net worth of an insured;

MO-540-7

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

- (e) Any first party claims by an insured that is an affiliate of the insolvent insurer;
- (f) Any fee or other amount relating to goods or services sought by or on behalf of any attorney or other provider of goods or services retained by the insolvent insurer or an insured prior to the date it was determined to be insolvent;
- (g) Any fee or other amount sought by or on behalf of any attorney or other provider of goods or services retained by any insured or claimant in connection with the assertion or prosecution of any claim, covered or otherwise, against the association;
- (h) Any claims for interest; or
- (i) Any claim filed with the association or a liquidator for protection afforded under the insured’s policy for incurred-but-not-reported losses.

Drafting Note: The language in this provision referring to claims for incurred-but-not-reported losses has been inserted to expressly include the existing intent of this provision and make it clear that “policyholder protection” proofs of claim, while valid to preserve rights against the ~~State estate~~ of the insolvent insurer under the Insurer Receivership Model Act, are not valid to preserve rights against the association.

[Optional Section 5H:

H. *“Cybersecurity insurance”, for purposes of this Act, includes first and third party coverage, in a policy or endorsement, written on a direct, admitted basis for losses and loss mitigation arising out of or relating to data privacy breaches, unauthorized information network security intrusions, computer viruses, ransomware, cyber extortion, identity theft, and similar exposures.]*

HH. “Insolvent insurer” means an insurer that is licensed to transact insurance in this State, either at the time the policy was issued, ~~when the obligation with respect to the covered claim was assumed under an assumed claims transaction,~~ or when the insured event occurred, and against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile.

Drafting Note: “Final order” as used in this section means an order which has not been stayed. States in which the “final order” language does not accurately reflect whether or not the order is subject to a stay should substitute appropriate language consistent with the statutes or rules of the State to convey the intended meaning.

IJ. “Insured” means any named insured, any additional insured, any vendor, lessor or any other party identified as an insured under the policy.

- JK. (1) “Member insurer” means any person who:
- (a) Writes any kind of insurance to which this Act applies under Section 3, including the exchange of reciprocal or inter-insurance contracts; and
 - (b) Is licensed to transact insurance in this State (except at the option of the State).
- (2) An insurer shall cease to be a member insurer effective on the day following the termination or

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

expiration of its license to transact the kinds of insurance to which this Act applies, however, the insurer shall remain liable as a member insurer for any and all obligations, including obligations for assessments levied prior to the termination or expiration of the insurer's license and assessments levied after the termination or expiration, which relate to any insurer that became an insolvent insurer prior to the termination or expiration of the insurer's license.

- ~~KL~~. “Net direct written premiums” means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees, less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. “Net direct written premiums” does not include premiums on contracts between insurers or reinsurers.

[Optional Section 5K:

- K. “Net direct written premiums” means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees and including all premiums and other compensation collected by a member insurer for obligations assumed under a transaction described in Optional Section 5G(3), less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. “Net direct written premiums” does not include premiums on contracts between insurers or reinsurers, other than compensation received for entering into a transaction described in Optional Section 5G(3).]*

Drafting Note: ~~The~~ Optional Section 5K is for states that have adopted Optional Section 5G(3).

- ~~M.~~ “Novation” means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.

- ~~KN~~. “Person” means any individual, aggregation of individuals, corporation, partnership or other entity.

- ~~LO~~. “Receiver” means liquidator, rehabilitator, conservator or ancillary receiver, as the context requires.

Drafting Note: Each State should conform the definition of “receiver” to the definition used in the State’s insurer receivership act.

- ~~MP.~~ “Self-insurer” means a person that covers its liability through a qualified individual or group self-insurance program or any other formal program created for the specific purpose of covering liabilities typically covered by insurance.

- ~~Q.~~ ~~[Alternative 2b]~~ “Assumption Consideration” shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer during the three calendar years prior to the effective date of the transaction to the applicable guaranty associations if the business had been written directly by the assuming insurer.

~~In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assumed claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the~~

Property and Casualty Insurance Guaranty Association Model Act

~~calendar year of the transaction.~~

~~The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.~~

Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7.

[Alternate Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7. For purposes of administration and assessment, the association shall be divided into three separate accounts:

- A. The workers' compensation insurance account;*
- B. The automobile insurance account; and*
- C. The account for all other insurance to which this Act applies.]*

Drafting Note: The alternate Section 6 should be used if a State, after examining its insurance market, determines that separate accounts for various kinds of insurance are necessary and feasible. The major consideration is whether each account will have a base sufficiently large to cover possible insolvencies. Separate accounts will permit assessments to be generally limited to insurers writing the same kind of insurance as the insolvent company. If this approach is adopted the provision of alternate Sections 8A(3) and 8B(6) and optional Section 5A should also be used.

Section 7. Board of Directors

- A. The board of directors of the association shall consist of not less than five (5) nor more than [insert number] persons serving terms as established in the plan of operation. The insurer members of the board shall be selected by member insurers subject to the approval of the commissioner. Vacancies on the board shall be filled for the remaining period of the term by a majority vote of the remaining insurer members subject to the approval of the commissioner. If no members are selected within sixty (60) days after the effective date of this Act, the commissioner may appoint the initial members of the board of directors. Two (2) persons, who must be public representatives, shall be appointed by the commissioner to the board of directors. Vacancies of positions held by public representatives shall be filled by the commissioner. A public representative may not be an officer, director or employee of an insurance company or any person engaged in the business of insurance. For the purposes of this section, the term "director" shall mean an individual serving on behalf of an insurer member of the board of directors or a public representative on the board of directors.

MO-540-10

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

Drafting Note: A State adopting this language should make certain that its insurance code includes a definition of “the business of insurance” similar to that found in the NAIC Insurer Receivership Model Act.

- B. In approving selections to the board, the commissioner shall consider among other things whether all member insurers are fairly represented.
- C. Members of the board of directors may be reimbursed from the assets of the association for reasonable expenses incurred by them as members of the board of directors.
- D. Any board member who is an insurer in receivership shall be terminated as a board *member*, effective as of the date of the entry of the order of receivership. Any resulting vacancies on the board shall be filled for the remaining period of the term in accordance with the provisions of Subsection A.
- E. In the event that a director shall, because of illness, nonattendance at meetings or any other reason, be deemed unable to satisfactorily perform the designated functions as a director by missing three consecutive board meetings, the board of directors may declare the office vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.
- F. If the commissioner has reasonable cause to believe that a director failed to disclose a known conflict of interest with his or her duties on the board, failed to take appropriate action based on a known conflict of interest with his or her duties on the board, or has been indicted or charged with a felony, or misdemeanor involving moral turpitude, the commissioner may suspend that director pending the outcome of an investigation or hearing by the commissioner or the conclusion of any criminal proceedings. A company elected to the board may replace a suspended director prior to the completion of an investigation, hearing or criminal proceeding. In the event that the allegations are substantiated at the conclusion of an investigation, hearing or criminal proceeding, the office shall be declared vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

Section 8. Powers and Duties of the Association

- A. The association shall:
 - (1) (a) Be obligated to pay covered claims existing prior to the order of liquidation, arising within thirty (30) days after the order of liquidation, or before the policy expiration date if less than thirty (30) days after the order of liquidation, or before the insured replaces the policy or causes its cancellation, if the insured does so within thirty (30) days of the order of liquidation. The obligation shall be satisfied by paying to the claimant an amount as follows:
 - (i) The full amount of a covered claim for benefits under a workers’ compensation insurance coverage;
 - (ii) An amount not exceeding \$10,000 per policy for a covered claim for the return of unearned premium;
 - (iii) An amount not exceeding \$500,000 per claimant for all other covered claims.
 - (iv) In no event shall the Association be obligated to pay an amount in excess of \$500,000 for all first- and third-party claims under a policy or endorsement providing, or that is found to provide, cybersecurity insurance coverage and arising out of or related to a single insured event, regardless of the number of

MO-540-11

Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

claims made or the number of claimants.

- (b) In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include a claim filed with the guaranty fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer.

For the purpose of filing a claim under this subsection, notice of claims to the liquidator of the insolvent insurer shall be deemed notice to the association or its agent and a list of claims shall be periodically submitted to the association or association similar to the association in another State by the liquidator.

Drafting Note: On the general subject of the relationship of the association to the liquidator, the working group/task force takes the position that since this is a model State bill, it will be able to bind only two parties, the association and the in-State liquidator. Nevertheless, the provisions should be clear enough to outline the requests being made to out-of-State liquidators and the requirements placed on in-State liquidators in relation to out-of-State associations.

Drafting Note: Because of its potential impact on guaranty association coverage, it is recommended that the legislation include an appropriate provision stating that the bar date only applies to claims in liquidation commencing after its effective date. Drafters should insure that the State's insurance liquidation act would permit, upon closure, payments to the guaranty association and any association similar to the association for amounts that are estimated to be incurred after closure for workers compensation claims obligations. The amounts should be payable on these obligations related to losses both known and not known at the point of closure.

- (c) Any obligation of the association to defend an insured shall cease upon the association's payment or tender of an amount equal to the lesser of the association's covered claim obligation limit or the applicable policy limit.

Drafting Note: The obligation of the association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is canceled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to \$10,000, against the association. The maximums (\$10,000 for the return of unearned premium; \$500,000 for all other covered claims) represent the working group's concept of practical limitations, but each State will wish to evaluate these figures.

- (2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent, subject to the limitations provided in this Act, shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent, including but not limited to, the right to pursue and retain salvage and subrogation recoverable on covered claim obligations to the extent paid by the association. The association shall not be deemed the insolvent insurer for the purpose of conferring jurisdiction.
- (3) **[Alternative 1a]** Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the

MO-540-12

Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

Drafting Note: -Alternative 1 for Subsection 8A(3) above or the Alternative 1a for Subsection 8A(2)(3) included in this drafting note as follows should be used in conjunction with Assumed Claims Transaction Definition Alternative 1 as described in the drafting note for Optional Section 5G(3).

(3) **[Alternative 1a for Subsection 8A(3)]** Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer's net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer's financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

[Alternative 2a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer

A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.]

[Optional:

- (4) Assess member insurers that have entered into transactions described in Optional Section 5G(3), in addition to the assessment levied under ~~Paragraph~~Section 8A(3), an amount reflecting liabilities that may have arisen before the date of the transaction. The assessment under this ~~paragraph~~subsection is not subject to the annual percentage limitation under Paragraph (3) and shall be the amount that would have been paid by the assuming insurer under Paragraph (3) during the three calendar years preceding the effective date of the transaction if the business had been written directly by the assuming insurer. If the amount of the applicable premiums for the three year period cannot be determined, the assessment shall be 130% of the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the assumed claims transaction, multiplied by the applicable guaranty association assessment percentage for the calendar year of the transaction.]*

Drafting Note: Optional ~~Paragraph~~Section 8A(4) is for states that have adopted Optional Section 5G(3) and choose to require an additional "assumption consideration" assessment when claim obligations are assumed from an entity other than a member insurer.

- (4) Investigate claims brought against the association and adjust, compromise, settle and pay covered claims to the extent of the association's obligation and deny all other claims. The association shall pay claims in any order that it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The association shall have the right to appoint and to direct legal counsel retained under liability insurance policies for the defense of covered claims and to appoint and direct other service providers for covered services.
- (5) Notify claimants in this State as deemed necessary by the commissioner and upon the commissioner's request, to the extent records are available to the association.

Drafting Note: The intent of this paragraph is to allow, in exceptional circumstances, supplementary notice to that given by
MO-540-16

Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

the domiciliary receiver.

- (6) (a) Have the right to review and contest as set forth in this subsection settlements, releases, compromises, waivers and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation. In an action to enforce settlements, releases and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation, the Association shall have the right to assert the following defenses, in addition to the defenses available to the insurer:
 - (i) The association is not bound by a settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment entered against an insured or the insurer by consent or through a failure to exhaust all appeals, if the settlement, release, compromise, waiver or judgment was:
 - (I) Executed or entered within 120 days prior to the entry of an order of liquidation, and the insured or the insurer did not use reasonable care in entering into the settlement, release, compromise, waiver or judgment, or did not pursue all reasonable appeals of an adverse judgment; or
 - (II) Executed by or taken against an insured or the insurer based on default, fraud, collusion or the insurer's failure to defend.
 - (ii) If a court of competent jurisdiction finds that the association is not bound by a settlement, release, compromise, waiver or judgment for the reasons described in Subparagraph (a)(i), the settlement, release, compromise, waiver or judgment shall be set aside, and the association shall be permitted to defend any covered claim on the merits. The settlement, release, compromise, waiver or judgment may not be considered as evidence of liability or damages in connection with any claim brought against the association or any other party under this Act.
 - (iii) The association shall have the right to assert any statutory defenses or rights of offset against any settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment taken against the insured or the insurer.
- (b) As to any covered claims arising from a judgment under any decision, verdict or finding based on the default of the insolvent insurer or its failure to defend, the association, either on its own behalf or on behalf of an insured may apply to have the judgment, order, decision, verdict or finding set aside by the same court or administrator that entered the judgment, order, decision, verdict or finding and shall be permitted to defend the claim on the merits.
- (7) Handle claims through its own employees, one or more insurers, or other persons designated as servicing facilities, which may include the receiver for the insolvent insurer. Designation of a servicing facility is subject to the approval of the commissioner, but the designation may be declined by a member insurer.
- (8) Reimburse each servicing facility for obligations of the association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the association and shall pay the other expenses of the association authorized by this Act.
- (9) Submit, not later than 90 days after the end of the association's fiscal year, a financial report for the

MO-540-17

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

preceding fiscal year in a form approved by the commissioner.

B. The association may:

- (1) Employ or retain persons as are necessary to handle claims, provide covered policy benefits and services, and perform other duties of the association;
- (2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;
- (3) Sue or be sued;
- (4) Negotiate and become a party to contracts necessary to carry out the purpose of this Act;
- (5) Perform other acts necessary or proper to effectuate the purpose of this Act;
- (6) Refund to the member insurers in proportion to the contribution of each member insurer to the association that amount by which the assets of the association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association exceed the liabilities of the association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

- (6) *Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]*

Drafting Note: The working group/task force feels that the board of directors should determine the amount of the refunds to members when the assets of the association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

C. Suits involving the association:

- (1) Except for actions by the receiver, all actions relating to or arising out of this Act against the association shall be brought in the courts in this State. The courts shall have exclusive jurisdiction over all actions relating to or arising out of this Act against the association.
- (2) The exclusive venue in any action by or against the association is in [designate appropriate court]. The association may, at its option, waive this venue as to specific actions.

[Optional: Section 8D

D. (1) *The legislature finds:*

- (a) *The potential for widespread and massive damage to persons and property caused by natural disasters such as earthquakes, windstorms, or fire in this State can generate insurance claims of such a number as to render numerous insurers operating within this State insolvent and therefore unable to satisfy covered claims;*
- (b) *The inability of insureds within this State to receive payments of covered claims or to timely receive the payments creates financial and other hardships for insureds and places undue*

MO-540-18

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

burdens on the State, the affected units of local government, and the community at large;

- (c) *The insolvency of a single insurer in a material amount or a catastrophic event may result in the same hardships as those produced by a natural disaster;*
 - (d) *The State has previously taken action to address these problems by adopting the [insert name of guaranty association act], which among other things, provides a mechanism for the payment of covered claims under certain insurance policies to avoid excessive delay in payment and to avoid financial loss to claimants or policyholders because of the insolvency of an insurer; and*
 - (e) *In order for the association to timely pay claims of insolvent insurers in this State and otherwise carry out its duties, the association may require additional financing options. The intent of the Legislature is to make those options available to the association in the event that a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection A(3). In cases where the association determines that it is cost effective, the association may issue bonds as provided in this subsection. In determining whether to issue bonds, the association shall consider the transaction costs of issuing the bonds.*
- (2) *In the event a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection 8A(3), the association, in its sole discretion, may by resolution request the [insert name of agency] Agency to issue bonds pursuant to [insert statutory authority], in such amounts as the association may determine to provide funds for the payment of covered claims and expenses related thereto. In the event bonds are issued, the association shall have the authority to annually assess member insurers for amounts necessary to pay the principal of, and interest on those bonds. Assessments collected pursuant to this authority shall be collected under the same procedures as provided in Subsection 8A(3) and, notwithstanding the two percent (2%) limit in Subsection 8A(3), shall be limited to an additional [insert percentage] percent of the annual net direct written premium in this State of each member insurer for the calendar year preceding the assessment. The commissioner's approval shall be required for any assessment greater than five percent (5%). Assessments collected pursuant to this authority may only be used for servicing the bond obligations provided for in this subsection and shall be pledged for that purpose.*
 - (3) *In addition to the assessments provided for in this subsection, the association in its discretion, and after considering other obligations of the association, may utilize current funds of the association, assessments made under Subsection 8A(3) and advances or dividends received from the liquidators of insolvent insurers to pay the principal and interest on any bonds issued at the board's request.*
 - (4) *Assessments under this subsection shall be payable in twelve (12) monthly installments with the first installment being due and payable at the end of the month after an assessment is levied, and subsequent installments being due not later than the end of each succeeding month.*
 - (5) *In order to assure that insurers paying assessments levied under this subsection continue to charge rates that are neither inadequate nor excessive, within ninety (90) days after being notified of the assessments, each insurer that is to be assessed pursuant to this subsection shall make a rate filing for lines of business additionally assessed under this subsection. If the filing reflects a rate change that, as a percentage, is equal to the difference between the rate of the assessment and the rate of*

MO-540-19

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

the previous year's assessment under this subsection, the filing shall consist of a certification so stating and shall be deemed approved when made. Any rate change of a different percentage shall be subject to the standards and procedures of [cite appropriate statutory authority for provisions on filing and approval of rates].

Drafting Note: This provision should only be considered by those States that have serious concerns that circumstances could result in a substantial capacity problem resulting in unpaid or pro rata payment of claims. An association intending to consider this provision should first consult with experienced bond counsel in its State to identify an appropriate State agency or bonding authority to act as vehicle for issuing the bonds. That agency or authority's statute may also have to be amended to specifically authorize these types of bonds and to cross-reference this provision in the guaranty association law. It is possible that in some situations a new bonding authority may have to be created for this purpose.

Regardless of the vehicle used, it is important that the decision-making authority on whether bonds are needed and in what amounts be retained by the association's board.

The extent of additional assessment authority under this subsection has not been specified. When considering the amount of additional authority that will be needed, a determination should be made as to the amount of funds needed to service the bonds. More specifically, consideration should be given to the amount of the bonds to be issued, interest rate and the maturity date of the bonds. The association should be able to raise sufficient funds through assessments to pay the interest and retire the bonds after some reasonable period (e.g. ten (10) years). Subsection D(2) requires the Commissioner's approval before the association can impose an additional assessment in excess of 5%. This is to assure that the additional assessment will not result in financial hardship to the member insurers and additional insolvencies.

The intent of Subsection D(4) is to permit recoupment by member insurers of the additional cost of assessments under this subsection without any related regulatory approval. A State enacting this subsection may need to revise Subsection D(4) so that it conforms to the particular State's recoupment provisions, as well as the provisions on filing and approval of rates.]

Section 9. Plan of Operation

- A. (1) The association shall submit to the commissioner a plan of operation and any amendments to the plan of operation necessary or suitable to assure the fair, reasonable and equitable administration of the association. The plan of operation and amendments shall become effective upon approval in writing by the commissioner.
- (2) If the association fails to submit a suitable plan of operation within ninety (90) days following the effective date of this Act, or if at any time thereafter the association fails to submit suitable amendments to the plan, the commissioner shall, after notice and hearing, adopt reasonable rules necessary or advisable to effectuate the provisions of this Act. The rules shall continue in force until modified by the commissioner or superseded by a plan submitted by the association and approved by the commissioner.
- B. All member insurers shall comply with the plan of operation.
- C. The plan of operation shall:
 - (1) Establish the procedures under which the powers and duties of the association under Section 8 will be performed;
 - (2) Establish procedures for handling assets of the association;

MO-540-20

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- (3) Require that written procedures be established for the disposition of liquidating dividends or other monies received from the estate of the insolvent insurer;
 - (4) Require that written procedures be established to designate the amount and method of reimbursing members of the board of directors under Section 7;
 - (5) Establish procedures by which claims may be filed with the association and establish acceptable forms of proof of covered claims;
 - (6) Establish regular places and times for meetings of the board of directors;
 - (7) Require that written procedures be established for records to be kept of all financial transactions of the association, its agents and the board of directors;
 - (8) Provide that any member insurer aggrieved by any final action or decision of the association may appeal to the commissioner within thirty (30) days after the action or decision;
 - (9) Establish the procedures under which selections for the board of directors will be submitted to the commissioner;
 - (10) Contain additional provisions necessary or proper for the execution of the powers and duties of the association.
- D. The plan of operation may provide that any or all powers and duties of the association, except those under Sections 8A(3) and 8B(2), are delegated to a corporation, association similar to the association or other organization which performs or will perform functions similar to those of this association or its equivalent in two (2) or more States. The corporation, association similar to the association or organization shall be reimbursed as a servicing facility would be reimbursed and shall be paid for its performance of any other functions of the association. A delegation under this subsection shall take effect only with the approval of both the board of directors and the commissioner, and may be made only to a corporation, association or organization which extends protection not substantially less favorable and effective than that provided by this Act.

Section 10. Duties and Powers of the Commissioner

A. The commissioner shall:

- (1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;
- (2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

B. The commissioner may:

- (1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to

MO-540-21

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than \$100 per month;

- (2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.
- (3) Examine, audit, or otherwise regulate the association.

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

- C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

Section 11. Coordination Among Guaranty Associations

- A. The association may join one or more organizations of other State associations of similar purposes, to further the purposes and administer the powers and duties of the association. The association may designate one or more of these organizations to act as a liaison for the association and, to the extent the association authorizes, to bind the association in agreements or settlements with receivers of insolvent insurance companies or their designated representatives.
- B. The association, in cooperation with other obligated or potentially obligated guaranty associations, or their designated representatives, shall make all reasonable efforts to coordinate and cooperate with receivers, or their designated representatives, in the most efficient and uniform manner, including the use of Uniform Data Standards as promulgated or approved by the National Association of Insurance Commissioners.

Section 12. Effect of Paid Claims

- A. Any person recovering under this Act shall be deemed to have assigned any rights under the policy to the association to the extent of his or her recovery from the association. Every insured or claimant seeking the protection of this Act shall cooperate with the association to the same extent as the person would have been required to cooperate with the insolvent insurer. The association shall have no cause of action against the insured of the insolvent insurer for sums it has paid out except any causes of action as the insolvent insurer would have had if the sums had been paid by the insolvent insurer and except as provided in Subsection B and in Section 13. In the case of an insolvent insurer operating on a plan with assessment liability, payments of claims of the association shall not operate to reduce the liability of the insureds to the receiver, liquidator or statutory successor for unpaid assessments.
- B. The association shall have the right to recover from any person who is an affiliate of the insolvent insurer all amounts paid by the association on behalf of that person pursuant to the Act, whether for indemnity, defense or otherwise.
- C. The association and any association similar to the association in another State shall be entitled to file a claim in the liquidation of an insolvent insurer for any amounts paid by them on covered claim obligations as determined under this Act or similar laws in other States and shall receive dividends and other distributions at the priority set forth in [insert reference to State priority of distribution in liquidation act].
- D. The association shall periodically file with the receiver or liquidator of the insolvent insurer statements of the covered claims paid by the association and estimates of anticipated claims on the association which shall

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

preserve the rights of the association against the assets of the insolvent insurer.

Section 13 [Optional] Net Worth Exclusion

Drafting Note: Various alternatives are provided for a net worth limitation in the guaranty association act. States may choose any of the Subsection B alternatives below or may elect to not have any net worth limitation. Subsection A, which defines “high net worth insured,” has two alternates allowing States to choose different net worth limitations for first and third party claims if that State chooses alternatives 1 or 2 to Subsection B. Subsections C, D and E are recommended to accompany any of the Subsection B alternatives. In cases where States elect not to include net worth, States may either omit this section in its entirety or include only Subsection C, which excludes from coverage claims denied by other States’ net worth restrictions pursuant to those States’ guaranty association laws.

- A. For purposes of this section “high net worth insured” shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

[Alternate Section 13A

- A. (1) *For the purposes of Subsection B(1), “high net worth insured” shall mean any insured whose net worth exceeds \$25 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.]*
- (2) *For the purpose of Subsection B(2) [and B(4) if Alternative 2 for Subsection B is selected] “high net worth insured” shall mean any insured whose net worth exceeds \$50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.*

Drafting Note: Alternate Subsection A language should only be considered in cases where a State is considering Alternative 1 or 2 of Subsection B and would like to set different dollar thresholds for the first party claim exclusion provision and the third party recovery provision.

Drafting Note: States may wish to consider the impact on governmental entities and charitable organizations of the application of the net worth exclusion contained in the definition of “covered claim.” The Michigan Supreme Court, in interpreting a “net worth” provision in the Michigan guaranty association statute, held that governmental entities possess a “net worth” for purposes of the provision in the Michigan guaranty association statute that prohibits claims against the guaranty association by a person who has a specified net worth. Oakland County Road Commission vs. Michigan Property & Casualty Guaranty Association, 575 N.W. 2d 751 (Mich. 1998).

[Alternative 1 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.^f
- i. The Association may also, at its sole discretion and without assumption of any ongoing duty to do so, pay any cybersecurity insurance obligations covered by a policy or endorsement of an insolvent company on behalf of a high net worth insured as defined in Section 13A(1). In that case, the Association shall recover from the high net worth insured under this sSection all amounts paid on its behalf, all

allocated claim adjusted expenses related to such claims, the Association's attorney's fees, and all court costs in any action necessary to collect the full amount to the Association's reimbursement under this sSection.]

Drafting Note: -Alternative 1 for Section 13B-~~paragraph~~(3), would only be a consideration in states with a net worth exclusion.

[Alternative 2 for Section 13B

- B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.
- (2) Subject to Paragraph (3), the association shall not be obligated to pay any third party claim relating to a policy of a high net worth insured. This exclusion shall not apply to third party claims against the high net worth insured where:
- (a) The insured has applied for or consented to the appointment of a receiver, trustee or liquidator for all or a substantial part of its assets;
- (b) The insured has filed a voluntary petition in bankruptcy, filed a petition or an answer seeking a reorganization or arrangement with creditors or to take advantage of any insolvency law; or
- (c) An order, judgment, or decree is entered by a court of competent jurisdiction, on the application of a creditor, adjudicating the insured bankrupt or insolvent or approving a petition seeking reorganization of the insured or of all or substantial part of its assets.
- (3) Paragraph (2) shall not apply to workers' compensation claims, personal injury protection claims, no-fault claims and any other claims for ongoing medical payments to third parties.
- (4) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, covered policy benefits and services, defense or otherwise.
- ~~(5) The Association may also, at its sole discretion and without assumption of any ongoing duty to do so, pay any third-party claims or cybersecurity insurance obligations covered by a policy or endorsement of an insolvent company on behalf of a high net worth insured as defined in Section 13A(2). In that case, the Association shall recover from the high net worth insured under this sSection all amounts paid on its behalf, all allocated claim adjusted expenses related to such claims, the Association's attorney's fees, and all court costs in any action necessary to collect the full amount to the Association's reimbursement under this sSection.]~~

Drafting Note: Alternative 2 to Section 13B-~~paragraph~~(5) would only be a consideration in states with a net worth exclusion.

[Alternative 3 for Section 13B

- B. The association shall not be obligated to pay any first party claims by a high net worth insured./
- C. The association shall not be obligated to pay any claim that would otherwise be a covered claim that is an obligation to or on behalf of a person who has a net worth greater than that allowed by the insurance guaranty association law of the State of residence of the claimant at the time specified by that State's applicable law, and which association has denied coverage to that claimant on that basis.

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

- D. The association shall establish reasonable procedures subject to the approval of the commissioner for requesting financial information from insureds on a confidential basis for purposes of applying this section, provided that the financial information may be shared with any other association similar to the association and the liquidator for the insolvent insurer on the same confidential basis. Any request to an insured seeking financial information must advise the insured of the consequences of failing to provide the financial information. If an insured refuses to provide the requested financial information where it is requested and available, the association may, until such time as the information is provided, provisionally deem the insured to be a high net worth insured for the purpose of denying a claim under Subsection B.
- E. In any lawsuit contesting the applicability of this section where the insured has refused to provide financial information under the procedure established pursuant to Subsection D, the insured shall bear the burden of proof concerning its net worth at the relevant time. If the insured fails to prove that its net worth at the relevant time was less than the applicable amount, the court shall award the association its full costs, expenses and reasonable attorneys' fees in contesting the claim.

Section 14. Exhaustion of Other Coverage

- A. (1) Any person having a claim against an insurer, shall be required first to exhaust all coverage provided by any other policy, including the right to a defense under the other policy, if the claim under the other policy arises from the same facts, injury or loss that gave rise to the covered claim against the association. The requirement to exhaust shall apply without regard to whether the other insurance policy is a policy written by a member insurer. However, no person shall be required to exhaust any right under the policy of an insolvent insurer or any right under a life insurance policy.
- (2) Any amount payable on a covered claim under this Act shall be reduced by the full applicable limits stated in the other insurance policy, or by the amount of the recovery under the other insurance policy as provided herein. The association shall receive a full credit for the stated limits, unless the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy. If the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy, or if there are no applicable stated limits under the policy, the association shall receive a full credit for the total recovery.

[Alternative 1 for Section 14A(2)(a)]

- (a) The credit shall be deducted from the lesser of:
- (i) The association's covered claim limit;
 - (ii) The amount of the judgment or settlement of the claim; or
 - (iii) The policy limits of the policy of the insolvent insurer.]

[Alternative 2 for Section 14A(2)(a)]

- The credit shall be deducted from the lesser of:
- (i) The amount of the judgment or settlement of the claim; or
 - (ii) The policy limits of the policy of the insolvent insurer.]
- (b) In no case, however, shall the obligation of the association exceed the covered claim limit embodied in Section 8 of this Act.
- (3) Except to the extent that the claimant has a contractual right to claim defense under an insurance policy issued by another insurer, nothing in this section shall relieve the association of the duty to

MO-540-25

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

defend under the policy issued by the insolvent insurer. This duty shall, however, be limited by any other limitation on the duty to defend embodied in this Act.

- (4) A claim under a policy providing liability coverage to a person who may be jointly and severally liable as a joint tortfeasor with the person covered under the policy of the insolvent insurer that gives rise to the covered claim shall be considered to be a claim arising from the same facts, injury or loss that gave rise to the covered claim against the association.
 - (5) For purposes of this section, a claim under an insurance policy other than a life insurance policy shall include, but is not limited to:
 - (a) A claim against a health maintenance organization, a hospital plan corporation, a professional health service corporation or disability insurance policy; and
 - (b) Any amount payable by or on behalf of a self-insurer.
 - (6) The person insured by the insolvent insurer's policy may not be pursued by a third-party claimant for any amount paid to the third party by which the association's obligation is reduced by the application of this section.
- B. Any person having a claim which may be recovered under more than one insurance guaranty association or its equivalent shall seek recovery first from the association of the place of residence of the insured, except that if it is a first party claim for damage to property with a permanent location, the person shall seek recovery first from the association of the location of the property. If it is a workers' compensation claim, the person shall seek recovery first from the association of the residence of the claimant. Any recovery under this Act shall be reduced by the amount of recovery from another insurance guaranty association or its equivalent.

Drafting Note: This subsection does not prohibit recovery from more than one association, but it does describe the association to be approached first and then requires that any previous recoveries from like associations must be set off against recoveries from this association.

Section 15. Prevention of Insolvencies

To aid in the detection and prevention of insurer insolvencies:

- A. The board of directors may, upon majority vote, make recommendations to the commissioner on matters generally related to improving or enhancing regulation for solvency.
- B. At the conclusion of any domestic insurer insolvency in which the association was obligated to pay covered claims, the board of directors may, upon majority vote, prepare a report on the history and causes of the insolvency, based on the information available to the association and submit the report to the commissioner.
- C. Reports and recommendations provided under this section shall not be considered public documents.

-Section 16. Tax Exemption

The association shall be exempt from payment of all fees and all taxes levied by this State or any of its subdivisions except taxes levied on real or personal property.

Section 17. Recoupment of Assessments

MO-540-26

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

Drafting Note: States may choose how they wish to allow member insurers to recoup assessments paid by selecting one of three alternatives for Section 17.

[Alternative 1 for Section 17]

- A. Except as provided in Subsection D, each member insurer shall annually recoup assessments it remitted in preceding years under Section 8. The recoupment shall be by means of a policyholder surcharge on premiums charged for all kinds of insurance in the accounts assessed. The surcharge shall be at a uniform percentage rate determined annually by the commissioner that is reasonably calculated to recoup the assessment remitted by the insurer, less any amounts returned to the member insurer by the association. Changes in this rate shall be effective no sooner than 180 days after insurers have received notice of the changed rate.
- B. If a member insurer fails to recoup the entire amount of the assessment in the first year under this section, it shall repeat the surcharge procedure provided for herein in succeeding years until the assessment is fully recouped or a de minimis amount remains uncollected. Any such de minimis amount shall be collected as provided in Subsection D of this section. If a member insurer collects excess surcharges, the insurer shall remit the excess amount to the association, and the excess amount shall be applied to reduce future assessments in the appropriate account.
- C. The amount and nature of any surcharge shall be separately stated on either a billing or policy declaration sent to an insured. The surcharge shall not be considered premium for any purpose, including the [insert all appropriate taxes] or agents' commission.
- D. A member may elect not to collect the surcharge from its insureds only when the expense of collecting the surcharge would exceed the amount of the surcharge. In that case, the member shall recoup the assessment through its rates, provided that:
 - (1) The insurer shall be obligated to remit the amount of surcharge not collected by election under this subsection; and
 - (2) The last sentence in Subsection C above shall not apply.
- E. In determining the rate under Subsection A for the first year of recoupment under this section, under rules prescribed by the commissioner, the commissioner shall provide for the recoupment in that year, or in such reasonable period as the commissioner may determine, of any assessments that have not been recouped as of that year. Insurers shall not be required to recoup assessments through surcharges under this section until 180 days after this section takes effect./

[Alternative 2 for Section 17]

- A. Notwithstanding any provision of [insert citation to relevant tax and insurance codes] to the contrary, a member insurer may offset against its [insert all appropriate taxes] liability the entire amount of the assessment imposed under this Act at a rate of [insert number] percent per year for [insert number of years] successive years following the date of assessment. If the assessment is not fully recovered over the [insert number of years] period, the remaining unrecovered assessment may be claimed for subsequent calendar years until fully recovered.

Drafting Note: States may choose the number of years to allow an insurer to offset an assessment against the insurer's premium tax liability.

- B. Any tax credit under this section shall, for the purposes of Section [insert citation to retaliatory tax statute] be treated as a tax paid both under the tax laws of this State and under the laws of any other State or country.

MO-540-27

7/7/23 DRAFT, with formatting and reference edits (in Yellow)
Amendments: IBT/CD, and CyberSecurity

NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009
Property and Casualty Insurance Guaranty Association Model Act

- C. If a member insurer ceases doing business in this State, any uncredited assessment may be credited against its [insert all appropriate taxes] during the year it ceases doing business in this State.
- D. Any sums that are acquired by refund from the association by member insurers and that have been credited against [insert all appropriate taxes], as provided in this section, shall be paid by member insurers to this State as required by the department. The association shall notify the department that the refunds have been made.]

[Alternative 3 for Section 17

The rates and premiums charged for insurance policies to which this section applies shall include amounts sufficient to recoup a sum equal to the amounts paid to the association by the member insurer less any amounts returned to the member insurer by the association. Rates shall not be deemed excessive because they contain an additional amount reasonably calculated to recoup all assessments paid by the member insurer.]

Section 18. Immunity

There shall be no liability on the part of, and no cause of action of any nature shall arise against a member insurer, the association or its agents or employees, the board of directors, or any person serving as an alternate or substitute representative of any director, or the commissioner or the commissioner's representatives for any action taken or any failure to act by them in the performance of their powers and duties under this Act

Section 19. Stay of Proceedings

All proceedings in which the insolvent insurer is a party or is obligated to defend a party in any court in this State shall, subject to waiver by the association in specific cases involving covered claims, be stayed for six (6) months and such additional time as may be determined by the court from the date the insolvency is determined or an ancillary proceeding is instituted in the State, whichever is later, to permit proper defense by the association of all pending causes of action.

The liquidator, receiver or statutory successor of an insolvent insurer covered by this Act shall permit access by the board or its authorized representative to such of the insolvent insurer's records which are necessary for the board in carrying out its functions under this Act with regard to covered claims. In addition, the liquidator, receiver or statutory successor shall provide the board or its representative with copies of those records upon the request by the board and at the expense of the board.

REINSURANCE (E) TASK FORCE

Reinsurance (E) Task Force July 24, 2023, Minutes..... 9-1051
Reinsurance (E) Task Force 2024 Proposed Charges (Attachment One) 9-1054
Implementation of *Term and Universal Life Insurance Reserve Financing Model Regulation (#787)*;
Status as of June 27, 2023 (Attachment Two)..... 9-1056

Draft: 8/1/23

Reinsurance (E) Task Force
Virtual Meeting (*in lieu of meeting at the 2023 Summer National Meeting*)
July 24, 2023

The Reinsurance (E) Task Force met July 24, 2023. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Adrienne A. Harris, Vice Chair, represented by John Finston (NY); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis (AL); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Wanchin Chou (CT); Michael Yaworsky represented by Jane Nelson (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen represented by Kim Cross (IA); Vicki Schmidt represented by Chut Tee (KS); Sharon P. Clark represented by Vicki Lloyd (KY); James J. Donelon represented by Tom Travis (LA); Gary D. Anderson represented by Christopher Joyce (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott represented by Robert Wake (ME); Grace Arnold represented by Ben Slutsker (MN); Troy Downing represented by Kari Leonard (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); D.J. Bettencourt represented by Pat Gosselin (NH); Justin Zimmerman represented by David Wolf (NJ); Alice T. Kane represented by Patrick Zeller (NM); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Liz Ammerman (RI); Michael Wise represented by Ryan Basnett (SC); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Nathan Houdek (WI).

1. Adopted its Spring National Meeting Minutes

Finston made a motion, seconded by Macaluso, to adopt the Task Force's March 6 minutes (*see NAIC Proceedings – Spring 2023, Reinsurance (E) Task Force*). The motion passed unanimously.

2. Adopted its 2024 Proposed Charges

Rehagen noted that the Task Force's 2024 proposed charges included minor revisions from 2023 to reflect the current duties of the Task Force and the Reinsurance Financial Analysis (E) Working Group.

Obusek made a motion, seconded by Finston, to adopt the 2024 proposed charges of the Task Force and the Reinsurance Financial Analysis (E) Working Group (Attachment One). The motion passed unanimously.

3. Adopted the Report of the Reinsurance Financial Analysis (E) Working Group

Kaumann stated that the Working Group meets in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. He stated that the Working Group met July 19 and May 2 to approve several certified and reciprocal jurisdiction reinsurers for passporting. He noted that the Working Group will meet several more times during 2023.

Kaumann stated that the Working Group has now approved 61 reciprocal jurisdiction reinsurers and 41 certified reinsurers for passporting, and that 41 states have passported a reciprocal jurisdiction reinsurer. He noted that the list of passported reinsurers can be found on the Certified and Reciprocal Jurisdiction Reinsurer web page.

Kaumann made a motion, seconded by Gosselin, to adopt the Working Group's report. The motion passed unanimously.

4. Received a Status Report on the Reinsurance Activities of the Mutual Recognition of Jurisdictions (E) Working Group

Wake stated that the Working Group last met on Nov. 7, 2022, to reapprove the status of Bermuda, France, Germany, Ireland, Japan, Switzerland, and the United Kingdom (UK) as qualified jurisdictions and to reapprove Bermuda, Japan, and Switzerland as reciprocal jurisdictions. He noted that this process will be completed again this fall.

Wake stated that on Feb. 24, the Bermuda Monetary Authority (BMA) issued a consultation paper on planned enhancements to its regulatory process. He added that the BMA will issue another draft later in August or September, with expected changes to its regulatory regime to be adopted in 2024. Wake noted that the UK is working on regulatory regime changes; it will move from Solvency II to a new Solvency UK, which is expected to be adopted by the UK Parliament by the end of 2024. Wake stated that Japan will also issue changes to its solvency regime, which is effective April 1, 2025. He stated that any changes to Bermuda, Japan, or the UK's regulatory practices will be evaluated during the annual re-review of their status as qualified and reciprocal jurisdictions.

5. Discussed Ongoing Projects at the NAIC that Affect Reinsurance

Jake Stultz (NAIC) stated that there are five ongoing projects at the NAIC that affect reinsurance. He noted that the Macroprudential (E) Working Group had created a new reinsurance worksheet, which is an optional tool for regulators to get a better understanding of reinsurance transactions at the companies that they regulate. He noted that the worksheet will allow for more consistent and thorough reviews of reinsurance, can be used for any type of reinsurance, is not intended to otherwise affect the Task Force's policies or procedures, and will not be required in the *Financial Analysis Handbook* or the *Financial Examiner's Handbook*. He said that the work completed using the reinsurance worksheet will remain confidential. He stated that the Macroprudential (E) Working Group adopted the reinsurance worksheet during its June 20 meeting and that the Financial Condition (E) Committee will consider it for adoption at the Summer National Meeting.

Stultz stated that the Valuation Analysis (E) Working Group is currently completing its first year of reviews of *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53). He noted that AG 53 is broad and covers asset adequacy testing (AAT) for life insurers, but he noted that the Task Force's primary focus in the process has been on the work involved with reinsurance, primarily focused on where this may affect the "Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance" (EU Covered Agreement) or the "Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance" (UK Covered Agreement). He noted that a wide range of people are working on this project, including actuaries from the NAIC and regulators from several states, which include actuaries, investment experts, and financial staff. Stultz said that other subject matter experts (SMEs) from the NAIC are brought in when needed and that the work being performed is regulator-only.

Stultz stated that the Life Risk-Based Capital (E) Working Group had received a request to potentially modify the risk-based capital (RBC) instructions to allow comfort trusts or a similar form to be allowed as collateral for reinsurance, but only for RBC treatment purposes and for credit for reinsurance purposes. He stated that comfort trusts and custody control accounts are a design of trust that are common at financial institutions but do not meet the rigorous standards set in the *Credit for Reinsurance Model Law* (#785). He said that currently, the rules for trusts for RBC mirror the trust provisions of Model #785. Stultz noted that this proposal would then lower the standard for a trust that can be used for RBC purposes. He noted that NAIC staff from the Task Force have been in contact with staff support from the Life Risk-Based Capital (E) Working Group but that there had not been any formal communication. He stated that during the Life Risk-Based Capital (E) Working Group's June 22 meeting,

this topic was discussed. However, it was put on hold pending further discussions and additional information to address Working Group concerns.

Stultz stated that a new project had been started by NAIC staff to get better information on catastrophe reinsurance programs of property/casualty (P/C) insurers. He stated that this project began because of the recent catastrophe-related insolvencies and the increasing cost of catastrophe reinsurance coverage, where state insurance regulators have identified a need to collect additional detail from insurers on the structure of their catastrophe reinsurance programs on an annual basis. This project is intended to enhance the disclosures for catastrophe reinsurance programs and will include several new interrogatories that will be added to the P/C RBC Instructions. He noted that the reason this is planned to be done through RBC is that the reinsurance program structure relates to the existing RCAT charge in RBC. This is based on modeled probable maximum loss amounts that take reinsurance program structure into account, recognizing that some insurers view detailed information about their reinsurance program structure as proprietary. Including it in the RBC filing provides confidentiality protections. He noted that no formal referrals or discussions have been held and that the details of the process to get these revisions adopted have not yet been finalized.

