Individual Disability Income Experience

- Current valuation standard based on 1990 to 2007 data
- 2019 – SOA 2006-2014 claim incidence report
 - Incidence rates > 60% of the valuation standard table
 - ALR's may be 25-50% too high
- 2021 -- SOA 2006-2014 claim termination report
 - Termination rates > 50-65% of the valuation standard table
 - DLR's may be 25-50% too high

What can regulators do to help?

For studies, tables, project desired by regulators

- Help us clarify the prioritization
- Support/encourage voluntary participation in Experience Study Pro studies
- Support/encourage potential funding through NAIC, where funding through direct sales is not feasible

Discussion

Additional Health Research

Experience Studies, Practice Research & Data Driven In-house Research

Project Name	Objective	Expected Completion Date
Digital Health	A study focusing on telehealth and other digital communications.	https://www.soa.org/49e6b8f60ba/assets/files/resources/research-report/2023/digital-health-covid-19am.pdf
Emerging Impact of Long COVID on HealthCare Costs and Medical Conditions	Examine the impact of a COVID 19 diagnosis on patient claims and medical conditions.	https://www.soa.org/resources/research-reports/2023/hcc-covid-effects-longterm/
Group Life Waiver of Premium Valuation Tables	Develop valuation tables for claim mortality and recovery on Group Term Life policies with Waiver of Premium benefits.	https://www.soa.org/resources/experience-studies/2023/group-life-waiver/
Health and Health Care Inequalities: Research Challenges and Considerations	A summary of the challenges involved in conducting research that requires health or health care data and protected personal information. Includes considerations for future research.	https://www.soa.org/resources/research-reports/2023/health-and-healthcare-inequalities/
Risk Adjustment White Paper	Interview Risk Adjustment SMEs and create a white paper that will address recent concerns brought up by political leaders about the use of Risk Adj through an actuarial user's guide to its past and future applications.	https://www.soa.org/resources/research-reports/2023/risk-adjustment-may/
Social Physical and Cultural Determinants of Health	Qualitative SDOH research project.	https://www.soa.org/resources/research-reports/2023/soc-phy-cultural-doh/
State Based Public LTC Catastrophic Research	Studies the feasibility, possibilities and potential options for a state specific public product for Catastrophic LTC protection.	https://www.soa.org/resources/research-reports/2023/tc-catastrophic-insurance/ https://www.soa.org/4936e5f60ba/assets/files/resources/research-report/2023/tc-catastrophic-report.pdf https://www.soa.org/497a68f60ba/assets/files/resources/research-report/2023/covid-impact-on-state-based-cat-program.pdf
Wall Street Journal Health Forum Summary 2023	This project is a brief that summarizes the March 2023 Wall Street Journal Health Forum.	https://www.soa.org/resources/research-reports/2023/wall-street-journal-health/
Modeling the Impact of the COVID-19 Public Health Emergency (PHE) on State Medicaid Programs	Develop a model to help estimate the impact of the anticipated unwinding of the PHE on State Medicaid Programs. This includes an excel model, a users guide to the model, and a paper that illustrates how the model works and what it is trying to measure.	8/23/2023
2024 Getzen Model	This research examines is a model that does long term medical trend projects. In addition, there is a write-up which describes how each of the assumptions were chosen.	9/15/2023
HCCI Quick Hit - Specialty Pharmacy Trends	This research will examine some key specialty drugs to look at how increases in uptake in drugs worth between 10K and 200K are driving current pharmacy trend.	9/15/2023
Calculated Risk: Driving Decisions Using the 5/50 Research	Validate the 5/50 Premise through % of total costs and average allowed annual costs by percentile grouping. Analyze ability to predict the 5% based on prior claims and risk factors. Calculate Transition probabilities between different groups. Introduce the concept of Total Risk Analysis which looks at the likelihood of large financial losses in health insurance as well as what types of risk and variance contribute to the possibility of those losses.	9/30/2023

We've heard your feedback

FSA candidates encounter significant challenges along the pathway

- Lack of flexibility or customization
- Less relevant to global markets
- Little guidance on what to study
- Slow grading process
- No exam feedback
- Difficult source materials that lack focus

2

The Evolution of the FSA Pathway

NAIC presentations
Stuart Klugman, FSA, CERA, PhD
SOA Senior Staff Fellow

August 2023

Regulatory Material Shift

Current Challenge

- In-depth U.S. and Canadian regulatory material lacks relevance to global markets

SOA Shift

- Detailed local regulatory material moved outside of the current FSA requirements
- Fundamental regulatory principles and frameworks will still be covered in the FSA pathway
- FSA will qualify actuaries to sign General Statements of Actuarial Opinion

CERTIFICATES:

- Stand-alone, optional regulatory certificates will be offered. Certificates can be taken when needed.
- The SOA is collaborating with regulatory bodies to develop the certificates

4

Introducing a range of improvements for a better candidate experience

3

Flexible Pathway

Current Challenge

- Forced track structure lacks flexibility and customization
- Highly specialized tracks are less relevant for developing markets

SOA Shift

- Shifting from “tracks” to a flexible pathway
- Flexibility to focus on a single practice area or create a combination of courses relevant to you
- 5 courses required:
 - 4 Technical courses (one must build on another)
 - 1 Decision Making and Communications (DMAC) Course
 - + Fellowship Admissions Course (FAC)

5

Choose from About 20 Courses

Life/Annuities

Retirement Benefits

Health

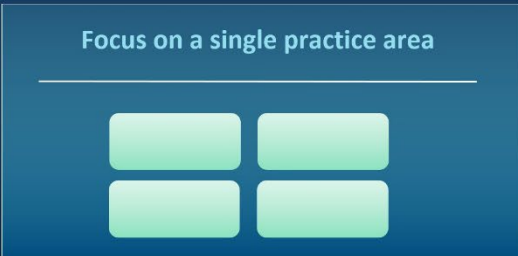

General Insurance

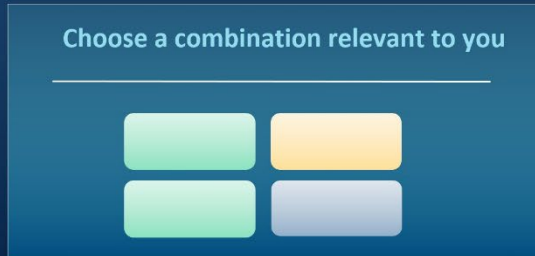

Finance/Investments/
ERM

Focus on a single practice area

Choose a combination relevant to you

About the American Academy of Actuaries

The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues.

The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

For more information, please visit: www.actuary.org

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Public Policy and the Academy

The Academy, through its public policy work, seeks to address pressing issues that require or would benefit from the application of sound actuarial principles. The Academy provides unbiased actuarial expertise and advice to public policy decision-makers and stakeholders at the state, federal, and international levels in all areas of actuarial practice.

Health Practice Council Updates & Priorities

Health Practice Council: Key Policy Priorities for 2023

- Health equity
- COVID-19 and other public health challenges
- Insurance coverage and benefit design
- Health care costs and quality
- Medicare sustainability
- Long-term services and supports (LTSS)
- Financial reporting and solvency
- Professionalism

Health Equity

- Presentations:
 - [Presentation to SEAC on Health Equity and the Upcoming Health Equity Symposium/Workshops](#) (June 2023)
 - [Academy Presents on Health Equity at SOA Meeting](#) (June 2023)
- Events:
 - Series of health equity workshops throughout summer/fall 2023, focused on the intersection of benefit design and health equity
 - Health Equity Symposium (scheduled for Nov. 15, 2023, in Washington, DC)

COVID-19 and Other Public Health Challenges

- Webinar: "[The Great Unwinding: What's Next for the Medicaid Population?](#)" (March 14, 2023)
 - Topic is included in our [Drivers of 2024 Health Insurance Premium Changes](#) issue brief

COVID-19 and Other Public Health Challenges: Climate Change and Health

[Climate Change Joint Committee](#)

- November 2021, the Climate Change Joint Committee was launched
- Members reflect the health, casualty, life, and pension practice areas and reports to the Risk Management and Financial Reporting Council (RMFRC)
- Activities to date
 - Comment letters to federal agencies and other stakeholders on climate-related disclosures and financial risks
 - [Climate Risks Pose Broad Impacts on Financial Security Systems](#) (June 2023) report
 - [Glossary](#) on climate-related terms (May 2023)

Health Insurance Coverage and Benefit Design

Issue Briefs:

- [Drivers of 2024 Health Insurance Premium Changes](#) (July 2023)
- [Considering Employee Benefits for Health Policy Development](#) (April 2023)

Comment Letter:

- Comments to CMS on [Medicaid Managed Care NPRM](#) (June 2023)

Presentation:

- Senior Health Fellow Cori Uccello, "[Considerations for Calculating Cost-Sharing Reduction Load Factors](#)" at the Society of Actuaries (SOA) Virtual Health Meeting (July 2023)

Webinars:

- "[Drivers of 2024 Health Insurance Premium Changes](#)" (July 2023)
- "[2024 Final Rules for Exchanges](#)" (May 2023)

Medicare Sustainability

Issue Brief:

- [Medicare's Financial Condition: Beyond Actuarial Balance](#) (April 2023)

Capitol Forum Webinar:

- [Medicare's Financing Challenges and Options to Address Them](#) (May 2023)

Long-Term Services and Supports (LTSS)

Issue Briefs:

- Refresh of [Impact of COVID-19 on Long-Term Care Insurance](#) issue brief (originally published January 2021—forthcoming)
- Refresh of [Essential Criteria for Long-Term Care Financing Reform Proposals](#) issue brief (originally published November 2016—forthcoming)
- *State of Long-term Care and How It Is Evolving* (forthcoming)

Financial Reporting and Solvency

Comment letters:

- [Comment letter](#) to NAIC Long-Term Care Actuarial (B) Working Group (LTCAWG) on LTC Past Losses (April 2023)
- [Comment Letter](#) to NAIC Blanks (E) Working Group on the exposure of the 2023 Blanks Proposal 2023-04BWG (with (April 2023)
 - Joint letter with the Academy's Committee on Property and Liability Financial Reporting (COPLFR) of the Casualty Practice Council (CPC)

NAIC Workstream Updates

Health Actuarial (B) Task Force (HATF)

Group Life Waiver Valuation Table Work Group

- Joint project of the Academy's HPC and the Society of Actuaries Research Institute (SOARI).
- Status: The revised AG 44 and associated tables have been adopted by the Executive & Plenary at the NAIC 2022 Fall National Meeting.
- [Final Materials](#) (June 2023):
 - [2023 Group Term Life Waiver Experience Table Report](#)
 - [2023 Group Term Life Waiver Experience Tables and Reserve Factor Calculator](#)
 - [The 2023 Waiver Reserve Table Webcast](#)

Health Risk-Based Capital (E) Working Group (HRBC)

Health Care Receivables Factors Work Group

- The Work Group is completing a review of the current health care receivables factors for the NAIC
- Update to the NAIC HRBC Working Group on July 25, 2023
- Task 1: Update the chart of health care (HC) receivables
 - HC Receivables now being reported on the Blue Blank as well as the Orange Blank
- Task 2: Evaluate 2018-2021 NAIC data

Long-Term Care Actuarial (B) Working Group (LTCAWG)

NAIC Long-Term Care Insurance Mortality and Lapse Study

- [Report](#) released November 2021 by the Academy's LTC Valuation Work Group and the Society of Actuaries Research Institute (SOARI)
- [Exposed](#) by the NAIC LTCAWG until Sept. 5, 2022

Status: LTCAWG to discuss drafting changes to VM-25, with the intention of adopting the tables within the 2021 report will adopt tables (Aug. 2023)

Other Updates

Academy 2023 Annual Meeting

[Envision Tomorrow—2023 Annual Meeting](#)

- November 13 and 14, 2023, in Washington, D.C.
- Health-specific breakout sessions:
 - Behavioral Health
 - Prescription Drugs
 - Regulating the Affordable Care Act: What's New for 2024?
 - Featuring Center for Consumer Information and Insurance Oversight (CCIIO) of CMS representatives

Regulatory Framework (B) Task Force
Seattle, Washington
August 13, 2023

The Regulatory Framework (B) Task Force met in Seattle, WA, Aug. 13, 2023. The following Task Force members participated: Sharon P. Clark, Chair (KY); Glen Mulready, Vice Chair, represented by Andy Schallhorn (OK); Michael Conway represented by Debra Judy and Jason Lapham (CO); Andrew N. Mais represented by Jared Kosky (CT); Karima M. Woods represented by Yohannes Negash (DC); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Alex Peck (IN); Vicki Schmidt represented by Julie Holmes (KS); Gary D. Anderson represented by Kevin Beagan (MA); Timothy N. Schott represented by Marti Hooper and Robert Wake (ME); Grace Arnold represented by Peter Brickwedde (MN); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning represented by Maggie Reinert, Michael Muldoon, and Margaret Garrison (NE); D.J. Bettencourt (NH); Justin Zimmerman (NJ); Judith L. French represented by Laura Miller (OH); Andrew R. Stolfi represented by TK Keen (OR); Michael Humphreys (PA); Larry D. Deiter represented by Jill Kruger (SD); Cassie Brown represented by Rachel Bowden (TX); Jon Pike represented by Tanji J. Northrup (UT); Scott A. White represented by Julie Blauvelt and Jackie Myers (VA); Mike Kreidler represented by Ned Gaines (WA); Nathan Houdek represented by Jennifer Stegall and Rebecca Rebholz (WI); and Allan L. McVey represented by Erin K. Hunter and Joylynn Fix (WV). Also participating were: Erica Weyhenmeyer (IL); and Jane Beyer (WA).

1. Adopted its Spring National Meeting Minutes

Keen made a motion, seconded by Seip, to adopt the Task Force's March 22 minutes (*see NAIC Proceedings – Spring 2023, Regulatory Framework (B) Task Force*). The motion passed unanimously.

2. Adopted its Subgroup and Working Group Reports

Before asking for a motion to adopt the Task Force's subgroup and working group reports, Commissioner Clark explained that in adopting the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup's report and minutes, the Task Force is not adopting the pharmacy benefit manager (PBM) white paper, which the Subgroup adopted during its July 27 meeting. The Task Force plans to meet following the Summer National Meeting to discuss its next steps for the white paper.

Gaines made a motion, seconded by Seip, to adopt the following reports: 1) the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its Aug. 7 (Attachment One), July 24 (Attachment Two), July 10 (Attachment Three), June 29 (Attachment Four), May 15 (Attachment Five), April 24 (Attachment Six), April 17 (Attachment Seven), and March 27 (Attachment Eight) minutes; 2) the Employee Retirement Income Security Act (ERISA) (B) Working Group, including its Aug. 13 (Attachment Nine) minutes; 3) the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, including its March 23 (Attachment Ten) minutes; and 4) the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its July 27 (Attachment Eleven) minutes. The motion passed unanimously.

3. Heard a Panel Discussion on Prior Authorization

Lucy Culp (Leukemia & Lymphoma Society—LLS), Emily Carroll (American Medical Association—AMA) and Beyer discussed prior authorization. Culp discussed patient and consumer experiences with prior authorization and how the prior authorization process can create a barrier to care. She highlighted a 2023 Kaiser Family Foundation (KFF) survey of consumer experiences with health insurance, which showed that six in 10 insured adults reported problems with their health insurance in the past year. Culp also discussed the NAIC consumer representatives'

work group on prior authorizations, appeals, and denials, including its areas of focus. She also identified opportunities and key policy reforms the states can take to address patient and consumer needs to: 1) improve access to evidence-based care; 2) ensure continuity of care; 3) promote transparency and fairness; 4) improve timely access to care; and 5) reduce administrative barriers.

Carroll discussed how prior authorization can harm patients, be burdensome to physician practices, and waste overall health care resources. She also discussed opportunities and solutions for state insurance regulators to reform the prior authorization process and provided examples of how certain states, including Washington, are acting on those solutions to reform the prior authorization process. Carroll also discussed federal actions complementing state actions to reform the prior authorization process.

Beyer discussed prior authorization in Washington, including the prior authorization rules adopted in 2017 and legislation enacted in 2023. She explained that Washington's prior authorization requirements apply to all health services, including prescription drugs. Washington requires carriers to use evidence-based clinical review criteria that are updated at least annually and can accommodate evidence regarding appropriate care for people of color and gender differences. Beyer said Washington's prior authorization requirements also include timeliness standards. She noted that Washington considers a prior authorization denial to be an adverse benefit determination that the health care provider or consumer can appeal.

Beyer discussed Washington's requirements for carriers to have a secure online process for a health care provider or facility to use to: 1) determine whether prior authorization is required; 2) find applicable clinical criteria and required documentation; and 3) submit prior authorization request with any needed documentation. She said that Washington has added new requirements for the online process to allow a health care provider or facility to submit and obtain a response to prior authorization requests using an application programming interface (API) beginning in 2025 for health care services (or 2026 if the federal interoperability proposed rule is not finalized by Sept. 13, 2023) and beginning in 2027 for prescription drugs.

Beyer discussed Washington's findings on how carriers use prior authorization based on the data it receives in accordance with its data reporting law, which was effective in 2020. She said that based on the data received, the services most frequently subject to prior authorization are: 1) physical therapy; 2) colonoscopy/endoscopy; 3) continuous positive airway pressure (CPAP) device; 4) imaging, including computed tomography (CT) and magnetic resonance imaging (MRI); and 5) room and board for both medical and behavioral health. She discussed the findings from a review of 2021 data for services with an approval rate of 98% or more and at least 50 requests processed. She highlighted the average standard response times for prior authorization requests from this review for current procedural terminology (CPT)/Healthcare Common Procedure Coding System (HCPCS) codes with the most prior authorization requests for medical-surgical versus mental health/substance use disorder (MH/SUD). She said the data showed that carriers generally take longer to approve or deny prior authorization requests for mental health/substance use disorder services than for medical-surgical services. She said the states can use this type of data as an indicator, operationally, of what more may be needed for comparability between the provision of MH/SUD services and medical-surgical services.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
August 7, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Aug. 7, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Tara Smith (CO); Chris Struk (FL); Robert Wake (ME); Maggie Reinert (NE); Shari Miles (SC); Heidi Clausen (UT); Mary Block and Jamie Gile (VT); and Lichiou Lee (WA).

1. Continued Discussion of Section 9A of Model #171

The Subgroup continued its discussion of the suggested revisions to the product statements in Section 9A—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171). The Subgroup returned to its discussion of the NAIC consumer representatives' suggested revisions to Section 9A(12). The suggested revisions recommend deleting the first sentence, which states: "Except for riders or endorsements by which the insurer effectuates a request made in writing by the policyholder or exercises a specifically reserved right under the policy, all riders or endorsements added to a policy after date of issue or at reinstatement or renewal that reduce or eliminate benefits or coverage in the policy shall require signed acceptance by the policyholder." After discussion, the Subgroup decided to delete the clause beginning with "[e]xcept" and retain the remainder of the sentence. The Subgroup also accepted the non-substantive suggested revisions.

The Subgroup next returned to its discussion of the NAIC consumer representatives' suggested revisions to Section 9A(19) concerning the outline of coverages delivered to consumers for certain products regulated under Model #171 to include language on or attached to the first page of the outline of coverage stating that these products are not Medicare supplement policies. The Subgroup accepted the suggested revisions during its July 24 meeting. In continuing its discussion of this provision, the Subgroup discussed whether additional revisions were needed for consistency with the consumer disclosure language in Appendix C of the *Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act* (#651). The Subgroup also discussed whether there should be a distinction between the consumer disclosure notices received under Section 9A(12) for individuals eligible for Medicare by reason of age and individuals eligible for Medicare by reasons other than age. After discussion, the Subgroup decided to add a drafting note alerting the states that permit individuals under the age of 65 with Medicare coverage to purchase a Medicare Supplement (Medigap) policy to review how they should provide the notices required under Section 9A(12) to these individuals.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(20). The NAIC consumer representatives suggest deleting the exception for direct response insurers to provide a specified disease insurance buyer's guide to any person applying for a specified disease insurance policy. For consistency with its other suggested revision to this provision, the NAIC consumer representatives also suggest deleting the language requiring direct response insurers to provide the buyer's guide upon request, but not later than the time the policy or certificate is delivered. The Subgroup accepted the suggested revisions.

The Subgroup next moved to the NAIC consumer representatives' suggested revisions for Section 9A(21) to Section 9A(29). The Subgroup agreed that the suggested revisions for these provisions, which concern consumer disclosure language for the products in Model #171 that must be on the first page of a policy or certificate, is already addressed with the previous revisions the Subgroup discussed and accepted for Section 9A(2).

2. Discussed Section 9B of Model #171

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9B establishing an outline of coverage requirements. Beginning with Section 9B(1), the Subgroup discussed the NAIC consumer representatives' clarifying revisions to this provision. The Subgroup accepted the suggested revisions.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9B(2). Section 9B(2) establishes requirements for providing a substitute outline of coverage when there is a change from when the outline of coverage was provided at the time of application or enrollment. The NAIC consumer representatives' suggested revisions would require insurers to provide a substitute outline of coverage to applicants and enrollees at the time of renewal. After discussion, the Subgroup did not accept the suggested revisions because it felt the suggested revisions would expand the scope and intent of the current language. The Subgroup accepted the NAIC consumer representatives' suggested revisions for the drafting note. However, the Subgroup decided to return to the drafting note during its next meeting on Aug. 21 to consider some additional clarifying language. The Subgroup discussed the NAIC consumer representatives' suggestion to add a clarifying sentence to Section 9B(3) to specifically state that a policy or certificate cannot be sold or renewed until the commissioner approves the alternate outline of coverage. No comments were received on Section 9B(4).

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/RFTF/Accident and Sickness Subgrp/Accident and Sickness Ins Min Stds Subgrp 8-7-23MtgMin.docx

Draft: 8/3/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
July 24, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met July 24, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Howard Liebers (DC); Chris Struk (FL); Robert Wake (ME); Camille Anderson-Weddle (MO); Martin Swanson (NE); Heidi Clausen (UT); Anna Van Fleet and Jamie Gile (VT); and Lichiou Lee (WA).

1. Continued Discussion of Section 9A of Model #171

The Subgroup continued its discussion of the suggested revisions to the product statements in Section 9A—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171). Jolie H. Matthews (NAIC) said that prior to the meeting, she distributed a document reflecting the Subgroup’s discussions on Section 9A to date. She said the document also reflects Bowden’s suggested revisions to streamline language related to the readability and accessibility requirements for the product statement disclosures. Bowden pointed out a proposed new sentence in Section 9A(2) stating: “The disclosures required by this section may be modified only as approved by the commissioner and as needed to approve the accuracy and clarity of the disclosure.” The Subgroup discussed the document and confirmed that it accurately reflected the Subgroup’s discussions to date. The Subgroup also accepted Bowden’s suggested streamlining revisions and her suggested new sentence in Section 9A(2). The Subgroup also discussed whether the proposed federal rule on short-term, limited-duration (STLD) plan and hospital indemnity and other fixed indemnity plan consumer disclosures would affect the Subgroup’s proposed language for the product disclosures in Section 9A. After discussion, because the federal rule is not final and because of other issues related to the proposed federal rule, the Subgroup decided to add a drafting note to Section 9A(2) alerting states that they may have to review the language in Section 9A and consider any changes, as appropriate, for consistency with state and/or federal rules applicable to such coverage that may have changed after the Model #171 revisions are adopted.

The Subgroup discussed the NAIC consumer representatives’ suggested product statement disclosure language for limited-scope dental coverage and limited-scope vision coverage. The Subgroup accepted the suggested language. The Subgroup also asked NAIC staff to review the language for consistency with the other product statement disclosures.

The Subgroup discussed the NAIC consumer representatives’ suggested product statement disclosure language for STLD health insurance coverage. The Subgroup discussed whether it should consider the disclosure language in the proposed federal rules instead of the NAIC consumer representatives’ suggested language. After discussion, the Subgroup decided to use the proposed federal rule’s disclosure language.

The Subgroup next discussed the NAIC consumer representatives’ suggested revisions to Section 9A(12). The suggested revisions recommend deleting the first sentence, which states: “Except for riders or endorsements by which the insurer effectuates a request made in writing by the policyholder or exercises a specifically reserved right under the policy, all riders or endorsements added to a policy after date of issue or at reinstatement or renewal that reduce or eliminate benefits or coverage in the policy shall require signed acceptance by the policyholder.” The Subgroup discussed whether this sentence should be deleted and why the NAIC consumer representatives suggest its deletion. Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) suggested the NAIC consumer representatives recommend deleting the language for consistency with other

proposed revisions. The Subgroup deferred deciding whether to accept the suggested revisions until it could review any other language in Model #171 on riders that could affect its decision.

The Subgroup discussed and agreed to accept the NAIC consumer representatives' suggested revisions to Section 9A(13) to add the language "and the combined total premium clearly identified as such." The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(16) adding language requiring certain notices to be prominently printed in a specified manner. The Subgroup discussed revising this language for consistency with other similar language used in Section 9A or reorganizing and placing this provision in Section 9A's general language. The Subgroup did not reach a decision. Similarly, the Subgroup discussed whether it should also reorganize and place Section 9A(17) in Section 9A's general language. It did not reach a decision. The Subgroup next discussed the NAIC consumer representatives' clarifying suggested revisions to Section 9A(18). The Subgroup accepted the suggested revisions. The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(19) concerning the outline of coverages delivered to consumers for certain products regulated under Model #171 to include language on or attached to the first page of the outline of coverage stating that these products are not Medicare supplement policies. The Subgroup accepted the suggested revisions. It also requested NAIC staff to revise the suggested language for consistency with similar language in Section 9A.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(20). The NAIC consumer representatives suggest deleting the exception for direct response insurers to provide a specified disease insurance buyer's guide to any person applying for a specified disease insurance policy. For consistency with its other suggested revision to this provision, the NAIC consumer representatives also suggest deleting the language requiring direct response insurers to provide the buyer's guide upon request, but not later than the time the policy or certificate is delivered. The Subgroup did not finish its discussion. The Subgroup plans to continue the discussion during its next meeting on Aug. 7.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 7/17/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
July 10, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met July 10, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Stephen F. Flick (DC); Christina Jackson (FL); Robert Wake (ME); Camille Anderson-Weddle (MO); Shari Miles (SC); Heidi Clausen and Shelley Wiseman (UT); Anna Van Fleet and Jamie Gile (VT); and Lichiou Lee (WA).

1. Discussed Small Stakeholder Group Revisions to Section 9A of Model #171

Prior to continuing its discussion of the suggested revisions to the product statements in Section 9A—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171), the Subgroup discussed the impact, if any, of the recently issued federal proposed rule on short-term, limited-duration (STLD) plans and hospital indemnity and other fixed indemnity plans. The Subgroup discussed if the rule would require the Subgroup to pause its work revising Model #171 and reopen Model #171's companion model act, the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170). After discussion, the Subgroup decided to continue revising Model #171 but remain cognizant of the provisions in the federal proposed rule. The Subgroup also concluded that Model #170 most likely would need to be reviewed and possibly reopened after that review for additional revisions to reflect the provisions of the federal rule if it is finalized as proposed. However, this work would begin after the Subgroup finishes revising Model #171. The Subgroup reached these conclusions because, at this point, the federal rule is a proposed rule, which means that after a review of the comments received on it, the federal rule's final language could change. In addition, NAIC staff explained the Subgroup's approach to revising both Model #170 and Model #171 as being focused on state laws and regulations and tying both models' provisions to such laws and regulations, not federal laws and regulations.

Schallhorn said NAIC staff distributed prior to the meeting a revised document reflecting the Subgroup's June 29 discussion of the proposed language for the product statements. He asked for comments. The Subgroup agreed that the revised language accurately reflects the Subgroup's discussion.

Bonnie Burns (consultant to consumer groups) expressed concern with the language in some of the product statements stating that the product is "supplementary and not intended to replace major medical insurance." She said the language is confusing to consumers. After discussion, the Subgroup agreed to revise the language to state: "This [policy] [certificate] is not major medical insurance and does not replace it."

Schallhorn expressed concern with the use of the word "for" in the proposed statement language for hospital indemnity and other fixed indemnity coverage. He said using this word seems to imply that the coverage will pay the cost of the actual expenses for a covered hospitalization or for a covered event resulting from a sickness or injury, which is not how these coverages function. He suggested deleting "for" and replacing it with "as a result of." Burns noted the Subgroup's extensive discussion during its June 29 meeting on the issue and the potential for consumers to not understand what that phrase means. After additional discussion, the Subgroup decided to accept Schallhorn's suggested revision. To avoid duplicative language, the Subgroup also agreed to revise the statement language for hospital indemnity to delete the words "resulting from" and replace them with "due to."

The Subgroup agreed to defer discussion of the remaining suggested statement language for STLD plans and dental and vision coverage until its July 24 meeting.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 7/13/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
June 29, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met June 29, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Shannon Doheny (FL); Robert Wake (ME); Camille Anderson-Weddle (MO); Martin Swanson and Maggie Reinert (NE); Shari Miles (SC); Heidi Clausen (UT); Anna Van Fleet and Jamie Gile (VT); and Shari Maier (WA).

1. Discussed Small Stakeholder Group Revisions to Section 9A of Model #171

The Subgroup discussed the small stakeholder group's suggested revisions to Section 9A—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) intended to reflect the Subgroup's discussion of the NAIC consumer representatives' suggested disclosure statement language during its May 15 meeting.

J.P. Wieske (Horizon Government Affairs) said following the Subgroup's May 15 meeting, a small group of stakeholders, including industry and consumer representatives, discussed potential revisions to the NAIC consumer representatives' suggested language for the disclosure statements required to be provided to consumers under Section 9A. This discussion aimed to address the Subgroup's concerns that the suggested language could be misleading to consumers about the type of benefit the product is providing. The Subgroup discussed the revised statement language for hospital indemnity and other fixed indemnity. After discussion, the Subgroup preliminarily agreed to the following revised statement language for hospital indemnity and other fixed indemnity:

Hospital Indemnity

"This [policy] [certificate] pays fixed dollar benefits for covered hospitalization resulting from a sickness or injury. The benefit amounts are not based on the cost of your medical expenses. These benefits are designed to be paid to the [policyholder] [certificate holder]. They are not intended to be paid directly to providers. This [policy] [certificate] is supplementary and not intended to replace major medical insurance. Read the description of benefits provided along with your [enrollment form /application] carefully."

Other Fixed Indemnity

"This [policy] [certificate] pays fixed dollar benefits for covered events resulting from a sickness or injury. The benefit amounts are not based on the cost of your medical expenses. These benefits are designed to be paid to the [policyholder] [certificate holder]. They are not intended to be paid directly to providers. This [policy] [certificate] is supplementary and not intended to replace major medical insurance. Read the description of benefits provided along with your [enrollment form /application] carefully."

The Subgroup also agreed to delete the word "review" in the last sentence of each of the revised statements and replace it with the word "read."

The Subgroup next discussed the disability income revised statement language. After discussion, the Subgroup agreed to revise the language to make it more consumer-friendly by deleting the words “set length of time” and substituting them with “specific period of time.” The Subgroup also agreed to delete the words “as a result of” and replace them with the word “from.”

The Subgroup next discussed the accident-only revised statement language. The Subgroup agreed to make the same revisions to the language it made to the disability income statement language.

The Subgroup discussed the revised statement language for specified disease coverage, specified accident coverage, and limited benefit coverage. After discussion, the Subgroup agreed to delete duplicative language in each.

The Subgroup asked NAIC staff to distribute prior to its next meeting on July 10 the revised statement language reflecting the Subgroup’s discussion for the Subgroup’s review during that meeting. The Subgroup also plans to continue its discussion of the NAIC consumer representatives’ comments on Section 9A during its July 10 meeting.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 5/17/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
May 15, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met May 15, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Stephen F. Flick (DC); Chris Struk (FL); Camille Anderson-Weddle (MO); Martin Swanson (NE); Shari Miles (SC); Tanji J. Northrup and Heidi Clausen (UT); Anna Van Fleet and Jamie Gile (VT); and Lichiou Lee (WA).

1. Continued Discussion of Comments Received on Section 9 of Model #171

The Subgroup continued its discussion of the comments received on Section 9—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171), beginning with the NAIC consumer representatives' comments for Section 9A(2)—Hospital Indemnity or Other Fixed Indemnity Coverage.

Jolie H. Matthews (NAIC) said that during its April 24 meeting, the Subgroup discussed, from a regulatory perspective, the appropriateness of including specific readability and accessibility requirements for consumer disclosures when such requirements are most likely already in other state laws and regulations, as well as other NAIC models. The Subgroup discussed this issue. After extensive discussion, the Subgroup decided not to accept the NAIC consumer representatives' suggested language on accessibility. The Subgroup decided to add a drafting note to Section 9A(2), alerting states to refer to their state laws and regulations and applicable NAIC models for provisions related to consumer disclosure readability and accessibility standards.

The Subgroup discussed the NAIC consumer representatives' suggested language for the statement in Section 9A(2) to be provided to consumers before submission of a completed application for coverage on hospital indemnity or other fixed indemnity coverage. The Subgroup raised a concern about the language because it seems to state that this type of coverage provides a benefit when it pays a fixed dollar amount triggered by a hospital stay or other covered health-related event regardless of the actual expense amount. The Subgroup discussed the issue, including other potential language to address it, but deferred deciding on what word to use until its May 22 meeting because of the NAIC consumer representatives' concerns that consumers would not understand the meaning of the word "trigger." The Subgroup did agree to bracket both "hospital stay" and "other covered health-related event."

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(3). This provision outlines the statement to be provided to consumers on disability income protection coverage. The other suggested language on readability and accessibility requirements for the statement is identical to the suggested language for Section 9A(2). Based on the Subgroup's discussion on Section 9A(2), the Subgroup agreed to make the same changes to Section 9A(3). The Subgroup discussed the suggested language for the statement. The Subgroup did not have any initial concerns with the suggested statement language.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(4). This provision outlines the statement to be provided to consumers on accident-only coverage. The other suggested language on readability and accessibility requirements for the statement is identical to the suggested language for Section 9A(2). Based on the Subgroup's discussion on Section 9A(2), the Subgroup agreed to make the same

changes to Section 9A(4). The Subgroup discussed the suggested language for the statement. The Subgroup did not have any initial concerns with the suggested statement language.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 9A(5). This provision outlines the statement to be provided to consumers on specified disease coverage. The other suggested language on readability and accessibility requirements for the statement is identical to the suggested language for Section 9A(2). Based on the Subgroup's discussion on Section 9A(2), the Subgroup agreed to make the same changes to Section 9A(5). The Subgroup discussed the suggested language for the statement. Like its discussion about the potential issues with the statement for hospital indemnity or other fixed indemnity coverage in Section 9A(2), the Subgroup discussed concerns that the statement could be misleading because it seems to imply the coverage to be provided under a specified disease policy is for diagnosing and treating a specified disease. The Subgroup agreed to revisit the issue during its May 22 meeting.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 5/16/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
April 24, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met April 24, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Chris Struk and Shannon Doheny (FL); Robert Wake (ME); Camille Anderson-Weddle (MO); Martin Swanson and Maggie Reinert (NE); Shari Miles (SC); Shelley Wiseman and Heidi Clausen (UT); Anna Van Fleet and Jamie Gile (VT); and Ned Gaines (WA).

1. Discussed Comments Received on Section 9 of Model #171

The Subgroup discussed the comments received on Section 9—Required Disclosure Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171), beginning with the NAIC consumer representatives' comments. Before discussing the comments, Lucy Culp (Leukemia & Lymphoma Society—LLS) asked if the Subgroup is planning to return to the short-term, limited-duration (STLD) plan provision considering the potential changes to the federal rules regulating those plans. Jolie H. Matthews (NAIC) said she did not believe this would be necessary because the proposed language for the STLD plan provision in Model #171 links the regulatory requirements for these plans with the state's regulatory requirements. Matthews also noted that the revisions to Model #171's companion model, the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170) (formerly known as the *Accident and Sickness Insurance Minimum Standards Model Act*), took a similar approach. J.P. Wieske (Horizon Government Affairs), as an employee of the Wisconsin Department of Insurance (DOI) and chair of the NAIC group that revised Model #170, agreed with Matthews.

The Subgroup discussed the NAIC consumer representatives' comments on Section 9A—General Rules. Before explaining the comments, Culp asked if the Subgroup would consider the NAIC consumer representatives' request to have another NAIC group, such as the Consumer Information (B) Subgroup, review this section because of its subject matter expertise in this area of consumer disclosures. The Subgroup discussed Culp's suggestion. After discussion, the Subgroup decided to move forward with its review of the comments received on Section 9.

Culp explained that the NAIC consumer representatives' suggested revisions would provide a specific disclosure provision for each type of product regulated under Model #171. She explained that the rationale for this approach is that the disclosure statement for each type of product would vary depending on the product. As such, it makes sense to allow for that variability and for the Subgroup to discuss the language for each disclosure statement and why it would be different based on the type of product rather than discussing a universal disclosure statement.

Chris Petersen (Arbor Strategies LLC) expressed concern with the NAIC consumer representatives' suggested new language for Section 9A(1), which states: "Any disclosures, and the documents to which they refer, must be delivered in the same written medium as the application to consumers. These documents must be available no later than 24 hours before a completed application is submitted by the consumer to the issuer." He said the language is problematic because it seems to prohibit providing the application and other documents electronically, despite a consumer requesting only electronic communications. He said another problem is that the language appears to suggest the insurer is to gather information about the consumer and deliver a disclosure before the consumer submits an application, which raises potential privacy concerns. The Subgroup discussed the potential new language. After discussion, the Subgroup revised the language to read as follows: "Any disclosures,

and the documents to which they refer, must be delivered in the written medium requested by the consumer. These documents must be available before the consumer submits a completed application.”

The Subgroup next discussed the NAIC consumer representatives’ suggested disclosure language for Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage. Culp explained that the NAIC consumer representatives suggest revising Section 9A(2)(a) so that it only applies to hospital indemnity or other fixed indemnity coverage. She said other revisions suggest using a sans-serif font for the required statement and the proximity of the statement to the applicant’s signature block. Petersen asked why the NAIC consumer representatives suggest the sans-serif font. Culp said NAIC consumer representatives with expertise in consumer disclosures suggested that font type. Petersen also questioned if any of these provisions related to font type and font size would conflict with other state readability laws and regulations. He asked if the *Uniform Individual Accident and Sickness Policy Provision Law* (#180) would include such requirements and, if so, whether it would be appropriate to include the NAIC consumer representatives’ suggested language in Model #171 instead of relying on Model #180’s provisions. Another stakeholder suggested the Subgroup review the *Life and Health Insurance Policy Language Simplification Model Act* (#575). Culp said she would be concerned with separating these requirements from Model #171 and having to refer to provisions in another model. Wieske raised an issue from a regulatory perspective with the NAIC consumer representatives’ product-by-product approach if an insurer combines products. He said if separate disclosures are required for each product, then it could be confusing to consumers if the insurer combines one or more products.

The Subgroup discussed a possible way to streamline the NAIC consumer representatives’ suggested language. The Subgroup also discussed whether to include a drafting note acknowledging the existence of other state readability and accessibility requirements.

In discussing the NAIC consumer representatives’ proposed statement for hospital indemnity or other fixed indemnity coverage, the Subgroup did not have any concerns with the proposed language. Cindy Goff (American Council of Life Insurers—ACLI) said there could be an issue with the statement’s accuracy if hospital indemnity and other fixed indemnity are sold separately. The Subgroup discussed her concern. Bowden said she would not object to including brackets around both “hospital stays” and “other covered health-related event” to address the concern. She said she could also support adding a drafting note alerting insurers that, subject to the insurance commissioner’s approval, they may modify the statement, as needed, for accuracy for a specific product type. The Subgroup did not reach a decision on whether to accept these suggested revisions.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/RFTF/Accident and Sickness Subgrp/Accident and Sickness Ins Min Stds Subgrp 4-24-23MtgMin.docx

Draft: 4/26/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
April 17, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met April 17, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Chris Struk (FL); Camille Anderson-Weddle (MO); Maggie Reinert (NE); Shari Miles (SC); and Tanji J. Northrup, Shelley Wiseman, and Heidi Clausen (UT).

1. Continued the Discussion of Section 7F of Model #171

The Subgroup continued its discussion of the comments received on Section 7F—Prohibited Policy Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) beginning with the Texas Department of Insurance’s (DOI’s) comments. Section 7F prohibits a policy from limiting or excluding coverage by type of illness, accident, treatment, or medical condition, except as provided in the subsection.

Bowden said her first comment on whether the exclusions in Section 7F are appropriate for short-term, limited-duration (STLD) plans was addressed during the Subgroup’s March 27 meeting. The Subgroup discussed Bowden’s next comment on Section 7F(4) concerning the exclusion of an illness, treatment, or medical condition arising out of war or an act of war (whether declared or undeclared). The Subgroup discussed how this provision would apply to acts of terrorism. After discussion, the Subgroup decided to leave the provision unchanged because of certain court rulings and other decisions related to acts of terrorism, finding that acts of terrorism are generally not considered acts of war. The Subgroup next discussed Bowden’s comments on Section 7F(8) concerning the exclusion for treatment provided in a government hospital. After discussion, the Subgroup agreed to delete the provision because it is no longer an issue for industry. Bowden said the Subgroup addressed her next comment related to the exclusion for dental care or treatment during its March 27 meeting.

The Subgroup next discussed Bowden’s comment on the territorial limitations exclusion. The Subgroup discussed what this provision means and whether the exclusion is related to territories outside the U.S. or a specific state in the U.S. The Subgroup discussed whether it should clarify the provision to note that it applies to territories outside the U.S. After discussion, which included a discussion of the impact of such a change with respect to the U.S. territories and possible confusion on whether the exclusion applies to U.S. territories, the Subgroup decided to leave the provision unchanged but add a drafting note explaining the intent of the provision.

The Subgroup next discussed the Health Benefit Institute’s (HBI’s) suggestion to add an exclusion to Section 7F for “genetic testing not ordered by a medical provider, and not used to diagnose or treat a disease.” The Subgroup discussed the comments. During the discussion, the Subgroup discussed whether medical necessity requirements would address the situation without adding the suggested language. The Subgroup noted that states generally do not apply their utilization review requirements to excepted benefit plans; as such, there would not be a medical necessity review. Cindy Goff (American Council of Life Insurers—ACLI) said she believes the purpose of adding the suggested language is to ensure that insurers can include a requirement in the contract that a health care provider must order the genetic testing to be covered. If a health care provider does not order it, then coverage is excluded. Goff said without this provision, a covered person could challenge the denial of coverage. After additional discussion, the Subgroup agreed to add the exclusion.

The Subgroup next discussed the NAIC consumer representatives' suggestion to delete Section 7G. Section 7G provides that Model #171 shall not impair or limit the use of waivers to exclude, limit, or reduce coverage or benefits for the specifically named or prescribed preexisting diseases, physical conditions, or extra hazardous activities. The Subgroup discussed the rationale for having such a provision and why it appears to benefit consumers. Goff said she believes this provision benefits consumers because it allows insurers to exclude certain pre-existing conditions without having to exclude coverage for the entire disease. She said this provision gives insurers more flexibility with respect to decisions related to the coverage of pre-existing conditions and other conditions not related to the pre-existing condition. The Subgroup discussed how this provision may or may not relate to Model #171's disclosure provisions. After additional discussion, the Subgroup deferred deciding on whether to accept the NAIC consumer representatives' suggestion to delete Section 7G until it completes its review of all the comments received on Model #171.

The Subgroup next turned to the NAIC consumer representatives' suggestions for adding new provisions to Section 7. The Subgroup deferred discussion of the suggested additional provisions until it completes its review of all the comments received on Model #171.

2. Discussed the Comments Received on Section 8H of Model #171

The Subgroup next discussed the comments received on the proposed Section 8H—Short-Term, Limited-Duration Health Insurance Coverage. The Subgroup only received comments from the NAIC consumer representatives. Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) explained that the NAIC consumer representatives' suggestion to revise Section 8H(1) for consistency with similar language in Model #171's companion model, the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170) (formerly known as the *Accident and Sickness Insurance Minimum Standards Model Act*). The Subgroup accepted the suggested revisions.

The Subgroup next discussed the NAIC consumer representatives' suggestion to revise the coinsurance percentage in Section 8H(2)(ii) to no more than "50%" of covered charges to no more than "20%" of covered charges. They also suggest striking "or" and substituting "and." Howard said the NAIC consumer representatives believe that a 50% coinsurance of covered charges in an STLD plan is too high of a percentage for consumers to potentially pay. After discussion, the Subgroup decided not to accept the suggested revision to the coinsurance percentage. The Subgroup accepted the suggested revision to strike "or" and substitute "and." The Subgroup next discussed the NAIC consumer representatives' suggestion to revise the provision's drafting note to delete the sentence suggesting that those states that have severely limited coverage time frames with limited renewals or extensions should apply smaller annual and lifetime limits and out-of-pocket maximums. The Subgroup did not accept the suggested revision, but because of impending changes to the federal rules regulating STLD plans, the Subgroup agreed to delete the last sentence in the drafting note suggesting that those states that allow coverage up to the federal maximum of three years might want to consider different limits.

No comments were received on Section 8H(3). The Subgroup discussed the NAIC consumer representatives' suggestion to delete Section 8H(4)(iii). This provision would require an insurer to include a statement in the STLD plan that the insurer retains the right, at the time of policy renewal, to make changes to the premium rate by class. After discussion, the Subgroup agreed to delete the provision, but it agreed to revisit the decision, if necessary.

No comments were received on Section 8H(5). The Subgroup discussed the NAIC consumer representatives' suggestion to add the word "intentionally" to Section 8H(6) to provide that a carrier may not rescind an STLD plan during the coverage period unless the insured "intentionally" fails to disclose a prior diagnosis of a health condition. After discussion, the Subgroup accepted the suggested revision.

No comments were received on Section 8H(7). The Subgroup discussed the NAIC consumer representatives' suggestion to revise the number of days an insurer must notify an insured of policy cancellation or rescission prior to the cancellation or rescission from 20 days to 30 days in Section 8H(8). After discussion, the Subgroup accepted the suggested revision.

Jolie H. Matthews (NAIC) pointed out a sentence in the drafting note for Section 8H(8) referencing the current federal rules for STLD plans, which limit coverage under such plans to less than 12 months and provide for a maximum duration of coverage of no longer than 36 months. The Subgroup decided to retain the sentence and revisit it after the release of the anticipated federal proposed rules on STLD plans.

The Subgroup next discussed the NAIC consumer representatives' suggestion to add a new provision to Section 8H prohibiting an insurer from issuing an STLD plan during the annual enrollment periods for individual health insurance and individual health insurance marketplace plans. The Subgroup discussed the pros and cons of adding such a provision. The Subgroup decided to defer the discussion until a later date.

Matthews pointed out for the Subgroup's future discussion a note to the Subgroup at the end of Section 8H suggesting that the Subgroup may want to consider adding language on pre-existing conditions to the subsection. The note to the Subgroup also alerts the Subgroup that it will have to craft a definition of "pre-existing condition" for STLD plans because the current definition of "pre-existing condition" in Section 6J applies to all coverages regulated under Model #171 except STLD plans.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/RFTF/Accident and Sickness Subgrp/Accident and Sickness Ins Min Stds Subgrp 4-17-23MtgMin.docx

Draft: 4/25/23

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
March 27, 2023

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met March 27, 2023. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Rachel Bowden, Co-Chair (TX); Debra Judy (CO); Howard Liebers (DC); Chris Struk (FL); Camille Anderson-Weddle (MO); Maggie Reinert (NE); Shari Miles (SC); Shelley Wiseman and Heidi Clausen (UT); Anna Van Fleet, Jamie Gile, and Mary Block (VT); and Ned Gaines (WA).

1. Continued Discussion of Section 7F of Model #171

The Subgroup continued its discussion of the comments received on Section 7F—Prohibited Policy Provisions of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) beginning with the NAIC consumer representatives' comments on this subsection. Section 7F prohibits a policy from limiting or excluding coverage by type of illness, accident, treatment, or medical condition, except as provided in the subsection.

The Subgroup discussed the NAIC consumer representatives' suggestion to delete Section 7F(2), which provides an exclusion for "mental or emotional disorders, alcoholism and drug addiction." Jackson Williams (Dialysis Patient Citizens—DPC) said the NAIC consumer representatives' suggestion to delete this exclusion relates to the issue of whether the products regulated under Model #171 should include a mental health parity component. He said he has identified someone to speak on this issue, and he requested that the Subgroup defer discussion of this issue until this individual could present during an upcoming Subgroup meeting. The Subgroup discussed the issue, noting that federal mental health parity requirements do not apply to excepted benefit plans. The Subgroup also discussed whether there should be a difference between what short-term, limited-duration (STLD) plans should be required to cover versus what excepted benefit plans should be required to cover. After discussion, the Subgroup decided not to accept the NAIC consumer representatives' suggestion to delete Section 7F(2). In addition, the Subgroup decided not to hold a broad discussion of the mental health parity coverage issue related to excepted benefit plans, noting that based on the discussion, few states would require excepted benefit plans to cover mental health benefits. The Subgroup agreed to add a drafting note to the subsection explaining that states should decide if any of the exclusions allowed in Section 7F should apply to STLD plans.

The Subgroup next discussed the NAIC consumer representatives' suggestion to delete Section 7F(4)(b) concerning an exclusion related to suicide and Section 7F(4)(e) concerning an exclusion for incarceration with respect to disability income protection policies. The Subgroup discussed the rationale for such exclusions. The Subgroup returned to its discussion about how Section 7F should apply to STLD plans and whether there should be a specific carve-out included in this provision for STLD plans. After additional discussion, the Subgroup decided not to accept the NAIC consumer representatives' suggestion to delete Section 7F(3)(b) and Section 7F(3)(e). The Subgroup also agreed to revise the drafting note it had agreed to add earlier concerning STLD plans to add a sentence that some of the exclusions listed in Section 7F may not be appropriate for STLD plans, and each state will have to determine which should apply, if any, to such plans. The Subgroup did not accept the NAIC consumer representatives' suggested drafting note for Section 7F(5) because it seems unnecessary. The Subgroup decided during its March 13 meeting to preliminarily accept the NAIC consumer representatives' suggestion to add the language "to improve the function of a malformed body part," subject to additional clarification on the meaning of "malformed."

The Subgroup accepted the NAIC consumer representatives' suggestion to clarify Section 7F(7) by adding the word "chiropractic."

The Subgroup accepted the NAIC consumer representatives' suggestion to add language to Section 7F(9) modifying the exclusion to have it not apply when the provision of dental services is medically necessary due to the underlying medical condition or clinical status of the covered person. The Subgroup did not accept the NAIC consumer representatives' suggested new drafting note for the provision.

The Subgroup next discussed the NAIC consumer representatives' suggestion to delete "routine physical examinations" in Section 7F(11). The Subgroup did not accept the suggestion.

The Subgroup next discussed the Vermont Department of Insurance's (DOI's) suggestion to add a drafting note to Section 7F(2), noting that the exclusion related to mental or emotional disorders, alcoholism, and drug addiction is optional, and states should review the desirability of its use for certain products regulated under the Model #171.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 8/17/23

Employee Retirement Income Security Act (ERISA) Working Group
Seattle, Washington
August 13, 2023

The Employee Retirement Income Security Act (ERISA) (B) Working Group of the Regulatory Framework (B) Task Force met Aug. 13, 2023. The following Working Group members participated: Andria Seip, Chair (IA); Crystal Phelps (AR); Debra Judy (CO); Julie Holmes (KS); Robert Wake, (ME); Carrie Couch (MO); Michael Muldoon, Maggie Reinert, and Margaret Garrison (NE); Ted Hamby (NC); Laura Miller and Craig Kalman (OH); Andrew Schallhorn (OK); Jill Kruger (SD); Tanji J. Northrup (UT); Charles Malone (WA); and Jennifer Stegall (WI). Also participating were: D.J. Bettencourt (NH); and Erin K. Hunter (WV).

1. Heard an Update from the DOL

Amber Rivers (U.S. Department of Labor—DOL) and Beth Baum (DOL) gave an update on two tri-agency proposals from the DOL, the U.S. Department of Health and Human Services (HHS), and the Internal Revenue Service (IRS). Rivers explained that the short-term, limited-duration insurance (STLDI)/fixed indemnity notice of proposed rulemaking (NPRM) proposes rules to amend the definition of STLDI, which is excluded from the definition of individual health insurance coverage under the federal Public Health Service Act and sets forth proposed amendments to the requirements for hospital indemnity or other fixed indemnity insurance to be considered an excepted benefit in the group and individual health insurance markets. Rivers said the proposed rule also solicits comments on the specified disease excepted benefits coverage and level-funded arrangements. Rivers said lastly, there is a proposal from the U.S. Department of the Treasury (Treasury Department) and the IRS that would clarify the tax treatment of certain fixed amount benefit payments under employer-provided accident and health plans

Rivers explained that historically, STLDI coverage was designed to fill temporary gaps in coverage when an individual is transitioning from one plan to another. She said the proposal focuses on amending the definitions to better align with that original purpose by shortening some of the key terms. Rivers also pointed out that the proposal also clarifies responsibilities for sales through group trusts or associations, including that group market reforms apply when plans are marketed to employers as employer-sponsored coverage. She emphasized that the DOL would like help identifying additional strategies to make clear the difference between short term limited duration (STLD)/fixed indemnity plans and comprehensive health coverage.

Rivers explained that level-funded arrangements are an increasingly popular method of funding for group health plans, particularly with small employers. She said numbers from the Kaiser Family Foundation (KFF) reported that in 2020, 13% of small employers were using level-funded arrangements compared to 42% of small employers reporting in 2021. She said the plan purports to be self-funded. However, employers make set monthly payments to cover estimated claims and administrative costs, as well as the premiums for stop loss insurance for when claims surpass a maximum dollar amount. She said that, usually, if the number of claims paid during the year is lower than what the contributions are, the plan sponsor may receive a refund or carry it over to the next year.

Rivers said that while level-funded arrangements self-identify as self-funded, they have certain features that look like fully insured plans. She said there are concerns when these arrangements are used by small employers with particularly low attachment points. One of the concerns the DOL has heard is that a lot of benefits are being provided under the stop loss coverage, which is not required to comply with federal reforms or state laws that apply to health insurance coverage. Rivers explained that the DOL is concerned that level-funded plans may be

used to deny or limit individual claims in a way that would otherwise be prohibited. She said that small employers may not understand the type of arrangement they are in because that monthly payment looks like a premium, and they do not realize they are actually on the hook for outstanding charges. She said the DOL would like to better understand what is going on in the marketplace to determine whether additional guidance is needed. Comments on the STLD/fixed indemnity NPRM are due Sept. 11, and Rivers encouraged the NAIC and the individual states to submit comments.

Baum said that the DOL will be presenting Aug. 14 at the Mental Health Parity and Equity Addiction Act (MHPAEA) (B) Working Group meeting. She said that a package was released in July that includes: 1) proposed rules; 2) a technical release requesting comments; 3) the second MHPAEA comparative analysis report to the U.S. Congress (Congress); and 4) an enforcement fact sheet for cases closed in the fiscal year 2022. Baum said there are two components to the proposed rules package. The first component proposed changes to the existing regulations that are designed to strengthen protections and ensure that participants and beneficiaries have access to mental health and substance use disorder (MH/SUD) coverage. She said a lot of those changes are in the sections of the rules that apply to non-quantitative treatment limitations (NQTLs). The second component proposed changes to some of the defined terms in the existing regulations, as well as a new section of the regulations with more specific requirements for the comparative analysis required for NQTLs. Baum said the technical release is a kind of companion to the proposed rules and includes what would be a new requirement for plans and issuers to collect and evaluate relevant data on outcomes. The technical release requests comments on outcomes data that plans and issuers would be required to collect and evaluate. The comment deadline for this rule is Oct. 2.

2. Received an Update on Revisions to the NAIC MEWA/ MET Chart.

Jennifer Cook (NAIC) explained that she is in the process of surveying state insurance departments for the purpose of updating the NAIC chart on state laws addressing multiple employer welfare arrangements (MEWAs) and multiple employer trusts (METs). She said that Wake suggested that the chart could be a template for answering initial and follow-up questions, such as: 1) If a MEWA is not fully insured by an authorized insurer, does your state require some sort of MEWA-specific license or registration before the MEWA can lawfully provide coverage in your state? If so, what are the requirements?; 2) Can a MEWA based out-of-state lawfully provide coverage in your state? If so, what are the requirements?; 3) Can a domestic MEWA lawfully provide coverage in other states? If so, does your state have any specific regulatory requirements that apply?; and 4) What are your requirements for fully-insured MEWAs? Do they include standards requiring the maintenance of specified levels of reserves and specified levels of contributions, as authorized under ERISA § 514 (b)(6)(A)(i)? Cook said she would be following up after the meeting to solicit additional information for updating the chart. Seip said she would like to know how other states address MEWAs and that she supports the development of a comprehensive chart.

Wake said that it would be helpful to have a resource, as he is often the point person for state questions about MEWAs. He explained that there are several common questions about how to handle MEWAs that states should consider. One common question is how to handle MEWAs when there is no MEWA-specific state law, especially in cases where the MEWA is operating in more than one state. Wake said in interstate cases, it is important to coordinate, especially if a state is looking to defer to the domiciliary state or if the law requires it. He said another question that comes up is what the enforcement perspective is of a state when an arrangement starts doing business in a state and says it is not a MEWA, or if the arrangement does not really fit under the state's laws. Wake said that if the arrangement is not fully insured and not specifically authorized by the state, it is prohibited. Wake said states could also require some sort of license. Congress has left most of the regulation of MEWAs to the states for the past 40 years, and it is important for states to think about their options and how to interpret their own laws.