Stultz stated that earlier this year, several banks had failed, which affected reinsurance since these were approved on the *List of Qualified U.S. Financial Institutions* (QUSFI). He noted that Model #785, Section 3 allows a letter of credit (LOC) to be used as collateral if the issuing bank meets the criteria of Section 4, which details the process for a bank to be reviewed and approved to be added to the QUSFI list and added that a drafting note in Model #785 clarifies situations when a financial institution loses its status as a QUSFI. Stultz stated that the Valuation of Securities (E) Task Force adopted a revision to the *Purposes and Procedures Manual* (P&P Manual) that will help it streamline the process of removing troubled financial institutions from the QUSFI list in the future.

6. Received a Status Report on the States' Implementation of Model #787

Stultz stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787) became an accreditation standard on Sept. 1, 2022, with enforcement beginning on Jan. 1, 2023. He noted that as of June 27, 34 jurisdictions have adopted Model #787. He noted that Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48) and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline. Stultz stated that 12 states have advised NAIC staff that they will rely on AG 48, either through an insurance bulletin or through simple adoption of the NAIC's *Accounting Practices and Procedures Manual* (AP&P Manual). He added that if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment Two).

Having no further business, the Reinsurance (E) Task Force adjourned.

NAICSupportStaffHub/Member Meetings/E CMTE/RTF/2023SummerNM/Meeting/Minutes/0 ReinsuranceTFmin 07.24.2023.docx

Reinsurance (E) Task Force 2024 Proposed Charges

The mission of the Reinsurance (E) Task Force is to monitor and coordinate activities and areas of interest that overlap to some extent the charges of other NAIC groups—specifically, the International Insurance Relations (G) Committee.

The **Reinsurance (E) Task Force** will:

1. Provide a forum for the consideration of reinsurance-related issues of public policy.
2. Oversee the activities of the Reinsurance Financial Analysis (E) Working Group.
- ~~3.~~ ~~Monitor the implementation of the 2011, 2016, and 2019 revisions to the Credit for Reinsurance Model Law (#785); and the 2011 and 2019 revisions to the Credit for Reinsurance Model Regulation (#786) and the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).~~
- ~~4.~~ ~~3.~~ Communicate and coordinate with the Federal Insurance Office (FIO), other federal authorities, and international regulators and authorities on matters pertaining to reinsurance.
- ~~5.~~ ~~4.~~ Consider any other issues related to the revised Model #785, Model #786, and Model #787.
- ~~6.~~ ~~5.~~ Monitor the development of international principles, standards, and guidance with respect to reinsurance. This includes, but is not limited to, monitoring the activities of various groups within the International Association of Insurance Supervisors (IAIS), including the Reinsurance and Other Forms of Risk Transfer Subcommittee, the Reinsurance Mutual Recognition Subgroup, and the Reinsurance Transparency Group.
- ~~7.~~ ~~6.~~ Consider the impact of reinsurance-related federal legislation, including, but not limited to, the federal Nonadmitted and Reinsurance Reform Act (NRRRA) and the Federal Insurance Office Act, and coordinate any appropriate NAIC action.
- ~~8.~~ ~~7.~~ Continue to monitor the impact of reinsurance-related international agreements, including the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement).

The **Reinsurance Financial Analysis (E) Working Group** will:

1. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing certified reinsurance topics and policy issues, such as amendments to the Uniform Application for ~~C~~Certified or reciprocal Reinsurers.
2. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.
3. Provide a forum for discussion among NAIC jurisdictions of reinsurance issues related to specific companies, entities or individuals.
4. Support, encourage, promote and coordinate multistate efforts in addressing issues related to certified reinsurers, including, but not limited to, multistate recognition of certified reinsurers.
5. Provide analytical expertise and support to the states with respect to certified or reciprocal reinsurers and applicants ~~for certification~~.
6. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.
7. Ensure the public passporting website remains current.

~~8. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.~~

Draft: 8/28/23

Valuation of Securities (E) Task Force
Seattle, Washington
August 14, 2023

The Valuation of Securities (E) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Eric Dunning, Vice Chair, represented by Lindsay Crawford and Nolan Beal (NE); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis (AL); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone and Wanchin Chou (CT); Michael Yaworsky represented by Carolyn Morgan and Bradley Trim (FL); Dean L. Cameron represented by Eric Fletcher (ID); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak and Lynn Beckner (MD); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Jon Godfread represented by Matt Fischer (ND); D.J. Bettencourt represented by Jennifer Li (NH); Justin Zimmerman represented by John Sirovets (NJ); Adrienne A. Harris represented by Bob Kasinow and Jim Everett (NY); Glen Mulready represented by Diane Carter and Ryan Rowe (OK); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Amy Garcia and Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and Greg Chew (VA); and Nathan Houdek represented by Amy Malm (WI). Also participating was: Elizabeth Kelleher Dwyer (RI).

1. Adopted its July 13, May 15, and Spring National Meeting Minutes

Mears said the first item is to consider adoption of the Task Force's July 13, May 15, and Spring National Meeting minutes. There were a couple of non-substantive editorial items identified that will be corrected. Mears asked for a motion to adopt the minutes from the Task Force's July 13, May 15, and Spring National Meeting.

Crawford made a motion, seconded by Clements, to adopt the Task Force's July 13 (Attachment One), May 15 (Attachment Two), and March 23 (see *NAIC Proceedings – Spring 2023, Valuation of Securities (E) Task Force*) minutes. The motion passed unanimously.

2. Adopted its 2024 Proposed Charges

Mears said next item is to consider the Task Force's 2024 proposed charges, which are unchanged from 2023.

Doggett made a motion, seconded by Malm, to adopt the Task Force's 2024 proposed charges (Attachment Three). The motion passed unanimously.

3. Received a Report on the Projects of the Statutory Accounting Principles (E) Working Group

Mears said the next item is to hear a report on projects before the Statutory Accounting Principles (E) Working Group.

Jake Stultz (NAIC) said the Working Group adopted several items and briefly discussed several items interest to the Task Force. First, the Working Group adopted the majority of the items from the Principles-Based Bond Project, including revisions to the *Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities*, and several other SSAPs that were affected by the changes. This effectively changes the Principles-Based Bond Definition for bonds, which includes issuer credit obligations and asset-backed securities (ABS). The changes are effective Jan. 1, 2025. Stultz explained that as part of the same

project, the Working Group exposed revisions to *SSAP No. 21R—Other Admitted Assets* to provide guidance for accounting for debt securities that do not qualify as bonds and provide proposed measurement guidance for residuals. The exposure also includes the updated issue paper that details the discussions and development of this guidance. The Working Group would also sponsor a Blanks proposal to revise Schedule BA, and it will send a formal notice to the Task Force and the Capital Adequacy (E) Task Force on the proposal to allow life reporting entities the ability to use existing Schedule BA reporting provisions for Securities Valuation Office (SVO)-assigned designations in determining risk-based capital (RBC) for debt securities that do not qualify as bonds.

Stultz mentioned an item that he explained is less investment-related but has been a major focus within the NAIC over the previous year. The Working Group adopted *Interpretation (INT) 23-01: Net Negative (Disallowed) Interest Maintenance Reserve*, which provides optional limited-time guidance that allows the admittance of net negative disallowed interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. INT 23-01 will be effective until Dec. 31, 2025, and it will automatically be nullified on Jan 1, 2026, but the effective date can be adjusted. In addition, the Working Group directed the formation of an ad hoc subgroup to work on a long-term solution to the issue.

The Working Group also re-exposed agenda item 2023-11-EP: AP&P Manual Editorial Updates, which provides for revisions to clarify the scope and reporting of investment structures and residual interest, primarily limited partnerships, joint ventures, and other equity fund investments. The agenda item is primarily focused on *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies investments*. There were two additional items adopted by the Working Group: 1) revisions to *SSAP No. 34—Investment Income Due and Accrued*, which clarifies and incorporates a practical expedient to the paid-in-kind interest aggregate disclosure in *SSAP No. 34 and Annual Statement Instructions*; and 2) revisions to *SSAP No. 43R* to incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and clarify that CLOs are not captured as legacy securities.

Stultz noted that the Working Group will have a shortened comment deadline for four items that were exposed: 1) *INT 23-02: Third Quarter 2023 Corporate Alternative Minimum Tax*; 2) *INT 23-03: Corporate Alternative Minimum Tax Guidance*; 3) agenda item 2022-11: Collateral for Loans; and 4) agenda item 2023-11-EP.

4. Discussed Comments on a Proposed P&P Manual Amendment to Update the Definition of an NAIC Designation

Mears said the next agenda item is to continue the discussion on the comments received on the proposed amendment to update the definition of an NAIC designation. As mentioned during the Task Force's July 13 meeting, the amendment was referred to the Capital Adequacy (E) Task Force, the RBC Investment Risk and Evaluation (E) Working Group, and the Statutory Accounting Principles (E) Working Group requesting comments. Those groups did not have any comments. During the July 13 meeting, the Valuation of Securities (E) Task Force directed the SVO to work with industry on creating a brief, straightforward statement as to the objective of an NAIC designation and why it is different than a rating agency rating and make additional updates to further simplify the definition. The SVO was also asked to consider different ways it could communicate to state insurance regulators the issues encapsulated in the current Subscript S descriptions and examples.

Marc Perlman (NAIC) said NAIC designations are explained and defined in both Parts One and Two of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual). The SVO proposed consolidating the explanations and definitions into Part One, because an NAIC designation is a fundamental policy of the Task Force. The amendment tried to clarify the meaning of an NAIC designation, including a designation's use, purpose, and risks addressed. Given the comments received, additional refinements to the amendment are necessary, such as adding a summary of the overall regulatory objective of an NAIC designation. The SVO met with industry on July 28 to begin discussions on additional definition simplifications and clarifications that can be brought back to the Task Force for consideration at a future date. Perlman said there appears to be some unfortunate general confusion about the proposed definition amendment, as most of the text would be unchanged. Nothing in the

update changes the scope of responsibility for the SVO. An NAIC designation should reflect the likelihood of timely and full payment of principal and scheduled periodic interest, as appropriate, as well as the probability of principal and interest payment default.

There were several references made in the comments to the work conducted by the Risk Subgroup of the Invested Assets (E) Working Group, the predecessor to the RBC Investment Risk and Evaluation (E) Working Group. The Subgroup identified eight different risk attributes of a fixed income investment: credit, deferral, event, liquidity, call, extension, currency, and leverage. The Subgroup noted, “the impact of deferral was already explicitly incorporated into rating agency credit ratings.” Given that it is explicitly incorporated into ratings, any deferral of payment is a risk that should therefore be considered as part of credit risk in the definition of an NAIC designation. The other risk attributes mentioned—events, liquidity, call, extension, currency, and leverage—and another risk referenced in the comment letters, portfolio risk, are not part of the current designation definition or contemplated as part of the proposed amended definition.

Perlman explained that a long-standing core objective of the Task Force and its work product, the NAIC designation, which is relied upon for many regulatory functions in the NAIC’s Financial Regulation Standards, is to “assess the financial ability of an insurer to pay claims, meaning the regulatory assumption is that a fixed income instrument called debt by its originator or issuer requires that the issuer make scheduled payments of interest and fully repay the principal amount to the insurer on a date certain. A contractual modification that is inconsistent with this assumption . . . may result in the insurer not being paid in accordance with the regulatory assumption.” This existing regulatory assumption that an insurer should be repaid in a timely, periodic manner is a core characteristic of an NAIC designation and credit risk, and it should be incorporated into the definition. Likewise, the statement that NAIC designations are, “standards identified in the NAIC Policy Statement and Financial Regulation Standards (SFRS) that have been incorporated into state law by States as participants in the Accreditation Programs administered by the Financial Regulation Standards and Accreditation (F) Committee,” is a factual statement in the current definition that must remain in the updated definition. Commenters suggested that loss given default (LGD) should also be considered when assigning an NAIC designation. Perlman said the SVO agrees, and including LGD would be a similar consideration to including tail risk in that it is appropriate for certain asset classes, structures, or rating levels. Consideration of LGD and tail risk could be used to adjust an NAIC designation up or down, as appropriate. Perlman said if the Task Force agrees, the SVO can include these considerations in the definition.

Perlman said inclusion of separate instructions related to the assignment of the NAIC Designation Subscript S and its related illustrations also caused unintended confusion. The SVO would be happy to work on creating another means to broadly communicate privately to state insurance regulators that an investment may have unusual risk characteristics. It could take time to implement technology enhancements to deactivate Subscript S and create a new communications channel, such as specialized Jumpstart reports to share with the affected state insurance regulators through NAIC systems. However, Perlman explained that the SVO would be able to continue to communicate any issues or concerns it sees to state insurance regulators through things such as regulator-only educational meetings, informal calls, or new proposals to the Task Force, as needed.

Three comment letters were received: 1) a joint letter from the American Council of Life Insurers (ACLI), the Private Placement Investors Association (PPIA), North American Securities Valuation Association (NASVA), and Structured Finance Association (SFA) that included additional NAIC proceedings from 2008 of the Risk Subgroup of the Invested Asset (E) Working Group; 2) a letter from Athene; and 3) a letter from Anderson Insights LLC. The SVO plans to work on making these updates and bringing a minimally revised version of this amendment back to the Task Force for consideration.

Michael Reis (Northwestern Mutual), representing the ACLI, the PPIA, the NASVA, and the SFA, discussed some of the broad parameters of what may happen with the amendment. He said LGD should be part of the NAIC

designation, but there was still confusion about whether tail risk should be in the definition. He said the members of the groups he is representing had varying opinions and need to fully vet it. He asked regarding Subscript S whether there would be a broad statement of what nonpayment risk is within the NAIC designation definition. Charles Therriault (NAIC) said Reis is correct. The concept would remain within the definition, but the separate reporting would be eliminated. Reis said Perlman mentioned a lot. He said the devil is in the details, and he needs to answer to his trade groups' constituents.

Sasha Kamper (Apollo and PPIA) said the PPIA has worked with the ACLI, others in the trade groups, and the SVO on the exposures. She explained that when industry drafted its responses regarding tail risk, the PPIA did not understand how tail risk would be used. In subsequent discussions, she said she understands that the concept of tail risk within a designation definition is to be a principles-based approach. She said she agrees that it is something to look at and figure out the details of how it is used later. She cautioned that if tail risk is included, it is important to be careful that various asset classes are treated fairly and tail risk is applied in a consistent way across asset classes. As she socializes the amendment with her constituents, she will probably have more to say both on tail risk and LGD. She said she is appreciative that it might be appropriate to look at LGD in certain situations.

Mears, with the permission of the Task Force, directed the SVO to: 1) continue to work with industry on the proposed amendment and draft language regarding the consistent treatment among asset classes; 2) include a brief summary of the overall regulatory objective or meaning, which would reflect the likelihood of the timely and full payment of principal and scheduled periodic interest, noting that the risk of payment deferrals will be included; 3) maintain the existing references to the NAIC's financial regulation standards; 4) include consideration of tail risk and LGD when appropriate for the asset class, structure, and rating levels; and 5) within its responsibilities to the Task Force, communicate with the Task Force as it finds different investment characteristics or other areas it believes the Task Force should know and potentially take action on. The SVO may also develop a means to communicate that information privately through internal systems that would not be public documents like Schedule D, and that process may take some time.

Chris Anderson (Anderson Insights LLC) said the topic calls for a very clear, concise definition in simple language that everybody can understand of what is in and what is out of a designation. He stressed that coordination between the other NAIC entities is paramount. As an example, he said if one looks at how RBC C1 and R1 factors were computed, both the frequency of probability of default and the severity were considered. LGD may or may not be in the RBC factors to the extent that it is appropriate. Chris Anderson said it is a matter that should be considered by the other NAIC entities as well, and having a clear and concise definition to share with them could be very beneficial.

5. Discussed Comments on a Proposed P&P Manual Amendment Authorizing the Procedures for the SVO's Discretion Over NAIC Designations Assigned Through the FE Process

Mears said the next agenda item is to discuss the comments received on a proposed amendment authorizing the procedures for SVO discretion over NAIC designations assigned through the filing exemption (FE) process. The topic was introduced during the May 15 meeting, and it stems from the Financial Condition (E) Committee's charge to the Task Force to: "Establish criteria to permit staff discretion over the assignment of NAIC Designations for securities subject to the FE process (the use of credit rating provider [CRP] ratings to determine an NAIC Designation) to ensure greater consistency, uniformity, and appropriateness to achieve the NAIC's financial solvency objectives." Mears reminded various interested parties of the evolution of the topic. Several years back, the process began of receiving private letter rating rationales to get more transparency into the growing use of private ratings. At that time, there was discussion of the possibility of implementing discretion over those ratings to adjust the designation, should it be warranted, with the expectation that the rating change would be instantaneous and automatic. State insurance regulators at that time decided against that route, acknowledging insurer concerns of feeling whipsawed from waking up one day to a new designation it would need to utilize.

Instead, the Task Force provided guidance to the SVO to bring thematic issues back to the Task Force to address, so the Task Force could look at the FE status of those asset classes. Mears said this approach worked well for a while. For example, principal protected securities (PPS) were removed from the FE process. However, the Task Force came across roadblocks as it observed more opaque structures. For example, earlier this year the Task Force deferred action on the proposed amendment related to removing structured equity and funds from FE following criticism from industry that the proposal was too broad. SVO staff recognized some issues with specific securities, and the common feature was the use of what was called structured equity and funds, or a feeder fund. However, there would have been several assets that would have been in scope that were not problematic. It was difficult to provide a scope that would be complete but also efficient in the number of assets that it captured. Industry asked if only the specific problematic securities could be addressed without removing whole swaths of assets from the FE process.

The Task Force was responsive to the industry request and directed SVO staff to draft the current proposal, which is meant to be limited in scope and target specific material risk assessment differences. Mears said the proposal was meant to have a distinct challenge process to provide insurers ample notice, as well as due process, by which an insurer can appeal any potential change well before an FE-produced NAIC designation is affected. The amendment would also address the charge assigned to the Task Force by the Financial Condition (E) Committee. It is incredibly important to note that designations ultimately fall under the purview of state insurance regulators. While the definition is still being worked on, it is necessary to clearly highlight this authority of state insurance regulators and reiterate that designations are solely for use within the insurance regulatory framework, and they are not ratings themselves. The FE process is just that; i.e., exemption from filing that would otherwise be required to be filed with the SVO to receive a designation.

Mears noted rating agencies, or CRPs, provide an invaluable service, and the NAIC benefits by being able to use these ratings in the designation process, when appropriate. Given the number of securities and efficiencies gained by the NAIC in using rating agency ratings to assign NAIC designations, there is no intention of displacing or competing with them. However, because of how the NAIC uses CRP ratings in its processes, this is not an unconditional usage. There is a need and desire to build out a more robust framework for utilizing CRP ratings in the process, and that remains underway. However, Mears explained that even if this is implemented, there could still be instances where a rating is not aligned with NAIC expectations for a designation. The misalignment may even be unrelated to the CRP or methodology. A structure could theoretically have a rating that is fully appropriate outside the insurance regulatory system, but based on whatever policies or procedures the NAIC has in place at that time, the NAIC may need to make an adjustment within its framework.

In exposing this proposal, Mears explained that the Task Force and the SVO recognize that the proposed process is not the final version, and she asked for comments to be as constructive as possible. She thanked the comment letter writers, as many of the letters provided constructive comments. She said there were many good suggestions made by interested parties in the comment letters, and the Task Force and the SVO will be working through many of those suggestions for a modified proposal. Mears commented on some broad themes. First, there is no intent to displace or compete with CRPs. The process was written to be focused on particular assets rather than to subject a broad asset class to removal from FE. The FE status of most assets would be unchallenged. Mears clarified that insurers may continue to use whatever nationally recognized statistical rating organization (NRSRO) opinions they deem appropriate for their decision-making process. The proposal is specific to how NAIC state insurance regulators, as consumers of rating agency ratings for regulatory purposes, choose to use them in the regulatory process. Mears said the SVO will continue to provide a centralized source of investing expertise to support any state insurance regulators in this responsibility. She said while the involvement of an independent, third party to validate individual rating challenges would be costly, inefficient, and not aligned with the NAIC regulatory process, the Task Force should consider how to conduct additional oversight of the SVO in conjunction with the proposal, and that may involve engaging an independent third party to perform a periodic assessment of the reasonability of the SVO's analysis, its operational processes, and supporting systems. She said other themes in the comment

letters included additional transparency during the challenge process, more regulatory oversight, and possibly a look-back or review of the process after implementation. She noted that the Task Force and the SVO will look at each of the suggestions and consider carefully how it can enhance the process, whether as suggested or with a minor adjustment.

Therriault said the SVO has reported to the Task Force on several occasions that it has observed growing and often material discrepancies between the ratings provided by competing NRSROs for the same security. The SVO also reviewed with the Task Force specific examples of the significant differences it has observed with some CRP ratings versus the security's issuance spread relative to similarly rated investments, risk assessment differences when applying other CRP methodologies, and comparing the investment to other CRP rated peers. Therriault explained that the examples were all privately issued and privately rated securities, meaning the SVO cannot publicly discuss the specifics of the security, the rating, the rating methodology, or the rating agency. Other than a generic summary of the issue, the SVO is precluded from being transparent about the issues because it must maintain the confidentiality required by non-public investments. Commenters mentioned transparency repeatedly. Much of what the SVO sees are privately issued and privately rated transactions. By their very nature, there is no transparency of these privately issued investments, and the SVO is restricted from sharing all but the most generic information about them. Prior to 2018, when private letter rated securities first needed to be reported to state insurance regulators through the SVO, no one knew anything about these investments or that they were being privately rated. Additional transparency into these securities was only revealed to the Task Force through the SVO beginning in 2022, when the rationale reports first needed to be submitted. The rating exceptions identified by the SVO to the Task Force only came about because of the requirement for increased regulatory transparency into these non-public transactions. Otherwise, the Task Force would continue to be completely blind to these issues. Therriault cautioned that the SVO cannot be put into a position of being required to disclose highly confidential private information to anyone other than an NAIC state insurance regulator who has a regulatory need for this information or if compelled by a court order. Regarding SVO methodology, as the SVO stated on numerous occasions, it frequently uses large NRSRO methodologies, primarily Moody's Investors Service (Moody's) and Standard & Poor's (S&P), when it reviews securities because the SVO general finds those methodologies to be clear, reasonable, and widely accepted across financial markets. Additionally, Moody's methodology served as the basis for the current RBC factors. However, the SVO could provide a highly generic summary without breaching confidentiality, provided it does not identify the security or issuer directly or indirectly, or the rating agency, if privately rated. An example of such a generic summary for a recent filing would be something like the following:

An insurer submitted a security to the SVO for review in which the insurer applied a Moody's methodology, one of the primary CRP methodologies the SVO often uses to review securities. The insurer's application of the methodology scored the entity's brand strength at the 'AAA' level, while the top brands in this sector that were rated publicly by Moody's only received a 'Baa' for this factor, a substantial seven notches lower. Other financial measures used by the insurer when applying this methodology made adjustments to debt that lowered the amount of debt outstanding, adjustments that improved the financial ratios and are not used in this methodology. The resulting SVO credit assessment differed from the insurer's assessment by three notches.

Therriault said publishing information about the transaction in any greater detail, including the issuer sector and specific methodology, would probably violate the confidentiality the SVO must maintain. The SVO would be willing to discuss privately with those insurers that had invested in the security. If industry finds that level of transparency useful, the SVO could look into publishing that type of information on the SVO web page. As just demonstrated, there can still be significant differences of interpretation when applying a methodology, even from a large rating agency.

Perlman said many of the comment letters point to a rating agency's NRSRO status as a sort of seal of approval by the U.S. Securities and Exchange Commission (SEC), from which the NAIC should derive comfort as to the quality

and reliability of an NRSRO's ratings. He said it has been previously explained at Task Force meetings, but which bears repeating, that the purpose of the Credit Rating Agency Reform Act of 2006 (CRARA), pursuant to which the SEC grants NRSRO status, was to foster accountability, transparency, and competition in the credit ratings industry. The CRARA requires NRSROs to make public certain information to help users of ratings, like the NAIC, assess the NRSRO's credibility and compare the NRSRO with other NRSROs. As with other federal approaches to securities regulation, the focus of NRSRO regulation is on disclosure. While the SEC closely monitors the internal controls of NRSROs, governing conflicts of interest and adherence to their own methodologies, under the CRARA, the SEC is prohibited from regulating the substance of credit ratings or the procedures or methodologies by which an NRSRO determines credit ratings. The SEC does not and cannot validate or approve any rating agency methodology. The SEC does not and cannot endorse or certify that there is any equivalency between any NRSRO ratings. Ratings are opinions of risk, and the CRARA leaves it up to the consumers of ratings, like the NAIC, to decide how they will use those rating opinions for their own use, including not using them at all.

Perlman explains that under the current proposal, the NAIC, as a user of ratings, would neither be regulating nor publicly challenging any of the NAIC's methodologies. Additionally, several comment letters proposed oversight processes for the SVO, which appeared to be excessive and intentionally burdensome, given that no such process exists for NRSRO ratings. If a ratings consumer disagrees with an NRSRO rating or the reasonableness of some aspect of its methodology, the consumer cannot appeal to the SEC or an independent third party to overrule or modify the methodology or rating. The consumer can instead use or rely on NRSROs with methodologies that meet its needs. As mentioned in prior meetings and by some of the commenters, there is no provision in any NAIC guidance, such as the P&P Manual, that permits any state insurance regulator or the SVO to overrule or disallow a CRP rating. Perlman said that is precisely the purpose of the amendment, to create a means by which the NAIC can decide, through the efforts and experience of the SVO, how it will use those rating opinions or not use them at all when regulatorily appropriate. The premise that CRP ratings should be untouchable, unquestionable, and unchallenged by the NAIC was implied in many of the comment letters. However, such treatment is in direct contradiction to the policies of the Task Force and the mandate from the Financial Condition (E) Committee. It is also inconsistent with the objective of the CRARA of allowing the consumer of ratings to decide how and if they will use those rating opinions. The NAIC does not avail itself of that right.

Therriault said it would be helpful to step through the proposed process envisioned by the amendment. Step one is the establishment of the materiality threshold required to flag a CRP rating as in a review. To limit the NAIC's use of this process to only that which would be considered truly material differences of opinion, the SVO would only be able to put a security or CRP rating on notice if it determines, based on the available information, that the CRP rating used in the FE process is three or more notches different than the SVO's assessment. The SVO proposed criteria that it has successfully used to identify such exceptions for the Task Force, which is the comparison to peers rated by other CRPs, the securities yield at issuance or current market yield compared to other securities at that NAIC Designation Category level, or the SVO applying methodologies from another CRP. The SVO frequently uses methodologies from very large NRSROs because it finds them to be clear, reasonable, and widely accepted across the financial markets. However, there can still be differences in the application of the methodologies, which can be discussed with a specific insurer.

Therriault said step two is a means to notify insurers that the SVO is looking at the FE-based designation. Nothing changes at that point; it is just a notification. It is anticipated that insurers will provide additional information to the SVO during this notification period to support why the CRP rating should be maintained. What information will be needed depends on the specific types of securities; there is not a standardized list. It is subject to the asset class that is being reviewed and the information available to the SVO. The proposal provides a sufficient notice period to allow an insurer to decide whether it wants to appeal and provide additional information before any action is taken. Insurers would have up to 120 days to appeal the SVO's assessment notification by introducing additional information and data, as necessary. The 120-day appeal period is similar and consistent with the existing appeal period for an SVO-assigned designation. If an insurer appeals, that review process could take an

additional 90 days or longer. During the SVO review, applicable state insurance regulators would also have the opportunity to be consulted on the deliberation if they request. If, after the SVO review, it determines that the CRP rating should be excluded for that security, the insurer would have another 120 days to either submit the security for review by the SVO or acquire an alternate CRP rating, thereby permitting continuation of the FE eligibility.

Therriault explained that it may take nearly a year or more from the initial notification until any action is taken on an investment, providing insurers ample time to respond and participate. There will not be any abrupt changes. The discretion process could take two to three years to implement and could be designed to permit multiple insurers that own the security, as reflected in the statutory schedules, to join in the appeal. The connection to the statutory schedules is necessary to allow SVO staff to know which insurers are permitted to have access to the confidential information related to the security and who they can share their observations with given that these may likely be privately rated securities. It would be up to the insurers to decide whether they wish to participate.

Therriault said the SVO assessments of investment risk have been compared to insurers' own investments' assessment of risk, and they have been found to be reasonable. He noted the Society of Actuaries (SOA) study titled, "2003 to 2015 Credit Loss Experience Study: Private Placement bonds," for the topic of "Rating Consistencies: The main quality rating used in the study, the internal rating supplied by the contributors, [i.e. the insurance companies] for each CUSIP for all years, was found to be consistent across two dimensions. Based on comparisons of commonly held CUSIPS, [internal] ratings were very consistent between contributors. They were also reasonably consistent in comparison to NAIC ratings [i.e. designations]."

Therriault then listed actionable recommendations from interested parties that should be incorporated into the proposed amendment:

1. The SVO publishes a generic summary of the reason for its action; i.e., that it maintain the confidentiality of the issuer, rating agency, and rating.
2. Include in the SVO's annual report to the Task Force at the Spring National Meeting information on several ratings challenged, the outcome of the challenges, and the average number of notches of the change.
3. Separately, submit a request to the Executive (EX) Committee authorizing the NAIC to engage an independent third party to perform a periodic review and assessment of the reasonability of the analysis, its operational processes, and supporting systems, and provide the Committee with a private and public assessment and recommendations. It would be up to the Committee as to how frequently such a report should be submitted.

Therriault said credit analysis is both an art and a science; differences of professional opinion are unavoidable. The SVO has proposed materiality thresholds to ensure that it is only focusing on material differences of opinion. The SVO agrees that CRPs have areas of strength and expertise, but they also recognize that there are eight different sources of credit rating opinions today, and those opinions can be significantly divergent. NAIC Designations are specifically intended for state insurance regulators, and they do not have a choice as to the opinions used in their regulatory framework. The proposal gives the state insurance regulators, through the SVO, over which the Task Force has oversight, the ability to align opinions to their risk tolerance. The checks and balances in the proposal, with the modifications that were mentioned, will provide the Task Force and industry comfort that the investment risk assessments are reasonable. The SVO recommends that the Task Force continue its overall assessment of CRP ratings, a project it initiated last year.

Walker said she understood the process, and the direction to SVO staff to draft the process, was about strengthening Task Force reliance upon the CRP ratings, but also allowing a relief valve whenever staff or state insurance regulators notice significant outliers in what is being produced through the process. Therefore, Mears' opening comments, that this process is not intended to replace CRPs aligns with Texas's view. Garcia said it should

create certainty for industry going forward that new and emerging asset classes are developed; this process can be used as opposed to creating uncertainty with an insurer not wanting to get into the new asset classes because it does not know whether the new asset class will be FE or not. She said the process is painful at this at this time, but it is a great base and foundation to build on going forward, as there is more innovation in the investment markets, and it will prevent retreading the same ground repeatedly. She said she was excited to hear what Therriault explained about the process. She said it is not perfect now, but we will take all the feedback and work through an iterative process to get something that everybody knows, understands, and is comfortable with.

Cotrone asked Therriault to confirm that no action will be taken on an NAIC Designation until after the insurer is notified and can go through the full appeal process. Therriault confirmed and explained that first there would be notification that the SVO is looking at something that it thinks is off the mark. The insurer could provide information to discuss that with the SVO. At that point, the SVO will know, if it is a private rating, that it has the ability to breach that confidentiality shield. Then, the SVO can discuss that with the insurer and decide if it wants to appeal. When the SVO decides that it should be removed from FE, there is still the option to go to an alternate rating agency to get a different answer or file the security with the SVO for review. Therriault said the process could take nearly a year before security moves from FE to out of FE or to another CRP.

Mears said several comment letters were received on the proposal, and she wants to ensure that everyone has a chance to speak to their comments. She listed the comment letters: a joint letter from the ACLI, the PPIA, the NASVA, the SFA, the Mortgage Bankers Association (MBA), and the Commercial Real Estate Financial Council (CREFC); the Lease-Backed Securities Working Group; Chris Anderson; Michelle Delaney; the National Association of Mutual Insurance Companies (NAMIC); the Bank of Montreal (BMO); Genworth; Teachers Insurance and Annuity Association of America (TIAA) Financial Services; Piper Sandler Companies; Group 1001; and Marty Carus (Martin Carus Consulting LLC).

Reis said he would briefly summarize the letter from the ACLI and the joint trades with the most basic concern being related to transparency. The first issue is that the designation challenge rests with the SVO and one state insurance regulator, yet other insurers may hold that same security, perhaps in other states, potentially resulting in extraterritorial regulatory approval. Also, the SVO would be making its objection or determination of a material discrepancy based on incomplete information. Then, on appeal, the insurer would be allowed to provide additional information. Reis said that seems more like an initial filing rather than an appeal. He said this was concerning to many members of his constituency. He said his constituency also thought there should be additional checks and balances on "appeals." He said there should maybe be a third party so the SVO is not judge, jury, and executioner, a term discussed by his constituents. He explained that there should be transparency to all partners affected and transparency about what is affected, whether it is just the security; a whole asset class; a subset of an asset class; something broader than the asset class, such as a methodology; or one or more rating agencies. There should be transparency as to the rationale and what was inappropriate with the rating rationale. Reis explained that the reason for the transparency request is if there is a problem with a security and that rating gets changed, industry will be left wondering whether the problem is with the whole asset class or a subset of that asset class. Industry is concerned that the private market, of which industry holds substantial assets, could freeze. Reis said there have been instances where certain segments of that market have been frozen due to challenged ratings or similar things. He said industry is ready to assist in addressing specific problems that are identified, but there are problems with transparency. He said Therriault had mentioned that the SVO uses large rating agency methodologies, but industry has heard that those rating methodologies can be misapplied. He explained that a rating methodology applies to apple pie, but it might inappropriately be applied to pumpkin pie. He said there are specific instances where that has happened, and he said he could share the details later. He then addressed materiality. He said it is predicated on a material discrepancy in ratings, and the SVO would be making its objection to a rating with incomplete information. He then addressed the appeal, which he said is not really an appeal but rather a security filing so the SVO has complete information. He reiterated his belief that there is not a real appeals process where there is recourse other than to the SVO.

Mears asked Reis to describe his concern about the providing of incomplete information. She asked if it is that he would want to see that happen in a different order. She explained that by its nature, the SVO would not receive complete information. She asked Reis what he believes the process should be.

Reis said he would answer in two ways. One, the process as outlined would be that the SVO thinks the rating is X, which is three notches higher or lower than the rating that is assigned; therefore, your insurer can file an appeal. Otherwise, the SVO rating stands. Reis explained that the SVO assessment was made with incomplete information, which seems like a backwards approach and is not really an appeal. He said if there were a process, and he clarified that his group has not talked about what the solution is, and the SVO would like to get additional information, it could be shared. He said that is a different process; i.e., the SVO saying it has the answer based on incomplete information.

Therriault said the process envisioned was for the SVO to give notice of what it is thinking and, at that point, to ask industry, through the notification, for additional information. If industry believes the SVO is off the mark, that would be the means by which the SVO would get the information Reis described. Therriault explained that if the SVO does not have a means to communicate to all parties that may be invested in the security in an efficient way, the SVO will not know who to reach out to, how it is going to get the information, and how it is going to be transmitted through NAIC systems. He explained that even if the SVO received the information, it would not be an automatic change in the designation. The only thing it would do is remove it from the population of FE, which then means it is a status change, then the insurer has other options to avail itself, such as another CRP rating if they want to request an alternate review, or a traditional full SVO filing, if the SVO had not received sufficient information already.

Reis said much of the process outlined by Therriault presumes that the rating is wrong based on the SVO assessment, which is based on incomplete information.

Therriault said that is correct, but he referred to the comments made by Perlman; i.e., there is no challenge process for a rating that exists anywhere. One cannot tell the SEC that rating agency X's rating is incorrect and ask the SEC to overrule it or make the rating agency change the answer. Therriault explained that this is a way for the state insurance regulators to avail themselves of a professional group that supports them to provide that function.

Mears said maybe there is another notification process where additional information is needed or something along those lines. She said we can take back that concern and think through what the enhancements would be.

Reis said there is a strong conceptual concern, but there are broad implications. If there is a hundred X types of securities in the market, one of those securities gets picked, and that rating gets notched down three notches, it is going to spread like wildfire through industry that the SVO has a problem with X security. Reis explained that industry would not know what the problem with the security is, and questions would arise, such as whether the whole population of 100 securities is at risk; whether it is a sub-population of those 100 securities that has certain characteristics; or whether it is the rating agency methodology that may rate 40 of those, but the other 60 are not at risk. He explained that if there is fear in the market, that whole population of securities could freeze up because certainty of capital is lacking.

Kamper talked regarding incomplete information. She said what industry envisioned that the information that the SVO would have on the security is the private ratings letter and whatever information is available on Schedule D. The SVO would not have had access to the financials, a private placement memorandum, the legal docs, etc. When this proposal is put into action and those securities would be flagged, that is then when the SVO would come and talk to the insurer; the insurer would provide that information; the SVO would do a more thorough due diligence; and there would be a discussion most likely between the insurers that own the security, the CRP that rated the

security, and the SVO. Kamper said her constituents view that dialog as similar to an initial filing, as if the SVO would have designated and assigned a designation absent a CRP rating. She said one of the concerns is that in the rare chance that after going through that process, the insurer and the SVO cannot come to a meeting of the minds and the insurer still feels strongly that there are fundamental reasons why the rating is appropriate and there is information the insurer wants to present, there needs to be a second place to have that dialog again. She said it is important that in the rare situations—most likely a methodology challenge—where there is something fundamental about the asset class that would affect a broad number of securities, not just any individual security, insurers would like to be able to bring its concern to the Task Force, or some subset thereof with expertise in these issues to bring the concern to. She said she would not envision that happening frequently, but she believes it is important to have an additional place of appeal because her constituents view the 120 days in the exposure as more like an initial filing. With respect to confidentiality language, she said she understands it is a big challenge, but she knows the SVO has provided some examples in the past where it has masked which rating agency assigned the rating and just speak in terms of NAIC equivalent ratings, and it has masked the name of the issuer and watered down the information enough that people can understand what the nature of the underlying transaction is, but it does not necessarily give away who the rating agency is or who the issuer on the deal was. She said the SVO has been able to overcome that challenge in the past and share with the small group, and that is the type of disclosure that industry is looking for here, mainly to avoid what Reis was referring to, meaning the situation where if many insurers have similar securities and the SVO is concerned about a very specific issue that affects the security or a certain methodology, that it does not cause unnecessary disruption to a broader range of securities than just that the SVO is concerned about and wants to challenge and talk about. She said from her constituents' perspective, transparency is key and would appreciate to the extent that the SVO can accommodate, as well as adequate due process, meaning a place to have concerns heard, be able to have a good dialog, and hopefully get to a decision that makes sense for everyone.

John Garrison (Lease-Backed Securities Working Group) said the Lease-Backed Securities Working Group believes the investment community and the state insurance regulators share the same desire for efficient, well-regulated markets that benefit everyone. It goes without saying that markets hate uncertainty. Any policy that allows the NAIC to question and potentially overturn individual CRP ratings after a bond has been purchased by the investor will inevitably create uncertainty in the markets and have a harmful effect on insurance companies, and they will be the only market participants subject to this added uncertainty. Garrison said even the mere discussion of the issue has already started to freeze markets for many securities where insurance investors have simply said they are not going to consider it because there is too much uncertainty involved with making that step. That being the case, the Task Force should strive, wherever possible, to minimize the negative impacts of the policy while preserving the ability to effectively regulate. This could be done, Garrison suggests, by limiting the scrutiny to only those companies where state insurance regulators feel the problem rises to a level where it could have a material impact on an individual company's capital ratios, or by making it clear that only certain classes of securities would be subject to this additional level of scrutiny. Responding to the comments of Reis and Kamper regarding incomplete information, Garrison said the fear is that the SVO will always be operating to some extent on incomplete information. To the extent that NRSROs can talk to management, they can do many things that the SVO is unable to do and that the Lease-Backed Securities Working Group believes the NRSROs will always have a bigger, fuller picture of a credit. Garrison said any analysis by the Investment Analysis Office (IAO) that questions the work of an approved CRP should be justified to the investor in the form of a full ratings rationale report equivalent to the fulsome reports published by the NRSROs and already provided to the SVO, which provide a detailed explanation of the analysis by the CRP, the credit issues, the legal issues, and any mitigants. Regarding the phrase of blind reliance on ratings, he said he understands that the state insurance regulators want to preserve the ability to question ratings in some instances, but it is hardly blind. The report prepared by the SVO or the IAO should highlight specific errors and omissions in the CRP analysis and the specific reasons the IAO reached a different conclusion. Garrison said the sample paragraph Therriault read as an example is insufficient. He said the SVO cannot just say it looked at all the same information, but it just came out with a different opinion. He also agreed that many of the proposed steps put forward by the Financial Condition (E) Committee framework to

modernize the SVO, including the establishment of a broad investment working group under the Committee to act as an adviser and hopefully to harmonize the various different investment-related projects that are underway, including this one, and also with the hiring of an external consultant to advise the Working Group and provide guidance on any policy-related issues. He said the Lease-Backed Securities Working Group believes that these recommendations, as well as the other steps contained in the Committee framework, should be brought into this discussion before any specific policies are implemented by the Task Force.

Chris Anderson said his comments are in the context of the Bond Project, which had just been adopted and should give state insurance regulators confidence that some of the problems that existed or may have existed will be dealt with. Turning to his letter, he said his conclusion was that it would be terrific to have a fresh look at how state insurance regulators can benefit from the resources of the NAIC with respect to their responsibilities to assess the credit quality of the assets of insurers. He referenced a study 25 years ago from an outside consultant and another more recent one saying those kinds of recommendations are appropriate now because the discretion proposal is a sweeping change in the responsibility of the SVO. He said years ago, the SVO was responsible for coming up with securities valuations, and now it comes up with some measure of risk, which in his opinion is essentially credit risk. He said it may well be time to look more fundamentally at how you can be served the best, and hopefully that can be addressed.

Chris Anderson said with respect to this proposal, there is tremendous new power that the SVO will have, and the idea that a security or a class of securities can be put under a cloud for even a brief period of time is market making and market moving and should not be ignored. The notion that it can be done for a year is inconceivable to market participants who are looking at securities on a moment-to-moment basis. The idea that one insurer may have information that other insurers may lack about the status of security and the reasons it is under a cloud can influence the fairness of trading. It could even prohibit the insurer from selling a security because of fear of trading on material nonpublic information. Chris Anderson said a proposal this sweeping needs to be accompanied by better governance, which is the theme of his letter. Regarding better governance, he said he outlined specific steps state insurance regulators can take to oversee the processes. The most fundamental step is something that existed before namely one, but probably more than one, working groups specifically dedicated to these questions. He clarified that a working group is a group that would actually do work. He said there cannot be 26 task force members all responsible for what goes on at the SVO; although, ultimately, they are. However, the Task Force needs arms and legs; i.e., people who are focused on it. Chris Anderson said in his letter that he outlined specific steps that can be taken for the Task Force to have visibility as to what goes on in the process.

The model is essentially what the SEC did when it wanted to have visibility and transparency to the work of rating agencies. Chris Anderson said it has been called burdensome, and he said it would take a significant period of time. He said he understands that that it would be a burden for the SVO because it has never done many of these things. He explained that the SVO has never produced the kinds of documents outlined in his letter, not the least of which is a ratings transition matrix, in other words the SVO's report card. With those documents, the Task Force will be able to assess the work that is being done by the IAO. Chris Anderson asserted that the idea that, as in the proposal, once a year the Task Force may request information about what the IAO has done in this regard is indicative of the notion that the proposal contemplates no disclosure. He said he is advocating for a group that digs into the operations of the SVO and demands accountability.

Chris Anderson said a second group that would be useful is something that existed many years ago, called the Rating Agency Working Group. The Working Group worked closely with the SEC. Chris Anderson said a web search will show interaction between the SEC and the NAIC concerning what kinds of information the NAIC would want. There are many things the Task Force could do, as state insurance regulators, if it had a working group to review the capabilities and performance of the NRSROs. Chris Anderson said Form NRSRO has incredible detail about the performance of rating agencies, and it is a model for the IAO. The SEC reports annually on infractions or

performance of rating agencies in a generic form, but there are several things the Task Force can do if it wants to focus on and improve state insurance regulator visibility on the performance of the NRSROs.

Chris Anderson is afraid that aside from the clouds it will cast over various securities and classes of securities, there are problems with this proposal. He asserted that the notion that one can come up with a three notch difference by using peer review, yield analysis, market yield, and other tools is flawed. He said by peer review specifically, the example of 43 securities was an apples-to-oranges comparison, and that was referred to an ad hoc group. He said he understands that that approach was never validated. Furthermore, if this is not intended to be used to an apples-to-apples review, in other words, two rating agencies rating the same asset, then for private placements, the SVO has noted that only 15% of private placements are rated by more than one rating agency. That means 85% of the private placements the SVO would be looking at would not be able to do an apples-to-apples review. Chris Anderson summarized that the proposal needs a lot of work, and hopefully there will be an opportunity for outside consultants to look at it.

Mears summarized Delany's comments stating that Delany noted that the NRSROs are regulated by the SEC and described the application process. Delany goes on to note that the NRSROs focus on collateral, along with the credit worthiness of the borrower. She highlights that she relies upon NRSROs for making credit decisions in a former role at a large regional bank. She suggests that the SVO should also be subject to an independent review in its provision of designations, as well as highlighting the suggestion that a third-party provider could assist with the request for proposal (RFP) for the review of the NRSROs.

Colleen Scheele (NAMIC) said NAMIC agrees with all other interested parties as it relates to transparency, and it looks forward to continuing the conversation with state insurance regulators and NAIC staff.

Mears summarized BMO's comments stating that BMO provided some considerations based on its observations. BMO noted that the rating agencies have been approved as NRSROs by the SEC due to comfort with their rating methodology and track record over time. They would like rating certainty, as there could be impacts to deal flow. They also note that adoption of this proposal could set a precedent for future negative amendments, increasing the riskiness of investing in private placements.

Michael Shepherd (Genworth) said he believes Genworth's concerns had been addressed by the ACLI and others.

Mears summarized the TIAA's comments stating that the TIAA has specific concerns with Sections 81 and 170 of the proposal. The TIAA does not believe the proposal demonstrates a requirement for the SVO to provide its own analysis or explanation as to why the CRP provided rating was challenged. The TIAA also makes a reference to an assumption that we have gone through this process before with 43 securities, and the Task Force did not approve a method to override the ratings at that time. The TIAA recommends that a clear methodology be outlined, and it noted that the SEC closely regulates all the NRSROs.

Mears summarized Sandler's comments stating that Sandler indicated that the current NAIC proposals have already caused major market disruption as word of the pending proposals permeated all levels of the insurance industry. They said some number of insurance companies have instituted a moratorium on certain rated transactions in the markets, and prior to buying a particular transaction, insurance companies should know what the NAIC Designation will be in order to monitor the regulatory capital charges. They talk about some of the rating agencies that are in the market, and they have seen some potential drop off in the total number of deals and respective transaction sizes. An increasing number of insurance company investors learned of the proposed NAIC/SVO's intent to provide the credit risk designations to FE securities, and they noted that the market has come to a virtual halt denying many strong and viable companies the ability to raise capital. They give some statistics regarding some of the ratings that have been in place. They note that the NAIC/SVO does not have the required resources, analytical capability, or regulatory status; i.e., not an SEC-regulated NRSRO to implement

unexpectedly high credit risk designations. They say insurance clients always carry out intense due diligence and all corporate credits that have come to the market. They note that this could impede the ability of smaller corporations to raise capital and provide strong value added investments for the insurance industry.

Bob Turner (Group 1001) said Group 1001's letter echoed many of the other themes from the other letters. He said he wants to discuss the impact of the Bond Project. He said many of the examples brought forth to industry in previous meetings would be addressed by the Bond Project and the new definition. Consideration should be given not just in the scope of securities that could be affected, but the timing of having to implement the Bond Project at the same time. The total scope of this proposal seems to be unlimited and could affect any number of securities, so there should be some consideration given to certain attributes of securities. Previously, there was the bespoke security letter that talked about red flags. Likewise, there should be attributes to some securities where insurers can have confidence that there will not be any expectation of a challenge based on certain attributes of those assets within the marketplace. Turner also said he echoed what other people said about transparency, and more insight into specific concerns would allow industry to come to the table with some alternative solutions, as well as the SVO's methodologies so people can better understand any appeal process and what the SVO's rating methodology would look like.

Mears summarized Carus's comments stating that he notes his experience as a state insurance regulator for 43 years and participation in NAIC activities during that tenure. He is now a consultant, but he offers his comments as a consumer policyholder of various insurance products and investor in insurance companies and as a taxpayer. He notes this proposal, like most NAIC proposals, does not define the associated costs that are ultimately borne by policyholders or investors. The proposal also does not estimate quantification of the benefits associated with it. As a taxpayer, Carus finds this problematic. He views this proposal as an attempt to overturn the existing FE process. He notes that no major market participant has encountered a severe adverse market event in decades. He lists several questions, including why the proposal is being made at this time, why there is no materiality threshold, what specific conditions have arisen, whether the insurance industry has experienced a financial strength decline due to its investment operations outside of the normal cyclical economic conditions, whether there are examples of companies abusing the fee process to the extent that its RBC calculations were materially misstated, and whether the current solvency regulatory regime is good enough as it is. He then goes on to note concerns with the fact that the timing of the challenge would occur after the investment is made.

Steve Broadie (American Property Casualty Insurance Association—APCIA) said the APCIA did not file comments, but it wants to associate itself with comments made by the ACLI and the other trade associate associations that joined in that letter.

Mears said the next steps are for the Task Force to provide direction back to SVO staff. The direction is to work through the actionable comments in the comment letters and incorporate, as needed. Mears said she would look to Task Force members if there are any specific areas that should be highlighted and further discussed.

Crawford said from the Nebraska standpoint, as heard from several commenters, there is a need to look back at the appeal process and the process of bringing the concerns to an insurer. The ultimate authority needs to rest with the states, and there should be a solution where the authority lies with the states. It could be through a committee, because of the issue of when a company in one state of domicile affects multiple. Crawford mentioned overall transparency and heard the concerns that were brought before the Task Force. The Task Force needs to take those seriously and provide as much transparency as it can, understanding the legal implications of that.

Cotrone said Connecticut agreed with Nebraska's comments. He said there is a need to take into consideration interested parties' comments, such as how to improve the process. He said the comments have provided some very valuable insight.

Mears said most Task Force members would be in agreement that increasing transparency would be a priority. It can be looked into in accordance with the confidentiality issues. There should be an annual report on the number of ratings challenges, outcome of challenges, average number of notches, and possibly some interim reporting, particularly at the initial onset of such a process. Mears said the Task Force should request the engagement of an independent third party to periodically review the operations, analysis, and systems of the IAO. It would require Executive (EX) Committee authorization, but there is the Financial Condition (E) Committee framework that contemplates the usage of such a resource for a purpose like this. Every suggestion that was made will be reviewed in good faith to determine whether it can be incorporated into the process. Mears asked Task Force members to read through the comments and think about this so further guidance can be provided to the SVO as this proposal is updated. She noted the related pending Financial Condition € Committee exposure stating that it is much broader than this Task Force proposal. As comments are received on the Committee proposal that may have implications for the Task Force initiative, that will need to be considered.

6. Heard a Staff Report on the Proposed CLO Modeling Methodology and the Ad Hoc Working Group

Eric Kolchinsky (NAIC) said the collateralized loan obligation (CLO) ad hoc group has continued to set the assumptions for CLO modeling. The assumptions for prepay and purchase pricing were recently finalized. The next step is to look at scenarios and probabilities. There will be a suggested set of scenarios, and based on those, the CLO ad hoc group will seek to set probabilities such that the risk of the underlying loan is approximately equal to the risk of the sum of the tranches. Kolchinsky said the next meeting of the CLO ad hoc group would be after Labor Day.

7. Received Final CRP Questions

Mears said the next agenda item is to note that the SVO received feedback on the initial list of questions to CRPs. She said the responses were private because some of them came from the CRPs themselves, and the Task Force was not going to publish those comments. The responses helped to create a final list of questions, which are published on the Task Force website. The submissions will be formalized to the CRPs, which starts the timeline of scheduling meetings with them as the responses are received over the coming months.

8. Discussed Other Matters

Mears had one additional matter. Fitch Ratings downgraded the U.S. government to AA+ from AAA. Along with S&P, that makes two rating agencies that no longer maintain an AAA rating on the U.S. Currently, the NAIC Designation of U.S. government obligations is fixed in the P&P Manual at NAIC 1.A. Therefore, any upgrades or downgrades do not change the NAIC Designation as they would with the FE process. If the NAIC Designations were governed by the FE process, U.S. government obligations would be at NAIC 1.B. Mears said the Task Force will need to talk about this issue. She said there is no recommendation, but she wants to ensure that the Task Force understands the implications and how that flows through the system, and if there is anything the Task Force needs to address, either within the Task Force or even with some of the groups the Task Force coordinates with, including the Statutory Accounting Principles (E) Working Group and the RBC Investment Risk and Evaluation (E) Working Group.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

Draft: 8/1/23

Valuation of Securities (E) Task Force
Virtual Meeting
July 13, 2023

The Valuation of Securities (E) Task Force met July 13, 2023. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Eric Dunning, Vice Chair, represented by Lindsay Crawford (NE); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Michael Yaworsky represented by Ray Spudeck (FL); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Bill Warner (LA); Kathleen A. Birrane represented by Matt Kozak (MD); Gary D. Anderson represented by Jim McCarthy (MA); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Justin Zimmerman represented by John Sirovets (NJ); Adrienne A. Harris represented by Jim Everett (NY); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Amy Garcia (TX); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted a P&P Manual Amendment to Clarify the Meaning of Repurchase Agreements in the Derivatives Transaction Definition for Funds in Part Three

Mears said the first item on the agenda is to discuss and consider adoption of a proposed technical *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) amendment to clarify the meaning of repurchase agreements, or repos, in the derivatives transaction definition for funds in Part Three of the P&P Manual.

Marc Perlman (NAIC) said in 2021, the Task Force adopted amendments to the NAIC Fund Lists section of the P&P Manual to provide greater clarity and predictability regarding the applicable use of derivatives in funds and permit funds greater flexibility in their use of derivatives while maintaining limits on funds' use of leverage. The Securities Valuation Office (SVO) proposed a new amendment to clarify which side of a repurchase agreement constitutes a derivative transaction for the purposes of the definition. The original amendment was intended to limit the use of leverage by funds; therefore, the derivative transactions definition encompasses instruments pursuant to which a fund may be required to make a future payment of cash or other assets. Likewise, the inclusion of reverse repurchase agreements, as based on the U.S. Securities and Exchange Commission (SEC) definition in Rule 18f-4, was intended to capture arrangements by which the fund would allow a future cash payment to the counterparty. However, to maintain consistency between the P&P Manual and the Statement of Statutory Accounting Principles (SSAPs) and eliminate any misconception that a fund cannot be the purchaser of securities/lender of cash, the SVO proposes changing reverse repurchase agreement to repurchase agreement in the derivatives transaction definition. To be clear, the SVO is not intending to change the meaning. Rather, the same side of the transaction was named differently by the SEC and the SSAPs, and the SVO wants to be consistent with the SSAPs. The proposed amendment was exposed for a 45-day public comment period that ended June 30, and the Task Force did not receive any comments.

Everett said the SEC definition is written from the broker-dealer perspective. He asked if it makes a difference that the Task Force is now dealing with the issue from a broker-dealer perspective rather than a counterparty perspective.

Perlman said regardless of the perspective, the SEC defined it in reverse. The SEC was looking at it from the fund perspective. It just defined it in reverse. Not only was it the opposite of what is in the SSAPs, but it was also the opposite of the general market convention. The SVO wants to align it with the SSAPs.

Michael Reis (Northwestern Mutual), representing the American Council of Life Insurers (ACLI), said the ACLI supports adoption.

Spudeck made a motion, seconded by Andersen, to adopt the P&P Manual amendment to clarify the meaning of repurchase agreements in the derivatives transaction definition for funds in Part Three (Attachment One-A). The motion passed unanimously.

2. Receive Comments on a P&P Manual Amendment to Update the Definition of an NAIC Designation

Mears said agenda item number two is to receive comments on a proposed P&P Manual amendment to update the definition of an NAIC designation. Once comments are received, direction will then be given to the Task Force. Mears noted that because referrals were mentioned in the letters, the amendment was referred to the Capital Adequacy (E) Task Force, the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group, and the Statutory Accounting Principles (E) Working Group. The Valuation of Securities (E) Task Force requested that these groups let the Task Force know if the definition meets their needs. If the definition meets their needs, no response needs to be submitted; if the definition does not meet their needs, these groups should notify SVO staff. The Task Force gave a date of June 29 for each group to notify that it may be proposing a modification to the definition of an NAIC designation or request additional time. The Capital Adequacy (E) Task Force distributed the referral to its members and requested comments or recommendations on the definition of an NAIC designation by June 19, and no comments were received. The RBC Investment Risk and Evaluation (E) Working Group and the Statutory Accounting Principles (E) Working Group also distributed the referral to their members and requested comments and recommendations on the definition by July 7, and no comments were received. As no comments have been received nor indications that comments are forthcoming, the Task Force can presume that there will be no further comments, but it certainly will listen to any issues or anything that may arise from these groups if they still were to arise. Mears noted that a joint comment letter was received from the ACLI, the Private Placement Investors Association (PPIA), the North American Securities Valuation Association (NASVA), and the Structured Finance Association (SFA), as well as letters from Athene and Anderson Insights.

Therriault said, as mentioned in the last Task Force meeting, NAIC designations are explained and defined in both Parts One and Two of the P&P Manual. In this amendment, the SVO proposed consolidating the explanation and definitions to make a single uniform definition in Part One that captures all policies and concerns of the Task Force in one place. The amendment added clarifications as to the meaning of an NAIC designation, including their use, purpose, and the risks they address, as these attributes should also be policies of the Task Force, and it explains why NAIC designations are different from credit rating provider (CRP) ratings. The consolidation included the incorporation of the “NAIC Designation Subscript S” illustrations in Part Two into the “NAIC Designation Subscript S” subsection, of “NAIC Designations” in Part One because the description of other nonpayment risk is also a policy of the Task Force. Most of the updates in the amendment involve existing language that was either moved, consolidated, or eliminated if there was redundancy. The new text primarily clarifies the regulatory meaning and objectives of an NAIC designation and expands on the existing guidance. These changes were highlighted in yellow.

Reis, representing the ACLI, the PPIA, NASVA, and the SFA, said there are two related issues, which he will take separately: 1) the changes to an NAIC designation; and 2) Subscript S. He acknowledges that these are somewhat the same and interrelated, but he believes it is easier to address them separately. The three proposed changes to the NAIC designation are: 1) an NAIC designation should reflect the probability of default; 2) it should reflect tail risk; and 3) to a lesser extent, it should be in the context of the NAIC Policy Statement on Financial Regulation

Standards (SFRS) and other NAIC guidance. Part of the challenge for constituents is there was no reason given for the changes. Therefore, the impact, if any, is not understood. For example, if a rating agency used loss given default (LGD) in its methodology, there is the question of whether that means it does not comply with the probability of default and is therefore void. Reis noted that the RBC factors were determined using LGD. If nothing changed, then there is nothing to object to. However, if something changed, that should be understood.

The Capital Adequacy (E) Task Force did not comment about whether the proposed definition changes met their needs. The Task Force was asked to weigh in if anything in the proposed definition changes what an NAIC designation represents (e.g., the LGD versus probability of default or the tail risk), how that would be assessed, whether it would be similar, and whether that would be assessed similarly for a credit issuance bond or the same for asset-backed securities (ABS). If the proposed definition changes anything, another referral can be requested of the Capital Adequacy (E) Task Force or some acknowledgment that nothing changed and why.

Related to Subscript S nonpayment risk, included was a letter that was previously submitted. It is unclear if those questions were answered. This is a big change from what the P&P Manual says, and it is a big change in practice, or at least it could potentially be. It is also a big change from a comprehensive study with conclusions reached by the Valuation of Securities (E) Task Force back in 2008.

The comments distinguish between individual credit risk and portfolio risk. For example, interest deferral may be of interest to state insurance regulators if there are a lot of interest deferral securities. If it is being reflected in asset adequacy testing (AAT), that would be very different from a security with nonpayment risk (e.g., perpetual bonds), where it could miss payments and there are no repercussions. There is an agreement that would be nonpayment risk, and it should possibly be notched, but it is unclear if there is appropriate distinguishment, especially if this proposal means that all interest deferral bonds, all 40-year bonds, and all things that are listed as Subscript S would have to be filed with the SVO. The intent is not really understood, and the ask is twofold: 1) work collaboratively with the Task Force and the SVO on this; and 2) make sure everything is transparent and understood. This begs the question of whether that means 40-year bonds are filed or if that is portfolio risk versus individual credit risk. That is the summary of the letters, and the groups want to be constructive and work with the Task Force and the SVO to address the concerns.

John Golden (Athene) said Athene is right where the joint trades are in terms of the overarching concerns regarding Subscript S. The only thing to add on top of that are the concerns at the higher level above that, which is how to ensure a consistent framework across asset classes that are properly interpreted in the principle of equal capital for equal risk. Looking at a feature like Subscript S, it effectively has a notching right, that presumes that there is a consistent framework where rating agencies have a clear role, as defined, and state insurance regulators, the SVO, and everybody knows how they operate. For that reason, it is premature to have the proposal with a notching right when the basics of who does what under what methodology and how that interrelates with capital charges but also the broader RBC framework. It is hard to really understand how a notching right can be presented at a point where some of these basic foundational issues remain. A larger workstream is proposed that will oversee all the changes that are going on that are parallel across multiple different groups and ideas and functions to bring all of these workstreams together into an overarching look at the framework in its entirety. The rating agencies have a very significant role to play in this framework and the capabilities to perform the primary credit risk assessment across all asset classes effectively that are able to be rated at all. As a structural matter, the state insurance regulators and the SVO, in concert, should have better tools and more governance to oversee rating agencies, interact with them, and make sure they are meeting the credit risk and regulatory assumptions and principles that are set out by the NAIC. When there are bifurcations in how credit risk is determined, by whom or under what methods, or what tools apply to some asset classes or others, those are large concerns.

Mears said Athene's comments focused on the Subscript S component of the proposal, and she asked if Athene had any comments related to the NAIC designation definition itself. Golden said when thinking about how capital is ultimately set in the insurance industry, there are three things needed: 1) who is doing the assessment, because who is doing it matters; 2) under what method: a) intrinsic price; b) Moody's Investors Service (Moody's) methodology; c) Standard & Poor's (S&P) methodology; or d) something else; and 3) how that ultimately relates to the capital charges that were set up. All three of those things are now being proposed to effectively float relative to each other in some way. That is a very big problem in the long run. It is not a regime where there is a clear demarcation of lines and separation of duties and oversight. Sometimes there are people doing certain things depending on what asset class that is. When you think about what an NAIC designation is, it starts with basically what is a rating and then where the NAIC designation needs to be different than a rating. The question that should be asked in a very broad way is what it is that is trying to be solved with that rating versus an NAIC designation. If there is something about the rating agencies that they are doing that does not meet the regulatory objectives of an NAIC designation, a conversation should be had about that.

Chris Anderson (Anderson Insights) said the first thing to note is that there should be a clear definition of what is meant by an NAIC designation. Thinking about the charges of the Task Force, it has the ability to consider all kinds of metrics for assets under charge 4. Under charge 7, of which it is charged with coordinating with other working groups, such as the Capital Adequacy (E) Task Force, the Statutory Accounting Principles (E) Working Group, etc., it is also charged with ensuring that the objectives of its guidance is incorporated into the P&P Manual. It seems that the P&P Manual is looked at first before coordinating on a simple definition of what is meant by an NAIC designation. The principal user of NAIC designations is the Capital Adequacy (E) Task Force because it is used for the R1 and C1 factors. Therefore, when the Valuation of Securities (E) Task Force had that discussion with the Capital Adequacy (E) Task Force, the question was what does the Valuation of Securities (E) Task Force expect the Capital Adequacy (E) Task Force will say it wants in a simple definition. Because the rating agency ratings were used as a basis for R1 and C1 factors, even as it was recently revised, the Capital Adequacy (E) Task Force used essentially ratings of corporates, so the question is whether that is all the Task Force might want to have and is it adequate for the Task Force. That is the Task Force's call. The Task Force should be deciding what the basis for NAIC designations should be in the definition for NAIC designations. It has been said several times that NAIC designations are part of RBC, but RBC is a blunt instrument, so it is not necessarily precise. Additionally, because the Capital Adequacy (E) Task Force is such an important constituent, the definition should probably be tailored to its needs rather than the needs of someone who is developing this.

When thinking about credit, credit is risk of nonpayment. It is whether the investor is going to get paid. An analyst starts with the term sheet and moves on to the prospectus looking at all the terms and conditions in the transaction, not just maturity but every element. Those are all considered. They are considered by the analyst, the analyst supervisor, and the credit committee, and they all decide what the risk of nonpayment is from 1 to 10. The NAIC has had some differences and has acted through the Statutory Accounting Principles (E) Working Group to redefine bonds. Therefore, there are things rating agencies may have rated, and now thanks to the efforts of the Capital Adequacy (E) Task Force and the Statutory Accounting Principles (E) Working Group, those are going to be knocked out. However, the risk of nonpayment is credit risk, and there is not much more to it. When it comes to other risks of investing, and this is something that Reis referred to, there was a study of risks of individual investments, and credit risk is certainly one of those. The Capital Adequacy (E) Task Force will probably tell the Valuation of Securities (E) Task Force that is at the heart of what they would need. There is also call risk, and call risk could be identified. This could be very significant in the future. Coming off a high interest rate environment, it would be a negative thing for insurers to have their bonds called away as rates go down. Perhaps Subscript S could be used to indicate call risk. It is not credit risk, but it could be material. Currency risk is another way Subscript S could be used. If it could be identified that Subscript S one or Subscript S two indicates that there is currency risks, an examiner looking through a statement could see that there is a risk of currency. Something that may be more difficult is liquidity risk. Liquidity risk would be very interesting on a bond-by-bond basis. If an

examiner were looking at the overall liquidity needs of an insurer, and if they had great liquidity needs, then their assets should match that. The issue with a Subscript S for liquidity is the problem of coming up with a measure of liquidity. The SVO, according to its budget, looks at about 12,000 to 13,000 bonds, but for the rest of the universe, it might be hard to find liquidity. The other measures—extension risk, leverage, and event risk—are relatively hard to come up with a Subscript S, but there needs to be a consensus as to what the core of a definition is. If the Capital Adequacy (E) Task Force is looking at a simple definition instead of complicated P&P Manul language, it would probably come close to credit, but that is the Task Force's call. As for Subscript S, there is a use for it; it is not credit, but perhaps it can be used for other purposes such as call, currency, and maybe liquidity.

Mears said following the lead of the ACLI and the various trade groups included on their letter, and talking separately about Subscript S versus the broader NAIC designation definitions, she has been a big proponent of the type of information that Subscript S has to offer for some time, and she has used deferred interest or payments in kind as an example of that. It is an example of the type of information that the SVO has the tools to identify via the multitude of filings that come its way—i.e., private letter ratings and things like that—where it can really be that type of investment characteristic. That is an example, but it broadly refers to a whole host of investment characteristics that are included under Subscript S, as it was written in this proposal and probably ones beyond that as well. State insurance regulators have an interest in this information. Many recognize that it is not always going to result in the need to change the NAIC designation. For example, as Reis noted, if a company has a concentration in assets that can defer payments beyond what would be a normal expected schedule for cash flows, that certainly has implications for cash flow testing. That is the kind of information state insurance regulators would expect to come out of this Task Force with guidance from the SVO and its teams to define where to go from there. For example, a formal letter from the Life Actuarial (A) Task Force of how to incorporate these risks when materiality or exposure is growing is something that could be addressed. The ACLI, the PPIA, NASVA, and the SFA noted in their letter that it may be more of a portfolio risk than an individual investment; regardless, it is certainly imperative that state insurance regulators have a way of receiving this information.

There have been a multitude of comments around the specificity of the Subscript S and what it is supposed to intend, what it actually intends, and what actions or policies are associated with it, and it is a source of confusion. It is understood that if it were in place, it would not be complete because it would be something that would be manually applied by the SVO and then would not necessarily be applicable to all the filing exempt (FE) securities. If state insurance regulators are getting a Schedule D and looking for Subscript S, they would realize that that is not really a representation of the population that has such characteristics as a whole within that insurer. Also, it being a singular letter, it is difficult to say which one of these characteristics it is applicable to. Mears asked for Task Force members' thoughts on the value of having this information shared with state insurance regulators via the Subscript S or to think through more holistic ways of getting this information that fall into normal information sharing that occurs between the SVO and the Task Force and how the Task Force can disseminate to other working groups. For example, payment in kind is something the Life Actuarial (A) Task Force is starting to look at now based on conversations that have occurred within the Valuation of Securities (E) Task Force over the last year or so. Mears said she appreciates the concerns around the Subscript S, and she is not sure it is necessarily fully needed to give the value that the Task Force hoped to get from other directions, including guidance from the SVO of observations that it is making and things the Task Force can discuss internally and then escalate as needed. She asked if Task Force members had any related thoughts to ultimately provide direction back to the SVO.

Andersen said as a reviewer of cash flow testing, that information would be helpful. He said he does not fully understand the pros and cons of this exact approach, but it seems like it is the information that is needed. Mears said it was her sense that that really was not debatable and did not get the sense from interested parties that that is something they had an issue with.

Reis said transparency is not the issue. The issue is the transparency of Subscript S, and that gets further complicated if they all need to be filed and they are going to be notched. That is different than what Mears and Andersen talked about.

Mears agreed and said the Task Force can provide direction to the SVO to consider that and see what kind of revisions could be made to ensure that there are mechanisms for Task Force members and beyond to receive information from an education standpoint, identify emerging characteristics that could pose risk to the regulatory framework as the SVO team sees them, and escalate them to the Task Force or more broadly and put together mechanisms internally to help aggregate them, recognizing that this particular mechanism is not necessarily the most efficient way to do that. Task Force members should consider this and bring any thoughts on the direction they would want back to the Task Force before exposing a different proposal. Second, the definition of a designation itself is an area that is incredibly important and underlies a lot of the discussions that have been had to date as the Task Force talks about working with CRPs, talking about how NAIC designations are different than ratings in what their ultimate purpose is. A rating is created as a measure of credit risk, and it is delivered into the NAIC insurance framework, and in many cases, it is fully appropriate for the NAIC's needs to pass through the NAIC designation process, ultimately to be used for RBC, state investment code restrictions, assumptions, and AAT. However, it is important to realize that the uses of those NAIC designations are different than what a pension plan would use a rating for in terms of measuring asset allocation and from a quality perspective. One of the intents of these definitions is to create that ground level understanding, and that was the feedback that came through some of the comment letters, particularly from Anderson Insights, saying it should start with something very straightforward that really drives what the designation is. Mears said that is the intent. In terms of some of the comments from the ACLI, the PPIA, NASVA, and the SFA of including LGDs, that is a reasonable suggestion. It would be from a consideration standpoint the same way that the tail risk component was because it is talking at a base level and noting that an NAIC designation, when appropriate, would consider the use of an LGD metric versus just the probability of default. It would not necessarily spell out the technical provisions of how the SVO would implement that; that would have to be a separate process. That goes back to the point that this is an underlying foundational definition. Mears encouraged Therriault and the SVO to put together some language that would address that and work with the ACLI, the PPIA, NASVA, and the SFA to see if that aligns with what their expectations would be. Similarly, there were questions on the inclusion of the tail risk component, which was also meant to be a consideration. There were some questions of how that type of attribute would work on a practical basis, and that was not the intent of these designation definitions because it was more based on an understanding of the types of components that would be in an NAIC designation. It was not intended that the Task Force would answer these questions to have a definition in place, but further feedback would be welcomed, as it is reviewed in that context. Lastly, once that is complete, the definition can be brought back to the Capital Adequacy (E) Task Force, and it can be asked informally if the definition is aligned with its expectations and that it fully understands what this definition entails. That addresses to some extent what is in the letters, and it provides some direction back to the SVO to clean up those definitions. That should not result in many major changes to that section, but the SVO can work directly with interested parties to get to some verbiage that makes sense. Catrone agreed with the direction.

Reis said the ACLI, the PPIA, NASVA, and the SFA are happy to work with the SVO. First, there was a lot of debate amongst the constituents about whether there was even a problem. One could argue that probability of default is sort of a subset of LGD, but not the other way around, so it may not change. However, there is a meaningful constituent group that wants to understand if this changes things. As Mears suggested, this is foundational, and change may come later, but the two-step process is a little worrisome to some.

Mears said the Task Force is trying to take a step back and say any future actions, not ones that are already contemplated and not there yet, should be able to look back to a baseline definition of an NAIC designation to understand why those actions would take place. It is not necessarily that this is starting here because there are

already steps two, three, and four in terms of policies that are forthcoming. This is trying to take that step back and say here is that foundational basis, and for future actions, whenever they happen, the Task Force would be able to point to this to say where it fits in.

Anderson said he believes that direction is fine. One of the reasons it is important to go to the Capital Adequacy (E) Task Force because that is part of the R1/C1 calculation; first, they look at probability of default, and then there is a charge or a valuation of the LGD. The Task Force might find that that is already baked into how RBC is done. Double counting is not necessarily a problem; it is conservative.

3. Heard a Staff Report on Updates on the Proposed CLO Modeling Methodology and Ad Hoc Working Group

Mears said agenda item number three is to hear updates on the proposed collateralized loan obligation (CLO) modeling methodology and updates from the CLO Ad Hoc Group.

Eric Kolchinsky (NAIC) said there was a meeting of the CLO Ad Hoc Group that morning. NAIC staff suggested adopting a no prepayment and no discount purchase approach. That is memorialized in a memo on the CLO website. Feedback was also requested from interested parties on a setup of scenarios, as well as the probabilities, which is going to be the next step in the process. The process so far has been great, and there has been really good feedback and a good relationship with working parties.

Mears said she has one additional point since that was seemingly still a source of confusion, given the different workstreams in place. She said for this modeling process, the focus is more on the rated notes of the CLO, which would be ultimately assigned an NAIC designation by the process that comes out of this Task Force. However, the Valuation of Securities (E) Task Force is not responsible for setting RBC factors. There were some questions about another hot topic, the residuals of CLOs, or more broadly of other securitizations, which was discussed within the RBC Investment Risk and Evaluation (E) Working Group and how that would be incorporated into this CLO Ad Hoc Group. There is a back-and-forth working with the Working Group, but it is not the Task Force's responsibility to set capital factors. The way residuals are held without an NAIC designation, without a credit assessment associated with those, means that the Task Force would not be setting factors now or in the future. If there is information that comes out of this process, or the American Academy of Actuaries (Academy), which is working with the Working Group, it could feasibly utilize that for informational purposes while going back through findings. It should be very clear that that is not an anticipated output from this process from the Task Force perspective.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

RE: Clarify the meaning of Repurchase Agreement in the Derivatives Transaction Definition for Funds in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*

DATE: April 28, 2023

Summary: In 2021 the Task Force adopted amendments to the NAIC Fund Lists section of the Purposes and Procedures Manual of the NAIC Investment Analysis Office (the “Purposes and Procedures Manual”) to provide greater clarity and predictability regarding the acceptable use of derivatives in funds and permit funds greater flexibility in their use of derivatives while maintaining limits on funds’ use of leverage. The SVO now proposes a new amendment to clarify which side of a repurchase agreement constitutes a derivative transaction for purposes of the section.

The definition “Derivatives Transaction” in the Purposes and Procedures Manual was modeled after the SEC definition in Rule 18f-4 under the Investment Company Act of 1940. The Purposes and Procedures Manual definition reads:

Derivatives Transaction – means: (1) any swap, security-based swap, futures contract, forward contract, option, any combination of the foregoing, or any similar instrument (“*derivatives instrument*”), under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise; (2) any short sale borrowing; and (3) *any reverse repurchase agreement or similar financing transaction* [Italics added for emphasis].

One purpose of the original amendment was to limit the use of leverage by funds and, therefore, “Derivative Transactions” encompasses instruments pursuant to which a fund may be required to make a future payment of cash or other assets. Likewise, the inclusion of “reverse repurchase agreements” was intended to capture arrangements by which the fund would owe a future cash payment to the counterparty.

According to the SEC definition in the Rule 18f-4 adopting release, “In a reverse repurchase agreement, a fund transfers a security to another party in return for a percentage of the value of the security. At an agreed-upon future date, the fund repurchases the transferred security by paying an amount equal to the proceeds of the initial sale transaction plus interest.” However, according to SSAP No. 103R - Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, “Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date.” The SSAP No. 103R reverse repurchase agreement definition is the opposite of the SEC definition. According to SSAP No. 103, “Repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date.” The SAPP No. 103R definition of repurchase agreement matches the SEC definition of reverse repurchase agreement, in which the fund is obligated to make a repurchase payment at a later date.

Recommendation: To maintain consistency between the Purposes and Procedures Manual and SSAP No. 103R and eliminate any misconception that a fund cannot be the purchaser of securities/lender of cash, the SVO proposes the following changes to the NAIC Fund Lists section of the Purposes and Procedures Manual. The proposed text changes to P&P Manual are shown below with additions in red underline, deletions in ~~red strikethrough~~ as it would appear in the 2023 P&P Manual format.

Draft: 6/12/23

Valuation of Securities (E) Task Force
Virtual Meeting
May 15, 2023

The Valuation of Securities (E) Task Force met May 15, 2023. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Eric Dunning, Vice Chair, represented by Lindsay Crawford (NE); Lori K. Wing-Heier represented by Jeffery Bethel (AK); Mark Fowler represented by Sheila Travis (AL); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Michael Yaworsky represented by Ray Spudeck (FL); Dana Popish Severinghaus represented by Vincent Tsang (IL); James J. Donelon represented by Stewart Guerin (LA); Kathleen A. Birrane represented by Matt Kozak (MD); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Jon Godfread represented by Matt Fischer (ND); Marlene Caride represented by John Sirovetz (NJ); Adrienne A. Harris represented by Jim Everett (NY); Glen Mulready represented by Diane Carter (OK); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Amy Garcia (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Discussed and Exposed a Proposed P&P Manual Amendment to Update the Definition of an NAIC Designation

Mears said the first item on the agenda is to discuss and consider for exposure a proposed *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) amendment to update the definition of an NAIC designation.

Charles Therriault (NAIC) said NAIC designations are explained and defined in Part One and Part Two of the P&P Manual. The drafted amendment proposes consolidating the explanation and definition into Part One of the P&P Manual because they are policies of the Task Force. The amendment includes clarifying the meaning of NAIC designations, including their use, their purpose, and the risks they address.

When the new format of the P&P Manual was adopted on Nov. 16, 2018, and published on April 7, 2019, there were several changes made to simplify the P&P Manual. It has since become apparent that some of those changes have led to the interpretation that there are really two meanings of an NAIC designation. One meaning, found in Part One, is applicable to all securities whether assigned an NAIC designation pursuant to the filing exemption (FE) process or by the Securities Valuation Office (SVO). A second meaning, found in Part Two, is applicable only to securities assigned NAIC designations by the SVO.

It is the SVO staff's view that there is only one definition of an NAIC designation, and that is applicable to whatever manner the NAIC designation is assigned. The revisions proposed in the amendment consolidate the instructions defining an NAIC designation creating a single, uniform definition which includes updates that address questions and concerns raised over the years as to the purpose of an NAIC designation versus credit rating provider (CRP) ratings.

Additionally, the SVO recommends consolidating the current NAIC designation subscript "s" definition for other nonpayment risks in Part Two into the consolidated NAIC Designation section in Part One because the application of the subscript "s" to assign an NAIC designation for other nonpayment risks signifies a change in the meaning of the designation, but it is also the policy of the Task Force. Most of the updates in the amendment involve existing language that was either moved, consolidated, or eliminated due to redundancy.

The new text clarifying the regulatory meaning and objectives of an NAIC designation and expansions of existing guidance are highlighted in yellow to try to make that distinction. A clean version is included at the end of the amendment, which removes all the language that has changed location and highlights only the new text in yellow. The SVO recommends exposing the amendment for a public comment period. As the Task Force continues its communication efforts with the Statutory Accounting Principles (E) Working Group and the Capital Adequacy (E) Task Force, the SVO also recommends referrals to those groups.

Chris Anderson (Anderson Insights LLC) said he had some comments and submitted a letter on this topic on Dec. 5, 2022. He said he agreed with staff that an NAIC designation would benefit from clarification, and there should be a single meaning for NAIC designations. He said he also agreed on the need for consolidation. He said he agrees on key points, and simplification is a valid and achievable goal, which was proposed in his letter. He said the appendix of the letter identified numerous examples in the present P&P Manual that referred to NAIC designations as measures of credit risk or credit quality, and the language in that letter was completely consistent with those concepts that are already in the P&P Manual.

What the proposed language does not reflect is that there are such things as other risks of nonpayment. This completely illogical concept found its way into the P&P Manual some years ago. Credit ratings reflect the risk of nonpayment regardless of the reason. That is what credit ratings are: opinions of the risk of nonpayment. Credit analysts are responsible for assessing the likelihood of any possible reason for nonpayment. There are huge numbers of these factors, and they are security specific. Further, they are all incorporated into credit ratings, as that is what credit ratings are. In the past, there may have been valid concerns about whether a payment was promised, but these are being addressed by the Statutory Accounting Principles (E) Working Group, which is devising tighter standards for what constitutes the debt obligation. The proposed P&P Manual language and the Dec. 5, 2022, letter clarify and simplify it by retaining clear definitions. This should be a welcome relief because it proposes deleting redundant and unnecessary language. Anderson requested that the Task Force expose both versions of the proposed language, meaning the staff version and the version in the Dec. 5, 2022, letter.

Mears confirmed that the Dec. 5, 2022, letter was included in the packet, and she said the letter will be part of the exposure.

Malm made a motion, seconded by Clements, to expose the proposed amendment to update the definition of an NAIC designation in the P&P Manual for a 45-day public comment period ending June 30. The motion passed unanimously.

2. Discussed and Exposed a Proposed P&P Manual Amendment Authorizing the Procedures for the SVO's Discretion Over NAIC Designations Assigned Through the FE Process

Mears said the next item on the agenda is to discuss and consider for exposure a proposed P&P Manual amendment authorizing the procedures for the SVO's discretion over NAIC designations assigned through the FE process. This proposal stems from the Financial Condition (E) Committee's new charge that was given to the Task Force to establish the criteria to permit staff discretion over the assignment of NAIC designations. The new charge also aligns with the current Task Force policy applicable to the FE process, which is found in the P&P Manual, Part One, paragraph 80. It states:

The VOS/TF is resolved that the benefit obtained from the use credit rating in state regulation of insurance must be balanced against the risk blind reliance on credit ratings. To ensure the Task Force properly understands the composition and risk of the filing exempt securities population; promote uniformity in the

production of NAIC Designations, reduce reporting exceptions for filing exempt securities and increase the efficiency of this NAIC process, the SVO and SSG (hereafter, the IAO) is charged with administration of the filing exempt process defined in Part Three of this Manual.”

In keeping with these policies and to provide a little bit more history on how the Task Force effectively got here, during the Spring National Meeting, there was a discussion on a proposed amendment for Structured Equity and Funds. That proposed amendment was based on a type of investment the SVO had identified through its review of private letter rating rationale reports, and as the Task Force directed as part of that process, when the SVO finds a significant potential issue, the SVO should bring that issue to the Task Force, along with a proposed solution. The proposal was to remove Structured Equity and Funds from FE.

The response from industry was that scoping was very difficult to do because it was effectively identifying a structure rather than the potential underlying risk that could be embedded underneath. One of the examples given was putting collateralized loan obligation (CLO) combination notes into this type of structure, which subverts the type of regulation that those are already subject to as being non-FE. It was acknowledged that these structures are clearly utilized broadly for many investments that, upon review, would be a valid use of the FE process. The Task Force heard those comments and understood and recognized that scoping can continue to be an issue as the Task Force looks at things that are more embedded in different types of structures, and it is difficult to draw lines around where those need to be without pulling in other types of investments and making that scope much too large. The Task Force directed the SVO staff to draft a distinct process on how it would recommend challenging an NAIC designation that was assigned from a CRP rating in the FE process on more of a case-by-case basis. The request was that the SVO define this in a way that is easily followable; is a well-understood process; acknowledges that, in many cases, there may just be more information needed; and allows a dialog between the insurer and the SVO.

Mark Perlman (NAIC) said to address the current blind reliance on credit ratings, the proposed amendment outlines the process by which a state insurance regulator or SVO staff member can contest an NAIC designation assigned through the FE process that it believes is not a reasonable assessment of the risk of the security for regulatory purposes. Following a notice period and optional appeal by the insurer security owner, the Eligible NAIC CRP Credit Rating or the security's FE eligibility could be maintained or revoked by the SVO in consultation with the appropriate state insurance regulator, if requested. If the final decision is to revoke FE eligibility, the insurer would then have the option of filing the security with the SVO for an assignment of an NAIC designation. An insurer can appeal revocation in a subsequent filing year. In order to limit the SVO's use of this process to only what would be considered truly material differences of opinion, the SVO would only be able to put a security or CRP rating on notice if it determines, based on the information at hand, that the CRP rating used in the FE process is three or more notches different than the SVO's assessment. Additionally, insurers would be allowed to appeal the SVO's initial assessment to ensure due process. Once notice is given to insurers that a security is under review, the insurer would have up to 120 days to appeal the SVO's assessment by introducing additional information and data, as necessary. This 120-day appeal period is similar to the existing one for SVO-assigned NAIC designations. At the request of the Task Force chair, the SVO would provide a report in a regulator-to-regulator meeting of the Task Force, summarizing the Eligible NAIC CRP Credit Ratings and securities removed from FE eligibility over the prior calendar year and the reason for the removal.

Mears said she would add some additional comments based on some preliminary feedback that has been received. When the idea of this concept was introduced at the Spring National Meeting, it was based on discussions of private investments and private letter ratings. One of the initial questions was if this was a broader proposal and would be inclusive of public ratings. If there is going to be an overarching process, which this proposal is introducing and as was discussed at the Spring National Meeting, then it should be consistent across the board to include all of FE. There is currently a red light response with everything removed from FE, or there is a green

light response for everything that is allowed for FE. This proposal would be somewhat of a middle ground or yellow light. The use of private letter ratings, or certain types of private structures, may more likely make up some of the transparency questions that have arisen, and there is a reason to dig into those more. However, if something was found that should be challenged, and that challenge was upheld, then that same concept exists in public securities and should be treated consistently. Private letter ratings may be the start of many reviews, but in the end, the Task Force should be agnostic of whether it is a public or private investment.