The ERISA (B) Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 2 (pending investigations), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues relating to federal legislative and regulatory matters) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

Draft: 4/10/23

Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group
Louisville, Kentucky
March 23, 2023

The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met in Louisville, KY, March 23, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Jane Beyer, Vice Chair (WA); Jimmy Harris (AR); Erin Klug (AZ); Kate Harris (CO); Kurt Swan (CT); Howard Liebers (DC); Andria Seip (IA); Julie Holmes (KS); Mary Kwei (MD); Peter Brickwedde (MN); Carrie Couch and Amy Hoyt (MO); Matthew Eberhardt (MT); Tracy Biehn (NC); Santana Edison (ND); Maureen Belanger (NH); Ralph Boeckman (NJ); Laura Miller (OH); Landon Hubbard and Ashley Scott (OK); David Buono (PA); Glynda Daniels (SC); Jill Kruger (SD); Rachel Bowden (TX); Tanji J. Northrup (UT); Julie Fairbanks (VA); Barbara Belling (WI); and Erin K. Hunter (WV).

1. Heard Presentations on *Wit v. United Behavioral Health*

Weyhenmeyer said speakers would inform the Working Group about the *Wit v. United Behavioral Health* case and its implications for mental health parity enforcement.

Brian Hufford (Zuckerman Spaeder) presented on the *Wit* case. He said the suit does not allege parity violations because the plaintiffs wanted to focus on the delivery of mental health services and not compare them to medical and surgical services. He said parity nonetheless had an impact on why the case was brought. He said plans used medical necessity guidelines to limit treatment even further than the quantitative limitations applied before the MHPAEA was passed. He said United Behavioral Health (UBH) limited its treatment to acute care and reduced the level of care after an acute episode. He said a trial court agreed that guidelines were overly restrictive in a 2019 decision. However, the Ninth Circuit appeals court overturned the decision and then later updated its decision to uphold in part the original ruling. He said four states require claims administrators to use specific guidelines.

Hufford said the newest decision included damaging findings related to the federal Employee Retirement Income Security Act (ERISA). He said plaintiffs had argued the company applied flawed guidelines. Therefore, the claims should be reprocessed. However, the Ninth Circuit ruled that reprocessing was not necessary. It also ruled that all class members had to have exhausted their administrative remedies such as internal and external appeals. He said plaintiffs are seeking further review of the decision, with support from 15 states; Washington, DC; and other organizations.

Hufford said UBH's guidelines were more restrictive than commonly accepted treatment standards. He provided examples, including applied behavioral analysis (ABA) and the treatment criteria established by the American Society for Addiction Medicine (ASAM). He said the court found that UBH lied to state insurance regulators regarding the guidelines they employed.

David Lloyd (The Kennedy Forum) provided comments on the importance of the *Wit* case. He said inappropriate medical necessity denials are a primary barrier to care. He said the Kennedy Forum has been pushing for inclusion of a definition of medical necessity in state and federal law. He said it has also advocated for making utilization review criteria consistent with generally accepted standards of care. He said some states have added a definition to their laws and that recently Georgia added it. Lloyd said professional medical societies have developed tools to show the level of care needed for patients, which provides a common standard for patients, providers, and payers. He said care decisions should be made using these tools and said some states have adopted rules to require them to be used. He said federal agencies have also made progress, including a federal Centers for Medicare & Medicaid

Services (CMS) requirement that Medicare Advantage plans made medical necessity determinations using appropriate guidelines. He said that regardless of the final decision in the Wit case, the issues will not go away.

Klug asked which state law definitions of medical necessity could serve as models for other states. Lloyd said laws in California, Georgia, Illinois, and Oregon are good models. Hufford said states should tie guidelines to generally accepted standards developed by medical societies, not those developed by private companies. He said that plans continue to limit treatment to only some parts of the ASAM guidelines. Klug asked whether the CMS definition of medical necessity used in Medicare is a good model. Lloyd said that it is pretty good.

Hoyt asked about exhaustion of administrative remedies. She said Missouri state law does not require internal review before a patient seeks external review. Hufford said prior decisions under federal law have required only a class representative to exhaust such remedies, but in the Wit case, the ruling requires all class members to do so. He said state laws would not be applicable to ERISA cases.

Having no further business, the MHPAEA (B) Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

Draft: 8/3/23

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Virtual Meeting
July 27, 2023

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met July 27, 2023. The following Subgroup members participated: TK Keen, Chair (OR); Ashley Scott and Molly Clinkscales, Co-Vice Chairs (OK); Kayla Erickson and Sarah Bailey (AK); Steve Dozier (AL); Crystal Phelps (AR); Jared Kosky (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt (KS); Sharon P. Clark and Daniel McIlwain (KY); Nina Hunter (LA); Chad Arnold and Karin Gyger (MI); Amy Hoyt, Cynthia Amann, and Camille Anderson-Weddle (MO); David Dachs (MT); Ted Hamby (NC); Cheryl Wolff (NE); Erin Porter (NJ); Paige Duhamel and Renee Blechner (NM); Eamon G. Rock (NY); Jodi Frantz (PA); Maggie Rosa (SC); Scott McAnally (TN); Ryan Jubber (UT); Don Beatty (VA); Jennifer Kreidler (WA); Jennifer Stegall (WI); and Jill Reinking and Tana Howard (WY).

1. Adopted its April 17 and Spring National Meeting Minutes

The Subgroup met April 17 to expose a draft of the pharmacy benefit manager (PBM) white paper for a 45-day public comment period ending June 1.

Scott made a motion, seconded by Arnold, to adopt the Subgroup's April 17 (Attachment Eleven-A) and March 22 (see *NAIC Proceedings – Spring 2023, Regulatory Framework (B) Task Force, Attachment Five*) minutes. The motion passed unanimously.

2. Adopted the PBM White Paper

Keen discussed the Subgroup's work to date on the PBM white paper. He noted the Subgroup's thoughtful discussions on extraordinarily complex issues and the collaborative process it followed throughout its work drafting the white paper. He said the current white paper draft the Subgroup is considering for adoption during this meeting includes revisions based on the comments received during the public comment period ending June 1. He asked for comments from Subgroup members.

Stegall expressed support for the white paper given the complexities of the issue. She said she believes it will be a great resource to state insurance regulators. Gyger also expressed support for the Subgroup's work, noting the Subgroup's collaborative process in drafting the white paper. She also noted the extensive stakeholder participation in the drafting process. She acknowledged that some stakeholders think additional edits should be made, but after almost two years of work, she believes the current white paper draft reflects the current state of play in the pharmaceutical drug supply chain and ecosystem and that it is time to move forward to the next step in the adoption process.

Kosky asked about the process moving forward assuming the Subgroup adopts the white paper during today's meeting. Keen said that if the Subgroup adopts the white paper during today's meeting, it will forward it to the Regulatory Framework (B) Task Force for its consideration and adoption. Following the Task Force's adoption, the Health Insurance and Managed Care (B) Committee would consider the white paper for adoption. Kosky said he wanted to make sure that this was the process moving forward because Connecticut still has concerns with the accuracy of some the information in the current white paper draft. He said that in addition, parts of the white paper lack citations for some of the statements. He said, generally, Connecticut is concerned with the overall lack of diversity and sources used for some of the information included in the white paper. He said Connecticut has concerns with the tone of some of the language as well. Kosky said that despite these concerns, Connecticut would

vote to support moving the white paper on to the next step in the process because it is important to move it along after more than two years of work. He said Connecticut will consider raising these concerns to the Regulatory Framework (B) Task Force as it considers the white paper.

Commissioner Clark echoed many of the comments already made about the Subgroup's work developing the white paper. Noting that its language will never be perfect to everyone, she expressed support for the white paper and moving it forward to the Regulatory Framework (B) Task Force for its consideration. Hoyt also expressed support for the white paper. She suggested, however, that because the white paper is intended to reflect a snapshot in time concerning the pharmaceutical drug supply chain and ecosystem, the Subgroup should consider including language in it clearly stating that intention. Keen expressed support for such language and the Regulatory Framework (B) Task Force adding it during its discussions on the white paper. He said there is an introduction section in the white paper that NAIC staff are using to track the white paper's development, which could be used to include the language she suggests. He also said that he considers the white paper to be the initial version, Version 1.0, because he believes that, as appropriate, other NAIC groups may want to revise it in the future to reflect changes, particularly with respect to any court decisions made after its adoption.

Keen asked for comments from interested parties. Carl Schmid (HIV+Hepatitis Policy Institute) noted the NAIC consumer representatives had suggested that the Subgroup develop the white paper. He also highlighted the Subgroup's work of approximately two years to complete the white paper and its inclusive process. He expressed support for moving the white paper forward despite the Subgroup not accepting many of the NAIC consumer representatives' suggested revisions.

Kris Hathaway (America's Health Insurance Plans—AHIP) also noted the Subgroup's deliberative and inclusive process in drafting the white paper. She said AHIP has three major concerns with the white paper as currently written. To address those concerns, AHIP believes the Subgroup should revise the white paper to: 1) fulfill the Subgroup's stated and agreed to charges because its focus is on PBMs and its failure to discuss the role of payors, wholesalers, pharmacy services administrative organizations (PSAOs), and other entities involved in the pharmaceutical supply chain; 2) remove non-objective, biased perspectives because there are sections of the white paper providing only one viewpoint; and 3) synthesize and streamline sections. Keen acknowledged AHIP's concerns. He said, however, that at this point in the process, he does not believe everyone agrees with AHIP's concerns about the white paper's biased language.

Peter Fjelstad (Pharmaceutical Care Management Association—PCMA) said the PCMA does not believe the current white paper version is a consensus document. He said the PCMA opposes its adoption. He suggested that because the PCMA does not consider it to be a consensus document, the Subgroup should include the comment letters it received on the white paper with their differing perspectives as an appendix to the paper. Keen acknowledged Fjelstad's comments. He explained that for him, the white paper is a consensus document because of the way the Subgroup members, given their different viewpoints, worked together and compromised on what the white paper should and should not include.

Joel Kurzman (National Community Pharmacists Association—NCPA) expressed appreciation for the Subgroup's work in developing the white paper. He said the NCPA has concerns about a few provisions in the white paper, particularly the language describing spread pricing. He said recent white paper revisions describing spread pricing as a risk mitigation pricing model legitimizes the practice. He said the real-life experience of NCPA members with spread pricing is vastly different. He also suggested that the white paper be carefully reviewed to ensure it does not include inaccurate and outdated views. Kurzman said that as other interested parties stated, the current white paper version does not reflect the NCPA's comments. He expressed hope that if the white paper is adopted, including its recommendation to consider developing model legislation, the NAIC would develop a robust model giving NAIC members the necessary tools to rigorously enforce PBM regulation. He said that assuming the

Subgroup adopts the white paper, he looks forward to working with the Regulatory Framework (B) Task Force to ensure that it incorporates moving forward some of the NCPA's previous suggestions, such as including language in the white paper recommending the creation of a standardized state-based system form for PBM complaints that will enable the NAIC and its Members to analyze and enforce regulation.

Will Dane (Healthcare Distribution Alliance—HDA) said the HDA submitted a comment letter suggesting the Subgroup revise a provision in the white paper concerning PSAOs for accuracy. Keen acknowledged the HDA's suggested revisions.

Sandra Guckian (National Association of Chain Drug Stores—NACDS) said that as other commenters have said, the NACDS' comments are not reflected in the current white paper draft. She said given this, as other comments have said, the NACDS may offer additional comments as the white paper moves forward to the Regulatory Framework (B) Task Force. She said like the NCPA, the NACDS would particularly like to add more language concerning the PBM complaint process.

Commissioner Clark made a motion, seconded by Scott, to adopt the PBM white paper (Attachment Eleven-B). The motion passed unanimously with the following Subgroup members present and voting: Alaska, Arkansas, California, Connecticut, District of Columbia, Iowa, Kansas, Kentucky, Michigan, Missouri, Montana, Nebraska, New Jersey, New Mexico, New York, North Carolina, Oklahoma, Pennsylvania, South Carolina, Tennessee, Utah, Virginia, Washington, Wisconsin, and Wyoming.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/RFTF/PBM Regulatory Issues Subgrp/PBM Reg Issues MtgMin 7-27-23.docx

Draft: 4/18/23

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Virtual Meeting
April 17, 2023

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met April 17, 2023. The following Subgroup members participated: TK Keen, Chair (OR); Ashley Scott and Molly Clinkscales, Vice Chair (OK); Anthony L. Williams (AL); Crystal Phelps (AR); Paul Lombardo and Michael Shanahan (CT); Brad Biren, Robert Koppin, and Brent Jambor (IA); Julie Holmes and Craig VanAalst (KS); Sharon P. Clark, Daniel McIlwain, Beth A. Taylor, and Jonathan Abbott (KY); Joshua Guillory (LA); Chad Arnold and Joe Stoddard (MI); Julia Dreier (MN); Amy Hoyt, Cynthia Amann, and Camille Anderson-Weddle (MO); Ted Hamby (NC); Cheryl Wolff (NE); Renee Blechner (NM); Eamon G. Rock (NY); Melissa Greiner (PA); Maggie Rosa (SC); Scott McAnally (TN); Tanji J. Northrup (UT); Don Beatty (VA); Ned Gaines (WA); Jennifer Stegall (WI); Michael Malone (WV); and Jill Reinking (WY).

1. Exposed a PBM White Paper for Public Comment

Keen said since the Subgroup's release of a working draft of the proposed pharmacy benefit manager (PBM) white paper during its meeting at the 2022 Fall National Meeting, the Subgroup has been working to refine and edit the working draft. He said the Subgroup met April 14 in regulator-to-regulator session to review a revised working draft and discuss issues related to the revised working draft. During this meeting, the Subgroup decided to expose the draft during today's meeting for a 45-day public comment period ending June 1. Keen said following the end of the public comment period, the Subgroup plans to hold meetings to review the comments received and update the draft based on those discussions. After the Subgroup completes its work, the Subgroup will forward the PBM white paper draft to the Regulatory Framework (B) Task Force for its consideration and adoption. Keen said following the Regulatory Framework (B) Task Force's adoption, the PBM white paper draft will be forwarded to the Health Insurance and Managed Care (B) Committee for its consideration and adoption.

Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) asked about the type of comments stakeholders should submit and the Subgroup's process for reviewing the comments, such as a line-by-line review. Keen said the Subgroup is looking for comments on the language currently in the draft and additional language that should be added. He said for comments suggesting additional language, such comments should include the specific language to be added, not just a general comment. He said the Subgroup will determine its review process based on the type of comments received. He said he does not anticipate the Subgroup discussing the comments on a line-by-line basis, which is generally the review process for developing or revising NAIC models, but the Subgroup will determine its review process based on the type of comments received.

Without objection, the Subgroup exposed the PBM white paper draft (Attachment Eleven-A1) for a 45-day public comment period ending June 1.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

A. INTRODUCTION

The NAIC Regulatory Framework (B) Task Force established the NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup in 2018 to explore whether to develop a new NAIC model regulating pharmacy benefit managers (PBMs). In 2019, the Task Force adopted a charge for the Subgroup to, “[c]onsider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs). The Subgroup may consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.” The Subgroup developed a PBM model, which both the Regulatory Framework (B) Task Force and the NAIC Health Insurance and Managed Care (B) Committee adopted in 2021. However, at the NAIC 2021 Fall National Meeting, the proposed new PBM model failed to receive the necessary votes for adoption from the full NAIC membership. While it was discussing the proposed new PBM Model, in 2021, the Regulatory Framework (B) Task Force adopted a charge for the Subgroup to develop a white paper to: 1) analyze and assess the role pharmacy benefit managers (PBMs), Pharmacy Services Administrative Organizations (PSAOs), and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements, rebating and spread pricing, including the implications of the *Rutledge vs. Pharmaceutical Care Management Association (PCMA)* decision on such business practices; and 3) discuss what challenges, if any, the states have encountered in implementing such laws and/or regulations.

After the proposed PBM model failed to receive sufficient votes for adoption, in early 2022, the Subgroup turned its focus on completing its charge to develop the white paper. Throughout 2022, the Subgroup held meetings to hear various stakeholders’, including consumers, PSAOs, insurers, and pharmacists, perspective on its charge to develop the PBM white paper. The Subgroup also heard presentations from various states that have enacted state laws regulating PBM business practices. The states discussed the process of enactment, their implementation process, and outstanding issues related to enforcement, including, in some cases, a discussion of enforcement challenges and lessons learned.

As the Subgroup was hearing the last few stakeholder presentations in a series of regulator-to-regulator meetings in July 2022 through September 2022, the Subgroup reviewed and approved an outline of the PBM white paper. Based on the outline, the Subgroup leadership solicited and obtained volunteers from the Subgroup members to draft initial language for the various provisions in the PBM white paper. The Subgroup reviewed an initial draft of the PBM white paper in October 2022. The Subgroup released a working draft of the PBM white paper during a meeting at the NAIC 2022 Fall National Meeting. Following the NAIC 2022 Fall National Meeting, the Subgroup met in early 2023 in a series of regulator-to-regulator meetings to discuss additional revisions to the working draft. On April 17, 2023, the Subgroup released a draft of the PBM white paper for a 45-day public comment period ending June 1, 2023.

[ADDITIONAL LANGUAGE WILL BE ADDED AS THE DRAFTING PROCESS MOVES FORWARD]

B. KEY PLAYERS IN PHARMACEUTICAL DRUG PRICING ECOSYSTEM

Inherent in the Subgroup’s review of the drug pricing ecosystem are the concerns of the consumer, the one key player who cannot see all of the levers before them but ultimately pays the price of the ecosystem that has been

put in place. Until very recently, pricing of pharmaceuticals has been opaque to many consumers.¹ However, increased costs of pharmaceutical drugs, several active campaigns by players in the ecosystem, increased federal and state attention on drug pricing, and drug price transparency programs have all operated to raise the consumer's knowledge of the cost levers of pharmaceutical drugs.

Pharmaceutical drugs are vital to both longevity and quality of life for many individuals. Not being able to afford lifesaving and life-improving prescriptions causes harm to patients and their families and contributes to additional burdens on our health care system. Some individuals can only afford prescriptions because they do so at the cost of other needs such as paying for housing and utility bills or addressing other medical issues. For these individuals there is a reduction in quality of life which can, and often does, affect overall health.² Affordability and access remain of high concern to consumers and lawmakers alike.

A 2021 poll by the Kaiser Family Foundation found that 60 percent of adults in the U.S. take at least one prescription drug and 25 percent take at least four per day. Of those prescribed medications, 29 percent of Americans reported not taking their medications as prescribed due to cost. They do this by not filling their medication, using an over-the-counter medication instead, or cutting the pills in half.³

It is the hope of the subgroup that by regulators gaining a greater understanding of the pharmaceutical drug ecosystem, research and price transparency programs, policymakers can better understand the levers that impact consumers. In so doing, consumers will see reduced costs for their pharmaceutical drugs.

Beyond the consumer, there are numerous players that make up the pharmaceutical drug ecosystem. Some of the key players in that ecosystem are described below.

1. INSURERS

Insurers contract with PBMs to manage the pharmacy benefit portion of their health care benefits provided to their insureds and enrollees.⁴ Insurers contract with PBMs because of the increasing complexity of prescription drug benefit management.⁵ In addition, in response to increasing prescription drug costs some insurers contract with PBMs for their services that help reduce costs, including utilization management, prescription drug rebates,

¹ See, e.g., the recent proliferation of drug price transparency programs across states, available as referenced by the National Academy for State Health Policy (NASHP): <https://nashp.org/prescription-drug-pricing-transparency-law-comparison-chart/>. At the time of this report, there are 13 states with drug price transparency programs.

and negotiation of pharmacy fees and prescription drug reimbursement, and access to pharmacy networks.⁶ Ultimately, the scope of the PBM's role in managing this benefit depends on the insurer.⁷

2. PRESCRIPTION DRUG MANUFACTURERS

Manufacturers

Pharmaceutical manufacturers research, develop, produce, market, and sell prescription drugs to treat medical conditions.⁸ The development of a new pharmaceutical product involves an investment of resources to create a product ready to be tested during clinical trials, where the safety and clinical efficacy of the drug are evaluated for a specific disease or condition.⁹ The U.S. Food and Drug Administration (FDA) reviews all applications for the sale of new drugs from manufacturers following clinical trials and decides whether the drug will be made available on the market to consumers.¹⁰ When a drug is approved, manufacturers then set the list price for medications and may change that price over time.¹¹

Brand manufacturers

Manufacturers who produce brand-name drugs may conduct the initial research and development of a new pharmaceutical product. Brand-name drugs receive patents and exclusivities from the FDA.¹² Manufacturers of these patent-protected brand-name products have market exclusivity to produce and sell their products during the life of the patent before therapeutically equivalent generic drugs can become available on the market.¹³

Generic manufacturers

Once a brand-name drug is no longer patent-protected, generic manufacturers may begin producing therapeutically equivalent generic drug products. Similar to brand-name drugs, the FDA must approve a generic drug application to ensure its equivalence to the branded drug before it can be produced.¹⁴ Generic drugs

comprise the largest portion of the pharmaceutical market, approximately 90 percent of all drugs dispensed to consumers.¹⁵

Biologic manufacturers

Biologic manufacturers are distinct from traditional brand and generic manufacturers because they produce drug products made in living cells, such as monoclonal antibodies, antitoxins, and certain vaccines.¹⁶ Biologics are sometimes referred to as “large-molecule drugs.” Manufacturers of biologic drug products are also required to receive approval from the FDA to sell their products through a separate application process.¹⁷ Biologics approved by the FDA are granted 12 years of exclusivity, which is substantially longer than the five years typically granted to traditional small-molecule brand-name drugs.¹⁸ A biosimilar drug product may be produced following the expiration of the biologic’s patent and exclusivity period.¹⁹

Biosimilar manufacturers

Because of biologic drugs’ complexity, they are much more difficult to replicate than the chemically produced generics for other drugs. As a result, truly identical “generic” versions are currently virtually impossible to produce. However, once patents expire for the existing brand-name biologic drugs, “biosimilar” medicines can be produced, which is an occurrence that raises regulatory issues in the states. In recent years a cumulative total of at least 49 states have considered legislation establishing state standards for substitution of a “biosimilar” prescription product to replace an original biologic product.²⁰

Comparable to the relationship between brands and generics, biosimilars are required to be extremely similar to approved biologics by having no clinically meaningful differences – the same strength, dosage form, and route administration (such as injection).²¹ Many biologics and biosimilars are categorized as specialty drugs due to their complex structures using living organisms, the storage requirements needed, and the cost and complexity of administering the product to a consumer. According to the FDA, biologic and biosimilar drug products are the fastest growing class of therapeutic products in the U.S.²²

PBMs negotiate and contract with all the various types of pharmacies, including independent pharmacies and pharmacy chains of all sizes, on reimbursement and pharmacy network related terms.²³ PBMs design, negotiate, implement, and manage formulary designs for prescription drugs, including negotiating rebates and drug coverage terms with pharmaceutical manufacturers.²⁴ PBMs are responsible for the design and implementation of preferred and non-preferred pharmacy networks, metric-based payment arrangements, and formulary design elements (drug coverage, out-of-pocket responsibilities for patients and utilization management protocols).²⁵ PBMs engage in the negotiation and financial transactions between pharmaceutical manufacturers, health plans, and pharmacies.²⁶

4. PHARMACIES

a. CHAIN

A pharmacy chain refers to a third party entity that engages in a retail business and that owns or operates multiple retail outlets at which an individual consumer may have a prescription drug order filled. The pharmacy retail outlet may also provide services that include providing immunizations, performing health screenings, testing at point-of-care, and providing medication counseling.²⁷

b. INDEPENDENT

Independent pharmacies refer to pharmacies that are privately and independently owned and operated by one or more pharmacists, and whose primary function is to provide direct pharmaceutical care to patients. These services include dispensing drugs, providing immunizations, performing health screenings, testing at point-of-care, and providing medication counseling in the community setting.²⁸

5. PHARMACISTS

The basic duty of a pharmacist is to check prescriptions from physicians and other authorized prescribers before dispensing the medication to the patients to ensure that the patients do not receive the wrong drugs or take an incorrect dose of medicine. Pharmacists also offer expertise in the safe use of prescriptions. They also may conduct health and wellness screenings, provide immunizations, oversee the medications given to patients, and provide advice on healthy lifestyles.

6. PHARMACY SERVICES ADMINISTRATIVE ORGANIZATIONS (PSAOs)

Pharmacy services administrative organizations (PSAOs) are organizations that provide administrative services to independent pharmacies to support the evaluation and execution of a contract with PBMs or wholesalers.²⁹ The PSAO overall administrative function is to assist with contract evaluation and execution, customer service,

central payment and reconciliation, and patient data evaluation.³⁰ In many instances a PSAO is owned by a wholesaler.³¹

7. INTERRELATION OF PARTIES IN THE CHAIN AND TRANSACTION COSTS

The diagram below provides a simplified illustration of the pharmaceutical distribution chain and the major entities involved that will be discussed in more detail in this section.³²

The following outlines the basic transactions that occur between the participants in the prescription drug supply chain system. For clarity, the transactions are organized into two categories: the physical distribution of a drug and the interactions on the pharmacy benefit side.

Physical Drug Distribution Chain

Pharmaceutical manufacturer and wholesaler

The pharmaceutical manufacturer provides prescription drugs to the wholesaler based on negotiated prices.³³ The average negotiated price is based on the wholesale acquisition cost (WAC) price set by the manufacturer.³⁴

Wholesaler and pharmacy

³⁰ *Id.*

³³ Jane Horvath, Georgetown University, "Basics of the Pharmaceutical Market & PBMs," Presentation to the NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, Aug. 19, 2019.

³⁴ *Id.*

The wholesaler sells their drugs to a pharmacy in an amount based on the WAC.³⁵ There are additional savings that can be achieved via volume rebates, functional rebates, bundle rebates, prompt pay discounts, free goods, marketing funds, and trade show discounts/rebates. The average wholesale price (AWP) is an estimate of the price wholesalers charge for drugs.³⁶ The National Average Drug Acquisition Cost (NADAC) is a federal Centers for Medicare and Medicaid Services (CMS)-calculated value that also attempts to capture the average price wholesalers charge to pharmacies.³⁷

Pharmacy and consumer

The pharmacy provides drugs directly to the consumer and collects certain cost sharing that may include co-pays or co-insurance.

Pharmacy Benefit Chain

Pharmaceutical manufacturer and PBM

The PBM negotiates rebates with the manufacturers, and rebates are typically based on volume. PBMs can offer manufacturers higher volume, and thus command higher rebates, by putting a manufacture's drug on the PBM's formulary and/or in a formulary's less expensive cost sharing tier.³⁸ Rebates create a market dynamic that may force up the "list" price of drugs by increasing the potential to generate "spread" profit.³⁹

Manufacturer and consumer

Pharmaceutical manufacturers can offer coupons or occasionally free samples of medications to consumers. The coupons can reduce a consumer's cost sharing below that which they would have paid had they used their pharmacy benefit plan.⁴⁰ If the coupon constitutes a third-party paying the consumer's cost share, some state laws require insurers to count this payment towards the consumer's deductible and pharmacy benefit maximum out of pocket amount.

PBM and PSAO

The PSAO assists the pharmacy in negotiating with the PBMs for reimbursement rates.⁴¹ Most reimbursement rates are set based on a percentage of AWP and are applicable to all drugs based on brand or specialty status, and are not negotiated on an individual drug basis.⁴²

Pharmacy and PBM

The pharmacy (mostly chains outside of PSAOs) negotiate with the PBM to determine a reimbursement rate for the drugs they dispense.⁴³ Like the PBM/PSAO relationship, negotiations are based on AWP less a percentage

and apply to all drugs.⁴⁴ In addition, PBMs negotiate a dispensing fee with the pharmacies. Actual Acquisition Cost (AAC) is the final price a pharmacy pays after all discounts have been subtracted.⁴⁵

PBMs and Payors

A PBM negotiates rebates with the manufacturer, negotiates with pharmacies, and may develop the formulary on behalf of the payor, the plan sponsor or the insurer, or sell the payor a pre-determined formulary. PBMs also offer payors medical management/utilization review and disease management services.⁴⁶

PBMs are reimbursed by the payor on either a pass-through basis or a spread-pricing basis. Payors may have the ability to choose either option in its contract with the PBM. Payors may also have the options of retaining rebates or allowing their members or insureds to receive point of sale rebates.

Pass through – The payor will pay the actual amount owed to the pharmacy under the contract on a per prescription basis and will pay the PBM an administration fee.

Spread pricing – The payor will either not pay or pay a reduced administration fee and the PBM will retain certain risk related to the difference between the price paid by the customer and the price paid to the pharmacy (whether the spread is profitable will vary from drug to drug). This provides set price assurance to the payor.⁴⁷

Through these definitions and descriptions of the pharmaceutical drug ecosystem, legislatures have enacted various state laws to promote greater transparency of the actions taking place, and put in place specific requirements around the activities of those in the ecosystem.⁴⁸ State laws and enforcement mechanisms have from time to time butted up against federal pre-emption issues and those issues are further detailed in the sections that follow.

C. ENFORCEMENT AND FEDERAL PREEMPTION ISSUES

In general, states have wide leeway to regulate PBMs serving health benefit plans in the individual market, small group market, fully insured large group market, and Medicaid. Under recent U.S. Supreme Court precedent, states also have significant authority to regulate costs for PBMs serving self-insured federal Employee Retirement Income Security Act of 1974 (ERISA) plans, though the legal boundaries of this preemption continue to be tested. It remains unclear how much authority states may exercise over PBM pharmacy networks and other elements of PBM administration. State authority to regulate PBMs serving Medicare Part D plans is limited to areas where the federal government has not established related standards.

This section will discuss the scope of federal preemption of state laws regulating PBMs under ERISA, Medicare Part D, and Medicaid, including the implications of recent and ongoing litigation.

1. EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974 (ERISA): (SELF-INSURED AND FULLY INSURED)

⁴⁴ Horvath.

⁴⁵ Horvath.

⁴⁶ Horvath; Wisconsin’s “Report of the Governor’s Task Force on Reducing Prescription Drug Prices, p. 21.

⁴⁷ Horvath.

⁴⁸ See, e.g., the recent proliferation of drug price transparency programs across states, available as referenced by the National Academy for State Health Policy (NASHP): <https://nashp.org/prescription-drug-pricing-transparency-law-comparison-chart/>. At the time of this report, there are 13 states with drug price transparency programs.

The federal Employee Retirement Income Security Act of 1974 (ERISA) governs all health benefit plans established by private-sector employers and certain employee organizations, such as unions.⁴⁹ ERISA's preemption clause, section 514, preempts all state laws to the extent that they "relate to" employer-sponsored health plans.⁵⁰ However, states are still permitted to maintain regulation of "the business of insurance" including for ERISA plans.⁵¹ This generally allows the states to regulate insurance carriers operating traditional insurance business, including regulation of plan design, solvency, and capital requirements for insurance companies.

However, ERISA explicitly prohibits states from regulating self-insured health plans where an employer bears the primary risk of claims and an insurer acts solely in an administrative capacity without bearing any risk.⁵² Under current federal court precedent, this effectively divides the large-group market into "fully insured" plans that are generally subject to state insurance law, and "self-insured" plans that are generally exempt from state insurance regulation.

Over the last 30 years, the U.S. Supreme Court has issued a series of opinions that narrow the scope of ERISA's preemption language. The most recent case, *Rutledge v. Pharmaceutical Care Management Association (PCMA)*,⁵³ decided in 2020, held that an Arkansas law (Act 900) requiring PBMs to reimburse pharmacies at a price equal to or greater than a pharmacy's wholesale cost was not preempted by ERISA. This suggests that states can regulate the conduct of PBMs that serve both fully insured and self-insured employer plans, to at least the same extent as the Arkansas law.

In *Rutledge*, the U.S. Supreme Court affirmed a legal standard stated in a prior decision, *Gobeille v. Liberty Mutual Insurance Company*.⁵⁴ To determine whether a state law has an impermissible connection with an ERISA plan, the Court asks whether the law "governs a central matter of plan administration or interferes with nationally uniform plan administration." In particular, a state law that "merely affects costs" will not be preempted, even where a cost regulation creates a significant economic incentive for a plan administrator, so long as it does not "force" a plan to adopt a certain "scheme of substantive coverage."⁵⁵

Taken together, this suggests that a state law comparable to Arkansas's Act 900 will not be preempted by ERISA, even if it applies to self-insured plans. The features of Act 900 upheld by *Rutledge* are as follows:

- (1) Requires PBMs to reimburse a pharmacy at a price equal to or greater than what the pharmacy paid to buy the drug from a wholesaler;
- (2) Requires PBMs to timely update their Maximum Allowable Cost (MAC) lists when drug wholesale prices increase;

⁴⁹ Furrow, et al., "Health Law" Third Ed. (2014), p. 325-27.

⁵⁰ *Id.* at 328.

⁵¹ See, e.g., Furrow generally at 328-330.

⁵² *Id.* at 328.

⁵³ *Rutledge v. Pharmaceutical Care Management Association*, 141 S.Ct. 474 (2020).

⁵⁴ *Gobeille v. Liberty Mutual Insurance Company*, 577 US 312 (2016).

⁵⁵ *New York State Conference of Blue Cross & Blue Shield Plans v. Travelers Ins. Co.*, 514 US 645 (1995). The Court found that a 13% surcharge that applied to all insurers other than Blue Cross / Blue Shield was not preempted by ERISA, despite creating a significant incentive for self-insured employers to choose Blue Cross / Blue Shield over other carriers. Since the law did not "force" plan administrators to make a particular choice, it was allowed by the court.

- (3) Requires PBMs to provide an administrative appeals procedure for pharmacies to challenge MAC reimbursement that is below a pharmacy's acquisition cost;
- (4) Requires PBMs to increase their reimbursement rate to cover a pharmacy's acquisition cost if that pharmacy is unable to acquire the drug at a lower price from a typical pharmaceutical wholesaler;
- (5) Requires PBMs to permit a pharmacy to "reverse and rebill" any reimbursement claim affected by the pharmacy's inability to acquire the drug at a price equal to or less than a PBM's MAC reimbursement price;
- (6) Permits a pharmacy to decline to sell a drug to covered beneficiary if the relevant PBM will reimburse the pharmacy for less than the pharmacy's acquisition cost.

The PCMA argued that the enforcement mechanisms of the Arkansas law impermissibly interfere with ERISA plan management. The U.S. Supreme Court rejected this argument, noting that if taken to the extreme, PCMA's proposed interpretation would preempt all state law mechanisms for resolving insurance payment disputes. However, beyond allowing Arkansas Act 900 to go into effect, the Court provided little guidance regarding what is or is not a matter "central to plan administration."

In a subsequent federal district court decision, *PCMA v. Mulready*⁵⁶, the lower court relied on *Rutledge* to conclude that Oklahoma's PBM law was not preempted by ERISA (the court's additional reasoning related to Medicare preemption is discussed below). The statute at issue in *Mulready* regulates both the network status of particular pharmacies as well as the conditions under which a PBM may reimburse for prescriptions, arguably going significantly beyond "mere cost regulation." However, the PCMA has appealed the *Mulready* decision, and it remains unclear whether the appeals court or other courts will follow its reasoning.

Another important aspect of the law at issue in *Rutledge* is that it is not applied exclusively to or even expressly to ERISA plans. Rather, it applies to PBMs whether or not they manage ERISA plans. Under prior U.S. Supreme Court precedent, a law may be preempted by ERISA if it "acts immediately and exclusively upon ERISA plans or where the existence of ERISA plans is essential to the law's operation."⁵⁷

Under the precedent of *Rutledge*, it seems clear that states have some leeway to regulate PBMs without concern for ERISA preemption. A law that distinguishes between ERISA and non-ERISA plans would be more likely to be preempted, particularly if it places a higher burden on ERISA plans than for other markets. A law that mandates particular pharmaceutical coverage, such as requiring reimbursement for a specific drug or diagnosis, would likewise be preempted as regulating plan design. On the other hand, a law that applies to PBMs regardless of market segment that merely regulates cost, similar to the Arkansas statute, would likely be upheld. Lesser regulations, such as transparency programs, are also unlikely to be preempted under ERISA.

2. MEDICARE PART D

Medicare Part D is an optional, federally supported prescription drug benefit available to Americans over the age of 65. The program's authorizing legislation incorporates the federal preemption language from the Medicare Part C, or "Medicare Advantage (MA)" program, which provides: "the standards established under this

⁵⁶ *Pharmaceutical Care Management Association v. Mulready*, 598 F.Supp.3d 1200 (2022).

⁵⁷ *Rutledge*, at 6.

part shall supersede any state law or regulation (other than state licensing laws or state laws relating to plan solvency) with respect to MA plans which are offered by MA organizations under this part.”⁵⁸

In general, courts have found that state laws are preempted under Medicare Part D where Congress or the CMS have established “standards” for the area regulated by said state laws. This means that the authority of states to regulate MA or Medicare Part D plans is significantly limited, though states explicitly retain the authority to regulate plan solvency. The Medicare Managed Care Manual indicates that state law should only be preempted where it would be impossible for a carrier to comply with both state and federal standards – a state standard that is stricter than the Medicare standard should not be preempted. However, courts have held that standards set by the CMS do not necessarily need to be in conflict with the provisions of state law for preemption to hold.

In *Mulready v. PCMA*, the federal district court ruled that many provisions of Oklahoma’s PBM statute were preempted with respect to Medicare Part D plans (the preceding section discussed the same court’s reasoning with respect to ERISA plans).⁵⁹

In its review of the statute at issue, the *Mulready* court found that several provisions of Oklahoma’s law were preempted by Medicare Part D. This included multiple elements of the law related to pharmacy reimbursement, including a ban on PBM service fees, a ban on PBMs reimbursing affiliated pharmacies at higher rates, and a ban on PBMs reducing pharmacy reimbursement after completion of a sale. Part D prohibits interference with negotiation between insurers and pharmacies, and Part D defines “negotiated price” by reference to said negotiations.⁶⁰ Accordingly, the district court agreed with the PCMA that these aspects of the state law were barred with respect to PBMs serving Medicare Part D plans as an impermissible interference in the price negotiations between PBMs, as the agents of Medicare Part D carriers, and pharmacies.⁶¹

The district court also ruled that Oklahoma’s retail-only pharmacy access standard was preempted because the CMS has established standards regulating convenient access to network pharmacies.

However, the district court held that the remaining provisions of the Oklahoma law challenged by the PCMA were not preempted by Medicare Part D.⁶² This includes the law’s requirements for preferred pharmacy networks, including the law’s any willing provider provision, affiliated pharmacy prohibition, and network provider restriction. The district court reasoned that while the CMS has promulgated a standard with respect to standard networks, there is no federal standard in place for preferred networks. Since all the relevant provisions of Oklahoma law apply only to preferred network status, the district court ruled there was no applicable standard in place that would preempt Oklahoma’s law.

Finally, the district court rejected the PCMA’s challenge to Oklahoma’s contract approval provisions.⁶³ Under the Oklahoma statute, insurers who utilize the services of PBMs are required to approve all contracts between the PBM and the PBMs retail pharmacy network. In this instance, the PCMA again pointed to Medicare Part D’s ban on interference in contract negotiations. However, the district court reasoned that Medicare Part D’s bar applies only to negotiations between plan sponsors and PBMs, while Oklahoma’s law regulates negotiations between

⁵⁸ 42 CFR § 422.402.

⁶³ *Id.*

PBMs and pharmacies. Accordingly, the district court concluded that the contract approval provisions of Oklahoma’s law are not preempted by Medicare Part D.

The PCMA has appealed the district court’s decision. It is unknown whether the 10th Circuit or other courts will follow the same reasoning with respect to the scope of Medicare Part D preemption of state PBM laws.

3. MEDICAID

Medicaid is a federally funded program that provides health benefits to certain low-income Americans.⁶⁴ It is structured very differently from either Medicare Part D or ERISA. Both Medicare and ERISA were set up with the intent of establishing uniformity of implementation nationwide – making preemption of state laws that conflict with the federal plan an important element of the program’s structure. Medicaid, however, is structured as a federal-state partnership and its implementation varies significantly from state to state. This means that the states have broad leeway to regulate PBMs serving Medicaid carriers, as long as those regulations do not come into conflict with the state’s Medicaid structure.

Each state implements Medicaid pursuant to a Medicaid plan submitted by the state and approved by the CMS.⁶⁵ Any changes a state makes to Medicaid implementation must also be approved by the CMS via a plan amendment process.⁶⁶ In some cases, states may also receive a waiver from certain terms of the Medicaid provisions in the Medicare and Medicaid Act (herein referred to as the Medicaid Act) under Section 1115 of the Social Security Act. So long as the PBM regulation is consistent with the terms of the state’s current Medicaid plan, it should be safe from federal preemption.

However, state laws that conflict with the terms of the Medicaid Act can still be theoretically preempted under the supremacy clause of the U.S. Constitution. Unlike Medicare Part D and ERISA, the Medicaid Act does not include any preemption language that goes beyond common law interpretation of the supremacy clause. Under common law, a state law will generally be preempted only if it is impossible for a regulated entity to comply with both the state and the federal statute. However, jurisprudence specifically related to Medicaid preemption is extremely limited, making definitive analysis difficult.

In many states, the state Medicaid agency contracts with one or more managed care organizations (MCOs) to administer all or a part of the state’s Medicaid program, including the management of the pharmacy program through the MCO’s contracted PBM. Some states also contract with PBMs directly to administer the pharmacy benefit, either in conjunction with or separate from an MCO. In other cases, the state Medicaid agency manages the Medicaid pharmacy program on its own.

To address rising costs, Congress passed legislation enacting the Medicaid Drug Rebate Program in 1990. Under this program, pharmaceutical companies sign a master rebate agreement with the CMS, which administers the Medicaid program at the federal level. These rebates result in cost savings on prescription drugs that are paid for under the Medicaid program and are shared by both the state Medicaid agency and the CMS. State Medicaid programs are required to provide a pathway to coverage for any drug whose manufacturer has signed a rebate agreement with the CMS. Therefore, state Medicaid programs do not have the flexibility that insurers in the private market do to implement strict formularies to control prescription drug spending. Instead, state Medicaid programs are allowed to negotiate additional “supplemental rebates” with pharmaceutical manufacturers

⁶⁴ See, e.g., Furrow generally 460-462.

⁶⁵ Furrow at 490-492.

⁶⁶ *Id.*

individually, and to develop preferred drug lists in consultation with state Drug Utilization Review (DUR) Boards and Pharmacy and Therapeutics (P&T) Committees.

In summary, Medicaid preemption should not be a significant concern for states looking to regulate PBMs that serve Medicaid managed care or other Medicaid carriers. However, states should ensure that any changes to PBM regulation in the Medicaid space are consistent with the state's Medicaid plan or seek an appropriate plan amendment if they are not.

D. FUNCTIONAL ISSUES

As the national conversation has evolved, most of the direct regulation has involved the practices of PBMs. As such, the most robust bodies of law and descriptions of practices have focused on PBM activities. Several functional issues within this ecosystem have been identified by state regulators as key to the ultimate pricing consumers pay or as having other significant marketplace impacts. Those functional issues are discussed in the sections that follow.

1. FORMULARY DESIGN

PBMs implement formularies or lists of covered drugs⁶⁷. PBMs' customers – payors, such as insurers or self-funded employer plans, may request open formularies, develop their own formularies, or purchase formularies from PBMs. Even closed formularies typically require coverage for at least one drug per therapeutic class.

For PBM developed formularies, PBMs use panels of experts called Pharmacy and Therapeutics (P&T) Committees. These committees, made up of independent physicians, pharmacists, and other health care providers, evaluate clinical and medical literature to select the most appropriate medications for individual disease states and conditions.⁶⁸ The federal Affordable Care Act (ACA) introduced federal regulations on P&T Committees serving qualified health plans (QHPs).

P&T Committees typically reviews drugs to identify those that are required (preferred), unacceptable and acceptable based on medical standards. The category of those that are determined acceptable is where there is leeway on the PBM's part to determine formulary inclusion.⁶⁹

The PBM will look at acceptable drugs that have been determined "clinically equivalent" and negotiate for the highest rebate and include these drugs in the formulary. PBMs negotiate drug costs with pharmaceutical manufacturers across the board for all customers using their volume of scale and then work with individual customers to create formularies.

Formularies provide lists of pharmaceutical drugs covered by payors and can be differentiated between preferred or discouraged products by dividing into three to five "tiers," each with a separate level of cost sharing.⁷⁰ By placing a drug in a preferred tier, PBMs can drive volume to that drug's manufacturer. This is an effective way for PBMs to generate rebates for either multi-source brands or competing brands in a therapeutic

<https://dfr.oregon.gov/drugtransparency/Documents/Prescription-Drug-Price-Transparency-Annual-Report-2019.pdf>.

class. The PBM then keeps the rebates or shares all or a percentage of the rebate with the plan sponsor or patient, depending on the PBMs contract with the plan sponsor.⁷¹

Since formularies are essentially coverage decisions, a PBM's step-therapy protocol may be viewed as part of its formulary. Step-therapy requires a patient to try a particular drug before another drug is covered. PBMs may shift drugs between tiers or add or remove them from the formulary entirely during a plan year, a practice which is known as "non-medical switching."

2. REBATES

The negotiation between a pharmaceutical manufacturer and PBM may result in a rebate. The rebate flows back to the PBM from the manufacturer usually based on the volume of prescriptions generated by the manufacturer's drug's placement on the PBM's formulary. The PBM may pass the rebate on to the health benefit plan according to their shared contract, which may allow the PBM to keep a percentage of the rebate, but it is possible the PBM keeps the entire rebate with no direct benefit to the plan or the consumer.⁷²

Rebates are mostly used on branded and specialty drugs where there exist similar competing drugs from other manufacturers. From a manufacturer's perspective, the rebate is a tool to incentivize PBMs to place the manufacturer's drugs on formularies within preferred tiers.⁷³ PBMs negotiate based on their volume of scale to obtain highest rebate for selected drugs.⁷⁴ From the PBM's perspective, a large rebate results in a smaller amount spent by their customers and more income for the PBM from proportional pass-through contracts.⁷⁵

Rebates are negotiated separately with each plan sponsor and can take the form of a number of different options in how rebates get passed along:⁷⁶

- 100 percent pass-through – The PBM passes 100 percent of the rebate back to the plan sponsor. Most clients prefer this method.
- Proportional pass-through – The PBM keeps a percentage of the rebate and passes the remainder back to the plan sponsor.
- At Risk – The PBM keeps 100 percent of the rebate but guarantees a certain level of rebate to the customer. In this instance the PBM is "at risk" for the difference between the guarantee and actual rebates received. In exchange, this option provides cost predictability to the customer.

The existence of rebates alone is not a problem. However, the PBM's ability to retain a percentage of the rebate creates a concern as they are also commonly in charge of formulary design. These two factors give PBMs a financial incentive to prioritize drugs in the formulary based on the highest rebate instead of the lowest total cost to the plan sponsor or consumer.⁷⁷ This could result in health plans and consumers paying a higher cost for prescription drugs than is necessary, resulting in higher prescription drug coverage costs.

Approaches to curb the negative effects of rebates include:

⁷¹ Horvath.

⁷³ Sood; Oestreicher.

⁷⁴ *Id.*

⁷⁵ *Id.*

⁷⁶ *Id.*

⁷⁷ *Id.*

- Rebate retention prohibitions: Some states have enacted as part of their PBM laws a provision stating that a PBM must pass through 100 percent of a pharmaceutical manufacturer rebate to a plan sponsor.⁷⁸
- Rebates at point-of-sale (POS): Some believe that rebates should be provided directly to consumers at POS to reduce deductibles or co-insurance amounts owed when the drug is purchased. As a result, these funds would no longer be used to offset the plan sponsor costs and could result in higher premiums for all members. Additionally, members with low or no prescription drug usage might experience a disproportional impact as they would be paying higher premiums and would not have a financial benefit from the POS rebates. Some insurers have indicated that passing the rebates to the consumer at POS would have a dramatic enough effect on drug adherence that it would cover the potential benefit of using the rebates against premiums and result in no additional premium cost.⁷⁹
- Elimination of rebates: Some have recently called for the elimination of rebates to provide more price transparency within the system. While the elimination of rebates might serve to achieve this, it could also cause a major disruption in current market conditions. In the short term, eliminating rebates could lead to increasing the cost of drugs to PBMs, plan sponsors and ultimately consumers without corresponding legislation to lower pharmaceutical manufacturer prices. In the longer term, eliminating rebates could lead to increased transparency in price competition between manufacturers of similar drugs as price setting would no longer happen in a private contractual setting with a PBM.⁸⁰

3. PRICING AND CONTRACTING PRACTICES

PBMs negotiate with pharmaceutical manufacturers, health plans, and pharmacies. PBMs may also be affiliated with a health plan and a pharmacy. As discussed below, the unique market position and negotiating power of the three largest PBMs enables them to engage in contracting practices that may be detrimental to consumers and other market participants.⁸¹ The below terms and descriptors identify the most common pricing and contracting practices that have received scrutiny from regulators:

Gag clauses: The term “gag clause” refers to a stipulation in a pharmacy benefit contract that prohibits a pharmacy or pharmacist from informing consumers of an alternative option when purchasing a drug. For instance, a gag clause may prohibit a pharmacist from telling a consumer about a generic version of a prescription drug or if a prescription drug can be purchased at a lower price out-of-pocket rather than through their insurance plan.⁸²

Mandatory arbitration clause: Most PBMs require that disputes be submitted to binding arbitration by including a mandatory arbitration provision in their pharmacy contracts. Some believe mandatory arbitration limits legal recourse for individual pharmacies and results in pharmacies foregoing potentially successful audit challenges.⁸³

⁸³ Oestreicher.

Copay clawbacks: Copay clawback is the PBM practice of taking back from a pharmacy the difference between a patient's copay and the actual cost of the medication when the patient's copay is larger than the cost of the drug.⁸⁴

MAC transparency: A maximum allowable cost (MAC) list is a list that includes the maximum amount that a plan will pay for certain drugs.⁸⁵ MAC lists are often generated by the PBM. There is no standardization in the industry as to the criteria for the inclusion of drugs on MAC lists or for the methodology as to how the maximum price is determined, changed or updated. PBMs may sometimes use multiple MAC lists and pocketing the spread between the two. For example, they might use a very low MAC list to reimburse pharmacies but a higher list when charging health plans.⁸⁶

Rebates: Rebates may provide incentive for a PBM to eliminate a less expensive, comparable medication from a formulary. Pharmaceutical manufacturers claim that these rebates are meant to be shared with plan sponsors or passed on to consumers in the form of lower drug prices. However, PBMs regularly keep a share of the rebates before passing the rest through to the plan sponsor.⁸⁷

Spread pricing: Spread pricing is the PBM practice of charging a plan sponsor a higher amount for a drug than they will reimburse the pharmacy and pocketing the difference. Pharmacy pricing is complex, and the process is not transparent. Plan sponsors are often unaware of the difference between the amount they are billed and the pharmacy reimbursement.⁸⁸

Pharmacy audit: PBMs routinely audit pharmacies to validate data entry, ensure compliance with regulatory and contractual requirements, and to help identify and mitigate fraud, waste, and abuse of a prescription drug benefit. However, many pharmacists have stated that the audits are unfair and may result in stiff penalties and fees.

Each of these practices have been regulated to a degree by regulation in some states; however, the degree and method of regulation has varied by those states. More details are provided in the state-specific sections below.

4. VERTICAL INTEGRATION AND CONSOLIDATION

In business and economics, vertical integration means a combination in one company of at least two stages of production normally performed by separate companies. For example, an entity that manufactures a product may also be affiliated with through common ownership a wholesale distributor and a retail store.⁸⁹ The entities at the various levels of the integrated enterprise may deal exclusively with the parent company's goods or services or may offer non-integrated products or services.⁹⁰

The three largest PBMs are each affiliated with a health plan and a pharmacy, so the parent company owns or controls up to three stages of the drug supply chain.⁹¹ Some PBMs are also affiliated with health care providers,

⁹⁰ *Id.*

⁹¹ *Id.*

such as retail clinic services. Thus, one entity controls the diagnosis of a condition, the retail sale of a prescribed drug to the patient, the distribution of the drug from manufacturer to retail pharmacy, and the insurance payment to the pharmacy, including determination of the patient's cost-sharing amounts.

In theory, vertical integration allows a company to synergize operations between stages of production and pass the savings from smaller transaction costs to their customers. However, vertical integration can also be a contributing factor in the monopolization of markets due to market foreclosure, where the merger or acquisition of a stage of production denies competing businesses access to that firm's business.⁹²

Consolidation refers to the merger and acquisition of many smaller companies resulting in a few much larger companies. The benefit of consolidation is that a larger firm may be able to realize efficiencies of scale and pass the resulting cost savings to consumers. The downside of consolidation is that costs tend to rise when there are fewer existing firms around to compete on prices and the few remaining firms price their products to maximize profit.⁹³ Along with vertical integration, consolidation in the pharmacy benefit supply chain has led to current market conditions, which feature the three largest PBMs covering 79 percent of prescription drug claims.⁹⁴ Further, independent pharmacies are put at a competitive disadvantage compared to PBM-affiliated pharmacies when it comes to contracting.

The proliferation of PBM-health insurer affiliations has resulted in inefficiencies in the market.⁹⁵ From the health insurer's perspective, an affiliation with a PBM is incredibly valuable for two reasons: lower costs for pharmacy benefit services and exclusive or priority access to the PBM. From a market perspective, a PBM-health insurer relationship results in lower market competition, dealings within affiliated businesses and possible anti-competitive practices.⁹⁶ The three largest PBMs are all affiliated with health insurers, so other large health insurers not affiliated with a PBM are no longer able to find a PBM that operates on their scale that is not affiliated with a competitor.

A PBM-pharmacy affiliation creates several incentives for PBMs to act against the best interests of the consumer. PBMs have been found inserting language into pharmacy benefit contracts that requires enrollees to use PBM-owned mail pharmacy services for long-term (90 days or longer) "maintenance" medications.⁹⁷ This contractual requirement effectively eliminates any competition to fill these prescriptions, allowing the pharmacy to charge higher prices to the consumer. An affiliation with a pharmacy may also incentivize a PBM to do the following, which are all contrary to the best interests of consumers:

- Perform fewer generic substitutions;
- Switch patients to higher-cost therapeutic alternatives ("therapeutic interchange"); or,
- Repackage drugs in a manner that could lead to increased costs to plan sponsors, while maximizing revenue for the PBM ("package size pricing").

5. PHARMACY NETWORK ADEQUACY

⁹² *Id.*

⁹³ *Id.*

⁹⁴ [PBMs ranked by market share: CVS Caremark is No. 1](#); Becker's Hospital Review (website); March 8th, 2022.

⁹⁵ Sood.

⁹⁶ *Id.*

⁹⁷ "A Tangled Web," p. 42-43.

A pharmacy network is a list of pharmacies or pharmacists that a health plan or PBM has contracted with to provide prescription drug services to their members.⁹⁸ Pharmacy network adequacy is often defined as the distance between a patient's residence and where services can be physically accessed.

Pharmacy access is an integral component of the standards established under section 1860D-4(b)(1)(C) of the federal Medicare Modernization Act of 2003. The standards require in part that each sponsor secure the participation in their pharmacy networks of a sufficient number of pharmacies to dispense drugs directly to patients (other than by mail order) to ensure convenient access to covered drugs by plan enrollees. Several states have since followed suit, defining acceptable pharmacy network adequacy standards for network participation with respect to various regions of their states and across all health plan types. Pharmacy network adequacy provisions effectively prohibit a PBM from deciding to contract with a narrow pharmacy network, potentially limiting member access to prescription drugs.

Some states specify that mail order pharmacies cannot be used to determine compliance with pharmacy network adequacy standards, while others specify that a network must have a mix of both retail and mail order pharmacies. Standards can be established by time and distance standards relative to the state as a whole, or to counties, or zip codes. In determining whether a PBM complies with access requirements, states review and consider the relative availability of physical pharmacies in a geographic service area.⁹⁹ Common pharmacy network adequacy requirements include:

- Defining what is a reasonably adequate retail pharmacy network;
- Making clear that mail-order pharmacies cannot be used to meet access standards;
- Requiring pharmacy networks to consist of both retail and mail order pharmacies in a specific geographic service area;
- Requiring ongoing monitoring of a PBM's capacity to furnish services;
- Network accessibility reporting requirements;
- A current, accurate, and searchable directory of pharmacies; and
- Requiring a minimum of at least one pharmacy per county, zip code, or other specifically defined service area.

About 35 percent of the states have some type of legislation that addresses PBM's placing heightened accreditation requirements upon pharmacies seeking to join the PBM's networks.¹⁰⁰ When this is the case, common legislative elements include prohibiting PBMs from imposing provider accreditation standards or certification requirements inconsistent with, or more stringent than the requirements of the state board of pharmacy or other state/federal agencies. Typically, the PBM must apply standards without regard to PBM affiliation and may not change the standards more than once every 12 months. The last common element is requiring PBMs to provide written disclosures upon request.