Second, as this is put out for exposure and interested parties review and provide feedback, that feedback should provide alternatives, where necessary. There may be instances where the process itself makes sense, but perhaps there may be different components, such as the timing, the type of information, or how that due process works, that need changes. If there are specific concerns with any of those steps, please provide alternatives that would address those concerns. Similarly, the Task Force has been talking for some time about how to address some of the securities out there without taking perhaps too expansive of a view by removing investments from FE. This proposal is to address that concern. If there is a better way to achieve that objective and this proposal is not quite there, comments are welcome; however, it is asked that potential alternatives offered are actionable so they can be reviewed. If one agrees or disagrees with this entirely, that could be in the comment letter as well. It is very helpful when actionable feedback is received. Given the importance of this topic, this will be exposed for a 60-day public comment period and discussed again at the Summer National Meeting in August.

Martin Carus (Martin Carus Consulting LLC) said he is a policyholder, an investor in insurance companies, and a taxpayer. He noted that there is a proposal on the table but no indication of its cost. He asked what this is going to cost and how policyholders are going to benefit. He said there is no cost laid out, and there are no benefits there. It was indicated that this was a very important matter. Carus said he did not see this as a very important matter because he did not see any benefit coming from it. He wondered why this proposal needed to be made at all. FE has been around for a couple of decades, and it has not been a problem. Carus said he has not heard of any company, in any way of its investments, going broke or having its risk-based capital (RBC) materially or even slightly overstated by using the FE process.

Mears said this is something the Task Force has been talking about for quite a bit of time. It is more expansive than just the Task Force. More broadly, there has been a fairly sizeable strategic shift in investments, probably in reaction to a lot of things that the investment managers can speak to, that have driven insurers to more private assets, with the benefit of taking on some more liquidity risk or potential complexity risk, to garner additional returns for insurers that then get passed on to policyholders. That is ultimately beneficial. On the other side, the NAIC's framework, across the board, was not designed for the complexity of these investments or the magnitude at which they are being held. One example is structured securities, which is being addressed elsewhere outside of this proposal. Speaking to some of the broader initiatives that are in place, regulations, as a standard, are always very reactionary. State insurance regulators are not innovators, and they are not going to be proactive. The role is to observe shifts within the market where different materiality increases and then address those issues.

Carus asked how this is going to affect the market if the investor cannot be sure of what they are going to get because the SVO comes in and says that this is now going to be taken out of FE. He asked what that is going to do to the investment marketplace. He also asked whom he is supposed to trust if he is dealing with an insurance company - the SVO's judgment as to whether something is too complicated or not evaluated as to its risk appropriately or the industry and the rating agencies that employ a hundred times or a thousand times as many investment analysts that are credentialed to do that. Carus said this is a way for the SVO to gum up the works in the investment marketplace, and he does not see anything wrong with the FE. If investments come along that are so complicated, there is always a dialogue between the industry and the investment community, and the SVO lays it out for them.

Mears said she would welcome a comment letter from Carus. She said this proposal is a reaction to those same concerns, and there is a dialogue in place as each of these is identified. Currently, when the Task Force tries to do it at a higher level, it creates scoping concerns. Due to the Task Force's efforts, this works as a middle ground to help state insurance regulators further understand where potential issues may arise. It is appreciated that many investors and insurance companies are doing a fantastic job in trying to find returns for their policyholders in a way that is measured, but there are instances where that is not the case. There was an example of a liquidation that occurred due to a lack of transparency in their private investments and how those were designated.

Carus asked if that was a single case, and he added that, from a market perspective, that single case had absolutely zero impact on the marketplace. Mears said it did have an impact on those policyholders, and she would welcome the comment letter.

Spudeck asked Therriault if commercial mortgage-backed securities (CMBS) were at one point FE. Therriault confirmed that they were, and he said residential mortgage-backed securities (RMBS) were also once FE. Spudeck asked Therriault if he believes there might have been a capital hit on the broader industry as a result of the financial crises in 2008, 2009, and 2010. Therriault said it was quite substantial at the time. Spudeck asked if this could have been addressed through this proposed framework. Therriault said yes.

Mears said, as noted and observed here, it is expected that there will be a variety of comments on this proposal, and she would appreciate alternatives provided when feasible.

Andersen said he had a few specific points on the question of whether this should be exposed for comment in its present form, and they relate to the objectives, practicality, and environmental, social, and governance (ESG) concerns. The proposal makes references to reasonable assessments of the risk of a security for "regulatory purposes." The meaning of credit ratings is clear and well-defined, whereas the risk for regulatory purposes is definitely not well-defined or well-understood. It is inappropriate to use that as the standard to "challenge" the ratings of nationally recognized statistical rating organizations (NRSROs), which is being proposed here. Credit ratings indicate what staff have been calling the risk of nonpayment; i.e., nonpayment for any reason. That is a regulatory concern when it comes to bonds' nonpayment. A credit rating should be assessed based on what it is: an opinion of relative creditworthiness. Further, NAIC designations are what FE ratings become. The ratings are intended to be used as measures of nonpayment risk, and they are uniform with C1 and R1 RBC factors. The R1 and C1 RBC factors are based on credit history, so it is unreasonable to attempt to use standards other than credit risk to determine NAIC designations.

Andersen's said that he questions the practicality of what is being proposed here. Specifically, the NAIC's Investment Analysis Office (IAO) has proposed three methods for implementing this proposal. There has been no demonstration that any of them will be able to indicate whether the assessments of the NRSROs are accurate.

Andersen (MN) made a motion, seconded by Stolte, to expose this proposed amendment authorizing the procedures for the SVO's discretion over NAIC designations assigned through the FE process for a 60-day public comment period ending July 14. The motion passed unanimously.

3. Discussed a Proposed Amendment to Clarify the Meaning of Repurchase Agreements in the Derivates Transaction Definition for Funds in Part Three of the P&P Manual

Mears said the next item on the agenda for exposure is the proposed amendment to clarify the meaning of Repurchase Agreements and the Derivate Transaction definition for funds in Part Three.

Perlman said in 2021, the Task Force adopted amendments to the NAIC Fund Lists section of the P&P Manual to provide greater clarity and predictability regarding the acceptable use of derivatives in funds and permit funds greater flexibility in their use of derivatives while maintaining limits on funds' use of leverage. The SVO now proposes a new amendment to clarify which side of a repurchase agreement constitutes a derivative transaction for the purposes of the section.

The definition of Derivatives Transaction in the P&P Manual was modeled after the U.S. Securities and Exchange Commission (SEC) definition in Rule 18f-4 under the Investment Company Act of 1940. The P&P Manual definition reads:

Derivatives Transaction – means: (1) any swap, security-based swap, futures contract, forward contract, option, any combination of the foregoing, or any similar instrument (“derivatives instrument”), under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise; (2) any short sale borrowing; and (3) any reverse repurchase agreement or similar financing transaction.

The original amendment was intended to limit the use of leverage by funds; therefore, Derivative Transactions encompass instruments pursuant to which a fund may be required to make a future payment of cash or other assets. Likewise, the inclusion of reverse repurchase agreements was intended to capture arrangements by which the fund would owe a future cash payment to the counterparty.

According to the SEC definition in Rule 18f-4 adopting release, “In a reverse repurchase agreement, a fund transfers a security to another party in return for a percentage of the value of the security. At an agreed-upon future date, the fund repurchases the transferred security by paying an amount equal to the proceeds of the initial sale transaction plus interest.” However, according to *Statement of Statutory Accounting Principles (SSAP) No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, “Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date.” The SSAP No. 103R reverse repurchase agreement definition is the opposite of the SEC reverse repurchase agreement definition. According to SSAP No. 103R, “Repurchase agreements, not reverse repurchase agreements, are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date.” The SAPP No. 103R definition of a repurchase agreement, therefore, matches the SEC definition of a reverse repurchase agreement, in which the fund is obligated to make a repurchase payment at a later date.

To maintain consistency between the P&P Manual and SSAPs, and to eliminate any misconception that a fund cannot be the purchaser of securities/lender of cash, the SVO proposes changing “reverse repurchase agreement” to “repurchase agreement” in the derivatives transaction definition.

To be clear, it is not intended to change the meaning. It is just that the same side of the transaction was named differently by the SEC and SSAPs, and the SVO wants to be consistent with the SSAPs. Subsequent to posting this amendment, Julie Gann (NAIC) explained that pursuant to both statutory accounting and U.S. generally accepted accounting principles (GAAP), many repurchase agreements are treated as secured borrowings rather than derivatives. To eliminate any confusion that the definition of derivative transaction in the P&P Manual Funds List section might be driven by accounting treatment, the SVO also recommends inserting a clause at the end of the posted proposed definition so that it reads: “(3) any repurchase agreement under which the fund sells securities

and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date, or similar financing transaction, irrespective of accounting treatment.”

Mears said this is primarily a technical type of change, but it was done in consultation with the Statutory Accounting Principles (E) Working Group staff to ensure that the definitions were aligned.

Kozak made a motion, seconded by Doggett, to expose the proposed amendment to the P&P Manual to clarify the meaning of repurchase agreements in the derivatives transaction definition for funds with the additional language proposed for a 45-day public comment period ending June 30. The motion passed unanimously.

4. Received Updates on the Proposed CLO Modeling Methodology and Ad Hoc Working Group

Mears said the next agenda item is to receive an update on the proposed CLO modeling methodology and any actions and discussions from the CLO ad hoc group.

Eric Kolchinsky (NAIC) said there have already been two meetings of the ad hoc group, and cash flows were shared and discussed for six transactions. Tie-out calls were also held on calls and via numerous email exchanges with several parties that have been involved and which were very helpful.

The next meeting is scheduled for Wednesday, May 17, to discuss some of the issues raised during the tie-out and present cash flows with prepay and discount purchase assumptions. More details will be added to the previously released cashflows, which will help the parties to tie out.

5. Discussed Other Matters

Mears said there was one other matter, and she asked Therriault to provide that update.

Therriault said he wanted to alert the Task Force that the SVO is looking at making a change to how its fees are determined. This is something that has been worked on for at least seven years. Currently, there is a fee for the insurers to file a security with the SVO and then an additional fee to access the NAIC designations assigned by the SVO and the FE process in Automated Valuation Service Plus (AVS+). This can be unfair to insurers that frequently file securities with the SVO. The insurers that do not file with the SVO get the benefit while not sharing the cost. This is an attempt to make it a fairer and more equitable process, as well as more operationally efficient. The concept would be a fee structure based on the book/adjusted carrying value (BACV) of the insurer's Schedule D assets. The fee would cover both the filing of securities with the SVO in Vision and access to the resulting NAIC designation in AVS+. The operational efficiency would be accomplished by the NAIC and insurers not having to process the many invoices produced as the SVO bills for the roughly 12,000 transactions reviewed each year. This is in the preliminary stages, but it can hopefully be included in the 2024 budget and be effective for 2025.

The Executive (EX) Committee must formally consider the proposal and approve any changes, as it and the commissioners as part of the Plenary, are responsible for approving the NAIC budget, which helps the NAIC to better support the nation's chief insurance regulators, as well as the fees charged and the services and functions provided. This is mentioned so the Task Force is aware of this possible change just in case any questions come up about any SVO fee change during the 2024 budget discussions that will begin in the next couple of months. Overall, this change is expected to be revenue neutral from an NAIC budgeting perspective, but the impact on individual insurers could vary, as some insurers may pay no SVO filing fees today but directly benefit from those insurers that frequently file with the SVO and pay the associated fees. Again, a formal proposal will need to be submitted to the Committee and go through its review and approval process before changes can be made.

Mears asked if this would remove any sort of variable cost to an insurer based on the number of filings. Therriault said the proposal would replace the vast majority of filing fees, but some fees would still persist, such as the Qualified U.S. Financial Institution List, regulatory treatment analysis service, appeals, and other similar fees. The majority of the SVO fees would be covered by this overall fee that gives access to AVS+ and filing with the SVO.

Mears said to clarify, the Task Force has no oversight over the fee structure whatsoever, but this was meant to provide information to those states that are involved in other processes.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

Draft: 7/25/23

2024 Proposed Charges

VALUATION OF SECURITIES (E) TASK FORCE

The mission of the Valuation of Securities (E) Task Force is to provide regulatory leadership and expertise to establish and maintain all aspects of the NAIC's credit assessment process for insurer-owned securities, as well as produce insightful and actionable research and analysis regarding insurer investments.

Ongoing Support of NAIC Programs, Products or Services

1. The Valuation of Securities (E) Task Force will:

- A. Review and monitor the operations of the NAIC Securities Valuation Office (SVO) and the NAIC Structured Securities Group (SSG) to ensure they continue to reflect regulatory objectives.
- B. Maintain and revise the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to provide solutions to investment-related regulatory issues for existing or anticipated investments.
- C. Monitor changes in accounting and reporting requirements resulting from the continuing maintenance of the *Accounting Practices and Procedures Manual*, as well as financial statement blanks and instructions, to ensure that the P&P Manual continues to reflect regulatory needs and objectives.
- D. Consider whether improvements should be suggested to the measurement, reporting and evaluation of invested assets by the NAIC as the result of: 1) newly identified types of invested assets; 2) newly identified investment risks within existing invested asset types; or 3) elevated concerns regarding previously identified investment risks.
- E. Identify potential improvements to the credit filing process, including formats and electronic system enhancements.
- F. Provide effective direction to the NAIC's mortgage-backed securities modeling firms and consultants.
- G. Coordinate with other NAIC working groups and task forces—including, but not limited to, the Capital Adequacy (E) Task Force, the Statutory Accounting Principles (E) Working Group, and the Blanks (E) Working Group and Risk-based Capital Investment Risk & Evaluation (E) Working Group—to formulate recommendations and to make referrals to such other NAIC regulator groups to ensure expertise relative to investments, or the purpose and objective of guidance in the P&P Manual, is reflective in the guidance of such other groups and that the expertise of such other NAIC regulatory groups and the objectives of their guidance is reflected in the P&P Manual.
- H. Identify potential improvements to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC's financial solvency objectives.

- I. Implement policies to oversee the NAIC's staff administration of rating agency ratings used in NAIC processes, including staff's discretion over the applicability of their use in its administration of filing exemption.
- J. Establish criteria to permit staff's discretion over the assignment of NAIC designations for securities subject to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC's financial solvency objectives.
- K. Implement additional and alternative ways to measure and report investment risk.

NAIC Support Staff: Charles Therriault, Marc Perlman

https://naiconline.sharepoint.com/teams/SVOVOSTaskForce/Shared Documents/Meetings/2023/2023-08 Summer NM/Minutes/Attachment Three 2023-007.01 VOSTF_Proposed_2024_Charges.docx

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

Financial Regulation Standards and Accreditation (F) Committee Aug. 13, 2023, Minutes..... 10-2
2024 Proposed Charges (Attachment One)..... 10-4

Draft: 8/17/23

Financial Regulation Standards and Accreditation (F) Committee
Seattle, Washington
August 13, 2023

The Financial Regulation Standards and Accreditation (F) Committee met Aug. 13, 2023. The following Committee members participated: Lori K. Wing-Heier, Chair (AK); Vicki Schmidt, Co-Vice Chair, represented by Tish Becker (KS); Sharon P. Clark, Co-Vice Chair (KY); Alan McClain (AR); Andrew N. Mais (CT); Mike Causey, represented by Jacqueline R. Obusek (NC); Jon Godfread, represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Andrew R. Stolfi (OR); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Larry D. Deiter (SD); Scott A. White (VA); and Jeff Rude (WY).

1. Adopted its Spring National Meeting Minutes

Commissioner Clark made a motion, seconded by Commissioner Mais, to adopt the Committee's March 22 minutes (*see NAIC Proceedings – Spring 2023, Financial Regulation Standards and Accreditation (F) Committee*). The motion passed unanimously.

Director Wing-Heier said the Committee met Aug. 12 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement of Open Meetings, to vote to award continued accreditation to Missouri, New Hampshire, South Dakota, and Texas.

2. Adopted Proposed Revisions to the Part A Insurance Holding Company Systems Accreditation Standard

Director Wing-Heier stated that in December 2020, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450). These revisions implement a group capital calculation (GCC) for the purpose of group solvency supervision and a liquidity stress test (LST) for macroprudential surveillance. The revisions to these models have been through the formal process for consideration of adoption as an accreditation standard. This process included a 30-day initial exposure period in 2021 and a one-year exposure period that ended Dec. 31, 2022. The exposure included a recommendation by the Committee for a revised approach to the GCC significant elements, allowing the commissioner to grant exemptions to qualifying groups meeting the standards set forth in Model #450, Section 21A and Section 21B, without the requirement to file at least once.

At the Spring National Meeting, Committee members discussed the comment letters received, which affirmed the importance of allowing the commissioner to exempt qualifying groups from the GCC requirements, when appropriate, to avoid placing an unnecessary burden on groups where such a filing would not provide added benefit. In accordance with the procedures for adopting amendments to existing models already included in the standards, if adopted, the recommendation will go to the Plenary at the Fall National Meeting for approval. Once adopted by the Plenary, the revised standard will become effective Jan. 1, 2026.

Dan Schelp (NAIC) stated that with respect to Section 21A and Section 21B of Model #450, a state may still adopt the language of those two sections and require that the insurance holding company system file a GCC at least once in order to grant an exemption with respect to future filings. He said the accreditation standards are minimum standards for solvency requirements, and states can choose to take a more conservative approach in their own requirements. The amended accreditation standard simply permits states to remove the requirement to file at least once at their discretion. Schelp also said that states may contact the NAIC's Legal Division if they would like assistance with drafting language that is consistent with the new accreditation standard.

Acting Superintendent Schott made a motion, seconded by Commissioner Clark, to adopt the significant elements of the 2020 revisions to Model #440 and Model #450, which implement a GCC, allowing for commissioner exemption for qualifying groups without having to file at least once and an LST, as an accreditation standard effective for all states Jan. 1, 2026. The motion passed unanimously.

3. Adopted its 2024 Proposed Charges

Director Wing-Heier discussed a memorandum that includes the Committee's 2024 proposed charges, noting the proposed charges are unchanged from the Committee's 2023 charges.

Acting Superintendent Schott made a motion, seconded by Commissioner Mais, to adopt the Committee's 2024 proposed charges (Attachment One). The motion passed unanimously.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Committees/F CMTE/2023 Summer/F Cmte 8-13-23.docx

MEMORANDUM

TO: Members of the Financial Regulation Standards and Accreditation (F) Committee

FROM: Bailey Henning, Senior Manager – Accreditation & Financial Examinations

DATE: July 31, 2023

RE: 2024 Proposed Charges

Below are the Financial Regulation Standards and Accreditation (F) Committee's 2024 proposed charges. There have been no substantive changes from the Committee's 2023 charges.

The mission of the Financial Regulation Standards and Accreditation (F) Committee is both administrative and substantive, as it relates to the administration and enforcement of the NAIC Financial Regulation Standards and Accreditation Program. This includes, without limitation: 1) the consideration of standards and revisions of standards for accreditation; 2) the interpretation of standards; 3) the evaluation and interpretation of the states' laws and regulations, as well as departments' practices, procedures, and organizations as they relate to compliance with standards; 4) the examination of members for compliance with standards; 5) the development and oversight of procedures for the examination of members for compliance with standards; 6) the selection of qualified individuals to examine members for compliance with standards; and 7) the determination of whether to accredit members.

Ongoing Support of NAIC Programs, Products or Services

1. The **Financial Regulation Standards and Accreditation (F) Committee** will:
 - A. Maintain and strengthen the NAIC Financial Regulation Standards and Accreditation Program.
 - B. Assist the states, as requested and as appropriate, in implementing laws, practices, and procedures and obtaining personnel required for compliance with the standards.
 - C. Conduct a yearly review of accredited jurisdictions.
 - D. Consider new model laws; new practices and procedures; and amendments to existing model laws, practices, and procedures required for accreditation. Determine the timing and appropriateness of the addition of new model laws, practices, procedures, and amendments.
 - E. Render advisory opinions and interpretations of model laws required for accreditation and on substantial similarity of state laws.
 - F. Review existing standards for effectiveness and relevancy, and make recommendations for change, if appropriate.
 - G. Produce, maintain, and update the NAIC *Accreditation Program Manual* to provide guidance to state insurance regulators regarding the official standards, policies, and procedures of the program.
 - H. Maintain and update the "Financial Regulation Standards and Accreditation Program" pamphlet.
 - I. Perform enhanced pre-accreditation review services, including, but not limited to, additional staff support, increased participation, enhanced report recommendations, and informal feedback.

Draft: 8/22/23

International Insurance Relations (G) Committee
Seattle, Washington
August 13, 2023

The International Insurance Relations (G) Committee met in Seattle, WA, Aug. 13, 2023. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Lori K. Wing-Heier (AK); Ricardo Lara (CA); Andrew N. Mais (CT); Gordon I. Ito (HI); Doug Ommen (IA); Dean L. Cameron (ID); Dana Popish Severinghaus (IL); Vicki Schmidt represented by Chut Tee (KS); James J. Donelon represented by Adam Patrick (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); and Justin Zimmerman (NJ).

1. Adopted its April 13 and Spring National Meeting Minutes

The Committee met April 13 and discussed NAIC comments on the International Association of Insurance Supervisors (IAIS) public consultation on the issues paper on the roles and functioning of policyholder protection schemes (PPSs).

Commissioner Mais made a motion, seconded by Director Popish Severinghaus, to adopt the Committee's April 13 (Attachment One) and March 22 (*see NAIC Proceedings – Spring 2023, International Insurance Relations (G) Committee*) minutes. The motion passed unanimously.

2. Heard an Update on International Insurance Developments and Activities in Canada

Commissioner Anderson spotlighted international cooperation on insurance-related matters between the U.S. and Canada. He noted Canadian insurance regulators as strong partners with the NAIC at the IAIS and assisting in advancing North American interests on the global stage.

Jacqueline Friedland (Government of Canada's Office of the Superintendent of Financial Institutions—OSFI) gave an update on international insurance developments and activities in Canada. She explained her role at the OSFI in frontline supervision and her actuarial background, noting that she is in charge of 250 supervisors that have oversight responsibilities of banks, insurers, and private pension plans.

Friedland spoke on the recent implementation of International Financial Reporting Standard (IFRS) 17, which is paramount to the OSFI's 2023 initiatives. While the implementation was not perfect and took longer for some to produce and analyze the results, she noted that only a few of the reporting insurers missed the deadline. She also noted that there were no significant surprises thus far, and not all Canadian insurers operate under federal regulation.

Friedland outlined shared priorities between Canada and the U.S., including looking into analyzing market volatility, and she provided the example of new mandatory stress testing for all Canadian insurers that is focused on inflation. On climate risk, she emphasized a focus on differing risks for each line of insurance and the implications on reinsurance, including availability and affordability.

On the topic of the OSFI's mandate, Friedland spoke to new changes, including expanding powers and enhancements to the broad oversight of banks and securities. Banks and insurers will need to have and adhere to policies and procedures that bring integrity to their security. The OSFI's examination of these results will be directly reported to the Canadian Minister of Finance.

Lastly, Friedland noted that investments are being made in the area of flood insurance coverage as part of a large budget bill that passed earlier this year. On auto rate freezes in Ottawa, she noted her strong opinion for adequate insurance rates and highlighted the OSFI's prudential mandate of ensuring consumer protection.

Commissioner Anderson highlighted the ongoing bilateral partnership between the NAIC and the OSFI, and he complimented their ongoing work at the global level on insurance matters.

3. Heard an Update on Activities of the IAIS

Commissioner Anderson gave an update on IAIS activities and its key 2023 projects and priorities. He began with a review of the IAIS committee meetings and Global Seminar that was hosted by the NAIC and took place in June in Seattle, WA. He began by thanking commissioners and state insurance regulators from the following states that participated: Alaska, California, Connecticut, Idaho, Illinois, Iowa, Nebraska, North Dakota, Maryland, Massachusetts, Michigan, Missouri, Oregon, Rhode Island, South Dakota, Virginia, and Washington.

Commissioner Anderson provided an update on the implementation and assessment activities at the IAIS. On the Targeted Jurisdictional Assessment (TJA) progress monitoring, he noted that this project is underway and will culminate in a report at the end of the year that will be delivered to the Financial Stability Board (FSB). He extended a thank you to New York, New Jersey, and Connecticut for their continued contribution to the project.

Next, Commissioner Anderson gave a brief update on the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), saying work is underway to develop the scope and thematic focus of a forthcoming implementation assessment. This assessment is scheduled to launch later this year.

On the Peer Review Process (PRP) of Insurance Core Principle (ICP) 16 Enterprise Risk Management for Solvency Purposes, Commissioner Anderson noted that this voluntary assessment will begin this fall, which is open to all IAIS members and gives member jurisdictions an opportunity to see how they are observing particular standards. He thanked Susan Berry (IL) for serving on the ICP 16 PRP expert team.

Commissioner Anderson highlighted some of the ongoing work being undertaken by forums and other groups within the IAIS, including:

- The FinTech Forum (FTF) that is continuing its discussions on its artificial intelligence (AI)/machine learning (ML) model risk management thematic review and supervisory responses to the use of ChatGPT and the different approaches adopted to monitor and address such FinTech developments in member jurisdictions. Commissioner Anderson highlighted a recent seminar in June in Basel, Switzerland on the use of innovative technology in financial supervision and thanked the NAIC's FTF member, Rachel Davison (MA), for participating on a panel on Suptech use cases in insurance supervision.
- The Climate Risk Steering Group's public consultation that covers the addition of new text to the IAIS ICPs introduction, work related to climate risk and governance, and the IAIS's plans to address climate more broadly. The group continues to discuss initial observations on the public consultation feedback and draft application paper material on climate-related market conduct considerations and climate scenario analysis, which are scheduled for public consultation by year-end 2023.

On the ICS, Commissioner Anderson said the IAIS has released a public consultation on a “candidate” version of the ICS ahead of its adoption as a Prescribed Capital Requirement for Internationally Active Insurance Groups in late 2024. This consultation also solicits input from stakeholders to support an economic impact assessment of the ICS. He mentioned that the IAIS is entering the fourth year of the five-year monitoring period for the ICS, and specifications for both the ICS and Aggregation Method (AM) data collections will be released at the end of April, with data due to the IAIS by Aug. 31.

To help provide more detailed information about the AM beyond what is already available, the U.S. IAIS members committed to producing a document describing the Provisional AM that is being used in the comparability assessment before the process begins (Attachment Two). Ned Tyrrell (NAIC) gave an overview of the draft document, explaining how it gathers existing AM documentation and communications into one authoritative spot and includes additional narrative context on how the AM will be used in the comparability assessment. He provided a summary of each of the sections of the document, including AM Principles, the Provisional AM, Scalars, and Finalization. Stakeholders were invited to provide any feedback by Sept. 1 for consideration for a final version of the document that will be provided to the IAIS in September.

Tom Finnell (American Property Casualty Insurance Association—APCIA) inquired about the deadline to produce comments on the AM document, noting IAIS public consultations with similar deadlines. Tyrrell responded that an extension would be difficult, given the need to have this document available within the IAIS timeline for the comparability assessment, and he reiterated that much of the document is based on existing material on the AM rather than being brand new. He cited the material on scalars and financial instruments as areas that may be of particular interest to stakeholders.

4. Heard an Update on International Activities

A. International Activities

Director Dunning reported on recent regional supervisory cooperation activities, starting with the European Union (EU)-U.S. Insurance Dialogue Project's public stakeholder event on June 16 in Seattle, WA. He noted that the project has been working within three working groups this year:

- Climate risk financial oversight, including climate risk disclosures, supervisory reporting, and other financial surveillance.
- Climate risk and resilience, including innovative technology, pre-disaster mitigation, adaptation efforts, and modeling.
- Innovation and technology, including big data, AI, and supervisory technology as a regulatory tool.

Next, Director Dunning spotlighted NAIC participation in recent international events, including:

- The Asociación de Supervisores de Seguros de América Latina (ASSAL) Annual Conference in San Jose, Costa Rica in early May, where Director Lindley-Myers, Commissioner Lara, and Commissioner Vega participated on a variety of panels, including ones addressing cybersecurity and climate. The NAIC held a bilateral meeting on the sidelines of the ASSAL Annual Conference, providing updates on a variety of its initiatives, including data privacy; climate resiliency; and diversity, equity, and inclusion (DE&I). The NAIC also discussed continuing opportunities for cooperation and collaboration with the ASSAL and its members.

- A joint Organisation for Economic Co-operation and Development (OECD) and Asian Development Bank Institute (ADBI) Roundtable on Insurance and Retirement Savings in Asia, where Superintendent Dwyer participated on two panels on insurance in a changing climate.
- The Bermuda Climate Summit 2023 held in June, where Commissioner Lara and Director Lindley-Myers addressed the future of the NAIC's Climate and Resiliency (EX) Task Force and highlighted consumer protection issues associated with the National Flood Insurance Program (NFIP) in a discussion panel.
- Keynote remarks by Director Lindley-Myers delivered virtually to the Taiwan Insurance Institute's (TII's) East Asia Pacific Insurance Forum 2023. She spoke on the NAIC and state insurance supervisors' work on embracing and incorporating new technology into regulation to encourage and improve the economic resiliency of the insurance industry and highlighted the NAIC's *State Ahead* strategic work plan.

Director Dunning then spoke to bilateral meetings that have taken place recently, including on the sidelines of the IAIS meetings in Seattle, WA, in June, where the NAIC held 11 bilateral meetings, the primary focus of which was on relationship building, especially among some individual EU member states. He said during these bilateral meetings, the NAIC addressed current strategic priorities and activities, including consumer protection, technology, and climate, and it touched on general macroeconomic issues, such as inflation.

Patrick Reeder (American Council of Life Insurers—ACLI) commented that the ACLI was encouraged by reports on recent bilateral engagements and said the NAIC is a great partner with other countries in developing their insurance frameworks. He noted that members are hearing from host regulators in many countries about their willingness to work with the NAIC, and there is a space to assist U.S. companies in their interactions with regulators overseas. He concluded his remarks by emphasizing how industry can be a resource when discussing prudential issues, and he welcomes the opportunity to participate as a resource and facilitator.

Karalee Morell (Reinsurance Association of America—RAA) agreed with Reeder's comments and emphasized that regulator-to-regulator dialogues are important for creating a level playing field, and she encouraged more engagement by state insurance regulators.

Dave Snyder (APCIA) added that some dialogues in the past involved trade negotiators, regulators, and industry, noting that having the key players at the table can help address regulatory issues on both sides and tackle regulatory issues that serve as barriers to international trade. He requested that these types of meetings be reestablished in critical markets, such as India.

Snyder then complimented the NAIC for its OECD participation, highlighting Director Dunning's remarks at the June meeting. He concluded by saying that a prioritization of how best to address fundamental regulatory conditions, and to do so in a coordinated manner, would be a strong way of combatting challenges coming from technology, macroeconomic conditions, the war in Ukraine, and supply chain disruptions.

Commissioner Anderson thanked Reeder, Morell, and Snyder for their constructive comments on the NAIC's bilateral relationships and activities, noting that industry's feedback on work such as this gives state insurance regulators some perspective as to where we should put our bilateral efforts.

B. OECD

Director Dunning reported on a variety of topics at the OECD that have progressed since the Spring National Meeting, including enhancing the contribution of insurance climate adaption, as well as digitalization to encourage policyholder risk reduction. He highlighted a roundtable discussion on June 26–27 in Paris, France, where he spoke on the NAIC's work overseeing and regulating insurer's use of AI and ML. He reported that during the Insurance and Private Pensions Committee portion of the meeting, members discussed several OECD

documents and reports, which are expected to be released soon, including a revised recommendation on disaster risk financing.

Having no further business, the International Insurance Relations (G) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/G CMTE/National Meetings/2023/Seattle-Summer National Meeting

Draft: 4/28/23

International Insurance Relations (G) Committee
Virtual Meeting
April 13, 2023

The International Insurance Relations (G) Committee met April 13, 2023. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair, represented by Lindsay Crawford (NE); Lori K. Wing-Heier (AK); Ricardo Lara represented by Ope Oyewole (CA); Andrew N. Mais (CT); Gordon I. Ito (HI); Doug Ommen (IA); Dean L. Cameron (ID); Dana Popish Severinghaus and Susan Berry (IL); Vicki Schmidt (KS); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); and Marlene Caride (NJ). Also participating was: Robert Wake (ME).

1. Discussed NAIC Comments on the IAIS Public Consultation on the Issues Paper on the Roles and Functioning of PPSs

Commissioner Anderson explained that the International Association of Insurance Supervisors (IAIS) is conducting a public consultation on the issues paper on the roles and functioning of policyholder protection schemes (PPSs). He noted that the paper was drafted by the IAIS's Resolution Working Group, and it provides an updated overview of global practices regarding PPSs and their roles in insurance resolution and a variety of related activities. He said the NAIC's initial draft comments are based on an internal review of the issues paper and a review completed by members of the NAIC's Receivership and Insolvency (E) Task Force. Those initial comments, as well as input that was received from Maine, were circulated in advance of the call.

Ryan Workman (NAIC) gave an overview of the NAIC's comments on the public consultation, which are mostly editorial to address grammatical changes or ensure that the issues paper follows a style consistent with other IAIS papers. Other comments included enhancing language to clarify which examples apply to certain jurisdictions, removing speculative wording, and ensuring that examples used are relevant to the rest of the topics in the issues paper.

Wake provided a review of the edits he suggested for the NAIC's comments on the issues paper. Berry suggested that an NAIC comment around using alternative language for an example from the United Kingdom (UK) be reworded to enhance clarity. Workman responded that the NAIC comments would be revised to ensure that the intended point is clear prior to submission. As a member of the Working Group, Wake noted that he would work to ensure that the NAIC's comments are addressed and properly understood.

Director Popish Severinghaus made a motion, seconded by Director Cameron, to approve the submission of the NAIC comments, including the discussed revision, on the issues paper on the roles and functioning of PPSs (Attachment One-A). The motion passed unanimously.

Having no further business, the International Insurance Relations (G) Committee adjourned.

Questions for Consultation on Issues Paper on roles and functioning of Policyholder Protection Schemes (PPSs)

Thank you for your interest in the public consultation on the Issues Paper on roles and functioning of Policyholder Protection Schemes (PPSs). The Consultation Tool is available on the IAIS website.

Please do not submit this document to the IAIS. All responses to the Consultation Document must be made via the [Consultation Tool](#) to enable those responses to be considered.

DRAFT NAIC Comments – April 12, 2023

Consultation questions

1	<p>General comments on the Issues Paper</p> <p>Global Comment: Throughout the paper, “PPS” and “PPSs” are used to refer to “Policyholder Protection Scheme” and “Policyholder Protection Schemes” respectively. This reads a bit awkwardly. To streamline these references, on the acronym page (pg. 5) include one definition that covers the singular and plural and use “PPS” throughout the paper.</p> <p>Pg. 5: PPS – Policyholder Protection Scheme(s)</p> <p>Global Comment: We understand IAIS convention does not use the oxford comma for lists, but in some cases in this paper the oxford comma is used for lists. Please review for consistency with IAIS formatting.</p> <p>Global Comment: For some of the example boxes throughout the document there are awkward breaks and spaces between the jurisdiction and example. Please review and clean up formatting.</p> <p>Global Comment: need to review the use and formatting of em-dashes for consistency; see for example, paras 37, 40, 53, 110 and the blue box after 124.</p>

DRAFT

1 Introduction

1.1 Purpose

1. This document describes the Aggregation Method (AM) for use in the IAIS' assessment of whether it provides comparable outcomes to the Insurance Capital Standard (ICS). This builds on the Level 1 document that was released in 2020 and the AM Data Collection package which is released annually by the IAIS. This document describes (i) principles for the AM approach (ii) a provisional AM which will serve as the basis for comparison to the candidate ICS during the IAIS' comparability assessment and (iii) steps planned for the finalization of the AM, including further analysis on scalars and decision on a final methodology that delivers comparable outcomes to the ICS.
2. Further documentation will be provided as the AM is finalized after the results of the comparability assessment.

1.2 History/Background

3. The AM was introduced as an alternative group capital approach for interested jurisdictions to apply to Internationally Active Insurance Groups (IAIGs).¹ The goal of the AM is to leverage legal entity reported available and required capital to produce a measure of group capital adequacy.
4. At the November 2017 IAIS Meeting, the IAIS agreed to collect data from US-based IAIGs and any other willing jurisdiction/volunteer at the option of the group-wide supervisor to assist the US and other interested jurisdictions in the development of the AM, through an annual AM Data Collection. In so doing, the IAIS aims to be in a position by the end of the monitoring period to assess whether the AM provides comparable, i.e. substantially the same, outcomes to the ICS and if so, it will be considered an outcome-equivalent approach for implementation of the ICS as a PCR².
5. At the November 2019 IAIS Meeting, the IAIS agreed on the definition of comparable outcomes and an overarching approach to guide the development of high-level principles (HLPs) and criteria³. The IAIS also agreed at this meeting to move forward into a five-year monitoring period from 2020 through 2024, during which optional reporting of the AM would be permitted, at the discretion of group-wide supervisors. As stated in the resulting workplan: "in support of the work on the comparability assessment, there will be an annual AM data collection" with timing that will be "similar to that for the ICS confidential reporting"⁴.
6. In March 2023, the IAIS released the final HLPs and criteria for use in the comparability assessment. These were developed through a deliberate process, including two rounds of consultation to ensure that "the AM is neither precluded at the outset as an outcome equivalent approach to the ICS for measuring group capital, nor given a free pass". The 2023 AM Data

¹ During the monitoring period, other interested Volunteer Groups that do not meet the definition of an IAIG may choose to participate in the annual AM Data Collection exercise, at the option of their group-wide supervisor.

² [Implementation of ICS Version 2.0, IAIS 2 November 2017](#)

³ [Explanatory Note on the ICS and Comparability Assessment, IAIS 14 November 2019](#)

⁴ [Work Plan and Timeline 2020-24, IAIS 14 November 2019](#)

Collection package included updated schedules for reporting data relevant to the comparability assessment. The results of the comparability assessment will be released in 2024.

1.3 AM Development

7. A useful group capital approach provides supervisors with meaningful and reliable information about the solvency risks presented by and to IAIGs. The AM is adaptable to the diverse business models, product designs, and risk management approaches employed by insurance groups around the world that create resilience within the insurance sector. Because the AM relies on a fully transparent methodology and is built on existing legal entity requirements, it helps contribute to the overall stability of the insurance sector as a ready and sound capital framework for detecting a need for appropriate supervisory intervention at the group level.

1.4 AM Data Collection

8. The annual AM Data Collection has a template, specifications and questionnaire that are released annually. The template can calculate the provisional AM as well as other possible versions of the final AM and also includes data to assist with the comparability assessment. If the final version of the AM has different parameters than the provisional AM, the results from prior years can be recalculated retrospectively via data already collected.
9. Since its beginning in 2018, the AM Data Collection has expanded to include 21 groups from 5 countries and includes jurisdictional level data from every major insurance market. This data was used to develop the provisional AM (see Section 3) and to analyze the full range of scaling options that are being considered for use in the final AM (see Section 4).
10. In addition to use in development of the AM, the 2023 AM Data Collection will be used in the comparability assessment. This includes the application of scenarios for the AM and ICS, data on local capital regimes, and ICS results. There is 100% participation from US life IAIGs in the ICS and AM Data Collections. All US non-life IAIG's are participating in the AM Data Collection and an approximation tool was developed and will be used to calculate their ICS results. For US RBC filing legal entities, there is additional data obtained through filings that can be used for an analysis of correlation over the business cycle (see Appendix 1). Lastly, the IAIS is requesting that supervisors provide information about the treatment of risks and capital in their local regime for use in the comparability assessment. See Appendix 3 for examples of completed data collection tables for the US RBC framework. *[Note: this version contains placeholders; the final version will have populated tables.]*

2 Design Principles

11. Based on legal entity building blocks, the AM provides a lens into group capital adequacy that allows supervisors to analyze, identify and address capital deficiencies at the group level as well as where they may reside at the local legal entity level. The AM builds on existing capital regimes. Group capital resources and requirements are derived from the aggregation of legal entity-level reporting.

12. Guiding principles of the AM concept:

- Indifferent to Corporate Structure: Location of an entity within the group and/or intragroup transactions do not impact group-level results.
- Reflective of Appropriate Capital Regimes: Differentiated treatment for insurance/financial entities under existing capital regimes and application of appropriate alternatives for non-insurance entities. This leverages existing solvency frameworks and jurisdictional-tailored approaches to risk.
- Transparency: Clear line of sight to where risks reside and capital is held. Provides supervisors with information for assessing risks at the legal entity level within the group.
- Comparability: Group level results reflect comparable levels of risk through scaling of entity results.

13. The AM calculation has five components. These components are described further in the 'Provisional AM' section of this document. The final version of the AM will include these same components:

- Inventory & Group Financials
- Adjustments
- Capital Requirements
- Capital Resources
- Aggregation

14. Using these principles and information from the AM Data Collection, the US and other interested jurisdictions have developed a provisional AM to serve as the basis for comparison to the Candidate ICS in the IAIS comparability assessment. While the final version of the AM will follow the same design as the provisional AM, ultimately some parameters (particularly scalars) may be subject to change based on further analysis on the annual data collection and the results of the comparability assessment. There is an ability to back-test the AM, applying a variety of parameters with the data collected.

15. When introduced in ComFrame, IAIG capital reporting to group-wide supervisors and public disclosure requirements, including their content, granularity, and frequency, will also apply to the final version of the AM. Results of the implemented capital standard – including but not limited to the template, available capital and required capital – would be reported to the group-wide supervisor. Documentation of the capital standard – specifications, template, scalars, etc. – would be publicly disclosed and updated as required under ComFrame.