Commonly, PBMs, or the health plans they contract with, require members to have their prescriptions filled *only* at pharmacies with which the PBM, or the health plan, is affiliated or has an ownership interest in. This is considered "steering," and is sometimes prohibited by state law.¹⁰¹ Sometimes PBMs will even mine members'

⁹⁸ Horvath; National Conference of State Legislatures Glossary of PBM terms, available at: [State Policy Options and Pharmacy Benefit Managers \(ncsl.org\)](https://www.ncsl.org/state-policy/state-policy-options-and-pharmacy-benefit-managers).

⁹⁹ National Conference of State Legislatures Glossary of PBM terms, available at: [State Policy Options and Pharmacy Benefit Managers \(ncsl.org\)](https://www.ncsl.org/state-policy/state-policy-options-and-pharmacy-benefit-managers).

¹⁰⁰ See generally, PBM Law Compilations, available at: https://content.naic.org/cmte_b_pharmacy_bmri_sg.htm.

¹⁰¹ Sood.

health data in an attempt to steer them to the PBM's affiliated pharmacies. This practice has become more popular as the number of health insurance companies that own PBMs has increased. Steering can limit a member's choice, increase costs, and lower quality of care to members.

Anti-steering state legislation typically prohibits PBMs from requiring drugs to be dispensed from specific contracted or affiliated pharmacies and prohibits PBMs from assessing additional fees when a prescription is filled by an in-network contracted pharmacy, but which is not specifically authorized by the PBM to fill certain types of prescriptions as a "specialty pharmacy." This occurs even when a pharmacy may otherwise have the credentials to do so, such as when it is a compounding pharmacy.

Such anti-steering legislation can have a major impact. It has been reported that even though less than 2 percent of the population uses specialty drugs, those prescriptions account for a staggering 51 percent of total pharmacy spending. This is a rapidly increasing trend. At a member level, plan sponsors see an average annual cost of \$38,000 to cover a specialty patient's drugs, compared to just \$492 for the coverage of a non-specialty patient's drugs. That is 75 times more to cover a specialty patient over the course of a year.¹⁰²

These types of practices can result in harm, including increasing drug prices, overcharging members, restricting a member's choice of pharmacies, underpaying community pharmacies and other dispensers, and fragmenting and creating barriers to care, particularly in rural areas, and for members battling life-threatening illnesses and chronic diseases.

6. LICENSING OF DIFFERENT ENTITIES INVOLVED IN THE DISTRIBUTION/SUPPLY CHAIN

Even though PBMs are engaged in interstate commerce and are not purely in the business of insurance, the trade practices described herein have largely eluded federal regulatory oversight. Many states have enacted licensing schemes to regulate PBMs in the absence of federal oversight. These licensing schemes usually put PBMs under the regulatory authority of a state's insurance department. Most states have gone about this in two ways: 1) regulating PBMs under a third party administrator (TPA) law; or 2) establishing a standalone license for PBMs. The various licensing laws address some of the issues herein through prohibition of certain behaviors, requiring transparency in business practices, or by requiring disclosures by the PBM.

Based on the conversations of the NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, a standalone PBM license is generally preferred among regulators. Anything less than licensure, including a registration requirement, is considered to lack in significant enforcement mechanisms.

Other key players that are licensed in the distribution and supply chain are described below:

Health insurers

Commercial health insurers are subject to federal and state oversight. Insurers providing fully insured employer or group plans and individual market coverage are regulated by states.¹⁰³ Self-insured health plans sponsored by

¹⁰² See Evernorth Health Services, "What is Drug Trend and How to Manage It" last accessed February 27, 2023, available at: <https://www.evernorth.com/articles/specialty-drug-trends-and-utilization>.

¹⁰³ Furrow at 308, 314-316.

employers or unions are subject to federal oversight pursuant to the ERISA, although the *Rutledge v. PCMA* case does seemingly allow state regulation of certain PBM activities performed for ERISA plans.

Wholesalers

All 50 states and the District of Columbia require a wholesaler to be licensed. The structure of the statutes varies but attempt to incorporate federal regulation language. There are several federal regulations that establish the minimal licensing requirements for drug wholesalers in the states. Every wholesale distributor in a state must be licensed by the state licensing authority, and the state must require that personnel employed by distributors have the appropriate education and/or experience for the position that person is hired for.

Per 21 C.F.R. § 205.6, the following factors should be considered by the states before granting a wholesaler license:

- Any convictions of the applicant under any federal, state, or local laws relating to drug samples, wholesale or retail drug distribution, or distribution of controlled substances;
- Any felony convictions of the applicant under federal, state, or local laws;
- The applicant's past experience in the manufacture or distribution of prescription drugs, including controlled substances;
- The furnishing by the applicant of false or fraudulent material in any application made in connection with pharmaceutical manufacturing or distribution;
- Suspension or revocation by federal, state, or local government of any license currently or previously held by the applicant for the manufacture or distribution of any drugs, including controlled substances;
- Compliance with licensing requirements under previously granted licenses, if any;
- Compliance with requirements to maintain and/or make available to the state licensing authority or to federal, state, or local law enforcement officials those records required under this section; and
- Any other factors or qualifications the state licensing authority considers relevant to and consistent with the public health and safety.

Manufacturers

Pharmaceutical manufacturers are required to be registered with the FDA within five days of starting operations (see 21 C.F.R. § 207 et seq). Applicants are required to provide standard business information as well as the list of drugs they produce as part of the application process. In addition to registering pharmaceutical manufacturers, the FDA also reviews all human drugs, including biologics, for safety, effectiveness, and quality. Each new drug has an application process; there is a licensing application for biologics. The FDA also inspects manufacturing facilities for drugs, including biologics, before drug production begins and according to their Compliance Program Guidance Manual (CPGM).

While most states require pharmaceutical manufacturers that produce or distribute drugs within their state to be licensed, states exercise little total control over pharmaceutical manufacturers. The FDA is responsible for approving new drugs and allowing for a given drug's patent protection period, which gives manufacturers a period of exclusivity before generics of that drug are allowed to be produced. Because the federal government is responsible for this function, there is little states can do about some of the life cycle management practices manufacturers engage in to extend the market exclusivity of their drugs. Pharmaceutical manufacturers commonly seek to extend their patent protection period by providing a new formulation of a drug or changing the route of administration for a drug.

Pharmacies

All 50 states and the District of Columbia require pharmacists to be licensed to practice within the state. To obtain a pharmacist license, states commonly require the applicant to satisfy the following criteria:

- Complete an application and pay the required fee;
- Proof of completion of a college degree in pharmacy from an approved college or other institution
- Completion of an approved internship, typically requiring between 1,000 to 1,750 hours;
- The applicant has passed the Multistate Pharmacy Jurisprudence Examination (MPJE) and the North American Pharmacist Licensure Examination (NAPLEX); and
- A fingerprint background check of some nature, normally including a criminal record search and/or production of a birth certificate and/or other vital documents.

All 50 states and the District of Columbia also require pharmacies to be licensed. Typically, the information needed for a license includes:

- Business entity information;
- The type of pharmacy (retail, hospital, sterile compounding, nuclear, etc.);
- Pharmacist-in-charge information, including license number;
- Articles of incorporation/formation;
- A list of officers and owners of the business;
- Disciplinary and criminal history for owners and officers of the pharmacy;
- A list of other licensed personnel who will operate the pharmacy, such as pharmacy technicians and pharmacist interns;
- Pharmacy hours of operation; and
- Application and license fees.

Pharmaceutical sales representatives

In comparison to other entities in the pharmaceutical supply chain, few states require pharmaceutical sales representatives (PSRs) to be licensed. PSRs have a large potential impact on the use and overuse of pharmaceutical drugs based on their interactions with prescribing health care providers.

PSR licenses generally require a pharmaceutical manufacturer to supply a list of all PSRs to the regulating entity. For licensure, the PSRs are generally required to take a professional education course that may include training ethics, pharmacology, and pharmaceutical marketing laws and rules. A licensed PSR is required to submit an annual report to the regulating entity that includes information on which health care providers they have contacted, which drugs they sold, any samples or gifts that were provided, and if the providers were compensated for their time.

In the absence of a law, the Pharmaceutical Research and Manufacturers of America (PhRMA) has instituted a Code on Interactions with Health Care Professionals.¹⁰⁴

The licensing of entities involved in the distribution/supply chain is an evolving area. Many activities performed by some of these entities may be captured by state TPA laws, although some may not be. The Subgroup plans to continue to monitor developments in this area.

E. STATE LAWS THAT OPERATE IN THE SUPPLY CHAIN

¹⁰⁴See PhRMA Code on Interactions with Health Professionals, last accessed February 27, 2023, available at: [PhRMA-Code---Final.pdf](#)

In the last several years states have been working on legislation regarding the impact that Pharmacy Benefit Managers have on increasing prescription drug costs and what that means to consumers.

1. PBM REGULATION

The role of PBMs has changed from intermediaries for pharmacies, drugmakers, wholesalers and others within the prescription drug supply chain to facilitate transactions. Vertical integration of pharmacies, PBMs, and insurers, along with opaque contracting has created a disruption within the drug supply chain. The influence of PBMs has expanded from its original role, growing more complex and opaque, causing transparency concerns. This has prompted states to reevaluate regulations regarding licensure, reporting requirements, transparency, contract standards, health plan responsibility, spread pricing, network adequacy, and clawback issues. At least 20 states have begun the task of improving their regulations and laws¹⁰⁵ and 18 states have either amended or established new PBM licensure requirements within the last few years.¹⁰⁶

a. State Laws and Approaches

Several states on the Subgroup offered up summaries and key developments on their specific states. These summaries are meant to provide further detail to the updated list of laws offered by the Subgroup on the Subgroup's website.¹⁰⁷

i. Florida

Florida enacted the Florida Pharmacy Act to their Insurance Code, which gives the Florida Office of Insurance Regulation (OIR) the authority to enforce provisions, respond to potential violations, establish more protection for pharmacies in relation to audits, establish a \$10,000 penalty for PBMs that do not register with the OIR, and authorize pharmacies to appeal audit findings by PBMs and health plans. However, the responsibility of establishing rules for pharmacy provisions will be managed by the Board of Pharmacy.

ii. New Jersey

New Jersey has a bill that focuses on PBM transparency, licensing, and reporting requirements. Carriers would be required to maintain records of contracted PBMs including transaction records and compensation remittance. Carriers would also be required to have pharmacy and therapeutics committees with no conflict of interest. Additionally, they must use more than one formulary.¹⁰⁸

iii. Kentucky

Kentucky State Representative Steve Sheldon proposed HB 457 during the 2022 legislative session. Although the bill did not pass, it was drafted to address the ongoing abuses from PBMs in Kentucky. Some critics have stated this bill is one of the most comprehensive pieces of PBM regulation in the United States. The bill proposed to

¹⁰⁵ Shaikh, H., & Keller, B. A. (2022). PBM Regulatory Roundup (Spring 2022): The 8th Circuit Rules and More States Issue Regulations. *The National Law Review*, XII(88). Retrieved September 6, 2022, from <https://www.natlawreview.com/article/pbm-regulatory-roundup-spring-2022-8th-circuit-rules-and-more-states-issue>.

¹⁰⁷ See generally, PBM Law Compilations, available at: https://content.naic.org/cmte_b_pharmacy_bmri_sg.htm.

¹⁰⁸ S.B. 220, 2022, 2022-2023 Reg. Sess. (NJ.2022). https://www.njleg.state.nj.us/bill-search/2022/S1616/bill-text?f=S2000&n=1616_11.

prohibit PBMs from the following: mandatory mail order pharmacy use, mandatory use of PBM affiliated pharmacies, limited preferred networks, patient incentives to use PBM affiliated pharmacies, spread pricing, and higher reimbursements to PBM affiliated pharmacies. The bill also contained provisions that addressed contract changes, offered 340B protections and applied to most commercial plans in Kentucky.

iv. Kansas

In 2022, Kansas enacted SB 28, which transformed the state's existing PBM registration requirements to a licensing scheme. As part of the license application, a PBM must submit a template contract to include a dispute resolution process, that ultimately involves an independent fact finder between the PBM and the health insurer or the PBM and the pharmacy or pharmacy's contracting agent; and a network adequacy report. The PBM Licensure Act also made updates to the MAC appeal law, gave the Commissioner some enforcement authority, but maintained an existing exemption for PBMs that hold a TPA registration in the state.

2. PBM DRUG PRICE TRANSPARENCY REGULATION

The push for implementation of laws that would require PBMs to disclose drug pricing, cost information regarding rebates, payments, and their fees collected from pharmaceutical manufacturers, insurers, and pharmacies has begun in many states.¹⁰⁹ The following states have proposed or implemented laws requiring transparency reporting: Delaware, Iowa, Michigan, Minnesota, New York, Oklahoma, Oregon, Texas, Washington, and West Virginia.

3. OTHER RELEVANT STATE LAWS AND PROPOSED LAWS

States have also implemented, or considered implementing other laws that touch upon the pharmaceutical drug ecosystem. A brief description of these approaches is contained below:

Affordability Review and Upper Payment Limits

Some states have proposed or implemented laws establishing prescription drug affordability review boards to set allowable rates for certain high-cost drugs, similar to the process states use to regulate utilities or insurance premiums. Under these laws, a state drug affordability review board would establish the maximum amount that certain payors would pay for individual drugs. The goal of these laws is to protect consumers and payors from over-priced drugs.

Unsupported Price Increases

Another approach to address high drug costs is enacting laws that would impose fines on pharmaceutical manufacturers whose drug price increases are unsupported by new clinical evidence. The state would use the revenue to provide cost assistance to consumers. Such laws impact the most frequently prescribed, high-cost drugs, and minimizes a state's administrative burden by using existing data sources.

¹⁰⁹ Colleen Becker, A. G. (2022, March 23). *State Policy Options and Pharmacy Benefit Managers (PBMs)*. State policy options and Pharmacy Benefit Managers (PBMs). Retrieved September 6, 2022, from <https://www.ncsl.org/research/health/state-policy-options-and-pharmacy-benefit-managers.aspx>

Anti-Price-Gouging

These laws prohibit pharmaceutical manufacturers from hiking prices for generic and off-patent drugs. Price increases that surpass a specific threshold identified in the law trigger action by a state's attorney general. Pharmaceutical manufacturers that price-gouge face fines and must stop charging the excessive price.

Importation

This legislative approach would create a state wholesale importation program to purchase lower-cost drugs from Canada and make them available to state residents through an existing supply chain that includes local pharmacies.

State Purchasing Pool Buy-in

These laws allow small businesses and individuals to buy into a state employee prescription drug benefit purchasing pool. They typically authorize non-state public employers, self-insured private employers, and insurance carriers who cover small groups or individuals to purchase drugs for their beneficiaries under the purchasing authority of the state. By adding more lives to a purchasing pool, purchasers can negotiate better prices for public employees and others who join the purchasing pool.

Licensing Pharmaceutical Representatives

This approach gives states the authority to license pharmaceutical sales representatives to increase transparency surrounding their activities and influence and to require training on ethical standards. For example, the laws would require representatives to disclose the wholesale acquisition cost of the drugs they market and to share the names of generic options in the same therapeutic class when available.

F. FEDERAL INTEREST AND POSSIBLE REGULATIONS

More and more state regulations have been brought before state legislators to help regulate PBMs. Many people think that mere state regulation is not enough, and that the federal government will need to step in to help. Given the overall expense of pharmaceutical drugs, some stakeholders have called for a federal overlay or federal preemption to create a uniform set of regulations for multistate PBMs. There are signs of increased interest from the federal government in PBM-related activities, as described below.

1. PHARMACY BENEFIT MANAGER TRANSPARENCY ACT OF 2022

Introduced on May 24, 2022, the Pharmacy Benefit Manager Transparency Act of 2022, is a bipartisan bill sponsored by Senators Maria Cantwell (D-WA) and Charles Grassley (R-IA). The act would enforce necessary disclosure requirements on PBMs and strive to prevent questionable PBM practices, such as three practices that could be deemed unfair or deceptive which are expressly outlawed by the proposed legislation. These include spread pricing, the practice of charging a health plan or payor a different amount for a prescription drug's ingredient cost or dispensing charge than the PBM reimburses a pharmacy for those costs, and keeping the difference as profit; reducing, canceling, or obtaining back any reimbursement payment made to a pharmacist or pharmacy for the price of a prescription drug's ingredients or dispensing charge arbitrarily, unfairly, or falsely; and deceptively reducing reimbursement to a pharmacy or arbitrarily raising fees to offset changes in reimbursement requirements would also be forbidden.

Beginning no later than one year after the proposed legislation's adoption, the act mandates that PBMs provide the following data to the FTC annually: 1) the difference between the sum that each health plan paid the PBM

for prescription medications and the sum that the PBM paid each pharmacy on behalf of the health plan; 2) the total of all fees, including those for the generic effective rate, compensation fees, or other price breaks offered to any pharmacy, and payments withheld from reimbursements to any pharmacy; 3) if the PBM shifted a prescription drug to a formulary tier with a higher cost, higher copayment, higher coinsurance, or higher deductible to a consumer or lower reimbursement to a pharmacy, an explanation for why the drug was moved to a different tier, including whether the move was requested by a prescription drug manufacturer or another entity; 4) information regarding any variations in reimbursement rates or practices, remuneration fees or other price concessions, and clawbacks between a pharmacy owned, controlled, or affiliated with the PBM and all other pharmacies, for any PBM that owns, controls, or is affiliated with a pharmacy.

The Senate Committee on Commerce, Science, and Transportation and the House Committee on Energy and Commerce would also need to receive two reports from the FTC-- one on general enforcement actions under the act and the other on PBM formulary design or placement practices. Under the proposed legislation, an annual report on enforcement activity would be filed. The report would include: 1) an anonymized summary of the annual reports that PBMs have submitted to the FTC; 2) the number of enforcement actions the FTC brought to enforce the act and the results of those actions; 3) the number of investigations and inquiries into potential violations of the act; 4) the number and nature of complaints the FTC received alleging violations of the act; and 5) recommendations for strengthening enforcement actions in response to violations of the act.

The agency's report to Congress on PBM formulary design or placement practices would be due within a year of the proposed law's passage. It would include information on whether PBMs use formulary design or placement to boost gross revenue without also enhancing patient access or lowering patient costs, as well as whether such PBM activities violate section 5(a) of the Federal Trade Commission Act (45 U.S.C. 45(a)). Employees in the healthcare sector who report violations of the act or take part in administrative, judicial, or investigative processes to enforce its provisions would not be fired, demoted, suspended, reprimanded, or subject to any other type of punishment under the proposed legislation. The proposed legislation also forbids companies from requiring employees to sign pre-dispute arbitration agreements in exchange for employment to make them give up their right to whistleblower protections under the act. The FTC and state attorneys general are given permission to carry out the proposed legislation's enforcement measures. Additionally, under the proposed law, offenders might face extra civil penalties of up to \$1 million in addition to the penalties provided under the Federal Trade Commission Act (15 U.S.C. 41 et seq.). The bill was adopted and forwarded to the full Senate by the Senate Committee on Commerce, Science, and Transportation on June 22, 2022.¹¹⁰

Additionally, the Act would incentivize fair and transparent PBM practices by providing exceptions to liability for PBMs that pass along 100 percent of rebates to health plans or payors and fully disclose prescription drug rebates, costs, prices, reimbursements, fees, and other information to healthcare plans, payors, pharmacies, and federal agencies.¹¹¹

¹¹⁰ Jang, T., & Shotlander, D. (2022, September 28). *Senate bill and FTC 6(b) study turn the heat on pharmacy benefit managers amid drug pricing concerns*. Food and Drug Law Institute (FDLI). Retrieved October 6, 2022, from <https://www.fdpi.org/2022/09/senate-bill-and-ftc-6b-study-turn-the-heat-on-pharmacy-benefit-managers-amid-drug-pricing-concerns/>.

Democrats and Republicans have both turned their attention to PBMs in recent years as they try to control the soaring cost of prescription drugs. The PBM sector claims that their job is to reduce costs for health plans, but detractors claim that they raise list prices of prescription pharmaceuticals by requesting more rebates or discounts from pharmaceutical manufacturers, which in turn raises prices for consumers.¹¹²

2. THE FEDERAL TRADE COMMISSION

In June 2022, the FTC announced that it will launch an inquiry into the prescription drug middleman industry, requiring the six largest pharmacy benefit managers to provide information and records regarding their business practices. The agency's investigation will closely examine how vertically integrated pharmacy benefit managers affect the availability and cost of prescription medications. The FTC will issue mandatory orders to CVS Caremark, Express Scripts, Inc., OptumRx, Inc., Humana Inc., Prime Therapeutics LLC, and MedImpact Healthcare Systems, Inc. as part of this investigation.

Even though many individuals are unaware of them, pharmacy benefit managers exert a significant amount of influence on the nation's prescription drug system, according to Lina M. Khan, chair of the FTC. This investigation will shed insight on the procedures used by PBMs.¹¹³

G. KEY JURISPRUDENCE

As states continue to pass laws related to the pharmaceutical drug ecosystem, a body of jurisprudence has begun to develop that outlines the limits of state authority vis a vis federal authority. The key cases to date are described below.

1. ***RUTLEDGE v. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION*, 141 S.Ct. 474 (2020)**

In *Rutledge v. PCMA*, the U.S. Supreme Court held that ERISA did not preempt an Arkansas law, Act 900, which required PBMs¹¹⁴ to reimburse pharmacies at a price equal to or higher than what the pharmacy paid to buy the drug. Act 900 required PBMs to provide administrative appeal procedures for pharmacies to challenge reimbursement prices that are below the pharmacies' acquisition costs, and it also authorized pharmacies to decline to dispense drugs when a PBM would provide a below-cost reimbursement. Unlike the PBM laws in some states, Act 900 was not strictly structured as an insurance law. It applied to all transactions between PBMs and pharmacies, including transactions where the PBM was acting on behalf of a self-insured ERISA plan, so Arkansas could not rely on the saving clause as its defense against an ERISA preemption challenge.

In a suit brought by the PCMA, a national trade association representing 11 PBMs, the Eastern District of Arkansas ruled that Act 900 was preempted by ERISA, and the Eighth Circuit affirmed.¹¹⁵ Both courts relied on a recent Eighth Circuit decision striking down a similar Iowa law because it "made 'implicit reference' to ERISA by

¹¹⁴ As the term is spelled in Act 900. Supreme Court style refers to "pharmacy benefit managers."

¹¹⁵ *PCMA v. Rutledge*, 891 F.3d 1109 (8th Cir. 2018).

regulating PBMs that administer benefits for ERISA plans”¹¹⁶ and “was impermissibly ‘connected with’ an ERISA plan because, by requiring an appeal process for pharmacies to challenge PBM reimbursement rates and restricting the sources from which PBMs could determine pricing, the law limited the plan administrator’s ability to control the calculation of drug benefits.”¹¹⁷

The U.S. Supreme Court, however, concluded that “[t]he logic of *Travelers* decides this case,”¹¹⁸ and ruled that Act 900 was not preempted by ERISA. The Court compared its decisions in *Gobeille*, where it held that a state law is preempted if it “governs a central matter of plan administration or interferes with nationally uniform plan administration,”¹¹⁹ and *Travelers*, where it held that ERISA does not preempt state price regulations that “merely increase costs or alter incentives for ERISA plans without forcing plans to adopt any particular scheme of substantive coverage,”¹²⁰ even if the law “affects an ERISA plan or causes some non-uniformity in plan administration.”¹²¹ The Court explained that ERISA is “primarily concerned with preempting laws that require ... structure[ing] benefit plans in particular ways, such as by requiring payment of specific benefits, or by binding plan administrators to specific rules for determining beneficiary status. A state law may also be subject to pre-emption if ‘acute, albeit indirect, economic effects of the state law force an ERISA plan to adopt a certain scheme of substantive coverage.’”¹²² The Court observed that Act 900 “does not require plans to provide any particular benefit to any particular beneficiary in any particular way,”¹²³ and determined that like the law at issue in *Travelers*, “Act 900 is merely a form of cost regulation.”¹²⁴

The Court reviewed the standards it has established for interpreting ERISA’s preemption clause, which preempts all state laws “insofar as they ... relate to any employee benefit plan”¹²⁵ unless some exception to preemption applies. The Court explained that a state law triggers the preemption clause when it “has a connection with or reference to” an ERISA plan.¹²⁶ The Court rejected the PCMA’s contention “that Act 900 has an impermissible connection with an ERISA plan because its enforcement mechanisms both directly affect central matters of plan administration and interfere with nationally uniform plan administration.”¹²⁷ The Court acknowledged that Act 900 required ERISA plan administrators to “comply with a particular process” and standards,¹²⁸ but explained that those enforcement mechanisms “do not require plan administrators to structure their benefit plans in any particular manner, nor do they lead to anything more than potential operational inefficiencies” for PBMs.¹²⁹ The Court held further that ERISA did not preempt Act 900’s decline-to-dispense provision, even though it “effectively denies plan beneficiaries their benefits” because any denial of benefits would be the consequence of the lawful state regulation of reimbursement rates and the PBM’s refusal to comply.¹³⁰

¹¹⁶ 141 S.Ct. at 479, quoting *PCMA v. Gerhart*, 852 F.3d 722, 729 (8th Cir. 2017).

¹²⁷ *Id.* at 481–482.

¹²⁸ *Id.* at 482, quoting PCMA brief at 24.

¹²⁹ *Id.*

¹³⁰ *Id.*

Finally, the Court rejected the PCMA’s claim that the law had an impermissible “reference to” ERISA. As the Court explained, Act 900 “applies to PBMs whether or not they manage an ERISA plan,” and Act 900 did not treat ERISA plans differently than non-ERISA plans.¹³¹ However, the Court only considered the provisions of the Arkansas PBM law as they stood at the time the PCMA filed its preemption challenge, not the amendments the legislature subsequently made while *Rutledge* was making its way through the appellate courts. Additionally, the Court did not address preemption under Medicare Part D.

2. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION v. WEHBI, 18 F.4th 956 (2021)

In 2021, the Eighth Circuit Court of Appeals issued its decision in *PCMA v. Wehbi*. This case was not appealed to the U.S. Supreme Court. At issue in the *Wehbi* case were two North Dakota laws prohibiting PBMs from engaging in deceptive and anti-competitive practices.

Ultimately, the court determined that none of the challenged provisions met the “connection-with” standard and all survived preemption by ERISA.¹³² The court concluded that some of the state law provisions “merely authorize pharmacies to do certain things,” such as:

- disclose certain information to plan sponsors;
- provide relevant information to patients;
- mail or deliver drugs to patients as an ancillary service; and
- charge shipping and handling fees to patients who request that their prescriptions be mailed or delivered.¹³³

The court also upheld provisions that “constitute, at most, regulation of a noncentral ‘matter of plan administration’ with de minimis economic effects.”¹³⁴ The court held that “whatever modest non-uniformity in plan administration [the sections] might cause does not warrant preemption.”¹³⁵ These provision include:

- limits on accreditation requirements a PBM may impose on pharmacies as a condition for participation in its network;
- requirements for PBMs to disclose basic information to pharmacies and plan sponsors upon request; and
- conditions on PBMs that have “an ownership interest in a patient assistance program and a mail order specialty pharmacy.”

In *Wehbi*, the court expands upon *Rutledge* in that the North Dakota statutes go beyond health care price/cost regulation and into disclosure requirements of PBMs, by prohibiting PBMs from preventing pharmacies from disclosing certain information (in compliance with HIPAA) to patients or plan sponsors. The court stops short of saying that PBM regulation cannot be preempted by ERISA. North Dakota’s laws, the court concluded, amount to regulation of a PBMs’ functions, rather than regulation of an ERISA plan itself so they are not preempted by ERISA.

¹³¹ *Id.* at 481.

¹³² 18 F.4th 956, 968.

¹³³ *Id.*

¹³⁴ *Id.*, quoting *Gobeille*, 577 U.S. 312, 320.

¹³⁵ *Id.*, citing *Rutledge*, 141 S. Ct. at 480.

For the Medicare Part D preemption, not all the North Dakota provisions were preempted by Medicare laws. The court held that preemption exists for some of the contested provisions because Medicare Part D directly governs some of the same matters that the state law attempts to regulate.

With respect to Medicare Part D, the court determines preemption by either of these questions:

1. Do the laws regulate the same subject matter as a federal Medicare Part D standard? If so, the state law is *expressly* preempted; or

2. Do the state laws otherwise frustrate the purpose of a federal Medicare Part D standard? If yes, then they are *impliedly* preempted.¹³⁶

3. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION v. MULREADY, 598 F.Supp.3d 1200 (2022)

In 2022, the U.S. District Court in the Western District of Oklahoma ruled in favor of the Oklahoma Insurance Commissioner Glen Mulready. The Patient’s Right to Pharmacy Choice Act (“Act”) passed in 2019 was challenged by PCMA as being preempted by ERISA, as well as Medicare Part D laws. The court held that the state law is not preempted by ERISA but agreed with PCMA that some of the law’s provisions are preempted by Medicare laws. PCMA has appealed the decision to the Tenth Circuit Court of Appeals.

The Oklahoma laws at issue protects Oklahoma consumers and their access to pharmacy providers and protects Oklahoma pharmacies from certain self-dealing and self-serving practices of PBMs that can harm consumers and put rural and independent pharmacies out of business. Relying on *Rutledge*, the court concluded that all of PCMA’s ERISA preemption claims fail as a matter of law. The court holds that “[the provisions] do not have a ‘connection with’ an ERISA plan” and that “[w]hile these provisions may alter the incentives and limit some of the options that an ERISA plan can use, none of the provisions forces ERISA plans to make any specific choices.” Finally, with regard to the Promotional Materials provision, the court holds that the law “does not regulate benefit design disclosures to beneficiaries but regulates how PBMs can advertise its providers” and that it “does not relate to a central matter of plan administration nor undermine the uniform regulation of ERISA plans.”

As it relates to PCMA’s ERISA preemption claim in totality, the court found that ERISA does not preempt enforcement of the following: “any willing provider” provisions; retail pharmacy network access standards; affiliated pharmacy prohibition; network provider choice restrictions; probation-based pharmacy limitations; cost sharing discounts; promotional material prohibitions; post-sale price reduction prohibitions; and affiliated pharmacy price match prohibitions on PBMs from reimbursing a pharmacy an amount less than the amount the PBM reimburses to a pharmacy it owns or is affiliated with.¹³⁷

With respect to preemption by Medicare Part D, the court found that about half of the PCMA’s preemption claims failed, while about half were meritorious. Specifically, the court ruled that Medicare Part D *does* preempt these provisions in the Act: retail pharmacy network access standards; promotional material prohibitions; cost sharing discounts; service fee prohibitions; post-sale price reduction prohibitions; and affiliated pharmacy price

¹³⁶ *Id.* at 972.

match prohibitions on PBMs from reimbursing a pharmacy an amount less than the amount the PBM reimburses to a pharmacy it owns or is affiliated with.¹³⁸

It is anticipated that additional cases will make their way to the U.S. Supreme Court and provide greater insights into the parameters of *Rutledge* and state regulation. The *Wehbi* and *Mulready* cases are instructive as to the parameters of *Rutledge*, but no doubt more decisions are to come.

H. RECOMMENDATIONS

The Subgroup acknowledges that issues in the pharmaceutical drug ecosystem are complex and often opaque; to the end consumer, many of these issues are difficult to understand. The most mature body of regulation has developed around PBM activities, but as noted throughout the paper, PBMs are not the only influential player in the ecosystem. Based on the information received by the subgroup over the last two years, the subgroup makes the following recommendations:

1. The NAIC should consider tasking the PBM subgroup or similar group with drafting a model guideline to address PBM regulation based on other state laws and recent jurisprudence;
2. The NAIC should consider expanding information sharing between the states through additional committees on the topic of pharmaceutical drug pricing and transparency;
3. The NAIC should consider any necessary updates to Model 22 out of the emergence of greater regulation in the prescription drug ecosystem;
4. The NAIC should consider impacts of this work on an ongoing basis on the federal 340B drug pricing program;
5. The NAIC should consider facilitating and maintaining a nationwide database of PBM contracting provisions. This would allow states to become familiar with common PBM contractual provisions and more easily identify issues that arise from them;
6. The NAIC should consider developing an open dialogue with Federal agencies that is broader than just PBM regulation. The discussion should consider regulation of all the stakeholders in the prescription drug ecosystem from a more holistic view and may be best achieved through a coordinated effort involving state and federal regulators; and
7. This subgroup, and successive subgroups, should continue to maintain a current listing of PBM laws and regulations and case law for reference by other states.

The Subgroup recognizes the critical role that the pharmaceutical drug ecosystem plays on consumer costs and the role states can play in understanding and best regulating the ecosystem. The body of knowledge gained by

¹³⁸ 36 O.S. § 6961 (OSCN 2023) available at (last accessed February 27, 2023): <https://www.oscn.net/applications/oscn/deliverdocument.asp?lookup=Previous&listorder=167560&dbCode=STOKST36&year=>

the subgroup over the last two years, and related resources provided to state regulators provides a solid foundation to continue to examine these key issues.

IX. APPENDIX I. LIST OF SUBGROUP MEETINGS AND TOPICS..... 39

I. INTRODUCTION

The NAIC Regulatory Framework (B) Task Force established the NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup in 2018 to explore whether to develop a new NAIC model regulating pharmacy benefit managers (PBMs). In 2019, the Task Force adopted a charge for the Subgroup to, “[c]onsider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs). The Subgroup may consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.” The Subgroup developed a PBM model, which both the Regulatory Framework (B) Task Force and the NAIC Health Insurance and Managed Care (B) Committee adopted in 2021. However, at the NAIC 2021 Fall National Meeting, the proposed new PBM model failed to receive the necessary votes for adoption from the full NAIC membership. While it was discussing the proposed new PBM Model, in 2021, the Regulatory Framework (B) Task Force adopted a charge for the Subgroup to develop a white paper to: 1) analyze and assess the role PBMs, Pharmacy Services Administrative Organizations (PSAOs), and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements, rebating, and spread pricing, including the implications of the *Rutledge vs. Pharmaceutical Care Management Association (PCMA)* decision on such business practices; and 3) discuss what challenges, if any, the states have encountered in implementing such laws and/or regulations.

After the proposed PBM model failed to receive sufficient votes for adoption, in early 2022, the Subgroup turned its focus on completing its charge to develop the white paper. Throughout 2022, the Subgroup held meetings to hear various perspectives from stakeholders, including consumers, PBMs, PSAOs, insurers, and pharmacists. The Subgroup also heard presentations from various states that have enacted state laws regulating PBM business practices. The states discussed the process of enactment, their implementation process, and outstanding issues related to enforcement, including, in some cases, a discussion of enforcement challenges and lessons learned.

As the Subgroup was hearing the last few stakeholder presentations in a series of regulator-to-regulator meetings in July 2022 through September 2022, the Subgroup reviewed and approved an outline of the PBM white paper. Based on the outline, the Subgroup leadership solicited and obtained volunteers from the Subgroup members to draft initial language for the various provisions in the PBM white paper. The Subgroup reviewed an initial draft of the PBM white paper in October 2022. The Subgroup released a working draft of the white paper during a meeting at the NAIC 2022 Fall National Meeting. Following the NAIC 2022 Fall National Meeting, the Subgroup met in early 2023 in a series of regulator-to-regulator meetings to discuss additional revisions to the working draft. On April 17, 2023, the Subgroup released a draft of the white paper for a 45-day public comment period ending June 1, 2023.

[ADDITIONAL LANGUAGE WILL BE ADDED AS THE DRAFTING PROCESS MOVES FORWARD]

II. KEY PLAYERS IN PHARMACEUTICAL DRUG PRICING ECOSYSTEM

Inherent in the Subgroup’s review of the drug pricing ecosystem are the concerns of the consumer, the one key player who cannot see all the levers before them but pays the price of the ecosystem that has been put in place.

Until very recently, pricing of pharmaceuticals has been opaque to many consumers.¹ However, increased costs of pharmaceutical drugs, several active campaigns by players in the ecosystem, increased federal and state attention on drug pricing, and drug price transparency programs have all operated to raise the consumer's knowledge of the cost levers of pharmaceutical drugs.

Pharmaceutical drugs are vital to both longevity and quality of life for many individuals. Not being able to afford lifesaving and life-improving prescriptions causes harm to patients and their families and contributes to additional burdens on our health care system. Some individuals can only afford prescriptions because they do so at the cost of other needs such as paying for housing and utility bills or addressing other medical issues. For these individuals there is a reduction in quality of life which can, and often does, affect overall health.² Affordability and access remain of high concern to consumers and lawmakers alike.

A 2021 poll by the Kaiser Family Foundation found that 60 percent of adults in the U.S. take at least one prescription drug and 25 percent take at least four per day. Of those prescribed medications, 29 percent of Americans reported not taking their medications as prescribed due to cost. They do this by not filling their medication, using an over-the-counter medication instead, or cutting the pills in half.³

It is the hope of the subgroup that by regulators gaining a greater understanding of the pharmaceutical drug ecosystem, research and price transparency programs, policymakers can better understand the levers that impact consumers. In so doing, consumers will see reduced costs for their pharmaceutical drugs.

Beyond the consumer, there are numerous players that make up the pharmaceutical drug ecosystem. Some of the key players in that ecosystem are described below.

A. PAYORS

Payors of health care services include health insurance providers, large and small employers, and government entities, such as state employee plans and Medicaid agencies. The entity making decisions about benefits – including the use of PBMs and the design of the prescription drug benefit – may depend on the market (individual, small group, large group) and the arrangement that the payor chooses. In this paper, when PBM functions are referenced, payors may choose to do those tasks internally.

1. Insurers

¹ See, e.g., the recent proliferation of drug price transparency programs across states, available as referenced by the National Academy for State Health Policy (NASHP): <https://nashp.org/prescription-drug-pricing-transparency-law-comparison-chart/>. At the time of this report, there are 13 states with drug price transparency programs.

² As indicated by Kaiser Family Foundation polls, Hamel, Liz et al. "Public Opinion on Prescription Drugs and Their Prices." Kaiser Family Foundation Polling, Oct. 20, 2022. <https://www.kff.org/health-costs/poll-finding/public-opinion-on-prescription-drugs-and-their-prices/>. Accessed Sept. 19, 2022. Discussed generally by Wisconsin's "Report of the Governor's Task Force on Reducing Prescription Drug Prices, p. 12, available at: <https://oci.wi.gov/Documents/AboutOCI/RxTaskForceFinalReport.pdf> and Oregon Drug Price Transparency reports 2019-2022 available at: <https://dfr.oregon.gov/drugtransparency/Pages/annual-reports.aspx>.

³ Hamel, Liz et al. "Public Opinion on Prescription Drugs and Their Prices." Kaiser Family Foundation Polling, Oct. 20, 2022. <https://www.kff.org/health-costs/poll-finding/public-opinion-on-prescription-drugs-and-their-prices/>. Accessed Sept. 19, 2022.

Insurers contract with PBMs to manage the pharmacy benefit portion of their health care benefits provided to their insureds and enrollees.⁴ Insurers contract with PBMs because of the increasing complexity of prescription drug benefit management.⁵ In addition, in response to increasing prescription drug costs some insurers contract with PBMs for their services that help reduce costs, including utilization management, prescription drug rebates, and negotiation of pharmacy fees and prescription drug reimbursement, and access to pharmacy networks.⁶ Ultimately, the scope of the PBM's role in managing this benefit depends on the insurer.⁷

Some insurers are part of integrated health systems, in which a common entity owns an insurer, hospitals, and employs networks of providers and provides all health care services to their enrollees. Because these entities more closely coordinate all care under their roof, insurers in integrated systems may not utilize PBMs to the same extent as more traditional insurers.

2. Employers/Unions/Taft Hartley Trusts

Employers have a variety of options available when designing the health benefits that they offer to their employees. They may choose a self-insured model, where the employer holds the risk, but sometimes hires an insurance company, PBM, or other benefit manager to administer the benefits. Employers choose how much of the benefits they will allow a contracted insurance provider or PBM to design and may choose to “carve out” the pharmacy administration and have external entities perform different functions.

3. Government Entities

Like private employers, government entities may contract with health insurers or PBMs to administer and/or design the health benefits plan that they provide. This may include a state employee health plan, coverage provided by cities or counties, or other benefit plans that cover government employees. Within Medicaid, there are a number of state variations in coverage, but for states that contract with Medicaid managed care organizations, those organizations are often in charge of administering the benefit plan that the state designs.

B. PRESCRIPTION DRUG MANUFACTURERS

1. Manufacturers

Pharmaceutical manufacturers research, develop, produce, market, and sell prescription drugs to treat medical conditions.⁸ The development of a new pharmaceutical product involves an investment of resources to create a product ready to be tested during clinical trials, where the safety and clinical efficacy of the drug are evaluated for a specific disease or condition.⁹ Manufacturers may also partner with the federal government to develop drugs, or license drugs developed with federal research funding. Manufacturers may also purchase prescription drugs developed by other manufacturers to market as their own. The U.S. Food and Drug Administration (FDA)

⁹ *Id.*

reviews all applications for the sale of new drugs from manufacturers following clinical trials and decides whether the drug will be made available on the market to consumers.¹⁰ When a drug is approved, manufacturers then set the list price for medications and may change that price over time.¹¹

2. Brand-Name Drugs

Manufacturers who produce brand-name drugs may conduct the initial research and development of a new pharmaceutical product. Brand-name drugs receive patents and exclusivities from the FDA.¹² Manufacturers of these patent-protected brand-name products have market exclusivity to produce and sell their products during the life of the patent before therapeutically equivalent generic drugs can become available on the market.¹³

3. Generic Drugs

Once a brand-name drug is no longer patent-protected, generic manufacturers may begin producing therapeutically equivalent generic drug products. Similar to brand-name drugs, the FDA must approve a generic drug application to ensure its equivalence to the brand-name drug before it can be produced.¹⁴ Generic drugs comprise the largest portion of the pharmaceutical market, approximately 90 percent of all drugs dispensed to consumers.¹⁵

4. Biologic Drugs

Biologic drugs are distinct from traditional brand-name and generic drugs because they are made of living cells, such as monoclonal antibodies, antitoxins, and certain vaccines.¹⁶ Biologics are sometimes referred to as “large-molecule drugs.” Manufacturers of biologic drug products are also required to receive approval from the FDA to sell their products through a separate application process.¹⁷ Biologics approved by the FDA are granted 12 years of exclusivity, which is substantially longer than the five years typically granted to traditional small-molecule brand-name drugs.¹⁸ A biosimilar drug product may be produced following the expiration of the biologic’s patent and exclusivity period.¹⁹

5. Biosimilar Drugs

Because of biologic drugs’ complexity, they are much more difficult to replicate than the chemically produced generics for other drugs. As a result, truly identical “generic” versions are virtually impossible to produce

currently. However, once patents expire for the existing brand-name biologic drugs, “biosimilar” medicines can be produced, which is an occurrence that raises regulatory issues in the states. In recent years a cumulative total of at least 49 states have considered legislation establishing state standards for substitution of a “biosimilar” prescription product to replace an original biologic product.²⁰

Comparable to the relationship between brand-names and generics, biosimilars are required to be extremely similar to approved biologics by having no clinically meaningful differences – the same strength, dosage form, and route administration (such as injection).²¹ Biologics and biosimilars can be categorized as specialty drugs when their storage requirements and complexity of administering the product to a consumer are such that they cannot be filled routinely in traditional pharmacy settings. According to the FDA, biologic and biosimilar drug products are the fastest growing class of therapeutic products in the U.S.²² Some biosimilar drugs meet additional requirements set out by the FDA and may be substituted for the reference product at the pharmacy; these drugs are known as interchangeable biosimilars.

C. PHARMACY BENEFIT MANAGERS (PBMs)

PBMs negotiate and contract with all the various types of pharmacies, including independent pharmacies and pharmacy chains of all sizes, on reimbursement and pharmacy network related terms.²³ PBMs design, negotiate, implement, and manage formulary designs for prescription drugs, including negotiating rebates and drug coverage terms with pharmaceutical manufacturers.²⁴ PBMs are responsible for the design and implementation of preferred and non-preferred pharmacy networks, metric-based payment arrangements, and formulary design elements (drug coverage, out-of-pocket responsibilities for patients and utilization management protocols).²⁵ PBMs engage in the negotiation and financial transactions between pharmaceutical manufacturers, health plans, and pharmacies.²⁶

D. PHARMACIES

1. CHAIN

A pharmacy chain refers to a third-party entity that engages in a retail business and that owns or operates multiple retail outlets at which an individual consumer may have a prescription drug order filled. The pharmacy retail outlet may also provide services that include providing immunizations, performing health screenings, testing at point-of-care, and providing medication counseling.²⁷

2. INDEPENDENT

²⁵ *Id.*

²⁶ *Id.*

²⁷ Wisconsin’s “Report of the Governor’s Task Force on Reducing Prescription Drug Prices, p. 20; “A Tangled Web” generally at p. 39-40.

Independent pharmacies refer to pharmacies that are privately and independently owned and operated by one or more pharmacists, and whose primary function is to provide direct pharmaceutical care to patients. These services include dispensing drugs, providing immunizations, performing health screenings, testing at point-of-care, and providing medication counseling in the community setting.²⁸

E. PHARMACISTS

The basic duty of a community pharmacist is to assess the safety and efficacy of prescriptions from physicians and other authorized prescribers before dispensing the medication to the patients to ensure that the patients do not receive the wrong drugs or take an incorrect dose of medicine. Pharmacists also provide counseling on the use of prescriptions. In addition to the medication expertise pharmacists contribute during the dispensing process, pharmacists also provide numerous patient care services to their patients to optimize the safe and effective use of medications, increase access to acute and preventative care, and work collaboratively with other members of the healthcare team to assist patients in reaching their therapeutic goals.

F. PHARMACY SERVICES ADMINISTRATIVE ORGANIZATIONS (PSAOs)

Pharmacy Services Administrative Organizations (PSAOs) are organizations that provide administrative services to independent pharmacies to support the evaluation and execution of a contract with PBMs or wholesalers.²⁹ In the majority of cases, an independent pharmacy's contract is with the PSAO, rather than with the PBM directly. The PSAO overall administrative function is to assist with contract evaluation and execution, customer service, central payment and reconciliation, and patient data evaluation.³⁰ In many instances a PSAO is owned by a wholesaler.³¹

G. WHOLESALERS/DISTRIBUTORS

Wholesalers purchase drugs from manufacturers, store those drugs, and then sell and distribute them to pharmacies, hospitals, provider offices and mail-order pharmacies. About 92 percent of prescription drugs in the United States are distributed through wholesalers, with three companies accounting for more than 90 percent of wholesale drug distribution in the United States. Wholesalers own the largest PSAOs used by independent pharmacies.

H. INTERRELATION OF PARTIES IN THE CHAIN AND TRANSACTION COSTS

The diagram below provides a simplified illustration of the pharmaceutical distribution chain and the major entities involved that will be discussed in more detail in this section.³²

The following section outlines the basic transactions that occur between the participants in the prescription drug supply chain system. For clarity, the transactions are organized into two categories: the physical distribution of a drug and the interactions on the pharmacy benefit side.

1. Physical Drug Distribution Chain

This subsection explains interactions between participants in the physical distribution of prescription drugs.

Pharmaceutical manufacturer and wholesaler

The pharmaceutical manufacturer provides prescription drugs to the wholesaler based on negotiated prices.³³ The average negotiated price is based on the wholesale acquisition cost (WAC) price set by the manufacturer.³⁴

Wholesaler and pharmacy

The wholesaler sells their drugs to a pharmacy in an amount based on the WAC.³⁵ There are additional savings that can be achieved via volume rebates, functional rebates, bundle rebates, prompt pay discounts, free goods, marketing funds, and trade show discounts/rebates. The average wholesale price (AWP) is an estimate of the

price wholesalers charge for drugs.³⁶ The National Average Drug Acquisition Cost (NADAC) is a federal Centers for Medicare and Medicaid Services (CMS)-calculated value that also attempts to capture the average price wholesalers charge to pharmacies.³⁷

Pharmacy and consumer

The pharmacy provides drugs directly to the consumer and collects certain cost sharing that may include co-pays or co-insurance.

2. Pharmacy Benefit Management Chain

This subsection explains interactions between participants in the administration of the pharmacy benefit plan.

Pharmaceutical manufacturer and PBM

The PBM negotiates rebates with the pharmaceutical manufacturers, and rebates are typically based on volume. PBMs can offer manufacturers higher volume, and thus command higher rebates, by putting a manufacturer's drug on the PBM's formulary and/or in a formulary's less expensive cost sharing tier.³⁸ Rebates create a market dynamic that may force up the "list" price of drugs by increasing the potential to generate "spread" profit.³⁹

Pharmaceutical Manufacturer and consumer

Pharmaceutical manufacturers can offer coupons or occasionally free samples of medications to consumers. The coupons can reduce a consumer's cost sharing below what they would have paid had they used their pharmacy benefit plan.⁴⁰

PBM and PSAO

The PSAO assists the pharmacy in negotiating with the PBMs for reimbursement rates.⁴¹ Most reimbursement rates are set based on a percentage of AWP and are applicable to all drugs based on brand or specialty status and are not negotiated on an individual drug basis.⁴²

Pharmacy and PBM

The pharmacy negotiates with the PBM to determine a reimbursement rate for the drugs they dispense.⁴³ Pharmacies typically negotiate as a chain in the case of chain pharmacies or through a PSAO. Like the PBM/PSAO relationship, negotiations are based on AWP less a percentage and apply to all drugs.⁴⁴ In addition, PBMs negotiate a dispensing fee with the pharmacies. Actual Acquisition Cost (AAC) is the final price a pharmacy pays after all discounts have been subtracted.⁴⁵

⁴⁵ Horvath.

PBMs and Payors

A PBM may perform a number of services on behalf of its payor clients: negotiate rebates with the manufacturer, negotiate with pharmacies, and may develop the formulary on behalf of the payor, the plan sponsor or the insurer, or sell the payor a pre-determined formulary. PBMs also offer payors medical management/utilization review and disease management services.⁴⁶

PBMs are paid by the payor through an administrative fee or through a spread-pricing calculation, as specified in the contract. For payment on an administrative fee basis, the payor will pay the PBM an administrative fee, which can be in the form of a retainer, a per claim fee, or other similar arrangement. With spread pricing, also known as a risk mitigation pricing model, the payor will either not pay or pay a reduced administration fee and the PBM will retain certain risk related to the difference between the price paid by the customer and the price paid to the pharmacy. This arrangement provides the payor with the assurance of a set price.⁴⁷ Payors have the ability to choose either option in its contract with the PBM. Payors report the amount paid to PBMs for their services (including retained rebates and concessions) as administrative cost on their annual Medical Loss Ratio filings. The amount of rebates the payors receive is deducted from their claims paid.⁴⁸

With this complex pharmaceutical drug ecosystem as a backdrop, state legislatures around the country have enacted various state laws to promote greater transparency of the actions taking place and put in place specific requirements around the activities of those in the ecosystem. State laws and enforcement mechanisms have at times encountered federal pre-emption issues. Those issues are further detailed in the sections that follow.

III. ENFORCEMENT AND FEDERAL PREEMPTION ISSUES

In general, states have wide leeway to regulate PBMs serving health benefit plans in the individual market, small group market, fully insured large group market, and Medicaid. Under recent U.S. Supreme Court precedent, states also have significant authority to regulate costs for PBMs serving self-insured federal Employee Retirement Income Security Act of 1974 (ERISA) plans, though the legal boundaries of this preemption continue to be tested. It remains unclear how much authority states may exercise over PBM pharmacy networks and other elements of PBM administration. State authority to regulate PBMs serving Medicare Part D plans is limited to areas where the federal government has not established related standards.

This section will discuss the scope of federal preemption of state laws regulating PBMs under ERISA, Medicare Part D, and Medicaid, including the implications of recent and ongoing litigation.

A. ERISA: (SELF-INSURED AND FULLY INSURED)

⁴⁶ Horvath; Wisconsin's "Report of the Governor's Task Force on Reducing Prescription Drug Prices, p. 21.

⁴⁷ Horvath.

⁴⁸ 2 CMS Medical Loss Ratio (MLR) Annual Reporting Form Filing Instructions for the 2021 MLR Reporting Year. <https://www.cms.gov/files/document/2021-mlr-form-instructions.pdf>

ERISA governs all health benefit plans established by private-sector employers and certain employee organizations, such as unions.⁴⁹ ERISA's preemption clause, section 514, preempts all state laws to the extent that they "relate to" employer-sponsored health plans.⁵⁰ However, states are still permitted to maintain regulation of "the business of insurance" including for ERISA plans.⁵¹ This generally allows the states to regulate insurance carriers operating traditional insurance business, including regulation of plan design, solvency, and capital requirements for insurance companies.

However, ERISA explicitly prohibits states from regulating self-insured health plans where an employer bears the primary risk of claims and an insurer acts solely in an administrative capacity without bearing any risk.⁵² Under current federal court precedent, this effectively divides the large-group market into "fully insured" plans that are generally subject to state insurance law, and "self-insured" plans that are generally exempt from state insurance regulation.

Over the last 30 years, the U.S. Supreme Court has issued a series of opinions that narrow the scope of ERISA's preemption language. The most recent case, *Rutledge v. Pharmaceutical Care Management Association (PCMA)*,⁵³ decided in 2020, held that an Arkansas law (Act 900) requiring PBMs to reimburse pharmacies at a price equal to or greater than a pharmacy's wholesale cost was not preempted by ERISA. This suggests that states can regulate the conduct of PBMs that serve both fully insured and self-insured employer plans, to at least the same extent as the Arkansas law.

In *Rutledge*, the U.S. Supreme Court affirmed a legal standard stated in a prior decision, *Gobeille v. Liberty Mutual Insurance Company*.⁵⁴ To determine whether a state law has an impermissible connection with an ERISA plan, the Court asks whether the law "governs a central matter of plan administration or interferes with nationally uniform plan administration." In particular, a state law that "merely affects costs" will not be preempted, even where a cost regulation creates a significant economic incentive for a plan administrator, so long as it does not "force" a plan to adopt a certain "scheme of substantive coverage."⁵⁵

Taken together, this suggests that a state law comparable to Arkansas's Act 900 will not be preempted by ERISA, even if it applies to self-insured plans. The features of Act 900 upheld by *Rutledge* are as follows:

- (1) Requires PBMs to reimburse a pharmacy at a price equal to or greater than what the pharmacy paid to buy the drug from a wholesaler;
- (2) Requires PBMs to increase their reimbursement rate to cover a pharmacy's acquisition cost if that pharmacy is unable to acquire the drug at a lower price from a typical pharmaceutical wholesaler;

⁴⁹ Furrow, et al., "Health Law" Third Ed. (2014), p. 325-27.

⁵⁰ *Id.* at 328.

⁵¹ See, e.g., Furrow generally at p. 328-330.

⁵² *Id.* at 328.

⁵³ *Rutledge v. Pharmaceutical Care Management Association*, 141 S.Ct. 474 (2020).

⁵⁴ *Gobeille v. Liberty Mutual Insurance Company*, 577 US 312 (2016).

⁵⁵ *New York State Conference of Blue Cross & Blue Shield Plans v. Travelers Ins. Co.*, 514 US 645 (1995). The Court found that a 13% surcharge that applied to all insurers other than Blue Cross / Blue Shield was not preempted by ERISA, despite creating a significant incentive for self-insured employers to choose Blue Cross / Blue Shield over other carriers. Since the law did not "force" plan administrators to make a particular choice, it was allowed by the court.

- (3) Requires PBMs to timely update their Maximum Allowable Cost (MAC) lists when drug wholesale prices increase;
- (4) Requires PBMs to provide an administrative appeals procedure for pharmacies to challenge MAC reimbursement that is below a pharmacy's acquisition cost;
- (5) Requires PBMs to permit a pharmacy to "reverse and rebill" any reimbursement claim affected by the pharmacy's inability to acquire the drug at a price equal to or less than a PBM's MAC reimbursement price;
- (6) Permits a pharmacy to decline to sell a drug to covered beneficiary if the relevant PBM will reimburse the pharmacy for less than the pharmacy's acquisition cost.

The PCMA argued that the enforcement mechanisms of the Arkansas law impermissibly interfere with ERISA plan management. The U.S. Supreme Court rejected this argument, noting that if taken to the extreme, the PCMA's proposed interpretation would preempt all state law mechanisms for resolving insurance payment disputes. However, beyond allowing Arkansas Act 900 to go into effect, the Court provided little guidance regarding what is or is not a matter "central to plan administration."

In a subsequent federal district court decision, *PCMA v. Mulready*⁵⁶, the lower court relied on *Rutledge* to conclude that Oklahoma's PBM law was not preempted by ERISA (the court's additional reasoning related to Medicare preemption is discussed below). The statute at issue in *Mulready* regulates both the network status of particular pharmacies as well as the conditions under which a PBM may reimburse for prescriptions, which the PCMA argued goes significantly beyond "mere cost regulation." However, the PCMA has appealed the *Mulready* decision, and it remains unclear whether the appeals court or other courts will follow its reasoning.