3 Provisional Aggregation Method

16. The following section describes the five components of the provisional AM.

3.1 Inventory & Group Financials

3.1.1 Scope

17. The starting point for the AM is the Consolidated Holding Company or Controlling Insurer in the case of a mutual insurer structure. All entities within the defined insurance (or financial) group are included. This is consistent with the perimeter of the calculation of the Candidate ICS and consistent with IAIS Insurance Core Principle (ICP) 23, Group-wide Supervision.
18. The AM is based on regulatory reporting at the legal (or local) entity level. This reporting is used to populate a schedule that separately lists the legal entities within the group and includes their available and required capital plus other relevant financial information. All figures are converted to a common reporting currency using exchange rates provided in the technical specifications.
19. Most legal entities are reported separately, however for simplification purposes, certain legal entities can be grouped or ‘stacked’ together. When the capital ratio is the same, regardless of whether a legal entity is stacked or de-stacked, then only the parent entity may be reported. Examples would include immaterial legal entities and non-insurance/non-financial entities that are not directly subject to a regulatory regime.
20. Legal entities that have material exposure to the total available capital are not grouped with a parent, including specifically legal entities that are subject to consolidated group capital requirements and foreign branches of an IAIG.
21. Each reported entity is mapped by the IAIG to an entity category. Entity categories are used to group entities prior to aggregation. Each entity within an entity category has its AM required capital determined in the same manner. There are entity categories for unregulated and regulated entities (“regulated”, in this context, means that an entity is subject to a capital requirement). For regulated entities, the entity category corresponds to a specific capital regime (e.g. RBC Filing US Life Insurer). Unregulated entities are mapped to categories including “Non-Insurer Holding Company,” “Asset Management,” “Other Non-Insurance/Non-Financial” or “Other Financial” and follow the AM specifications to calculate their required capital.
22. Entities in the provisional AM are mapped to the following categories:

Type	Entity Category	Type	Entity Category
Non-US Ins	Argentina	Non-US Ins	Solvency II (UK) – Life
Non-US Ins	Australia - All	Non-US Ins	Solvency II (UK) - Non-Life
Non-US Ins	Barbados	Non-US Ins	South Africa - Composite
Non-US Ins	Bermuda – Comm Insurers	Non-US Ins	South Africa – Life
Non-US Ins	Bermuda - Other	Non-US Ins	South Africa - Non-Life
Non-US Ins	Brazil	Non-US Ins	Switzerland – Life
Non-US Ins	Canada - Life	Non-US Ins	Switzerland - Non-Life
Non-US Ins	Canadian - P&C	Non-US Ins	Thailand
Non-US Ins	Chile	US Ins	RBC Filing U.S. Insurer (Life)
Non-US Ins	China	US Ins	RBC Filing U.S. Insurer (P&C)
Non-US Ins	Chinese Taipei - All	US Ins	RBC Filing U.S. Insurer (Health)
Non-US Ins	Colombia	US Ins	RBC Filing U.S. Insurer (Other)

Non-US Ins	Hong Kong - Life	US Ins	Non RBC filing U.S. Insurer
Non-US Ins	Hong Kong - Non-Life	Non-US Ins	Regime A
Non-US Ins	India	Non-US Ins	Regime B
Non-US Ins	Indonesia	Non-US Ins	Regime C
Non-US Ins	Japan - Life	Non-US Ins	Regime D
Non-US Ins	Japan - Health	Non-US Ins	Regime E
Non-US Ins	Japan - Non-Life	HoldCo	Non-Insurer Holding Company
Non-US Ins	South Korea	Fin	Bank (Basel III)
Non-US Ins	Malaysia	Fin	Bank (Other)
Non-US Ins	Mexico	Fin	Asset Manager/Registered Inv Advisor
Non-US Ins	New Zealand	Fin	Other Regulated Financial Entity
Non-US Ins	Philippines	Fin	Other Unregulated Financial Entity
Non-US Ins	Singapore - All	Other	Other Non-Ins/Non-Fin with Material Risk
Non-US Ins	Solvency II (EU) - Life	Other	Other Non-Ins/Non-Fin w/o Material Risk
Non-US Ins	Solvency II (EU) - Non-Life		

3.1.2 Use of Local Valuation, Capital Resources and Capital Requirements

23. Available capital is reported for each entity based on either local GAAP or the local capital regime depending on the type of entity. There is no group or consolidated balance sheet reported under the AM.
24. For unregulated entities, available capital is based on local GAAP reporting.
25. For regulated entities, unadjusted available capital and unadjusted required capital refer to reported amounts based on the relevant local capital regime. The local unadjusted available capital reflects all exclusions and adjustments as required by the local capital regime. The local unadjusted required capital is at the prescribed capital requirement (PCR)⁵ intervention level or the closest equivalent.
 - a. For Australian subsidiaries, the PCR is the target capital as set by the insurer/group in accordance with APRA requirements. Effectively, this would be "Target capital under ICAAP". PCR is not a set multiple of MCR.
 - b. For Bermudian subsidiaries, the Legal Entity PCR in Bermuda for medium and large commercial insurers is called the "Enhanced Capital Requirement" (ECR) and is calibrated to Tail-VaR at 99% confidence level over a one-year time horizon.
 - c. For Brazilian subsidiaries, the PCR is reported as the Brazilian MCR (in Portuguese, CMR – Capital Mínimo Requerido).
 - d. For Canadian life entities, the baseline PCR is "100% of the LICAT Base Solvency Buffer". The carrying value should include surplus allowances and eligible deposits on a net of

⁵ A PCR is defined in ICP 17.4 as "a solvency control level above which the supervisor does not intervene on capital adequacy grounds". (<https://www.iaisweb.org/icp-online-tool/13528-icp-17-capital-adequacy/>)

reinsurance basis. For property/casualty entities, the PCR should be the MCT capital requirement at the target level.

- e. For Chilean subsidiaries, the PCR is 100% of the total capital requirement which is the maximum between minimum capital, maximum debt ratios and a solvency margin.
- f. For Chinese subsidiaries, the PCR is 100% of the C-ROSS total capital.
- g. For Chinese Taipei subsidiaries, the PCR is 200% of the RBC ratio.
- h. For European Union member-based subsidiaries, the PCR is the Solvency II Solo SCR (Solvency Capital Requirement).
- i. For Hong Kong subsidiaries, under the current rule-based capital regime, if applied similar to the concept of PCR, the regime's PCR would be 150% of MCR for life insurers and 200% of MCR for non-life insurers.
- j. For Indian subsidiaries, the PCR is a factor-based solvency approach, based on a Solvency I type model, to maintain an excess of the value of assets over the amount of liabilities of not less than 50% of the amount of minimum capital subject to the control level of a solvency ratio of 150%.
- k. For Japanese subsidiaries, the PCR is the solvency margin ratio of 200%.
- l. For Korean subsidiaries, the PCR is 100% of risk-based solvency margin ratio.
- m. For Malaysian subsidiaries, the PCR is the individual target capital level calculated by individual entities based on policy requirements set by the Bank Negara Malaysia. It reflects the individual insurer's/Takaful Operator's own risk profile and risk management practices and includes additional capacity to absorb unexpected losses beyond those covered in the Risk-Based Capital Frameworks for Insurance and Takaful Operators.
- n. For Mexican subsidiaries, the PCR is the solvency capital requirement (SCR) based on a Solvency II type model, using both Value at Risk (VaR) methodologies, considering the time horizon of one year at a confidence level of 99.5%, and Probable Maximum Loss (PML) methodologies for catastrophic risks.
- o. For Singaporean subsidiaries, the PCR at the legal entity level under the enhanced valuation and capital framework for insurers (RBC 2) is calibrated at the 99.5% VaR over a one-year period.
- p. For South African subsidiaries, the PCR is 100% of the SAM SCR.
- q. For Swiss subsidiaries, the legal entity PCR under the "Swiss Solvency Test" (SST) is 100% of the target capital, which is calibrated to Tail-VaR at 99% confidence level over a one-year time horizon.
- r. For US subsidiaries, the RBC Company Action Level of each insurer should be recalibrated to the point at which regulatory action can be taken in any state based on RBC alone, i.e., the point at which the trend test begins, which is one and a half times company action level.

3.2 Adjustments

26. Before entities are aggregated, the reported available and required capital figures are adjusted to remove any double-counting. After adjustment, an entity's available and required capital reflects solely its own capital and risks and not that of its subsidiaries.
27. To ensure that the IAIG has properly eliminated any double-counting, details on each adjustment are provided in the AM template and questionnaire.

3.3 Capital Requirements

28. The AM capital requirement reflects risk aggregated at the group level. The AM also provides the capital requirement contribution from each entity within the scope of the group that provides another level of granularity for jurisdictional analysis. Group-level breakdowns of risk is by type of entity (e.g. entity category, entities by region). Given this approach, reporting at the individual risk level is not necessary nor would it be possible due to differing risk categories and definitions under the local capital regimes.

3.3.1 Exposures

29. The contribution of each legal entity to the total capital requirement is equal to a factor multiplied by a specified exposure measure. An exposure measure is specified for each entity category. All entities within their respective categories use the same factor and exposure measure. For regulated financial entities (including banking and insurance), the exposure measure is the local required capital (after adjustments for double-counting and at a specified PCR-equivalent intervention level). For these regulated entities, the factor will be referred to as a "scalar".
30. The exposure measures used in the provisional AM are provided in the table below. In the event an exposure is negative, the required capital is floored at zero.

Reg/Non-Reg	Category	Exposure Measure
Entities with Regulatory Capital Requirements	Insurance Entities	Adjusted Required Capital
	Banking Entities	Adjusted Required Capital
	Asset Mgmt	Adjusted Required Capital
Entities without Regulatory Capital Requirements	Non-Insurer Holding Company	Adjusted Available Capital
	Asset Mgmt / Other Financial	Average 3-year Gross Revenue

	Non-Insurance / Non-Financial	Adjusted Available Capital
--	-------------------------------	----------------------------

3.3.2 Diversification/Fungibility

31. The AM reflects the diversification that is already included in local capital requirements. The AM does not allow for further diversification between different legal entities and thereby recognizes the limitations on capital fungibility within a group.

3.3.3 Scalar Methodology

32. The provisional AM uses an unscaled methodology: local capital requirements at a PCR (or equivalent) level without any further adjustment other than for double-counting (i.e. all scalars are 100%).
33. Different scalar methodologies can produce similar indications. For example, results from the AM Data Collection for the provisional AM are similar to those from the '99.5% Value at Risk' scalar methodology. A number of additional scalar methodology options are being analyzed (see Section 4, 'Scalars', for more information.) The scalar methodology to be implemented in the finalized AM will either be one of the tested methodologies or some combination/variation that falls within the range of options under consideration.

3.4 Capital Resources

3.4.1 General Considerations

34. Capital resources have one tier with two components: financial instruments and adjusted available capital. Qualifying financial instruments are determined using a common set of criteria at the group-level. These instruments are issued at the holding company level and treated as liabilities in the holding company's balance sheet. They are classified as 'Senior Debt', 'Hybrid', 'Surplus Notes (or Similar)' and 'Other'. Available capital is determined at the legal entity level and becomes an input to the aggregated amount. Any capital element (other than a financial instrument) that is not recognized as available capital in the local statutory regime will also be excluded from capital resources in the AM.

3.4.2 Recognition of Financial Instruments

35. The AM recognition of a financial instrument as a qualifying capital resource is based on consideration of criteria developed based on five key principles:
- loss absorbing capacity (on a going concern basis and/or in winding-up);
 - subordination;
 - availability to absorb losses;
 - permanence; and
 - absence of both encumbrances and mandatory servicing costs.
36. Based on these principles, the following criteria are applied to financial instruments. These criteria are consistent with those used to determine financial instruments that qualify as capital resources in the ICS while also reflecting the economic circumstances and existing legal protections under a structural subordination environment. Analysis as part of the AM Data

Collection has shown there are no material differences in the amount of these financial instruments recognized in the AM and the ICS.

- The instrument must have a maturity date and initial maturity must be at least five years;
- Instruments must be subordinated to policyholders. For structurally subordinated instruments, supervisory approval of ordinary dividends can be met if the supervisor has in place supervisory controls over distributions, including the ability for the supervisor to limit, defer and/or disallow the payment of any distributions should it find that the insurer is presently, or may potentially become, financially distressed;
- Distributions cannot be linked to the credit standing or financial condition of the insurance group;
- The issuer has full discretion at all times to cancel distribution or payments;
- The instrument is not secured or covered by a guarantee given by the issuer or a related entity of the issuer;
- The debt instrument has been issued by a clean holding company, which is defined as a holding company that does not have policyholder liabilities on its stand-alone balance sheet;
- Amounts from the instrument issuance have been down-streamed into an insurance subsidiary of the holding company and the insurance subsidiary is located in a jurisdiction whose regulatory regime proactively enforces structural subordination;
- The IAIG and its group-wide supervisor have determined that the proceeds of the instruments, which have been down-streamed into insurance subsidiaries, are being tracked and reported appropriately; and
- The instrument must be fully paid up.

3.4.3 Application of Limits to Recognition of Debt

37. The amount of qualifying financial instruments recognized is subject to a limit of 75% of the aggregated available capital (before the addition of instruments). This is equivalent to a limit of 43% of group capital resources including financial instruments. This was reviewed as part of the AM Data Collection to ensure there was no material difference between the impact of this limit and the impact of limits on the same financial instruments in the ICS. The AM template has the functionality to test a range of approaches to applying limits.

3.5 Aggregation

38. After application of adjustments and scaling, the IAIG's available and required capital are aggregated by entity category.
39. Group capital resources are the sum of the adjusted available capital for the underlying entities plus any qualifying financial instruments subject to limits described above.
40. Group required capital is the sum of the scaled adjusted required capital for the underlying entities.

4 Scalars

41. The AM Data Collection includes analysis to identify, estimate and assess reasonable scaling methodologies. This analysis has been informed by a 2021 paper by American Academy of Actuaries on scalars: “Aggregating Regulatory Capital Requirements Across Jurisdictions: Theoretical and Practical Considerations” ([Academy paper](#)). The purpose of the Academy paper is to assist group-wide supervisors that are creating an aggregation-based group capital approach. The Academy paper does not make a recommendation as to which scalar(s) should be used nor does it discuss comparability of the AM and ICS. Rather it provides a framework for classifying and evaluating different methodologies.
42. The goal is to select a scaling methodology for the final AM that is meaningful from a prudential point of view, relevant for the monitoring of financial soundness and that provides for comparable outcomes to the ICS.

4.1 Purpose of Scalars

43. Scalars adjust local capital requirements to comparable levels. The AM will have one scalar for each entity category. The AM currently has 45 insurance entity categories and 3 non-insurance entity categories. This includes 5 placeholders (Regime A, Regime B, Regime C, Regime D and Regime E) to be used if/when further categories are needed. Given that these categories encompass the largest insurance markets, it is expected this list will be generally stable over time.
44. The provisional AM’s scalar methodology is unscaled (i.e. each scalar is 100%) for every regulated entity category. For alternative scalar methodologies, a scalar would be assigned to each of these entity categories; the assigned scalars may be different than 100% but would not necessarily be. Different methodologies may produce similar results. Scalars are jurisdiction-specific and not IAIG specific. For a given type of entity, every IAIG will use the exact same scalar.
45. A ‘scalar methodology’ is a means of using data, statistical analysis and/or judgment to calculate a set of scalars. A methodology is a verbal description of how scalars are determined for each entity category. Once selected, a methodology does not change.
46. A scalar can adjust for differences in the level of calibration between different types of capital requirements and also potentially differences in valuation.
47. Scalars can be “pure” or “excess”. Pure scalars are only applied to the underlying capital requirement. Excess scalars also make an adjustment to available capital to preserve the amount of excess assets (the amount by which the available capital exceeds the required capital). For a pure scalar, the calibration level depends on the intervention level of the underlying capital requirement and the scalar itself. For example, applying a scalar of 1.5 to US RBC at 200% of the Authorized Control Level is equivalent to applying a scalar of 1.0 to US RBC at 300% of the Authorized Control Level. For excess scalars, the calibration level only depends on the choice of intervention level. Further information on these types of scalar methodologies can be found in section 4.3 below.

4.1.1 Identifying a Point of Comparison

48. The Academy paper recommends using a practical approach to scaling by identifying some characteristic of the entities within each jurisdiction as a point of comparison – a common “yardstick”. This contrasts with the more abstract “ideal” of scalars that produce the same capital ratio for the foreign entity as that entity would have exhibited had it operated in exactly the same way in the home jurisdiction. This ideal is unachievable and undesirable. Differences between entities (risks, products, regulatory practices, etc.) limit the effectiveness of a capital framework outside the business model to which it was designed to apply. As the Academy paper notes, for a bank to recalculate its available and required capital using rules governing insurance entities “may not only not be ideal, it may not be useful at all”. Even within the insurance industry, using the “ideal” scalar would remove the adjustments that have been contemplated by the local supervisor to address these differences. The Academy paper recommends selecting a “yardstick” that can be measured for the full range of business models and industries in which an insurance group may operate. The Academy paper considers many variations, but the two basic examples of this are probability of default and average level of capital adequacy.

4.1.2 Total Balance Sheet Perspective on Calibration

49. Scalars can adjust for differences in: (1) the overall level of conservatism of different capital frameworks (i.e. their calibration); and/or (2) the extent to which that conservatism is reflected in the valuation of liabilities versus the capital requirement itself.
50. Adjustments for differences in calibration are made by adjusting the amount of required capital. Analysis on individual regimes would determine the individual level of solvency protection. Examples of such analysis include empirical study of probability of default, comparison to known benchmarks that are calibrated to known levels, or reference to existing equivalence agreements between regimes. Required capital can be scaled up (or down) to any level to achieve the target calibration of the aggregation method as a whole. Note that, mathematically, this is equivalent to using a higher (or lower) intervention level as the starting point of the AM calculation.
51. Adjustments for differing levels can be made by adjusting available capital in a way that preserves the amount by which it exceeds the required capital. An example of a method that does this is the Excess Relative Ratio approach. From a total balance sheet perspective, this does not change the level of calibration (i.e. it does not change point of intervention), but it would change the capital ratios.

4.2 Criteria for Evaluating Scalar Methodologies

52. The Academy paper presents four general criteria for assessment of scalar methodologies: validity, reliability, ease of implementation and stability of parameters. The Academy paper’s description of these criteria is paraphrased below. After each description, there is a discussion of related AM Data Collection analysis including the role of the data being collected.
53. Validity means that the selected methodology generates values for available and required capital for an entity in a foreign jurisdiction that can appropriately be added to the values of available and required capital for entities in the home jurisdiction. There are two common ways in which validity of the scalar measures are evaluated: (1) the reasonableness of assumptions;

and (2) the correlation of the measure with other known measures of similar quantities. The Academy paper relies on reasonableness of assumptions. The AM Data Collection analysis also looks at how various benchmarks of capital adequacy compare to AM results and to each other. These benchmarks include financial strength ratings, distance to default, and the ICS.

54. Reliability means that any entity or group calculating a scalar will know with confidence they are using the same information which any other entity or group would use. This implies that the scaling methodology must be transparent, unambiguous, and based on broadly available and understood data. The scalars used in the AM Data Collection are publicly available (as will any scalars used in the final AM).
55. Ease of implementation is based on availability of data and compatibility with existing procedures. This includes consideration of the degree to which these data sources are available, understood, and compatible with existing procedures for analysis.
56. Stability of parameters is important if the parameters are to be useful. Depending on the purposes for which the scalars are to be used, more or less sensitivity to changing conditions might be appropriate. The Academy paper discusses sensitivity analysis in two different dimensions: (1) sensitivity of results to changes of parameters within a model; and (2) sensitivity of results to differences in methods of calculating scalars. Sensitivity analysis is performed on the AM Data Collection by reweighting entities, changing the size of different scalar options, and looking at the impact of individual categories of entities on individual and total results.

4.3 Methodologies Under Consideration

4.3.1 Provisional AM

57. This method serves as the default calculation while the AM is under development. It is 'unscaled' (i.e. scalars are 100%). The underlying assumption is that each regime uses the approach to valuation, capital resources and capital requirements that is best suited to the products within that jurisdiction and so the adjustments needed to best bring each regime to a comparable level are already made in the underlying regimes.

4.3.2 Pure Relative Ratio Approach (Pure RRA)

58. This method adjusts only the capital requirement of regulated entities for each local regulatory regime within the IAIG. Scalars are calculated through a comparison of the industry average capital ratio within each entity category. For example, if the average capital ratio within one jurisdiction is twice as large as another, then the scalar for that jurisdiction will be half as large. The US RBC category scalar is being tested at different intervention levels equivalent to 200% and 300% of the Authorized Control Level under NAIC Risk Based Capital. A decision on which level would be used will depend on which level (for the US and any equivalent jurisdictions) is considered most comparable to the ICS.

4.3.3 Excess Relative Ratio Approach

59. This method adjusts both available capital and required capital. It adds a step to the Pure RRA by looking at the excess capital (also referred to as free surplus) ratio above the first intervention level requirement. To calculate a jurisdiction's excess capital ratio, one would first calculate the amount of the capital ratio in excess of the capital ratio required at the selected intervention

level. This amount would then be divided by the capital ratio required at the selected intervention level; for an example of this calculation, see Appendix 2. This method is also being tested at different intervention levels equivalent to 200% and 300% of the Authorized Control Level under NAIC Risk Based Capital. A decision on which level would be used will depend on which level (for the US and any equivalent jurisdictions) is considered most comparable to the ICS.

4.3.4 99.5% Value at Risk

60. These are pure scalars that are calibrated to a level equivalent to a 99.5% Value at Risk over a one-year time horizon. For a jurisdiction that is calibrated to this (or an equivalent⁶) level, this method would be unscaled. Examples of equivalent levels are a 99% Tail Value at Risk over a one-year time horizon and a 0.5% probability of default over a one-year time horizon. The latter is sometimes referred to as a “minimum investment grade level”.

4.3.5 Supervisory Assessment Approach

61. This method uses the local PCR (or equivalent) as the required capital for regimes that produce comparable outcomes to the ICS including having an equivalent level of solvency protection. This would be similar, in practice, to the 99.5% Value at Risk methodology but would have additional qualitative consideration of other comparability criteria. In practice, the 99.5% VaR method is similar to the provisional AM and so this method also produces similar results to an unscaled approach.

4.4 Methodologies No Longer Under Consideration

62. Over the course of the monitoring period, analysis on scalars has narrowed the range of reasonable methodologies that have the potential to produce comparable outcomes to the ICS. While the following methodologies are no longer under consideration, these summaries are provided to help give an understanding of how the thought process around the use of scalars has evolved.
63. Reverse Engineered ICS: This method uses scalars that are calibrated to a level equivalent to the average level of ratios under the reference ICS (ICS Version 2.0 for the monitoring period). Initial indications showed that the method was highly sensitive to changes in weighting. Use of the reference ICS was problematic due to the valuation and the one-size-fits-all nature of the standard method for calculating the capital requirement. While it is possible that design changes to valuation in the candidate ICS may reduce these problems, reflecting the use of internal models in a scalar based method would remain.
64. Internal Model: This method includes scalars that a group’s internal models have determined are equivalent to a specified target calibration (e.g. a 99.5% Value at Risk over a one-year time horizon). While this method is not under consideration for the AM itself, it may be of use to

⁶ From ICP 17.8.3: “With regards to the choice of the risk measure and confidence level to which regulatory capital requirements are calibrated, the IAIS notes that some supervisors have set a confidence level for regulatory purposes which is comparable with a minimum investment grade level. Some examples have included a 99.5% VaR calibrated confidence level over a one year timeframe, 99% TVaR over one year and 95% TVaR over the term of the policy obligations.” (<https://www.iaisweb.org/icp-online-tool/13528-icp-17-capital-adequacy/>)

groups that use aggregation in their internal models that are used to calculate the ICS. Note that for this method to be considered appropriate for use as an other method of calculating the ICS capital requirement, a group would need to demonstrate to their supervisor that it meets the requirements for use as an internal model.

65. Banking Equivalent: This method is scaled to a level that local supervisors consider equivalent to Basel banking requirements. For most jurisdictions this would be equivalent to an unscaled approach. The ICS does not scale Basel banking requirements and so is intended to be scaled to the same level. For the US, analysis by the Federal Reserve indicates that Basel is equivalent to an RBC intervention level of 250%. While it produces similar indications as some other methods under consideration, this banking equivalent approach is not under consideration as it is not as directly focused on insurance risk.

5 Finalizing the AM

5.1 Selecting Final Methodology

66. This document describes the AM as envisaged for implementation subject to further changes which may be decided based on the outcome of the IAIS comparability assessment and analysis of the results of the annual AM Data Collection.
67. The AM template has the functionality to test (and back-test) any potential revisions, including those to scalars. The AM Data Collection includes a variety of scaling methodologies that represent a full range of reasonable methods of scaling local capital. These methods were selected based on analysis of data from the AM Data Collection and consideration of the comparability criteria, which were developed so as to not give the AM a free pass nor preclude comparability at the outset. While it is not yet known which method(s) will produce comparable results, the goal is to select a scalar methodology for the final AM that is meaningful from a prudential point of view, relevant for the monitoring of financial soundness and provides comparable outcomes to the ICS.

5.2 AM Implementation

68. Similar to the ICS, once finalized, jurisdictions using the AM will implement it into their group capital regime. For example, as a jurisdiction that has noted its intent to implement the AM, the US will implement the AM for US IAIGs via the Group Capital Calculation (GCC). This is a similar calculation to the AM but with additional disclosures and more specific guidance. The GCC provides analytical information to the group-wide supervisor for use in assessing group risks and capital adequacy. The GCC helps US state insurance supervisors perform an assessment of capital when combined with other information obtained by US state insurance supervisors. This includes group organizational information provided on Schedule Y, enterprise risk information on Form F, and internal risk self-assessment information in Own Risk and Solvency Assessment (ORSA) filings (where applicable).

5.3 Ongoing evolution of the AM

69. The AM will evolve with the local solvency regimes that it uses as building blocks. As these regimes adapt to changes in the legal entities owned by IAIGs, the AM will too. Any updates to

parameters will be done in a manner consistent with the current specifications for the AM. Local prescribed capital requirements (or equivalent) will be maintained through communication with local supervisors. Further maintenance of scalars will be a technical exercise done in accordance with principles underlying the selected methodology. Similar updates will be needed for parameters used in the ICS and any process for doing so will be considered for use in the AM as well. The components of the AM are inherent to any aggregation-based method and so will not change.

DRAFT

6 Appendix 1: Correlation Analysis on US Entities

- The US RBC capital regime has been relatively stable for many decades and allows a more direct consideration of correlation than is possible with the AM Data Collection. Without precluding whatever decision is made for the aggregation of all entities, the following correlation analysis can be performed specifically for US legal entities:
 - Similarity of Life RBC and P&C RBC
 - Correlation between P&C RBC and the ICS
 - Correlation between Life RBC and the ICS
- Note that scaling changes the quantum of change but multiplying by a constant does not impact correlation. This means that all potential scaling options are correlated with the provisional AM and a change to the scaling methodology will not impact analysis on the correlation between the AM and the ICS.

6.1 Life RBC vs P&C RBC

- While developing its own aggregation-based approach to group capital, the Federal Reserve analyzed historical results of life and property/casualty (P&C) entities. For this analysis, the Federal Reserve used logistic regressions to model the relation between solvency ratios and default rates. When analyzed separately, the regression produces very similar parameter estimates for life and P&C (see table below). The differences are not statistically significant. A test of differences yields two-sided p values above 50% for tests of both the slope and intercepts. The lack of a statistically significant difference of slopes indicates capital requirements are comparably conservative in the two frameworks. If one framework had less stringent requirements, then companies operating at a given multiple of the capital requirement would be more likely to default, which was not observed. The lack of a statistically significant difference of intercepts indicates capital resources are comparably conservative in the two frameworks. If one framework had significantly more conservatism embedded into its valuation or capital instrument qualification criteria, a company with a low stated capital ratio would be less likely to default because of the loss absorbing potential of the balance sheet.

	P&C Insurance	Life Insurance
Slope (b)	-0.714	-0.662
Robust Std. Err.	(0.052)	(0.102)
Intercept (a)	-0.402	-0.602
Robust Std. Err.	(0.178)	(0.440)
Observations	21,031	6,862
R²	23.3%	20.3%

- The results above show that Life RBC and P&C RBC provide statistically similar measures of solvency.

6.2 Correlation of P&C RBC with ICS

- As part of work on the AM Data Collection, Team USA has developed models that can approximate ICS results for any US P&C entity or group. This allows calculation of ICS results going back several decades, long enough to make direct calculations of correlation. The results show that the US RBC and the ICS are significantly correlated across a broad range of P&C business models and product mixes. As an example, the following chart shows year-over-year changes in the modeled ICS ratio versus actual changes in the RBC ratio from 2001 to 2020 for a large P&C entity. While the quantum of change differs, the chart shows a similar directional reaction to conditions over this period of time. Applying a Pearson test of correlation, these results have a p-value well below 1%. One can conclude that, for this entity, the results are not due to chance and are statistically significant. Similar results have been found for other entities that report NAIC P&C RBC.

Chart: Year-over-year change in ICS Ratio vs RBC ratio

Table: Correlation test with null hypothesis that correlation is not zero

7 Appendix 2: Calculation of Excess Relative Ratio Approach

1. The following has been adapted from the 2022 instructions for the NAIC Group Capital Calculation. Included below are various steps to be taken in calculating the excess relative ratio approach to developing jurisdiction-specific scalars. In order to numerically demonstrate how this approach could work, hypothetical capital requirements and financial amounts have been developed for Country A. Based on preliminary research that has been performed by NAIC staff, it appears that the level of conservatism built into accounting and capital requirements within a jurisdiction may differ significantly for life insurers and non-life insurers. Therefore, ideally each jurisdiction would have two different scalars based on the type of business. The example below includes information related to life insurers in the US and Country A.

Step 1: Understand the Jurisdiction's Capital Requirements and Identify the First Intervention Level

- a. The first step in the process is to gain an understanding of the jurisdiction's capital requirements. This can be done in a variety of ways including reviewing publicly available information on the regulator's website, reviewing the jurisdiction's Financial Sector Assessment Program (FSAP) reports and discussions with the regulator.

In Country A, it assumes that the capital requirements for life insurers are based on a capital ratio, which is calculated as follows:

$$\text{Capital ratio} = \frac{\text{Total available capital}}{\text{Base required capital (BRC)}}$$

In the US, capital requirements are related to the insurer's RBC ratio. For purposes of the Relative Ratio Approach, an Anchor RBC ratio is used and calculated as follows:

$$\text{Anchor RBC ratio} = \frac{\text{Total adjusted capital}}{100\% \text{ Company Action Level RBC}^*}$$

* 100% Company Action Level RBC is equal to the Total RBC After Covariance including operational risk, without adjustment or 200% Authorized Control Level RBC.

- b. Similar to legal entity RBC requirements in the US, Country A utilizes an early intervention approach by establishing target capital levels above the prescribed minimums that provide an early signal so that intervention will be timely and for there to be a reasonable expectation that actions can successfully address difficulties. Presume that this target capital level is similar to the US Company Action Level (CAL) event, both of which can be considered the first intervention level in which some sort of action—either on the part of the insurer or the regulator—is mandated. A separate sensitivity calculation will be applied in the GCC template using trend test level RBC.

- c. For Country A, the target capital level is presumed to be a capital ratio of 150%. That is, the insurer's ratio of total available capital to its BRC should be above 150% to avoid the first level of regulatory intervention. Again, this is similar to the US CAL event, which is usually represented as an RBC ratio of 200% of Authorized Control Level (ACL) RBC (ignoring the RBC trend test). In the Relative Ratio approach, the Anchor RBC ratio represents the Company Action Level event (or first level of regulatory intervention) as 100% CAL RBC (instead of 200% ACL RBC), because CAL RBC is the reference point that is used to calibrate against other regimes. The Anchor RBC Ratio ($\text{Total Adjusted Capital} \div 100\% \text{ CAL RBC}$) tells how many "multiples of trigger level capital" that the company holds. Conceptualizing the CAL event as 100% CAL RBC allows the consistent definition of local capital ratios that are calibrated against a "multiples of the trigger level" approach, to ensure an "apples-to-apples" comparison.⁷

Step 2: Obtain Aggregate Industry Financial Data

2. The next step is to obtain aggregate industry financial data, and many jurisdictions include current aggregate industry data on their websites. Included below are the financial amounts for use in this exercise.

<p><i>U.S. Life Insurers – Aggregate Data</i></p> <p>Total Adjusted Capital = \$495B</p> <p>Authorized Control Level RBC = \$51B</p> <p>Company Action Level RBC = \$102B</p>
<p><i>Country A Life Insurers – Aggregate Data</i></p> <p>Total Available Capital = \$83B</p> <p>BRC = \$36B</p>

Step 3: Calculate a Jurisdiction's Industry Average Capital Ratio

3. To calculate a jurisdiction's average capital ratio, the aggregate total available capital for the industry would be divided by the minimum or base capital requirement for the industry in computing the applicable capital ratio. In Country A, this would be the BRC. In the US, this base or minimum capital requirement is usually seen as the ACL RBC, but because the Relative Ratio Approach is using 100% CAL RBC as a reference point to calibrate other regimes to, the Relative Ratio formula uses 100% CAL RBC as the baseline and the first-intervention level to calculate the Average Capital Ratio and Excess Capital Ratio. As a result, the scaled ratio of a non-US company should inform regulators how many multiples of first-intervention level capital the non-US company holds. Included below is the formula to calculate a jurisdiction's industry average capital ratio:

⁷ While it is mathematically equivalent to use 200% ACL RBC as the denominator, the Approach is designed to use the representation of first-intervention level capital levels as the conceptual underpinning of the Relative Ratio Approach, where 100% CAL RBC is the reference point to calibrate against other regimes.

Calculation of U.S. Industry Average Capital Ratio – Life Insurers

$$\frac{\$495\text{B (Total Adjusted Capital)}}{\$102\text{B (CAL RBC)}} = 485\%$$

Calculation of Country A Industry Average Capital Ratio – Life Insurers

$$\frac{\$83\text{B (Total Available Capital)}}{\$36\text{B (BRC)}} = 231\%$$

Step 4: Calculate a Jurisdiction's Excess Capital Ratio

4. The next step is to understand the level of capital the industry is holding above the first intervention level. Therefore, to calculate a jurisdiction's excess capital ratio, one would first need to calculate the amount of the capital ratio carried in excess of the capital ratio required at the first intervention level. This amount would then need to be divided by the capital ratio required at the first intervention level.

General Excess Capital Ratio Formula

$$\frac{\text{Average Capital Ratio} - \text{Capital Ratio at the First Intervention Level}}{\text{Capital Ratio at the First Intervention Level}}$$

5. Based on the formula above and information provided in Step 2 and Step 3, included below are how to calculate each jurisdiction's excess capital ratio.

NOTE: The first intervention level in the US is defined in the Relative Ratio Approach as 100% CAL RBC, while the first intervention level in Country A is a capital ratio of 150%.⁸

Calculation of U.S. Excess Capital Ratio – Life Insurers

$$\frac{485\% \text{ (Average Capital Ratio)} - 100\% \text{ (Capital Ratio at the First Intervention Level)}}{100\% \text{ (Capital Ratio at the First Intervention Level)}} = 385\%$$

Calculation of Country A Excess Capital Ratio – Life insurers

$$\frac{231\% \text{ (Average Capital Ratio)} - 150\% \text{ (Capital Ratio at the First Intervention Level)}}{150\% \text{ (Capital Ratio at the First Intervention Level)}} = 54\%$$

⁸ 100% CAL RBC translates to an ACL RBC level of 200%, but for conceptual purposes, the Relative Ratio Approach refers to the U.S. first intervention level as 100% CAL RBC, as 100% CAL RBC is the reference point to which the Relative Ratio Approach calibrates other regimes. In other words, 100% CAL RBC ensures that the scaled ratio of Country A results in a ratio that determines how many multiples of first-intervention level capital that the company in Country A is holding.

Step 5: Compare a Jurisdiction’s Excess Capital Ratio to the US Excess Capital Ratio to Develop the Scalar

6. Based on the information above, the US excess capital is 385%. In other words, life insurers in the US carry approximately 385% more capital than what is needed over the first intervention level. Country A’s excess capital ratio is 54%. That is, life insurers in Country A carry approximately 54% more capital than what is needed over the first intervention level.
7. To calculate the scalar, one would divide a jurisdiction’s excess capital ratio by the US excess capital ratio. Therefore, the calculation of Country A’s scalar for life insurers would be $54\% \div 385\% = 14\%$. Therefore, Country A’s scalar for life insurers would be 14%.

Step 6: Apply to the Scalar to the Non-US Insurer’s Amounts in the GCC

8. To demonstrate how the calculation of the scalar works, it would be best to provide a numerical example. For the purposes of this illustration, it assumes that a life insurer in Country A reports required capital of \$341,866 and total available capital of \$1,367,463. As noted previously, the above information and calculation suggests that US life insurers carry capital far above the minimum levels, while life insurers in Country A carry capital far closer to the minimum. Therefore, to equate the company’s \$341,866 of required capital, one must first calibrate the BRC to the first regulatory intervention level by multiplying it by 150%, or Country A’s capital ratio at the first intervention level. The resulting amount of \$512,799 is then multiplied by the scalar of 14% to get a scaled minimum required capital of \$71,792.
9. Further, the above rationale suggests that the available capital might also be overstated (because it does not use the same level of conservatism in the reserves) by the difference between the calibrated required capital of \$512,799 and the required capital after scaling of \$71,792, or \$441,007. Therefore, one should now deduct the \$441,007 from the total available capital of \$1,367,463 for a new total available capital of \$926,456. These two recalculated figures of required capital of \$71,792 and total available capital of \$926,456 is what would be included in the group’s capital calculation for this insurer. These figures are further demonstrated below.

<p><i>Calculation of Scaled Amounts for GCC Amounts</i></p> <p>as Reported by the Insurer in Country A</p> <hr/> <p>Total available capital = 1,367,463</p> <p>Minimum required capital (BRC) = 341,866</p> <p>Calibration of BRC to 1st Regulatory Intervention Level</p> <p>341,866 (BRC) * 150% = 512,799</p> <p>Scaling of Calibrated Minimum Required Capital</p> <hr/> <p>512,799 (Calibrated BRC) * 14% (Scalar) = 71,792 (Difference of 441,007)</p> <p>Scaled Total Available Capital</p> <hr/> <p>1,367,463 (Total Available Capital) – 441,007 (Difference in scaled required capital) = 926,456</p>
--

10. Given these scaled amounts, one can calculate the numerical effect on the company's relative capital ratio by using the unscaled and scaled amounts included below.

	<i>Unscaled Amounts from Table Above</i>	<i>Scaled Amounts from Table Above</i>
Total Available Capital (TAC)	1,367,463	926,456
<u>Base Required Capital (BRC)</u>	<u>341,866</u>	<u>71,792</u>
Capital Ratio (= TAC ÷ BRC)	400%	1290%

11. Because life insurers in Country A hold much lower levels of capital over the first intervention level as compared to US life insurers, the change in the capital ratio from 400% (unscaled) to 1290% (scaled) appears reasonable and consistent with the level of conservatism that is built into the US life RBC formula driven primarily from the conservative reserve valuation.

Note: In the above example, the company has an unscaled ratio (400%) that is above the industry average in Country A (231%) and a scaled ratio (1290%) that is higher than the US life industry average (485%). If the company had an unscaled ratio that was lower than the industry average in Country A, its scaled ratio would be lower than the US life industry average. company with an unscaled ratio equal to its own country's industry average will have a scaled ratio equal to the anchor RBC ratio."

Data for industrywide US RBC ratios is sourced from the aggregate RBC Statistics maintained by the NAIC. Data for industrywide capital ratios for foreign insurance jurisdictions was derived from publicly available aggregate industry data. If this scalar methodology is retained, then the data will require periodic updating.

8 Appendix 3: Comparability Data for US Entities

[Note: data for the following are undergoing review and will be populated in the final version]

8.1 Comparison of Life Risks

ICS Risk	Is material ?	Is the risk captured in the local capital requirement?	If no, is the risk reflected in local valuation and/or capital resources?	Describe the calculation of local capital requirement by risk category including its components and interaction, if any, with valuation and capital resources

Draft: 8/30/23

Innovation, Cybersecurity, and Technology (H) Committee
Seattle, Washington
August 13, 2023

The Innovation, Cybersecurity, and Technology (H) Committee met in Seattle, WA, Aug. 13, 2023. The following Committee members participated: Kathleen A. Birrane, Chair (MD); Michael Conway, Co-Vice Chair (CO); Doug Ommen, Co-Vice Chair (IA); Karima M. Woods (DC); John F. King (GA); Gordon I. Ito represented by Kathleen Nakasone (HI); Dana Popish Severinghaus represented by KC Stralka (IL); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing (MT); Jon Godfread (ND); Adrienne A. Harris represented by John Finston (NY); Judith L. French (OH); Carter Lawrence represented by Stephanie Cope (TN); Kevin Gaffney (VT); and Mike Kreidler represented by Byron Welch (WA). Also participating were: Lori K. Wing-Heier (AK); Wanchin Chou (CT); Michael Humphreys (PA); and Katie Johnson (VA).

1. Adopted its 2023 Spring National Meeting Minutes

Executive Deputy Superintendent Finston made a motion, seconded by Commissioner King, to adopt the Committee's March 22 minutes (*see NAIC Proceedings – Spring 2023, Innovation, Cybersecurity, and Technology (H) Committee*). The motion passed unanimously.

2. Adopted the Reports of its Working Groups

A. Big Data and Artificial Intelligence (H) Working Group

Superintendent Dwyer said the Big Data and Artificial Intelligence (H) Working Group met the morning of Aug. 13 during the Summer National Meeting. Related to the Working Group's artificial intelligence (AI)/machine learning (ML) survey efforts, Superintendent Dwyer said the Working Group received a report from Commissioner Gaffney summarizing observations from the home insurance AI/ML survey. She also reported that the Working Group heard a presentation on generative AI from Casey Kacirek (Deloitte) and David Sherwood (Deloitte). The presentation addressed how generative AI currently works, the emerging capabilities of generative AI, how to measure and mitigate AI risk, insurance industry examples of the benefits of AI, and common AI terms and definitions.

B. Cybersecurity (H) Working Group

Amann stated that the Cybersecurity (H) Working Group met March 7 in lieu of the Spring National Meeting. Since then, the drafting group of state insurance regulators has been meeting to develop a Cybersecurity Event Response Plan (CERP), which will be a useful resource for regulators with less experience but who are charged with leading a department's response to cyber events at regulated entities. The Working Group requested input from the public and received input from trade associations, including the National Association of Mutual Insurance Companies (NAMIC), the American Council of Life Insurers (ACLI), and the American Land Title Association (ALTA). Amann also thanked the states of Connecticut, Kansas, Illinois, New York, North Dakota and Virginia for their contributions to the CERP drafting efforts. The Working Group will also continue monitoring federal and international developments. The Working Group anticipates a meeting in September based on the current progress of the CERP drafting.

C. E-Commerce (H) Working Group

Director French reported that the E-Commerce (H) Working Group chairs have now met several times to discuss the Working Group's next steps and to give NAIC staff guidance on drafting a framework that would serve as a guide for states looking to modernize their regulatory requirements. NAIC staff are currently in the process of scheduling a meeting to present the draft framework for comment, and the Working Group anticipates it will take place in early September.

D. Innovation in Technology and Regulation (H) Working Group

Commissioner Conway reported that the Working Group plans to meet Aug. 29 to hear presentations from the Global Insurance Accelerator (GIA) and InsurTech NY about their programming in support of insurtechs and to discuss what state insurance regulators can do to support the insurtech community. The Working Group is also planning a regulator-only meeting in September to hear from states on how they are using technology to improve regulatory processes.

E. Privacy Protections (H) Working Group

Johnson reported that following the Spring National Meeting, there were several items of note. The Working Group adopted minutes from the four open meetings the Working Group has held since the Spring National Meeting, as well as the minutes from the Spring National Meeting. The Working Group also heard updates from NAIC staff on federal and state privacy legislation efforts. The Working Group also heard comments on specific topics including marketing issues, as well as opt-in and opt-out language related to certain processes discussed in the new *Insurance Consumer Privacy Protections Model Law* (#674). Lastly, the Working Group also discussed asking for additional time to complete the model law. The Working Group will stop taking comments for the time being and will work through the 40 comments received thus far, leading to the exposure of a new draft of the model law. Based on the comments received for the updated model law draft, the Working Group will understand how much additional time would be needed to complete the drafting process.

Welch made a motion, seconded by Executive Deputy Superintendent Finston, to adopt the reports of the Big Data and Artificial Intelligence (H) Working Group (Attachment One); the Cybersecurity (H) Working Group; the E-Commerce (H) Working Group; the Innovation in Technology and Regulation (H) Working Group, including its April 27 minutes (Attachment Two); and the Privacy Protections Working Group (Attachment Three). The motion passed unanimously.