Another important aspect of the law at issue in *Rutledge* is that it is not applied exclusively to or even expressly to ERISA plans. Rather, it applies to PBMs whether or not they manage ERISA plans. Under prior U.S. Supreme Court precedent, a law may be preempted by ERISA if it "acts immediately and exclusively upon ERISA plans or where the existence of ERISA plans is essential to the law's operation."⁵⁷

Under the precedent of *Rutledge*, it seems clear that states have some leeway to regulate PBMs without concern for ERISA preemption. A law that distinguishes between ERISA and non-ERISA plans would be more likely to be preempted, particularly if it places a higher burden on ERISA plans than for other markets. A law that mandates particular pharmaceutical coverage, such as requiring reimbursement for a specific drug or diagnosis, would likewise be preempted as regulating plan design. In contrast, a law that applies to PBMs regardless of market segment that merely regulates cost, similar to the Arkansas statute, would likely be upheld. Lesser regulations, such as transparency programs, are also unlikely to be preempted under ERISA.

B. MEDICARE PART D

Medicare Part D is an optional, federally supported prescription drug benefit available to Americans over the age of 65. The program's authorizing legislation incorporates the federal preemption language from the

⁵⁶ *Pharmaceutical Care Management Association v. Mulready*, 598 F.Supp.3d 1200 (2022).

⁵⁷ *Rutledge*, at 6.

Medicare Part C, or “Medicare Advantage (MA)” program, which provides: “the standards established under this part shall supersede any state law or regulation (other than state licensing laws or state laws relating to plan solvency) with respect to MA plans which are offered by MA organizations under this part.”⁵⁸

In general, courts have found that state laws are preempted under Medicare Part D where Congress or the CMS have established “standards” for the area regulated by said state laws. This means that the authority of states to regulate MA or Medicare Part D plans is significantly limited, though states explicitly retain the authority to regulate plan solvency. The Medicare Managed Care Manual indicates that state law should only be preempted where it would be impossible for a carrier to comply with both state and federal standards – a state standard that is stricter than the Medicare standard should not be preempted. However, courts have held that standards set by the CMS do not necessarily need to conflict with the provisions of state law for preemption to hold.

In *Mulready v. PCMA*, the federal district court ruled that many provisions of Oklahoma’s PBM statute were preempted with respect to Medicare Part D plans (the preceding section discussed the same court’s reasoning with respect to ERISA plans).⁵⁹

In its review of the statute at issue, the *Mulready* court found that several provisions of Oklahoma’s law were preempted by Medicare Part D. This included multiple elements of the law related to pharmacy reimbursement, including a ban on PBM service fees, a ban on PBMs reimbursing affiliated pharmacies at higher rates, and a ban on PBMs reducing pharmacy reimbursement after completion of a sale. Part D prohibits interference with negotiation between insurers and pharmacies, and Part D defines “negotiated price” by reference to the negotiations.⁶⁰ Accordingly, the district court agreed with the PCMA that these aspects of the state law were barred with respect to PBMs serving Medicare Part D plans as an impermissible interference in the price negotiations between PBMs, as the agents of Medicare Part D carriers, and pharmacies.⁶¹

The district court also ruled that Oklahoma’s retail-only pharmacy access standard was preempted because the CMS has established standards regulating convenient access to network pharmacies.

However, the district court held that the remaining provisions of the Oklahoma law challenged by the PCMA were not preempted by Medicare Part D.⁶² This includes the law’s requirements for preferred pharmacy networks, including the law’s any willing provider provision, affiliated pharmacy prohibition, and network provider restriction. The district court reasoned that while the CMS has promulgated a standard with respect to standard networks, there is no federal standard in place for preferred networks. Since all the relevant provisions of Oklahoma law apply only to preferred network status, the district court ruled there was no applicable standard in place that would preempt Oklahoma’s law.

Finally, the district court rejected the PCMA’s challenge to Oklahoma’s contract approval provisions.⁶³ Under the Oklahoma statute, insurers who utilize the services of PBMs are required to approve all contracts between the PBM and the PBMs retail pharmacy network. In this instance, the PCMA again pointed to Medicare Part D’s ban on interference in contract negotiations. However, the district court reasoned that Medicare Part D’s bar applies only to negotiations between plan sponsors and PBMs, while Oklahoma’s law regulates negotiations between

PBMs and pharmacies. Accordingly, the district court concluded that the contract approval provisions of Oklahoma’s law are not preempted by Medicare Part D.

The PCMA has appealed the district court’s decision. It is unknown whether the 10th Circuit or other courts will follow the same reasoning with respect to the scope of Medicare Part D preemption of state PBM laws.

C. MEDICAID

Medicaid is a program that provides health benefits to certain low-income Americans and is jointly funded by the federal government and state governments.⁶⁴ It is structured very differently from either Medicare Part D or ERISA. Both Medicare and ERISA were set up with the intent of establishing uniformity of implementation nationwide – making preemption of state laws that conflict with the federal plan an important element of the program’s structure. Medicaid, however, is structured as a federal-state partnership and its implementation varies significantly from state to state. This means that the states have broad leeway to regulate PBMs serving Medicaid carriers, if those regulations do not come into conflict with the state’s Medicaid structure.

Each state implements Medicaid pursuant to a Medicaid plan submitted by the state and approved by the CMS.⁶⁵ Any changes a state makes to Medicaid implementation must also be approved by the CMS via a plan amendment process.⁶⁶ In some cases, states may also receive a waiver from certain terms of the Medicaid provisions in the Medicare and Medicaid Act (herein referred to as the Medicaid Act) under Section 1115 of the Social Security Act. So long as the PBM regulation is consistent with the terms of the state’s current Medicaid plan, it should be safe from federal preemption.

However, state laws that conflict with the terms of the Medicaid Act can still be theoretically preempted under the Supremacy Clause of the U.S. Constitution. Unlike Medicare Part D and ERISA, the Medicaid Act does not include any preemption language that goes beyond common law interpretation of the Supremacy Clause. Under common law, a state law will generally be preempted only if it is impossible for a regulated entity to comply with both the state and the federal statute. However, jurisprudence specifically related to Medicaid preemption is extremely limited, making definitive analysis difficult.

In many states, the state Medicaid agency contracts with one or more managed care organizations (MCOs) to administer all or a part of the state’s Medicaid program, including the management of the pharmacy program through the MCO’s contracted PBM. Some states also contract with PBMs directly to administer the pharmacy benefit, either in conjunction with or separate from an MCO. In other cases, the state Medicaid agency manages the Medicaid pharmacy program on its own.

To address rising costs, Congress passed legislation enacting the Medicaid Drug Rebate Program in 1990. Under this program, pharmaceutical manufacturers sign a master rebate agreement with the CMS, which administers the Medicaid program at the federal level. These rebates result in prescription drug cost savings that are paid for under the Medicaid program and are shared by both the state Medicaid agency and the CMS. State Medicaid programs are required to provide a pathway to coverage for any drug whose manufacturer has signed a rebate agreement with the CMS. Therefore, state Medicaid programs lack the flexibility that private insurers have to implement strict formularies to control prescription drug spending. Instead, state Medicaid programs are allowed to negotiate additional “supplemental rebates” with pharmaceutical manufacturers individually, and to

⁶⁴ See, e.g., Furrow generally at p. 460-462.

⁶⁵ Furrow at p. 490-492.

⁶⁶ *Id.*

develop preferred drug lists in consultation with state Drug Utilization Review (DUR) Boards and Pharmacy and Therapeutics (P&T) Committees.

In summary, Medicaid preemption should not be a significant concern for states looking to regulate PBMs that serve Medicaid MCOs or other Medicaid carriers. However, states should ensure that any changes to PBM regulation in the Medicaid space are consistent with the state's Medicaid plan or seek an appropriate plan amendment if they are not.

IV. FUNCTIONAL ISSUES

As the national conversation has evolved, most of the direct regulation has involved the practices of PBMs. As such, the most robust bodies of law and descriptions of practices have focused on PBM activities. Several functional issues within this ecosystem have been identified by state regulators as central to the ultimate pricing consumers pay or as having other significant marketplace impacts. Those functional issues are discussed in the sections that follow.

A. FORMULARY DESIGN

PBMs implement formularies or lists of covered drugs⁶⁷. PBMs' customers – payors, such as insurers or self-funded employer plans, may request open formularies, develop their own formularies, or purchase formularies from PBMs. Even closed formularies typically require coverage for at least one drug per therapeutic class.

For PBM developed formularies, PBMs employ panels of experts called Pharmacy and Therapeutics (P&T) Committees. These committees, made up of independent physicians, pharmacists, and other health care providers, evaluate clinical and medical literature to select the most appropriate medications for individual disease states and conditions.⁶⁸ The federal Affordable Care Act (ACA) introduced federal regulations on P&T Committees serving qualified health plans (QHPs).

P&T Committees typically reviews drugs to identify those that are required (preferred), unacceptable and acceptable based on medical standards. The category of those that are determined acceptable is where there is leeway on the PBM's part to determine formulary inclusion.⁶⁹

PBMs review acceptable drugs that have been determined "clinically equivalent" and negotiate for the highest rebate and include these drugs in the formulary. PBMs negotiate drug costs with pharmaceutical manufacturers across the board for all customers using their volume of scale and then work with individual customers to create formularies.

Formularies provide lists of pharmaceutical drugs covered by payors and can be differentiated between preferred or discouraged products by dividing into three to five "tiers," each with a separate level of cost sharing.⁷⁰ By placing a drug in a preferred tier, PBMs can drive volume to that drug's manufacturer. This is an

<https://dfr.oregon.gov/drugtransparency/Documents/Prescription-Drug-Price-Transparency-Annual-Report-2019.pdf>.

effective way for PBMs to generate rebates for either multi-source brands or competing brands in a therapeutic class.

Since formularies are essentially coverage decisions, a PBM's step-therapy protocol may be viewed as part of its formulary. Step-therapy, a utilization management tool, requires a patient to try a particular drug before another drug is covered. PBMs may shift drugs between tiers or add or remove them from the formulary entirely during a plan year, another utilization management practice which is known as "non-medical switching."⁷¹

B. REBATES

The negotiation between a pharmaceutical manufacturer and PBM may result in a rebate. The rebate flows back to the PBM from the manufacturer usually based on the volume of prescriptions generated by the placement of the manufacturer's drug on the PBM's formulary. The PBM may pass the rebate on to the plan sponsor according to their shared contract, which may allow the PBM to keep a percentage of the rebate; however, it is possible the PBM keeps the entire rebate with no direct benefit to the plan sponsor or the consumer.⁷²

Rebates are mostly used on brand-name and specialty drugs where similar competing drugs from other manufacturers exist. From a manufacturer's perspective, the rebate is a tool to incentivize PBMs to place the manufacturer's drugs on formularies within preferred tiers.⁷³ PBMs negotiate based on their volume of scale to obtain highest rebate for selected drugs.⁷⁴ From the PBM's perspective, a large rebate results in a smaller amount spent by their customers and more income for the PBM from proportional pass-through contracts.⁷⁵

Rebates are negotiated separately with each plan sponsor and can take different forms in how they are passed along:⁷⁶

- 100 percent pass-through – The PBM passes 100 percent of the rebate back to the plan sponsor. Most customers prefer this method.
- Proportional pass-through – The PBM keeps a percentage of the rebate and passes the remainder back to the plan sponsor.
- At Risk – The PBM keeps 100 percent of the rebate but guarantees a certain level of rebate to the customer. In this instance the PBM is "at risk" for the difference between the guarantee and actual rebates received. In exchange, this option provides cost predictability to the customer.

The existence of rebates alone is not a problem. However, the PBM's ability to retain a percentage of the rebate creates a concern as they are also commonly in charge of formulary design. These two factors give PBMs a financial incentive to prioritize drugs in the formulary based on the highest rebate instead of the lowest total

⁷¹ See, e.g., National Conference of State Legislatures Glossary at: <https://www.ncsl.org/health/state-policy-options-and-pharmacy-benefit-managers#anchor16752>.

⁷⁵ *Id.*

⁷⁶ *Id.*

cost to the plan sponsor or consumer.⁷⁷ This could result in plan sponsors and consumers paying a higher cost for prescription drugs than is necessary, resulting in higher prescription drug coverage costs.

Approaches to curb the negative effects of rebates include:

- **Rebate retention prohibitions:** As part of their PBM laws, some states have enacted a provision stating that a PBM must pass through 100 percent of a pharmaceutical manufacturer rebate to a plan sponsor.⁷⁸
- **Rebates at point-of-sale (POS):** Some believe that rebates should be provided directly to consumers at POS to reduce deductibles or co-insurance amounts owed when the drug is purchased. As a result, these funds would no longer be used to offset the plan sponsor costs and could result in higher premiums for all members. Additionally, members with low or no prescription drug usage might experience a disproportional impact as they would be paying higher premiums and would not have a financial benefit from the POS rebates. Some insurers have indicated that passing the rebates to the consumer at POS would have a dramatic enough effect on drug adherence that it would cover the potential benefit of using the rebates against premiums and result in no additional premium cost.⁷⁹
- **Elimination of rebates:** Some have recently called for the elimination of rebates to provide more price transparency within the system. While the elimination of rebates might serve to achieve this, it could also cause a major disruption in current market conditions. In the short term, eliminating rebates without corresponding legislation to lower pharmaceutical manufacturer prices could lead to increasing the cost of drugs to PBMs, plan sponsors and ultimately consumers. In the longer term, eliminating rebates could lead to increased transparency in price competition between manufacturers of similar drugs as price setting would no longer happen in a private contractual setting with a PBM.⁸⁰

C. PRICING AND CONTRACTING PRACTICES

PBMs negotiate with pharmaceutical manufacturers, health plans, and pharmacies. PBMs may also be affiliated with a health plan and a pharmacy. In particular, the unique market position and negotiating power of PBMs enables them to engage in contracting practices that may be detrimental to consumers and other market participants.⁸¹ A variety of pricing and contracting practices are used by PBMs and have received scrutiny from regulators. Several of these practices are described below:

- **Gag clauses:** The term “gag clause” refers to a stipulation in a pharmacy benefit contract that prohibits a pharmacy or pharmacist from informing consumers of an alternative option when purchasing a drug. For instance, a gag clause may prohibit a pharmacist from telling a consumer about a generic version of a prescription drug or if a prescription drug can be purchased at a lower price out-of-pocket rather than through their insurance plan.⁸²
- **Mandatory arbitration clause:** Most PBMs require that disputes be submitted to binding arbitration by including a mandatory arbitration provision in their pharmacy contracts. Some believe mandatory

arbitration limits legal recourse for individual pharmacies and results in pharmacies foregoing potentially successful audit challenges.⁸³

- Copay clawbacks: A copay clawback is the PBM practice of taking back from a pharmacy the difference between a patient's copay and the actual cost of the medication when the patient's copay is larger than the cost of the drug.⁸⁴
- MAC transparency: A maximum allowable cost (MAC) list is a list that includes the maximum amount that a plan will pay for certain drugs.⁸⁵ MAC lists are often generated by the PBM. There is no standardization in the industry as to the criteria for the inclusion of drugs on MAC lists or for the methodology as to how the maximum price is determined, changed or updated. PBMs may sometimes use multiple MAC lists and pocketing the spread between the two. For example, PBMs might use a very low MAC list to reimburse pharmacies but a higher list when charging plan sponsors.⁸⁶
- Rebates: Rebates may provide incentive for a PBM to eliminate a less expensive, comparable medication from a formulary. Pharmaceutical manufacturers claim that these rebates are meant to be shared with plan sponsors or passed on to consumers in the form of lower drug prices. However, PBMs regularly keep a share of the rebates before passing the rest through to the plan sponsor.⁸⁷
- Spread pricing: Spread pricing is the practice of a PBM charging a plan sponsor a higher amount for a drug than they will reimburse the pharmacy and pocketing the difference. Pharmacy pricing is complex, and the process is not transparent. Plan sponsors are often unaware of the difference between the amount they are billed and the pharmacy reimbursement.⁸⁸
- Pharmacy audit: PBMs routinely audit pharmacies to validate data entry, ensure compliance with regulatory and contractual requirements, and to help identify and mitigate fraud, waste, and abuse of a prescription drug benefit. However, many pharmacists have stated that the audits are unfair and may result in stiff penalties and fees.
- Retroactive fees: PBMs engage in retroactive claim reviews, meaning they review a claim after it has been adjudicated. A retroactive claim review may result in a denial of a claim or a reduction in reimbursement after payment for the claim has been authorized.

Each of these practices has been addressed by one or more state laws around the country; however, the scope and method of regulation has varied by those states. More details are provided in the state-specific sections below.

D. VERTICAL INTEGRATION AND CONSOLIDATION

In business and economics, vertical integration means the combination in one company of at least two stages of production normally performed by separate companies. For example, an entity that manufactures a product may also be affiliated with a wholesale distributor and a retail store through common ownership.⁸⁹ The entities

⁸³ Oestreicher.

⁸⁷ Horvath.

⁸⁸ Oestreicher.

⁸⁹ Sood.

at the various levels of the integrated enterprise may deal exclusively with the parent company's goods or services or may offer non-integrated products or services.⁹⁰

The three largest PBMs are each affiliated with a health plan and a pharmacy, so the parent company owns or controls up to three stages of the drug supply chain.⁹¹ Some PBMs are also affiliated with health care providers, such as retail clinic services. Thus, one entity controls the diagnosis of a condition, the retail sale of a prescribed drug to the patient, the distribution of the drug from manufacturer to retail pharmacy, and the insurance payment to the pharmacy, including determination of the patient's cost-sharing amounts.

In theory, vertical integration allows a company to synergize operations between stages of production and pass the savings from smaller transaction costs to their customers. However, vertical integration can also be a contributing factor in the monopolization of markets due to market foreclosure, where the merger or acquisition of a stage of production denies competing businesses access to that firm's business.⁹²

Consolidation refers to the merger and acquisition of many smaller companies resulting in a few much larger companies. The benefit of consolidation is that a larger firm may be able to realize efficiencies of scale and pass the resulting cost savings to consumers. The downside of consolidation is that costs tend to rise when there are fewer existing firms around to compete on prices and the few remaining firms price their products to maximize profit.⁹³ Along with vertical integration, consolidation in the pharmacy benefit supply chain has led to current market conditions, which feature the three largest PBMs covering 79 percent of prescription drug claims.⁹⁴ Further, independent pharmacies are put at a competitive disadvantage compared to PBM-affiliated pharmacies when it comes to contracting.

The proliferation of PBM-health insurer affiliations has resulted in inefficiencies in the market.⁹⁵ From the health insurer's perspective, an affiliation with a PBM is incredibly valuable for two reasons: lower costs for pharmacy benefit services and exclusive or priority access to the PBM. From a market perspective, a PBM-health insurer relationship results in lower market competition, dealings within affiliated businesses and possible anti-competitive practices.⁹⁶ The three largest PBMs are all affiliated with health insurers, so other large health insurers not affiliated with a PBM are no longer able to find a PBM that operates on their scale that is not affiliated with a competitor.

A PBM-pharmacy affiliation creates several incentives for PBMs to act against the best interests of the consumer. PBMs have been found inserting language into pharmacy benefit contracts that requires enrollees to use PBM-owned mail pharmacy services for long-term (90 days or longer) "maintenance" medications.⁹⁷ This contractual requirement effectively eliminates any competition to fill these prescriptions, allowing the pharmacy to charge higher prices to the consumer. An affiliation with a pharmacy may also incentivize a PBM to do the following, which are all contrary to the best interests of consumers:

- Perform fewer generic substitutions;

⁹⁶ *Id.*

⁹⁷ "A Tangled Web," p. 42-43.

- Switch patients to higher-cost therapeutic alternatives (“therapeutic interchange”); or,
- Repackage drugs in a manner that could lead to increased costs to plan sponsors, while maximizing revenue for the PBM (“package size pricing”).

E. PHARMACY NETWORK ADEQUACY

A pharmacy network is a list of pharmacies or pharmacists that a health plan or PBM has contracted with to provide prescription drug services to their members.⁹⁸ Pharmacy network adequacy is often defined as the distance between a patient’s residence and where services can be physically accessed.

Pharmacy access is an integral component of the standards established under section 1860D-4(b)(1)(C) of the federal Medicare Modernization Act of 2003. The standards require in part that each sponsor secure the participation in their pharmacy networks of a sufficient number of pharmacies to dispense drugs directly to patients (other than by mail order) to ensure convenient access to covered drugs by plan enrollees. Several states have since followed suit, defining acceptable pharmacy network adequacy standards for network participation with respect to various regions of their states and across all health plan types. Pharmacy network adequacy provisions effectively prohibit a PBM from deciding to contract with a narrow pharmacy network, potentially limiting member access to prescription drugs.

Some states specify that mail order pharmacies cannot be used to determine compliance with pharmacy network adequacy standards, while others specify that a network must have a mix of both retail and mail order pharmacies. Standards can be established by time and distance standards relative to the state as a whole, or to counties, or zip codes. In determining whether a PBM complies with access requirements, states review and consider the relative availability of physical pharmacies in a geographic service area.⁹⁹ Common pharmacy network adequacy requirements include:

- Defining what is a reasonably adequate retail pharmacy network;
- Making clear that mail-order pharmacies cannot be used to meet access standards;
- Requiring pharmacy networks to consist of both retail and mail order pharmacies in a specific geographic service area;
- Requiring ongoing monitoring of a PBM’s capacity to furnish services;
- Network accessibility reporting requirements;
- A current, accurate, and searchable directory of pharmacies; and
- Requiring a minimum of at least one pharmacy per county, zip code, or other specifically defined service area.

About 35 percent of the states have some type of legislation that addresses PBM’s placing heightened accreditation requirements upon pharmacies seeking to join the PBM’s networks.¹⁰⁰ When this is the case, common legislative elements include prohibiting PBMs from imposing provider accreditation standards or certification requirements inconsistent with, or more stringent than the requirements of the state board of pharmacy or other state/federal agencies. Typically, the PBM must apply standards without regard to PBM

⁹⁸ Horvath; National Conference of State Legislatures Glossary of PBM terms, available at: [State Policy Options and Pharmacy Benefit Managers \(ncsl.org\)](https://www.ncsl.org/state-policy/state-policy-options-and-pharmacy-benefit-managers).

⁹⁹ National Conference of State Legislatures Glossary of PBM terms, available at: [State Policy Options and Pharmacy Benefit Managers \(ncsl.org\)](https://www.ncsl.org/state-policy/state-policy-options-and-pharmacy-benefit-managers).

¹⁰⁰ See generally, PBM Law Compilations, available at: https://content.naic.org/cmte_b_pharmacy_bmri_sg.htm.

affiliation and may not change the standards more than once every 12 months. The last common element is requiring PBMs to provide written disclosures upon request.

Commonly, PBMs, or the health plans they contract with, require members to have their prescriptions filled *only* at pharmacies with which the PBM, or the health plan, is affiliated or has an ownership interest in. This is considered “steering,” and is sometimes prohibited by state law.¹⁰¹ Sometimes PBMs will even mine members’ health data in an attempt to steer them to the PBM’s affiliated pharmacies. This practice has become more popular as the number of health insurance companies that own PBMs has increased. Steering can limit a member’s choice, increase costs, and lower quality of care to members.

Anti-steering state legislation typically prohibits PBMs from requiring drugs to be dispensed from specific contracted or affiliated pharmacies and prohibits PBMs from assessing additional fees when a prescription is filled by an in-network contracted pharmacy, but which is not specifically authorized by the PBM to fill certain types of prescriptions as a “specialty pharmacy.” This occurs even when a pharmacy may otherwise have the credentials to do so, such as when it is a compounding pharmacy.

Such anti-steering legislation can have a major impact. It has been reported that even though less than 2 percent of the population uses specialty drugs, those prescriptions account for a staggering 51 percent of total pharmacy spending. This is a rapidly increasing trend. At a member level, plan sponsors see an average annual cost of \$38,000 to cover a specialty patient’s drugs, compared to just \$492 for the coverage of a non-specialty patient’s drugs. That is 75 times more to cover a specialty patient over the course of a year.¹⁰²

These types of practices can result in harm, including increasing drug prices, overcharging members, restricting a member’s choice of pharmacies, underpaying community pharmacies and other dispensers, and fragmenting and creating barriers to care, particularly in rural areas, and for members battling life-threatening illnesses and chronic diseases.

F. LICENSING OF DIFFERENT ENTITIES INVOLVED IN THE DISTRIBUTION/SUPPLY CHAIN

Even though PBMs are engaged in interstate commerce and are not purely in the business of insurance, the trade practices described herein have largely eluded federal regulatory oversight. Many states have enacted licensing schemes to regulate PBMs in the absence of federal oversight. These licensing schemes usually place PBMs under the regulatory authority of a state’s insurance department. Most states have gone about this in two ways: 1) regulating PBMs under a third-party administrator (TPA) law; or 2) establishing a standalone license for PBMs. The various licensing laws address some of the issues herein through prohibition of certain behaviors, requiring transparency in business practices, or by requiring disclosures by the PBM.

Based on the conversations of the NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, a standalone PBM license is generally preferred among regulators. Anything less than licensure, including a registration requirement, is considered to lack significant enforcement mechanisms.

¹⁰¹ Sood.

¹⁰² See Evernorth Health Services, “What is Drug Trend and How to Manage It” last accessed February 27, 2023, available at: <https://www.evernorth.com/articles/specialty-drug-trends-and-utilization>.

Other key players that are licensed in the distribution and supply chain are described in this section. The level of regulation imposed on other players in the supply chain demonstrates the uniquely minimal level of oversight PBMs have experienced and continue to experience in many jurisdictions.

1. Health insurers

Commercial health insurers are subject to federal and state oversight. Insurers providing fully insured employer or group plans and individual market coverage are regulated by states.¹⁰³ Self-insured health plans sponsored by employers or unions are subject to federal oversight pursuant to ERISA, although the *Rutledge v. PCMA* case does seemingly allow state regulation of certain PBM activities performed for ERISA plans.

2. Wholesalers

All 50 states and the District of Columbia require a wholesaler to be licensed. The structure of the statutes vary but all of the statutes incorporate federal regulation language. There are several federal regulations that establish the minimal licensing requirements for drug wholesalers in the states. Every wholesale distributor in a state must be licensed by the state licensing authority, and the state must require that personnel employed by distributors have the appropriate education and/or experience for the position that person is hired for.

Per 21 C.F.R. § 205.6, the following factors should be considered by the states before granting a wholesaler license:

- Any convictions of the applicant under any federal, state, or local laws relating to drug samples, wholesale or retail drug distribution, or distribution of controlled substances;
- Any felony convictions of the applicant under federal, state, or local laws;
- The applicant's past experience in the manufacture or distribution of prescription drugs, including controlled substances;
- The furnishing by the applicant of false or fraudulent material in any application made in connection with pharmaceutical manufacturing or distribution;
- Suspension or revocation by federal, state, or local government of any license currently or previously held by the applicant for the manufacture or distribution of any drugs, including controlled substances;
- Compliance with licensing requirements under previously granted licenses, if any;
- Compliance with requirements to maintain and/or make available to the state licensing authority or to federal, state, or local law enforcement officials those records required under this section; and
- Any other factors or qualifications the state licensing authority considers relevant to and consistent with the public health and safety.

3. Manufacturers

Pharmaceutical manufacturers are required to be registered with the FDA within five days of starting operations (see 21 C.F.R. § 207 et seq). Applicants are required to provide standard business information as well as the list of drugs they produce as part of the application process. In addition to registering pharmaceutical manufacturers, the FDA also reviews all human drugs, including biologics, for safety, effectiveness, and quality. Each new drug has an application process; there is a licensing application for biologics. The FDA also inspects manufacturing facilities for drugs, including biologics, before drug production begins and according to their Compliance Program Guidance Manual (CPGM).

While most states require pharmaceutical manufacturers that produce or distribute drugs within their state to be licensed, states exercise little total control over pharmaceutical manufacturers. The FDA is responsible for approving new drugs and allowing for a given drug's patent protection period, which gives manufacturers a

¹⁰³ Furrow at p. 308, 314-316.

period of exclusivity before generics of that drug are allowed to be produced. Because the federal government is responsible for this function, there is little states can do about some of the life cycle management practices manufacturers engage in to extend the market exclusivity of their drugs. Pharmaceutical manufacturers commonly seek to extend their patent protection period by providing a new formulation of a drug or changing the route of administration for a drug.

4. Pharmacies

All 50 states and the District of Columbia require pharmacists to be licensed to practice within the state. To obtain a pharmacist license, states commonly require the applicant to satisfy the following criteria:

- Complete an application and pay the required fee;
- Proof of completion of a college degree in pharmacy from an approved college or other institution
- Completion of an approved internship, typically requiring between 1,000 and 1,750 hours;
- The applicant has passed the Multistate Pharmacy Jurisprudence Examination (MPJE) and the North American Pharmacist Licensure Examination (NAPLEX); and
- A fingerprint background check of some nature, normally including a criminal record search and/or production of a birth certificate and/or other vital documents.

All 50 states and the District of Columbia also require pharmacies to be licensed. Typically, the information needed for a license includes:

- Business entity information;
- The type of pharmacy (retail, hospital, sterile compounding, nuclear, etc.);
- Pharmacist-in-charge information, including license number;
- Articles of incorporation/formation;
- A list of officers and owners of the business;
- Disciplinary and criminal history for owners and officers of the pharmacy;
- A list of other licensed personnel who will operate the pharmacy, such as pharmacy technicians and pharmacist interns;
- Pharmacy hours of operation; and
- Application and license fees.

5. Pharmaceutical sales representatives (PSRs)

In comparison to other entities in the pharmaceutical supply chain, few states require pharmaceutical sales representatives (PSRs) to be licensed. PSRs have a large potential impact on the use and overuse of pharmaceutical drugs based on their interactions with prescribing health care providers.

PSR licenses generally require a pharmaceutical manufacturer to supply a list of all PSRs to the regulating entity. For licensure, the PSRs are generally required to take a professional education course that may include training ethics, pharmacology, and pharmaceutical marketing laws and rules. A licensed PSR is required to submit an annual report to the regulating entity that includes information on which health care providers they have contacted, which drugs they sold, any samples or gifts that were provided, and if the providers were compensated for their time.

In the absence of a law, the Pharmaceutical Research and Manufacturers of America (PhRMA) has instituted a Code on Interactions with Health Care Professionals.¹⁰⁴

The licensing of entities involved in the distribution/supply chain is an evolving area. Many activities performed by some of these entities may be captured by state TPA laws, although some may not be. The NAIC Pharmacy Benefit Manager Regulatory Issues (B) Subgroup continues to monitor developments in this area.

V. STATE LAWS IMPACTING THE DRUG SUPPLY CHAIN

In the last several years states have been working on legislative solutions to increase transparency and accountability for key players in the prescription drug supply chain and to increase affordability and accessibility of prescription drugs for consumers.

Over 40 states require PBMs to be licensed by or register with the state's Department of Insurance. In addition, a few states require PBMs to register as a TPA.¹⁰⁵ Based on NAIC member self-reporting, as of February 2023, states also have enacted legislation regulating certain PBM business practices. At least seven states give the state Department of Insurance (DOI) the authority to conduct PBM examinations. About eight states also have enacted legislation related to PBM pharmacy networks, including requirements related to network adequacy, prohibiting affiliate-only networks, and prohibiting PBMs from requiring consumers to use mail-order pharmacies. Numerous states have enacted laws prohibiting certain market conduct practices such as misleading advertising and solicitation. In addition, several states have enacted laws specifically prohibiting gag clauses, clawbacks, and spread pricing. Over 20 states have also enacted legislation regulating PBM pharmacy audit procedures. Rebating has also been a source of state legislation. Four states require PBMs to submit to the insurance commissioner annually or quarterly certain rebate information, including:

- 1) the aggregate amount of rebates the PBM received;
- 2) the aggregate amount distributed to the appropriate healthcare payor; and
- 3) the aggregate amount passed on the enrollees of each healthcare payor at the point of sale that reduced the enrollees' applicable deductible, copayment, coinsurance, or other cost-sharing amount.

States have also enacted legislation requiring transparency in pricing. The most common type of legislation in this area requires PBMs to make reimbursement lists, including MAC lists, or payment methodologies available to network pharmacies. About 20 states have enacted such legislation. Other types of transparency legislation include requiring PBMs to provide advance written notice of formulary changes and substitutions. In a recently enacted Florida law, prescription drug manufacturers are required to notify the Florida Department of Business and Professional Regulation of manufacturer prescription drug price increases.

A. PBM REGULATION

¹⁰⁴See PhRMA Code on Interactions with Health Professionals, last accessed February 27, 2023, available at: [PhRMA-Code---Final.pdf](#)

¹⁰⁵ <https://www.ncsl.org/health/state-policy-options-and-pharmacy-benefit-managers>.

As drug costs have risen, the influence of PBMs has expanded from its original role, growing more complex. This has prompted states to reevaluate regulations regarding licensure, reporting requirements, transparency, contract standards, health plan responsibility, spread pricing, network adequacy, and clawback issues.

Several states in the Subgroup provided summaries and key developments in their specific states. These summaries are meant to provide further detail to the updated list of laws offered by the Subgroup on the Subgroup's website.¹⁰⁶

1. Florida

Florida recently enacted new laws effective July 1, 2023, regulating prescription drug manufacturers and PBMs.¹⁰⁷ Under the new law, PBMs must obtain a certificate of authority from the Office of Insurance Regulation (OIR) by January 1, 2024. If a PBM fails to obtain a certificate of authority by that deadline but continues to operate, it will be subject to a \$10,000 fine per day.

Florida's law also regulates contracts between PBMs and pharmacy benefit plans requiring such to use a pass-through pricing model. In addition, the law prohibits PBMs from using "spread pricing" unless the difference is passed along to the pharmacy benefits plan. PBMs must also pass the entirety of all pharmaceutical manufacturer rebates received to the pharmacy benefits plan. In addition, Florida's law establishes requirements for pharmacy networks. PBMs must set up pharmacy networks that meet or exceed Medicare Part D standards for convenient access to network pharmacies. Other pharmacy network requirements prohibit PBMs from conditioning participation in one pharmacy network as a condition for participating in any other network and requiring participating pharmacies to meet accreditation standards that are more stringent than state pharmacy licensing requirements.

The Florida law also deals with contracts between PBMs and participating pharmacies, including prohibiting financial clawbacks, reconciliation offsets, and certain other types of recoupments. PBMs may no longer unilaterally change the terms of participation contracts with pharmacies. In addition, the Florida law includes gag clause provisions prohibiting PBMs from restricting pharmacists from disclosing to the consumer:

- 1) information about the nature of the treatment and possible side effects;
- 2) alternative forms of treatment;
- 3) information about any financial incentives used by the benefits program; and
- 4) information that may reduce the cost of pharmacist services.

2. New Jersey

New Jersey has a proposed bill that focuses on PBM transparency, licensing, and reporting requirements. Insurers would be required to maintain records of contracted PBMs including transaction records and

¹⁰⁶See generally, PBM Law Compilations, available at: https://content.naic.org/cmte_b_pharmacy_bmri_sg.htm.

¹⁰⁷<https://www.ausley.com/news-insights/florida-enacts-sweeping-new-legislation-regulating-pharmacy-benefit-managers>.

compensation remittance. Insurers would also be required to have P&T Committees with no conflict of interest. Additionally, they must use more than one formulary.¹⁰⁸

3. Kentucky

Kentucky State Representative Steve Sheldon proposed HB 457 during the 2022 legislative session. Although the bill did not pass, it was drafted to address the ongoing abuses from PBMs in Kentucky. Some critics have stated this bill is one of the most comprehensive pieces of PBM regulation in the U.S. The bill proposed to prohibit PBMs from the following: mandatory mail order pharmacy use, mandatory use of PBM affiliated pharmacies, limited preferred networks, patient incentives to use PBM affiliated pharmacies, spread pricing, and higher reimbursements to PBM affiliated pharmacies. The bill also contained provisions that addressed contract changes, offered 340B protections and applied to most commercial plans in Kentucky.

4. Kansas

In 2022, Kansas enacted SB 28, which transformed the state’s existing PBM registration requirements to a licensing scheme. As part of the license application, a PBM must submit a template contract, a network adequacy report, and a dispute resolution process that ultimately involves an independent fact finder between the PBM and the health insurer or the PBM and the pharmacy or pharmacy’s contracting agent. The PBM Licensure Act also made updates to the MAC appeal law, gave the Commissioner some enforcement authority, but maintained an existing exemption for PBMs that hold a TPA registration in the state.

5. Maine

In 2019, Maine enacted a comprehensive package of legislation impacting PBMs and other entities in the pharmaceutical drug supply chain.¹⁰⁹ The four laws included in this legislative package: 1) impose stricter requirements on PBMs; 2) update Maine’s drug transparency program to require more prescriptive data collection and enforcement mechanisms; 3) establish a drug affordability review board; and 4) express support for the state to pursue a wholesale drug importation program.

In looking at the requirements on PBMs, Maine’s law establishes a PBM licensure requirement. The law also includes provisions making the health insurance carrier responsible for monitoring all activities of the PBM if the carrier uses PBMs to manage their prescription drug benefits. The Maine law also stipulates that PBMs have a fiduciary duty to their insurance carriers when managing their prescription drug benefits and as such, carriers are empowered to hold PBMs accountable for their financial dealings. The Maine law requires health insurance carriers to use the prescription drug rebates that PBMs negotiate with pharmaceutical drug manufacturers to either lower health plan premiums or to reduce out-of-pocket costs for consumers when they purchase prescription drugs.

6. Oklahoma

In 2019, Oklahoma enacted HB2632, which created the Patient’s Right to Pharmacy Choice Act for the purpose of establishing uniform access to a pharmacy provider. As part of the regulatory framework, the Oklahoma Insurance Department must review retail pharmacy network access in addition to licensing PBMs and ensuring they are compliant with Oklahoma law. In addition to those provisions, the bill contains “any willing provider” language, prohibits PBMs from restricting individuals’ choice of in-network prescription drug providers and

¹⁰⁸ S.B. 220, 2022, 2022-2023 Reg. Sess. (NJ.2022). https://www.njleg.state.nj.us/bill-search/2022/S1616/bill-text?f=S2000&n=1616_11.

¹⁰⁹<https://nashp.org/maine-forges-new-ground-and-enacts-comprehensive-drug-package/#:~:text=Maine's%20new%20law%20regulating%20PBMs,carriers%20with%20whom%20PBMs%20contract>.

prohibits PBMs from taking certain actions, like incorporating “gag clauses” in their contracts with pharmacies. The bill established a fine amount of up to \$10,000 for any violation.

B. DRUG PRICE TRANSPARENCY REGULATION

The push for implementation of laws that would require PBMs to disclose drug pricing, cost information regarding rebates, payments, and their fees collected from pharmaceutical manufacturers, insurers, and pharmacies has begun in many states.¹¹⁰

1. Insurer Transparency

A number of states that require PBMs to disclose certain information about their costs also require health insurance providers to report similar prescription drug spending information to the state. Additionally, Section 204 of the transparency provisions of the Consolidated Appropriations Act of 2021 requires health plans to report information on premiums, plan medical costs, and prescription drug spending to the Secretaries of HHS, Labor, and Treasury, so that they may publish a report on prescription drug pricing trends and the contributions to health insurance premiums. The first filings under this law, known as the Prescription Drug Data Collection, or RxDC, were due in December 2022.¹¹¹

2. Drug Manufacturer Transparency

As drug costs have now become the largest expenditure of the premium dollar¹¹², states have moved to actively address by legislating transparency of drug prices. Multiple states have passed legislation requiring drug manufacturers to provide advance notice when the price of drugs being offered on the market will increase over a specific percentage or cost and to provide the reasoning behind those increases. For new drugs over a certain price threshold being placed on the market, drug manufacturers must provide advance notice and include reasoning on the price methodology. At least one state has limited their transparency laws to manufacturers that treat specific diseases. There has been a slight moderation of drug price increases which has paralleled the passage of these laws; however, the costs associated with new drugs have increased exponentially.¹¹³

3. PSAO Transparency

Some state laws have included PSAOs in their transparency laws, to understand the drugs with the highest reimbursement rates and/or year-to-year change in reimbursement rates, as well as the types of fees paid for the services provided by the PSAO.

C. OTHER RELEVANT PROPOSED OR IMPLEMENTED STATE LAW PROVISIONS

States have also implemented or considered implementing other laws that address the pharmaceutical drug ecosystem. A brief description of these approaches is contained below:

¹¹⁰ Colleen Becker, A. G. (2022, March 23). *State Policy Options and Pharmacy Benefit Managers (PBMs)*. State policy options and Pharmacy Benefit Managers (PBMs). Retrieved September 6, 2022, from <https://www.ncsl.org/research/health/state-policy-options-and-pharmacy-benefit-managers.aspx>.

¹¹³ Drug Price Transparency Laws Position States to Impact Drug Prices. NASHP. January 10, 2022. <https://nashp.org/drugprice-transparency-laws-position-states-to-impact-drug-prices/>

1. Affordability Review and Upper Payment Limits

Some states have proposed or implemented laws establishing prescription drug affordability review boards to set allowable rates for certain high-cost drugs, similar to the process states use to regulate utilities or insurance premiums. Under these laws, a state drug affordability review board would establish the maximum amount that certain payors would pay for individual drugs. The goal of these laws is to protect consumers and payors from over-priced drugs.

2. Unsupported Price Increases

Another approach to address high drug costs is enacting laws that would impose fines on pharmaceutical manufacturers whose drug price increases are unsupported by new clinical evidence. The state would use the revenue to provide cost assistance to consumers. Such laws impact the most frequently prescribed, high-cost drugs, and minimizes a state's administrative burden by using existing data sources.

3. Anti-Price-Gouging

These laws prohibit pharmaceutical manufacturers from sharply increasing prices for generic and off-patent drugs. Price increases that surpass a specific threshold identified in the law trigger action by a state's attorney general. Pharmaceutical manufacturers that price-gouge face fines and must stop charging the excessive price.

4. Importation

This legislative approach would create a state wholesale importation program to purchase lower-cost drugs from Canada and make them available to state residents through an existing supply chain that includes local pharmacies.

5. State Purchasing Pool Buy-in

These laws allow small businesses and individuals to buy into a state employee prescription drug benefit purchasing pool. They typically authorize non-state public employers, self-insured private employers, and insurance carriers who cover small groups or individuals to purchase drugs for their beneficiaries under the purchasing authority of the state. By adding more lives to a purchasing pool, purchasers can negotiate better prices for public employees and others who join the purchasing pool.

6. Licensing Pharmaceutical Sales Representatives

This approach gives states the authority to license pharmaceutical sales representatives to increase transparency surrounding their activities and influence and to require training on ethical standards. For example, the laws would require representatives to disclose the wholesale acquisition cost of the drugs they market and to share the names of generic options in the same therapeutic class when available.

VI. FEDERAL INTEREST AND POSSIBLE REGULATIONS

Increasing state regulations have been brought before state legislators to help regulate PBMs. Many believe that state regulation is not enough, and that the federal government will need to get involved. Given the overall expense of pharmaceutical drugs, some stakeholders have called for a federal overlay or federal preemption to create a uniform set of regulations for multistate PBMs. There are signs of increased interest from the federal government in PBM-related activities, as described below.

A. PHARMACY BENEFIT MANAGER TRANSPARENCY ACT OF 2022

Introduced on May 24, 2022, the Pharmacy Benefit Manager Transparency Act of 2022, was a bipartisan bill sponsored by Senators Maria Cantwell (D-WA) and Charles Grassley (R-IA). The act proposed disclosure requirements on PBMs and the prevention of questionable PBM practices, such as three practices that could be deemed unfair or deceptive which would have been expressly outlawed by the proposed legislation. These included spread pricing; reducing, canceling, or obtaining back any reimbursement payment made to a pharmacist or pharmacy for the price of a prescription drug's ingredients or dispensing charge arbitrarily, unfairly, or falsely; and deceptively reducing reimbursement to a pharmacy or arbitrarily raising fees to offset changes in reimbursement requirements.

Beginning no later than one year after the proposed legislation's adoption, the act would have mandated that PBMs provide the following data to the Federal Trade Commission (FTC) annually:

- 1) the difference between the sum that each health plan paid the PBM for prescription medications and the sum that the PBM paid each pharmacy on behalf of the health plan;
- 2) the total of all fees, including those for the generic effective rate, compensation fees, or other price breaks offered to any pharmacy, and payments withheld from reimbursements to any pharmacy;
- 3) if the PBM shifted a prescription drug to a formulary tier with a higher cost, higher copayment, higher coinsurance, or higher deductible to a consumer or lower reimbursement to a pharmacy, an explanation for why the drug was moved to a different tier, including whether the move was requested by a prescription drug manufacturer or another entity; and
- 4) information regarding any variations in reimbursement rates or practices, remuneration fees or other price concessions, and clawbacks between a pharmacy owned, controlled, or affiliated with the PBM and all other pharmacies, for any PBM that owns, controls, or is affiliated with a pharmacy.

The FTC would have been required to submit two reports to the Senate Committee on Commerce, Science, and Transportation and the House Committee on Energy and Commerce -- one on general enforcement actions under the act and the other on PBM formulary design or placement practices. Under the proposed legislation, an annual report on enforcement activity would be filed. The report would have included:

- 1) an anonymized summary of the annual reports that PBMs have submitted to the FTC;
- 2) the number of enforcement actions the FTC brought to enforce the act and the results of those actions;
- 3) the number of investigations and inquiries into potential violations of the act;
- 4) the number and nature of complaints the FTC received alleging violations of the act; and
- 5) recommendations for strengthening enforcement actions in response to violations of the act.

The agency's report to Congress on PBM formulary design or placement practices would have been due within a year of the proposed law's passage. It would have included information on whether PBMs use formulary design or placement to boost gross revenue without also enhancing patient access or lowering patient costs, as well as whether such PBM activities violated section 5(a) of the Federal Trade Commission Act (45 U.S.C. 45(a)). Employees in the healthcare sector who report violations of the act or take part in administrative, judicial, or investigative processes to enforce its provisions would not be fired, demoted, suspended, reprimanded, or subject to any other type of punishment under the proposed legislation. The proposed legislation would have

also forbade companies from requiring employees to sign pre-dispute arbitration agreements in exchange for employment to make them give up their right to whistleblower protections under the act. The FTC and state attorneys general would have been given permission to carry out the proposed legislation's enforcement measures. Additionally, under the proposed law, offenders would have been exposed to civil penalties of up to \$1 million in addition to the penalties provided under the Federal Trade Commission Act (15 U.S.C. 41 et seq.). The bill was adopted and forwarded to the full Senate by the Senate Committee on Commerce, Science, and Transportation on June 22, 2022.¹¹⁴ The bill was never voted out of committee.

Additionally, the act would have incentivized fair and transparent PBM practices by providing exceptions to liability for PBMs that pass along 100 percent of rebates to health plans or payors and fully disclose prescription drug rebates, costs, prices, reimbursements, fees, and other information to healthcare plans, payors, pharmacies, and federal agencies.¹¹⁵

B. THE FEDERAL TRADE COMMISSION

In June 2022, the FTC announced it will launch an inquiry into the PBM industry, requiring the six largest PBMs to provide information and records regarding their business practices. The agency's investigation will closely examine how vertically integrated PBMs affect the availability and cost of prescription medications. The FTC will issue mandatory orders to CVS Caremark, Express Scripts, Inc., OptumRx, Inc., Humana Inc., Prime Therapeutics LLC, and MedImpact Healthcare Systems, Inc. as part of this investigation.

VII. KEY JURISPRUDENCE

As states continue to pass laws related to the pharmaceutical drug ecosystem, a body of jurisprudence has begun to develop that outlines the limits of state authority vis a vis federal authority. The key cases to date are described below.

A. **RUTLEDGE v. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION, 141 S.Ct. 474 (2020)**

In *Rutledge v. PCMA*, the U.S. Supreme Court held that ERISA did not preempt an Arkansas law, Act 900, which required PBMs¹¹⁶ to reimburse pharmacies at a price equal to or higher than what the pharmacy paid to buy the drug. Act 900 required PBMs to provide administrative appeal procedures for pharmacies to challenge reimbursement prices that are below the pharmacies' acquisition costs, and it also authorized pharmacies to

¹¹⁴ Jang, T., & Shotlander, D. (2022, September 28). *Senate bill and FTC 6(b) study turn the heat on pharmacy benefit managers amid drug pricing concerns*. Food and Drug Law Institute (FDLI). Retrieved October 6, 2022, from <https://www.fdpi.org/2022/09/senate-bill-and-ftc-6b-study-turn-the-heat-on-pharmacy-benefit-managers-amid-drug-pricing-concerns/>.

¹¹⁵ Dowell, M. A. (2022, August 16). *State PBM regulations protecting community pharmacies*. U.S. Pharmacist – The Leading Journal in Pharmacy. Retrieved September 6, 2022, from <https://www.uspharmacist.com/article/state-pbm-regulations-protecting-community-pharmacies>.

¹¹⁶ As the term is spelled in Act 900. Supreme Court style refers to “pharmacy benefit managers.”

decline to dispense drugs when a PBM would provide a below-cost reimbursement. Unlike the PBM laws in some states, Act 900 was not strictly structured as an insurance law. It applied to all transactions between PBMs and pharmacies, including transactions where the PBM was acting on behalf of a self-insured ERISA plan, so Arkansas could not rely on the saving clause as its defense against an ERISA preemption challenge.

In a suit brought by the PCMA, a national trade association representing 11 PBMs, the Eastern District of Arkansas ruled that Act 900 was preempted by ERISA, and the 8th Circuit affirmed.¹¹⁷ Both courts relied on a recent 8th Circuit decision striking down a similar Iowa law because it “made ‘implicit reference’ to ERISA by regulating PBMs that administer benefits for ERISA plans”¹¹⁸ and “was impermissibly ‘connected with’ an ERISA plan because, by requiring an appeal process for pharmacies to challenge PBM reimbursement rates and restricting the sources from which PBMs could determine pricing, the law limited the plan administrator’s ability to control the calculation of drug benefits.”¹¹⁹

The U.S. Supreme Court, however, concluded that “[t]he logic of *Travelers* decides this case,”¹²⁰ and ruled that Act 900 was not preempted by ERISA. The Court compared its decisions in *Gobeille*, where it held that a state law is preempted if it “governs a central matter of plan administration or interferes with nationally uniform plan administration,”¹²¹ and *Travelers*, where it held that ERISA does not preempt state price regulations that “merely increase costs or alter incentives for ERISA plans without forcing plans to adopt any particular scheme of substantive coverage,”¹²² even if the law “affects an ERISA plan or causes some non-uniformity in plan administration.”¹²³ The Court explained that ERISA is “primarily concerned with preempting laws that require ... structure[ing] benefit plans in particular ways, such as by requiring payment of specific benefits, or by binding plan administrators to specific rules for determining beneficiary status. A state law may also be subject to preemption if ‘acute, albeit indirect, economic effects of the state law force an ERISA plan to adopt a certain scheme of substantive coverage.’”¹²⁴ The Court observed that Act 900 “does not require plans to provide any particular benefit to any particular beneficiary in any particular way,”¹²⁵ and determined that like the law at issue in *Travelers*, “Act 900 is merely a form of cost regulation.”¹²⁶

The Court reviewed the standards it has established for interpreting ERISA’s preemption clause, which preempts all state laws “insofar as they ... relate to any employee benefit plan”¹²⁷ unless some exception to preemption applies. The Court explained that a state law triggers the preemption clause when it “has a connection with or reference to” an ERISA plan.¹²⁸ The Court rejected the PCMA’s contention “that Act 900 has an impermissible connection with an ERISA plan because its enforcement mechanisms both directly affect central matters of plan administration and interfere with nationally uniform plan administration.”¹²⁹ The Court acknowledged that Act

¹¹⁷ *PCMA v. Rutledge*, 891 F.3d 1109 (8th Cir. 2018).

¹¹⁸ 141 S.Ct. at 479, quoting *PCMA v. Gerhart*, 852 F.3d 722, 729 (8th Cir. 2017).

¹¹⁹ *Id.* at 479, quoting *Gerhart*, 852 F.3d at 726, 731.

¹²⁰ *Id.* at 481.

¹²¹ *Id.* at 480, quoting *Gobeille*, 577 U.S. at 320.

¹²² *Id.* at 480, citing *Travelers*, 514 U.S. at 668.

¹²³ *Id.*

¹²⁴ *Id.*, quoting *Gobeille*, 577 U.S. at 320.

¹²⁵ *Id.* at 482.

¹²⁶ *Id.* at 481.

¹²⁷ 29 U.S.C. § 1144(a).

¹²⁸ 141 S.Ct. at 477.

¹²⁹ *Id.* at 481–482.

900 required ERISA plan administrators to “comply with a particular process” and standards,¹³⁰ but explained that those enforcement mechanisms “do not require plan administrators to structure their benefit plans in any particular manner, nor do they lead to anything more than potential operational inefficiencies” for PBMs.¹³¹ The Court held further that ERISA did not preempt Act 900’s decline-to-dispense provision, even though it “effectively denies plan beneficiaries their benefits” because any denial of benefits would be the consequence of the lawful state regulation of reimbursement rates and the PBM’s refusal to comply.¹³²

Finally, the Court rejected the PCMA’s claim that the law had an impermissible “reference to” ERISA. As the Court explained, Act 900 “applies to PBMs whether or not they manage an ERISA plan,” and Act 900 did not treat ERISA plans differently than non-ERISA plans.¹³³ However, the Court only considered the provisions of the Arkansas PBM law as they stood at the time the PCMA filed its preemption challenge, not the amendments the legislature subsequently made while *Rutledge* was making its way through the appellate courts, so it is important that *Rutledge* not be read as a finding that the Court analyzed Arkansas’ PBM law as it existed in 2020. Additionally, the Court did not address preemption under Medicare Part D.

B. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION v. WEHBI, 18 F.4th 956 (2021)

In 2021, the 8th Circuit Court of Appeals issued its decision in *PCMA v. Wehbi*. This case was not appealed to the U.S. Supreme Court. At issue in the *Wehbi* case were two North Dakota laws prohibiting PBMs from engaging in deceptive and anti-competitive practices.

Ultimately, the court determined that none of the challenged provisions met the “connection-with” standard and all survived preemption by ERISA.¹³⁴ The court concluded that some of the state law provisions “merely authorize pharmacies to do certain things,” such as:

- disclose certain information to plan sponsors;
- provide relevant information to patients;
- mail or deliver drugs to patients as an ancillary service; and
- charge shipping and handling fees to patients who request that their prescriptions be mailed or delivered.¹³⁵

The court also upheld provisions that “constitute, at most, regulation of a noncentral ‘matter of plan administration’ with de minimis economic effects.”¹³⁶ The court held that “whatever modest non-uniformity in plan administration [the sections] might cause does not warrant preemption.”¹³⁷ These provision include:

¹³⁰ *Id.* at 482, quoting PCMA brief at 24.

¹³¹ *Id.*

¹³² *Id.*

¹³³ *Id.* at 481.

¹³⁴ 18 F.4th 956, 968.

¹³⁵ *Id.*

¹³⁶ *Id.*, quoting *Gobeille*, 577 U.S. 312, 320.

¹³⁷ *Id.*, citing *Rutledge*, 141 S. Ct. at 480.

- limits on accreditation requirements a PBM may impose on pharmacies as a condition for participation in its network;
- requirements for PBMs to disclose basic information to pharmacies and plan sponsors upon request; and
- conditions on PBMs that have “an ownership interest in a patient assistance program and a mail order specialty pharmacy.”

In *Wehbi*, the court expands upon *Rutledge* in that the North Dakota statutes go beyond health care price/cost regulation and into disclosure requirements of PBMs, by prohibiting PBMs from preventing pharmacies from disclosing certain information (in compliance with the Health Insurance Portability and Accountability Act) to patients or plan sponsors. North Dakota’s laws, the court concluded, amount to regulation of a PBMs’ functions that have no or limited impact on plan administration, rather than regulation of an ERISA plan itself; therefore, they are not preempted by ERISA.

For the Medicare Part D preemption, not all the North Dakota provisions were preempted by Medicare laws. The court held that preemption exists for some of the contested provisions because Medicare Part D directly governs some of the same matters that the state law attempts to regulate.

With respect to Medicare Part D, the court determines preemption by either of these questions:

1. Do the laws regulate the same subject matter as a federal Medicare Part D standard? If so, the state law is *expressly* preempted; or
2. Do the state laws otherwise frustrate the purpose of a federal Medicare Part D standard? If yes, then they are *impliedly* preempted.¹³⁸

C. PHARMACEUTICAL CARE MANAGEMENT ASSOCIATION v. MULREADY, 598 F.Supp.3d 1200 (2022)

In 2022, the U.S. District Court in the Western District of Oklahoma ruled in favor of the Oklahoma Insurance Commissioner Glen Mulready. The Patient’s Right to Pharmacy Choice Act (“Act”) passed in 2019 was challenged by PCMA as being preempted by ERISA, as well as Medicare Part D laws. The court held that the state law is not preempted by ERISA but agreed with PCMA that some of the law’s provisions are preempted by Medicare laws. PCMA has appealed the decision to the 10th Circuit Court of Appeals.

The Oklahoma laws at issue protect Oklahoma consumers’ access to pharmacy providers through pharmacy network requirements, pharmacy reimbursement standards and prohibitions, and contract approval requirements. Relying on *Rutledge*, the court concluded that all of PCMA’s ERISA preemption claims fail as a matter of law. The court holds that “[the provisions] do not have a ‘connection with’ an ERISA plan” and that “[w]hile these provisions may alter the incentives and limit some of the options that an ERISA plan can use, none of the provisions forces ERISA plans to make any specific choices.” Finally, regarding the Promotional Materials provision, the court holds that the law “does not regulate benefit design disclosures to beneficiaries but regulates how PBMs can advertise its providers” and that it “does not relate to a central matter of plan administration nor undermine the uniform regulation of ERISA plans.”

¹³⁸ *Id.* at 972.

As it relates to PCMA’s ERISA preemption claim in totality, the court found that ERISA does not preempt enforcement of the following: “any willing provider” provisions; retail pharmacy network access standards; affiliated pharmacy prohibition; network provider choice restrictions; probation-based pharmacy limitations; cost sharing discounts; promotional material prohibitions; post-sale price reduction prohibitions; and affiliated pharmacy price match prohibitions on PBMs from reimbursing a pharmacy an amount less than the amount the PBM reimburses to a pharmacy it owns or is affiliated with.¹³⁹

With respect to preemption by Medicare Part D, the court found that about half of the PCMA’s preemption claims failed, while about half were meritorious. Specifically, the court ruled that Medicare Part D *does* preempt these provisions in the Act: retail pharmacy network access standards; promotional material prohibitions; cost sharing discounts; service fee prohibitions; post-sale price reduction prohibitions; and affiliated pharmacy price match prohibitions on PBMs from reimbursing a pharmacy an amount less than the amount the PBM reimburses to a pharmacy it owns or is affiliated with.¹⁴⁰

It is anticipated that additional cases will make their way to the U.S. Supreme Court and provide greater insights into the parameters of *Rutledge* and state regulation. The *Wehbi* and *Mulready* cases are instructive as to the parameters of *Rutledge*, but there is no doubt more decisions are forthcoming.

VIII. RECOMMENDATIONS

The Subgroup acknowledges that issues in the pharmaceutical drug ecosystem are complex and often opaque; to the end consumer, many of these issues are difficult to understand. The most mature body of regulation has developed around PBM activities, but as noted throughout the paper, PBMs are not the only influential player in the ecosystem. Based on the information received by the Subgroup over the last two years, the Subgroup makes the following recommendations:

1. The NAIC should consider tasking the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup or similar group with drafting a model guideline to address PBM regulation based on other state laws and recent jurisprudence;
2. The NAIC should consider expanding information sharing between the states through additional committees on the topic of pharmaceutical drug pricing and transparency;
3. The NAIC should consider any necessary updates to the *Health Carrier Prescription Drug Benefit Management Model Act* (#22) out of the emergence of greater regulation in the prescription drug ecosystem;
4. The NAIC should consider impacts of this work on an ongoing basis on the federal 340B Drug Pricing Program;

¹³⁹ 36 O.S. § 6961 (OSCN 2023) available at (last accessed February 27, 2023): <https://www.oscn.net/applications/oscn/deliverdocument.asp?lookup=Previous&listorder=167560&dbCode=STOKST36&year=>

¹⁴⁰ 36 O.S. § 6961 (OSCN 2023) available at (last accessed February 27, 2023): <https://www.oscn.net/applications/oscn/deliverdocument.asp?lookup=Previous&listorder=167560&dbCode=STOKST36&year=>

5. The NAIC should consider facilitating and maintaining a nationwide database of PBM contracting provisions. This would allow states to become familiar with common PBM contractual provisions and more easily identify issues that arise from them;
6. The NAIC should consider developing an open dialogue with Federal agencies that is broader than just PBM regulation. The discussion should consider regulation of all the stakeholders in the prescription drug ecosystem from a more holistic view and may be best achieved through a coordinated effort involving state and federal regulators; and
7. This Subgroup, and successive groups, should continue to maintain a current listing of PBM laws and regulations and case law for reference by other states.

The Subgroup recognizes the critical role the pharmaceutical drug ecosystem plays on consumer costs and the role states can play in understanding and best regulating the ecosystem. The body of knowledge gained by the Subgroup over the last two years, and related resources provided to state regulators provides a solid foundation to continue to examine these key issues.

APPENDIX I. LIST OF SUBGROUP MEETINGS AND TOPICS

Meeting #	Date	Presenter/Topic
Meeting #1	August 15, 2019	<ul style="list-style-type: none"> Jane Horvath (Horvath Health Policy and Research Faculty, Georgetown University) presentation on “Basics of the Pharmaceutical Market & PBMs.” Leanne Gassaway (America’s Health Insurance Plans—AHIP) presentation on “Pharmacy Benefit Managers Overview & Background.”
Meeting #2	August 22, 2019	<ul style="list-style-type: none"> Dr. Neeraj Sood (Sol Price School of Public Policy, University of Southern California) presentation on “PBM Economics.” Saiza Elayda (Pharmaceutical Research and Manufacturers of America—PhRMA) presentation on the pharmaceutical supply chain and how the pharmaceutical distribution and payment system shapes the prices of brand name medicines.
Meeting #3	August 29, 2019	<ul style="list-style-type: none"> April Alexander (Pharmaceutical Care Management Association—PCMA) and J.P. Wieske (Horizon Government Affairs) presentation on the history, role, and services PBMs provide in managing prescription drug benefits. Anne Cassity (National Community Pharmacists Association—NCPA) and Matthew Magner (NCPA) presentation on the community pharmacy industry’s perspective regarding PBMs and managing prescription drug benefits. Claire McAndrew (Families USA) discussed the effect of PBMs and prescription drug costs on consumers. Amy Killelea (National Alliance of State and Territorial AIDS Directors—NASTAD) discussed PBMs and their impact on consumer access and affordability of prescription drugs.
Meeting #4	October 3, 2019	<ul style="list-style-type: none"> Kentucky discussed its PBM licensing process. Arkansas discussed its PBM licensing law and other provisions related to PBM business practices.

Senior Issues (B) Task Force
Seattle, Washington
August 13, 2023

The Senior Issues (B) Task Force met in Seattle, WA, Aug. 13, 2023. The following Task Force members participated: Barbara D. Richardson, Chair (AZ); Larry D. Deiter, Vice Chair (SD); Lori K. Wing-Heier represented by Sarah Bailey (AK); Mark Fowler represented by Willard Smith (AL); Andrew N. Mais represented by Paul Lombardo (CT); Trinidad Navarro represented by Jeffrey Schott (DE); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Shannon Hohl (ID); Amy L. Beard represented by Alex Peck (IN); Vicki Schmidt represented by Julie Holmes (KS); Sharon P. Clark represented by Angi Raley (KY); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Kevin Beagan (MA); Kathleen A. Birrane represented by Jamie Sexton (MD); Timothy N. Schott (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by T.J. Patton (MN); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning represented by Martin Swanson (NE); D.J. Bettencourt represented by Jennifer Li (NH); Justin Zimmerman (NJ); Scott Kipper represented by David Cassetty (NV); Judith L. French represented by Laura Miller (OH); Andrew R. Stolfi (OR); Michael Humphreys represented by Lindsay Swartz (PA); Carter Lawrence represented by Scott McAnally (TN); Cassie Brown represented by Rachel Bowden (TX); Jon Pike represented by Shelley Wiseman (UT); Scott A. White represented by Julie Blauvelt (VA); Kevin Gaffney represented by Anna Van Fleet (VT); Mike Kreidler represented by Todd Dixon (WA); Nathan Houdek represented by Rachel Cissne Carabell (WI); and Allan L. McVey represented by Erin K. Hunter (WV).

1. Adopted its April 14 and Spring National Meeting Minutes

Director Deiter made a motion, seconded by Henderson, to adopt the Task Force's April 14 (Attachment One) and March 22 (*see NAIC Proceedings – Spring 2023, Senior Issues (B) Task Force*) minutes. The motion passed unanimously.

2. Heard a Presentation Regarding New MA Marketing Rules and Regulations

Nyetta Patton (federal Centers for Medicare & Medicaid Services—CMS) and Ken Garnder (CMS) gave a review of CMS's Medicare Advantage (MA) marketing rules and regulations. Nyetta Patton said regarding communications, it is defined as activities and the use of materials created or administered by the plans or any downstream entity to provide information to current and prospective enrollees. She said activities and materials aimed at prospective and current enrollees, including their caregivers, are "communications" within the scope of the regulations. She said the definition of marketing is a subset of communications and must, unless otherwise noted, adhere to all communication requirements. She said to be considered marketing, communications materials must meet both intent and content standards. She said in evaluating the intent of an activity or material, the CMS will consider objective information, including, but not limited to, the audience, timing, other context of the activity or material, and other information communicated by the activity or material, and the organization's stated intent will be reviewed but not solely relied upon.

Nyetta Patton said the CMS issued an updated interpretation of marketing to include content that mentions any type of benefit (emphasis added) covered by the plan that is intended to draw a beneficiary's attention to a plan or plans, influence a beneficiary's decision-making process when selecting a plan, or influence a beneficiary's decision to stay enrolled in a plan—i.e., retention-based marketing—and thus subject to review. She said it is critical that state departments of insurance (DOIs) keep in contact with their CMS liaison offices and work together when problems arise.

Gardner said the CMS's plans for marketing and communications oversight improvements for 2024 include prohibiting marketing unless the names of MA organizations or marketing name(s) of entities offering the referenced products or plans, benefits, or costs are identified in the marketing material. He said MA organizations cannot use the Medicare name, logo, and card image in a misleading way, and the use of the Medicare card image is permitted only with authorization from the CMS. He said it also includes the prohibition of unsubstantiated statements without supporting data in the marketing piece, advertising benefits not available in the service area where the marketing appears, and marketing "savings" not realized; i.e., MA organizations cannot advertise about savings available that are based on a comparison of typical expenses for uninsured individuals, unpaid costs of dually eligible beneficiaries, or other unrealized costs of a person with Medicare.

Gardner said the improvements also include clarification of unsolicited door-to-door knocks, opt-out notices, and the prohibition of marketing events taking place within 12 hours of an education event. He said there will be a requirement that prior to an enrollment, the CMS' required questions and topics regarding the individual's needs in a health plan choice are fully discussed. He said a section is to be added to the pre-enrollment checklist (PECL) explaining the effect of enrolling in a new plan, and there will be a requirement that medical benefits be listed in specific order and at the top of a plan's Summary of Benefits.

Gardner said there is an update to the Third-Party Marketing Organization (TPMO) Disclaimer that State Health Insurance Assistance Programs (SHIPs) be added as an option for beneficiaries to get additional help, and it must include the number of organizations/plans represented. He said there is a limit to the requirement to record calls between TPMOs and people with Medicare to marketing/sales enrollment calls that TPMOs must list all MA organizations and Part D sponsors they represent on marketing materials, and MA organizations must establish and implement an oversight plan that monitors agent and broker activities, identifies non-compliance with CMS requirements, and reports non-compliance to the CMS.

Nyetta Patton said additional oversight plans for 2024 include television ads, online videos, radio ads, provider office material, sales presentations, and enrollment forms. She said it is important that any reporting issues to the CMS be done quickly, and she encouraged state insurance regulators to use the 1-800-Medicare number and utilize their CMS-DOI Liaison office. She said the slide presentation the CMS provided for the meeting includes the contacts for all 12 regions of CMS-DOI offices.

Director Richardson asked if there is any other role for state insurance regulators other than looking at the information of CMS-DOI liaisons or if there is a regulatory role the CMS has any expectations for states to perform Nyetta Patton said as different states have different regulations and the CMS regulates from a federal level, the CMS's goal is to partner with each state to address that state's specific concerns.

Swanson asked about better interactions between the states and the CMS in obtaining the necessary evidence when states engage in prosecutions for mis-marketing by those entities states have jurisdiction over. He said the process of obtaining the evidence requires layers and layers of procedures, and he asked if there is a way to streamline or cut down the time it takes to obtain the necessary evidence. Nyetta Patton said she will take that question back to the CMS to get an answer about how to expedite that process.

Swanson said there has been a utilization of both Social Security and Medicare. Although the CMS is toughening up the regulations and it is tied to the Social Security Act of 1935, the Office of Inspector General (OIG) has been unwilling to prosecute in the past. He asked if these new regulations will mean the OIG will take prosecutions or have the same position. Nyetta Patton said she cannot speak for the OIG, but the CMS coordinates with the OIG on these matters.

Henderson said many states are dealing with beneficiaries in crisis who have been switched into a plan they did not ask for or does not fit them, and they cannot utilize it because their doctor is not part of that new plan they

were switched into. He asked what the process is with dealing with third parties and the MA plans as far as educating them on what they are supposed and not supposed to do. He said he has a case in Louisiana where a beneficiary was switched on three different occasions in three months, and we scramble to help these folks with the CMS's help, but he asked how these issues can be addressed from the front end and not after the switch. Nyetta Patton said the most important advice is to keep working with the CMS regional offices and the CMS-DOI offices because we can then take care of the part of educating compliance.

McAnally asked about the narrowing of the scope on the requirement to record marketing calls and what kind of impact that has had as far as investigation and how useful that requirement is. Nyetta Patton said it is not really new but scaling back, for lack of a better term, and the CMS listens to those calls that it can help CMS staff better understand, as well as help the plans better understand what the beneficiary wanted.

3. Heard a Presentation Regarding Lead Generators

Charro Knight-Lilly (eHealth) and Gavin Galimi (eHealth) gave a presentation on lead generators. Galimi said eHealth is an online marketplace offering consumers a broad choice of insurance products from approximately 200 carriers that includes thousands of MA, Medicare Supplement (Medigap), and Medicare Part D plans, and it also offers individual and family health insurance, small business coverage, and ancillary health insurance products. He said eHealth cultivates long-term relationships with their customers, and that is the key to eHealth's success. He said retention is a constant focus, and if a customer cancels their plan or eHealth does not remain the broker of record, the commission revenue ceases. He said finding the right plan for each customer is essential.

Knight-Lilly discussed the marketing relationships with lead generators. She said the marketing relationships with lead generators may include affiliate organizations, online advertisers, content providers, and other marketing vendors. She said eHealth generally compensates lead generators for their referrals of potential customers. She said marketing partners, which include lead generation services, are a significant bridge for brokers and carriers to reach potential customers. She said partners are more effective in reaching potential customers who sign up to receive the partner's marketing materials and have invested in various ways of reaching customer segments, based on potential interests, such as suitability of product type and qualifying plan type.

Galimi said the success of the marketing partner relationship is dependent upon a series of factors, such as: 1) compliance of the marketing partner with applicable laws, regulations, and guidelines; 2) reputation and growth of the partner; 3) continued positive market presence; and 4) the ability to manage the partner. He said in recent years, the industry has experienced that some partners may be deceptive to consumers in their marketing message, and some partners may be deceptive to brokers and carriers about the sources of their referrals. He said when marketing partners fail to adhere to eHealth standards, they are subject to corrective action, up to and including termination of the relationship.

Knight-Lilly highlighted the characteristics of good marketing partners as the adherence with regulatory requirements, the referral of consumers interested in our products, and good long-term reputation and reliability. She said the indications of a concern with a marketing lead would be the failure to adhere to regulatory requirements, the referrals who are confused or not interested in our products, and a poor track record or short-term business focus. Galimi said insurance commissioners can help by distinguishing between high-quality, reputable referral sources and fly-by-night deceptive referral sources and continue to collaborate with eHealth on this topic.

Director Richardson asked whether a broker or agent referring a client or customer and choosing a different product or policy is considered a bad referral or something to learn from. She asked how one knows if it is a right

plan. Galimi said CMS provides the PCL and the checklist that has a list of questions that need to be gone through and a need assessment. He said on eHealth's platform, people are asked to put in necessary information to determine the right plan and the right value of the plan.

T.J. Patton said he reads a large percentage of insurance-related complaints that come into the Minnesota Department of Commerce, and one thing that is frustrating is hearing how Minnesota's elderly residents have challenges in getting the accurate and complete information they need to make the best choice for themselves when they become Medicare eligible. One of the subcategories of those complaints received relates to the online domains they have visited. T.J. Patton asked what eHealth's position is on the domains it operates, specifically Medicare.com. Galimi said there is a lot of information as eHealth transforms, not just with a new logo, but also the transformation underway with its marketing team and creating a differentiated brand message, but Medicare.com is not being rebranded nor making significant use of it, and it is in static mode. T.J. Patton said while he appreciates the commitment, it may be in eHealth's best interest to pull down that domain.

Lombardo asked in eHealth's selection process and process of matching an individual to the right plan use any type of artificial intelligence (AI) or machine learning (ML); if not, he asked if that is something being contemplated for the future. Galimi said eHealth does not use any generative AI for any health or customer-facing work. He said it may be used for ideation and the creation of ideas to start, but the chat platform is a live licensed agent, not an AI robot. He said ML algorithms are used as part of call matching, but there are no plans to launch any sort of AI customer interface. Lombardo asked if any AI currently used is in-house or from vendors. Galimi responded that it is in-house.

Henderson asked if eHealth is contracted with the MA plans that it provides information on. Galimi said they are contracted with their licensed agents and appointed with those carriers. Knight-Lilly said eHealth is a licensed agency. She said eHealth is aware that there are bad actors in the industry, and it is difficult to lump together TPMO statements and difficult for people to understand who is licensed and who is not, as well as what services are being performed by each entity.

Director Richardson said that is an important statement, as every state insurance regulator has at some point called up one of these organizations and asked for their license number to then be hung up on. Henderson said he gets calls, and when he makes inquiries, he gets cut off. Knight-Lilly said many of those are off-shore, and eHealth does not contract with off-shore entities.

Cissne Carabell asked about the slide that discusses failure to adhere to eHealth standards and whether eHealth has taken action against a company that has failed to adhere to those standards; if so, she asked how often that happens. Galimi replied that eHealth has done this. Knight-Lilly said she does not have an exact number; it does occur, but it is infrequent.

4. Heard a Presentation Regarding Concerns Related to Adverse Risk Selection in MA Plans

Dr. Barbara McAneny (New Mexico Oncology Hematology Consultants Ltd.—NMOHC) gave a presentation on her opinions and experience with MA. She emphasized that these are her own anecdotal experiences and do not reflect views from her past American Medical Association (AMA) presidency or her current position as Chief Executive Officer (CEO) of the NMOHC.

Dr. McAneny said she is a cancer doctor and has seen a significant deterioration of benefits for cancer patients and others with serious illnesses. She believes the NAIC, outside of the CMS, is the only organization that has any ability to provide oversight of MA plans. She said her hope is for regulations to be promulgated that allow patients to select a plan that is honestly marketed and lives up to expectations.

Dr. McAneny said her anecdotal experiences and opinions on MA plans related to cancer patients and others with serious illness are formed by: 1) discussions and interactions physicians have employed by managed care companies; 2) observations of delays in prior authorizations by MA companies; 3) attempts to participate in accountable care organizations (ACOs) or to be on the board; 4) discussions with other cancer practices; 5) discussions with physicians employed by hospitals that also have MA or other insurance plans; and 6) the report produced by the Governor of New Mexico’s Task Force on Drug Pricing on which she participated.

Dr. McAneny said she calls MA Medicare Dis-Advantage because of its poor treatment for those with serious illnesses. She said managers of the plans benefit from enrolling healthier seniors and finding hierarchical condition categories (HCCs) that increase the monthly payment from the CMS, such as gym memberships and dental care. She said primary care doctors she has tried to hire have told her that their job is more to find HCCs than to treat patients, and that step therapy is a deterrent to patients with serious illnesses. She said managers of the plans benefit from delaying care for enrolled seniors, especially near open enrollment when sicker patients can switch to fee-for-service (FFS) Medicare. She said managers of the plans benefit from higher drug prices as those increase the medical loss ratio (MLR), and they can get rebates from their pharmacy benefit managers (PBMs) utilizing copay accumulators and maximizers.

Dr. McAneny highlighted the chart from the Kaiser Family Foundation (KFF) in her presentation illustrating the massive margins MA makes per enrollee. She said the report’s findings are that in 2021, MA insurers reported gross margins averaging \$1,730 per enrollee, at least double the margins reported by insurers in the individual/non-group market (\$745), the fully insured group/employer market (\$689), and the Medicaid managed care market (\$768). She said the report found that for MA insurers, the gross margins per enrollee in 2021 were similar to the period before the COVID-19 pandemic, but the margins per enrollee for the individual and group markets in 2021 were below pre-pandemic levels, while the margins per enrollee for Medicaid managed care insurers are higher. She said these are the most profitable products the insurance companies market, and in her opinion, these companies are taking advantage of Medicare, taxpayers, and the people who are used to managed care when they are at work and they move to MA. She said it seems to her that these companies are trading free eyeglasses for the ability to treat cancer.

5. Heard an Update on Minnesota’s “Own Your Future” Initiative and Washington’s WA Cares Fund

Steve Schoonveld (FTI Consulting) gave a presentation on the progress of Minnesota’s “Own Your Future” initiative. He said the Minnesota Department of Human Services (DHS) sought options to increase access to long-term care (LTC) financing, services, and support for Minnesotans. He said the primary objective and goals are to improve access to long-term services and support (LTSS) for Minnesotans who typically do not qualify for Medicaid, examine and evaluate integrated LTSS funding options, and transform the LTC funding system. He said there is an emphasis on options to enable older adults to receive care in their homes; improve the caregiver supply; develop a broad base of support for positive recommendations; consider revised roles for private LTC insurance for Minnesota’s Medicaid program and other funding sources, including Medicare LTSS and Older Americans Act (OAA) programs; and explore new and innovative models of LTC financing and service delivery.

Schoonveld explained how Minnesota is building on what works. He said Minnesota’s existing LTSS approaches include partnering with a wide variety of agencies; tapping all revenue streams, including private pay; and reaching older adults and family caregivers further upstream from Medical Assistance; i.e., Medicaid. He highlighted what he called the “red box,” which is the middle-income market in Minnesota. He said that market consists of family incomes between \$25,000 and \$124,999. He said that population accounts for over 60% of the Minnesota population.

Schoonveld discussed the range of policy options: 1) “Back End Catastrophic” Public Program providing financial support for longer duration care situations—i.e., three or more years—and would require a waiting period or

deductible dollar amount to be met before people could begin accessing benefits; 2) Home and Community-Based Services, which would be a public program providing funding for care and services for middle income older Minnesotans with more modest benefit levels and caps on the benefit duration to keep the program costs down. He said, similar to option 1, this program will have a waiting period or dollar deductible; 3) Early Intervention Benefit for Medicare Recipients, which would be a public program providing modest, capped dollar, at-home benefits to Medicare recipients to delay or mitigate their need to spend out-of-pocket funds for paid care or spend down to be eligible for Medicaid; and 4) Private Long-Term Care Insurance Incentives, which would strengthen the appeal and encourage innovation within private long-term care insurance (LTCI) to help address gaps in funding and include regulatory or legislative modifications that can make private LTCI more affordable and more accessible to middle-income adults.

Schoonveld provided a sampling of potential designs under consideration. He said one option is early intervention and support, which is a state-developed program to provide a care support structure that leverages existing services, provides strong awareness and education, and supports informal caregivers. He said this option would also provide modest, capped, at-home benefits with the goals of delaying or mitigating their need to spend down to be eligible for Medicaid, and a Care Navigation service will also focus on obtaining access to community services offered by waiver and alternative care programs and be the platform to support residents and their caregivers. He said the aim is to maintain a safe home environment and preserve the safety net.

Schoonveld said the second option is a mandatory state-sponsored LTSS program of one year of coverage, purchased by non-Medicaid eligible residents during Medicare enrollment or earlier, and participants receive care support and preventive services coordinated with their Medicare plans. He said the program will also offer additional options to buy up for more than a year of coverage and purchase/funding options prior to age 65, and employer support may be offered. He said the approach is modeled after the comprehensive care coordination approaches of Managed Long-Term Services and Supports (MLTSS) plans. He said the third option is catastrophic coverage, which is a mandatory state insurance program to help pay for long-lasting, long-term care (LTC) expenses that exceed two years, without Medicaid's income and asset restrictions. He said the program will be self-funded by a state-specific payroll deduction for all workers 21 years of age and over, and the deductions will go into a restricted fund for this program's use only.

Ben Veghte (WA Cares Fund) said the Fund provides working Washingtonians a way to earn access to LTC benefits that will be available to eligible individuals when they need them. He said the Fund is an earned benefit, self-funded by worker contributions, and it works like an insurance program. He said people only contribute while they are working, everyone is covered at the same rate regardless of pre-existing conditions, there are no copays, there are no deductibles, and claims never have to be filed. He said the typical income is \$50,091, and the typical contribution is \$291 per year.

Veghte said the Fund is the product of a 2019 law, the LTSS Trust Act, which among other things created the LTSS Trust Commission. He said the Commission's report reached a set of recommendations on the structuring of a Supplemental Private Long-Term Care Insurance (SPLTCI) market, organized into six areas: 1) consumer protection; 2) a venue for filing policies; 3) a benefit trigger and elimination period; 4) transition issues for near retiree cohorts; 5) continuity of covered care settings and providers; and 6) coordination of benefits between the WA Cares Fund and SPLTCI policies.

Veghte highlighted three of the six areas. He said the goal of consumer protection is to ensure that consumers are aware of cost and benefit tradeoffs involved in choices around policy design features, particularly for a product that claims to supplement WA Cares Fund benefits. He said issues regarding filing venue could create barriers to market entry by private LTCI carriers, and the recommendation is that the state should endeavor to work through the logistical challenges for allowing "mix and match" to reach the agreed-upon goal of facilitating the development of a vibrant and competitive SPLTCI market.

Veghte said the challenges for a benefit trigger and elimination period are the potential gaps in coverage related to the benefit trigger and elimination period. He said the recommendations to tackle this challenge are that: 1) the SPLTCI deductible should be equal to the WA Cares Fund full maximum lifetime benefit, which starts at \$36,500 and should be automatically adjusted for inflation; the WA Cares Fund annual benefit inflation adjustment should be automatic, rather than an annual discretionary determination; and 3) carriers may not require that a client undergo a functional assessment or satisfy a benefit trigger in order to determine that a SPLTCI elimination period has begun or ended. He also highlighted that SPLTCI policies' elimination period may include, in addition to the monetary component—i.e., the deductible—a time component, such as three, six, nine, or 12 months, but not to exceed 12 months. He also said a new SPLTCI consumer guide, Statewide Health Insurance Benefits Advisors (SHIBA) counseling, and disclosures should support consumers in assessing tradeoffs between various elimination period options and price points and educate consumers about the importance of budgeting their WA Cares Fund benefits carefully to reduce the likelihood and size of a potential donut hole.

6. Discussed Other Matters

Bonnie Burns (California Health Advocates—CHA) raised the issue of the conflict between Medicare and the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) rules that has led to some confusion about which system and set of rules govern eligibility for coverage, as well as how the responsibility for the payment of health care benefits for eligible individuals is determined. She once again encouraged the Task Force to reconsider editing the *Coordination of Benefits Model Regulation* (#120).

Having no further business, the Senior Issues (B) Task Force adjourned.

Draft: 4/18/23

Senior Issues (B) Task Force
E-Vote
April 14, 2023

The Senior Issues (B) Task Force conducted an e-vote that concluded April 14, 2023. The following Task Force members participated: Larry D. Deiter, Vice Chair (SD); Lori K. Wing-Heier (AK); Mark Fowler (AL); Barbara D. Richardson (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); Michael Yaworsky (FL); John F. King (GA); Doug Ommen (IA); Dean L. Cameron (ID); Amy L. Beard (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Mike Causey (NC); Jon Godfread (ND); Eric Dunning (NE); Glen Mulready (OK); Michael Humphreys (PA); Jon Pike (UT); Scott A. White (VA); Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Allan L. McVey (WV).

1. Adopted Letters Regarding the Conflict Between COBRA and Medicare

The Task Force conducted an e-vote to consider adoption of a letter to the U.S. Congress (Attachment One-A) and a letter to the U.S. Department of Labor (DOL) (Attachment One-B) regarding the conflict between Medicare and the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) rules that has led to some confusion about which system and set of rules govern eligibility for coverage, as well as how the responsibility for the payment of health care benefits for eligible individuals is determined.

Without objection, the Task Force adopted the comment letters by a vote of 26 to 2.

Having no further business, the Senior Issues (B) Task Force adjourned.

May 11, 2023

The Honorable Kevin McCarthy
Speaker
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Hakeem Jeffries
Democratic Leader
U.S. House of Representatives
Washington, D.C. 20515

Dear Speaker McCarthy and Leader Jeffries,

On behalf of The National Association of Insurance Commissioners (NAIC), the standard setting organization representing the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories, we write to you regarding the confusion and costly expenses some workers and retirees are facing with the transition to coverage under the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) accompanied by eligibility for Medicare.

As you are aware, COBRA grants temporary continuation of coverage to individuals enrolled in group health plans when coverage would otherwise end upon the occurrence of a qualifying event. For individuals who are eligible or enrolled in Medicare when COBRA coverage begins, Medicare is the primary payer and COBRA plans become secondary.

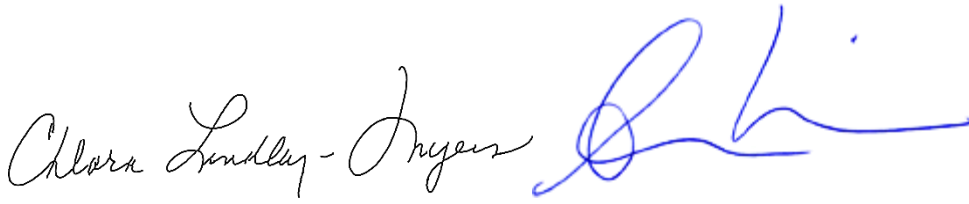

However, for individuals that qualify for COBRA and are eligible for Medicare but have not yet enrolled in either Medicare Part A or Medicare Part B, group health plans may recoup any paid claims and many workers and retirees are not aware of their Medicare eligibility or the need to enroll in the program, even if one is still employed. As a result, many workers and retirees find themselves facing out-of-pocket costs for claims paid under COBRA benefits due to their Medicare eligibility, as well as penalties for late enrollment in Medicare.

An example brought to our attention is of a gentleman who signed up for Medicare Part A at age 65 but did not sign up for Part B as he was still working. At age 76, he left employment and his employer provided eight months of COBRA as part of his separation agreement. The COBRA carrier paid benefits as the primary plan, but after six months the carrier discovered the gentleman was *eligible* for Medicare but was not *enrolled* for benefits. The gentleman had large medical expenses during this time and the carrier sought recovery for \$80,000 of benefits paid by COBRA.

Medicare enrollment and penalties, secondary payment rules, and COBRA are confusing, and we have heard some suggestions to help consumers better navigate these rules. One is better coordination between the Departments of Labor (DOL) and Health and Human Services (HHS). As you are aware, COBRA notices issued by DOL are not required under COBRA nor mentioned under Medicare. Another suggestion is for additional clarification in the law as to which coverage, Medicare or COBRA, is primary and which is secondary in these situations.

The NAIC requests you to examine this issue and we, as the state insurance regulators, are prepared to work with you to find solutions to aid and help our workers and retirees navigate this confusing interaction between COBRA and Medicare.

Sincerely,

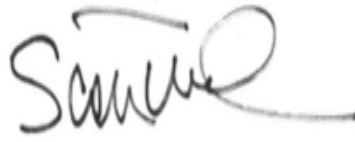

Lindley-Myers

Washington, D.C. 20510

The Honorable Mitch McConnell
Republican Leader
United States Senate
Washington, D.C. 20510

Dear Leader Schumer and Leader McConnell,

On behalf of The National Association of Insurance Commissioners (NAIC), the standard setting organization representing the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories, we write to you regarding the confusion and costly expenses some workers and retirees are facing with the transition coverage under the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) accompanied by eligibility for Medicare. to

As you are aware, COBRA grants temporary continuation of coverage to individuals enrolled in group health plans when coverage would otherwise end upon the occurrence of a qualifying event. For individuals who are eligible enrolled in Medicare when COBRA coverage begins, Medicare is the primary payer and COBRA plans become secondary. or
are

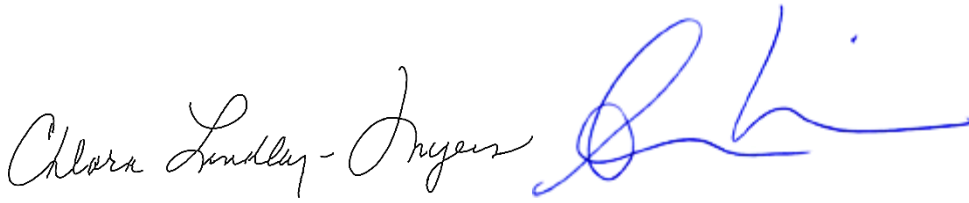

However, for individuals that qualify for COBRA and are eligible for Medicare but have not yet enrolled in either Medicare Part A or Medicare Part B, group health plans may recoup any paid claims and many workers and retirees not aware of their Medicare eligibility or the need to enroll in the program, even if one is still employed. As a result, many workers and retirees find themselves facing out-of-pocket costs for claims paid under COBRA benefits due to their Medicare eligibility, as well as penalties for late enrollment in Medicare. sign up
as

An example brought to our attention is of a gentleman who signed up for Medicare Part A at age 65 but did not enroll for Part B as he was still working. At age 76, he left employment and his employer provided eight months of COBRA part of his separation agreement, The COBRA carrier paid benefits as the primary plan, but after six months the carrier discovered the gentleman was *eligible* for Medicare but was not *enrolled* for benefits. The gentleman had large expenses during this time and the carrier sought recovery for \$80,000 of benefits paid by COBRA.

Medicare enrollment and penalties, secondary payment rules, and COBRA are confusing, and we have heard some suggestions to help consumers better navigate these rules. One is better coordination between the Departments of Labor (DOL) and Health and Human Services (HHS). As you are aware, COBRA notices issued by DOL are not required under COBRA nor mentioned under Medicare. Another suggestion is for additional clarification in the way you to which coverage, Medicare or COBRA, is primary and which is secondary in these situations.

The NAIC requests you to examine this issue and we, as the state insurance regulators, are prepared to work with you to find solutions to aid and help our workers and retirees navigate this confusing interaction between COBRA and Medicare.

May 11, 2023

The Honorable Julie A. Su
Acting Secretary
U.S. Department of Labor
200 Constitution Avenue NW
Washington D.C. 20210

Dear Acting Secretary Su:

On behalf of The National Association of Insurance Commissioners (NAIC), the standard setting organization representing the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories, we write to you regarding the confusion and costly expenses some workers and retirees are facing with the transition to coverage under the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) accompanied by eligibility for Medicare.

We thank you for the members of your Department's Employee Benefits Security Administration who joined the October 17, 2022, open meeting of the NAIC's Senior Issues Task Force to discuss this topic. Their participation was helpful.

As you are aware, COBRA grants temporary continuation of coverage to individuals enrolled in group health plans when coverage would otherwise end upon the occurrence of a qualifying event. For individuals who are eligible for or enrolled in Medicare when COBRA coverage begins, Medicare is the primary payer and COBRA plans become secondary.

However, for individuals that qualify for COBRA and are eligible for Medicare but have not yet enrolled in either Medicare Part A or Medicare Part B, group health plans may recoup any paid claims. Many workers and retirees are not aware of their Medicare eligibility or the need to enroll in the program, even if one is still employed. As a result, many workers and retirees find themselves facing out-of-pocket costs for claims paid under COBRA benefits due to their Medicare eligibility, as well as penalties for late enrollment in Medicare.

One of the suggestions offered during the October 17 meeting is for more robust notification and communication about COBRA and Medicare to workers and retirees. We appreciate that Medicare enrollment and penalties, secondary payment rules, and COBRA are complicated issues. The NAIC requests you to examine this issue and we, as the state insurance regulators, are prepared to work with you to find solutions to aid and help our workers and retirees in this confusing interaction between COBRA and Medicare.

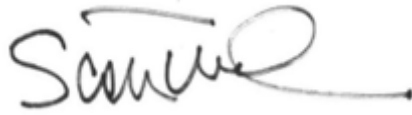

Sincerely,

Chlora Lindley-Myers

Draft: 8/28/23

Property and Casualty Insurance (C) Committee
Seattle, Washington
August 15, 2023

The Property and Casualty Insurance (C) Committee met in Seattle, WA, Aug. 15, 2023. The following Committee members participated: Alan McClain, Chair (AR); Grace Arnold, Co-Vice Chair (MN); Larry D. Deiter, Co-Vice Chair (SD); Mark Fowler (AL); Ricardo Lara (CA); Andrew N. Mais and George Bradner (CT); Gordon I. Ito represented by Kathleen Nakasone (HI); Amy L. Beard represented by Patrick O'Connor (IN); James J. Donelon (LA); Mike Chaney and Andy Case (MS); D.J. Bettencourt (NH); Glen Mulready (OK); Kevin Gaffney (VT); and Allan L. McVey represented by Erin Hunter (WV). Also participating was: Peg Brown (CO).

1. Adopted its Spring National Meeting Minutes

Commissioner Arnold made a motion, seconded by Director Deiter, to adopt the Committee's March 24 minutes (see *NAIC Proceedings – Spring 2023, Property and Casualty Insurance (C) Committee*). The motion passed unanimously.

2. Adopted the Reports of its Task Forces and Working Groups

Commissioner Lara made a motion, seconded by Director Deiter, to adopt the following task force and working group reports: the Casualty Actuarial and Statistical (C) Task Force; the Surplus Lines (C) Task Force; the Title Insurance (C) Task Force (Attachment One); the Workers' Compensation (C) Task Force (Attachment Two); the Cannabis Insurance (C) Working Group (Attachment Three); the Catastrophe Insurance (C) Working Group (Attachment Four); the Terrorism Insurance Implementation (C) Working Group; and the Transparency and Readability of Consumer Information (C) Working Group. The motion passed unanimously.

3. Adopted the Regulatory Guide to Understanding the Market for Cannabis Insurance: 2023 Update

Commissioner Lara thanked Brown for her hard work in leading updates to the *Regulatory Guide to Understanding the Market for Cannabis Insurance*. Brown said the Cannabis Insurance (C) Working Group published the original white paper in 2019. At that time, the cannabis industry was in its infancy, and many insurance gaps for cannabis-related businesses existed. Since 2019, the cannabis industry has become more sophisticated. It has also continued to rapidly expand, driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. The state of cannabis regulation, particularly at the state and local levels, has also evolved significantly since the last white paper. For these reasons, the original white paper needed to be updated to be of benefit to state insurance regulators.

Brown said the Working Group was officially tasked with providing an updated white paper in 2022. Since then, it has been exploring emerging issues, primarily in the commercial cannabis space, through presentations, panel discussions, and hearings held during open meetings. Information gained through these was leveraged to inform the content of the updated white paper.

Brown explained the Working Group designated a drafting group to develop the white paper after it reviewed and approved an outline during an open meeting. The drafting group held bi-weekly drafting sessions until completion. Drafting group member states included California, Colorado, Illinois, Oregon, Vermont, and Washington. The Insurance Services Office (ISO) and American Association of Insurance Services (AAIS) contributed educational materials and revisions to the sections of the white paper that discuss their products and services. The Working

Group was presented with periodic updates on the working drafts during open meetings so it could provide feedback.

Brown said the Working Group has not encountered any controversy related to the updated white paper. The white paper avoids advocacy-oriented discussion and focuses on issues affecting affordability and availability of insurance for cannabis-related risks in states that have legalized its use. The white paper finds that although capacity has improved since the first white paper's publishing, most of the commercial insurance for cannabis-related businesses is still found in the nonadmitted market. This affects smaller industry players most as the nonadmitted market does not offer the "off-the-shelf" insurance solutions typically available in the admitted market. Insurance gaps are most prevalent in the emerging areas of the cannabis industry, such as ancillary services, cannabis-infused products, and social consumption lounges. Among the potential structures being explored to facilitate cannabis-related business coverage are: the use of state-based commercial insurance programs, risk retention groups (RRGs), captives, and joint underwriting associations (JUAs).

Brown said the Working Group adopted the 2023 update to the *Regulatory Guide to Understanding the Market for Cannabis Insurance* white paper during an open meeting on July 18. The adoption followed an extensive public comment period.

Commissioner Lara made a motion, seconded by Commissioner Arnold, to adopt the *Regulatory Guide to Understanding the Market for Cannabis Insurance: 2023 Update* (Attachment Three). The motion passed unanimously.

4. Heard a Presentation on Telematics

Micheal DeLong (Consumer Federation of America—CFA) said consumer protections related to telematics programs are needed at the state level to protect consumers and make sure telematics programs improve pricing fairness and incentivize safe driving. He noted that telematics is an insurance program that captures consumers' driving data from cars, via devices, built-in technology, and mobile phones. Telematics programs use that data to assess consumers' driving behavior and driving patterns, as well as to calculate insurance premiums. He said savings and surcharges vary by company, and some companies say they do not surcharge people with bad driving behavior.

DeLong said safe drivers should, in theory, earn lower premiums, but there are concerns about the use of telematics related to transparency, data uses, consumer privacy, actuarial soundness, and fairness. He said telematics programs use hard braking, the time someone is driving, the distance or miles traveled, how quickly someone accelerates, their speed, cornering, and location. He said one company collects phone data even when a person is not driving. He said most drivers still do not have telematics-based auto insurance despite a lot of promotion and marketing from insurers. Consumers are wary of telematics for several reasons: concerns about privacy, worries about control over their information, and vulnerability to data hacks and breaches.

DeLong said the CFA believes that the NAIC should develop and provide guidance on telematics for departments of insurance (DOIs) and lawmakers. He said there are few state laws, regulations, or bulletins addressing telematics. He said better oversight, whether in the form of a model law or bulletin, or other guidance for state insurance regulators, would help protect consumers from harmful practices and their resulting consequences.

DeLong said there are several key objectives of telematics consumer protections: transparency clarity concerning all variables used in telematics programs along with consumer-facing explanations of the weight given to each variable; actuarial support for each variable included in the telematics algorithm and further demonstration that

variables used do not result in unfair discrimination on a protected class basis; strict limits on the data collected and used by auto insurers; strong privacy standards; and testing for unfair and unintentional bias.

DeLong said he believes insurers should provide their customers with a list of all variables used to calculate their premiums, in a format approved by the DOI. The list should be presented in an easily understandable manner for consumers and include an explanation of what each variable is assessing. The list should also disclose the relative weight given to each variable in the telematics algorithm, in a way that makes it clear how much impact each variable will have on consumer premiums. Insurance companies should disclose all the data they are collecting, but consumers need more detail, more explanations about how they are being evaluated, and why each item is needed to evaluate their insurance risk.

DeLong said companies should demonstrate to state insurance regulators why each of the factors is relevant and should be collected. There should be actuarial support for each variable. Regulators should only allow data that is both demonstrably related to the risk of loss and not unfairly discriminatory. He said insurers should provide actuarial justification and causative explanation for each data point used. He said insurers must also demonstrate that each component meets the standards for fair and unfair discrimination as understood in a civil rights context so a component cannot disproportionately harm consumers of a certain race or ethnicity or related to another protected class status. He said justification should be required whether an insurance company uses its own program or a third-party telematics program.

DeLong said the use of telematics should encourage driver safety and reduce insurance costs, and telematics should not be allowed to become a platform from which consumers are turned into products. He said there should be strict limits on the data collected and used by insurers. Insurers, and any third party managing a telematics system on an insurer's behalf, must only be allowed to collect data necessary to calculate a consumer's premium in accordance with the approved telematics program. He also noted that policyholders should have the right to access, review, contest, and use any data collected as part of a telematics program. He said he believes that, beyond its use for insurance rating, the only other appropriate uses of the data are driving safety communications, crash response, and claims handling. With respect to the use of data for handling claims, a condition for allowing insurers to use that data must be that the data is equally available to consumers for their use in the claims process.

DeLong said there should also be strong privacy standards for consumer data, and these standards should synchronize with the NAIC privacy model. Rules should be clear that data collected shall not be sold, loaned, rented, shared, monetized, or used in any way beyond the approved auto insurance purposes. Consumers should have access to all data collected and information about how and where the data is stored, and how long data will be maintained by the company. Insurers should meet standards for protections against hackers and should report any data breaches and other malicious activities to the appropriate authorities. He also noted that policyholders should have the right to opt out of a telematics program and to be rated without usage-based data in a manner that is not unfairly discriminatory.

DeLong said ensuring equity in the use of telematics requires testing for unfair discrimination and bias. He said charging higher premiums to consumers who drive at night or to those with varying time of day driving patterns could harm lower-income consumers who often work night shifts or jobs with inconsistent hours, with no control over their schedules. He said telematics programs should be subject to algorithmic bias testing. The focus should be on assessing the outcomes of the telematics algorithm, such as how much a customer is charged as a result of the telematics system and whether any data elements of the program are driving protected class discrimination.

Commissioner Mulready asked if there is an analysis of how states treat the usage of telematics. DeLong said most states do not have specific laws or regulations concerning telematics, although New York has some guidelines.

5. Heard Presentation on Underinsurance Issues

Ken Klein (California Western School of Law) said he has been conducting research into underinsurance. He said most homeowners in the U.S. believe they are fully insured, but they are significantly underinsured. He worked with the California DOI to obtain two years of fire claims. He said the data shows that after a catastrophe, about 95% of homeowners have less coverage than what it would take to rebuild. He said most homeowners are at least 57% underinsured. He said the explanation is not demand surge because many of the claims were not total losses, and they experienced 24% demand surge compared to underinsurance of 57%. He also said homeowners are not choosing to underinsure because many homeowners bought Extended Replacement Cost where they chose 100% of the estimate of reconstruction costs. He said these homeowners still have inadequate insurance, including the extended replacement coverage (ERC), at least 60% of the time. Klein said in the non-catastrophe losses, homeowners were underinsured 77% of the time by an average of 35.5%.

Klein said insurers use algorithms at point-of-sale (POS) to estimate reconstruction cost. He said the estimates are presented to customers as the insurer's estimated cost of reconstruction based on the information the insurer has about the house. He said the customer is given the right to select either more or less Coverage A than the estimate, but the customer typically is not given any information about error rates in the algorithm-generated estimates or any other reasons to doubt the accuracy of the estimates. Klein said the error rate of the algorithm-generated estimates apparently is significant and typically is significantly low. He noted the insurer's internal data makes error rates in algorithm-generated reconstruction estimates easily calculatable and knowable to insurers, but insurers cannot unilaterally adjust their pricing to correct for the error rates without causing competitive issues through high prices.

Klein said that although he reviewed 8,000 large loss claims, the data is not conclusive because data does not exist to compare claims that insurers internally identified as total losses to the amount of the POS estimated reconstruction cost for each claim.

Klein suggested that state insurance regulators should require insurers to report the following for each total loss claim: the insurer's POS estimated reconstruction cost and the estimation software used to determine that estimate; any updated estimated reconstruction cost and the software used for following years; the dwelling reconstruction coverages and the coverage limit of Coverage A; the incurred loss; and whether the loss occurred in a catastrophe.

Klein also said state insurance regulators should adopt the approach of California and Colorado in terms of disclosure rules by requiring insurers to: 1) make annual calculations of the error rates of their POS reconstruction cost algorithm; and 2) disclose to insureds their error rate within the algorithm so the insured can decide which coverage amount to choose. He said this would reduce the frequency of unintended underinsurance. Klein said this research would be published in January 2024.

6. Discussed Insurance Issues Related to Public Schools

Commissioner Mulready said he is hoping to learn from other states about how they are dealing with rising insurance rates for public schools. He said Oklahoma had two self-insurance pools for public schools, but one recently went out of business. He said 61 reinsurers participate in the pool with \$25 billion in property. The pool has seen a 262% loss ratio over the past six years. He said the program has a pilot program to conduct water and temperature monitoring in an attempt to keep claims down. Some schools are changing deductibles to improve rates. He noted that an Oklahoma company runs one of the three pools in the state of Texas. He said the Oklahoma legislature is looking into these insurance issues.

Commissioner McClain said Arkansas is seeing similar issues with rates. He said a recent tornado caused \$100 million in losses to schools. He said Arkansas has 24 reinsurers participating in its pool. Director Wing-Heier said two pools are merging in Alaska. She said members of the pool are responsible for losses. Commissioner Mulready said that is the case in Oklahoma as well and that when the prior pool went under, there were assessments to those school districts to pay for losses. Commissioner McClain said the Committee will look to have future discussions on this issue.

Peter Kochenburger (University of Connecticut School of Law) said this issue is national in scope. He said access to cyber insurance is difficult due to school vulnerabilities. He also said he has conducted work on the cost of insuring armed security.

7. Announced the Property Insurance Data Call Project

Commissioner McClain said state insurance regulators understand that increasing frequency and severity of weather events, rising reinsurance costs, and inflationary pressures are making property insurance availability and affordability more challenging for a growing number of regions across the country. These dynamics can vary significantly within a relatively small geographic area, so while a state's property insurance market may be generally healthy overall, there can be localized protection gaps that challenge certain communities.

Commissioner McClain said state DOIs have robust financial data to understand the impact of these forces on insurers' solvency and investments and can assess the strength and resilience of the industry, but many states lack granular data on how this translates to availability and affordability of coverage for consumers in some areas. He noted NAIC Members adopted a 2023 charge for the Property and Casualty Insurance (C) Committee to: "Assist state insurance regulators in better assessing their markets and insurer underwriting practices by developing property market data intelligence so regulators can better understand how markets are performing in their states, and identify potential new coverage gaps, including changes in deductibles and coverage types, and affordability and availability issues."

Commissioner McClain said interested regulators have begun preliminary scoping work to identify regulatory issues and considerations related to affordability and availability for which data is lacking, and then intend to refine a data template to respond to those specific needs of state insurance regulators. He said that although there is federal interest in this issue and proposals to gather data directly from insurers, NAIC Members believe the states have both the expertise and necessary regulatory authority to gather, analyze, and use data about their unique market conditions and meet the needs of policyholders, so they are best positioned to lead this work.

Commissioner McClain said that as the data template is developed over the coming weeks, state insurance regulators will work with interested parties in ensuring regulators receive accurate and meaningful data to meet regulatory needs.

Birny Birnbaum (Center for Economic Justice—CEJ) said in 1991, the Texas DOI tried to obtain data for a redlining study. He said they could not get the data from statistical agents, so the DOI developed a new data collection program for effective market monitoring through a single statistical agent. The new statistical plan was based on transactional-level reporting. He said this structure would work for state insurance regulators in conducting analyses to determine which insurers are writing in what areas and at what price. He said workers' compensation has a similar type of detailed transaction-level reporting. He said state insurance regulators should not try to become data collectors, but they should reform the statistical agent reporting system.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2023_Summer/National Meeting/C-08.doc

Draft: 8/18/23

Title Insurance (C) Task Force
Seattle, Washington
August 14, 2023

The Title Insurance (C) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: Eric Dunning, Chair (NE); Kevin Gaffney, Vice Chair (VT); Mark Fowler represented by Erick Wright (AL); Karima M. Woods represented by Angela King (DC); Michael Yaworsky represented by Anoush Brangaccio, Jeffrey Joseph, and Bradley Trim (FL); Vicki Schmidt represented by Julie Holmes (KS); James J. Donelon represented by Chuck Myers (LA); Kathleen A. Birrane represented by Mary Kwei (MD); Grace Arnold represented by Paul Hanson (MN); Troy Downing (MT); Mike Causey represented by Tracy Biehn (NC); Judith L. French represented by Tom Botsko and Maureen Motter (OH); Glen Mulready represented by Erin Wainner and Diane Carter (OK); Michael Humphreys represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Patrick Smock (RI); Michael Wise represented by Will Davis and Rachel Moore (SC); and Larry D. Deiter represented by Tony Dorschner (SD).

1. Adopted its Spring National Meeting Minutes

Commissioner Gaffney made a motion, seconded by Botsko, to adopt the Task Force's March 23 minutes (*see NAIC Proceedings – Summer 2023, Title Insurance (C) Task Force*). The motion passed unanimously.

2. Heard an Update on the Administration of the Survey of State Insurance Laws Regarding Title Data and Title Matters

Director Dunning stated that after investigating various survey administrative tools, NAIC staff have decided that using Microsoft Forms for the survey questions would make the most sense. The survey is anticipated to be administered to states shortly following the Summer National Meeting.

3. Heard an Update on the Compiling of Consumer Complaint Data Related to the Title Industry

Myers stated that the Task Force is charged this year with “obtaining information on consumer complaints submitted to states regarding title insurance to determine if updates are needed to insurance regulatory best practices or standards.” He leads the subsequently formed drafting group. Other drafting members include Montana; Nebraska; Ohio; Pennsylvania; Rhode Island; Washington, DC.

A draft survey of questions to send to states to collect title-related complaint information was drafted. The survey was not sent to states, as the drafting group became aware of the NAIC Complaints Database System (CDS) maintained by the NAIC's Market Regulation Department. NAIC staff were then directed to obtain the title-related complaint data from the CDS and compile it for analysis. Myers and NAIC staff then met with NAIC Market Regulation staff to better understand the submission process and how data is captured in the CDS. Additionally, Myers investigated how the Louisiana Department of Insurance (DOI) tracks and reports title-related complaints.

The drafting group met May 22 to review the draft survey of questions and four years of title complaint information compiled from the NAIC CDS. The drafting group found that more than 50% of complaint reasons were coded as “state-specific” for each year. Complaint dispositions can also be coded as “state-specific.” As this does not provide much information for analysis, NAIC staff were instructed to reach out to states reporting a significant number of complaint dispositions and reasons as “state-specific” for additional detail. Requests for additional information were sent to California, Florida, Missouri, and Texas.

California responded that all of its “state-specific” coded reasons for complaints were for escrow handling. Florida responded that more than half of its reasons for complaints came from agent handling, failure to disburse funds, and premium refunds. Texas reported that over half of its “state-specific” reasons were for closing, contract disputes, and earnest money. Texas also reported that over half of its “state-specific” dispositions were for contract language, information furnished, and questions of fact. Missouri declined to provide information citing the task as being too laborious.

The drafting group plans to meet again following the Summer National Meeting to discuss if additional detail is needed to identify trends. As part of its discussions, it will contemplate how reporting to the NAIC CDS could be enhanced to allow for more transparency on title-related complaints. Currently, title is captured under the CDS’s miscellaneous category, which does not offer the same coding options as those that have their own category.

4. Heard a Presentation on Issues with NTRAPS

Sylvia Smith-Turk (Stewart Title) stated that Non-Title Recorded Agreements for Personal Services (NTRAPS) are agreements that obligate the current owner to use the other party’s services in the future and further attempt to bind successor owners by purporting to create a real property interest. Failure to comply with these agreements may give rise to a lien against the property to secure liquidated damages. How these agreements are marketed to property owners and the terms, duration, and enforcement of these agreements are concerning. There are no regulatory disclosure requirements regarding these agreements. Consumers may not fully understand the implications of these agreements. The act of recording NTRAPS in property records can create a long-term barrier to the sale or refinancing of real estate or hamper estate administration. The practice of submitting NTRAPS for inclusion in property records characterized as liens, covenants, encumbrances, or security interests in exchange for money recently emerged throughout the country.

Smith-Turk stated that these agreements are harmful to consumers because they obligate current and future property owners to utilize the service providers for up to 40 years. Consumers do not have the expertise of real estate professionals or attorneys. They may not have the benefit of legal counsel and may not fully understand the agreement or the long-term implications of the ability to transfer or finance their property. Elderly homeowners or those in need of the financial incentives being offered are particularly at risk, and NTRAPS can result in a significant monetary loss when transferring or financing their home. Additionally, NTRAPS provisions allow the listing agreement to be assigned without notice to the property owner.

The American Land Title Association (ALTA) supports efforts to protect consumers by prohibiting the filing of unfair real estate fee agreements in property records, a practice that creates impediments and increases the cost and complexity of selling, refinancing, or transferring real estate. ALTA advocates for state laws and regulations preventing the enforcement of NTRAPS. ALTA’s model legislative bill: 1) makes agreements unenforceable; 2) prohibits the recording of these agreements in property records; 3) creates penalties for recording these agreements in property records; and 4) provides for the recovery of damages and the removal of agreements from property records. The proposed legislation protects consumers and provides state insurance regulators with the ability and authority to assist consumers in seeking damages caused by NTRAPS. There have been over 30 bills introduced in 21 states and 15 laws passed. Attorneys General from Florida, Massachusetts, New Jersey, North Carolina, Ohio, and Pennsylvania have filed complaints stating that NTRAPS being used in the marketplace are deceptive, unfair, and unconscionable business practices.

5. Heard a Presentation on Current Fraud Trends in the Title Space, Including Seller Impersonation Fraud

Thomas Cronkright (CertifID) stated that business email compromise (BEC) losses have increased four-fold over the past five years. BEC is a scam targeting businesses and individuals performing wire transfers of funds. Legitimate email accounts are compromised through social engineering and computer intrusion to conduct unauthorized wire transfers. Cryptocurrency has enabled accelerated funds movement, and compromises have evolved to include spoofed phone calls, videos, and websites. Open source of information, Multiple Listing Service (MLS) data syndication, and multiple transactional parties make real estate a top target. The pandemic led to rapid growth in digital closings without creating a safety net. Emerging technologies and expanded personal digital footprints create a growing divide between businesses that protect their customers and those that do not. Vulnerable businesses are reliant on the belief in trusted communications, focus on the manual detection of suspicious behavior, and believe they are too small to be a target. Protected businesses verify identities before sharing sensitive information, leverage technology to inspect every case thoroughly, and recognize that everyone is a target.