3. Received Comments on the Model Bulletin Exposure Draft

Commissioner Birrane said that the model bulletin draft on the use of algorithms, predictive models and AI was first discussed at the 2022 Fall National Meeting. During that meeting, state insurance regulators discussed that the bulletin would establish a regulatory framework for the use of AI. The regulators chose the approach of a model interpretive bulletin because AI is already subject to regulatory standards and authority. They settled on a principles-based approach with a high-level of standards that would apply generally, focusing on governance. They also acknowledged the importance of validation as part of industry's practices but also recognized practical limitations that sometimes exist. Finally, the regulators settled on placing responsibility for third-party activities on licensees with the expectation that licensees would conduct appropriate due diligence when dealing with third-party data and model vendors.

After deciding on a direction for the bulletin, the regulators convened into four drafting groups with 22 states participating in the drafting process supported by NAIC staff members, including the NAIC's general counsel.

Next, Commissioner Birrane provided a brief summary of the contents of the model bulletin. The bulletin was constructed as regulatory guidance and not as a model law or model regulation, as the regulators decided that existing state laws already apply to the decisions made by insurers using AI systems. The bulletin guides insurers on how to govern their development and use of AI systems that impact consumers, and it also offers guidance on what information and documentation insurers should provide to regulators.

Section 1 of the bulletin gives background and statutory authority in identifying the model laws that provide underlying authority. The regulators recognized that there is not complete uniformity in state laws, so they anticipate that states will adjust the text accordingly. The focus of the bulletin is also on market conduct evaluation and investigation and does not include financial standards for financial examination.

Section 2 identifies definitions for key terms used in the bulletin. The definitions were subject to robust discussion among drafting regulators. Commissioner Birrane specifically invited public comments on the definitions provided in the bulletin.

Section 3 sets the expectation that insurers will establish meaningful governance and risk management policies and procedures and that those policies and procedures will be commensurate with the insurer's AI use.

Section 4 reminds the public that insurers' decisions that are based on AI systems are like any other decisions and are, therefore, subject to review to ensure compliance with the law. The section also provides guidance on the types of information and requests a carrier might expect to see during regulatory reviews of insurer conduct.

With the introduction provided, Commissioner Birrane then opened the floor for discussion, inviting comments from speakers that specifically indicated interest before the meeting in addressing the contents of the model bulletin. Comments were heard from 10 speakers, and each speaker was given three minutes to provide their input.

Peter Kochenburger (Consumer Representative) said that the model bulletin does very little other than describe and expand on what was already expressed in the "NAIC Principles on Artificial Intelligence (AI)" (AI Principles) adopted three years ago. He said the model bulletin missed the opportunity to set guidance and documentation of what insurers need to do when using AI. Kochenburger noted that even for a model bulletin, the language is tentative in areas that it really should not be, such as when encouraging the development of a written automated indicator sharing (AIS) program, which Kochenburger said should be a minimum standard. He also suggested that testing should be required. That way, even in a principles-based approach, regulators can create guidance with teeth to it. Kochenburger also noted that the bulletin reminds insurers that they have to follow state law, but that is already expected as expressed in the AI Principles written three years ago. In some instances, he said the model bulletin represented a step back as well (e.g., when discussing the concept of proxy discrimination against protected classes). Kochenburger said he recognizes the importance of careful wording but after so many years, it is important for the regulators to agree on guidance on unintentional harm.

Dave Snyder (American Property Casualty Insurance Association—APCIA) said that during his years of participation at the NAIC, while there have always been issues and challenges, he did not recall an era where there was so much that was challenging and profoundly disturbing, and as seen with the catastrophe in Hawaii, even tragic. He said the moment calls on regulators and interested parties to work together for the benefit and support of the general public. Regarding the bulletin, Snyder expressed that the overall approach to the model bulletin was correct and that the APCIA appreciated the effort reflected in the draft. He also expressed appreciation for the proportionality and flexibility of the bulletin, as well as the priority that was placed on governance. He added that at first, the bulletin's scope appears to sweep in operations and data that are already adequately regulated and do not need additional regulation. Second, the bulletin's language reflects the current reality of the availability of data and the undesirability of obtaining certain types of data. The APCIA is concerned about any data collection that the public

does not want insurers to gather or use. Regarding third-party vendors, the APCIA's smaller insurer members would have some difficulty with these provisions, and that difficulty may extend to larger insurers, as well, in a way that deprives insurers and ultimately the public of beneficial innovation. Fourth, regarding terminology, Snyder emphasized that the legislative standards mentioned in the bulletin should govern the terms used in the bulletin and should not be undermined or modified in favor of any unlegislated standard or terminology. Fifth, the APCIA is concerned about the danger of unnecessary costs. Unless resolved, these issues could impose burdens and ultimately harm, not help, the public. These harms could include increased cost, subpar service, and less technology and information that could help prevent and manage loss. The APCIA asked to continue forward on a bulletin that is appropriately limited in scope, that reflects the realistic status and issues with testing for demographics, helps address third-party vendor regulatory issues without closing off access to the expertise and innovation of other players, adheres in all ways to legislated standards, and results in the most cost-effective bulletin for regulators, insurers, and ultimately, the public.

Dave Sandberg (American Academy of Actuaries—Academy) said that the Academy applauded the bulletin's focus on a framework to document and govern decisions based on AI systems. A focal point of decisions would be essential to assess the depth and breadth of the necessary documentation of governance. Sandberg also drew a comparison of the structure and implementation of governance requirements to the previous effort to implement the Own Risk and Solvency Assessment (ORSA) requirements. He said that the ORSA requirements focus on documenting key risk management principles, measures, and the governance being used by a company. Sandberg further noted that the ORSA requirements were created and drafted over a relatively short period of time. In contrast, he noted that the principles-based reserving requirements were derived over a 20-year period. Therefore, the Academy asked if the framing and implementation requirements of the bulletins were meant to be the same as or different from those used for the ORSA requirements. Sandberg noted that much of the work being done at the Academy and the other actuarial professions is in parallel to this draft bulletin and will be of use to the NAIC and insurance organizations regarding the guardrails and adequate governance needed for AI systems. He said that work at the Academy included content and resources developed by Academy committees, as well as the professional standards for actuarial work that are maintained by the Academy. He stated current applicable standards, include modeling, assumptions setting, and risk classification. Sandberg closed with a reference to the upcoming Center for Insurance Policy and Research (CIPR) educational event during which Dorothy Andrews (Academy) would be sharing further details on projects of the Academy that would be of most interest and applicable to the discussions on the bulletin.

Andrew Pauley (NAMIC) said that NAMIC appreciates the time and effort put into the task of providing a framework and guardrails for insurer use of AI/ML and associated technology systems. Pauley implored the Committee to embrace the many positive aspects of AI/ML that can have important and transformational results for policyholders and consumers. He further stated that NAMIC and its members do not want any legitimate harm to come to consumers or policyholders. NAMIC believes the model bulletin provides a draft framework that can accomplish the Committee's goals while finding common ground with industry and stakeholders. Pauley noted that NAMIC will offer suggestions in the areas of statutory authority to act in these instances; clarification of some of the definitional aspects, such as bias or algorithm; enhanced protections for industry information; risk-based understanding; and needed clarification on some of the principles elucidated in the model bulletin, such as testing and third-party vendor responsibility. He said that NAMIC looks forward to working with the Committee to arrive at solutions that protect and stabilize the insurance marketplace while fostering growth and innovation that benefit all stakeholders.

Brian Bayerle (ACLI) applauded the Committee's leadership for addressing the critical issue of consumer protection. He said that life insurers are increasingly leveraging technology to improve interactions with consumers to make it easier and more convenient to get the financial protections that they need. This includes greater use of technologies that simplify underwriting processes. He said that a regulatory framework designed to eliminate unfair discrimination must be balanced with emerging technologies that help expand the coverage

to underserved communities. Bayerle said the model bulletin would allow life insurers to use such technologies to meet consumer demands for an easier, less-intrusive underwriting process while advancing the objective to eliminate unfair discrimination of consumers. However, he said the ACLI has concerns about certain definitions and the imposition of impractical oversight and new contractual obligations on the use of third-party vendors, which will be challenging for smaller to mid-sized companies throughout the country.

Randi Chapman (Blue Cross Blue Shield Association—BCBSA) expressed appreciation for the Committee’s work on the model bulletin. She said the BCBSA believes it is important to continue researching and developing best practices and standards for the use of AI tools across all industries. These best practices and standards should focus on emerging risk mitigation that is grounded in the National Institute of Standards and Technology (NIST) *Artificial Intelligence Risk Management Framework*, which includes accountability, security and safety, privacy and confidentiality, transparency and explainability, reliability, fairness, and bias mitigation. The BCBSA supports the development of a risk-based approach that measures the need for appropriate protections without stifling innovation, and it encourages the NAIC to coordinate with federal regulatory partners, like NIST, to promote consistency in AI governance best practices. The BCBSA believes that consistent and uniform standards that address algorithm documentation, testing, and auditing, as well as stakeholder education, will foster greater trust and accountability in AI tools.

Michael DeLong (Consumer Representative), on behalf of the Consumer Federation of America (CFA), said consumer groups have long been concerned about protected class unfair discrimination generated by insurer use of data that are racially biased, which indirectly cause unfair discrimination on the basis of race. DeLong added that with insurers’ explosive growth in using new sources and the types and volumes of data and AI, state insurance regulators acknowledged the increased potential for racially biased data and algorithms to produce protected class unfair discrimination in 2020 with the adoption of the AI Principles. Shortly after the adoption of the AI Principles, the NAIC created the Special (EX) Committee on Race and Insurance, which is charged with determining if current practices exist in the insurance sector that potentially disadvantage minorities. DeLong said that while the NAIC has done much on diversity, equity, and inclusion (DE&I) among insurers and regulators, structural racism in insurance has not been addressed. He further stated that the model bulletin is not principles-based, but a prescriptive governance approach that does not expand on the AI Principles nor provide specific guidance, principles-based or otherwise, to NAIC committees, working groups, insurers, or regulators on how to implement the AI Principles. DeLong noted that it fails to provide essential definitions, does not define proxy discrimination, fails to address structural racism in insurance, and incorrectly tells insurers that testing for protected class bias may not be feasible.

Birny Birnbaum (Center for Economic Justice—CEJ) said that AI governance, risk management procedures, and documentation are necessary and important but not sufficient. Birnbaum stated the emphasis should be placed on testing consumer outcomes for fair and unfair discrimination during all phases of the insurance life cycle and in both model development and post-deployment. Birnbaum added that regulatory guidance is needed to generate this testing, including proxy discrimination defining, to establish at least one uniform testing methodology, reporting of testing results by insurers, and to establish thresholds for what constitutes proxy discrimination. Birnbaum said that for some issues such as for cybersecurity, it is necessary to rely on good hygiene or process guidance to try to prevent bad outcomes because there are not enough outcomes against which to apply predictive analytics. Insurers have and regulators can obtain the data and ability to ensure good market outcomes and compliance through testing of these outcomes for fair and unfair discrimination. Testing should be the central feature of governance. Meaningful guidance regarding the fairness prong of the AI Principles must include insurer data testing guidance. Testing for racial bias has been done for housing, employment, credit, and even insurance for five decades. There are well-accepted methods for such testing so that regulators do not have to invent their own methodology. Birnbaum gave an example of what would happen if a governance-only approach to financial solvency was enacted, but it would not make sense with metrics, such as risk-based capital (RBC), giving regulators the ability to quickly review and compare hundreds of insurers and their relative financial

condition. He added that the same logic behind a standard methodology and standard metrics for RBC should apply to establishing standard metrics and testing methodology for insurer's use of AI.

Jim Hodges (National Alliance of Life Companies—NALC) said that the principal-based approach is the correct approach. However, he stated that the NALC wanted to raise several issues, with the first being the uneven negotiating power of small versus large companies. Vendors in smaller companies may not enjoy the same level of cooperation or abilities to modify terms and conditions that the larger companies have. The second issue involves better defining specific terms around AI to discern between newer technologies versus algorithms that have been around for decades. Hodges also noted that other federal and state regulators are wrestling with the same issues and encouraged regulators to collaborate to provide consistent definitions to spur innovation and ensure a more consistent approach for consumers, insurers, and regulators. Hodges stated the importance of engaging with technology companies to share the sensitivity points of regulators and to try to have those issues addressed. He said an ongoing dialogue will lead to better products that address regulatory concerns and regulatory mandates. Hodges noted the bulletin also references the federal Unfair Trade Practices Act and is concerned that utilization of new AI tools may be deemed appropriate in one state and an unfair trade practice in another, which will discourage the use of innovative tools. Where possible, companies and regulators should work together to advance the use of innovative tools on a consistent and uniform basis. The NALC also believes that pilot initiatives around new regulatory approaches should be undertaken to test both effectiveness and fairness.

J.P. Wieske (American InsurTech Council—AITC) expressed appreciation for the time regulators have taken to work with industry representatives on the continued development of the model bulletin. Wieske further said the AITC appreciates that the bulletin requires insurers to have the same standard across anything they use fundamentally in their insurance products and gives regulatory authority that makes sense, is consistent, and is time-tested. Wieske said the AITC acknowledged that many concerns have been raised on what AI is and raised that the definitions in the model bulletin may need to be revised. He also expressed that AI is simply another tool available to insurers that should be held to the same standards that insurers have to meet today. Wieske said that while he understands that there are concerns on the use of AI, those concerns are likely reflective of already existing concerns in the current marketplace. The AITC would like the NAIC to consider the process that exists in market conduct, which is more generally around self-audit and comprehensive self-audit, and is not mentioned in this bulletin. Wieske encouraged the NAIC to work with large, medium, and small companies privately to better understand how AI is being used in insurance.

Commissioner Birrane then opened the floor for discussion from Committee membership, other regulators, or interested parties.

Commissioner Humphreys posed that a general question be issued to companies in order to incorporate feedback in written comments about the oversight of third-party groups regarding compliance with non-discrimination laws. He said he has heard from companies that do feel they have the power to require cooperation with insurance departments but is unsure if that would be true for companies of all sizes. Commissioner Humphreys has also heard from smaller companies that feel they have little to no power to negotiate such terms. He drew a comparison to pharmacy benefit managers and wondered about the possibility of licensing service providers similar to rating organizations where departments have to work with the service providers to get into compliance. Commissioner Humphreys asked for feedback on third-party oversight that would give companies comfort in knowing that the service providers are not discriminating.

Chou asked the Academy to elaborate on how effective ORSA is given that many companies treat the filing as a compliance exercise.

Sandberg responded to Chou that the value of ORSA is that it lays a foundation for productive conversations. Sandberg continued by noting that AI is emerging, and the ability to have a set of metrics will be a long process and will be a good foundation for having further productive conversations. He added the ORSA filings allow companies to engage with regulators about their controls and emerging risks. He drew a parallel to AI-related discussions, noting the process to develop a set of metrics that remain unchanged and are codified will require a foundation to be laid.

Commissioner Conway added to Commissioner Humphrey's commentary said on the third-party aspect of the bulletin. He noted that if the regulators are going to have an outcome-focused testing methodology, then third parties will necessarily need to be involved. Conway noted it is important for companies to address this testing, and if there is a problem with third-party agreements, he questioned how industries will respond if there is a problem with outcome-testing.

Commissioner Birrane then opened the floor to any others who did not sign up to speak ahead of the meeting. Brendan Bridgeland (Center for Insurance Research—CIR) pointed out one sentence in the bulletin that he found troubling, which he quoted: "Current limitations on the availability of reliable demographic data on consumers make it challenging for insurers and regulators to directly test these systems to determine whether the decisions made meet all applicable legal standards." Bridgeland stated this sentence should not be in the bulletin, as it undermines the power of regulatory authority, implying that regulators will not be able to deal with this in the future.

Director Wing-Heier said that the bulletin is a good working document. She said she appreciated the hours spent on it and acknowledged the bulletin has been a significant project and represents a good start.

Commissioner Birrane concluded by stating that when the Committee receives all the written public comments, the Working Group will meet in regulator-to-regulator session, and then it will present a second draft of the model bulletin at the end of September.

Having no further business, the Innovation, Cybersecurity, and Technology (H) Committee adjourned.

Draft: 8/28/23

Big Data and Artificial Intelligence (H) Working Group
Seattle, Washington
August 13, 2023

The Big Data and Artificial Intelligence (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Seattle, WA, Aug. 13, 2023. The following Working Group members participated: Elizabeth Kelleher Dwyer, Chair (RI); Amy L. Beard, Co-Vice Chair, represented by Victoria Hastings and Alex Peck (IN); Doug Ommen, Co-Vice Chair (IA); Adrienne A. Harris, Co-Vice Chair, represented by John Finston (NY); Kevin Gaffney, Co-Vice Chair (VT); Mark Fowler (AL); Barbara D. Richardson (AZ); Michael Conway, Peg Brown, and Debra Judy (CO); Andrew N. Mais, George Bradner, and Wanchin Chou (CT); Susan Jennette (DE); Rebecca Smith (FL); Shannon Hohl (ID); Erica Weyhenmeyer (IL); Chuck Myers (LA); Rachel M. Davison (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Karen Dennis (MI); Phil Vigliaturo (MN); Cynthia Amann (MO); Colton Schulz (ND); Eric Dunning (NE); Christian Citarella (NH); Matt Walsh (OH); Teresa Green (OK); Alex Cheng (OR); Shannen Logue, Katie Merritt, and Michael McKenney (PA); Ryan Basnett (SC); Travis Jordan (SD); Stephanie Cope (TN); Mark Worman (TX); Scott A. White (VA); Bryon Welch (WA); Rachel Cissne Carabell (WI); and Erin K. Hunter (WV). Also participating were: John F. King (GA); and Matt Gendron (RI).

1. Adopted its Spring National Meeting Minutes

Commissioner Ommen made a motion, seconded by Commissioner Gaffney, to adopt the Working Group's March 22 minutes (*see NAIC Proceedings – Spring 2023, Innovation, Cybersecurity, and Technology (H) Committee, Attachment Two*). The motion passed unanimously.

2. Received an Update on the AI/ ML Surveys

Commissioner Gaffney said the Artificial Intelligence (AI)/Machine Learning (ML) surveys are being conducted to accomplish three goals: 1) gain a better understanding of the insurance industry's use and governance of big data and AI/ML; 2) seek information that could aid in the development of guidance or potential regulatory framework to support the insurance industry's use of big data and AI/ML; and 3) inform state insurance regulators as to the current and planned business practices of companies. Commissioner Gaffney said the public report of the Private Passenger Automobile (PPA) AI/ML survey was distributed at the 2022 Fall National Meeting and is posted on the NAIC website under the Big Data and Artificial Intelligence (H) Working Group.

Commissioner Gaffney said the public report of the Home AI/ML survey has been issued. The Home Insurance survey was conducted under the examination authority of 10 states (Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, Vermont, and Wisconsin) and was issued to insurers having at least \$50 million in national homeowners written premium in 2020. Just like the PPA survey, the requesting states agreed the collected data will not be used to evaluate or determine a company's compliance with applicable laws and regulations and that all company-specific information will be kept confidential under state examination authority.

Commissioner Gaffney said the survey was focused on the use of AI models, which include ML, but it was specifically limited to exclude the use of more traditional generalized linear models (GLMs) in the areas of claims, fraud identification, marketing, rating, underwriting, and loss prevention. He said the survey also asked about data elements used by operational area, how consumers are notified of the use of data and their ability to request a correction to data being used, how governance is documented in the company's governance framework, and the names of third-party vendors providing data and/or external models.

Out of the 194 companies completing the survey, Commissioner Gaffney said 136 companies (or about 70%) use, plan to use, or plan to explore using AI in their operations. This is not quite as high as the 88% of the responses received from the PPA survey, which may be due to less usage of AI/ML claims models in homeowners insurance. Among insurer operations areas, Commissioner Gaffney said the percentage of companies using AI models in homeowners insurance were: 1) claims, 54%; 2) underwriting and marketing, both at 47%; 3) fraud detection, 42%; 4) rating, 35%; and 5) loss prevention, 14%. He said the main reasons reported for not using, not planning to use, and not exploring the use of AI for home insurance were: "no compelling business reason"; "waiting for regulatory guidance"; and "lack of resources and expertise." In the claims function, the home insurers reported using AI mostly for subrogation, claims triage, and evaluating images of loss.

Commissioner Gaffney said home and PPA insurers use claims models to analyze images of loss. Home insurers also use claims models to determine subrogation and for claims triage. He said home insurers do not use claims models to make claim assignment decisions or to determine settlement amounts as much as reported in the PPA survey. AI/ML claims models for both home and PPA were generally developed in-house except those used to evaluate images, which tend to be developed externally.

For fraud identification, Commissioner Gaffney said both PPA and home insurers reported using AI mainly to refer claims for further investigation, with some using AI to detect organized crime rings. Some home insurers also reported using social media for fraud identification. For both home and PPA, fraud models were mixed between internally and externally developed models.

For marketing, Commissioner Gaffney said both home and PPA insurers are generally using AI for targeted online advertising. Generally, the marketing models used in both PPA and home were reported about equally developed in-house and purchased from a third party.

For rating and underwriting, Commissioner Gaffney said there was less usage of advanced AI/ML models reported, mainly reflecting the transparency requirements by state insurance regulators, where more traditional GLMs provide this transparency. Almost all rating and underwriting models were developed in-house. Home insurers reported that most models used in underwriting were for automated or augmented denial decisions and for verification of policy characteristics.

For loss prevention, Commissioner Gaffney said 28 home insurers reported using AI mainly for guidance on loss control inspections, but only three PPA insurers reported using AI for loss prevention.

Commissioner Gaffney said a variety of typical data elements are being used in home and PPA insurance depending on the model purpose and that insurers are also looking at a lot of geo-demographic data externally sourced. For marketing, insurers are looking at a lot more types of data to identify prospects than would be allowed for use in ratemaking or underwriting, such as data on occupation, education, personal finance information, and income.

When asked about information provided to policyholders about how their data is being used and opportunities to correct their data, Commissioner Gaffney said there was a low response rate from insurers reporting they do more than what is required by existing statutes and regulations.

Regarding insurers' documented governance practices as aligning with the NAIC Principles on AI, Commissioner Gaffney said roughly half of insurers reported they have a documented governance program that considers the elements of the NAIC Principles on AI.

Commissioner Gaffney said potential next steps include exploring insurers' AI model usage and the level of decision-making, evaluating the regulatory framework for the use of third-party models, and determining whether additional white papers on best practices on subjects related to AI/ML would be useful. There were no additional comments or questions from the Working Group members or interested parties.

3. Heard a Presentation from Deloitte on Generative AI

Superintendent Dwyer said the next agenda item is to hear a presentation on generative AI from David Sherwood (Deloitte) and Casey Kacirek (Deloitte). Before hearing the presentation from Sherwood and Kacirek, Superintendent Dwyer said NAIC staff asked ChatGPT, which is an example of generative AI, to explain what Generative AI is. The following, edited for brevity, is what ChatGPT produced:

Generative AI refers to a category of artificial intelligence techniques that focus on creating or generating new content, data, or information. These techniques are particularly useful in tasks where creativity, imagination, and pattern recognition are required. When explaining generative AI to state insurance regulators, you can use the following approach: Generative AI involves training a computer program to generate content that is similar to, but not identical to, existing data. It's like teaching a computer to come up with its own versions of things it has seen before. Generative AI models are trained on large datasets to understand the patterns, styles, and structures present in the data. These models then use this knowledge to create new content that fits within the learned patterns. For example, a generative AI model trained on insurance claim data can generate new, plausible insurance claims based on the patterns it has learned.

Sherwood said AI has been around a long time, and credit card companies use it to detect fraud. Sherwood said generative AI is a hot topic of discussion. Sherwood said Deloitte has a concept called trustworthy AI, and organizations need to think about what controls are in place for AI conducting tasks.

Kacirek said AI is technology striving to mimic human behavior. This encompasses several technologies that work together, including ML, natural language processing, predictive analytics, and speech processing. In terms of the evolution of AI, Kacirek said generative AI is creating content based on human prompts by leveraging robust data sources that are either internally or externally available. Natural language processing (NLP) is another emerging technology, which is the ability to understand text and spoken words. Kacirek said Alexa and Siri are based on the ability to understand human language. Computer vision is another technology that has been in existence and is essentially image recognition, such as facial recognition to unlock a phone. She said Netflix and Hulu use near real-time interfacing to provide consumers recommendations based on the analysis of real-time data on how a consumer is selecting a show. Kacirek said these four technologies are driving the emerging capabilities of AI.

Kacirek said a business could have an initial draft of code written through generative AI and have that draft be the basis for a human coder to review and leverage. Generative AI can also be used for marketing and creative design work. Generative AI can produce a wide range of outputs depending on the specific application and type of data that is needed. Some common output types include text, video, code, image, and audio. Sherwood said generative AI is being used in insurance to create text. For example, draft job descriptions or consumer communications on certain types of claims might be prepared using generative AI. Insurers can then use a human in the loop to review these outputs. For call centers, insurers might use audio generative AI where a human is answering calls with generative AI listening and providing suggested prompts to the types of questions being asked.

Kacirek said the use of external data and third-party data requires monitoring and controls to be in place and that that a human should be responsible for the output. Sherwood said it is unlikely that insurers will be developing their own generative AI systems because there are already leaders in this field. Sherwood said it is important to understand how insurers integrate this technology with their existing technology and how both internal and external data might be leveraged.

Kacirek said there are potential risks with using generative AI, including bias since models are leveraging robust data sets. She said data may have unintentional bias, such as demographic data or protected class data. Because of this, there is a need to monitor for potential bias, and having some level of human supervision during the training of a model is one way to address bias risk. Periodic monitoring is also needed to assure the model continues to perform as anticipated. Kacirek said companies should consider whether the use of a model output is ethical to use. She said another risk is hallucination, which occurs when a model produces an output that sounds plausible but is factually incorrect. Kacirek said this may occur because of poor data quality. Sherwood said generative AI is mimicking human behavior and that risk and control are important because AI works at a higher velocity than humans.

Kacirek reviewed Deloitte's Trustworthy AI framework is intended to provide a framework to address the risks associated with the use of AI. She said the framework is rooted in the National Institute of Standards and Technology (NIST) AI framework. Kacirek said the Deloitte framework includes the following concepts:

- **Fair and impartial:** This involves assessing whether systems include internal and external checks to assure equitable application across all participants and that there is no bias towards certain groups or protected classes. Companies can assess this risk by conducting fairness testing and reviewing whether models are providing any discriminatory outcomes.
- **Transparent and explainable:** Participants can understand how their data is being used and how AI systems make decisions. This means questioning whether algorithms and attributes are open to inspection and whether the outcomes are explainable.
- **Responsible and accountable:** This involves making sure policies are in place to determine who is held ultimately responsible for the output of AI system decisions.
- **Robust and reliable:** This focuses on having the appropriate, minimum requirements or checks for reliability and consistency of an AI model prior to deployment. This also involves ongoing checks after deployment to make sure the model performs as intended.
- **Privacy:** This involves elevating consumer privacy to make sure customer data is not used beyond its intended and stated use.
- **Safe and secure:** This involves elevating safety and security to assure AI systems are protected from risks, including cyber risk.

Kacirek said approximately 50% of organizations have adopted some framework for governing the use of AI. She said companies have an opportunity to leverage existing risk management processes, which have roles and responsibilities, policies and procedures, processes and technology, and aspects of cross-functional compliance. Sherwood said a good example of leveraging existing model risk management is for a company to review the list of models being used and to identify which models are using AI. This might lead to further scrutiny about what data is being used and the third parties being used.

Kacriek said building a trustworthy AI environment involves the concept of establishing three lines of defense. The first line of defense is for the business users to own the model and its outputs. The second line of defense is for a company to establish governance and compliance requirements. The third line of defense is for a company to have an independent review of models. Kacirek said business owners should be performing testing and validation of a model before it is deployed, and there should then be validation, monitoring, and controls in place. She said it is important for companies to understand how quickly they can respond to unintended outcomes of an AI model.

Sherwood said companies should look at the use of AI throughout the value chain and upskill staff in the use of AI. He said there are tasks that may be automated to enhance consumer outcomes or eliminate costs for the company. Sherwood provided an example of the use of accelerated underwriting, chat features of call centers, and the use of AI in claims settlement and fraud detection.

Superintendent Dwyer said it is important for insurance companies to be able to explain how their AI models work. Commissioner Ommen said transparency is an important consumer protection. For example, insurance companies may not be able to adequately explain to a consumer why a claim is being delayed or denied. Sherwood said a model should be generating an outcome, which is reviewed by a human, who then communicates the outcome to the consumer.

Commissioner Birrane said insurers should be able to explain what is causing an adverse decision or outcome for a consumer. Kacirek said a model will evolve over time and that a company should be accessing decisions that are considered outliers. The company can then assess the frequency of these outcomes and use these outcomes for possible training of the model within established guardrails.

Commissioner Gaffney asked how to minimize the risk of overreliance on data. Kacirek said there should be controls to monitor the completeness and accuracy of data prior to its use and ongoing monitoring. Companies should also make sure the data is fit for the intended purpose of the model. In response to Commissioner Gaffney's question about upskilling of state insurance regulators, Sherwood said upskilling should be completed in layers with foundational education provided to a broader set of staff and then more specific training provided to staff based upon their specific role. Sherwood said state insurance regulators should understand control environments and engage with industry to understand challenges. In response to Commissioner Gaffney's question about how AI could be used to reach underserved markets, Sherwood said automation of functions may help lower costs and could potentially lead to more affordable and available insurance.

Having no further business, the Big Data and Artificial Intelligence (H) Working Group adjourned.

Draft: 6/26/23

Innovation in Technology and Regulation (H) Working Group
Virtual Meeting
April 27, 2023

The Innovation in Technology and Regulation (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met April 27, 2023. The following Working Group members participated: Jason Lapham, Chair (CO); Dana Popish Severinghaus and C.J. Metcalf, Co-Vice Chairs (IL); Matt Walsh, Co-Vice Chair (OH); Erick Wright (AL); Letty Hardee (AR); Lucy Jabourian (CA); George Bradner (CT); Dana Sheppard (DC); Tim Li (DE); Gordon I. Ito (HI); Jared Kirby (IA); Weston Trexler (ID); Shannon Lloyd (KS); Abigail Gall (KY); Rachel M. Davison (MA); Kory Boone (MD); Sandra Darby (ME); Chad Arnold (MI); Cynthia Amann (MO); Ryan Blakeney (MS); Chris Aufenthie and Colton Schulz (ND); Cassie Soucy (OR); Shannen Logue (PA); Joe McElrath (TX); Melissa Gerachis (VA); Eric Slavich (WA); Jennifer Stegall and Timothy Cornelius (WI); and Juanita Wimmer (WV).

1. Discussed an Overview of its 2023 Work Plan

Lapham said the Working Group's 2023 work plan was submitted to the Innovation, Cybersecurity, and Technology (H) Committee leadership. At the Spring National Meeting, Commissioner Michael Conway (CO) gave an overview of the work plan during the Committee's meeting. He said the Working Group plans to develop a SupTech Forum to allow state insurance regulators to share insights on current innovations and technologies they use in their respective states. He said the Working Group is also looking to develop an Insurtech Forum that will allow state insurance regulators to have one-on-one discussions with insurers and third-party insurtechs that work with insurers about the types of technologies and innovations those insurers and third parties are using, as well as the regulatory barriers and opportunities that exist around those technologies. He said the Working Group will monitor industry developments and create insurtech training for state insurance regulators. As issues arise, the Working Group will pass along referrals to the appropriate NAIC working group or committee.

2. Discussed the Development of a SupTech Forum

Lapham said the idea of a SupTech Forum is for a regulator-to-regulator webinar that would be a forum for states to present on supervisory technologies they are using, which would be beneficial for other state insurance regulators to hear about. He said the point of the webinar is to foster innovative thinking on how state insurance regulators do their jobs. He said one example of supervisory technology is the North Dakota project using blockchain technology to collect uninsured motorist data.

Brander said he would volunteer to present a webinar on Connecticut's use of artificial intelligence (AI) and machine learning (ML) to review files.

Boone said Maryland has many projects it is working on. He said examples include digitizing portable document formats (PDF files) to make it easier for people to fill out forms on their tablets or smartphones using a ticketing system to track complaints and upgrading enterprise accounting software.

Lapham said the goal is to display various supervisory technologies because not all technologies will work in every state. He said small technology upgrades are just as important to showcase as large, innovative projects.

3. Discussed the Development of an Insurtech Forum

Lapham said Working Group leadership and NAIC staff drafted an outline of an Insurtech Forum program to be held at the 2023 NAIC Insurance Summit. He said the Working Group is looking for volunteers to assist with designing and participating in the program.

Lapham said the forum's objective is to facilitate conversations between state insurance regulators, insurers, insurtechs, and interested parties about the types of innovations and technologies available to insurers and insurtechs and the potential regulatory barriers and opportunities. He said the goal is to invite four to six insurtech companies to engage in conversations with the participants in a round-robin style setting. He said it would be helpful to hear from state insurance regulators and interested parties that have participated in similar events to finetune the forum before the launch at the Insurance Summit.

Logue said she would support this effort. She said Pennsylvania created a pipeline that facilitates these conversations with insurers and insurtechs to discuss their innovative technologies with state insurance regulators. She said a forum like this would be a good opportunity to have state insurance regulators from multiple states weighing in on the conversations.

Amman suggested contacting the Insurance Regulatory Examiners Society (IRES) and the Society of Financial Examiners (SOFE) to ask about possible presenters or volunteers for both the SupTech Forum and Insurtech Forum initiatives.

Miguel Romero (NAIC) said the perspective from interested parties would benefit the program's design and implementation.

4. Heard a Presentation from the Aite-Novarica Group on ChatGPT

John Keddy (Aite-Novarica Group) said ChatGPT and other emerging technologies are the hottest topics across all insurance industry sectors. He said the Aite-Novarica Group surveyed the industry and collected data on various technologies. He said in the property/casualty (P/C) industry, interest lies in cloud computing, low-code and no-code technologies, and AI. He said there is also a developing interest in unstructured data. He said the life, annuities, and benefits industry has shown similar interest, with an even higher deployment rate of these technologies driven by larger carriers. He said chatbots have a high deployment rate across the industry, but that technology differs from the technology behind ChatGPT.

Keddy said large insurers especially are taking advantage of data lakes to transform enterprise data management. He said insurers of all types recognize the value of "big data" sources. He said interest in blockchain technology remains more modest.

Keddy said P/C insurers have invested heavily in ML and unstructured text capabilities. He said data is used to drive the training of algorithms in AI. He said the life, annuities, and benefits industry has a higher deployment rate of unstructured text capabilities and voice recognition technology.

Keddy said the survey results show that sustained investment in data, plus broad interest in AI, investment in cloud technology, and fervor around technologies like ChatGPT means now is the time for engagement in AI topics.

Keddy said when discussing AI, it is best first to define the technology, as there are many different technologies under the AI umbrella. He said the trajectory of the AI conversation has rapidly increased in 2023 due to the excitement around ChatGPT. He said ChatGPT is just one technology under the natural language processing part of AI. He said it is best for companies to not only focus on ChatGPT but to look holistically at AI and its uses within the company.

Keddy said outside of the insurance industry, AI has already arrived. He said examples include home security, medical scanning for tumors or diseases, and cybersecurity.

Keddy said his perspective on AI technology is that it should remove abstractions and work within reality, and AI decisions must be explainable and compared to human decisions.

Keddy said technologies and data scientists testing out new models and approaches have more risks. He said automated ML allows people who do not understand the technologies, statistics, or data to create new models, which is a high-risk activity.

Keddy said the takeaways of this discussion include the following: 1) due to sustained investment and recent fervor, now is the time for a conversation on emerging technologies; 2) ChatGPT is an incredibly powerful tool, but the industry should focus on the larger conversation of AI; and 3) the force must be respected, but fundamental principles must not be abandoned.

Lapham said the Working Group will continue to monitor these fast-moving emerging technologies and consider the possibility of developing state insurance regulator training on these technologies.

Having no further business, the Innovation in Technology and Regulation (H) Working Group adjourned.

Draft: 8/30/23

Privacy Protections (H) Working Group
Seattle, Washington
August 13, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Seattle, WA, Aug. 13, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Vice Chair (MO); Lori K. Wing-Heier (AK); Catherine O’Neil (AZ); Damon Diederich (CA); George Bradner (CT); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Ron Kreiter (KY); Van Dorsey (MD); Robert Wake and Sandra Darby (ME); Jeff Hayden (MI); T.J. Patton (MN); Santana Edison represented by Colton Schulz (ND); Martin Swanson (NE); Teresa Green (OK); Raven Collins (OR); Gary Jones (PA); Patrick Smock (RI); Frank Marnell (SD); Todd Dixon (WA); Rachel Cissne Carabell and Timothy Cornelius (WI). Also participating were: Sarah Bailey and Heather Carpenter (AK); Peg Brown (CO); Doug Ommen (IA); Victoria Hastings (IN); Jamie Sexton (MD); Eric Dunning (NE); Judith L. French (OH); Matthew Tarpley (TX); and Don Beatty (VA).

1. Heard Opening Remarks

Johnson said the Working Group has what looks like a simple agenda, but it has important discussions ahead of it. She said she and the Working Group would like to thank everyone who has been and continues to be an important part of this transparent, collegial, and collaborative process, especially those who spent considerable time, money, and input for two full days—four days including travel time—to dig into seven important issues with the model.

Johnson said she would like to give an update on the Working Group’s activities to ensure all stakeholders are on the same page going forward. She said the 60-day comment period for the first draft of the new *Insurance Consumer Privacy Protections Model Law* (#674) ended April 3.

Johnson said the drafting group met with companies privately to discuss current consumer data practices on May 9, May 4, April 28, April 27, April 20, April 13, April 12, April 11, April 6, and April 5.

Johnson said the Working Group met July 25, June 5–6 at an in-person meeting in Kansas City, MO; May 16; May 2; April 18; and at the Spring National Meeting to discuss comments received and collaborate on workable language. She said the interim meeting sessions were working sessions focused on the drafting of model language. She said the 112 in-person attendees—29 state insurance regulators, including one commissioner; three NAIC consumer representatives; 68 industry representatives; and 12 NAIC staff members—were asked to be prepared to consider new language and offer their pros and cons. She said participants were asked to keep their comments specific to the topic under discussion. She said topics already discussed in open meetings were not revisited during this meeting.

Johnson said a drafting group met Aug. 9, July 20, July 10, July 7, June 30, June 29, June 26, June 23, June 2, May 17, May 12, and May 5 in regulator-to-regulator session.

Johnson said because Version 1.2 of the new Model #674 was based on changes discussed at the interim meeting, the Working Group exposed it July 11 for a public comment period ending July 28. She said the drafting group privately continued its meetings with industry trades and companies to discuss current consumer data practices Aug. 9, meetings with two different companies on Aug. 3, Aug. 2, and July 28.

Johnson said the Working Group sent interested parties an invitation that it would continue scheduling private calls with trades, companies, and other interested parties. She said the Working Group also notified interested parties that so many comment letters had been received since the interim meeting that the Working Group has been unable to post them all prior to the Summer National Meeting. She said the Working Group will continue posting comments to the website after the national meeting. She said due to the sheer volume of comments and the number of one-on-one calls requested, the Working Group has determined that more time is needed to engage the public and continue drafting the model.

2. Adopted its July 25, June 5–6, May 16, May 2, April 18, and Spring National Meeting Minutes

Johnson said the Working Group met July 25, June 5–6, May 16, May 2, and April 18. During its meetings, the Working Group took the following action:

- A. Discussed comments received and collaborated on workable language regarding the following seven topics:
 - i. Third-party service providers, including the definition of third-party service providers, third-party service providers not related to an insurance transaction but that have access to consumers' personal information, and contracts with third-party service providers.
 - ii. Definitions of insurance transactions and additional permitted transactions.
 - iii. Marketing, including marketing insurance products to consumers using consumers' personal information, marketing other products to consumers using consumers' personal information, and affiliate marketing.
 - iv. Joint marketing agreements (JMAs), JMAs with affiliates, and JMAs with non-affiliated third parties.
 - v. Opt-in versus opt-out consent to marketing and the difference between marketing insurance and non-insurance products.
 - vi. Notice of Consumer Privacy Practices – Contents.
 - vii. Notice of Consumer Privacy Protections – Frequency and Methodology of Delivery.
- B. Drafted Model #674 language. In-person attendees were asked to be prepared to consider the new language and offer pros and cons. Participants were asked to keep their comments specific to the topic under discussion. Topics already discussed in open meetings were not revisited during this meeting.
- C. Exposed Version 1.2 of the new Model #674 on July 11 because it was based on changes discussed at an interim meeting, with a public comment period ending July 28. The drafting group continued its meetings with industry trade companies privately Aug. 9, Aug. 3, Aug. 2, and July 28 to discuss current consumer data practices.
- D. Notified interested parties that so many comment letters have been received since the interim meeting that the Working Group has been unable to post them all prior to the Summer National Meeting. The Working Group will continue posting comments to the website after the national meeting. Due to the sheer volume of comments and the number of one-on-one calls requested, the Working Group has determined that more time is needed to engage the public and continue drafting Model #674.
- E. Discussed comments received and engaged the public to continue drafting Model #674.

The Working Group also met Aug. 12 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.

Amann made a motion, seconded by Diederich, to adopt the Working Group’s July 26 (Attachment Three-A), June 5–6 (Attachment Three-B), May 16 (Attachment Three-C), May 2 (Attachment Three-D), April 18 (Attachment Three-E), and March 22 (see *NAIC Proceedings – Spring 2023, Innovation, Cybersecurity, and Technology (H) Committee, Attachment Three*) minutes. The motion passed unanimously.

3. Heard Updates from NAIC Staff on State and Federal Privacy Legislation

Jennifer Neuerburg (NAIC) said in the continuing absence of congressional action on a comprehensive U.S. federal privacy law, many states have enacted state data privacy laws or are considering legislative action. She said on June 30, the Delaware legislature passed the Delaware Personal Data Privacy Act (HB 154), and the bill is ready for governor consideration. She said assuming that the bill becomes law, Delaware will become the 12th state—the seventh this year—to pass a consumer data privacy law. The other states that have passed bills this year are Indiana, Iowa, Montana, Oregon, Tennessee, and Texas. Neuerburg said at least 16 additional states have introduced data privacy bills during the current legislative cycle that are either comprehensive in nature or address a range of data privacy issues, and if anyone wants to read more about these bills, there are charts tracking state legislation on the Working Group’s web page.