New technologies have led to advanced social engineering. SpoofCard is an application that offers users the ability to change what someone else sees on their caller ID display when they receive a phone call. A current practice in the industry to confirm identity has been to call someone and reach them live over the phone, which is known as the “call-back” procedure. Some errors and omissions insurance policies even require a call back before funds are initiated, or coverage may be denied if a loss occurs. The challenge is, you often cannot get a hold of someone in real-time, so they need to call you back. As an example, a hacker could spoof a title company and call the buyer when it is time to wire funds to close. Likewise, a fraudster could impersonate a seller and call the title company and provide them fraudulent wiring information for net proceeds to be transferred after closing.

Deepfakes—artificial intelligence (AI) voice replication—can impersonate real estate professionals to gain access to sensitive information about clients and defraud them. All it requires is a short voice sample of the human voice you want to replicate for the AI to learn it instantly. Fake AI-generated property tours online could deceive buyers and agents about property conditions. Influence Bots—open-source intelligence—use social media to influence users of social platforms. SIM swap—SS7 Network—is a type of account takeover fraud that generally targets a weakness in two-factor authentication and two-step verification, in which the second factor or step is a text message (SMS) or a call placed to a mobile telephone. AI-generated attack emails use ChatGPT AI text-generating interfaces to create malicious messages designed to spear phish, scam, harass, and spread fake news. These AI-based systems can also be used for BEC scams.

Seller impersonation fraud is a new type of scam hitting the real estate industry due to fewer opportunities for other fraud techniques from a decline in home sales. Fraudsters are impersonating an owner to sell unoccupied property, including vacant lots, they do not own. A fraudster will identify vacant lots using public records. Posing as the seller, the scammer contacts a real estate agent to list the property for below market value. The scammer quickly accepts the offer, with a preference for cash sales and then requests a remote notary signing and impersonates the notary. The funds are transferred to the scammer and not discovered until later. Florida and Texas have the highest percentage of vacant land sales as a percentage of total sales. The U.S. Secret Service and CertifID issued a joint bulletin recently advising of the rise in vacant land fraud.

Fraud attempts on mortgage payoffs increased by five times in the second quarter versus the prior three months. Payoff fraud is when fraudsters impersonate a lender or another title company to receive the funds from disbursement after the settlement process, either from refinancing or the sale of a property. Fraudsters use common tactics found in other wire fraud scams to send a falsified payoff statement with wiring instructions to the targeted settlement agent. Shifts in deposit relations stemming from the three high-profile bank failures opened the door for fraudsters.

The CertifID Fraud Recovery Services (FRS) team received an unprecedented number of reports of wire fraud in 2022. Cases increased by 145% year-over-year, with a \$158,000 average loss reported per case. Average wire fraud loss for businesses and consumer cases were \$295,000 and \$107,000, respectively. A layered protection process of education and engagement, technology, insurance coverage, and incidence response planning are needed to mitigate the impact.

Having no further business, the Title Insurance (C) Task Force adjourned.

Draft: 8/2/23

Workers' Compensation (C) Task Force
Virtual meeting (*in lieu of meeting at the 2023 Summer National meeting*)
July 20, 2023

The Workers' Compensation (C) Task Force met July 20, 2023. The following Task Force members participated: Alan McClain, Chair, and Jimmy Harris (AR); John F. King, Vice Chair, and Steve Manders and Paula Shamburger (GA); Mark Fowler represented by Jimmy Gunn, Yada Horace, and Erick Wright (AL); Ricardo Lara represented by Yvonne Hauscarriague, Margaret Hosel, Giovanni Muzzarelli, Mitra Sanandajifar, and Sarah Ye (CA); Michael Yaworsky represented by Greg Jaynes (FL); Doug Ommen represented by Matthew Cunningham and Travis Grassel (IA); Dean L. Cameron represented by Maria Delvillar and Randy Pipal (ID); Vicki Schmidt represented by Chris Hollenbeck, Julie Holmes, and Sara Hurtado (KS); Sharon P. Clark and Sue Hicks (KY); James J. Donelon represented by Charles Hansberry (LA); Gary D. Anderson represented by Jackie Horigan and Matthew Mancini (MA); Timothy N. Schott represented by Brock Bubar, Sandra Darby, and Robert Wake (ME); Grace Arnold represented by Connor Meyer, and Phil Vigliaturo (MN); Chlora Lindley-Myers represented by Julie Lederer and Jo LeDuc (MO); Mike Causey represented by Sharon Thornton-Hall (NC); Scott Kipper represented by Anna Krylova and Gennady Stolyarov (NV); Glen Mulready represented by Cuc Nguyen (OK); Andrew R. Stolfi represented by TK Keen (OR); Michael Humphreys represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Michael Wise represented by Will Davis and Melissa Manning (SC); Larry D. Deiter represented by Tony Dorschner (SD); and Kevin Gaffney, Rosemary Raszka, Zachary Rothammer, and Shane Silverman (VT). Also participating were: Tom Zuppan (AZ); Lucretia Prince (DE); Reid McClintock and Julie Rachford (IL); Linda Grant (IN); Paige Dickerson, and Tina Nacy, (MI); Christian Citarella (NH); Carl Sornson (NJ); Marianne Baker (TX); Rebecca Nichols, Lee Ann Robertson, and Zuhairah Tillinghast (VA); and David Haushalter (WI).

1. Adopted its Spring National Meeting Minutes

Commissioner King made a motion, seconded by Commissioner Clark, to adopt the Task Force's March 6 minutes (*see NAIC Proceedings – Spring 2023, Workers' Compensation (C) Task Force*). The motion passed unanimously.

2. Heard a Presentation from Lewis & Ellis on Workers' Compensation Rating

The Task Force heard a presentation from Katie Koch (Lewis & Ellis) on workers' compensation ratemaking. Workers' compensation laws, by design, protect workers by providing financial compensation. Workers' compensation payments include medical benefits for work-related injuries or illness, regardless of fault.

Workers' compensation insurance emerged in the early 20th century, and by mid-1900, most states had some form of legislation for workers' compensation. The National Council on Compensation Insurance (NCCI) and regional bureaus developed advisory rates that insurers widely adopted. The introduction of open competition in the workers' compensation market led to a reevaluation of pricing procedures.

The NCCI and other state rating bureaus typically provide loss costs instead of advisory rates today. Insurers must independently justify various components of the premium rate, including profit and contingency provisions, expense loads, investment income offsets, and other loss cost deviations. The loss cost variations include experience rating modifications and schedule rating, allowing insurers to deviate from bureau rates or loss costs.

Insurers consider the expense costs of participation in involuntary pools and special fund assessments. Additionally, insurers evaluate the cost implications of workers' compensation reforms enacted in state legislatures.

Pricing actuaries are often involved in determining rates that cover expected losses and expenses during the policy period while allowing the insurer to make a reasonable profit. Actuaries use two methods for determining rates. The first method is the loss ratio method, which quantifies needed revisions from current rates. The second method is the pure premium method, which quantifies the required rate per exposure unit and can be used in the deviation of rating factor relativities. Actuaries use the loss ratio methodology for an overall state rate indication and the pure premium methodology for classification ratemaking.

There are challenges when comparing workers' compensation rates across states. Experience rating, schedule rating, large deductible policies, and retrospective rating can significantly affect the final premium a policyholder pays under the existing overarching rating regime.

Experience rating involves identifying and collecting individual employers' payroll and loss information. It permits employer-specific deviations from manual rates with a foundation in a particular employer's historical loss experience.

Retrospective rating involves an endorsed insurance policy such that the final premium adjusts according to the losses experienced by the insured employer rather than according to industry-wide loss experience. This method takes actual losses during the policy period to modify the initial premium to one that more accurately reflects the loss experience of the individual employer.

Schedule rating refers to modifying manual rates either upward or downward to reflect the individual risk characteristics of the insured, generally done at the employer level.

The published loss costs of the state rating bureau (bureau), or NCCI, by industry code, are foundational to today's process. Typically, loss costs are reviewed and revised yearly. Insurers are permitted to use their own loss cost multipliers (LCMs), including a company-specific expense provision. Insurers may also use a loss cost modification factor (LCMF), which adjusts the rate level considering company-specific loss experience. There are often limitations on the degree to which an LCMF in a specific program is permitted to deviate.

Most states permit rating and schedule rating, which facilitates additional rate segmentation, but there may be some differences in specific rules. Some states are administrative pricing states, which may be the most restrictive in permitting insurers to deviate from a bureau filing. A workers' compensation model in a rate filing would likely not be allowed. Anyone can find state differences regarding laws and benefits by visiting the Workers Compensation Research Institute's (WCRI's) web page.

Workers' compensation rating laws can vary by state regarding the specific regulations and methodologies used to determine premium rates. Insurers use classification systems to establish the level of risk associated with each occupation. Classification systems influence premium rates. While many states have similar classification systems, some may have unique or more detailed classifications.

Many states permit insurers to use an experience modification factor, or an experience rating system, to adjust an employer's premium based on their historical claim experience. The experience modification factor compares an employer's actual claims history with the expected claims for companies in the same industry. A factor above 1.0 indicates higher-than-average claims, resulting in higher premiums. A factor below 1.0 indicates lower-than-average claims, leading to reduced premiums.

Some states have a competitive market where multiple insurers can provide workers' compensation insurance, allowing insurers to compete for business. Other states operate in a monopolistic system, where a state fund, or agency, is the sole provider of workers' compensation insurance.

Benefit levels provided under workers' compensation insurance, like medical coverage, disability payments, and vocational rehabilitation, can vary by state. Factors like average wage levels, cost of living, and specific state regulations may influence benefit levels.

Workers' compensation rating formulas consider factors such as industry classification, claims history, payroll, and other factors believed to be relevant. Although many states have similar risk classification plans, these formulas' specific components and weighting can differ.

IBM defines a predictive model as a statistical tool or algorithm that leverages patterns and relationships in historical data to make predictions or forecasts about future events. It involves training a model on a dataset and then using that model to make predictions about new, unseen data.

Insurers commonly use predictive models in personal lines products. The purpose of using the models is to promote more accurate risk segmentation, which correlates with expected costs. Predictive models must use a robust historical dataset. Using modeling approaches allows more formal control that eliminates some of the guesswork.

The use of workers' compensation models is lagging behind the use of personal lines models. The NCCI and rate bureau methods are sophisticated but not typically interpreted as applying a true "model" definition. Model usage is less prevalent in workers' compensation than in personal lines.

According to studies conducted by Robert Hartwig (University of South Carolina), there has been no statistically discernible relationship between workers' compensation underwriting performance and periods of recession over the past century. Workers' compensation rates have also been flat or decreased in recent years.

One hurdle to model rollouts in workers' compensation includes internal resource constraints and prioritization compared to other lines of insurance. Additionally, there may be pushback on regulatory or company management acceptance.

Workers' compensation has experience ratings and scheduled ratings built in. However, these components must be managed in a modeling process. The management of these components might increase the complexity of a model due to the extent there are differences by state.

There are some impacts of model usage on workers' compensation. One effect might be that if the regulatory framework permits models, insurers can conceivably use models to deviate from bureau loss cost plans and the current rating structure. Additionally, insurers could modify risk segmentation based on cost expectations. Due to state differences, there will likely be unique complexities in workers' compensation models that differ from personal lines pricing. However, workers' compensation models could offer risk management and pricing insights.

A good pricing model needs to comply with state laws and regulations. When used on a dataset not used in building the model, the model should predict the target variable, such as claim severity, claim frequency, pure premium, and loss ratio. A good model considers the dataset size; a more extensive dataset may permit a more complex model structure than a smaller dataset. Acknowledging that different data set sizes offer different credible insights is necessary. Finally, a good model uses appropriate input characteristics that meaningfully

contribute to a model's ability to predict the target variable. For example, the input variable can be demonstrated to have statistical significance or influence on the model results and improve the predictions of the target variable.

A good pricing model has appropriate control and offset variables to mitigate the risk of predictions without influencing a particular variable's model contributions (e.g., policy year and state). Sometimes an insurer will put a policy year in for a control variable when using multiple years of data because they do not want to distort their model results. Another control variable would be the state because each state likely has differences. The control variable is the variable that the modeler does not want to influence their target variable predictions.

Another factor that makes a good pricing model is integrating it into the model process. Insurers will have a current rating plan, but introducing a model into the rating plan requires an approach to control how the model gets integrated. For example, this will ensure there is no double counting.

When stakeholders, like regulatory communities, and consumers are concerned about the black box aspect of pricing models, it is important to ensure they:

- Understand the data underlying the model.
- Understand how the model validation works.
- Have some model memorandum or write-up.
- Get intuitive results.
- Have measured reliance (i.e., how the model improves a situation and why building a model is important).

Insurers may have concerns about protecting their proprietary information. Additionally, there are concerns regarding the time and speed-to-market, as well as compliance costs.

Commissioner McClain said everyone wants good data and analytics, and predictive modeling speaks to this. He said he has heard from stakeholders that they like the methods in place for years, as they have proved reliable. Commissioner McClain also heard that some insurers apply the models differently. He has heard from Arkansas' local industry concerns about the uniform applicability of models.

McKenney said he thought the presentation was helpful and liked how it touched on state insurance regulator concerns and state-by-state differences. He said Pennsylvania has had some workers' compensation insurers try to come in with predictive models, and Pennsylvania does not think their law allows it. McKenney said their workers' compact uses words like a uniform classification system, a uniform experience rating plan, and exclusive means. He said bringing in something that is essentially another way of classifying risk provides prospective pricing that deviates from what is supposed to be the exclusive means of providing prospective pricing in Pennsylvania's Act. McKenney said he understands that state-by-state laws vary. However, predictive models are not used as often in workers' compensation as in other lines of business.

Grassel said the workers' compensation industry has thrived for five to 10 years. He asked Koch if the workers' compensation market would deteriorate if she thought there might be more pressure on predictive modeling products. Grassel said workers' compensation insurance was a line of insurance needing improvement, say 25 years ago, and now it is the one that is performing the best.

Koch said she believes if the risk segmentation abilities deteriorate and the experience starts to deteriorate, there will be more efforts to use modeling. She said if insurers see ways predictive modeling could improve results, they would do so in jurisdictions that permit it.

Wake said he questions whether the improved performance in workers' compensation is due to improved performance. Instead, he wonders if the improved performance is a different inflation and investment environment in recent decades.

Wake asked if insurers need lower combined ratios to sustain the same level of performance. He said that combined ratios are not the only thing determining success or failure in workers' compensation because it is a long tail line; so much of the probability depends on investment return. Wake asked if the structure of investment return changes in low inflation and if a low nominal return economy needs more profitability from underwriting than investment. Koch said that if the investment returns are coming in lower than expected, that will put upward pressure on rates and pricing.

8. Discussed Other Matters

Commissioner McClain said the Task Force would meet in a couple of months to hear a presentation regarding the unintended consequences of the legalization of cannabis on workers' compensation.

Having no further business, the Workers' Compensation (C) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/C CMTE/2023_Summer/WCTF/Minutes-WCTF-SNM.docx

Draft: 8/7/23

Cannabis Insurance (C) Working Group
Virtual Meeting (*in lieu of meeting at the 2023 Summer National Meeting*)
July 18, 2023

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met July 18, 2023. The following Working Group members participated: Ricardo Lara, Chair, represented by Katey Piciucco (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Jimmy Harris (AR); Angela King (DC); Randall Currier (NJ); Melissa Robertson (NM); Gennady Stolyarov (NV); Jan Vitus (OR); Sebastian Conforto (PA); Beth Vollucci (RI); Mary Block (VT); and Michael Walker (WA).

1. Adopted its June 20 Minutes

Currier made a motion, seconded by Vollucci, to adopt the Working Group's June 20 minutes (Attachment Three-A). The motion passed unanimously.

2. Discussed Exposure Comments Received on the Final Draft of the *Understanding the Market for Cannabis Insurance 2.0* White Paper

Brown stated that the *Understanding the Market for Cannabis Insurance 2.0* white paper was exposed during the Working Group's last meeting for a 45-day public comment period ending May 26. Notification of the exposure was redistributed on June 6 to include the Property and Casualty Insurance (C) Committee's distribution list, and the comment period was extended to July 7.

A comment letter was received from the Vermont Department of Insurance (DOI). The Vermont DOI suggested that claims adjusters be included in the Education section because they may need specialized training on cannabis-related claims. As such, the drafting group recommended the following red-lined revisions to the white paper:

D. Cannabis Education Landscape

Education could help address complications and gaps experienced in the cannabis and insurance industries caused by the recent and rapid rate of state regulation. Those needing to maintain currency include cannabis business owners, employees and licensees, regulators, and the insurance industry, such as insurers, claims adjusters, agents, and producers. Many involved in the cannabis industry and businesses would be better able to mitigate their risks with insurance through keeping current on applicable authorities and their requirements.

Regulators and other interested parties should enhance their knowledge through understanding industry trends, such as current and future state cannabis or insurance market conditions. For example, pre-license training for insurance producers does not touch on the topic of cannabis, but the insurance producers may be engaged in providing coverage to the cannabis industry. A producer of insurance should be well educated on the industry they provide coverage for, in order to ensure the procured policy is appropriate, adequate, and lawful. Additionally, claims adjusters may need specialized training on cannabis-related claims.

A comment was also received from the Insurance Services Office (ISO), which can be found in Attachment B of the meeting materials. It provided revisions to the sections of the white paper referencing the ISO and its products. Those revision suggestions reflect a preference for how things are worded rather than substantive changes. Since the changes do not affect the intent of the section and pertain to the ISO's organization and products, the drafting group recommended implementing them as requested by the ISO.

3. Adopted the *Understanding the Market for Cannabis Insurance 2.0* White Paper

Walker made a motion, seconded by Vitus, to adopt the *Understanding the Market for Cannabis Insurance 2.0* white paper (Attachment Three-B) as amended. The motion passed unanimously.

4. Heard a Panel Discussion on the Uncertainties in the Treatment of Hemp and Cannabis

Brown stated that the 2018 Farm Bill legalized hemp using broad language. She asked about the policy mindset and politics around this.

Courtney Moran (EARTH Law) stated that under the Controlled Substances Act (CSA), all parts of the cannabis plant were illegal, whether it was hemp or marijuana. The 2014 Farm Bill separated out industrial hemp, giving it a broad and simple definition of being from the plant *Cannabis sativa* L., whether growing or not, with a delta-9 tetrahydrocannabinol (THC) concentration of not more than 0.3% on a dry weight basis. The 2014 Farm Bill did not remove industrial hemp from the definition of marijuana. However, the U.S. Court of Appeals for the Ninth Circuit clarified that the U.S. Congress (Congress) had contemplated the interaction of the 2014 Farm Bill and the CSA. In 2016, the U.S. Department of Agriculture (USDA), in consultation with the U.S. Drug Enforcement Administration (DEA) and the U.S. Food and Drug Administration (FDA), developed a Statement of Principles on Industrial Hemp to inform the public of how federal law applies to activities associated with industrial hemp that is grown and cultivated in accordance with the 2014 Farm Bill. In doing this, the agencies attempted to modify the definition of industrial hemp to be below 0.3% THC and used exclusively for the industrial purposes of fiber and seed. Thus, the Statement of Principles on Industrial Hemp was in direct conflict with Congress's intent.

Congress submitted an amicus curiae brief in support of a legal challenge to the 2016 Administrative Rule issued by the DEA that established that all extracts from the plant *Cannabis sativa* L., including industrial hemp extracts, are illegal under federal law. The lawsuit, *Hemp Industries Association v. DEA*, was before the Ninth Circuit Court. The amicus supported the Hemp Industries Association's argument that the DEA's rule is contrary to and subverts the 2014 Farm Bill, which carved out certain legal exceptions for the growth, cultivation, and marketing of industrial hemp. The amicus argues that in passing the 2014 Farm Bill, Congress made it clear "that industrial hemp and any derivatives, extracts, and uses thereof would be exempted from the definition of 'marijuana' under the CSA." The amicus asked the court to find that the DEA's position that industrial hemp extracts "will continue to be treated as Schedule I controlled substances" was an abuse of the DEA's administrative procedure and rulemaking authority. The amicus noted that Congress recognizes the need within the 2014 Farm Bill for research and development to investigate the market potential of agriculture and the economic impact of hemp-derived avenues, such as cannabinoids.

It was U.S. Sen. Mitch McConnell (R-KY) and U.S. Sen. Ron Wyden (R-OR) who proposed the hemp amendment to the 2014 Farm Bill. While crafting the language for the 2018 Farm Bill, the reference to industrial hemp was removed to make it clear to federal agencies that the intent of the amendment was to authorize derivatives of cannabinoids coming from cannabis below 0.3% or less of THC. The same day the 2018 Farm Bill was signed into law, the FDA issued a notice stating that it views it as illegal to introduce into commerce any food or dietary supplement that contains cannabidiol (CBD). The USDA implemented the 2018 Farm Bill, utilizing the testing clause provided in another part of the bill and modifying any preharvest THC levels to a total THC standard, which

is different from the federal definition. In its interim rule in 2020, the DEA asserted that “a cannabis derivative, extract, or product that exceeds the 0.3% Delta-9 THC limit is a schedule I controlled substance, even if the plant from which it was derived contained 0.3% or less Delta-9 THC on a dry weight basis.” The DEA’s position created potential criminal risk for processors of hemp and hemp extracts if any substances created in processing or extraction even temporarily result in levels of THC over 0.3%. In doing so, the interim final rule creates additional criminal risks that were neither contemplated nor intended by Congress in passing the 2018 Farm Bill.

Beau Whitney (Whitney Economics) stated that prior to the 2018 Farm Bill, there was still interest in hemp, especially from the fiber and grain side. Driven by market value, production exploded in 2018, with most licensed acres being for cannabinoid production. Excess inventory resulted in a large influx of supply, driving prices down rapidly. Despite this, the total acres licensed between 2019 and 2020 did not change much because as some states pulled back on production, other states entered the marketplace. By 2021 and 2022, states began to legislate cannabinoids in the absence of federal actions. The resulting uncertainty led to a 62% drop in acres licensed in 2021 and a continued decrease in 2022. There was also a shift in interest towards fiber and grain because they have a more predictable market. Globally, the amount of fiber and grain used for construction materials, textiles, and automobile parts is significantly larger than that of adult and medical use. The intense legislative and regulatory activity around cannabis is forcing investors to pause investments in this space, leading to interstate commerce difficulties. The impact on the production of fiber and grains must be contemplated when setting policies for cannabinoids. State regulation of cannabinoids has had unintended consequences on the market.

Brown asked what developments, challenges, and implications are coming out of the 2018 Farm Bill and what the status is.

Gillian Schauer (Cannabis Regulators Association—CANNRA) stated that CANNRA members’ regulatory efforts are focused on protecting consumer safety, which has been challenging under the current landscape. The gaps in the 2018 Farm Bill are being used to produce products that can be high-risk for consumers. The 3% dry weight in a plant is not a lot, but in a beverage or chocolate bar, it can be a lot of milligrams of delta-9. Many CANNRA members see products in the hemp marketplace that have more milligrams of THC than they legally allow in their adult-use or medical-use marketplace. Additionally, the regulatory frameworks between marijuana and hemp are quite different. States and territories are putting in place rigorous regulatory frameworks that include packaging, labeling, and testing requirements for marijuana products to protect consumers. These are not in place federally or in certain states for hemp products. The 2018 Farm Bill definition of hemp focuses on delta-9. There are many sources online selling flower and concentrates that have high levels of THC. As soon as those buds or concentrates are heated, they convert into delta-9. These products are not regulated and could potentially be sold to anyone who indicates they are over 21 with a credit card. Also, the broad definition legalizing hemp allows for cannabinoids that have not been studied for safety to be produced and consumed. This leaves humans to be the test case for these cannabinoids. Consumer safety is an issue, as there are no required federal packaging and label standards, consumer disclosures, protections against child consumption, or testing standards. Regulated cannabis markets have a 96% compliance rate of not selling to minors. The FDA has openly said it needs Congress to tell them it can take the regulatory reins. Some of the challenges the FDA faces is the lack of a regulatory structure for combustion or aerosolized products outside of tobacco regulation, which is very different. There is no clear science to suggest what threshold is intoxicating and if this differs between synthetic and non-synthetic products. The lack of federal action has resulted in a patchwork of regulations across states. CANNRA was created, in part, to harmonize policy. Every member would like to see a robust food, fiber, feed, and grain marketplace. However, cannabinoid products need to have a more rigorous regulatory framework.

Moran clarified that the 2018 Farm Bill sought to solve the barriers to cultivation because the Ninth Circuit Court clarified that non-psychoactive hemp products were never scheduled under the CSA. It was the cultivation itself that required that registration. It was meant to greenlight the farming and commercial production of the crop

itself. The FDA wants to see a new regulatory framework for hemp-derived cannabinoid products. However, there is a regulatory framework at the farm level.

Schauer agreed that the regulatory framework stops at the farm. The U.S. Federal Food, Drug, and Cosmetics Act (FD&C Act) does not provide a regulatory framework because it does not contend with smoked or aerosolized products. These products remain the predominant way people consume cannabis.

Whitney stated that the inputs he has received from the hemp industry reflect that there is frustration even on the industry side on these issues. Commerce in this space is tremendous, with an estimated \$20–25 billion a year, making it on par with the legal regulatory sales of adult and medical-use cannabis. There is a desire to have labeling, testing, and ID checks implemented for consumer safety.

Michael Correia (Cannabis Consultant) stated that very few congresspeople understand the policy and science related to these issues. He stated that they are looking at this as an agricultural and industrial commodity.

Moran stated that Sen. McConnell signed on to the amicus brief and was supportive of CBD production and protecting it within the constructs of the 2014 and 2018 Farm Bills. He viewed it as an opportunity to help Kentucky farmers find a replacement crop for tobacco. However, he did not foresee intoxicating products coming about from it.

Whitney stated that hemp producers do not mind being regulated, but they do not want to be criminalized or treated like they are producing a scheduled drug.

Morgan Fox (National Organization for the Reform of Marijuana Laws—NORML) stated that legislative intent is important. The 2018 Farm Bill resulted in the widespread, unregulated use of intoxicating cannabinoids. The FDA holds a lot of blame for this because it chose to regulate in a way that allowed major distributors (such as Walmart) to sell these products. Producers were looking for additional markets for their large amounts of CBD isolate. Unscheduled intoxicating cannabinoids are most popular in states without legal-use markets. This loophole is being exploited to the potential detriment of consumers because research on the effects of various cannabinoids in amounts consumers are now putting in their bodies is limited. Production is a key part of the problem because producers are not regulated. They are essentially backyard scientists. Additionally, these hemp-derived intoxicating cannabinoids are less expensive than legal cannabis. The FDA essentially punted on the issue of regulating CBD. This leaves Congress to push down hard on intoxicating cannabinoids in the next Farm Bill. It is already occurring at the state level.

Schauer stated that it is important when talking about the regulatory framework for hemp to also talk about the regulatory framework for cannabis because they are the same plant. We have effectively legalized cannabis without consumer safety levels in effect. Hemp and cannabis products are overlapping, and the regulatory frameworks could not be more different.

Fox stated that marijuana markets have strict regulations in place, but none of this exists in other markets. In some state-legal markets, the regulations at the state and local level become onerous, and producers start to then pivot to unregulated markets so they can add additives to various products. People will continue to cut corners and bleed these two industries until there is a functional federal regulation framework.

Schauer stated that many have forgotten the lessons learned from the vaping lung injury outbreak because it happened right before the pandemic. The outbreak was largely due to additives and illicit market products.

There is a risk of a similar public health crisis on the hemp side without regulation. It is important that the upcoming Farm Bill address this, but there are rumors that this will not happen. If the threshold is raised to 1% and it does not include total THC, the regulated cannabis market will not likely survive.

Fox stated that he agrees that the regulated cannabis market would not likely survive a direct challenge from the hemp market with such a different regulatory framework. Despite states regulating a lot of these substances, science is constantly changing. This occurred with bath salts and other synthetic cannabinoids in that as soon as the FDA schedules a component, somebody changes the molecule to get around it. Rather than a complete ban, the solution is to develop a regulatory framework fluid enough to address all new cannabinoids.

Correia stated that he is also concerned about a public health outbreak from unregulated products. The National Cannabis Industry Association (NCIA) released a paper, *Adapting a Regulatory Framework for the Emerging Cannabis Industry* (<https://thecannabisindustry.org/reports/adapting-a-regulatory-framework-for-the-emerging-cannabis-industry/>), in 2019 on regulating the cannabis industry. The paper advocated for a regulatory structure that had regulatory agencies overseeing products based on the end-use of the product. The goal of legalization is to create a taxed and regulated market so products are known. Science will always be ahead of regulations and legislation. Regulations need to be designed so cannabinoids are under the same rule.

Schauer said the few markets that have implemented something similar have approved only a few manufacturers, if any, to go into this space. There continue to be issues with demonstrating that synthetic products can be safe for different modes of consumption. There needs to be a real separation between industrial hemp and cannabinoid products. This will help the industrial hemp industry to flourish and grow. There also needs to be a federal regulator with a public health and safety focus clearly named. This federal regulator should have a very rigorous timeline for putting regulations in place. The actual definition of the Farm Bill needs to be reconsidered, as it is currently broad enough to effectively legalize cannabis.

Fox stated that he has seen laboratory tests on delta-8 products that show they consist of 25% unknown substances. This is a serious consumer safety issue that will persist until there is a federal regulatory framework. A key hurdle is how this framework can be put in place while cannabis itself is still federally illegal. Lawmakers will need to consider that keeping cannabis as a Schedule 1 drug inhibits their own ability to regulate all these emerging products. It is likely that draconian measures will be added to the 2023 Farm Bill that could have long-lasting ramifications on both the cannabinoid and fiber side of the hemp industry.

Moran stated that she has been working on the Industrial Hemp Act of 2023 (H.R. 3755). This act would create a new sub-definition for industrial hemp and not allow for any flower harvesting. It would also set up a new regulatory framework for farmers electing to only grow grain and fiber. It would create a new enforcement provision with penalties for anyone attempting to deviate from industrial hemp production. This legislation is highly supported by green and fiber hemp producers. The CBD market has had a negative impact on the green and fiber farmers who tend to be traditional farmers adding hemp fiber into their crop rotations.

Fox asked if there is a chance the legislation will get added as an amendment to the 2023 Farm Bill or if it will have to go through on a stand-alone basis. He also asked what farmers do with the non-stock part of the plant and if regulations address this. Moran stated that it is a standalone bill, but it will hopefully become an amendment to the 2023 Farm Bill. Farmers are required to destroy the non-stock part of the plant before taking it off the field. The process for this will be specified in rulemaking.

Fox asked if there is potential for the bill to be amended to the point that farmers could donate the material to licensed operators in cannabinoid-producing areas. Moran stated that this was not likely, as the marijuana growers would object.

Whitney stated that there are over a million kilograms of excess biomass supply related to cannabinoids. This year, there are few growers in this space, which will have a significant impact on the supply of hemp-derived CBD, fiber, and grain in the market. Some fiber manufacturers are having to import from Canada to acquire their raw materials for plastic and textile production. Whitney Economics studied the cannabis and hemp policies of over 30 countries. In Europe, they are intertwined. Greater regulatory policies related to good agricultural products and manufacturing processes are needed.

Brown asked the panelists what they believe is next on the horizon.

Schauer stated that states and territories are looking to the 2023 Farm Bill to provide a federal regulatory framework and name a federal regulator. The FDA needs to be compelled to be involved to ensure public health and safety. Schauer expressed concern on what would happen if the 2023 Farm Bill does not aggressively name a regulator within a timeframe. This would leave states to continue creating a patchwork of regulations and potentially leave gaps in consumer safety, particularly for online sales. States do not have authority over the online marketplace.

Correia stated that the federal government ceded its authority to the states to regulate cannabis. Now there are 50 different regulatory models. The Secure and Fair Enforcement (SAFE) Banking Act was introduced 10 years ago, and it still has not been passed. This illustrates how hard it is for Congress to come together. The 2023 Farm Bill will likely clarify intoxicants, but the political issue of legalizing cannabis remains polarizing.

Moran stated that it is important to remember that the Farm Bill is about farming, and it is under USDA authority. It is not likely to resolve all these issues. A standalone bill may be more appropriate. Schauer asked if Moran would have concerns about another bill being passed through Congress. Moran stated that the FDA has given a clear directive to Congress on what it would like to see set up, and it is her hope that this, combined with the states' actions, will propel more than just economic interest parties to the negotiating table.

Whitney stated that it will come down to defining cannabinoids as an ingredient and then regulating it as such. Once the debate on legalization is resolved, policy will rest on the cannabinoid side. This is how it is occurring in the pharmaceutical industry in Europe with novel foods.

Brown said the NAIC has taken a position supporting the SAFE Banking Act and the Clarifying Law Around Insurance of Marijuana (CLAIM) Act. She asked what the panelists' thoughts were on these being passed by Congress.

Correia stated that if every Democrat in the Senate supported the SAFE Banking Act, it would take the support of 9–15 Republicans to get it passed. Politics is preventing this from happening. The U.S. Senate (Senate) Committee on Banking, Housing, and Urban Affairs chair is up for re-election. The main Republican sponsor in the Senate also oversees Republican retention in the Senate, and the dynamics of perceived political victories play into this. The U.S. House of Representatives (House) faces procedural challenges, but this may not prevent it from passing the SAFE Banking Act. However, the biggest issue with the SAFE Banking Act is that it does not end cannabis prohibition. It just provides more certainty for banks.

Whitney stated that the lack of progress on the SAFE Banking Act is affecting policies and operations globally. Jamaica is looking at the SAFE Banking Act as a condition for the legalization of cannabis in Jamaica. It wants to use the taxation money in support of reparations. The SAFE Banking Act reduces the cost of capital and borrowing costs, providing greater transparency with the ability to see the flow of money through the banking system. This would be beneficial to the insurance industry.

Brown stated that the white paper focuses on what policy issues are affecting the affordability and availability of insurance for cannabis-related risks and avoids advocacy-related discussion.

Vitus asked if there is a real possibility of a substantive vote on the SAFE Banking Act when Congress returns from summer recess. Correia stated that U.S. Sen. Chuck Schumer (D-NY) has said it is a priority for the summer, but it will more likely come up in September or October if there are enough votes.

Schauer stated that it is important for state insurance regulators to know and interact with the hemp and cannabis regulators in their states. She offered to make connections if needed.

5. Discussed Other Matters

Brown announced that she would be retiring in August.

Piciucco announced that she would be replacing Melerie Michael in representing California Insurance Commissioner Ricardo Lara as chair of the Working Group.

Having no other business, the Cannabis Insurance (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2023_Summer/Cannabis/7-CannabisWG.doc

Draft: 7/5/23

Cannabis Insurance (C) Working Group
Virtual Meeting
June 20, 2023

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met June 20, 2023. The following Working Group members participated: Ricardo Lara, Chair, represented by Ken Allen (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Jimmy Harris (AR); Austin Childs (AK); Jeff Shot (DE); Angela King (DC); C.J. Metcalf (IL); Randall Currier (NJ); Melissa Robertson (NM); Gennady Stolyarov (NV); Michael Drummonds and Jan Vitus (OR); Sebastian Conforto (PA); Beth Vollucci (RI); Mary Block (VT); and Michael Walker (WA). Also participating were: Erick Wright (AL); Andy Case and Khapre Hollins (MI); and Lela Ladd (WY).

6. Adopted its April 11 Minutes

The Working Group met April 11. During this meeting, the Working Group took the following action: 1) adopted its Nov. 29, 2022, minutes; 2) discussed the final draft of the *Understanding the Market for Cannabis Insurance 2.0* white paper; 3) exposed the *Understanding the Market for Cannabis Insurance 2.0* white paper for a 45-day public comment period ending May 26; and discussed its work plan.

Currier made a motion, seconded by Robertson, to adopt the Working Group's April 11 minutes (Attachment Three-C). The motion passed unanimously.

7. Received an Update on the Exposed *Understanding the Market for Cannabis Insurance 2.0* White Paper

Brown stated that during its April 11 meeting, the Working Group exposed the *Understanding the Market for Cannabis Insurance 2.0* white paper for a 45-day public comment period ending May 26. Notification of the exposure was redistributed on June 6 to include the Working Group's interested regulators and the Property and Casualty Insurance (C) Committee's distribution list, and the comment period was extended to July 7.

The drafting group will meet July 11 to review comments and discuss how they should potentially be incorporated in the white paper draft. The Working Group will review the comments received and consider adoption of the white paper during its next meeting on July 18.

8. Heard a Presentation from NAMIC on the Impact of Cannabis in the Personal Lines

Tony Cotto (National Association of Mutual Insurance Companies—NAMIC) stated more research is needed across all personal and commercial lines. Cannabis-related issues in the private passenger auto insurance line include driving under the influence, challenges in measuring toxicology, and assessing driver risk analysis. Self-grow implications, goods/dwelling coverage, and risk of fire and theft are issues in the homeowner's line. Life and health insurance issues include prescription coverages and treatment of smoking.

Almost half of the U.S. lives in a state where recreational use of marijuana is legal under state law. As of June 2023, 23 states and the District of Columbia have laws legalizing recreational marijuana, 15 states have laws legalizing medical marijuana, 10 states have laws legalizing "limited" medical marijuana for specific designated medical conditions, and two states have no marijuana law. Driving while impaired is illegal in every state. However, marijuana-impaired driving laws vary widely in terms of the level of detail and

sophistication. They range from zero tolerance of any sort of impairment to specific quantity limits where they actually test for tetrahydrocannabinol (THC) and have different levels that are deemed acceptable. Specifically, 12 states have “zero tolerance” laws for THC driving: Arizona; Delaware; Georgia; Indiana; Iowa; Michigan; Oklahoma; Pennsylvania; Rhode Island; South Dakota (for drivers under the age of 21); Utah; and Wisconsin. Additionally, five states have specific per se limits for THC to establish “impairment” while driving: Illinois; Montana; Nevada (only for felony violations); Ohio; and Washington. Colorado has a unique “permissible inference law” that applies if THC is identified in the driver’s blood in quantities of 5 ng/ml or higher. The remaining 37 states and territories include marijuana under “driving under the influence of drug” (DUID) laws. As most of the applicable laws are found in traffic and criminal codes—not insurance codes—partnering beyond insurance is important.

The National Highway Traffic Safety Administration (NHTSA) traffic arrest and fatality data indicate cannabis is the illicit drug most frequently found in the blood of drivers involved in motor vehicle crashes. A 2017 National Academies of Science, Engineering, and Medicine (NASEM) study found marijuana combined with alcohol is the most frequent combination of drugs by drivers. Per the Centers for Disease Control and Prevention (CDC), marijuana slows reaction time and reduces the ability to make decisions, which is vital to driving. Crash risk associated with drug use in two European studies from 2012 and 2014 found an extremely increased crash risk for marijuana used in conjunction with alcohol. Surprisingly, when only marijuana is used, there is only a 6% increase in fatal crashes and a 1-3 relative risk increase.

A 2018 study by the Insurance Institute for Highway Safety (IIHS) compared claim frequencies in Colorado, Oregon, and Washington after recreational cannabis was legalized to four non-recreational use neighboring states. The IIHS found meaningful spikes in claim frequency after legalization of recreational marijuana. However, in Oregon, there appeared to be almost no effect on collision claims after legalization. An Insurance Information Institute (III) study in 2019 found crash risk increased 22% while under the influence of marijuana. However, the presence of THC does not necessarily equal impairment. Medical cannabis may contain either or both cannabidiol (CBD) and THC, and the cognition effects need much further study.

Enforcement and testing difficulties make research in this area challenging. There is a lot of effort going into developing roadside testing capacities, but it is still in its infancy. Unlike alcohol, there is no “breathalyzer” for THC. THC stays in the body for varying lengths of time depending on metabolism, product type, potency, quantity, and frequency of use. Biological screenings and field sobriety tests (saliva, urine, and blood testing) are time-consuming. If impairment beyond alcohol is suspected by a police officer, a drug recognition expert (DRE) is called to the scene. DREs go through Advanced Roadside Impaired Driving Enforcement (ARIDE) training to learn how to observe, identify, and articulate the signs of impairment related to drugs.

Funding for marijuana and road safety research has grown from \$30 million in 2000 to \$143 million in 2018. The federal Infrastructure Investment and Jobs Act directs the U.S. Department of Transportation (DOT) to produce a report about scientific research and associated research barriers on marijuana impairment while operating a vehicle. The federal Medical Marijuana and Cannabidiol Research Expansion Act removes some restrictions on research and allows for Food and Drug Administration (FDA) development and approval of CBD/THC. Emerging technology includes improved and faster oral fluid tests, ocular data systems to test eye movements, mobile fingerprinting devices for officers to use during stops, DRE tablet application to assist with drug influence evaluation, and computerized assessment and referral systems to reduce recidivism.

Public awareness surveys reveal a low level of perceived risks related to marijuana impairment. The American Auto Association (AAA) Traffic Culture Safety Index (2021) found 94% of drivers believe driving after drinking alcohol is dangerous, but only 65% believe driving within an hour of using marijuana is dangerous. Additionally, only 31% of drivers believe police will apprehend a driver for marijuana use. However, 79%

support making it illegal to drive with more than a certain amount of marijuana in your system. In 2022, the Virginia Cannabis Control Authority (CCA) found that 33% believe marijuana makes them a safer driver.

More research is needed on the specific influence of cannabis on frequency/severity of crashes, injuries versus fatalities, and the impact of different kinds of cars and roads. Road safety affects private passenger auto (PPA), commercial trucking, and workers' compensation. Additionally, the need for new contract language and claims, fraud, and litigation-related issues need to be evaluated.

Allen asked what four states the IIHS study compared California, Colorado, and Oregon against for auto claim frequencies related to impairment. Ladd stated she would also like the study. Brown stated the presentation materials and requested studies will be available on the Working Group's committee page. Cotto stated he would make the study available to NAIC staff for distribution. He provided the link to the NHTSA study (<https://www.nhtsa.gov/campaign/if-you-feel-different-you-drive-different>). He later provided additional links to studies done by the IIHS (<https://www.iihs.org/news/detail/crash-rates-jump-in-wake-of-marijuana-legalization-new-studies-show>) and other research studies (<https://www.iihs.org/topics/alcohol-and-drugs#marijuana>).

Erick Wright (AL) stated recent research findings in 2022 state users are three times less likely to drive at all within three hours of using cannabis. He asked why these more recent findings contradict those presented from 2017 research. He also asked if there was any concern about artificial intelligence (AI), police, and testing bias since policing can be biased by race, with African Americans being stopped and arrested three times more than any other race. Cotto stated the insurance industry is aware of the potential bias and is always looking for additional sources of unbiased data.

9. Heard a Presentation from Wilson Elser on the Unique Risks of Social Consumption Lounges

Ian Stewart (Wilson Elser) stated on-site social consumption facilities allow people to consume cannabis openly as opposed to the current model of consuming only in private homes. On-site consumption lounges (also called pot cafes or lounges) are licensed in 10 states: Alaska, California, Colorado, Illinois, Massachusetts, Michigan, New Jersey, New Mexico, Nevada, and New York. Illinois is unusual in that it is a bring-your-own cannabis model. Cannabis event licensing is much more robust in terms of what states are allowing in comparison to on-site consumption facilities. There are good insurance options for cannabis events, with a number of carriers offering coverages.

On-site licensing and permitting is highly varied by state and locality. However, there are certain license restrictions in all states. No one under the age of 21 is allowed in consumption lounges. Consumption areas must be properly ventilated. Cannabis consumption cannot be visible from the street. Alcohol and tobacco cannot be sold. Games that encourage consumption are prohibited. Facilities are subject to approval at the municipal level, which opt-in. Factors in assessing risk include: 1) if it is attached to the cannabis sales facility or a stand-alone facility; 2) if cannabis can be sold in the facility; 3) if there are serving limits; 4) if there is packaging; 5) if there are label and warning requirements; 6) if customers can leave with unused cannabis; 7) if customers can bring in their own cannabis; 8) if food is sold at the facility and if it is prepackaged; 9) if there are warnings or instructions given to patrons; and 10) if there are occupancy limits. Many jurisdictions are looking for ways to cap risk. This includes limiting sales, having customer identification cards that inform on impairment effects and require oral affirmation of understanding, preventing outside marijuana, and helping impaired consumers find transportation. Assisting impaired consumers find transportation through ride-sharing partnerships or no-tow policies can present a moral hazard issue if patrons abuse it.

Considerations around patrons taking unused cannabis off-site include ensuring possession limits and compliant packaging. Although it raises the question of potentially encouraging public intoxication, it also

potentially discourages over-consumption before leaving the facility. Considerations around how the facility is procuring cannabis include: 1) if the lounge is attached to a retail facility or stand-alone; 2) if the lounge can procure multi-serving items and resell individual pieces; 3) if Metrc modification is needed to allow the selling of fractional units; 4) if there are serving limitations; 5) if only prepackaged items are sold or if cannabis-infused food is allowed; 6) if there are good storage and disposal practices for cannabis waste; and 7) if there are constraints on last sales before the close of the business day. Nevada prohibits the sale of products two hours before the close of business. There is no uniform standard for service training related specifically to cannabis products. Cannabis needs a higher level of training due to the clinical effects on the body and difficulty identifying impairment compared to alcohol.

There are 35 states that currently have dram shop laws for alcohol that limit liability for those establishments that are serving alcohol to minors or visibly intoxicated adult patrons. (Some states only limit the liability for serving minors.) Some states, such as California, have their own standard for the obviously intoxicated minor. There are seven states that have no dram shop law. Nevada is one of the few states that have modified their dram shop laws to accommodate cannabis. In contrast, Michigan expressly allows for suits to be brought against establishments that service visibly intoxicated persons. Michigan also requires a minimum insurance coverage amount of \$50,000 through an admitted carrier.

The liability landscape is a critical consideration when determining the risk profile for any particular on-site cannabis consumption facility. The hypothetical scenario of a person killing someone while driving home intoxicated from a nightclub, after having also earlier consumed alcohol at a restaurant and bar and cannabis at an on-site consumption lounge, illustrates the difference between the treatment of alcohol and cannabis. In California, every establishment but the on-site consumption lounge is immune from prosecution or a civil suit. In most states, an establishment only needs to be a substantial cause of an occurrence, not the only or most significant cause. Complicating this issue is that data on the extent to which THC concentration is correlated to subjective impairment is lacking. Additionally, ventilation and filtration must meet standards. Underwriting risks for on-site social consumption lounges needs to account for the different liability laws. Policy exclusions and endorsements need to change and be adaptable to the risks specific to each state.

Currier asked how cannabis lounges make money and turn over tables if they cannot sell food or alcohol. Stewart said this issue is a big dispute driver in terms of some of the restrictions that drag on profits, such as stopping sales of cannabis products two hours before closing time. The consumer experience for consumption is different from a bar or restaurant because only prepackaged food products can be consumed versus a meal. Consumers tend not to stay for hours and spend a lot of money. The most profitable on-site consumption facilities are attached to a retail facility.

Brown stated she noted both presenters indicated more research was needed in this space. She stated the Working Group's drafting group noted the same need while working on the white paper. It is difficult to assess risk without the necessary data. She stated the Working Group would meet again July 18 to review exposure comments received and consider adoption of the white paper.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.

I. INTRODUCTION

The cannabis industry continues to evolve and expand both in structure and in the number of states with legalized cannabis. The National Association of Insurance Commissioners (NAIC) Cannabis Insurance (C) Working Group's original white paper adopted in 2019, *Regulatory Guide Understanding the Market for Cannabis Insurance*, found there are substantial gaps in insurance coverage for the cannabis industry. While gaps remain, much has transpired since the writing of the original white paper. This white paper seeks to provide an update on activities and trends since the adoption of the previous white paper.

The original white paper focused on the cannabis industry's architecture, insurance needs and gaps, and insurance regulator best practices to encourage insurers to enter the market. The cannabis industry has become more sophisticated since the original white paper was published in 2019. It has also continued to rapidly expand. The maturation and expansion of the cannabis market are driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. It is in these areas where insurance gaps most persist. As such, this white paper will include discussion on emerging insurance issues in these areas of the cannabis industry.

Additionally, the current state of cannabis regulation in the United States (U.S.) will be explored. States and U.S. jurisdictions continue to legalize cannabis, but it remains federally illegal under the Controlled Substances Act (CSA). This tension between federal and state law creates uncertainty about the insurability of cannabis and how policy language will be applied to coverages. Municipal bans on cannabis in states where cannabis has been legalized further complicate this issue. For these reasons, insurers remain reluctant to enter the cannabis space. Although capacity has improved since the first white paper's publishing, most of the commercial insurance for cannabis-related businesses is still found in the excess and surplus lines (also known as the non-admitted) market. Potential paths forward to these issues, including best regulatory practices and addressing the needs of states regulating insurance and cannabis operators under state law.

This white paper will outline the complexities of the cannabis industry, explaining the different designs of cannabis businesses, jurisdictional variations, current insurance types and offerings, potential future insurance products, differences presented by insuring hemp versus cannabis, and the importance of developing consistent regulatory practices for state cannabis insurance regulators. It will also cover cannabis history and terminology, cannabis policy trends at the state and national levels, current landscapes of cannabis regulation, licensing and education, cannabis business operating structures, and cannabis industry insurance market considerations. It will

conclude with a brief discussion on the future state of cannabis insurance, including possible next steps for all affected parties.

The need for accessible, affordable, and adequate insurance for the cannabis industry will only continue to increase. Therefore, it will be vitally important for state insurance regulators to fully comprehend and carefully consider the needs and risks of this industry. Regulators can play an important role in encouraging insurance participation in the new cannabis-related industry, which can help all affected parties achieve risk mitigation with proper financial management. This will lead to increases in consumer protections, as well as better functioning cannabis and insurance markets.

II. UNDERSTANDING CANNABIS CONCEPTS AND TERMS

Cannabis, also known as marijuana, is an annual herbaceous plant in the Cannabis genus under the Cannabaceae family.¹ Cannabis has been referred to as consisting of three species of plants: cannabis ruderalis, cannabis sativa, and cannabis indica. The properties of the plant depend on and are determined by the type of cannabis being produced. Each plant type differs in size, shape, and production yield. Many plants utilized in modern-day cannabis industries are hybrid species that have been selected for certain plant traits.²

Cannabis ruderalis has a naturally high composition of Cannabidiol (CBD), an anti-inflammatory non-psychoactive component, and low concentrations of delta-9 Tetrahydrocannabinol (THC) (the psychoactive substance associated with cannabis).³ This type of plant tends to be short and stalky and has the ability to begin the flowering cycle automatically at a certain point in the plant's lifespan, regardless of lighting.⁴ Cannabis ruderalis produces smaller yields when comparing it to the indica or sativa variants.⁵

¹ John M. McPartland, National Library of Medicine: National Center for Biotechnology Information – Cannabis Systematics at the Levels of Family, Genus, and Species (October 1, 2018) – <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6225593/>

² David Gloss, National Library of Medicine: National Center for Biotechnology Information – An Overview of Products and Bias in Research (July 23, 2015) – <https://pubmed.ncbi.nlm.nih.gov/26202343/>
<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4604179/#:~:text=Cannabis%20is%20often%20divided%20into,of%20the%20same%20parent%20species>

³ *Id.*

⁴ *Id.*

⁵ *Id.*

Cannabis sativa grows taller and more highly branched than the other two species.⁶ *Cannabis sativa* also grows narrow leaves and tends to produce higher yields than *cannabis ruderalis*.⁷ Additionally, it can produce high levels of THC composition.

Cannabis indica grows with short and dense branch structures.⁸ *Cannabis indica* generally has the shortest flowering period of the species.⁹ *Cannabis indica* also produces higher yields than *cannabis ruderalis* and can produce high levels of THC.¹⁰

Historically, the terms *indica* and *sativa* were introduced in the 18th Century to define different species of cannabis.¹¹ *Sativa* was used to describe cannabis hemp plants, which were cultivated for plant fibers and seeds.¹² *Indica* was used to describe intoxicating cannabis, which was harvested for seeds and hashish.¹³ The terms have been adapted to modern-day usage by allowing *sativa* to refer to cannabis with energizing properties and *indica* to be synonymous with cannabis that relaxes the consumer.

Recently, scientists have discovered that the effects of a cannabis plant on a consumer result from cannabinoids and terpenes. Cannabinoids are various naturally occurring, biologically active chemical constituents of cannabis, including some that possess psychoactive properties.¹⁴ Examples of cannabinoids include delta-9 THC, a chemical psychoactive component of cannabis, and CBD, a non-psychoactive and anti-inflammatory chemical component. THC is one of many chemical compounds found in the resin secreted by the glands of the cannabis plant. THC can stimulate cells in the brain to release dopamine, creating euphoria.¹⁵ CBD is non-impairing and non-euphoric, meaning it does not cause impairment or intoxication to the consumer.¹⁶

Cannabis also contains terpenes, which are aromatic chemical compounds produced and commonly found in plants. Each cannabis plant has a different terpene profile, and the profile of each plant can cause varied effects on the consumer.¹⁷

Usable cannabis and hemp are derived from the same species of plant. However, hemp is defined as cannabis that has a THC concentration of no greater than .3% total, as measured in dry weight.¹⁸ Hemp is cultivated for use in the production of a various assortment of products, including foods and beverages, personal care products, nutritional supplements, fabrics and textiles, paper, construction materials, and other manufactured and industrial goods.¹⁹

Cannabis is produced in several different forms: seeds, clones, plant tissue, plants, harvested materials (i.e., leaves, flowers, stalks, stems, pollen, and concentrates), and consumer products (consumable flowers, concentrates (i.e., hash, kief, waxes, oils, and vapor), topical goods, and infused consumables). The main categories of consumer cannabis products include flowers; concentrates; and infused goods.²⁰

- Cannabis Flower – THC in cannabis plants is produced by resinous glands that tend to concentrate in the plant’s flowers or buds.²¹ Cannabis farmers harvest the flower from the plant (removing bulky leaves and stems with less THC concentration) and dry the plant material of any moisture so it is prepared for consumption. Generally, cannabis flower is often smoked in pipes or hand-rolled cigarettes called joints, pre-rolled joints, or pre-rolls. Cannabis flowers can also be smoked in a cigar or combined with tobacco and smoked as a cigarette.²²
- Cannabis Concentrates – Cannabis can be harvested and processed through methods that produce cannabis concentrates. These products have been grown, harvested, and processed in a way to maximize cannabinoid, THC, and terpene content. Cannabis concentrates can take the form of hash, kief, waxes, or oils. The cannabis in these products has been concentrated through different scientific extraction and processing methods, including but not limited to: screens, sifts, bags, mechanical separation,

²² *Id.*

chemical extractions, distillation, and pressurized heat applications. These methods employ different scientific strategies to extract, at highly concentrated ratios, THC from the cannabis plant. The final product of these extraction processes can result in a range of forms, from a dry and granular pollen powder similar to hash or kief to a sticky, resinous wax material, which can resemble plant sap, and is known as cannabis wax (i.e., budders, shatters, crumbles, sugars, distillates, or oils). These forms vary in properties, such as viscosity and density, and are named accordingly. For example, a cannabis concentrate wax marketed as a budder is likely to have the same consistency as household butter, being pliable and not too rigid. However, a cannabis concentrate wax marketed as shatter would have extremely rigid properties, and the wax could break into pieces or shatter if pulled or bent.²³

- Infused Goods – Cannabis can also be processed into topical products and infused consumables. Topical products are those that are placed directly on the consumer’s skin. Infused consumables include beverages, edibles, and suppository products that have been infused with cannabis, including cannabinoids such as THC or CBD. Topical products are not associated with impairment or intoxication to the consumer. However, infused consumable products will lead to intoxication or impairment of the consumer, as these products contain cannabis concentrates, including THC and CBD. Examples of infused consumable products include cannabis beverages and edibles.²⁴

III. THE EXPANSION OF STATES LEGALIZING CANNABIS

A. Medical-Use and Recreational-Use Legalization in States

California was the first state in the United States (U.S.) to legalize cannabis for medical use.²⁵ In 1996, California passed Proposition 215, allowing for the sale and medical use of cannabis for patients with AIDS, cancer, and other serious, painful diseases. Currently, as of February 3, 2022, 37 states, the District of Columbia (D.C), and three territories allow for the medical use of

²⁴ Leafly: Cannabis Glossary – Topical (accessed June 27, 2022) – <https://www.leafly.com/learn/cannabis-glossary/topical>

²⁵ California Department of Cannabis Control: California’s Cannabis Laws (September 13, 2022) – [https://cannabis.ca.gov/cannabis-laws/laws-and-regulations/#:~:text=California%20became%20the%20first%20state,and%20adult%20\(recreational\)%20use](https://cannabis.ca.gov/cannabis-laws/laws-and-regulations/#:~:text=California%20became%20the%20first%20state,and%20adult%20(recreational)%20use)

cannabis.²⁶ In 2021, 25 years after California first authorized medical cannabis, the majority of states in the U.S. now allow the use of cannabis for medical purposes.

Colorado was the first state in the U.S. to legalize cannabis for recreational purposes in 2012.²⁷ Washington also passed marijuana reform legislation shortly after Colorado, in 2012, legalizing the recreational use of cannabis.²⁸ As of November 9, 2022, 21 states, two territories, and D.C. have enacted legislation to regulate cannabis for nonmedical or recreational use.²⁹ According to 2020 U.S. Census Bureau apportionment numbers, more than 145 million Americans now live in a state that has legalized cannabis.³⁰

The path toward legalization is not necessarily straight, nor is it quick. The following are examples of this experience.