Shana Oppenheim (NAIC) said the privacy legal and regulatory landscape is changing quickly in the U.S., particularly for financial institutions, which hold significant volumes of consumer data. She said at the federal level last year, the U.S. Congress (Congress) made significant bipartisan progress on comprehensive federal privacy legislation, advancing the proposed federal American Data Privacy and Protection Act (ADPPA), which passed out of the U.S. House of Representatives (House) Committee on Energy and Commerce with a 53-2 vote and almost made it to a House floor vote. Earlier this year, she said the House Committee on Energy and Commerce’s new Subcommittee on Innovation, Data, and Commerce held a hearing in March titled “Promoting United States Innovation and Individual Liberty Through a National Standard for Data Privacy.” Additionally, she said House Financial Services Committee Chair, Patrick McHenry’s, financial data privacy bill, the Data Privacy Act of 2023 (H.R. 1165), passed out of the Committee along party lines in February. She said it would: 1) revamp existing financial privacy protections for consumers under the federal Gramm-Leach-Bliley Act (GLBA); and 2) create a preemptive ceiling and floor to create a uniform federal standard. She said the current bill allows for enforcement by functional regulators, provides a new deletion right for consumers, and allows consumers to stop collecting and disclosing their data, among other provisions. She said Representative Maxine Waters (D-CA) and the Democrats have been critical of any preemption because it would hinder the states’ ability to act as a laboratory for innovation while establishing a weak federal standard. She said although there seemed to be some legislative momentum earlier this year, nothing has yet come of it. She said more limited/focused data privacy actions seem more likely. For example: 1) the House Judiciary Committee also approved a bill in July that would ban law enforcement agencies from buying people’s sensitive information from data brokers—the Fourth Amendment Is Not For Sale Act; and 2) for the second consecutive year, the U.S. Senate (Senate) has approved two children’s online privacy measures—the Kids Online Safety Act (KOSA)—for floor consideration just before departing for the month-long August recess. Oppenheim said KOSA is focused on social media companies and children’s data. She said U.S. state insurance regulators are also drafting several regulations that may be pertinent: 1) the Consumer Financial Protection Bureau (CFPB) is in the process of issuing a rule for the long-awaited implementation of Section 1033 of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), which would require that consumers be able to access their financial data. She said the rule may specifically affect checking, savings, and credit card accounts. It is expected later this year with a final rule slated for 2024; 2) the CFPB also launched an inquiry into data brokers under the federal Fair Credit Reporting Act (FCRA), and it is attempting to understand the “full scope and breadth of data brokers and their business practices, their impact on the daily lives of consumers, and whether they are all playing by the same rules.” She said the Federal Trade

Commission (FTC) is also investigating commercial surveillance industries, which it defines as collecting, analyzing, and profiting from information about people. She said the term encompasses the collection, aggregation, analysis, retention, transfer, or monetization of consumer data. She also said in an advanced notice of proposed rulemaking in August 2022, the FTC posed 95 questions about consumer harm, data security, and related topics to commercial surveillance companies.

4. Discussed an Extension to Develop the New Model #674

Johnson said the Working Group would like to discuss an extension of the time to develop the new Model #674 due to the sheer volume of comments received on Version 1.2 from July 11 through Aug. 8 and the number of requests for private calls with trade associations, consumer representatives, and companies.

Johnson said the 15 comment letters received prior to the July 28 due date are posted to the Working Group's web page and the meeting platform in the Summer National Meeting Event App. She also said the eight comment letters received after the July 28 due date will be posted to the Working Group's web page following the Summer National Meeting. She said the Working Group received 32 separate comments and redlined language documents in total. Additionally, she said the Working Group needs to review previously received comments to ensure all comments have been considered.

Johnson said extending the timeline would give the Working Group the time it needs to review all the comments submitted and have conversations with those who submitted the comments to ensure all stakeholders are heard and all parties understand the functional differences between different licensees and the various types of insurance being offered to consumers.

Johnson said the next version of the draft would be a redline that includes comments submitted, and the exposure draft period would allow a reasonable time of four to six weeks to review and comment on it. She said the Working Group will probably have another interim meeting before the Fall National Meeting, when a new timeline will be presented. Crow read a statement indicating that more work and time is needed for the state to support the draft model. Hastings thanked the Working Group for all its efforts in drafting a model that could work for all stakeholders, and she said Indiana has concerns that the interested state insurance regulators will work with the Working Group to resolve.

5. Discussed the Sections on Marketing, Consumer Notices, and Opt-Out/Opt-In in the Second Exposure Draft of Model #674

Johnson said the next item on the agenda is to discuss the topics on which the most comments were received; i.e., marketing, consumer notices, and opt-in/opt-out. She said the Working Group would hear from anyone who would like to talk about these topics. She asked that each stakeholder limit their comments to three minutes if possible and please focus on what, in their opinion, works and what does not. She said this will give Working Group members and other state insurance regulators time to ask questions and discuss the issues presented. Marnell reiterated the comments he submitted on the first exposure draft of the model prior to the Working Group's interim meeting in June, indicating that South Dakota could not support Version 1.2 of the model in its current form. Swanson said Nebraska agreed with the comments submitted by Marnell.

Shelby Schoensee (American Property Casualty Insurance Association—APCIA) said she appreciates all the hard work the Working Group put into Version 1.2 of the model, but she is disappointed that it did not include all of the APCIA's comments from the interim meeting in June. She said it was a patchwork of extensive regulatory

changes that included unworkable notice requirements, such as obtaining consumers' signed consent for insurance data retention, sharing, and annually renewable data review, so it needs more work.

Kristin Abbott (American Council of Life Insurers—ACLI) said the drafting group was clearly dedicated given the tremendous amount of work that had already been accomplished, and she said she appreciated working with the drafting group on specific issues of concern to her members. She said, however, that a redline document would allow the most constructive feedback to be given to avoid conflicting verbiage. She also said she was extremely disappointed that the ACLI's ideas about JMAs, marketing, retention, deletion, and data correction had not been included.

Karrol Kitt (University of Texas at Austin) said state insurance regulators need to know that consumers need this revised model desperately, and consumers need their help in protecting personally identifiable information because most insurance consumers do not understand the implications of what happens to their data once companies share it with other non-insurance companies.

Lauren Pachman (National Association of Professional Insurance Agents—PIA) said she submitted comments on behalf of the PIA's members last week and was surprised that the adverse underwriting decision language had been kept in Version 1.2 of the model. At the interim meeting in June, she said she asked that the National Flood Insurance Program (NFIP) be fit into the draft model because only 10% of consumers buy flood insurance directly through the NFIP. Agents are selling it to the other 90% of consumers through an arrangement with the federal government—via federal government borrowing money or the Federal Emergency Management Agency (FEMA) through upstream and downstream agreements—that could be considered a JMA in this model. Pachman said most flood policies sold cover \$250,000, and agents sell flood insurance for homes over that amount to ensure full coverage for homeowners. She asked how agents could offer this excess coverage under the model and if agents would need to get the consumer's approval in advance via written consent, which would be a potential errors and omissions (E&O) problem for consumers.

Johnson said she would be happy to set up a call with Pachman to discuss the sale of flood insurance further, as this concern was an unintentional consequence. She said she still believes state insurance regulation is better for consumers than federal regulation. Diederich said he believes the model has the same definition of financial institution as the federal government. Johnson confirmed that it is in Version 1.2.

Harry Ting (Health Consumer Advocate) said the new state insurance regulatory protections are sorely needed. He said the model is not confusing to consumers. For Sections 9 and 10 of Model #674, he suggested creating a standard template for consumer notices that could be clearly understood and uniform; i.e., like those created for the Medicare program.

Matthew J. Smith (Coalition Against Insurance Fraud—CAIF) said he submitted written comments on July 27 and urged state insurance regulators to update the model to protect consumers against insurance fraud. He asked the Working Group to focus on two issues: 1) consider making sure investigations of insurance fraud can continue by taking care not to prevent such investigations inadvertently; and 2) take the opportunity to designate fraud prevention clearly.

Peter Kochenburger (Southern University Law School) said he supports the revision of the model and understands that whether consumers should be given the opportunity to opt-in or opt-out of sharing their personal information is always the question. He said opt-in should be the default because opt-out means companies will share a consumer's personally identifiable information with their affiliates. Industry understands this, so that is what they

prefer. Kochenburger said it is up to the Working Group to determine if consumers can have the protection of an opt-in consent that would provide the opportunity for consumers to know what they are agreeing to. He said he recently signed up for the highest level of Wi-Fi access, and the acceptance of the terms included several pages of legalism in very small print that was hard to read, even for an attorney. He said the only realistic opportunity for consumers to control the use of their data is an opt-in consent form. Kochenburger said the creation of an opt-in consent form is a complicated topic that needs further consideration. He said the Working Group has done a great job of putting together real consumer protection provided through state insurance regulation, whereas the federal government could adopt a broad bill.

Diederich said due to the GLBA, JMAs make it difficult to do this, and he needs ideas from Kochenburger on banks.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said his members have threshold concerns, and he agrees that privacy is important, as is uniformity. He said the disagreement is on how to do it. He said the GLBA is wonderful, and the Working Group needs to use it. He said he has carried a lot of water for state insurance regulation over federal insurance oversight throughout the years because he supports state insurance regulation. However, he said he believes the Working Group should discontinue drafting a new model to replace the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672). He also said Model #670 and Model #672 only need minor adjustments, as they have worked well for many years.

Amann said she was actively involved when Model #672 was drafted in 1992, and the new model is being conscientiously drafted with language referred from Model #670 and Model #672. She said it would be helpful if Bissett could tell the Working Group where exactly it went off the rails because lines of business are different, as are companies' business processes. She also said new technologies have been and are being brought to the table, which is why the Working Group would appreciate any direction regarding Bissett's members' concerns.

Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said she appreciates the drafting group's willingness to discuss issues of concern in the model with her members. She highlighted the importance of making the new model more workable for companies, and she asked that it be more like California's privacy regulations. She pointed out that the timeline in Section 5 of Version 1.2 is three times longer than it is in California; instead, it should be in alignment with California, like railroad tracks, rather than trying to change the entire landscape of privacy, which would take a major effort on the part of insurance companies. She asked if there was any need to go beyond what California or Model #672 did, particularly Sections A.6 and A.7 of the new model. She said these sections address marketing across jurisdictions, which should not be a topic for a privacy discussion. She said her members continue to be willing to work with the Working Group to revise the wording in Version 1.2 to address these outstanding issues.

Erica Eversman (Automotive Education & Policy Institute—AEPI) said she echoes the thoughts of the other consumer representatives, and she suggested specifically identifying certain types of data categories by looking to California, as companies are already complying with it. She said other personally identifiable information, such as commercial, financial, banking, internet, browsing, fingerprints, voice prints, geo data, audio, visual, education, and professional/employer information, should be considered as inferences that industry could use to create a profile that could lead to automotive insurance disputes. She said bodily injury under personal injury protection (PIP) auto insurance requires that the consumer waives federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) rights to give access to health information for claims. She asked if this gives other companies access to medical data that they would not normally have due to HIPAA protections.

Eric Ellsworth (Consumers' Checkbook) said he is a data scientist with both an information technology (IT) and a HIPAA background who believes in strong data protection. He said there has been a lot of discussion about the inability of companies to access data in legacy systems to correct or delete a specific consumer's data when it is no longer needed. He said while it is true that legacy systems require a lot of maintenance and a lot of work, it is not true that data in legacy systems is safe because companies cannot access it. He said an experienced data scientist can access data located anywhere and from any type of system, including a legacy system. He said it is also true that companies may not know what data they have or where the data they have accumulated, especially through agreements, mergers, and acquisitions of blocks of business from other companies, is located. He said contrary to what is being said about consumers having to pay higher premiums to cover the additional costs companies will incur to comply with the new privacy act, history has proven that not to be the case. He said the same thing was said about HIPAA and California's privacy law, yet neither HIPAA nor California privacy compliance has bankrupted any insurers. He said state insurance regulators need to bind companies to the same rules as HIPAA, and he encouraged state insurance regulators to maintain this level of control over consumers' data.

Diederich said the Parliament of India recently enacted very strong data privacy protections with a data fiduciary requiring consent. He said this is a level setting, as the U.S. is very technologically advanced but not very advanced in privacy protection.

6. Discussed Other Matters

Johnson reminded attendees about the Insurance Summit, Sept. 11–14.

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 8/8/23

Privacy Protections (H) Working Group
Conference Call
July 25, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met July 25, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Vice Chair (MO); Damon Diederich and Jennifer Bender (CA); George Bradner and Anthony Francini (CT); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Van Dorsey (MD); Robert Wake and Sandra Darby (ME); Jeff Hayden (MI); T.J. Patton (MN); Santana Edison (ND); Martin Swanson (NE); Richard Hendrickson and Gary Jones (PA); Patrick Smock (RI); Frank Marnell (SD); Mike Walker (WA); and Rachel Cissne Carabell and Timothy Cornelius (WI). Also participating were: Doug Ommen (IA); and Garth Shipman (VA).

1. Discussed Comments Received on the Draft of Model #674.

Johnson said that the revised work plan dated July 10, 2023, is posted on the Working Group's web page and indicates that the exposure draft of the new *Insurance Consumer Privacy Protection Model Law* (#674) was distributed July 11 for a comment period ending July 28. She said it also lists Sept. 12 as the date that bi-weekly Working Group open meetings will resume to discuss comments received. Johnson said the Working Group will hear comments on the new Model #674, starting with those from NAIC consumer representatives. Karrol Kitt (The University of Texas at Austin) said she is good with the revisions to Sections 17–20. Harry Ting (Health Consumer Advocate) said he would submit written comments by the end of the week that would include replacing the 10-year time for companies to comply with consent, use, and deletion of consumer data requirements with a more reasonable time frame that would include exceptions to be granted by the Commissioner. He said opt-in and opt-out needed expiration dates that are consistent in each section, as consumers tend to forget to whom they gave consent two years ago. Dr. Ting said he agreed with discussions during the interim meeting that included changing notice requirements to the 11 categories defined in the California Consumer Privacy Act (CCPA). He said that he opposed the adverse underwriting decisions section of the model that would require consumers to send a letter to request the reason for such denial because doing so would cause unnecessary delays and effort by consumers. He also said the option for a private right of action needs to include some individual remedy for significant breaches like that in the CCPA. Diederich asked if expiration dates should be included for consent only or other areas of the model.

Jeff Klein (McIntyre & Lemon, PLLC and the American Bankers Association—ABA) said changes to opt-in and opt-out have been narrowed to not include financial institutions; sensitive personal information (SPI) now includes emails; and the sharing of information now includes publicly available information. He said the ABA benefited from the private calls with the drafting group and that they would suggest adding the *Privacy of Consumer Financial and Health Information Regulation* (#672) sections verbatim to avoid state and federal conflicts.

Klein agreed with Wes Bissett's (Independent Insurance Agents and Brokers Association—IIABA) comment letter that the new Model #674 should consider the 13 state privacy laws that have already been enacted.

Helen Dalziel (International Underwriting Association—IUA) said the IUA represents alien insurers with NAIC surplus lines written and asked that adverse underwriting decisions exclude lawful surplus lines because the definition of a licensee means that there is a relationship with companies, not with consumers but that brokers licensed to sell these should send notices to individual consumers. She said Article 3 (8) A (2) needs to include surplus and excess lines.

Jennifer McAdam (American Council of Life Insurers—ALCI) said the ACLI supports changes to private right of action and that the ACLI still has concerns with the new Joint Marketing Agreements section and the annual review of consumer data. She said the time to comply with the requirement to move away from legacy systems should be extended to 20 years and that the delivery of notice requirements needed to be modernized. McAdam expressed concern about the time left in the work plan and the amount of work still needed. She said ACLI members have been meeting weekly to discuss changes in the new model, and sometimes they meet more often. McAdam said more explanation is needed from drafters as to why the changes suggested by the ACLI were not made. She said ACLI members agree that progress has been made but that the language is unworkable for their members as revised.

Diederich said the Working Group wanted to make sure the legacy system issue does not limit real-time response and deletion. He asked the ACLI what time frame would work from its standpoint, as 10 years seemed generous to him. McAdam said that thousands of policyholders have been their customers for decades, so ACLI members need more than 10 years to change the systems in which the data for those policyholders' is recorded. Johnson said the Working Group recognized that there are difficulties but that some companies said 10 years was plenty of time. Even so, she said the Working Group gave commissioners discretion for individual company exclusions or extensions and that specific suggestions as to the desirable time frame are needed.

Swanson asked how much it would cost companies to make this change and how much of that companies would pass along to consumers. McAdam said she did not know how much it would cost or how much would be passed on. Peter Kochenburger (Southern University Law School—SULS) said legacy systems are not upgraded as frequently and are more vulnerable to hacking, so there is a greater need to end legacy systems to avoid giving hackers access. McAdam said she did not know about the technical part of it but that she is not so much concerned about it as companies are still subject to the *Insurance Data Security Model Law* (#668). Kitt said legacy systems cannot make modifications, so companies will have to change them so that the cost would be there to replace the legacy system with a new system or to keep the old one updated. Johnson said that at the NAIC International Forum, she heard that the cost of maintaining legacy systems is tremendous but that they still have lost costs compared to new systems.

Sabrina Miesowitz (Lloyd's Underwriting) said surplus lines are different as they go through brokers, not direct to consumers, and that Lloyd's Underwriting agrees with the IUA's comments on adverse underwriting decisions.

Shelby Schoensee (American Property Casualty Insurance Association—APCIA) said the APCIA received significant additional changes to the notice content and delivery; joint marketing agreements; definitions; the cover letter's intent versus the changes made; and removal of the sharing of data with overseas affiliates and the private right of action sections of the initial draft of the model. She said the APCIA will submit additional comments in writing but that they need more time to do so.

Bissett suggested the deletion of personal information, notices, etc., and that the Working Group step back to reassess if a new model could be adopted at state legislatures. He said the Working Group should add to a successfully operating framework already in place. Bissett asked what problem the model is trying to solve. He said the National Conference of Insurance Legislators (NCOIL) does not like nor support state passage of the new model. Bissett said the Working Group should limit its changes just to existing marketing models. He also said that the IIBA will oppose the new model. Diederich said the old models were written pre-digital and that the Working Group is trying to address new digital processes because under the federal Gramm-Leach-Bliley Act (GLBA), there was no right of access, limited joint marketing agreements, and limited control of what happens to a consumer's personal information. Bissett said the U.S. House Committee drafted a new module to the GLBA with changes to consumer notices that indicated consumer data uses should be addressed. He also said that no new types of data have been used since then.

Diederich asked Bissett if he had any guardrails to suggest so all parties could find a middle ground. Bissett said not having to disclose uses of client data and removal of the mandatory deletion within 90 days after the consumer is no longer a client takes away the agent's rights. Bissett suggested the Working Group see the New York State Department of Financial Services' (DFS') cybersecurity regulations.

Johnson said she disagrees with Bissett because the model has several reasons under which agents can keep consumer data. Bissett said the words on the page say consumer data can be kept while there is an ongoing business relationship, which he reads to mean that agents have 90 days after the policy closes. Johnson asked Bissett to give the Working Group language that is clearer for use in the new model. Bissett said he would not provide any. Marnell said the Working Group is performing an important task but that his state would not support this draft of the model. He said he does not support it as a model and that the Working Group has not listened closely enough to industry. Marnell said the model needs lots of redrafting, as noted in the redline he submitted. Swanson said he agreed with Marnell and supports the changes noted in Marnell's redline submission. Swanson said he thinks this is true in a lot of other states.

Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said she appreciated the Working Group's attention to industry's comments. She said the Working Group has taken a novel approach with radical changes but that she likes the old system because Model #672 was a success of uniformity that just needs a few modifications to list third parties, allow deletions, and clarify permitted use of public information. Paolino said a pause is needed as she wants to understand why the Working Group has not made industry changes. Johnson said the Working Group still has changes needed and that the goal is to have a new redline draft (version 1.3) before the Summer National Meeting. She said the drafting group is still having private meetings because it still needs continual input to get to a workable model. Johnson said she disagrees that the new model is radically different and reiterated that the existing models needed changes, as noted by NAIC leadership and privacy working groups over the past four years. She said the goal is to develop a model that protects the privacy of consumers' data when it is used for insurance transactions.

Johnson asked regulators, industry, and consumer representatives to submit ongoing specific wording changes to the model in redline because the Working Group reads all comments and takes parts of the language changes from everyone. She asked that interested parties read all the comments submitted and take note of the fact that they do not all agree on the wording, as each type of insurance and licensee has its own areas of concern due to differences in how their business is conducted. Johnson said the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) safe harbor is being revised as recommended by America's Health Insurance Plans (AHIP).

2. Discussed Other Matters

Johnson thanked everyone for their comments, discussion, and collaboration during the meeting. She said she looked forward to receiving additional comments on the draft and to continuing collaboration at the Summer National Meeting. She said the due date for changes on model 1.2 is July 28 and that comments received no later than Aug. 7 would be considered at that meeting. Johnson said the Privacy Protections (H) Working Group is scheduled to meet Aug. 13 from 11:30 a.m. to 1:00 p.m. PT (Pacific Time). She said there would also be a regulator-to-regulator meeting Aug. 12 from 4:00 p.m. to 5:00 p.m. PT. Both meetings will have virtual participation with the ability to speak (with requests submitted via the chat feature).

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 8/9/23

Privacy Protections (H) Working Group
Interim Meeting
June 5–6, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met June 5, 2023, and June 6, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Damon Diederich and Jennifer Bender (CA); George Bradner and Anthony Francini (CT); Erica Weyhenmeyer (IL); Justin McFarland (KS); Ron Kreiter (KY); Van Dorsey (MD); Robert Wake (ME); Jeff Hayden (MI); T.J. Patton (MN); Molly Plummer (MT); Santana Edison (ND); Martin Swanson (NE); Teresa Green (OK); Richard Hendrickson and Gary Jones (PA); Patrick Smock (RI); Amy Teshera (WA); and Rachel Cissne Carabell and Timothy Cornelius (WI). Also participating were: Doug Ommen (IA); Sandra Darby (ME); and Garth Shipman (VA).

MONDAY, JUNE 5, 2023

1. Discussed the Definition of Third-Party Service Providers Related to an Insurance Transaction, Third-Party Service Providers Not Related to an Insurance Transaction That Have Access to Consumers' Personal Information, and Contracts with Third-Party Service Providers

Johnson reminded attendees that these sessions are working sessions, and the Working Group would be focused on the drafting of model language. She asked everyone to be prepared to consider new language and offer their pros and cons. She said comments must be specific to the topic under discussion, and topics already discussed in open meetings would not be revisited during this meeting. Diederich said the Working Group has heard a lot about individual companies' excellent oversight of service providers and strong contractual protections with respect to these arrangements. He said the Working Group has asked for contract language but has not yet received it. He said the Working Group would appreciate the submission of language or standards for consideration and a set of best practices that the Working Group could apply to third parties.

Wake said state insurance regulators want to make sure promises that service providers make to consumers remain in place when data is shared. In addition, he said insurers should ensure that their promises made to consumers are upheld by the service providers who are provided access to the data, as the type of data shared may require different protections. Swanson said Nebraska could not offer up this model as is as a bill in the legislature. Aufenthie asked about third parties who get consumers' personal information from the insurer and who do not have a contract with the insurer in the classic tow truck example. He asked to what extent state insurance regulators can require an advance contract for every type of situation, or whether it should be stated that the state department of insurance (DOI) has jurisdiction. Then, if the tow trucks go beyond what they need to do for the claim, it is criminal theft. Wake said this is where privacy meets security. Chris Petersen (Arbor Strategies LLC and the Coalition of Health Insurers) asked if the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) safe harbor applies. If it does, he said the Business Associate (BA) rules would apply. Without knowing whether that applies, he said the Coalition of Health Insurers would push for privacy regulation that looks like the HIPAA Privacy Rule so that health plans that already comply with HIPAA would follow these rules and everyone else would have different rules. He said there is a distinction between a breach and misuse of information, so this is a security versus privacy issue. He said in the HIPAA world, the BA is responsible for any misuse, and under the safe harbor, the state DOI could determine if there are enough of those violations so the entity is not complying with HIPAA. Then, the safe harbor would disappear, and the state DOI could go after them.

Katie Koelling (Thrivent Financial) said there is a difference between privacy and security, so imposing the same obligations on all types of vendors is not possible. She said Thrivent Financial is legally required to perform third-party due diligence, and it uses a third-party due diligence questionnaire. She said she believes the model should be more risk-based than prescriptive. Peter Albert (Progressive) said: 1) care needs to be taken toward accurately defining what a service provider is; 2) there need to be exceptions; and 3) redundancy within existing laws needs to be avoided. He also said when Progressive dispatches a tow truck, it does it through third parties with whom it already has contracts. Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said the model has significant problems because the definition of a third party includes licensee, and it should not because it treats agent/insurer relations as a third-party relationship, which is not the case. Therefore, the definition should not include licensee. Bissett also suggested referring to the definitions in the National Institute of Standards and Technology (NIST) as an amendment to the federal Gramm-Leach-Bliley Act (GLBA). Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said the contract management process is a big lift and takes a lot of work, so the Working Group should consider grandfathering for contractual provisions and include wording in an appendix about third-party contracts, safe harbors, and compliance. Lauren Pachman (National Association of Professional Insurance Agents—PIA) said the internet requires that consumers accept terms and conditions, and consumers opt into the internet. Kristin Abbott (American Council of Life Insurers—ACLI) said the ACLI will submit specific language. Jessica Waltman (National Association of Benefits and Insurance Professionals—NABIP) said a safe harbor for HIPAA should extend to the whole model or as a standard for all insurers because it is a known entity, so it would be easier for vendors to follow where there is a power imbalance. Al Sand (Committee of Annuity Insurance) said the contractual language around third parties makes it so licensees do not choose the best third party but rather the ones who will agree to the contract language.

Johnson asked if there were some groups of third parties that should be treated differently than others. Petersen replied that those with incidental exposure should be. He said there should also be differences between first-party data and second-party data when the first relates to getting insurance and the second relates to non-insurance, such as tow truck vendors. Koelling said the definition is too broad because it does not include a person who obtains a consumer's information, and she said she would send a suggested definition with exclusions to address it.

2. Discussed Definitions of Insurance Transactions and Additional Permitted Transactions

Tricia Wood (Liberty Mutual) said that normal processing activity should be reasonably anticipated by a consumer, and the model should include language that covers business purpose catchall. She said there should not be an opt-out for any part of an insurance transaction; however, she said for additional permitted transactions (APTs), there needs to be an opt-out provision. Shelby Schoensee (American Property Casualty Insurance Association—APCIA) said the definition of information technology (IT) is too narrow. She said in Article §2, Section 4(B), the uses of data should be included, and any mathematical-based decisions should be deleted. Aufenthie said this was included to cover artificial intelligence (AI) and APTs, but it does not think the existing language captures the intent. Petersen said he does not believe “by or on behalf of licensee” works because disclosures are permitted that do not fall under that; i.e., sharing with law enforcement. Albert said the IT definition is too narrow, and he suggested that the Working Group reflect on existing model definitions because certain marketing actions may fall under IT. He said if an insurer is giving data to their own affiliates to offer supplemental coverage, the transaction should not be subject to opt-in or opt-out. He said APTs and product development should be included in this category as well. Bissett said IT, as used in Section 4A(1), says personal information (PI) cannot be collected, processed, or shared unless it fits into categories in the definition of IT. He said the federal Fair Credit Reporting Act (FCRA) preempts some of this, including the exchange between affiliates, and it is an unconstitutional restriction of free speech if IT is content or speaker-based. Jennifer McAdam (ACLI) said if IT means any transaction or service by, or on behalf of, licensees, the Working Group should add “or affiliates” and “or any functions that

support the above.” She also said marketing is important for consumers to be supported in a holistic manner. Paolino said opt-out is the only approach that makes sense for APTs, such as research activities and product development, so it makes sense to include, and there could be more areas to expand upon, such as internal analytics. Sand said updating data is difficult and puts insurers at a competitive disadvantage. He said a better framework would be to focus on consumer empowerment and not try to figure out ahead of time what is appropriate to offer to consumers. McAdam asked what revelations the Working Group has been having or bad practices the Working Group has seen. Johnson said there is always someone who wants to push the envelope, and state insurance regulators need the power to rein them in when that happens. Harry Ting (Health Consumer Advocate) said regarding the company’s comments about future developments and products, the consumer cannot know what to consent to when the consumer does not know what these future products could be.

3. Discussed Marketing Insurance Products to Consumers Using Consumers’ PI, Marketing Other Products to Consumers Using Consumers’ PI, and Affiliate Marketing

Johnson said the Working Group is concerned about companies marketing something other than insurance and inundation of unwanted ads on consumers. Petersen said there is a need for a definition of marketing. Sand said restrictive marketing standards will put insurers at a competitive disadvantage. He said consumers may not be opposed to marketing, but they may not take the time to give consent if there is an opt-in standard. He said this will lead to a competitive disadvantage, and it is especially problematic for annuity companies when a broker/dealer is also marketing a competitive product, such as a mutual fund. He said consumers need to be made aware of all products, and it is not fundamentally bad to make consumers aware of insurance products. Wake said the issue is how to get to reasonable limits so consumers are not inundated with marketing materials. He said the opt-out notice might be a good marketing opportunity, where a company could tell a consumer what information they might be giving up by opting out.

Sand said limiting information to consumers does not create a more informed consumer. He said it is better for a consumer to be contacted and then allow the consumer to tell the insurance company they do not want to receive additional marketing information on a particular topic or product. He also expressed concerns with Section 4G. Albert said restrictions on marketing are unworkable. He also expressed concerns with the ambiguity of the term “marketing.” He said the focus should be on insurance-specific marketing concerns, insurers should be able to market products without consumer consent, and there should be an opt-out standard consistent with existing federal law. He provided an example of how an insurer could not obtain affirmative consent to market an insurance product to a consumer who does a Google search for “I want cheap car auto insurance.” He said an opt-in standard would also prevent an insurance company from mailing a consumer an offer for home insurance after a consumer’s purchase of a home. He said if an insurance company is sharing information with an affiliate, the company must offer the consumer an opt-out under the FCRA. He said Progressive has affiliates throughout the U.S., but the affiliates share one database. Pachman expressed concerns about restrictions on marketing and gave an example of flood insurance coverage and the potential inability of an agent to market home insurance coverage to provide greater than the \$250,000 coverage offered through the National Flood Insurance Program (NFIP).

Johnson asked what, if anything, agents should be prohibited from doing. Pachman said selling a consumer’s data without their consent should be prohibited. Johnson asked if an agent should be prohibited from having the ability to sell products other than insurance to a consumer. Johnson replied that it is important to identify what product is related to an insurance product. She said one way to make this determination is to determine if the related product is tied to risk mitigation. She said state insurance regulators are okay with the sale of additional products, but they do not want an insurance agent to sell information to a company selling canoes, such as Land’s End, after the purchase of a lake house.

McAdam said prior consent language will deny consumers the opportunity to learn about products and services. Glenn Daly (John Hancock) said this is a data-driven world, and he suggested the development of a one-pager for consumer education. Paolino said that risks evolve for consumers, and technology is continuing to change, so state insurance regulators should think about this as the model framework is developed. Bissett said the definition of marketing is important, but the more important question is whether we are looking at an opt-in standard for marketing. Wake asked if do-not-call lists are unconstitutional. Bissett said he believes there would be a problem if a state adopts a law saying only insurers cannot market, but everyone else can, and this would be considered a discriminatory standard.

4. Discussed JMAs with Affiliates and with Non-Affiliated Third Parties

Abbott said a prohibition of joint marketing agreements (JMAs) by affiliates would be problematic, and standards for joint marketing should be the same for all financial institutions. Schoensee suggested keeping the joint marketing structure in the *Privacy of Consumer Financial and Health Information Regulation* (#672). Sand said he read the six elements of joint marketing from Model #672, and this reflects the fact that smaller institutions will not be able to offer all products. He said joint marketing allows the offering of a larger option of products, and joint marketing allows insurance products to be brought to consumers that would not otherwise be offered. Wake asked why an opt-out standard for joint marketing is not appropriate. Sabrina Guenther Frigo (CUNA Mutual Group—CUNA) said CUNA partners with credit unions to bring products to consumers, and joint marketing standards should be the same across all financial institutions. Johnson asked if banks give CUNA a list of names for marketing and if then the consumer can opt out after the initial offer. Guenther Frigo said this is the case. Aufenthie asked whether CUNA gets information from a credit union and if then a consumer can opt out of marketing. He also asked if CUNA then honors the request and deletes the consumer's information. Guenther Frigo said CUNA honors the consumer's request, and the deletion of consumer information is based on legal requirements.

TUESDAY, JUNE 6, 2023

5. Discussed Opt-In vs. Opt-Out Consent to Marketing and the Difference Between Marketing Insurance and Non-Insurance Products

Schoensee expressed concerns about moving to opt-out. She said opting out makes it difficult to identify coverage gaps and for insurers to conduct business. Wake said marketing is generally an opt-out standard, but there is an opt-in for health under both the GLBA and Model #672. He asked what people think about opting out of marketing and opting in for the use of sensitive data that is appropriately defined. Wood said cookies are attached if a consumer accesses the company's website. She said the cookies notify the company if the consumer goes to another website so the company can place an ad on the other website. At the same time, though, she said the company does not have any information about the consumer. She also said California has an opt-out regime for cross-context and behavioral advertising, and she encouraged consistency with the California standard.

Diederich asked if anonymized data ever becomes associated with an individual. Wood replied that it does not, and any information associated with an individual would come from the customer and not from the cookie. She said the company only knows that a consumer came to their website. Albert said Facebook and other tech companies have a lot of information about consumers. He said Progressive will attach cookies to take a consumer back to its web page, but Progressive does not know anything else about the consumer. He said there are also third-party cookies being dropped by Amazon, Google, and Facebook. He said if Progressive is interested in a certain consumer profile, Progressive puts the information through a hashing program. He said service providers, like Google, know other websites that a consumer has visited, and Progressive can then work with the service providers to obtain a list of consumers who might be interested in insurance products. He said service providers track consumers across all websites. He also said insurance companies need a consistent standard across all states

to eliminate redundancies and consumer confusion. Aufenthie asked why Progressive did not apply standards of the California Consumer Privacy Act (CCPA) to all states. Albert said the CCPA is a complicated law, and Progressive is still working through its implementation of it to assess the impact on its business in California. For example, he said when a consumer requests the deletion of information, it leads to the manual deletion of the information at Progressive, which is a complicated endeavor. Wake suggested using opt-out for marketing except for certain types of data. He said this is a regulatory regime worth exploring; i.e., carve out certain types of sensitive information, such as health information, from the opt-out standard. Albert suggested caution around carving out health information because a property/casualty (P/C) company settling a claim would need access to health information. Wake suggested an opt-out regime for general marketing purposes but to carve out specific sensitive personal information to be under an opt-in regime. He also suggested defining sensitive PI as it is in the *NAIC Insurance Information and Privacy Protection Model Act* (#670) when companies use precise geo-locations to adjust a consumer's insurance rate when hard accelerations, late-night driving, etc., result in higher risk factors or for ancillary services like dispatching emergency services.

Paolino said an opt-in approach for marketing would make insurance an exception and put less information in the hands of consumers. Sands said it is important to maintain a level playing field within the financial services industry. He said an opt-in approach for marketing would limit the marketing of annuities compared to mutual funds. Johnson said the Working Group heard industry wants a level playing field, and opt-ins are difficult. She asked if any insurance companies use sensitive information for marketing. Daly said he is concerned about the broad definition of sensitive information in the current draft. He said opting in and the need for consumer consent would inhibit companies from providing products to consumers, especially personalized products.

Diederich asked what type of sensitive information is being used in marketing for diversity, equity, and inclusion (DE&I). Daly said an example is LGBTQ data. Diederich expressed concerns about what information a consumer wants to be available to the public and what information they want to keep private. Daly agreed but said there is a need to maintain a level playing field so insurance products that consumers need can be made available to those consumers. Wake agreed but said there is a need to balance benefits and harms. Daly said companies respect what they know about consumers and reiterated companies' need for a level playing field. Teshera asked what marketing information is provided. Daly said every consumer's mobile device is segmented in the advertising world. Daly said a company can then identify what segment of the market they want to target with their advertising because advertising and marketing is a very complicated process that begins when a consumer query is captured in the data world. He said this does not mean the consumer is identified, but it does mean a company can identify a consumer's interest for marketing purposes. Daly also said the definition of sensitive information is very broad in the current draft of the model. Diederich said cross-contextual advertising is anonymized, and he asked if companies need individual consumer information. Daly responded that they do not need individual consumer information.

6. Discussed the Contents Necessary to Have in a Notice of Consumer Privacy Practices

Albert said privacy notices are complicated because the content is mandated by state insurance regulators, and he suggested selecting one of the abbreviated disclosure notices from Model #672 to avoid the requirements of privacy notices that contain more prescriptive statements. He said privacy notice requirements should specify what categories to cover but should not become too prescriptive. For example, he said Progressive discloses that information is shared with rental car companies rather than listing the names of each specific rental car company. He is concerned with the use of wording like "specific types" because it sounds like state insurance regulators want an exhaustive list.

Schoensee suggested that the Working Group add a safe harbor for companies using federal privacy forms. Sands said if disclosures become too specific, it will be difficult for companies to comply, and generalized disclosures

that are principle-based would be more appropriate. He said the current language of Model #674 would prohibit insurers from using the federal privacy form, and he questioned what consumer benefit is derived from the disclosure of a specific service provider's name rather than disclosure of a broader category of service provider that provides "x" services. Diederich said the names of specific providers help consumers track where information goes in case there is a service provider breach. Sands said there are other state laws regarding notification of breaches. Wood said a privacy risk is not best addressed through privacy notices to consumers, especially with a detailed list of specific vendors, because the notices would become inaccurate very quickly if specific vendors are required to be listed. She said the posting and disclosure of vendors also increase the security risk for a company, and a vendor may also consider its contract with a company to be confidential. Diederich asked if companies would make the names of specific vendors available to consumers upon request. Wood said they would not because while this request sounds reasonable, such disclosure may not be a good idea. For example, she said a company may use Amazon Web Services (AWS), and AWS does not do anything with the data. She asked why the company would need to disclose it. Similarly, she asked why it would be necessary to disclose the name of a vendor used for a company's accounting. She also questioned how this would benefit a consumer because the company would not change the use of certain vendors due to its business needs.

Paolino encouraged the use of a safe harbor for sample notices and continued the use of the federal privacy forms that are included by reference in Model #672. Petersen questioned the usefulness of a notice unless a consumer can do something in response to the notice. He said this is not the case today with privacy notices given to consumers, as the notices simply disclose that the company uses personal information in compliance with current law. Johnson said a consumer can switch companies if they do not like how a company is using their data. Petersen said price point, company reputation, and service usually drive consumer behavior, and he questioned whether a consumer would change companies based on information in a company's privacy notice. Wake said even if a consumer may not be able to do anything, a consumer may still want to know, and that it is also important for them to know if a company has a policy more restrictive than what is permitted by law. Daly said disclosure of specific vendors will increase the privacy risk to customers.

7. Discussed the Frequency and Methodology of Delivery for the Notice of Consumer Privacy Protections

Schoensee said the timing of notices should be consistent with the direction provided in the NAIC's most recent privacy bulletin from 2016 that incorporated the federal Fixing America's Surface Transportation (FAST) Act amendments regarding the frequency of privacy notices. She also has concerns with notices that might be required for group insurance, reinsurance, and the need to include beneficiaries in notices because this could lead to the premature disclosure of a consumer's estate plan. Johnson asked if the model should allow consumers to continue receiving notices via paper delivery. Paolino encouraged guidance on the timing of notices set forth in the FAST Act. She also suggested consideration of how a group of companies may interact and send notices on a consolidated basis. Diederich asked about potential conflicts with the Uniform Electronic Transactions Act (UETA) and its requirement for companies to receive consumers' affirmative consent for electronic transactions. Dorsey said electronic notice would also violate Maryland law. Johnson said the Working Group may look at a requirement of paper notice for the initial notice and then for companies to provide consumers with an option to opt out of paper notices in the future. Daly said consumers without internet access can call the company, and any company using beneficiary information for marketing should have disclosed this in their initial privacy notice.

8. Discussed Other Matters

Jeff Klein (McIntyre & Lemon PLLC) asked procedural questions on the next draft because the GLBA was about much more than privacy. He said no state may prevent or significantly interfere in insurance sales or cross-marketing, and there are 13 safe harbors outlined in the GLBA. He also said the current draft of Model #674 raises preemption issues. Johnson asked companies to let the Working Group get the next draft out, as it may address

many of these issues. McAdam asked if the notice provisions would apply to reinsurers or group insurance, as the current provisions require them to provide consumer notices. Johnson said the Working Group is not going to require reinsurers or group insurance to provide consumer notices in the next draft. Dr. Ting asked the Working Group to include special safeguards in notices to maintain privacy in cases of domestic abuse.

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 5/22/23

Privacy Protections (H) Working Group
Virtual Meeting
May 16, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met May 16, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Chelsy Maller (AK); Gio Espinosa and Catherine O’Neil (AZ); Damon Diederich (CA); George Bradner and Hicham Bourjaili (CT); Ron Kreiter (KY); Van Dorsey (MD); Jeff Hayden, Renee Campbell, Danielle Torres, and Julie Merriman (MI); T.J. Patton (MN); Molly Plummer (MT); Santana Edison (ND); Connie Van Slyke (NE); Teresa Green (OK); Scott D. Martin (OR); Gary Jones and Richard Hendrickson (PA); Matt Gendron and Raymond Santilli (RI); Frank Marnell (SD); Shari Maier and Michael Walker (WA); and Timothy Cornelius, Rachel Cissne Carabell, and Barbara Belling (WI). Also participating were Janice Davis, Scott Woods, and Rebecca Smid (FL); Paula Shamburger (GA); Joseph Fraioli and Sonya Sellmeyer (IA); Hermoliva Abejar (ID); Tanji J. Northup (UT); Garth Shipman (VA); and Mary Block and Karla Nuisl (VT).

1. Discussed Sharing Consumer Information with a Person Outside the Jurisdiction of the U.S., Section 4. A (5)

Johnson said the Working Group would discuss the sharing of consumer information with a person outside the jurisdiction of the U.S., including the consent provision (Section 4. A (5)) and the guardrails around sending consumer information outside the jurisdiction of the U.S.

Chris Petersen (Arbor Strategies) said he has legal and political concerns about this provision. He said that he believes federal labor laws pre-empt this type of provision at the state level and that this is a security breach issue rather than a privacy issue. Petersen said companies are becoming global and recommends that this provision be stricken from the model. Sarah Wood (Insured Retirement Institute—IRI) reiterated the comments in the IRI’s letter. She said this provision would disrupt annuity supply chains by being overly burdensome in requiring operational changes, so implementation would not be feasible. Johnson asked Wood if she was referring to costs being prohibitive.

Jordan Heiber (U.S. Chamber of Commerce) said its members are concerned with this provision as drafted because it would limit or prevent companies from outsourcing functions, prevent access to information, and lead to increased costs that would be passed on to consumers. He said mandatory consent requirements would confuse companies and consumers as to what information is needed. Heiber said it conflicts with U.S. legal, contractual, and recent state legislation in California and other states. He said these requirements are unnecessarily restrictive and conflict with the G7 requirements in the Organisation for Economic Co-operation and Development (OECD), which is moving forward with its plan for the free flow of data and trust globally.

Kristin Abbott (American Council of Life Insurers—ACLI) said this provision appears to give consumers consent. However, in her April 3 comment letter, she said it is better for companies to address consumer consent questions through vendor oversight and contractual obligations. She said this provision would severely limit global insurers and reinsurers, as well as cause them to lose 24/7 customer service. Abbott also said that the *Insurance Data Security Model Law* (#668) already covers this, so she suggests the provision be removed from the new model, *the Insurance Consumer Privacy Protection Model Law* (#674).

Sabrina Miesowitz (Lloyd’s of London—Lloyd’s) said the comment letter Lloyd’s submitted included a definition of “licensee” that includes unauthorized insurers like Lloyd’s, which are non-U.S. based. She said this is different from other models in that most models say this means “surplus lines licensees.” Shelby Shoensee (American Property

Casualty Insurance Association—APCIA) said this provision would ban global servicing, as it goes against the G7 financial dialogue. She said the protection of data is a function of both security and systems and is concerned it would block a company's functionality, even within the company itself. Shoensee said it would cause companies to become less efficient over time and would limit a company's ability to respond to subpoenas from outside the U.S.; therefore, the provision should be stricken from the model. Bob Ridgeway (America's Health Insurance Plans—AHIP) and Tom Smith (American Reinsurance Association—ARA) both said they agreed with the others who had spoken. Ridgeway said companies help consumers save money and that the risk is on the carrier if anything happens.

Joseph Whitlock (Global Data Alliance—GDA) said he represents a coalition of 70 companies that rely on data transfer around the world. He said there are three cybersecurity, fraud, and privacy concerns: 1) domestic; 2) international obligations; and 3) international policy. Whitlock said this provision is more restrictive than federal laws and that it raises Article 1 constitutional concerns, as well as international case law concerns. He said there are cross-data requirements, as the provision is more restrictive than in other countries or jurisdictions that have very strict laws with contract-based consent, like China, Vietnam, and Africa. Petersen said privacy is about how and when data can be used and what companies need to do to protect it. If a third party misuses data, it is a legal breach and, therefore, a security issue. He said there are two victims—the company and the consumer—and that the provision as written says, "as permitted in the U.S." (not outside the U.S.). Ridgeway said that the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) does not cover lots of information and that HIPAA data is controlled by contracts that are standard business association forms. He said companies could consent to jurisdiction, perhaps.

Diederich said he appreciated the comments and is sensitive to the concerns presented by companies and trade associations but that he was more concerned with consumer understanding and consent. With strong vetting, security, and contracts, he would like free-flowing data with trust. Diederich asked what the minimum boundary conditions, standards, and requirements would be to get companies to build out this type of system. Johnson said the Working Group has asked companies and trades for these types of industry standards many times. Diederich said state insurance regulators keep hearing that the carrier is the victim when data breaches occur and that the real problem is how to ensure there are safeguards on the front end. He said this is very helpful to build in protections for consumers in place of consent to prevent injury down the line.

Silvia Yee (Disability Rights Education & Defense Fund—DREDF) said she would love to see a legal opinion that HIPAA has the authority over U.S. companies that operate overseas. She asked how companies can be held accountable because HIPAA is fairly limited as to what type of data is included.

2. Discussed Other Matters

Johnson reminded attendees about the in-person interim Working Group meeting to be held in Kansas City, MO, on June 5–6. She said the purpose of this meeting is to collaborate with state insurance regulators, consumer representatives, and industry members on revised wording for the most complex topics in the new draft of Model #674. Johnson thanked state insurance regulators, consumer representatives, and industry members who had submitted requests to be added to the registration invitation for this meeting, as the venue limits seating. Ridgeway asked when the agenda for the interim meeting will be available. Johnson said the agenda should be distributed and posted by May 22.

Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) asked when the revised draft of Model #674 would be available. Johnson said a revised draft would be posted after the interim meeting and after the Working Group meets in regulator-to-regulator session. Shoensee asked about the logistics for the interim meeting. Johnson said the room would be set up like it was for the Working Group at the Spring National Meeting

and that the attendees may break into table rounds to discuss issues separately should the need arise during the meeting. She said the Working Group will have suggested language to start the conversations and that Lois E. Alexander (NAIC) will distribute and post the dial-in information a week prior to the meeting for those who will participate in listen-only mode.

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 5/23/23

Privacy Protections (H) Working Group
Virtual Meeting
May 2, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met May 2, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair, and Jo LeDuc (MO); Chris Aufenthie, Co-Vice Chair (ND); Chelsy Maller (AK); Gio Espinosa and Catherine O'Neil (AZ); Damon Diederich (CA); Kristin Fabian, Hicham Bourjaili, Anthony Francini, and Kurt Swan (CT); Erica Weyhenmeyer (IL); LeAnn Crow and Shannon Lloyd (KS); Alexander Borkowski (MD); Jeff Hayden, Chad Arnold, Renee Campbell, Danielle Torres, and Julie Merriman (MI); Molly Plummer (MT); Santana Edison and Colton Schulz (ND); Martin Swanson (NE); Teresa Green (OK); Raven Collins and Thomas Hojem (OR); Gary Jones (PA); Patrick Smock and Matt Gendron (RI); Frank Marnell (SD); Shari Maier, Amy Teshera, and Michael Walker (WA); and Lauren Van Buren, Timothy Cornelius, Rachel Cissne Carabell, and Barbara Belling (WI). Also participating were Rachael Lozano and Rebecca Smid (FL); Joseph Fraioli (IA); Hermoliva Abejar (ID); Shelley Wiseman (UT); Rebecca Nichols and Garth Shipman (VA); and Mary Block, Karla Nuisssl, and Isabelle Turpin Keiser (VT).

1. Discussed Confidentiality (Section 21)

Johnson said the Working Group would like to discuss the use of the *Insurance Data Security Model Law* (#668) confidentiality wording in Section 21 of the new *Insurance Consumer Privacy Protection Model Law* (#674).

Bob Ridgeway (America's Health Insurance Plans—AHIP) said he disagreed with the frequently asked questions (FAQ) because question one noted a slight difference, but the wording in Model #668 deleted one-third of the Own Risk and Solvency Assessment (ORSA) wording. He said AHIP had argued that “shall” should not have been changed to “may” in Model #668 when referencing regulators receiving written agreement (i.e., third-party), but instead to give notice only if subpoenaed on ownership. However, AHIP had lost that battle, so it was proposing limited language again, as Model #668 was less deserving of protection. Ridgeway said AHIP members want the longer language and reiterated the same arguments they had used during discussions of Model #668. Kristin Abbott (American Council of Life Insurers—ACLI) said the confidentiality of intellectual property must be protected to avoid infringement. For Section 21 C. 3 and Section 21 C. 4, she said the ACLI prefers the stronger ORSA provisions. Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said NAMIC would submit comments similar to those mentioned by the ACLI on using the wording from Model #668 in Model #674.

Birny Birnbaum (Center for Economic Justice—CEJ) said Section 21 should be deleted because consumers need to have access to any market conduct exam that is already considered confidential. The wording he suggested is that the privacy disclosure to consumers would be confidential if submitted to regulators and that the FAQ are proprietary because they apply to consumers, who need to be able to see what is being disputed by the company. Birnbaum said consumers need to be empowered to compare companies using all information, so nothing should be considered confidential or be kept from consumers' review.

Johnson asked those commenting to submit suggested wordings in writing following the meeting. She said the Virginia Bureau of Insurance is not subject to the federal Freedom of Information Act (FOIA), but Virginia laws are. Johnson said privacy policies must be posted on company websites. Teshera said records are not held in confidence in Washington state and that the department of insurance's (DOI's) responses are not held in confidence either. Diederich said the Working Group's intention was not that information automatically would be confidential simply because it was given to regulators.

2. Discussed Retention and Deletion of Consumers' Information (Section 5) and Record Retention (Section 22)

Johnson said the Working Group would discuss the retention and deletion of consumers' information wording in Section 5 and the record retention wording in Section 22 of Model #674 next. She said the Working Group intends that companies would be allowed to keep consumers' information for as long as it is needed, but they would delete it within 90 days of the date when it is determined the information is no longer needed to conduct the business with the consumer. She said private calls with companies before this meeting have indicated that this requirement is easy for new companies to do. However, it is very difficult, if not impossible, for companies with old, legacy-based systems.

Shelby Schoensee (American Property Casualty Insurance Association—APCIA) said the section regarding “applicable to any within Section 5 (A)” should be deleted, as well as changes to Section 5 (A) (1) and Section 5 (A)(9). She asked for redress from the 90-day requirement, as it is impossible for legacy companies especially. She also said that exceptions from the federal Gramm-Leach-Bliley Act (GLBA) 502 (b) are also needed and that she had similar concerns about Section 21 and Section 22. Jennifer McAdam (ACLI) asked how Section 5 (A) and Section 5 (B) (i) could be administered without being retroactive, especially with regard to in-force business with regard to information obtained prior to the effective date of Model #674. She noted that the ACLI would like to revisit this section later as others had indicated earlier. She asked that the Working Group add experience studies regarding company insolvencies to Section 5 (b) along with 90-day deletion concerns and the notice from the company on third parties, as the deadline is unfeasible and could damage financial reporting. McAdam suggested a risk-based approach with a reasonable amount of time, along with possibly considering wording similar to that in the California Privacy Rights Act (CPRA). She said Section 5 (b) (3) should read the same as the APCIA had indicated and that the ACLI would be submitting its additional comments in writing. Paolino said she agreed with what the other trade associations had provided.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said the IIABA had several concerns with these sections, as the duty to remove data is very comprehensive with new concepts above what the federal requirement indicates. He wondered why the insurance industry was so strict compared to other non-insurance businesses. Bissett said he is worried that most states would not pick up nor pass such a model, so there would be no uniformity. He said Model #674 is a wholesale rewrite when a tune-up was needed—not a complete overhaul. Bissett said he agreed with the ACLI on Section 5 (b) (3), especially the requirement that small businesses need to control third parties that they do business with.

Diederich said the Working Group's job is to draft the new model so state insurance regulators can use it to regulate for the future. The old models were written several decades ago when legacy systems were written so data could not be deleted in order to avoid theft. He said that now it is known that any data can be stolen, and the only data that is theft-proof is data that is not stored. Deleted data cannot be stolen. He asked companies what state insurance regulators can do to help move them forward with new systems that replace the antiquated legacy systems. Johnson said the Working Group is looking for what would be workable, such as, perhaps, changing the 90-day rule to guardrails for licensees to use or de-identifying the data and keeping it.

Lauren Pachman (National Association of Professional Insurance Agents—PIA) asked how companies would determine when a consumer's data was no longer needed. Johnson said it would be up to the licensee to determine how long the data is needed. She said it would also be up to the licensee to write up their policy and follow it. Tricia Wood (Liberty Mutual Insurance) said, with regard to privacy and records retention, that there is a business purpose for the business records that they keep and that they are looking at not all consumer information. She also said they need a longer period to replace their existing systems.

Elizabeth Magana (Privacy4Cars) said she proposed keeping the requirements closer to the Internet of Things' (IOT's) data retention policy, which allows companies to keep the data as long as they have a legitimate business purpose. Jim Hurst said legacy systems were designed to be write once, read many (WORM), and kept forever, so historical data in such systems simply cannot comply with newer, more modern data privacy requirements. Patrick Simpson (Erie Insurance) said his company has a mix of legacy and new systems and that under New York cyber regulation, what may be feasible today should be periodically reviewed with plans for the future being brought to state insurance regulators, regardless of whether it is for a new system or changes to legacy systems. He said carriers do not want to keep legacy systems because it would not be competitive and because the more data a carrier has, the greater the risk to the company. Simpson said true de-identification would not permit re-identification. He said that as a property/casualty (P/C) insurer, Erie Insurance does have some legacy and some modern systems, as well as some changes from mainframe to cloud issues. He also said how long a change would take depends on the business, but on average, it could take less than 10 years. Hurst said he had no idea how long it would take to switch systems but that he would work to draft a final plan by the end of this year as a possibility.

Silvia Yee (Disability Rights Education & Defense Fund—DREDF) said she understood the need to maintain consumer data for claims. However, she said it seems the data to be collected is mammoth and that the carrier that gets the data can keep it forever. She advocated for a standard across the board so that consumers do not have to track down their data for every company or individual who gets it. Erica Eversman (Automotive Education & Policy Institute—AEPI) said companies need more modern equipment and systems that promote or incentivize the implementation of new technologies. Birnbaum said there is a need to have guidelines for implementing such technologies. Karrol Kitt (The University of Texas at Austin) said this is a technical issue and agrees with Simpson that legacy systems need to be replaced. Birnbaum said the infeasibility of taking data from a legacy system makes it even more imperative to strengthen the Model on the uses of consumer data due to the wide distribution of such systems.

Diederich said the new Model #674 must deal with the information being shared today, as well as with the new data that will be shared in the future. Johnson said some models have a step-up schedule with certain goals for the future and wondered if this type of schedule might work for the privacy model as well. Aufenthie said the question for those using a legacy or WORM system to answer is how long it would take to switch these systems. He also asked if companies could let state insurance regulators know how long it would take. Amann said the company would already have determined the data that is not needed before the 90-day period starts. Diederich said companies are requesting standards rather than prescriptive solutions, so companies need to let the Working Group know if they are following the National Institute of Standards and Technology (NIST), Insurance Services Office (ISO), or any other type of industry data standard.

3. Discussed Other Matters

Johnson reminded attendees about the in-person interim Working Group meeting to be held in Kansas City, MO, June 5–6. She said the purpose of this meeting is to collaborate with state insurance regulators, consumer representatives, and industry members on revised wording for the most complex topics in the new draft of Model #674. Johnson thanked state insurance regulators, consumer representatives, and industry members who had submitted requests to be added to the registration invitation for this meeting, as the venue limits seating.

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 5/4/23

Privacy Protections (H) Working Group
Virtual Meeting
April 18, 2023

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met April 18, 2023. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Chelsy Maller (AK); Gio Espinosa and Catherine O'Neil (AZ); Damon Diederich (CA); C.J. Metcalf and Erica Weyhenmeyer (IL); LeAnn Crow (KS); Ron Kreiter (KY); Alexander Borkowski and Van Dorsey (MD); Jeff Hayden (MI); Santana Edison (ND); Teresa Green (OK); Gary Jones (PA); Patrick Smock (RI); and Todd Dixon (WA). Also participating was Doug Ommen (IA).

1. Discussed Private Right of Action (Section 28—Individual Remedies)

Johnson said the Working Group would be discussing the use of the following private right of action wording from the *Insurance Data Security Model Law* (#668) in place of the wording in Section 28(A) and (B) in the new *Insurance Consumer Privacy Protection Model Law* (#674):

This Act may not be construed to create or imply a private cause of action for violation of its provisions, nor may it be construed to curtail a private cause of action which would otherwise exist in the absence of this Act.

Shelby Schoensee (American Property Casualty Insurance Association—APCIA) said the APCIA would be okay with the wording, as it is better than that in the original Feb. 1 exposure draft. Bob Ridgeway (America's Health Insurance Plans—AHIP) said he is okay with it, but he reserved the right to change his opinion in the future if necessary. Kristin Abbott (American Council of Life Insurers—ACLI) said she welcomes the change, particularly the removal of Part B. Chris Petersen (Arbor Strategies LLC), representing the Health Coalition, said legislators and state insurance regulators he had spoken with are against including a new private right of action, as the current version in Model #668 would maintain the status quo and not take away any protection from consumers.

Birny Birnbaum (Center for Economic Justice—CEJ) asked for the reason for this change. Johnson said it is because comments received were leaning strongly against the new wording, and no comments had been received leaning strongly in favor of the new wording. Birnbaum asked why the NAIC needs consumer representatives if state insurance regulators are going to do what industry members say. He said privacy differs from security, and the set of company actions differs. He said Model #668 is based on the federal Fair Credit Reporting Act (FCRA), which has a private cause of action, so Model #674 should have it. He posited that if a company takes data without the consumer's consent and the consumer's personal information is stolen, the consumer is harmed. He said a private cause of action would give the consumer an opportunity for redress. He also said this comment is in the comment letter submitted and signed by seven NAIC consumer representatives. Karrol Kitt (University of Texas at Austin) said she supports what Birnbaum is trying to say. She asked how else consumers would get redress. Peter Kochenburger (Southern University School of Law) said he supports what Birnbaum said, and industry never supports any private right of action. Michael DeLong (Consumer Federation of America—CFA) said he agrees with Birnbaum that not having a private right of action would hurt consumers, and it appears state insurance regulators are carrying water for industry. Bonnie Burns (Consultant to Consumer Groups) said she also supports Birnbaum's comments, and it appears that state insurance regulators and industry are on one side of this issue while consumer representatives are on the other side. Birnbaum said there is no evidence or reason for industry to oppose this except for the fact that state insurance regulators can enforce and protect consumers. Harry Ting (Consumer

Healthcare Advocate) said Europe has not been able to control this issue. Birnbaum said there is no status quo on consumers' data. He said we must have a surveillance economy now, and the consequences of losing data are great.

Smock said this change does not affect existing private right of action regulations. He said it depends on the jurisdiction as to whether it has or does not have a private right of action. The new wording allows each state to keep the private right of action or lack thereof that it currently has under law.

2. Discussed the HIPAA Safe Harbor

Johnson said the next topic to be discussed is the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Safe Harbor in Section 19 of Model #674. Petersen said the Health Coalition's comment letter noted that HIPAA preempts state law where it does not conflict and includes a safe harbor that will apply to all HIPAA-compliant companies. He said Model #674 should remove the words "subject to" and only use "compliant with," which is stronger wording. Johnson said Model #674 currently says, "subject to and compliant with." Ridgeway echoed what Petersen said because larger holding companies have health insurers and non-health insurers or companies, so HIPAA should apply to both. He also said the Working Group should want to adopt the most rigid structure regarding data privacy that it can. Birnbaum said the redline in question should say, "... if compliant with HIPAA; not subject to #674," and that it would give safe harbor. He also asked if states would go in to check on whether the companies are HIPAA-compliant. He asked that it be limited to companies that are subject to HIPAA. He also said this is the same as in the *Suitability in Annuity Transactions Model Regulation* (#275), which has caused lots of problems and tremendous confusion holding up even the frequently asked questions (FAQ) document explaining it. Johnson told Birnbaum what he meant by the phrase, "there is no agency to enforce it." Birnbaum said the wording, "subject to HIPAA" would require state and federal oversight of a company that is not subject to HIPAA.

Bradner asked what other lines are only subject to HIPAA, such as health services and property/casualty (P/C) companies compliant with HIPAA. He asked if other lines are subject to HIPAA or Model #674. Birnbaum asked if State Farm says it is compliant with HIPAA, whether states only look at HIPAA or state insurance regulators look at state insurance laws. Petersen said all personal information is protected the same as protected information. He said this is not new. It is in the federal Gramm-Leach-Bliley Act (GLBA) via the *Privacy of Consumer Financial and Health Information Regulation* (#672) and other state legislation via cybersecurity as "compliant with HIPAA." Ridgeway said the concern in California was that companies with HIPAA and non-HIPAA companies both used HIPAA for all lines to create administrative efficiencies, and he is trying to do the same for Model #674. He said an inquiry from the state would resolve any issues, which usually end up checking for clerical error. Aufenthie said it was unclear from the comments submitted by the Blue Cross Blue Shield Association (BCBSA) whether they agreed with the edits being suggested by Ridgeway during this call. Johnson said the comments submitted by the BCBSA referenced personal health information and not the broader term "all personal information," so it was unclear whether the BCBSA was suggesting the same edits as AHIP. She asked Randi Chapman (BCBSA) if she could shed some light on this question. Chapman said she needs to check with her policy person. Johnson asked Chapman to let Lois E. Alexander (NAIC) know if their policy references personal health information or the broader term "all personal information."

3. Discussed Other Matters

Johnson reminded attendees about the in-person interim Working Group meeting to be held in Kansas City, MO, on Monday, June 5, and Tuesday, June 6. She said the purpose of this meeting is to collaborate with state insurance regulators, consumer representatives, and industry members on revised wording for the most complex topics in the new draft of Model #674. Johnson thanked state insurance regulators, consumer representatives, and industry members who had submitted requests to be added to the registration invitation for this meeting, as the venue limits seating.

Having no further business, the Privacy Protections (H) Working Group adjourned.

NAIC/CONSUMER LIAISON COMMITTEE

NAIC/Consumer Liaison Committee Aug. 12, 2023, Minutes 13-2
NAIC/American Indian and Alaska Native Liaison Committee Aug. 13, 2023, Minutes
(Attachment One) 13-8

Draft: 8/28/23

NAIC/Consumer Liaison Committee
Seattle, Washington
August 12, 2023

The NAIC/Consumer Liaison Committee met in Seattle, WA, Aug. 12, 2023. The following Liaison Committee members participated: Andrew R. Stolfi, Chair (OR); Grace Arnold, Vice Chair (MN); Lori K. Wing-Heier represented by Heather Carpenter (AK); Mark Fowler (AL); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais represented by Kurt Swan (CT); Michael Yaworsky (FL); Dean L. Cameron represented by Randy Pipal (ID); Dana Popish-Severinghaus represented by KC Stralka (IL); Vicki Schmidt represented by LeAnn Crow (KS); James J. Donelon represented by Ron Henderson (LA); Kathleen A. Birrane represented by Jamie Sexton (MD); Anita G. Fox represented by Renee Campbell (MI); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by Jacob Just (ND); Eric Dunning represented by Martin Swanson (NE); Scott Kipper represented by David Cassetty (NV); Judith L. French represented by Jana Jarrett (OH); Michael Humphreys represented by Jodi Frantz (PA); Cassie Brown represented by Randall Evans (TX); Jon Pike represented by Tanji Northup (UT); Scott A. White represented by Don Beatty (VA); Mike Kreidler (WA); Nathan Houdek represented by Sarah Smith (WI); and Allan L. McVey represented by Erin K. Hunter (WV). Also participating was Paige Duhamel (NM).

1. Adopted its Spring National Meeting Minutes

Commissioner Lara made a motion, seconded by Ron Henderson, to adopt the Committee's March 21 minutes (see *NAIC Proceedings – Spring 2023, NAIC/Consumer Liaison Committee*). The motion passed unanimously.

2. Heard a Report on the Consumer Board of Trustees Meeting

Commissioner Stolfi said the Consumer Board of Trustees is combining the different applications for the NAIC Consumer Participation Program into one application. He said there have been different applications, depending on whether a person is applying as a funded or unfunded consumer representative and whether a person is in the first or second year as a consumer representative. He said the combined application will be used for individuals applying to participate in the NAIC Consumer Participation Program in 2024. He said the Board discussed a request for action submitted by Erica Eversman (Automotive Education & Policy Institute—AEPI) for the NAIC to amend the NAIC *After Market Parts Model Regulation* (#891) to redefine “aftermarket” parts and establish criteria for insurers to inform consumers about the use of aftermarket parts. He said the Board discussed a potential conflict of interest submitted by a consumer representative.

3. Heard a Presentation from the CEJ on “A Meaningful Framework for Supervision of Insurer’s Use of Big Data and Artificial Intelligence”

Birny Birnbaum (Center for Economic Justice—CEJ) said the purpose of market conduct regulation is to ensure the fair treatment of consumers. He said unfair discrimination, from an actuarial perspective, is treating similarly situated consumers differently in rating or claims. He said this is defined as an unfair trade practice. He said unfair discrimination is also defined as discriminating against a person because of their race, religion, or national origin. He said discriminating against an individual is unfair and prohibited even if the treatment is actuarially fair. He said insurers may use data that is racially biased, which indirectly causes unfair discrimination based on race. He said industry claims a risk classification and scoring algorithm that is predictive is fair and that protected class discrimination can only mean explicit and intentional discrimination against a protected class.

Birnbaum said state insurance regulators in 2020 acknowledged the increased potential for the use of racially biased data and algorithms to result in the unfair discrimination of protected classes when the NAIC adopted the Principles on Artificial Intelligence (AI). He said following the adoption of the principles, George Floyd was murdered by police in Minneapolis, and the U.S. was confronted with the fact that structural racism persists throughout the country. State insurance regulators recognized this watershed moment to declare action against racism in insurance, which led to the appointment of the Special (EX) Committee on Race and Insurance. Since that time, Birnbaum said the NAIC has made great strides in diversity, equity, and inclusion (DE&I) education and initiatives, but he questioned the progress the NAIC has made in addressing structural racism in insurance.

Birnbaum said the Innovation, Cybersecurity, and Technology (H) Committee's draft AI Model Bulletin fails to respond to the challenges and promises made by the NAIC in 2020. He said the bulletin does not expand on the AI Principles or offer guidance on how state insurance regulators should implement the principles. He said the bulletin tells insurers what they already know, which is that the use of AI must comply with the law and insurers should have oversight of their AI. He said the bulletin fails to provide essential definitions and does not define proxy discrimination.

Birnbaum said state insurance regulators should focus on consumer outcomes and not the process. He said AI governance and risk management procedures are necessary and important but not sufficient. He said insurers should be testing to ensure their data, algorithms, and applications do not result in unfair discrimination on both an actuarial basis and a protected class basis in all phases of the insurance life cycle. He said regulatory guidance is needed to define proxy discrimination and disparate impact to help establish at least one uniform testing methodology. He said this should include the reporting of test results by insurers.

Birnbaum said a governance requirement should include a requirement that insurers' AI outcomes are disputable, which is a broader requirement than transparency. He said the governance- only approach, which is called principles-based, does not make sense for addressing the regulatory oversight of AI. He said state insurance regulators can obtain the data and ability to ensure good consumer outcomes and compliance with state laws through testing for unfair discrimination, and that testing should be a central feature of state insurance regulatory oversight of AI.

Birnbaum said state insurance regulators need to define proxy discrimination and establish thresholds for testing results that would be considered proxy discrimination. He said the CEJ has proposed guidance for these. He said insurers should be able to identify and explain why a consumer outcome occurred and trace the outcome to a particular characteristic of the consumer. This would provide consumers with the ability to dispute the outcome, which is a broader requirement that an insurer explain how a model or algorithm works.

In response to a question from Commissioner Stolfi about the difference between governance and testing, Birnbaum said financial regulators use risk-based capital (RBC) with specific guidance on how insurers should measure their capital to produce an RBC ratio. Without this type of testing and guidance, insurers would have only a governance approach, and each insurer could define risk in any way they want. Birnbaum said the framework for RBC is the framework needed for the oversight of AI. This framework sets common metrics for testing and goes beyond pure governance.

Commissioner Lara asked about testing for unfair discrimination based on sexual orientation. Birnbaum suggested a phase-in approach and starting testing for unfair racial discrimination since data on race is available. Insurers, at some point, should be willing to ask policyholders for protective class characteristics on a voluntary basis.

4. Heard a Presentation from the UP and the AEPI on the Appraisal Process for Automotive and Property Damage Claims

Amy Bach (United Policyholders—UP) said the UP has a Roadmap to Recovery Program to help consumers after a catastrophe and a Roadmap to Preparedness Program to help eliminate protection gaps and engage in consumer advocacy and action. She said the UP is working to restore confidence and fairness to the property claims appraisal process. She said disputes between insurers and insureds over the extent of damage and repair costs are extremely common. This leads to wasted time and judicial resources since appraisals can be completed without attorneys and litigation.

Bach provided an overview of how the insurance appraisal process is supposed to work, which is intended to be a faster and cheaper process than litigation in resolving a valuation dispute between an insurance company and a policyholder. She said each side picks their appraiser, and then the two appraisers are supposed to agree on an umpire to resolve any discrepancies in the valuation. For example, she said the appraisal process should resolve issues, such as how many square feet of lumber are needed or the grade of lumber needed, by engaging with experts in construction and labor costs rather than taking these types of disputes to court.

Bach said some insurers have removed appraisal clauses from their policies in states that do not require an appraisal clause. This means disputes have a higher likelihood of ending up in litigation. Bach said there are some variations in appraisal clauses. She provided an example of an appraisal clause that specifies that each party must select their appraiser within 20 days after the demand is received, and then an umpire is to be selected. She said not every company or state needs to have the exact same rules.

Bach said there are a lot of points of contention around initiating appraisals. For example, she said parties may be working to resolve a dispute, and then either the insurer or insurance company may demand to initiate an appraisal process. The parties can then face disputes about what umpire to select, which is when courts often need to get involved. Bach said there may also be questions about whether an appeal is binding, the effect of the appraisal process in a lawsuit, and whether the use of the appraisal process precludes a bad faith case. She encouraged the Property and Casualty Insurance (C) Committee to review this issue and work to reform the appraisal process.

Eversman said the appraisal clause is intended to be an alternative dispute resolution mechanism used to determine property loss claim value. She said it is not intended to determine liability. She said some appraisal clauses are more definitive, but they are usually not very detailed in private passenger automobile (PPA) policies. She said typical auto appraisal disputes arise with partial losses and focus on the types of parts to be used, the cost of parts, and whether a part should be repaired or replaced. She said there are new parts, aftermarket parts, and salvage parts. She said total loss values can also be contentious. She said insurers use appraisals as a shield by which an insurer will not use an appraisal until an insured sues in court to demand an appraisal. Insurers will also use appraisals as a sword to try to resolve non-monetary issues.

Eversman recommended that state insurance regulators mandate appraisal clauses in automobile policies for both full and partial property losses; require insurers to notify consumers that the right to an appraisal exists if they disagree with an offer; require insurers to use independent umpires; and establish a time frame for the right to an appraisal, along with a maximum consumer expense permitted. She said appraisal requirements must also have details, such as who may serve an appraiser and penalties for failure to comply with the appraisal requirements.

Eversman requested that the Property and Casualty Insurance (C) Committee establish a workstream to address the appraisal process for auto losses. Crow asked what the recommended maximum a consumer should pay for an appraisal is. Bach said the cost is a deterrent for consumers, and she suggested that insurers should advance

the cost of the appraisal and then deduct half the cost of the appraisal from the final settlement. Eversman suggested a maximum cost of between \$500 to \$800 for auto claim appraisals. She said states should mandate appraisal clauses in policies, and either the insurer or insured should have the right to request an appraisal.

5. Heard a Presentation from the DREDF, the Whitman-Walker Institute, and the LLS on Federal Health Updates

Kellan Baker (Whitman-Walker Institute) said the Consolidated Appropriations Act of 2023 delinked continuous enrollment in Medicaid and the public health emergency (PHE), which ended continuous Medicaid enrollment on March 31. He said Medicaid enrollment grew by an estimated 23 million (32%) to 95 million individuals between 2020 and 2023. He said this stopped the churn between Medicaid coverage and private marketplace coverage. He said 7.8 to 24.4 million individuals will lose Medicaid coverage during the PHE unwinding, and states are moving at different speeds to complete PHE unwinding and Medicaid eligibility redeterminations. He said 74% of people who dropped from Medicaid coverage were disenrolled for procedural reasons during the unwinding, and many disenrolled beneficiaries are likely still eligible for Medicaid coverage.

Baker said state insurance regulators can help mitigate the impact of disenrollment from Medicaid by enhancing in-person assistance; working with insurers and state Medicaid agencies to develop outreach toolkits; ensuring that accurate information is available to consumers about inexpensive but potentially insufficient coverage alternatives; and monitoring qualified health plans (QHPs) for marketing, enrollment, and network adequacy. He said states should also consider an “unwinding” open enrollment period, expand continuity of care protections, and require pro-rating of out-of-pocket costs for mid-year transitions.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) said the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) applies to fully insured and self-insured health plans, as well as non-federal governmental group plans. She said enforcement authority is held by the U.S. Department of Labor (DOL), the federal Centers for Medicare & Medicaid Services (CMS), and state insurance regulators. She said racial and ethnic minorities often have worse mental health outcomes due to inaccessibility to quality mental health care services. There is also discrimination and a lack of awareness about mental health. Yee said there was a proposed rule issued on July 25 addressing non-quantitative treatment limitations (NQTLs) under the MHPAEA. This guidance provides 13 factual examples for review. One key change is that the proposed rule would classify certain benefits, conditions, and disorders based on “generally recognized independent standards of current medical practice.” Yee encouraged state insurance regulators to comment on the proposed rule to provide insights on how state and federal cooperation can best be operationalized to ensure consumer access to care for mental health and substance use disorder (MH/SUD).

Lucy Culp (Leukemia & Lymphoma Society—LLS) said Georgetown University has completed several “secret shopper” studies, and there is a trend of misleading marketing as people lose their Medicaid coverage. She said the proposed rule on short-term, limited-duration (STLD) insurance defines STLD insurance as being no more than a three-month contract term and no more than four months with the same insurer within a 12-month period. The rule prohibits stacking by issuers and applies to new policies. For on-coordinate excepted benefits, she said the proposed rule requires individual market indemnity products to be paid on a per-period basis, and hospital or other fixed indemnity products must be paid as a fixed dollar amount, regardless of expenses incurred. She recommended that state insurance regulators support the definition of STLD insurance in the proposed rule, support the proposal for hospital indemnity and other fixed indemnity insurance to qualify as an excepted benefit, and offer additional insights regarding products sold across state lines through association plans.

Commissioner Stolfi said Oregon passed a law that required three free primary care visits, and consumers could pick whether the three free visits would be for medical or mental health purposes. Due to established federal methodology requiring insurers to estimate which costs would be for medical care versus mental health care, Oregon had to amend the law to require a \$5 copay for these visits. Commissioner Stolfi said Oregon would be

submitting comments about this since the implementation of a \$5 copay is not something Oregon wanted to impose on consumers.

6. Heard a Presentation from the Consumers' Checkbook, Georgians for a Healthy Future, and the United States of Care on Preventative Health Services

Caitlin Westerson (United States of Care) said the federal Affordable Care Act (ACA) requires most private health plans (e.g., non-grandfathered individual, group, and self-funded) to cover more than 100 preventive health services without cost sharing. She said the decision in the case of *Braidwood Management Inc. v. Becerra*, while temporarily stayed, puts access to critical preventive care at risk for more than 150 million people, including approximately 37 million children. If the decision is upheld and applies nationwide, she said two in five adults would skip necessary preventive care, and historically underserved communities will be disproportionately affected. She said even a small copay could deter those with low incomes from receiving preventive care. She said the following key preventive services, if eliminated, would disproportionately affect consumers with limited access to health care: 1) smoking cessation; 2) pre-exposure prophylaxis for the prevention of HIV; 3) colorectal cancer screening; and 4) postpartum depression screening. The communities most affected would be Native Americans, African Americans, Hispanic individuals, and rural populations.

Eric Ellsworth (Consumers' Checkbook) said documentation for providers and consumers regarding preventive services and payer guidance documents is extremely burdensome to search on insurers' websites. He said consumers equate not finding information on a benefit with that benefit not being available. He said plan formularies often do not distinguish coverage from preventive and non-preventive drugs. He said payer guidance documents that inform claims adjudication policies were often incomplete. He said it is especially hard for consumers to get complete information when an intervention includes both a medical and pharmacy benefit.

Yosha Dotson (Georgians for a Healthy Future) provided the following six recommendations for state insurance regulators: 1) utilize data calls and market conduct exams to assess compliance with preventive and cost-sharing requirements; 2) ensure continued preventive protections with state legislative and regulatory action; 3) enforce appeals protections for mis-adjudicated or denied preventive services claims; 4) ensure that QHP certification assesses formularies and other plan documents; 5) hold plans accountable for educating consumers and providers on preventive services requirements; and 6) establish uniform billing and coding standards.

7. Heard a Presentation from the AKF and the HIV+Hepatitis Policy Institute on Health Care Appeals and Denials

Deb Darcy (American Kidney Fund—AKF) said the number of health care denials is a concern, and she referenced a ProPublica report that stated that one health insurer denied 60,000 claims in one month without a human reviewing the claims. She said health insurers must follow the laws, and doctors are expected to examine a patient's medical records before a health insurer can reject a claim for not being medically necessary. She said the U.S. House of Representatives (House) Committee on Energy and Commerce is looking into the activities of this company. In addition, she said a class action lawsuit was filed against the insurance company in the Eastern District of California. The class action lawsuit notes that the insurer rejected 300,000 claims over a two-month period, which indicates that the insurer spent an average of 1.2 seconds on each claim.

Darcy said the Kaiser Family Foundation (KFF) released a survey on consumer experience with health insurance and whether consumers understand what services will and will not be covered. She said the KFF survey reflects that 17% of health claims were denied for ACA plans, and less than 1% of denied claims were appeals. She said the survey reflected that 16% of consumers said their insurance company delayed or denied needed care and prior authorizations; 27% of consumers said their health insurance paid less than what they expected; 18% of consumers said insurance did not cover any of the care they received; and 23% said their insurance did not cover a needed prescription. She said the survey reflected that 40% of adults surveyed did not know they have the right

to appeal a claim denial, and 24% of the consumers surveyed did not know who to contact when they have a problem with their health insurance.

Carl Schmid (HIV+Hepatitis Policy Institute) said there are 20 consumer representatives focusing on health insurance issues, and he suggested that state insurance regulators review existing data collected on health insurer denials. He suggested that state insurance regulators meet with representatives of the KFF, the federal Center for Consumer Information and Insurance Oversight (CCIIO), and the DOL. Regarding prior authorization, he suggested that states have a better understanding of individual state actions and proposed federal regulations through state presentations, federal presentations, and presentations by consumer groups and the American Medical Association (AMA). He also suggested that the NAIC update its models to address prior authorization. Regarding appeals and denials, he suggested that state insurance regulators better understand the reasons for denials, better understand why a low number of appeals are approved, and work to shift provider behaviors around appeals. He said state insurance regulators should work to encourage consumer knowledge of their rights to appeal a denial. He said state insurance regulators should investigate new ways in which to communicate with consumers and engage with each other to exchange ideas on how to enhance communication with consumers. He said state insurance regulators should review the use of AI for health claims, and he encouraged state insurance regulators to invite insurers to present on their use of AI. He also encouraged state insurance regulators with expertise in health insurance to work with the Innovation, Cybersecurity, and Technology (H) Committee to develop guidance on the use of AI.

Schmid said consumer representatives have submitted formal requests for action for an additional review of these issues by the Health Insurance and Managed Care (B) Committee; the Market Regulation and Consumer Affairs (D) Committee; and the Innovation, Cybersecurity, and Technology (H) Committee. Duhamel suggested that the denial of health claims would be a good topic for NAIC Zone meetings. Crow said the Consumer Information (B) Subgroup is working on how to increase consumers' knowledge regarding their rights to appeal a health claim denial.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.

SharePoint/NAIC Support Staff Hub/Committees/Consumer Cmte/2023 Summer/Consumer_08 Min

Draft: 8/29/23

NAIC/American Indian and Alaska Native Liaison Committee
Seattle, Washington
August 13, 2023

The NAIC/American Indian and Alaska Native Liaison Committee met in Seattle, WA, Aug. 13, 2023. The following Committee members participated: Glen Mulready, Chair (OK); Trinidad Navarro, Vice Chair (DE); Lori K. Wing-Heier (AK); Dean L. Cameron represented by Randy Pipal (ID); Grace Arnold (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by John Arnold (ND); Alice T. Kane represented by Colin Baillio and Paige Duhamel (NM); Andrew R. Stolfi represented by TK Keen (OR); Larry D. Deiter represented by Tony Dorschner (SD); Jon Pike (UT); Mike Kreidler represented by Todd Dixon (WA); Nathan Houdek (WI); and Jeff Rude (WY). Also participating were: Peni Itula Sapini Teo (AS); Diane Carter (OK); Patrick Smock (RI); Carter Lawrence (TN); and Cassie Brown (TX).

1. Adopted its Spring National Meeting Minutes

Commissioner Navarro said the Committee meets to discuss insurance issues of importance to tribal members to promote education, understanding, and collaboration to enhance consumer protection in Indian country. Navarro said he would conduct the meeting on behalf of Commissioner Mulready, who was unable to be at the meeting in person due to a conflict but would be participating virtually.

Director Wing-Heier made a motion, seconded by Commissioner Rude, to adopt the Committee's March 25 minutes (see *NAIC Proceedings – Spring 2023, NAIC/Consumer Liaison Committee, Attachment One*). The motion passed unanimously.

2. Heard an Update from Oklahoma on the *McGirt v. Oklahoma* U.S. Supreme Court Case

Mithun Mansinghani (Lehotsky Keller Cohn LLP) said the *McGirt v. Oklahoma* case that was brought before the U.S. Supreme Court was about tribal sovereignty in that it took away land from tribes' reservations and gave it to Oklahoma for state government. He said it has remained that way for 100 years and was looked at by the U.S. Congress (Congress) due to a criminal case. Mansinghani said the case of *Worster v. Georgia* in 1830 was the first case about state versus tribal sovereignty. However, it ended with an abandoned decision. He said increased assertion of tribal sovereignty was seen before land was carved out for Indian-owned casinos. Mansinghani said it was also at the forefront when tribal lending cases led to tribal members avoiding state and federal usury laws. He said tribes were then given patent ownership over pharmaceuticals, which non-tribal members tried to use to avoid state taxation and regulation. He said the Sovereign Nation Insurance Company (SNIC) has challenged state sovereignty through several laws in different states. Mansinghani said the scope of immunity being sought is higher in Indian country, with *McGirt v. Oklahoma* being recently cited for life and health insurance in New York and Wisconsin, as well as with regard to short-term disability insurance.

3. Heard a Presentation from HCSC on the Effect of Risk Adjustment Treatment of Tribal Enrollees Under the ACA

Josh Goldberg (Health Care Services Corporation—HCSC) gave a presentation on the effect of risk adjustment treatment of tribal enrollees under the federal Affordable Care Act (ACA). He said his colleagues spoke at the tribal

roundtable last week about the challenges and successes of their work with the Oklahoma Department of Insurance (DOI) and that he would like to give a brief refresher at this meeting on the issue. He said when comparing the risk term and the rating term with regard to cost-sharing reduction (CSR) and the induced demand factor (IDF), the old model indicated that the silver zero cost-sharing plan was rated as number one and the limited cost-sharing plan was rated as number two. However, this is no longer true in the current marketplace. Goldberg said when comparing the predictive results to the actual results for accuracy and CSR Electronic Medical Records-EMR in all states, the silver plan rated above predictive in the chart, indicating it was higher or over-predicted. The limited plan rated under in the chart, indicating it was lower or under-predicted, which resulted in the company being underpaid because the zero cost sharing predictive ratio was too low, at 0.71. He said this had no effect at the federal level but varied at the state level, so there is a financial disincentive for companies to sell these plans to tribal populations.

Goldberg said the Milliman Analysis compared two companies with zero split—one at 90% and the other at 10% by recalibrating the CSR factors to be at the higher level. When looking at the bronze plan, he said the modeling results magnified by 4% when added to additional benefits, while the preferred is equal for both companies. Goldberg said the federal government stopped making restitution of cost sharing in 2016 due to rating term consideration. He said Milliman produced a white paper in 2021 at the national level but did not have state-specific data, so it went back to get more granular data. The federal Centers for Medicare & Medicaid Services (CMS) has been working on this recently as well, so it is taking this new study seriously.

4. Heard an Update from Alaska on the Risk Adjustment Treatment of Alaska Native Enrollees Under the ACA

Director Wing-Heier said health care clinics in Alaska enroll patients in the National Tribal Health Care (NTHC), and Alaska pays one month's premium for the silver plan when Alaska Natives come in for health care services, and the charges for medical care are usually significant. She said the NTHC sued Primera over this. However, this involves native politics, so the state cannot get involved in it. Director Wing-Heier said the issue is substance abuse, and Alaska natives are being targeted to enroll in the Alaska plan and being taken to out-of-state facilities for drug abuse treatment because Alaska pays for such treatment at a much higher rate. She said they are looking for the bad lead generators that are doing this and are taking action to stop them because such policies are not legal due to the fraudulent applications that are not approved in Alaska, and the care is being done in facilities that are not licensed. However, this has caused another problem. The patients are being thrown out of these facilities in another state with no way to get back home to Alaska. Commissioner Navarro said the recent revisions to the NAIC's *Unfair Trade Practices Act* (#880) from the Improper Marketing of Health Insurance (D) Working Group will help stop this type of fraudulent activity. Duhamel said New Mexicans are being sent to similar facilities, and she will circulate an article through Lois Alexander (NAIC) to all Committee members.

5. Considered Drafting a Letter to the CMS Regarding Native American Issues Under the ACA

Commissioner Navarro asked if any committee members would like to speak to this suggestion but received no input.

6. Discussed Other Matters

Commissioner Pike said the Sovereign Nation Health Consortium (SNHC) consisted of three tribes. He said Utah sent a letter to the SNHC attorney asking them to put in writing their intent about marketing to non-tribal members because the attorney had previously said SNHC would not be selling to non-tribal members. However,

Commissioner Pike said that SNHC was selling insurance coverage to non-tribal members outside of tribal lands. SNHC's attorney has not responded.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