Today, cannabis laws in Alaska allow adult use. The state first legalized medical marijuana in 1998, though for many years, there was no way for patients to legally purchase it.³¹ Alaska was the second state in the U.S. to decriminalize possession of up to one ounce and the third to legalize recreational marijuana.³² Residents over 21 years old with a valid state ID can legally grow up to six plants at home and purchase up to one ounce of marijuana or 7 grams of concentrates from regulated dispensaries.³³ Only cash is accepted.³⁴

Some states did not see cannabis legalized overnight. For example, Oregon’s Measure 80 (Oregon Cannabis Tax Act Initiative) in 2012 did not receive enough “yes” votes.³⁵ Measure 80 would have permitted cannabis to be sold at state-licensed stores and would have permitted adults to purchase cannabis at such stores without a license. Oregon did not legalize such recreational cannabis use until July 2016.³⁶ This is a consistent experience among the states where there is a majority support for legalization, but it may take multiple attempts.

The nature of cannabis being regulated on a state-by-state basis permits state systems on cannabis regulation to differ quite drastically. The below map outlines the different states and their varied approaches to cannabis regulation:

* National Conference of State Legislatures: State Cannabis Laws – Map of State Regulated Cannabis Programs (November 2022 - <https://www.ncsl.org/research/health/state-medical-marijuana-laws.aspx>)

B. Public Opinion Supports Legality Expansion

As discussed in the previous white paper, the majority of Americans now support legalized cannabis.³⁷ In fact, public support for legalizing cannabis is increasingly favorable. Over 90% of

U.S. adults in 2021 believe cannabis should be legal for either medical or recreational purposes.³⁸ Here, 60% support the legalization of cannabis for medical and recreational use, and 31% support the legalization of cannabis for medical use only.³⁹ Public opinion on cannabis and cannabis legalization have changed significantly since President Richard Nixon signed the Controlled Substances Act (CSA) of 1970 into law. Once associated with the war on drugs, cannabis now presents business opportunities, with the state-legal cannabis markets expected to reach over \$40 billion in the U.S. by 2026.⁴⁰

Public opinions and perspectives on cannabis are shifting to a level of lower scrutiny than experienced under the previous zero-tolerance approach adopted by the federal government and individual states. For example, U.S. Congress has considered replacing the statutory term of reference from marijuana or marihuana to cannabis.⁴¹ The changing of terms from marijuana to cannabis is being pursued in part because there are potentially negative connotations associated with the history and origin of the term marihuana.⁴² States have also sought similar legislation for the switching of statutory references from marijuana to cannabis.⁴³ The increasing legislative reformation of cannabis at the federal and state levels, as well as less scrutiny from the public, combine to show that cannabis is likely trending toward regulation versus outright prohibition.

IV. FEDERAL LEGISLATION ACTIVITY INTENSIFIES

Conflicting individual state and federal laws on cannabis have largely discouraged insurers from participating in coverage of the market. To illustrate this conundrum, cannabis is an illegal substance under the Classified Substances Act (CSA).⁴⁴ The CSA classifies cannabis as a Schedule I drug that has no currently accepted medical use in the U.S.⁴⁵ A 2018 Farm Bill provision removed hemp from the list of Schedule I controlled substances.⁴⁶ Therefore, the U.S. Drug Enforcement Administration (DEA) will not consider hemp-derived cannabinoids as a controlled substance that

⁴⁵ *Id.*

⁴⁶ U.S. Department of Agriculture Website, Farm Bill – <https://www.usda.gov/farmbill>

is subject to the CSA. However, cannabis and CBD (irrespective of being sourced from cannabis or hemp) are subject to Federal Drug Administration (FDA) approval under the federal Food, Drug, and Cosmetic Act (FD&C Act).⁴⁷ The FDA has not yet approved a cannabis drug for medical use or treatment. The FDA has approved CBD medicines for the treatment of epilepsy. Federal law currently prohibits CBD from being added to any food or drink product. On July 22, 2019, the FDA issued formal letters making the determination that certain CBD products were sold in violation of the FD&C Act.⁴⁸ Despite this prohibition, products containing CBD are generally widely available in the retail marketplace in formulations ranging from nutritional supplements to cosmetics and for both human and veterinary use.

Companies functioning within state-legal cannabis industries generally experience banking restrictions due to federal regulations.⁴⁹ This causes many cannabis businesses and cannabis-related businesses (CRBs) to function on a cash-only basis. Current estimates show that approximately 70% of CRBs operate solely as a cash-only business and have no formal relationship with a bank.⁵⁰ This causes CRBs to possess and process large amounts of money in cash form, which can create a higher risk of theft and additional liabilities.⁵¹ More on this and the federal authorities limiting the abilities of cannabis businesses to engage in financial transactions can be found in the NAIC's White Paper on *Understanding the Market for Cannabis Insurance (2019)*.

There is an ongoing concern about entities supporting cannabis businesses being charged with violation of the federal Racketeer Influenced and Corrupt Organizations (RICO) Act. In addition, the federal Internal Revenue Code 280E prevents cannabis businesses from taking advantage of tax deductions for actual economic expenses incurred in the ordinary course of business. This can prevent cannabis businesses from taking deductions related to insurance and premiums or costs, such as for workers' compensation and health insurance.

Recently, the federal government has been considering cannabis reform legislation at a record-setting pace. During the 117th Congress (in 2021 – 2022), at least five different pieces of national

Id.

cannabis reform legislation were introduced.⁵² Each bill took a different approach to altering the federal government's position on cannabis. The bills include the federal Safe and Fair Enforcement (SAFE) Banking Act, the Clarifying Law Around Insurance of Marijuana (CLAIM) Act, the Marijuana Opportunity Reinvestment and Expungement (MORE) Act of 2021, the Cannabis Administration and Opportunity (CAOA) Act, and the States Reform Act of 2021.

The CLAIM Act would provide a safe harbor from penalties or other adverse agency action for insurance companies that provide services to cannabis-related legitimate businesses in jurisdictions where such activity is legal. The U.S. Government Accountability Office (GAO) must report on barriers to marketplace entry for minority-owned and women-owned cannabis-related businesses.⁵³

The NAIC submitted a letter in support of the CLAIM Act on June 17, 2021. The letter acknowledged the bill would provide a safe harbor from violations of federal law for those engaged in the business of insurance participating in cannabis industry activity that is permissible under state law. By removing barriers, the CLAIM Act would permit insurers to provide insurance coverage options for these commercial policyholders.⁵⁴

The SAFE Banking Act would remove constraints on depository institutions to provide banking services to a legitimate cannabis-related business. Under the SAFE Banking Act, proceeds would not be considered unlawful activity and not run afoul of anti-money laundering laws. Under this act, depository institutions would not be at risk of forfeiting financial assets for providing a loan or other financial services to a legitimate cannabis-related business. The NAIC also submitted a letter in support of the SAFE Banking Act on June 17, 2021.

The MORE Act would decriminalize cannabis. Specifically, it removes cannabis from the list of scheduled substances under the CSA and eliminates criminal penalties for an individual who manufactures, distributes, or possesses cannabis. The States Reform Act of 2021 would remove the legal obstacles preventing U.S. cannabis companies from accessing the financial system and allow for interstate commerce of cannabis. The bill also requests the release and expungement of people convicted of nonviolent cannabis-only crimes.⁵⁵

⁵² Julie Hyman, Yahoo! Finance: Weed is Likely to Remain Federally Illegal, but 'Cannabis Banking' Could Pass this Year (March 31, 2022) – <https://finance.yahoo.com/news/weed-is-likely-to-remain-federally-illegal-but-cannabis-banking-could-pass-this-year-132330251.html>

On July 21, 2022, Senate Majority Leader Chuck Schumer introduced the CAO Act.⁵⁶ The CAO Act attempts to accomplish significant reformation of federal cannabis policy, allowing states to lead on cannabis regulation and establishing a federal regulatory paradigm similar to that of alcohol and tobacco.⁵⁷ The CAO would expunge federal cannabis-related records and create funding for law enforcement departments to fight illegal cannabis cultivation.⁵⁸

On October 6, 2022, President Biden asked the Secretary of Health and Human Services and the Attorney General to review how marijuana is categorized under federal law.⁵⁹ President Biden also signed the Medical Marijuana and Cannabidiol Research Expansion Act (Statute at Large 136 Stat. 4178 - Public Law No. 117-215) in December 2022. This new law is anticipated to increase access to the scientific study of cannabis by streamlining the government issuance of permits to scientists who want to study the substance and expediting applications for cannabis producers (including universities) that grow the substance for research purposes.⁶⁰ None of these laws were passed in the previous Congress, but it is anticipated that discussion will continue on these issues.

V. CANNABIS BUSINESS REGULATORY, LICENSING, AND EDUCATION LANDSCAPE

A. States Legalize Cannabis Around the Cole Memorandum

Colorado and Washington were the first states to legalize cannabis for recreational use in 2012. At that time, 19 states had already legalized cannabis for medical use. To address the growing legalization of cannabis use by the states, the federal Department of Justice (DOJ) issued the Cole Memorandum in 2013. The Cole Memorandum provided states with the federal position on the enforcement of marijuana under the Classified Substances Act (CSA). Specifically, it provided that the federal government would not prioritize enforcement or interference with state implementation of regulated cannabis programs if states upheld the Department of Justice's (DOJ's) and federal government's priorities.⁶¹ These priorities included:

⁵⁶ Natalie Fertig, Politico: Schumer's Legal Weed Bill is Finally Here, (July 21, 2022) – <https://www.politico.com/news/2022/07/21/schumer-legal-weed-bill-00047058>

⁵⁷ John Schroyer and Jeff Smith, MJBizDaily: Schumer Marijuana Legalization Bill Finally Introduced in Senate, (July 22, 2022) – https://mjbizdaily.com/schumer-marijuana-legalization-bill-finally-introduced-in-senate/?utm_medium=email&utm_source=newsletter&utm_campaign=MJD_20220722_NEWS_Daily&nowprocket=1

⁵⁸ Natalie Fertig, Politico: Schumer's Legal Weed Bill is Finally Here, (July 21, 2022) – <https://www.politico.com/news/2022/07/21/schumer-legal-weed-bill-00047058>

⁵⁹ The White House: Briefing Room Website – Statement from President Biden on Marijuana Reform, (October 6, 2022) – <https://www.whitehouse.gov/briefing-room/statements-releases/2022/10/06/statement-from-president-biden-on-marijuana-reform/>

⁶⁰ Meredith Wadman, Science Insider: New U.S. Law Promises to Light Up Marijuana Research, (December 2, 2022) – <https://www.science.org/content/article/new-u-s-law-promises-light-marijuana-research>

⁶¹ *Id.*

- Preventing the distribution of marijuana to minors;
- Preventing revenue from the sale of marijuana from going to criminal enterprises, gangs, and cartels;
- Preventing the diversion of marijuana from states where it is legal under state law in some form to other states;
- Preventing state-authorized marijuana activity from being used as a cover or pretext for the trafficking of other illegal drugs or other illegal activity;
- Preventing violence and the use of firearms in the cultivation and distribution of marijuana;
- Preventing drugged driving and the exacerbation of other adverse public health consequences associated with marijuana use;
- Preventing the growing of marijuana on public lands and the attendant public safety and environmental dangers posed by marijuana production on public lands; and
- Preventing marijuana possession or use on federal property.

Many states that voted to legalize the sale and use of cannabis designed their regulated cannabis systems to carefully consider the DOJ and federal government priorities outlined in the Cole Memorandum. Each state took an individualized approach to implementing cannabis regulation. This has led to individual cannabis industries across the country that operate under separate and distinct authorities for their jurisdictions. The differences in state cannabis regulations are evident in the varied cannabis business licensing programs, regulation authorities, consumer experiences, and associated practices for CRBs. For example, Colorado has implemented a regulatory system where cannabis businesses can vertically integrate their businesses, including agriculture, retail sales, and manufacturing. Washington has implemented a prohibition on vertical integration, requiring licensed cannabis businesses to operate in their licensed business classification, such as a cannabis retailer, cannabis producer, or cannabis processor.

The Cole Memorandum was rescinded by the federal government in 2018.⁶² This created a gray area for states with legal cannabis operations. The United States Attorney General issued new guidance in 2018 under Attorney General Jefferson B. Sessions. The new guidance directed U.S. state attorneys to use their discretion, as well as well-established principles that govern all federal prosecutions, in cannabis enforcement.⁶³ The current administration has expressed views to return to a Cole-like environment but has not taken an official position.

⁶³ *Id.*

B. The Role of CANNRA

States have been striving to work toward best policies and practices in the cannabis and insurance industries by working through the Cannabis Regulators Association (CANNRA). CANNRA is a national not-for-profit organization of cannabis regulators that provides policymakers and regulatory agencies with the resources to make informed decisions when considering whether and how to legalize and regulate cannabis.⁶⁴ It is a support association for regulatory agencies, not a cannabis advocacy group. As such, it takes no formal position for or against cannabis legalization but rather seeks to provide government jurisdictions with unbiased information to help make informed decisions when considering whether or how to legalize or expand regulated cannabis.⁶⁵ Membership in CANNRA is limited to regulators and representatives from relevant government offices.⁶⁶ CANNRA is funded by member agencies and does not receive funding from industry or advocacy groups.⁶⁷

CANNRA strives to create and promote harmony and, where possible, standardization across jurisdictions that legalize and regulate cannabis.⁶⁸ CANNRA helps interested parties find objective data and evidence-based approaches to policymaking and implementation.⁶⁹ CANNRA also works to ensure federal officials benefit from the vast experiences of states across the nation so that any changes to federal law adequately address states' needs and priorities.⁷⁰

C. Cannabis Impairment and Insurance Considerations

Insurers rely on data to help them understand the risks they indemnify. However, there is still much to know about impairment and cannabis use. Cannabis shares the Schedule I classification along with some of the most serious drugs, including heroin, LSD, and meth. As such, cannabis used for studies must come from federally approved facilities. Historically, the University of Mississippi was recognized as the only institution federally approved to cultivate cannabis for research, with the license awarded in 1968.⁷¹ The cannabis that is produced in this facility does

not resemble the cannabis in modern-day retailers. In fact, the cannabis produced in the federally approved facilities does not mimic the appearance nor potency of state-regulated cannabis.⁷²

Recently, the federal government, through the Drug Enforcement Administration (DEA), approved registrations for two other companies to produce cannabis for research purposes.⁷³ This is a historic development for the research of cannabis and allows the DEA to oversee the production of research-grade cannabis at a level not previously achieved by the University of Mississippi.⁷⁴ The two companies include Groff North America Hemplex and the Biopharmaceutical Research Company, which began harvesting their first crops by January 2022.⁷⁵

The limitations on human studies, with limited accessibility to cannabis that resembles that same substance in state-legal medical and retail markets, create substantial complications to the scientific research of cannabis, including long-term studies on the effects or dangers of impairment and usage. Thus, they provide limited information from which to develop policy or make informed decisions.

Testing for cannabis impairment is difficult due to the limits of drug testing technology, as well as the lack of a recognized limit to determine impairment. For example, the nationally recognized level of impairment for alcohol is set at .08 g/mL of blood alcohol concentration, which is well-founded in scientific research. However, there is no similar national standard set for driving under the influence of cannabis. Cannabis may not affect all people consistently. Cannabis may remain in a person's body for weeks after consumption, and may still appear in drug tests, even though it may no longer be causing impairment to the consumer. As a practical matter, because of these problems, drivers may be tested for high blood alcohol concentrations but may not be tested for other impairing substances.

The states of Illinois, Montana, Nevada, Ohio, and Washington have all adopted specific per se limits for THC present in a driver's body, with ranges between two nanograms and five nanograms per milliliter of blood.⁷⁶ These authorities provide that when a person has reached or

exceeded the legal threshold, that person is considered impaired under law. The state of Colorado has a reasonable inference law that outlines that in instances where THC is identified in a driver's blood, at quantities of 5ng/ml or more, it is assumed that the driver was under the influence.⁷⁷ The reasonable inference laws are different from the per se laws, as they allow drivers who are charged to raise an affirmative defense showing that despite having tested at or above the legal limit, they were not actually impaired. There are also 12 states that have zero- tolerance laws for THC, including Arizona, Delaware, Georgia, Indiana, Iowa, Michigan, Oklahoma, Pennsylvania, Rhode Island, South Dakota, Utah, and Wisconsin.⁷⁸

Complicating this issue is the lack of technologies, scientific methodologies, or accepted best practices in discovering or determining cannabis impairment. New technologies are being developed and generally involve biological screening or field sobriety tests. Here, examples of technologies used to detect cannabis impairment include saliva, urine, and blood testing machines. A few states, including Alabama and Michigan, have adopted active oral fluid roadside tests for drivers suspected to be impaired by cannabis use, among other drugs, which could negatively impact their driving.⁷⁹ Law enforcement officers in most states also generally possess discretion to determine whether an individual is impaired and presents a risk to themselves or others, whether using cannabis or other impairing substances in public, the workplace, or in driving situations. Many law enforcement agencies employ Drug Recognition Experts (DREs), who rely on professional experience and training to discover and determine whether an individual is impaired by cannabis usage. The use of new technology, scientific methodology, and best practices among law enforcement agencies will be critical in mitigating the risks of cannabis impairment in our workplaces and on our roadways.

1. Cannabis Driving Impairment – Cannabis DUI

Preventing cannabis users from driving while impaired was a top priority enumerated in the Cole Memorandum and an issue that each state with a regulated cannabis industry has considered. Cannabis is the second leading substance present in cases of driving under the influence, trailed only by alcohol.⁸⁰ Scientists and law enforcement are still seeking a reliable DUI test to identify impairment from cannabis use. While there are blood tests that can detect some of cannabis's components, such as THC, there is no scientifically accepted standardized method of testing or

determining the level of impairment from a cannabis user's blood or breath. Law enforcement officers may also have the discretion of completing a field sobriety test with any person they suspect is driving under the influence.

The National Association of Mutual Insurance Companies (NAMIC) analyzed this issue in 2021 with its research on the *Cannabis Conundrum: The Intersection of Property/Casualty Insurance and Cannabis-Impaired Driving*.⁸¹ NAMIC's research revealed that the states that have legalized cannabis for medical and recreational use will only continue to grow as ballot initiatives and legislation are codified. This places a focus on scientific research, funding, and technology development that will assist all parties in better understanding and ability to mitigate risks that cannabis-impaired driving may present. Educational campaigns to educate drivers of all ages and backgrounds on the potential risks associated with cannabis consumption will be needed.

Some studies, including studies associated with NAMIC and the American Property Casualty Insurance Association (APCIA), show a direct relation between cannabis regulation and increased auto accidents, as well as an associated increase in auto insurance premiums.^{82,83} Other studies focus on data that shows an increase in cannabis DUIs and related car accidents, whether related to recreational or medical cannabis legalization.^{84,85} Multiple insurance periodicals have recorded similar increases in car insurance claims and accident rates after states have regulated cannabis.^{86,87} Obviously, increased accident rates and claims have an effect on premiums; however, at this point, research is inconclusive on whether the relationship is a correlation or a direct causation.

Education for those outside of the cannabis industry can be conducted through public service announcements, government-sponsored education efforts, informative websites, and news media. For example, the U.S. Department of Transportation (DOT), the National Highway Traffic Safety Administration (NHTSA), and the Ad Council have recently started a campaign

communicating the dangers of driving while under the influence of cannabis, called *Drug Impaired Driving: If You Feel Different, You Drive Different*.⁸⁸

2. Cannabis Workplace Impairment

Currently, two out of three Americans live in a state that has approved the sale and use of recreational cannabis.⁸⁹ Cannabis can appear in drug tests and remain in a consumer for 30 days or longer.⁹⁰ Therefore, cannabis users could lawfully consume the substance during their off-work hours but still be affected by cannabis or THC in their systems during work. Employers must assess if their staff present a risk of liability to themselves or others. Problems include issues with pre-employment drug testing, determining employee impairment, establishing reasonable accommodations, and maintaining medical privacy.

It should be noted that there is little data on the impact of legal market cannabis consumption on everyday life. There is a huge range of products available on the legal market that have never touched a research lab. Cannabis consists of a few primary cannabinoids and hundreds of minor cannabinoids and terpenes, and many are still being discovered. There is also a huge variation in potency across strains. Different products have different levels of major and minor cannabinoids, and each looks distinct. For these reasons, the study of cannabis is unlike the study of other drugs, where one is pretty much focused on a dose-dependent effect of a single pharmacological agent.⁹¹

Overlapping authorities and developments in case law on the topic have revealed that employers lack consistent and developed guidelines for cannabis drug testing in the workplace. Case law in several states, including California, Oregon, and Washington, has established that a private employer can terminate an employee for failing a company's drug test, even if that employee is authorized under state law to use cannabis as a medicine.⁹² Multiple states, including Arizona, Arkansas, Connecticut, Delaware, Maine, Minnesota, Oklahoma, Pennsylvania, Rhode Island, and

West Virginia, prohibit employers from refusing to employ an applicant or terminate an existing employee based only on a positive drug test for cannabis.⁹³

Recently, some employers in the private sector have been reducing the scrutiny placed on cannabis use and impairment in the workplace. In September 2021, Amazon made the corporate decision to no longer deny employment, or terminate employees, due to failed drug tests due to cannabis use.⁹⁴ Amazon even emphasized that the company would reinstate employment eligibility for previous applicants and staff who were terminated or deferred during random or pre-employment cannabis screenings.⁹⁵ However, this policy has exceptions, where employees involved in transportation may be required to prove they have not used and will not be impaired by cannabis.⁹⁶ The shift from a zero-tolerance policy on drug testing for cannabis use to one of acceptance is further evidenced by the developments in professional sports industries. Four of the biggest professional sports in America, including the NBA, NHL, MLB, and NFL, have all relaxed their drug testing policies as it pertains to cannabis.⁹⁷

3. Other Cannabis Impairment Considerations

Cannabis businesses are attempting to capitalize on the trend of increased usage by bringing ingenuity to their products and services.⁹⁸ While many consumers historically smoked the substance in private settings, there are now other innovative forms of cannabis in the regulated markets which allow consumers to eat or vaporize the substance discreetly in public environments.⁹⁹ These trends of increased exposure, additional usage, as well as ingenuity in the cannabis industry, combine to create complications with regulating and insuring the risks of cannabis impairment.

Prior to legalization, cannabis users would need to consume their cannabis products in private locations, out of view from the public and law enforcement. Cannabis users employed these strategies to secretly consume the illegal cannabis products for effect while also avoiding the risk of penalties from law enforcement. However, with the legalization of cannabis came the ability for consumers to use cannabis in different forms and settings. For example, a current medical

cannabis patient in Las Vegas can lawfully use a cannabis vaporizer at a cannabis consumption lounge to administer their prescribed medications.¹⁰⁰

Cannabis legalization and ingenuity possess potential to increase the frequency, exposure, and risks of cannabis impairment. Cannabis is now offered in newer and varied mediums, such as beverages and edibles, and can be created with concentrated forms of cannabis that are much more potent. Cannabis consumers run the risk of being uninformed on if the product has been scientifically researched or studied for long-term side effects and what level of impairment it is likely to produce.

The risks posed by cannabis impairment must be carefully considered in the underwriting process to ensure adequate coverage and appropriate premiums. Risk selection and risk classification play important roles in insurance underwriting systems. The current state of cannabis research may not provide the insurance industry with a sufficient understanding of cannabis impairment and how it can impact underwriting. An incomplete understanding of the increased risks associated with cannabis impairment could lead to circumstances of underinsured policyholders or a lack of sustainable insurer solvency.

D. Cannabis Education Landscape

Education could help address complications and gaps experienced in the cannabis and insurance industries caused by the recent and rapid rate of state regulation. Those needing to maintain currency include cannabis business owners, employees and licensees, regulators, and the insurance industry, such as insurers, claims adjusters, agents, and producers. Many involved in the cannabis industry and businesses would be better able to mitigate their risks with insurance by keeping current on applicable authorities and their requirements.

Regulators and other interested parties should enhance their knowledge by understanding industry trends, such as current and future state cannabis or insurance market conditions. For example, pre-license training for insurance producers does not touch on the topic of cannabis, but the insurance producers may be engaged in providing coverage to the cannabis industry. A producer of insurance should be well educated about the industry they provide coverage for in order to ensure the procured policy is appropriate, adequate, and lawful. Additionally, claims adjusters may need specialized training on cannabis-related claims.

E. Vaping Regulations and Their Impact on Cannabis

As cannabis is legalized and regulated in different states across the country, ingenuity in cannabis products and technologies continues to create complications for regulators, insurers, businesses, and consumer populations alike. An example of this is the increased use of and access to cannabis vaping or vaporization products.

Vaping technology was developed to provide a noncombustible nicotine delivery system to help cigarette and tobacco smokers. Vaping devices heat liquid into an aerosol that can be inhaled. This method of vaporization has now been adapted for cannabis use and is the method often used to consume cannabis products. Studies have shown that cannabis users believe vaping the substance is less harmful to their health than the consumption alternative of combustible smoking methods.¹⁰¹ This theory is based on the reduction of ingesting harmful contaminants present in cannabis smoke, which are less present in cannabis vapors.¹⁰² The significant increase in vaping has raised concern about the health and safety of this practice. Of particular concern is the increase in vaping among teenagers.

A large illicit cannabis market continues to exist without concern for product safety and exacerbates issues of product liability coverage. Illicit products containing substances not allowed in a regulated market are part of the challenge. Current scientific research provides inadequate information to understand the effects of acute and long-term inhalation of aerosols emitted by vaping devices. A lack of studies on the substance itself or the consumption methodologies means the consequences of vaping cannabis are largely unknown. While many choose to vape, believing it is a safer method of consumption, studies are needed to determine whether vaporizing cannabis truly offers a safer experience for the consumer.

Millions of Americans have consumed cannabis from vaporization devices over the past decade, and the possibly dangerous effects are now being observed.¹⁰³ In 2019, the U.S. experienced an outbreak of e-cigarette, or vaping, product use-associated lung injuries (EVALI).¹⁰⁴ The Centers for Disease Control and Prevention (CDC) established a link between EVALI and cannabis users, where a substance called Vitamin E Acetate was added to cannabis vaporization products, which

¹⁰⁴ *Id.*

can interfere with normal lung functioning.¹⁰⁵ Since this outbreak was the result of an additive, it does not speak to the impact of vaping itself but does speak to the need for regulation.

Governments in jurisdictions with regulated cannabis industries took alternative approaches to respond to the outbreak of EVALI cases in cannabis consumers. Washington and Oregon enacted emergency bans on cannabis vaping product additives, whereas Massachusetts temporarily stopped the sale of all vaping products.¹⁰⁶ While many jurisdictions were concerned about EVALI's association with consumers who vaporized cannabis, some states were confident in the safety of products being produced within their regulated systems. For example, Pennsylvania released a position in response to the EVALI outbreak, explaining that none of the EVALI cases experienced in the state were connected to the state's medical cannabis program.¹⁰⁷

F. Licensing Takes a Focus on Social and Economic Equality

The prohibition of cannabis in America has disproportionately and adversely impacted people of color.¹⁰⁸ Studies have shown that "... on average Black people are almost 4 times more likely to be arrested for pot than white people."¹⁰⁹ This racial disparity in law enforcement is present in all areas of the country, regardless of the demographics of the jurisdiction.¹¹⁰

State-legal cannabis industries are now estimated to be worth over \$18 billion and provide for hundreds of thousands of full-time jobs.¹¹¹ However, minority populations that were most adversely impacted by the war on drugs and the prohibition of cannabis are being excluded from

¹¹¹ Alex Malyshev and Sarah Ganley, Reuters: The Challenges of Getting Social Equity Right in the State-Legal Cannabis Industry (July 22, 2021) – <https://www.reuters.com/legal/litigation/challenges-getting-social-equity-right-state-legal-cannabis-industry-2021-07-22/>

the industry. In 2021, African Americans represented roughly 13% of the U.S. population, yet only 1.2% to 1.7% were business owners in the cannabis industry.¹¹²

States legalizing cannabis have recently taken efforts to resolve the racial disparity in cannabis business ownership by employing social and economic equity provisions into their laws. Social and economic equity in cannabis licensing can vary by jurisdiction, but includes reducing barriers, improving access, and assisting cannabis business license applicants who are from certain communities that have been adversely and disproportionately impacted by cannabis prohibition. These groups can include but are not limited to women-owned businesses, minority-owned businesses, distressed farmers, and service-disabled veterans. The intended goal of social and economic equity provisions in cannabis business authorities is to achieve participation in the legalized industry for those who were most negatively affected by the war on drugs.

States that have experienced cannabis reform legislation, either recreationally or medically, have taken different approaches to implementing social and economic equity provisions in their regulated cannabis markets. For example, Michigan, in processing recreational cannabis business licenses, will reduce licensing fees for prospective business owners living in cities where residents were disproportionately impacted by the war on drugs.¹¹³ California offers a statewide program for recreational cannabis to assist local governments with equity provisions in providing loans, grants, and technical assistance to cannabis entrepreneurs and employers.¹¹⁴ It is too early to know the effect on the insurance market for cannabis businesses of these regulatory policies. However, there are efforts to address social and economic equity concerns in insurance generally.

VI. CANNABIS OPERATING AND ORGANIZATIONAL STRUCTURES EVOLVE

The industry's growing legitimization has intensified merger and acquisition activity to gain market share. The year 2021 is generally acknowledged in both the financial and cannabis

¹¹² *Id.*

¹¹³ MJBizDaily: MI Marijuana rules changes include new licenses, lower fees, social equity (September 1, 2021) – <https://mjbizdaily.com/michigan-marijuana-rules-changes-include-new-licenses-lower-fees-social-equity/>

¹¹⁴ Alex Malyshev and Sarah Ganley, Reuters: The Challenges of Getting Social Equity Right in the State-Legal Cannabis Industry (July 22, 2021) – <https://www.reuters.com/legal/litigation/challenges-getting-social-equity-right-state-legal-cannabis-industry-2021-07-22/>

industry press as one of overall sales growth marked by rising incidence of consolidation.¹¹⁵ The significant amount of consolidation in the industry continues to produce frequent ownership changes and business structure modifications.¹¹⁶ There are varying aspects through which this cannabis market evolution can be viewed, and each has implications for insurance coverage availability. As noted in his article “The Year of Cannabis Industry Consolidation,”¹¹⁷ Robert Hoban writes: “There are loosely four common phases of an industry’s life cycle –introduction, growth, maturity, and decline. The cannabis industry is not yet mature across the board but is largely stuck in the growth phase. The step between the later stages of the growth phase and the beginning of maturity comes down to one word: *consolidation*. That is the mantra for 2021.”

There are some indications that more vertically integrated—or common ownership along the supply chain—is occurring. It is viewed that larger-scale cultivation operations permit greater consistency in raw material availability. Some of this can be demonstrated by the increasing prevalence of indoor or greenhouse cultivation, which permits a more controlled growing environment and avoids some of the risks associated with traditional outdoor grow operations (e.g., use of clones rather than seed; environmental controls for light, heat, water, pest control; multiple harvests per year in a smaller footprint; more accessible warehousing/storage for processing; etc.). Such physical consolidation is much more friendly to vertical integration of ownership. This integration also permits more risk management along with scale to support the acquisition of insurance coverage. Greater scale and integration of cannabis businesses also allow the purchase of more comprehensive coverage through the excess and surplus lines market. The downside is that there are indications that the reinsurance market to cover such risks continues to be constrained, resulting in policy limits that may not reflect the scale or potential risk of the business.

Larger, and more vertically integrated, cannabis businesses are able to seek out and negotiate more comprehensive insurance packages and can pay higher premiums for tailored coverage. In contrast, cottage industry players (e.g., independent retailers) tend to look for more “off-the-

shelf” insurance solutions, as would typically be available in the admitted market (but appears to be not widely available). Some admitted insurance coverage is available for discrete types of insurance. A good example is workers’ compensation insurance, which is widely available for employers in the cannabis industry—but such niches are limited.

Another aspect of this consolidation is changes in the ownership and sophistication of the industry. In 2019, the Colorado legislature changed state law to allow people who live outside Colorado to own cannabis businesses in the state, and it permitted publicly traded companies and private capital funds to invest in Colorado cannabis businesses.¹¹⁸ This “opening” of the market for cannabis businesses was ostensibly premised on increased access to capital for cannabis businesses, but it also fueled merger and acquisitions (M&A) activity with concomitant insurance aspects. In particular, the availability of directors’ and officers’ liability coverage is often cited as a challenge for cannabis businesses.

VII. CANNABIS INSURANCE NEEDS AND COVERAGE AVAILABILITY

A. Admitted vs. Excess and Surplus Lines Market

While there are a few states with admitted carriers, most of the cannabis industry is purchasing insurance through the excess and surplus lines market. Some admitted carriers, mostly in specific lines, such as required workers’ compensation, will write coverage for cannabis businesses. However, for more comprehensive or package coverage, the substantial majority is written through excess and surplus carriers, which are generally exempt from state regulation, and in many to most cases, state laws. One result of this is that it is challenging, if not virtually impossible, for state regulators to assess the size and extent of insurance coverage, in both availability and affordability, along with coverage for cannabis businesses. Some admitted carriers do write coverage primarily in their domiciliary state or immediate region, or for a specific component of the marketplace (e.g., retail dispensaries) for general liability.

What state insurance regulators do know is that there is a burgeoning market for cannabis coverage in the excess and surplus lines and managing general agent/underwriter program arena. There are also a few other structures to provide coverages, such as captives and risk

¹¹⁸ Tommy Wood, [Boulder, CO] Daily Camera: Robust sales, expanding legalization lead to increased mergers, acquisitions in Boulder County cannabis industry (Sept. 5, 2021) – <https://www.dailycamera.com/2021/09/05/robust-sales-expanding-legalization-lead-to-increased-mergers-acquisitions-in-boulder-county-cannabis-industry/>

retention groups (RRGs) being explored.¹¹⁹ Estimates range from a handful to in excess of 30 insurers and managing general agents/underwriters are providing services in this area.¹²⁰ Nonetheless, a Google search of commercial insurance for cannabis business will yield several references to entities, primarily surplus lines brokers or managing general agents/underwriters, which “specialize” in writing coverage for cannabis businesses or have an insurance “program” for cannabis businesses. Review of some of these indicates the majority are surplus lines brokers who are providing excess and surplus lines coverage.

As more insurance companies feel comfortable writing insurance in this industry, it is anticipated the market will move from excess and surplus lines to the admitted market, similar to other products in the past.¹²¹ At one point, there were insurance companies that did not want anyone to know they were providing coverage for these exposures, and now they are openly providing this coverage.¹²² However, there is a chance that not all segments of the cannabis industry will move from the excess and surplus lines to the admitted market. We may see certain segments, like retail or dispensary, moving to the admitted market because the risks associated with those are less than with other segment areas.¹²³

B. Insurance Needs and Considerations from Seed-To-Market

Though most coverage is in the excess and surplus lines market, access to commercial insurance for cannabis businesses varies significantly by the market segment of the seed-to-sale continuum. For some market segments, there are an increasing number of options in areas such as general commercial liability or basic property coverage. In many cases, businesses in the cannabis space

¹¹⁹ According to IRMI.com an MGA is Managing General Agent (MGA) — a specialized type of insurance agent/broker that, unlike traditional agents/brokers, is vested with underwriting authority from an insurer. Accordingly, MGAs perform certain functions ordinarily handled only by insurers, such as binding coverage, underwriting and pricing, appointing retail agents within a particular area, and settling claims. Typically, MGAs are involved with unusual lines of coverage, such as professional liability and surplus lines of insurance, in which specialized expertise is required to underwrite the policies. However, MGAs also write some personal lines business, especially in geographically isolated Areas (e.g., western Oklahoma, North Dakota) where there are accessibility concerns. MGAs benefit insurers because the expertise they possess is not always available within the insurer's home or regional offices and would be more expensive to develop on an in-house basis. –

¹²³ *Id.*

are facing more expensive coverage than other similar businesses. While they can get some insurance, a common complaint is that the limits available are constrained, e.g., \$1 million per occurrence, \$2 million aggregate capped. A further challenge is the anticipated explosive business growth for established cannabis businesses year over year.¹²⁴

What follows is some discussion about the various cannabis business market segments, particular insurance needs and availability, and some of the particular risk considerations that make availability and affordability challenging.

1. Cultivation

Coverage for cannabis has several aspects. First, hemp was included as a “legal” crop in the 2018 Farm Bill.¹²⁵ As it currently stands, federal multi-peril crop insurance is available in certain states and communities with conditions. The cultivator must: 1) be licensed and meet all requirements of state, tribal, and federal authorities, 2) have at least one year of history producing the crop, and 3) have a contract for the purchase of the hemp crop at the policy inception.¹²⁶ Hemp has the additional risk of becoming “hot hemp” due to environmental causes (THC above the 0.3 compliance level). Additionally, hemp does not qualify for replant payments or prevented plant payments.¹²⁷

Second, for hemp that does not qualify and cannabis cultivation, the insurance coverage availability is much less clear. There appears to be a small market for private crop insurance, though reports are that it is prohibitively expensive until more data and experience is available to support underwriting. An option that is emerging is parametric coverage for outdoor cannabis crops with triggers including: recorded rainfall over a specified time, wind, early freeze, hail, and drought.¹²⁸

¹²⁴ Alexander T. Brown, see generally, Lathrop GPM: Five Insurance Considerations for Cannabis-Related Businesses (July 21, 2021) – [Five Insurance Considerations for Cannabis-Related Businesses: Lathrop GPM](https://www.lathropgpm.com/TheRoadToInsuranceRecovery/five-insurance-considerations-for-cannabis-related-businesses) – <https://www.lathropgpm.com/TheRoadToInsuranceRecovery/five-insurance-considerations-for-cannabis-related-businesses> ¹²⁵

¹²⁸ Evan Stait, Cannabis Industry Journal: Why You Should Consider Parametric Insurance to Protect Your Outdoor Cannabis Crop, (Sept. 22, 2020) – <https://cannabisindustryjournal.com/column/why-you-should-consider-parametric-insurance-to-protect-your-outdoor-cannabis-crop/>

More broadly, a primary differentiator amongst cannabis cultivators is whether the grow is outdoor or indoor (greenhouse). The two methods have significantly different risk profiles, leading to differing accessibility and affordability. Outdoor cultivation brings not only the traditional multi-peril concerns of crop insurance for destructive weather (hail, frost, damaging wind), disease, drought, fire, flooding, and insect damage.¹²⁹ The more controlled environment of an indoor grow protects from some of the environmental risks but presents its own array of challenges, including electrical, plumbing, security, and contaminants, including but not limited to mold, mildew, and pesticides. Anecdotally, coverage is more available for indoor cannabis cultivation, though it is undeterminable whether this is because the grow environment can be more easily managed, or whether the scale of a greenhouse grow permits several “crops” per year with increased proceeds.

2. Processing and Manufacturing

Cannabis products are available in a rising number of derivations. Cannabis is commercially available in flower (similar to loose tobacco), pre-rolled joints, vapes, dabable concentrates (highly concentrated extracts aka wax, shatter, or other appellations), edibles (including gummies, chocolates, taffy, beverages, and more), tinctures, topical applications, and more. Usage and the reasons for usage likewise can vary greatly by product format. According to IRI, a data analytics firm focused on consumer-packaged goods (CPGs), 43% of adults in fully legal states are cannabis consumers. Of those, 72% consume inhalable products, and 62% of those inhalable users are consuming cannabis at least once daily. Topical cannabis is more associated with pain relief, as the top reported relief communicated by consumers of those products. Better sleep is the top reported relief communicated for consumers of edibles. Users of CBD cite a myriad of health-related reasons for their use, the top four being pain relief, better sleep, and management of anxiety and stress.¹³⁰

As the number and variety of products/uses grows, so do the processing and manufacturing systems to produce a retail product. Traditional cannabis consumption relies on “flower” or “bud,” which is ground and then packed into a pipe or rolled. To achieve this basic formulation, the cannabis plant must be harvested, dried, sorted, trimmed to remove the flower from leaves and stalks, and then cured. Obviously, premises for drying, sorting, trimming, and curing are required, and some portions of these processes may be supported by mechanization. Under the Colorado cannabis regulatory structure, the premises used must be licensed as a “Regulated

¹²⁹ Insurance Information Institute (III): Understanding Crop Insurance (accessed February 21, 2023) – <https://www.iii.org/article/understanding-crop-insurance>

¹³⁰ Jessica Lukas, BDSA, and Larry Levin, IRI, Blog on BDSA and IRI: The Rise of Legal Cannabis as a Consumer Packaged Good, (September 30, 2021) – <https://www.iriworldwide.com/en-us/insights/blog/rise-of-cannabis-as-a-consumer-packaged-good>

Marijuana Business Operation,” which carries extensive rules about possession and access to the premises, security and lock standards, signage, floor plans, shared facilities (medical and adult use), waste disposal, inventory tracking, health and safety measures, audits, and prohibited chemicals and practices.¹³¹

Insurance for cannabis manufacturing premises is reportedly becoming more widely available, but pricing can be more expensive than for other sectors. The extensive regulation of the premises must be balanced against the enhanced risks, including potentially high-value raw materials, inventory in-process, risks of fire, theft, contamination, etc., and the potential of mishandling waste in violation of state law. Against this higher base level of premises, coverage can be increased risks from processing to make cannabis derivative products such as edibles, topicals, and dabs. For many of these derivative products, the raw material (including cannabis or the <.3% THC hemp) must be processed using solvents, pressure, heat, distillation/crystallization, or combinations thereof. Each adds an aspect of risk that should be considered and accounted for in the underwriting process.

3. Testing

State-mandated testing schemes are substantial and detailed to ascertain if the regulated cannabis (as either raw material or finished product) is: 1) contaminated or mislabeled, 2) is in violation of any product safety, health or sanitary statute, rule, or regulation, or 3) whether the results of a test raise questions requiring further investigation. The most significant area of liability will be professional liability if someone suffers legal injury due to a negligently erroneous test result. As an erroneous test could require the destruction of an entire crop or product run, the economic injury is obvious. From a consumer perspective, a test result indicating safety when a product is contaminated or varies from potency standards could lead to substantial recovery for personal injury. Consequently, professional liability or errors and omissions coverage is an important part of a testing facility’s portfolio.¹³²

4. Distribution

There are effectively two levels of distribution concern. One is raw material transport between cultivator and manufacturer/processor (and testing labs), and the other is consumer delivery. However, at the base, in Colorado, both levels rely on a comprehensive seed-to-sale tracking

¹³¹ Code of Colorado Regulations, Department of Revenue, Marijuana Enforcement Division, 1 CCR 212-3, Part 3 - Regulated Marijuana Business Operations

¹³² See subsequent section under Products Liability for further discussion of aspects of liability for a defective product.

system, which can be used to provide manifests documenting the transport of cannabis products throughout the state. In Colorado, this requirement is stated in statute as:

“To ensure that no marijuana grown or processed by a retail marijuana establishment is sold or otherwise transferred except by a retail marijuana store or as authorized by law, the state licensing authority shall develop and maintain a seed-to-sale tracking system that tracks retail marijuana from either seed or immature plant stage until the marijuana or retail marijuana product is sold to a customer at a retail marijuana store[.] . . .”¹³³

The seed-to-sale tracking system in Colorado is based on a Radio Frequency Identification (RFID) tag, which is affixed to a plant and, with aggregation of the information on it, follows the plant through cultivation, harvest, manufacturing, and distribution. For licensed operators who are transporting legal product, this permits explicit manifests that can be reconciled with the cargo between cultivator and manufacturer/processor. Both medical and retail cannabis in Colorado require a transporter’s license, which is obtained from the state’s regulatory authority, the Marijuana Enforcement Division of the Colorado Department of Revenue.

Insurance concerns of transporters include cargo coverage for an often high-value commodity that can be subject to theft/hijacking and spoilage. As described in a Reuters article, “Low coverage limits on cargo insurance, for example, can force companies to split shipments up, said Gene Brown, an insurance agent in Carmel, California, who specializes in cannabis coverage.”¹³⁴ Similarly, the cash-based current consumer economics of the industry has substantial security needs and a high risk of theft.

Recently, delivery to consumers through purchase on an app has been authorized in Colorado and has generated significant interest. This interest was likely accelerated by the expansion of other delivery services, such as Uber Eats, and similar services during the COVID-19 pandemic. This direct-to-consumer delivery has similar liability concerns as other delivery services (e.g., damage to third-party vehicles and parties, and the potential for theft, misdirection, or deception).

5. Retailers

When someone says, “legal cannabis,” the mental picture most people have is of a local dispensary in a state where it is legalized. Certainly, for most people a dispensary or store is how

¹³³ §44-12-202(1), Colo. Rev. Stat. - Powers and duties of state licensing authority - rules. § (1). Note: an almost identical provision is located in Colorado’s medical marijuana code.

¹³⁴ Alwyn Scott, Reuters: U.S. cannabis insurers get ready to roll as federal legalization nears (August 19, 2021) – <https://www.reuters.com/article/us-usa-insurance-cannabis-focus-idCAKBN2FK1AO>

they experience the industry. As storefronts, retailers have many of the same business insurance needs as other commercial establishments (e.g., premises/property and general liability coverage, inventory, employee benefits and employment practices liability insurance, business income/interruption, umbrella, commercial auto, and cybersecurity). Generally, insurance coverage is increasingly becoming available for these risks, albeit often at higher rates than for other types of retailers.

Primary among the risks is those of theft – both cash and product. In 2020, one of Colorado’s largest cannabis retailers, with 21 locations, reported 15 burglary attempts in 90 days.¹³⁵ Because most cannabis outlets deal almost exclusively in cash, there is ample opportunity for burglaries and robberies. Also, because the product for sale is high value itself, criminals do not go for just the cash. It is common for retailers to have substantially increased security, including around-the-clock guards, video screening, and extensive training and monitoring of their staff, to mitigate their enhanced risk.¹³⁶

In addition to the risk of damage to premises from break-ins for theft, personal injury to employees, customers, and bystanders is also a concern. As noted previously, workers’ compensation coverage is more available for cannabis retailers since it is a state-mandated coverage. However, questions of consistent occupational subclassification and experience rating may develop and have premium impacts.¹³⁷ In Colorado, complaints or concerns are not generally received about employee benefit coverages (primarily health). This is likely due to the federal Affordable Care Act (ACA) and the expansion of guaranteed availability to the individual health insurance market. On the employment practices liability aspect, there are anecdotal reports of challenges in finding coverage. At this time, additional information is needed to ascertain whether there is out-of-the-ordinary employment practices liability that is not mitigated by state regulatory schemes. This includes requiring criminal background checks and licensure of all persons employed in a business that possesses, cultivates, dispenses, transfers, transports, offers to sell, manufactures, or tests regulated cannabis.

6. Products Liability

One of the thorniest insurance issues for cannabis businesses is that of products liability coverage. As products liability claims may be made against any, and potentially all, entities in the supply chain from retailer or distributor, manufacturer, tester, or cultivator. The costs of defense

¹³⁵ Thomas Mitchell, Westword: Colorado’s Largest Dispensary Chain: Fifteen Burglary Attempts in Ninety Days Last Year (October 28, 2021) – <https://www.westword.com/marijuana/colorado-livwell-burglary-cash-cannabis-banking-12660338>

¹³⁶ *Id.*

¹³⁷ Insurance Information Institute: Spotlight on: marijuana and employment (November 24, 2020) For discussion of other aspects of marijuana in the broader employment context – <https://www.iii.org/article/spotlight-on-marijuana-and-employment>

in a products liability action alone make this coverage “in demand.” Moreover, the breadth of circumstances that can lead to a products liability claim raises legitimate concerns for all parts of the industry. By way of refresher, there are three basic theories of product liability: 1) design defect, which could include pesticide, mold, or biological contamination; 2) manufacturing defect, which can include contamination introduced during processing, or by faulty testing and results; and 3) warning/instruction defect, including product labeling violations or omissions, advertising misrepresentation, and packaging defects (i.e., child-resistant packages). It is easy to imagine the potential liability concerns of an industry involving an intoxicant that, until relatively recently, was comprehensively banned throughout the United States.

Reliance on a standard policy for products liability coverage for CRBs may not provide the full protection a business would anticipate. Most standard policies contain broad exclusions for Schedule 1 federally prohibited substances or criminal/fraudulent or dishonest acts or claims arising from violation of statute, code, rule, regulation, procedure, or guidance. Most standard policies do not include products completed, operations, and health hazard exclusions for cannabis businesses. Coverage for defense costs in a products liability action against a cannabis business is particularly key. The experience in the vaping crisis, referred to as “Vape-Gate,” is instructive. While it was ultimately found that most of the vaping injuries involved illicit or black market vape products, the potential for substantial and broad liability led to tighter risk management in the cannabis supply chain, including identification of unapproved or potentially dangerous additives resulting in adulterated products.¹³⁸ It is recommended that cannabis businesses specifically discuss with their insurer about coverage for products liability to ensure they understand the coverage provided and any limitations on it.

VIII. MARKET CONSIDERATIONS FOR COMMERCIAL CANNABIS INSURANCE

As noted above, the availability of insurance coverage for cannabis businesses is overwhelmingly found in the excess and surplus lines market at present. In part, this is due to the evolving nature of the commercial cannabis industry, and the lack of generally agreed upon data, measurement, and experience to support insurance underwriting. It is anticipated that just as the cannabis commercial industry evolves, so will the associated commercial insurance options in the admitted market. This evolution is anticipated and may be driven by how the cannabis business market

¹³⁸ Steve Hallo, National Underwriter Property and Casualty 360 Market Insights: Vape Gate and today’s cannabis product liability market (December 16, 2020) – <https://www.propertycasualty360.com/2020/12/16/vape-gate-and-todays-cannabis-product-liability-market/>

develops (e.g., vertical integration and consolidation versus continuation of niche commercial entities in the cannabis supply and distribution market).

A. Cannabis as a Client (and Consumer Beliefs)

As more states legalize cannabis for either recreational use or medical use, more insurance companies may enter the market to write cannabis businesses. The cannabis industry is a new aspect for insurance companies. Thus, they will need to understand the risks and exposures, as well as the needs of cannabis businesses as clients.¹³⁹

It is also important for producers to be educated on the cannabis market to serve this demographic. For example, it would be beneficial for a producer to be educated on the risks and exposures at each segment from seed to sale so that they can explain to their client what would be best suited for their needs. They may also help explain the differences between legal requirements and best practices. A cannabis business may not purchase coverage because it is not legally required; however, it may be a good business practice.

The cannabis business as a client has a similar learning curve. The cannabis business owner must have done their due diligence to obtain a license, be educated on cannabis products and processes, and know the applicable laws surrounding cannabis. However, a cannabis business as an insurance client may need some help with insurance terms and coverage options as they may not know what options are suitable for their needs.¹⁴⁰ Vocabulary from region to region or state to state also differs. This can be challenging for an insurance company when trying to explain coverage options to a cannabis business as a client.

Misconceptions also play a part when cannabis businesses seek insurance. When cannabis businesses first opened (around 1996 in California) there was fear that due to the federal illegality, they could be subject to criminal charges at any moment.¹⁴¹ There are concerns from the cannabis industry that the information provided to insurers can be accessed by the federal

¹³⁹ Jason Howard, CRC Group Wholesale & Specialty: Understanding the Issues Around Insuring Cannabis-Related Businesses (accessed February 21, 2023) – [Understanding the Issues Around Insuring Cannabis-Related Businesses - News - Tools & Intel | CRC Group](https://www.crcgroup.com/Tools-Intel/post/understanding-the-issues-around-insuring-cannabis-related-businesses) – <https://www.crcgroup.com/Tools-Intel/post/understanding-the-issues-around-insuring-cannabis-related-businesses>

government.¹⁴² Some businesses in the industry may believe that insurance is not worth the cost or that coverage is not available.¹⁴³ Such misconceptions fuel belief that coverage is not available but, more recently, the concerns have been about the cost and limitations of coverage. Among the inherent limitations of excess and surplus lines are the higher costs of coverage and restrictions on the coverage beyond cannabis licensure requirements.

B. The Role of Data

Cannabis businesses are just like any other business; however, they continue to pay several times more than what other industries pay for insurance.¹⁴⁴ For example, a small mercantile general liability policy might run about \$1,000, but for a cannabis business, that policy could run about \$10,000 without products liability.¹⁴⁵ A directors and officers policy (D&O) for \$1 million in coverage could cost a cannabis business well into the six-figure range.¹⁴⁶ The difference in pricing may largely be due to the federal versus state treatment and the concomitant risks involved with cannabis businesses.¹⁴⁷ One major issue that persists for cannabis businesses and insurance is the lack of consistent and verifiable market data across market segments to inform of potential risks.¹⁴⁸ Insurers know very little about the losses and expenses associated with this industry, and therefore, it is difficult to price. An insurer can acquire information from their potential customer, but there is not a public source of comparative data that insurers can use to evaluate risks.¹⁴⁹

The lack of data relating to losses and expenses is a major issue, but data from similarly situated businesses can be used to assist in the underwriting process. When looking at dispensaries, an insurer can look at a pharmacy for medical use cannabis and liquor stores or vape shops for recreational use of cannabis to learn about underwriting a cannabis business. Similarly, cannabis processors and growers can look to processors from other similarly situated industries. Cannabis businesses need insurance at every point from seed to sell. Although data is lacking, there is

¹⁴⁶ *Id.*

¹⁴⁷ *Id.*

¹⁴⁸ *Id.*

¹⁴⁹ *Id.*

information available to begin the underwriting process and to get a sense of what is needed by a cannabis-related business.

Insurers can also consider various factors during underwriting depending on the type of cannabis business. For processors, the results from a third-party inspection, the type of security system, and whether they are wired to outside monitoring stations, fire suppression systems, and the sufficiency of the electrical system with proper wattage and circuits all could be factors in the underwriting process. For retailers, the type of safe storing cash or product can also be considered when in the underwriting process, as there may be a regulatory requirement that a safe has to be so heavy as to not be easily moved, or the insurer may impose one. Overall, the insurer may want to know more about the owner/operator of the cannabis-related business. For instance, it may want to know if they are a member of a trade association or what education and training they have, and what they require of their staff. All this information can play a role in the risk involved with the cannabis-related business. What insurers would like to see is the risk be reduced. For example, the risk to insure someone who just decided to open a shop would be much higher than a person who took the time to get trained and educated in cannabis.

C. Developing Commercial Policy Forms

Most insurance policies, particularly those in the admitted market, are standardized. Advisory organizations help develop these forms that are used by property and casualty companies. The standardization of forms ensures: 1) the legal requirements from each state are taken into consideration; 2) premium rates are based on actuarial studies of insurable risks; and 3) case law is taken into consideration to prevent ambiguities in contract terms. Additionally, standardized forms using familiar terms and vocabulary may reduce the potential for disparate interpretations. Prior to legalization, insurance policies would typically exclude cannabis-related activities from a policy due to the illegality of the product as a federally listed Schedule 1 substance.¹⁵⁰ As states implement new cannabis laws, insurers will need to modify their contract forms to achieve compliance. Striving for consistent terminology and language is part of the normal work of advisory organizations.

¹⁵⁰ Heather Howell Wright, National Underwriter Property and Casualty 360: ISO Revises Policy Forms to Address Cannabis (November 1, 2019) – [ISO revises policy forms to address cannabis | PropertyCasualty360](https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/) – <https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/>

1. Insurance Services Office (ISO)

ISO is an insurance advisory organization that shares actuarial information with its customers, including insurance companies, actuaries, agents and brokers, and government entities.¹⁵¹ ISO gathers large amounts of loss data from various insurance companies to develop advisory prospective loss costs. Licensing carriers may use these loss costs to develop their ultimate insurance rates.¹⁵² ISO also creates insurance policy forms and endorsements often viewed by many as an industry standard.¹⁵³ ISO-created policy forms and endorsements often include policy language that has been tested in the courts, providing licensing carriers with potentially less volatility in interpretation than if an insurer creates its own form.¹⁵⁴

ISO insurance programs are available to provide insurance coverage to or exclude coverage with respect to cannabis-related businesses and exposures through policy endorsements.¹⁵⁵ An insurance endorsement can be used at policy inception or after a policy is issued to add, delete, exclude, or otherwise alter coverage.¹⁵⁶

Previously, neither the ISO Commercial General Liability (CGL), Commercial Property (Property), nor Commercial Auto (CA) forms expressly addressed cannabis. However, ISO developed several endorsements to specifically address the cannabis exposure in these and other insurance programs. The related endorsements can enhance an insurer's flexibility to tailor their product by expressly addressing coverage with respect to cannabis-related exposures.

If an insurance carrier prefers to avoid providing coverage with respect to cannabis-related exposures in any of the related insurance programs, ISO makes available several exclusionary endorsements to exclude coverage. However, if there is interest in providing coverage for a cannabis-related exposure, ISO has made available several endorsements for that purpose.

ISO's CGL and Property programs include options for the carrier to extend certain coverage with respect to the cannabis exposure. Carriers also have the option to extend limited coverage with respect to only the hemp exposure using a cannabis exclusion with an exception applying to

¹⁵¹ Marianne Bonner, The Balance: Insurance Services Office (ISO) (May 16, 2019) – [What Is the Insurance Services Office \(ISO\)? – thebalancesmb.com](https://thebalancesmb.com/iso-what-is-the-insurance-services-office/)

¹⁵² *Id.*

¹⁵³ *Id.*

¹⁵⁴ *Id.*

¹⁵⁵ Heather Howell Wright, National Underwriter Property and Casualty 360: ISO Revises Policy Forms to Address Cannabis (November 1, 2019) – [ISO revises policy forms to address cannabis | PropertyCasualty360 – https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/](https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/) ¹⁵⁶

Mila Araujo, The Balance: What Is an Insurance Endorsement (May 4, 2022) – [What Is an Insurance Endorsement? – thebalance.com](https://thebalance.com/insurance-endorsement/)

hemp. Additionally, the CGL program includes options for insurance carriers to exclude liability for specifically listed products.

Within the commercial general liability program, ISO developed liability coverage endorsements with an aggregate limit for cannabis, a cannabis exclusion with a hemp exception aggregate limit, and a cannabis liability exclusion with designated product or work exception subject to an aggregate limit.¹⁵⁷

Lastly, ISO developed the defense within limits endorsement specific to products liability coverage that allows the carrier to limit the cost of defense related to products covered by the coverage form. Similar options are available for ISO's Businessowners, Commercial Flood, and Commercial Inland Marine programs.

2. American Association of Insurance Services (AAIS)

AAIS, a not-for-profit advisory organization governed by its member insurance companies, provides insurance forms, rules, and loss costs to the property casualty insurance industry.¹⁵⁸ AAIS provides policy forms and manuals in commercial lines, inland marine, farm and agriculture business lines, as well as personal lines to more than 700 insurance carriers.¹⁵⁹ As a licensed statistical agent in 51 jurisdictions, AAIS collects data that helps members meet regulatory statistical reporting responsibilities, which also supports loss cost development and ratemaking activities.¹⁶⁰

AAIS' cannabis business owners' policy (CannaBOP) product was developed at the request of the California Department of Insurance (DOI) to strengthen carrier participation for coverage of commercial cannabis operations. The CannaBOP is a package policy that provides property and liability coverages for qualifying cannabis dispensaries, storage, distributors, processors, manufacturers, and private cannabis testing facilities and laboratories.¹⁶¹ Rather than providing coverage to legal cannabis businesses through an endorsement, AAIS advocates for cannabis-specific product development and cannabis-specific programs.¹⁶² The CannaBOP program also

¹⁶² AAIS: Arizona Approves AAIS CannaBOP, Cannabis Business Owners Insurance Policy (March 9, 2021) – [Arizona Approves AAIS CannaBOP, Cannabis Business Owners Insurance Policy - AAIS Online](https://aaionline.com/press-arizona-approves-aa-is-cannabop-cannabis-businessowners-insurance-policy) – <https://aaionline.com/press-arizona-approves-aa-is-cannabop-cannabis-businessowners-insurance-policy>

includes the rules, loss costs, and a suite of optional endorsements to be used by an insurance company.¹⁶³ The program also offers technology support so that CannaBOP can be quickly distributed and AAIS dedicated personnel keeping a keen eye on the “legs & regs” to help carriers remain compliant within this space.¹⁶⁴

3. Filing Process and Adoption of ISO and AAIS Forms

AAIS and ISO are advisory organizations that submit advisory loss costs, rules, and forms to the respective regulating agency for review and approval. These advisory organizations have member or subscriber requirements to use their approved forms, rules, rates, or loss costs. Loss costs are the data on claims that have been paid out.

In some states, advisory organizations file on behalf of insurers that have given them authorization, and other states may have varying filing requirements, as in the case of California. In the absence of a filing made on behalf of an insurer, the insurance company submits a separate filing to adopt the product or endorsement before it can use what has been created by the advisory organization. For example, in California, insurer XYZ wanted to start writing a Cannabis Business Owners policy. As a member of an advisory organization, XYZ could use the advisory organization’s forms and data for what coverages to offer, forms to use, rules to apply, and rates (loss costs multiplied by a loss cost multiplier to account for the insurer expenses) to use. Insurer XYZ would submit a prior approval new program filing with the California DOI to adopt the portions of the advisory organization material they wanted to use. The filing would then be reviewed and approved before insurer XYZ could start writing cannabis business owners’ risks using the advisory organization’s filing as a foundation. So, two separate filing approvals are needed: first, the approval of the filing containing the advisory organization product; and then, after the advisory organization’s product is approved, the insurance company(s) filings requesting adoption of the already approved advisory organization’s product.

ISO’s Cannabis Endorsements were approved for use in a majority of the states in September 2019.¹⁶⁵ According to AAIS, CannaBOP was first filed and approved in California in 2018.¹⁶⁶

Since then, CannaBOP has been approved in Colorado, Nevada, Illinois, Michigan, and Washington.¹⁶⁷ In March 2021, CannaBOP was adopted by Golden Bear in Arizona.¹⁶⁸

IX. RESPONDING TO EMERGING TRENDS

Emerging trends in the cannabis industry provide opportunities for next steps in policy, regulation, and insurance. Cannabis product innovation is expanding past edibles to infuse cannabis into beverages, baking staples, crafts, and luxury products. New formulas and strengths are also being introduced with these new products. Innovation brings both new insurance needs and risks. For instance, states issued recalls in 2022 for cannabis edibles for mislabeling and contamination, resulting in litigation.¹⁶⁹

Growing demand for ancillary services and infrastructure in the cannabis space will also likely impact cannabis-related insurance. Ancillary services include those that complement the cannabis industry and are often non-plant touching. This includes marketing, transportation and delivery, financing, breathalyzers, product packaging, accountants, landlords, staffing firms, nutrient suppliers, and equipment companies.

Insurance regulators should also be informed of the emergence of on-site social consumption lounges. A few states have started issuing licenses for these establishments. On-site social cannabis lounge sites may operate similarly to bars, where consumers would gather to socially consume cannabis at a place of business. These businesses will face liability and insurance issues akin to businesses serving alcohol, like bars, breweries, and wineries.

X. CONCLUSIONS

A major aspect of obtaining insurance coverage for cannabis-related businesses is the complexity of limitations to interstate commerce hampering multi-state expansion. The current cannabis marketplaces are contained in individualized state jurisdictions without competition from other state marketplaces.¹⁷⁰ There have been state legislative authorizations in California (2022) and Oregon (2019) to create legal cannabis interstate commerce through trade pacts with other states. However, these laws require Congressional authorization or a memorandum from the DOJ allowing for interstate transfers of cannabis products. Federal legislation was introduced in 2021 with the States Reform Act (SRA). The SRA would decriminalize cannabis at the federal level while deferring to state powers over prohibition and commercial regulation.

¹⁶⁹ Jay Viridi, Cannabis Industry Journal: Challenges Abound for Cannabis Industry Growth in 2023 (November 30, 2022) – https://cannabisindustryjournal.com/feature_article/challenges-abound-for-cannabis-industry-growth-in-2023/

¹⁷⁰ Tommy Tobin and Andrew Kline, Yale Law & Policy Review: A sleeping Giant: How the Dormant Commerce Clause Looms Over the Cannabis Marketplace (January 3, 2022) – https://ylpr.yale.edu/inter_alia/sleeping-giant-how-dormant-commerce-clause-looms-over-cannabis-marketplace

Insurers are likely to continue to be cautious about entering the cannabis space in the absence of federal safe harbor provisions, legalization, decriminalization, or rescheduling. The federal prohibition has the effect of inhibiting access to vital ancillary services, such as banking with financial institutions and mitigating risk through insurance. States may look to add safe harbor laws into their authorities to ensure vital ancillary businesses can legally service the cannabis industry within state laws. The goal of safe harbor authorities is to seek and grant protections from liabilities or penalties, so long as certain conditions are met. For example, California recently passed a bill that states an individual or firm providing insurance or related services to a state legal cannabis business does not commit a crime under California law solely for providing that insurance or related service.¹⁷¹ The NAIC has supported federal legislation to provide a safe harbor for financial institutions and insurers serving cannabis-related businesses operating in states that have legalized cannabis.

Currently, most commercial insurance coverage for cannabis-related businesses is in the excess and surplus market. There is, however, growing interest among admitted carriers in entering this area. Among the potential structures to facilitate cannabis-related business coverage are: the use of state-based commercial insurance programs, risk retention groups (RRGs), captives, and joint underwriting associations (JUAs). States may want to look at their state laws to identify and remediate any restrictions in use of such programs for cannabis-related businesses.

Fair Access to Insurance Requirements (FAIR) plan programs afford opportunities for difficult risks to be underwritten by certain insurers when other insurance is not feasible. Sometimes known as insurers of last resort, the availability of these plans varies by jurisdiction. While commonly limited to personal lines, some states include commercial coverage. Generally, these programs help to provide insurance for those unable to acquire it from the admitted or excess and surplus insurance markets. FAIR plans are shared market plans, where several insurance companies provide coverage for the property, limiting the amount of risk that any one company assumes.

Risk retention groups and captive insurers also provide additional options for cannabis-related business insurance coverage. Governed by state law, there are many nuances that a state must consider. For example, Washington identified 17 businesses using captive insurance but not

¹⁷¹ Assembly Member Cooley, AB 2568 (Chapter 393, Statutes of 2022).

paying premium taxes to the state the captive was operating in. This was due to legal framework for captive registration and taxation had not yet been established.¹⁷²

Joint underwriting associations (JUAs) could be created to alleviate the lack of availability and affordability for state mandated cannabis-related commercial insurance coverage. A joint underwriting association is a nonprofit risk-pooling association established by a state legislature in response to availability crises in respect to certain kinds of insurance coverage. For example, a number of states have established JUAs to provide medical malpractice insurance for physicians who are unable to obtain affordably priced insurance coverage in the standard marketplace.

Addressing black-market cannabis operations could also help support capacity for cannabis-related commercial insurance. Black-market operations can take the form of illegal grows, unlicensed production and processing facilities, and criminal retailers. Black-market operations compete with the regulated markets and remove revenue that would be taxed and generated with the legal retailers. Black-market products are also not subject to any regulations for advertising, marketing, retail sales, or consumer safety. This creates risk than can spill over into the state-legal cannabis market. For example, during Vape Gate, insurers increased pricing and added product liability exclusions for unapproved additives. Many of the vape issues were found to be due to black market products. However, insurers' apprehension on writing vape-related risks lingered for a few years following the event.¹⁷³

Some states are already taking steps to address black market operations. For example, Oregon and Washington each involve their law enforcement agencies in a collaborative effort with their cannabis regulatory bodies to seek and enforce against illegal cannabis operations. Oregon even coordinates its enforcement efforts in collaboration with California agencies in these efforts. Colorado coordinates between law enforcement and the cannabis regulatory agencies. In Washington, state tax revenue generated at regulated cannabis retailers is also distributed to local law enforcement agencies, which can help fund their enforcement efforts against black-market operations. The cannabis and insurance industries, as well as consumers, benefit from these enforcement activities, as well as the removal of the unregulated black-market.

As the number of states legalizing cannabis continues to grow, so will the need for cannabis-related commercial insurance. Insurance regulators must stay current with the rapidly changing landscape. There has been a rapid introduction of new cannabis products whose product liability

¹⁷² Joel S. Chansky, FCAS, MAAA Craig R. Brophy, FCAS, MAAA David R. Kennerud, FCAS, MAAA Joseph T. Holahan, JD, Milliman Report: Captive Insurance Study (January 18, 2021) –

needs and risks are still unknown. The insurance needs of ancillary businesses will also need to be understood. Finally, insurance regulators will need to access the capacity for new business models, such as on-site consumption lounges, to find insurance coverage and address associated educational needs.

Draft: 4/13/23

Cannabis Insurance (C) Working Group
Virtual Meeting
April 11, 2023

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met April 11, 2023. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael (CA); Michael Conway, Vice Chair, represented by Peg Brown and Bobbie Baca (CO); Jimmy Harris (AR); Christina Miller (DE); Ryan Blakeney (MS); Randall Currier (NJ); Melissa Robertson (NM); Erin Summers (NV); Michael Drummonds (OR); Sebastian Conforto (PA); Beth Vollucci (RI); Karla Nuissl (VT); and Michael Walker (WA).

10. Adopted its Nov. 29, 2022, Minutes

Currier made a motion, seconded by Brown, to adopt the Working Group's Nov. 29, 2022, minutes (see *NAIC Proceedings – Fall 2022, Property and Casualty Insurance (C) Committee, Attachment One*). The motion passed unanimously.

11. Discussed the Final Draft of the *Understanding the Market for Cannabis Insurance 2.0* White Paper

Michael stated that the drafting group has been meeting several times a month since mid-2021. The white paper content was heavily informed by the many presentations and panels received and the two-day hearing held by the Working Group over the last two years. The introduction explains that the updated white paper was needed, as the cannabis industry rapidly evolves and expands in structure and geography. The maturation of the cannabis market since the adoption of the previous white paper is driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. It is in these areas where insurance gaps most persist now. As such, the updated white paper includes a discussion on emerging insurance issues in these areas of the cannabis industry. Additionally, the white paper outlines the different operating structures and designs of cannabis businesses, jurisdictional variations, current insurance types and offerings, and differences presented by insuring hemp versus cannabis. It also covers cannabis policy trends, current landscapes of cannabis regulation, and licensing and education. It concludes with a brief discussion on the future state of cannabis insurance, including possible next steps for all affected parties.

Walker stated that there is a vast array of lingo, concepts, and scientific terms when discussing cannabis. Overlaying this with all the insurance lingo adds to the complexity. Knowing how these intersect is important to interpreting related regulations, legislation, products, and research. As such, the second section is dedicated to providing this information. The third section delves into the expansion of states legalizing cannabis. It covers the varied approaches to cannabis regulation across the states and U.S. jurisdictions and the role of growing public opinion support. Some states have joined the list of those that have legalized cannabis, while others have chosen not to.

Drummonds stated that the fourth section discusses the impact of conflicting state and federal laws on insurers' willingness to provide coverage for cannabis businesses. It also discusses recent federal legislative efforts, including the Secure and Fair Enforcement (SAFE) Banking Act, the Clarifying Law Around Insurance of Marijuana (CLAIM) Act, the Marijuana Opportunity Reinvestment and Expungement (MORE) Act of 2021, the Cannabis

Administration and Opportunity Act (CAOA), and the States Reform Act of 2021. The SAFE Banking Act would remove constraints on depository institutions to provide banking services to legitimate, cannabis-related businesses. The CLAIM Act would provide a safe harbor from penalties or other adverse agency action for insurance companies that provide services to cannabis-related, legitimate businesses in jurisdictions where such activity is legal. The MORE Act would decriminalize cannabis by removing it from the list of scheduled substances under the Controlled Substances Act (CSA). The COA would allow states to lead on cannabis regulation and establish a federal regulatory paradigm similar to that of alcohol and tobacco. The States Reform Act of 2021 would remove the legal obstacles preventing U.S. cannabis companies from accessing the financial system and allow for the interstate commerce of cannabis. Additionally, there is a discussion on President Joe Biden's request that the Secretary of the U.S. Department of Health and Human Services (HHS) and the Attorney General review how marijuana is categorized under federal law. The section concludes by noting that President Biden signed the Medical Marijuana and Cannabidiol Research Expansion Act in December 2022 to increase access to the scientific study of cannabis.

The fifth section of the paper provides an overview of the cannabis business regulatory, licensing, and education landscape. It begins by explaining that many states that legalized cannabis designed their regulated cannabis systems to carefully consider the priorities of the U.S. Department of Justice (DOJ) and federal government outlined in the Cole Memorandum. It then discusses how the Cannabis Regulators Association (CANNRA) provides policymakers and regulatory agencies with the resources to make informed decisions when considering whether and how to legalize and regulate cannabis. It then takes a deeper dive into insurance considerations around cannabis impairment, including research limitations, driving impairment testing, workplace considerations, and potency variances in newer products. It also discusses the need for education and the impact of vaping regulations on cannabis. It concludes with a discussion on social and economic equality provisions and licensing. The sixth section looks at the implications of evolving cannabis operating and organizational structures. Consolidation and sales growth were the dominant trends of 2021. This section discusses how this consolidation results in ownership changes and business structure modifications that lead to a more sophisticated industry.

Brown stated that the seventh section examines cannabis insurance needs and coverage availability. This section discusses the difficulty state insurance regulators have in assessing availability and affordability, given that the majority of cannabis business coverage is written through excess and surplus carriers. There are some admitted forms, such as through the Insurance Services Office (ISO) and the American Association of Insurance Services (AAIS). However, in most states, admitted carriers are not widely using these avenues to provide coverage. This section also examines how access to commercial insurance for cannabis businesses significantly varies by the market segment of the seed-to-sale continuum. In many cases, coverage for cannabis businesses is more expensive than for other sectors, and limits can be constrained. The eighth section explores market considerations for commercial cannabis insurance. It points out that a cannabis business as an insurance client may need some help with insurance terms and coverage options, as the client may not know what options are suitable for their needs. It also discusses leveraging data on similarly situated businesses to overcome difficulties evaluating risks given the lack of data specific to cannabis businesses. Additionally, cannabis business coverage forms offered by the ISO and the AAIS are discussed. The discussion includes the process the advisory organizations go through to adopt and file the forms.

Nuissl stated that in the ninth section, the paper provides an overview of emerging trends in the cannabis industry. Product innovations are moving past edibles to infuse cannabis into beverages, baking staples, crafts, and luxury products. Additionally, demand is growing for ancillary services and infrastructure. A few states have started issuing on-site social consumption lounges. All of these emerging trends create new insurance needs and risks to be addressed in policy and regulation.

Michael stated that the white paper's conclusion emphasizes the importance of federal safe harbor provisions. It notes growing interest among admitted carriers in entering the cannabis space. It also discusses the use of state-based commercial insurance programs, risk retention groups (RRGs), captives, and joint underwriting associations (JUAs) as potential structures to facilitate cannabis-related business coverage. Additionally, it notes the need for states to address black market operations.

12. Exposed the *Understanding the Market for Cannabis Insurance 2.0* White Paper

Brown made a motion, seconded by Nuisl, to expose the *Understanding the Market for Cannabis Insurance 2.0* white paper to NAIC staff for a 45-day public comment period ending May 26. The motion passed unanimously.

13. Discussed the Working Group's Work Plan

Michael stated that the work plan essentials include items specifically identified in the Working Group's charges and presentations or panel discussions needed to inform those items. This includes exposing and adopting the *Understanding the Market for Cannabis Insurance 2.0* white paper by the Summer National Meeting. Once that is accomplished, the Working Group can begin drafting its outline for the addendum to the white paper that will cover emerging issues. Drafting on the addendum can be done as information is gained through presentations to the Working Group throughout the year. Presentations on emerging areas will include cannabis-infused food and beverages and its oversight by the U.S. Food and Drug Administration (FDA), cannabis intoxication, delivery and social equity, and social consumption lounges. There is also a presentation anticipated from the National Underwriter Company on its launch of the first certification on cannabis insurance coverage for insurance agents and brokers, risk managers, and other professionals who advise cannabis-related businesses. The final essential work plan item is to continue receiving reports on cannabis-related legislative activities from the NAIC Government Relations (EX) Leadership Council staff and other legal experts.

Feedback is needed on items the Working Group could potentially include in its work plan. Cannabis regulations are state specific. Additionally, there are emerging areas like social consumption lounges that some states are already involved in, and others may want to know about for the future. For these reasons, feedback is needed regarding whether members want to hold an educational roundtable where states could share and learn from each other. Additionally, it has been hard to get something beyond anecdotal or second-hand information on what issues insureds are having in obtaining insurance coverage for cannabis-related exposures. It could also be helpful to understand what experiences insurers or prospective insurers are having as they approach state insurance regulators about writing cannabis-related coverages in the admitted market. For these reasons, feedback is needed on whether it would be beneficial to host hearings or panels to hear from insurers and prospective insurers and/or insureds. In a similar vein, feedback is needed on whether the Working Group should host a hearing or a series of panels on the unique structures being created to address cannabis insurance needs. This would include things such as RRGs, captives, and surplus lines-specialty programs. It would also include things like hearing from the Specialty Agriculture Risk and Financial Association (SARFA), a member-driven association designed to meet the insurance regulatory requirements of Michigan. Another idea is to compile a list of those writing cannabis coverage by surveying managing general agents (MGAs) and/or inquiring with the Surplus Lines Association about surveying their members for this information. If the Working Group surveys MGAs, it would need to find a list of MGAs and their contact information. Finally, the drafting group could leverage the research it compiled and wrote while drafting the white paper to develop issue papers that would be used for background information and not officially adopted.

Brown stated that the intersection of insurance and the cannabis industry is very complex. The commercial cannabis market is not available in all states. It is extensively regulated in states where it is available, but those state regulations differ, which creates a somewhat unique situation. It is important for state-based insurance

regulators to work closely with the state marijuana or cannabis regulatory entities in each member's respective state. Doing so ensures that state-based insurance regulators understand that not every state is alike and collaboration is needed on interstate issues of insurance coverage.

Walker stated that he also supports the potential work plan idea of holding educational roundtables with states sharing how cannabis is regulated in their jurisdictions and any related issues. For instance, some states have prohibited vertical integration, and others allow it. Additionally, variances between jurisdictions could become more complex as new concepts, such as social consumption lounges, launch.

Nuissl stated that she also supports the potential work plan idea of holding educational roundtables. It is important to examine issues with different sizes of companies in different segments. For instance, a very small grower might have very different issues from a larger one.

Michael requested that any additional feedback on the work plan be sent to NAIC staff.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2023_Summer/Cannabis/4-CannabisWG.docx

Draft: 8/22/23

Catastrophe Insurance (C) Working Group
and the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group
Seattle, Washington
August 13, 2023

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met in Seattle, WA, Aug. 13, 2023, in joint session with the NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee. The following Working Group members participated: Chlora Lindley-Myers, Chair, represented by Cynthia Amann, Brad Gerling, and Jo LeDuc (MO); Mike Causey, Vice Chair, represented by Jackie Obusek, Vice Chair (NC); Sian Ng-Ashcraft (AK); Mark Fowler and Brian Powell (AL); Alan McClain (AR); Ken Allen, Elsa Carre, Lucy Jabourian, and Lynne Wehmueller (CA); George Bradner (CT); Virginia Christy and Michelle Brewer (FL); Jerry Bump, Randy Jacobson, and Kathleen Nakasone (HI); Travis Grassel (IA); Craig VanAalst (KS); James D. Donelon (LA); Jackie Horigan and Matthew Mancini (MA); Joy Hatchette (MD); Ryan Dakeney (MS); Anna Krylova (NM); Landon Hubbard (OK); Tom Botsko and Maureen Motter (OH); Brian Downs (OK); Raven Collins (OR); David Buono and Michael McKenney (PA); Glorimar Santiago (PR); Beth Vollucci (RI); Will Davis (SC); Stephanie Cope (TN); Marianne Baker, J'ne Byckovski, Nicole Elliott, and Mark Worman (TX); Matt Stoutenburg (WA); Jeannie Tincher and Juanita Wimmer (WV); and. Also participating were Patrik O'Connor (IN); Paige Dickerson and Kevin Dyke (MI); Peter Brickwedde (MN); Dede Bennisan (NV); Tony Dorschner (SD); Tracy Klausmeier (UT); Marly Santoro (VA); Isabelle Turpin Keiser and Beth Sides (VT); and Bryan Stevens (WY).

The following Advisory Group members participated: Glen Mulready, represented by Brian Downs and Landon Hubbard (OK), Chair; Carter Lawrence, represented by Stephanie Cope, Vice Chair (TN); Mark Fowler and Brian Powell (AL); Sian Ng-Ashcraft (AK); Ken Allen, Elsa Carre, Lucy Jabourian, and Lynne Wehmueller (CA); George Bradner (CT); Virginia Christy and Michelle Brewer (FL); Travis Grassel (IA); Patrick O'Connor (IN); Craig VanAalst (KS); James D. Donelon (LA); Joy Hatchette (MD); Ryan Dakeney (MS); Cynthia Amann, Brad Gerling, and Jo LeDuc (MO); Anna Krylova (NM); Raven Collins (OR); Beth Vollucci (RI); Tony Dorschner (SD); Marly Santoro (VA); Matt Stoutenburg (WA) and Raven Collins (OR).

9. Adopted its Spring National Meeting Minutes

Botsko made a motion, seconded by Commissioner McClain, to adopt the Working Group's March 21 minutes (see *NAIC Proceedings – Spring 2023, Joint Meeting of the Catastrophe Insurance (C) Working Group and the NAIC/FEMA (C) Advisory Group, Attachment Five-A*). The motion passed unanimously.

10. Heard an Update on the Catastrophe Modeling Primer

Sara Robben (NAIC) provided an update on the progress of the drafting group in drafting the Catastrophe Modeling Primer. The drafting group met July 28 and plans to meet again during the last week of August.

Several primer sections have been drafted, and the drafting group continues to work diligently on this task. The drafting group now has access to a SharePoint site, allowing the state insurance regulators in the drafting group to view and edit the document at any time.

The drafting group hopes to complete the drafting and be able to expose the document by the Fall National Meeting.

11. Heard from Alabama, Louisiana, and Minnesota About Their Mitigation Programs

Commissioner Fowler talked to the Working Group about the wind mitigation program in place in Alabama. The name of the program in Alabama is Strengthen Alabama Homes. Alabama makes grants of up to \$10,000 dollars available to Alabama residents to fortify their homes to the Insurance Institute for Business and Home Safety (IBHS) Bronze Fortified standards. Commissioner Fowler said many qualifications go into the Bronze Fortified standards, and Alabama has built numerous strong partnerships with industry, academia, and nonprofit organizations. These partnerships include: Smart Home America; Habitat for Humanity; the Center for Risk and Resilience at the University of Alabama, Birmingham; and Protective Life. Working with these entities, about 100 homes have been fortified in five historic and mostly underserved neighborhoods around downtown Birmingham's new protective stadium.

Commissioner Fowler said the Alabama legislature passed a bill creating the Strengthen Alabama Homes (SAH) program in 2012. Funding comes from the insurance industry through fees paid to the Alabama Department of Insurance (DOI). The first grant was made in 2016, and since then, the DOI has distributed \$59.2 million to fortify more than 6,000 homes in Alabama. By the end of this fiscal year, the Alabama DOI will have granted \$62.5 million and fortified more than 6,300 homes.

Commissioner Fowler said the application and approval process occurs online through the SAH's website. The site is opened quarterly for grants for new applications at midnight on a designated day. The DOI only had 300 available grants left for this fiscal year, and more than 200,000 people were logged on to get one of those 300 available grants on the designated day. Brian Powell (SAH) is frequently called on by other states to consult with them on forming their own version of SAH.

Commissioner Fowler said that currently, 11 states are looking at establishing a program like SAH, some of which have already passed legislation. Powell often works with the IBHS and others to promote state mitigation programs. Alabama Gov. Kay Ivey strongly supports the SAH program and signed an executive order establishing the Alabama Resilience Council (ARC). The ARC is a broad-based collaborative effort where risk and vulnerabilities can be assessed, and resilience efforts can be aligned through council partners. The most beneficial strategies and actions can be identified, and the ARC's ongoing work is not limited to a single event. Commissioner Fowler serves as the ARC's co-chair, along with cabinet member Jeff Smitherman (Alabama Emergency Management Agency).

Commissioner Fowler said the ARC's consistent coordination with the numerous public agencies and private partners who comprise the members and stakeholders will continually generate rewards by setting priorities, leveraging resources, communicating effectively, and delivering measurable results for the people of Alabama before and after events.

Commissioner Fowler said that when adverse circumstances occur, reimagining the approach to resiliency through the work of the ARC will empower Alabamians in the community to build stronger, live safer, and recover quicker.

Commissioner Donelon said Alabama is the reason Louisiana is where it is today. Louisiana has copied Alabama's legislation as closely as it could. The Louisiana Fortify Homes Program (LFHP) addresses the increasing cost of wind and hail coverage from homeowners by encouraging people to retrofit and upgrade their homes to the Fortified roof standard.

Commissioner Donelon said Louisiana had back-to-back hurricane seasons that generated 800,000 claims being filed, resulting in \$20.3 billion in payments to homeowners and commercial property owners in 2020 and 2021. Through these events, the Fortified roof standard in construction has proven to offer greater resilience in the face of high wind, hail, and hurricanes. Fortified roofs are more readily insurable at lower rates than homes not built or retrofitted to that standard.

Commissioner Donelon said the two hurricanes making landfall in 2020 and 2021 had winds of 150 mph. In both cases, homes built to the Fortified standards were undamaged. These homes were located on the coast and barrier islands. The Louisiana legislature enacted the LFHP in 2022 but appropriated no money until 2023. In 2023, the legislature appropriated \$20 million from the general fund and another amount not to exceed \$10 million from excess revenue collected by the DOI. The current 2023/2024 fiscal year funding will permit 3,000 grants at \$10,000 per grant to be awarded. Since the creation of the LFHP, the Louisiana DOI has prepared for the receipt of funding by working closely with the SAH and Smart Home America to develop its grant administration system. The program will operate on a first-come, first-served basis, offering grants not to exceed \$10,000 to retrofit existing homes to the Fortified standard. This amount was chosen based on the experience of the SAH. Applicants must own a residential property with a homestead exemption, and the residential property cannot be a condominium or mobile home. The property must also have wind insurance coverage, and if the property is in a Special Flood Hazard Area (SFHA), there must be flood coverage. The grant process is managed through Louisiana's online system, from verification of eligibility to authorization of the grant payment upon receipt of the Fortified group certificate. Grant payments are made directly to participating contractors. In the 2023 legislative session, property insurers, like Alabama, were mandated to file rate discounts for properties with Fortified designation.

Commissioner Donelon said a separate program that is funded is the incentive program for insurers to write coverage in Louisiana, primarily focusing on taking the 120,000 homes that must get their insurance from Louisiana's state-sponsored market of last resort priced at the highest level of any private property insurance company offering coverage in each of Louisiana's parishes plus 10%.

Commissioner Donelon required the first \$15 million to go to those homes insured by Citizens when awarding grants during the October/November time period this year. If any of the \$15 million happens to be left over from that offering, it will be put into the second \$15 million offering, which will go out to the public. Louisiana hopes to get 3,000 homes insured with these grants.

Commissioner Donelon said that the Louisiana Insurance Department was one of several recipients of a two-year Robert Wood Johnson Foundation (RWJF) grant. This grant encourages resilient construction in studying the public health effects of resilient construction in underserved and at-risk communities.

Horigan asked if there is a time frame in which the mitigation must be done to a home. Commissioner Donelon said the contractor is paid directly to certified Fortified contractors. Louisiana has approximately 100 certified contractors. Inspectors also have to meet a certification standard. He said a homeowner has no motive to stall or delay the mitigation, but Louisiana does not have a deadline. Commissioner Fowler said he believes there is a 90-day limit. However, the mitigation is generally completed 55 days from the grant award. Alabama does not make the grants available to the individual and pays the contractor directly.

Brickwedde said Minnesota also used many elements of Alabama's program. Michael Newman (IBHS) and Fred Malik (IBHS) went to St. Paul, MN, in February to testify to the legislature about the work done under the Fortified program, which helped get Minnesota's program through legislation this year. Minnesota received \$1 million from the legislature this year for planning and implementation work over the next two years. Brickwedde said the money will be used to hire staff and build some of the relationships needed to get the work done. Currently, three homes in Minnesota have a Fortified roof, so Minnesota has to start at the level of creating a workforce to do the work and then raise awareness among Minnesotans.

Brickwedde said the Minnesota DOI believes there are tremendous health and safety benefits to a mitigation program, as well as cost savings to the consumer. He said the DOI had good discussions with the insurance industry as they put together the legislation to determine how that would be done. They are now working through the first-rate filing received from the insurers they had conversations with. Brickwedde said Minnesota is the first cold-weather state to have a mitigation program. This program will have compounding effects in conjunction with

other existing state programs. The DOI has Minnesota's energy offices in its department. The Fortify project will sit next to the weatherization program in the organization chart. In severe weather, this type of program can be helpful.

Amann said other states have mitigation programs in legislation currently or that have been recently enacted. She encouraged the Working Group members and interested state insurance regulators to share what worked and did not work in the process, as there is value in states learning from each other.

Birny Birnbaum (Center for Economic Justice—CEJ) asked how the level of funding relates to the need. He asked how many years it would take to retrofit all the properties needing to be retrofitted. Commissioner Donelon said it is a long process that will take many years to retrofit all the properties needing this done. He said it would be greatly beneficial to fortify the homes of the 120,000 consumers in the residual market, as most consumers using the residual market are in underserved communities.

Commissioner Donelon said the number of consumers in the residual market had depopulated following Hurricane Katrina. However, the residual market has grown again. He said the legislature funded \$55 million to give to insurers to write business in Louisiana amid this crisis. Commissioner Donelon said he had to engage the governor and the legislative leadership to call a special session to get the program in place one month before the regulator session. This was done before the regular session because 10,000 people are hit with up to 70% rate increases each month, causing thousands of people to lose their homes.

Commissioner Fowler said it needs to get to a point where the market reacts and responds to insurance rates, making it easier to provide access and availability. He said the DOI talked to several reinsurers to see what it would take before the market reacts. They determined that once 20% of homeowners in the coastal counties are fortified, they may see some market reaction, and Alabama is close to 20% now. There are 35 counties now that are in the program. Alabama credits former Commissioner Jim Ridling for getting the program started. This is a long-term program.

Birnbaum asked how the funds could be increased to retrofit more consumers' homes. Commissioner Donelon said that following Hurricanes Katrina and Rita, the governor called a special session and did some things, including implementing an incentive program and a statewide building code for the first time. He said that the governor approved upgrading building codes to the latest codes every three years. The building code upgrade was paused during the COVID-19 pandemic for one three-year period. As of Jan. 1, the paused and scheduled upgrades were done. This upgrade requires 95% of fortified or retrofitted construction in new buildings.

Commissioner Donelon said that getting to the last 5% will cost money because fortifying is above and beyond the building code. He said Louisiana is doing both at the same time, and it would be foolish to put an expensive Fortified roof, which is more expensive than a building code roof, on brother-in-law construction, which there was a lot of along the coast when roofs were unregulated or loosely regulated for building codes. These are the properties most affected by 135 mph to 150 mph winds. Louisiana is doing everything in its power not to fortify those homes and to strengthen their markets and make them more attractive and, in the process, help the property owners in the state, primarily residential property owners. Commissioner Fowler echoed these comments.

Commissioner Fowler said he believes many other opportunities are coming through at the federal level, like the federal "green bank" opportunities. He said there are also possible state-based "green bank" opportunities. No state will be able to invest the kind of resources it would take to mitigate every single home. The grant program can create an environment where consumers see that some roofs are not damaged following a storm, which makes them question what they can do so their room is not damaged following a storm.

12. Heard a Presentation from FLASH on Resources Available to States for Mitigation Grant Programs

Leslie Chapman-Henderson (Federal Alliance for Safe Homes—FLASH), said FLASH has been around for 25 years and is very diverse. FLASH’s central theme, which has not changed in 25 years, is to strengthen homes and safeguard families from disasters. FLASH is behind many projects, including “Turn Around Don’t Drown.” FLASH focuses on finding trusted voices for audiences that need to know about disaster safety and resilience. Once FLASH finds the audience, it works to provide consumers with information using information outreach and other types of campaigns or training that meets the need of its audiences.

FLASH works with meteorologists, the weather center, and the broadcast community to shape messages that drive solutions.

FLASH’s most recent initiative is its “Disaster Smart” initiative, which began five years ago. Chapman-Henderson said it is an exciting time in resilience because there is much momentum. One of the things FLASH has recognized is that there is increased interest due to disruption in the marketplace. The disruption has likely caused an increased interest in the public about solutions for building better.

FLASH recently completed a research project this year that focused on how to take all the information that Alabama, Louisiana, and Minnesota just talked about and make the information accessible. Building code leadership is an important way to encourage retrofitting.

States like Alabama, Louisiana, and Minnesota are changing the marketplace by creating a culture of preparedness.

FLASH understands that building code leadership is not possible in every state. The dynamics, either structurally or politically, may not lend themselves to stepping forward on building codes and making them a top priority. However, in those cases, many insurance commissioners have been integral to driving positive change in building policy.

FLASH believes that stronger building codes are a way of fixing the older housing stock. Simply talking about building codes and leading and supporting public awareness campaigns helps achieve these goals. The International Code Council (ICC) sponsors Building Safety Month every May. During this time, FLASH presents information regarding the link between resiliency codes, shorter recovery times, healthier insurance markets, and available discounts for retrofitting. During Building Safety Month, building code leadership can lead and support public awareness campaigns, as well as analyze and track the local building code adoption status.

Chapman-Henderson said that the states tracking building code status and adding that to their portfolio is something FLASH has seen commissioners do. While it is not an easy process, she said it is worthwhile if there is a level of interest to adopt current model codes and keep them intact. It is also necessary for states advocating for building codes to make sure there are resources to administer a program.

Chapman-Henderson said there are a lot of new resources available. FEMA has helpful publications, including *Building Codes Save: A Nationwide Study*, *Building Codes Strategy*, and a *Building Codes Adoption Playbook*. There are more incentives for building codes at the federal level. IBHS assesses residential building codes and enforcement systems in hurricane-prone regions, and the Insurance Services Office (ISO) has a national building code report. Additionally, FLASH has a study regarding why Americans are not concerned about building codes.

It used to be harder to find information regarding building codes. FLASH has worked with its partners to create a large dataset for the building code statuses in the U.S. The website is consumer-facing and provides a simple illustration. FEMA has a building code adoption tracking portal.

FLASH had a pilot in Florida in 2005 regarding retrofitting. Originally, the conversation around retrofitting focused on new construction. Initially, FLASH could not find a workforce interested in remodeling or retrofitting. FLASH learned that nearly 50% of the housing stock is pre-1980, and currently, homeowners are not moving and are remodeling instead. In 2011, 17% of the housing inventory was from new construction. However, in 2021, only 10% of the housing inventory was from new construction. Due to these decreases, the interest in the industry providing these services is increasing. Therefore, partnerships are being formed to retrofit homes being remodeled. This provides an opportunity to inject resilience into the remodeling trend.

FLASH will be looking at how it can work with the remodeling community to ensure Fortified is part of the conversation as an optional upgrade or for every roof where the code fits. FLASH received a grant from the RWJF to work on a project that supported DOIs in states wishing to participate in retrofitting programs.

FLASH asked three research questions: 1) What resource and knowledge gaps impede widespread retrofitting program implementation?; 2) What are the benefits/barriers for DOIs to implement a retrofitting program?; and 3) Can a losses avoided model focused on mental health, injury, and death be further refined for use by stakeholders?

FLASH started out by looking at existing retrofitting programs. It looked at state and local programs, although some were not DOI programs. FLASH looked at the Texas General Land Office (GLO) mitigation program and the Sonoma County wildfire program. It used the information about the programs to try to figure out what was missing and then conducted interviews and devised a plan for solutions. FLASH looked at the budgets, staffing, timing, timelines, etc. The interviews included those who were doing the programs and who were not doing the programs.

The lack of funding models was one of the resource gaps. However, there is money available, not just at the state level. Some work is happening with Department of Housing and Urban Development (HUD) dollars, where resilience is allowed to be included. There are different time horizons when resilience can be accomplished, namely when the home is built, retrofitting during blue-sky, but also knowing what the plan is for large-scale reconstruction to a higher standard. Some of the federal dollars available require reconstruction to a higher standard.

FLASH also discussed operational and administrative barriers, such as who will do the inspections, who is the builder, etc. It also discussed knowing what employees would staff the program; i.e., customer service representatives that could answer the phone, etc. States must also be aware of model language and policies, fraud prevention, outreach, and education.

Chapman-Henderson said the benefits of a mitigation program include improved availability and affordability of insurance, overall state economic stability, improved building performance, losses being avoided or reduced, a shorter recovery period, and safer communities overall.

Chapman-Henderson said the barriers that DOIs run into when wanting to implement a retrofitting program include funding availability and sustainability, administrative complexity, workforce availability, and the fact that this is a nontraditional DOI role.

Chapman-Henderson said FLASH's research conclusion was that states needed a resource available or a hub at the NAIC where DOIs could find information that has current information on retrofitting programs. She said this information might include easy access to resources and best practices and how other states are implementing retrofitting programs. Examples like North Carolina's success in retrofitting roofs likely come from their endorsement on their wind pool policy. Other items on the hub would provide information regarding the best standard inspection form, the type of training, what type of software is used, etc.

FLASH hopes to work with the Center for Insurance Policy and Research (CIPR) to create a resilience services hub that would work to host information for DOIs. DOIs could update information for their program or take the information down. The hub will focus on how FLASH can support the natural champions of resilience and make it easier to execute a vision for retrofitting as a program if desired. If not, there can be standby plans focused on recovery.

FLASH will be publishing its findings in the form of a playbook and resource guide in September.

Amy Bach (United Policyholders—UP) said that through its partnership with the California DOI and a grant from the governor's office of emergency services, it has established a Wildfire Risk Reduction and Asset Protection (WRAP) initiative. UP has been coordinating all of the fire-safe councils' fire-wise communities across the state, as well as some of the firefighting agencies. UP's resource center, which provides information at a county level, is a template that DOIs might be able to use as a resource. The resource center provides information regarding who is offering grants in various counties. Currently, UP has only had the funding to complete 30 counties but is hoping to eventually complete the entire state.

13. Discussed Ways to Create an Efficient Process for Proof of No Insurance to FEMA for Individual Assistance

Following a storm that qualifies for federal disaster assistance, property insurers are often asked to provide information on behalf of their insureds that can be shared with the FEMA to help the insureds obtain federal loans and grants.

FEMA often will not accept applications for federal aid from impacted consumers until their insurer or the state provides evidence of coverage. The lack of a uniform process leaves consumers with little or no disaster assistance for weeks.

Steve Simpkins (State Farm Insurance) said that during catastrophes, insurers work with DOIs and FEMA to support consumers following a catastrophic event. There is a requirement in the federal aid packages that does not allow citizens to receive duplicative benefits. This sometimes slows down the process, and it tends to differ from state to state or region to region. Insurers would like a process in place so that each time there is a catastrophic event, insurers are not required to revisit how they will provide information showing proof that consumers do not have other insurance covering their items or have exhausted their insurance benefits. Simpkins suggested getting a group together to work on a way to create a process for future events, allowing consumers to receive their individual assistance in a timelier manner.

Commissioner Clark said this should be a priority because, following a catastrophic event, consumers need help. She said consumers should not be mired in bureaucracy in such devastating situations.

Horigan asked what insurers were required to give to FEMA for proof of no insurance. Simpkins said it had become a letter in a record-only process from the insurer's perspective that provides the available coverages or has been paid. He said the letter often must be reapproved. Sometimes previous letters that were used have not been accepted, and it takes time to resolve this type of issue. The information must include proof of what has been paid, proof of what has not been paid, proof of the insured exceeding their limit, and items like this.

Jabourian said California has been hearing consumers say that they are afraid to apply for individual assistance because they do not want to file a flood claim, as they know that flood is not covered. However, FEMA does not require consumers to file a claim for flood with their normal homeowners insurance policy. Consumers have some misconceptions regarding some of the requirements.

Amann said the Working Group will work with its FEMA partners and bring information back to the Working Group during the Fall National meeting.

14. Heard from the CIPR COE on its Available Programs

Jeff Czajkowski (CIPR) said the Center of Excellence (COE) is now fully staffed. He said the COE has good relationships with the catastrophe modeling industry on the property/casualty (P/C) side, as well as has some agreements in place with the eight main modelers. The COE also has relationships with the International Society of Catastrophe Managers (ISCM), which is engaging with state insurance regulators at the annual Reinsurance Association of America (RAA) Catastrophe Risk Management conference.

There are three pillars to the COE: 1) vendor models; 2) education and tools; and 3) applied research. There is work moving across all of these pillars. Work includes the Catastrophe Modeling 101 course, a memorandum of understanding with IBHS, and research collaboration with FLASH.

Jennifer Gardner (NAIC) said the catastrophe models integrate property characteristics and then measure how the losses play out based on the perils. These tools can be used to see how risk mitigation factors can reduce losses over time, which is how insurers are pricing mitigation discounts. The COE is trying to identify the tools that insurers use to manage the risk and how regulators can use these tools to help improve their markets.

There is a regulator-only SharePoint site that provides model documentation from seven vendors, as well as the IBHS member-only research. The COE has participated in both the Southeast and Northeast Zone meetings. Before these meetings, the COE surveyed the states about their regulatory and legislative oversight of catastrophe models. The survey intended to develop and share information among the states about catastrophe models. The survey asked questions about where models have been approved, which models have been improved, and the common practices regarding reviewing the models in rate filings. The surveys are being conducted and shared by the zone.

The COE is developing a property and vendor model insights document that will provide information on catastrophe losses and relevant reports coming from the catastrophe modeling vendors. State insurance regulators interested in receiving information regarding catastrophe losses and product development should sign up for the SharePoint site.

The COE is developing education and training events. These events have been conducted for Colorado, Massachusetts, New York, and Puerto Rico. The Cat Modeling 101 course is being rolled out virtually for all insurance regulators. This course will be launched on Oct. 1 for all regulators.

The COE has an ongoing relationship with the ISCM. The ISCM offers training produced by the insurance industry for the insurance industry and is not geared specifically to state insurance regulators. Therefore, the COE decided to provide its own program. However, the COE provides access to the ISCM if any state insurance regulators are interested in learning more about what they produce.

The COE will conduct four sessions at the upcoming Insurance Summit. One of these sessions will focus on state insurance regulator financial oversight training related to catastrophe modeling. This is provided in conjunction with the referrals from the Climate and Resiliency (EX) Task Force to integrate more climate-specific data into the financial analysis tools. There will also be three sessions at the Insurance Summit focusing on research and current market trends. These sessions include: 1) an update on the reinsurance market; 2) a panel discussion on wildfire based on the wildfire risk assessments the COE has done; and 3) ways to reduce the risk of property loss due to fire propagation. Much of this information is obtained from the research conducted by IBHS in conjunction with

its Wildfire Prepared Home and Community programs. Finally, there will be a session at the Insurance Summit regarding research on the impact of roof age on claims and loss exposure over time.

The COE has been working with the Society of Actuaries (SOA) on a report focusing on how insurers are identifying their risk and using catastrophe models to assess and manage this risk. This report should be ready to be released in the next month or so.

15. Heard a Recap of the FEMA Region 1 Event Held in Maynard, MA

Amann said FEMA Region 1 met in Maynard, MA, on May 21–22. During the meeting, the group heard from several FEMA employees regarding items like:

- Historical disaster and emergency declarations for Region 1 and the surrounding regions.
- Response planning for flood risk in New England.
- The National Oceanic and Atmospheric Administration’s (NOAA’s) climate services.
- Tropical cyclone forecasting and threats in New England.
- FEMA’s disaster operations.
- FEMA’ public assistance and individual assistance.
- FEMA’s outreach and communication program.

Amann said the takeaways included:

- The improvement needed in consumer education.
- The need to continue working with FEMA on messaging.
- The need to strengthen relationships with agents through education.
- Interest from FEMA Region 1 members in discussing adjuster access to disasters.

Having no further business, the joint meeting of the Catastrophe Insurance (C) Working Group and the NAIC/FEMA (C) Advisory Group adjourned.

Draft: 8/25/23

Casualty Actuarial and Statistical (C) Task Force
Seattle, Washington
August 12, 2023

The Casualty Actuarial and Statistical (C) Task Force met in Seattle, WA, Aug. 12, 2023. The following Task Force members participated: D.J. Bettencourt, Chair, represented by Christian Citarella (NH); Chlora Lindley-Myers, Vice Chair, represented by Jo LeDuc (MO); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ken Allen and Lynne Wehmuller (CA); Andrew N. Mais represented by Wanchin Chou and Qing He (CT); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Julie Rachford (IL); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by Nichole Torblaa (LA); Kathleen A. Birrane represented by Ron Coleman (MD); Timothy N. Schott represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Phil Vigliaturo (MN); Mike Causey represented by Richard Kohen (NC); Eric Dunning represented by Michael Muldoon (NE); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by Raven Collins (OR); Michael Humphreys represented by Shannen Logue (PA); Michael Wise represented by Will Davis (SC); Cassie Brown represented by Miriam Fisk (TX); Kevin Gaffney (VT); Mike Kreidler represented by Eric Slavich (WA); and Allan L. McVey represented by Tom Whitener (WV).

1. Adopted its June 13, May 2, and Spring National Meeting Minutes

The Task Force met June 13 and May 2 to discuss the monitoring of other NAIC committee groups, the review of future actuarial papers, the loss cost multiplier (LCM) form implementation, the Director and Officer (D&O) Insurance Coverage Supplement, and the Cyber Insurance Supplement.

Chou made a motion, seconded by Dyke, to adopt the Task Force's June 13 (Attachment One), May 2 (Attachment Two), and March 7 (*see NAIC Proceedings – Spring 2023, Casualty Actuarial and Statistical (C) Task Force*) minutes. The motion passed unanimously.

2. Adopted the Report of the Actuarial Opinion (C) Working Group

Fisk said the Actuarial Opinion (C) Working Group met three times since its last report to the Task Force on June 13. The Working Group met June 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the 2022 Statement of Actuarial Opinion (SAO). No serious issues or trends were identified during that meeting.

The Working Group met July 12 to adopt its response to the Financial Analysis (E) Working Group's referral on predictive analytics in reserving, which had been exposed for a public comment period through June 26. The Actuarial Opinion (C) Working Group voted unanimously to adopt the response. The Working Group also began discussing potential changes to the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2023* (2023 Regulatory Guidance) and the 2024 Opinion instructions during the July 12 meeting.

The Working Group also met Aug. 2 to continue the discussion of the 2023 Regulatory Guidance and 2024 Opinion instructions. A draft of the 2023 Regulatory Guidance document is exposed for public comment through Sept. 1. The draft includes changes to better reflect the instruction's language about what to do when a material error is found and to remove the section on guidance related to COVID-19. The most significant change discussed by the Working Group for the 2024 Property/Casualty (P/C) Opinion instructions would be to modify the requirement for

qualification documentation to be provided by appointed actuaries only upon initial appointment and eliminate the requirement to provide qualification documentation annually thereafter.

Fisk made a motion, seconded by Muldoon, to adopt the report of the Actuarial Opinion (C) Working Group, including its Aug. 2 (Attachment Three); July 12 (Attachment Four); and May 25 (Attachment Five) minutes, which adopted a Financial Analysis (E) Working Group referral on predictive analytics in reserving (Attachment Four-A), discussed actuarial opinion instructions, and exposed the 2023 Regulatory Guidance for a 30-day public comment period ending Sept. 1. The motion passed unanimously.

3. Adopted the Report of the Statistical Data (C) Working Group

Darby said the Statistical Data (C) Working Group has not met in open session since the Spring National Meeting.

The Working Group approved the adoption of the 2021 *Auto Insurance Database Report* (Auto Report) Average Premium Supplement, which is now at the Task Force for review and adoption. Darby mentioned that the Working Group will conduct an e-vote shortly after the Summer National Meeting to consider adoption of the 2021 *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report). Darby mentioned that data requests for 2022 data for both reports will be sent at the end of August.

Darby said that the full 2020/2021 Auto Report, as well as the *Report on Profitability by Line by State* (Profitability Report) and *Competition Database Report* (Competition Report), will be sent to the Working Group for review, and they are on track to be adopted and released by December.

Darby made a motion, seconded by Chou, to adopt the report of the Statistical Data (C) Working Group, including its July e-vote adopting the 2021 Auto Insurance Database Report Average Premium Supplement (Attachment Six). The motion passed unanimously.

4. Considered Comments on the Proposed ERM ASOP

The Actuarial Standards Board (ASB) of the American Academy of Actuaries (Academy) approved an exposure draft of a new Actuarial Standard of Practice (ASOP) on enterprise risk management (ERM) in the spring of 2023. Regulators met informally on June 22 for an optional, regulator-to-regulator call regarding this proposed ASOP, and it determined that it would be reasonable to consider submitting written comments to the ASB. Julie Lederer (MO) drafted comments after the call for submission to the Task Force. The Task Force chair exposed the comments July 3, with feedback due July 21. No feedback was received by the Task Force via written or oral comment.

Chou made a motion, seconded by Botsko, to submit the comments on the proposed ERM ASOP (Attachment Seven). The motion passed unanimously.

5. Discussed its Work Plan Regarding the D&O and Cyber Supplements

Citarella said there appeared to be consensus in prior Task Force meetings for the transition of the Director and Officer (D&O) supplement from calendar year to accident year reporting, and he asked if anyone is willing to take leadership regarding a formal presentation to the Blanks (E) Working Group. No members came forward to volunteer. Citarella said the item can be revisited in a future meeting.

Citarella mentioned that there is an ad hoc group working with the Working Group on a proposal for changes to the Cyber Liability Supplement. The ad hoc group, led by Sara Robben (NAIC), includes some members of the Task

Force, other state insurance regulators, and interested parties. A small group of Task Force members met recently to discuss this proposal. That conversation centered on what types of information state insurance regulators want and/or need in the supplement. Citarella said these conversations will continue as the Task Force considers the ad hoc group's goal for exposure in October. He reiterated that the individual regulators are not acting on behalf of the Task Force; rather they are interested regulators acting on their states' behalf. He mentioned that members interested in joining these discussions should contact Robben, Michael McKenney (PA), Chou, or himself.

Citarella mentioned that the changes to the Cyber Liability Supplement proposal do not address the issues raised by Irwin Goldfarb (American International Group [AIG]–Retired) during the Task Force's May meeting. During that meeting, Goldfarb suggested that cyber be pulled out of the Other Liability line (and any other lines) in Schedule P of the annual statement. Alternatively, short of inclusion as a separate line in Schedule P, he proposed that the Cyber Supplement be reported on an accident-year basis, similar to his D&O Supplement proposal.

Citarella asked if any Task Force members had thoughts on how to move these proposals forward. No comments were received. Citarella mentioned that this item will be revisited in the future.

6. Received a Report on the Capital Adequacy (E) Task Force's Risk Evaluation Ad Hoc Group

Botsko gave an update on the Capital Adequacy (E) Task Force's Risk Evaluation Ad Hoc Group. He mentioned that the Ad Hoc Group is designed to evaluate risk-based capital (RBC), both from a holistic view, as well as considering any other factors that should be added or removed. He mentioned that three subgroups were created: 1) Geographic Concentration, which serves to identify localized companies; 2) Guidelines & Education, which serves to re-educate about the purpose of RBC and identify minimalized capital for companies; and 3) Asset Concentration, which serves to evaluate the need to have asset concentration factors.

Botsko asked if any members were interested in joining. No members came forward to volunteer.

7. Heard a Presentation from the Academy on its Approaches to Identify and/or Mitigate Bias in Property and Casualty Insurance White Paper

Mike Woods (Academy) gave a presentation titled "Methods to Identify and/or Mitigate Bias." Initially, ASOPs and definitions of unfair discrimination and disproportionate outcomes were discussed (Attachment Eight). Woods then outlined principles for approaches to identify and address unfair discrimination, and he discussed data collection, classification, and other considerations. Afterward, he listed and discussed methods for identifying, preventing, and addressing potential bias.

There were several questions posed. Citarella asked Woods to walk through how different methods would adjust rates given the following scenario: The industry has long known that people who drive 4-door cars have fewer and less expensive losses than those who drive 2-door cars. In one company's book of business, only People of Color drive 2-door cars. This would then show that in the end result, People of Color have higher rates than white policyholders for this company, even though industry-wide it has been proven to have nothing to do with race. Which methods would accept that differential as an acceptable rating and which would adjust rates so there is no difference in rates between 4-door and 2-door cars for this one company? Is there a different result if the People of Color group drive the 4-door cars and others drive the 2-door cars in this company?

Woods went through the six methods given for identifying bias and described whether each one would accept the rate differential as follows:

- Disproportionate Impact Analysis: The company would fail (i.e., Method indicates that rates need to be adjusted) since the method does not consider whether the losses are in proportion to the premiums.

- Fairness Metrics: The company would pass (i.e., Method indicates that rates don't need to be adjusted) since predicted losses are equal to actual losses.
- Insurance Data Disclosure: The public will see that protected classes are being charged higher premiums.
- Loss Ratio Test: The company would pass since the method looks at whether premiums are being charged in relation to expected losses.
- Proxy Test: The company would fail because the door variable is a proxy for protected class.
- Rational Explanation: Company would pass because 4-door cars have lower expected losses.

For the second question, Woods mentioned that the results would be similar but whoever is administering the test needs to determine whether it is appropriate for a protected class to receive a lower premium.

He then reiterated the importance of looking at different methods. There was also a discussion regarding the collection of protected class data by insurance companies and the effectiveness of the methods proposed for the purposes of identifying bias. The predictive power of protected characteristics for rating purposes and their potential use was also discussed by multiple parties.

8. Heard Reports from Professional Actuarial Organizations

The Academy, the Actuarial Board for Counseling and Discipline (ABCD), the ASB, the Casualty Actuarial Society (CAS), and the Society of Actuaries (SOA) provided reports on current activities and research.

9. Heard a Report from the SOA on Exam Changes

Stuart Klugman (SOA) gave a presentation titled "The Evolution of the FSA Pathway" (Attachment Nine). He mentioned that a current exam pathway challenge is that in-depth U.S. and Canadian regulatory material lacks relevance to global markets. To address this challenge, he mentioned that the SOA proposes to move detailed regulatory material outside of fellowship requirements and offer stand-alone, optional regulatory certificates. He further mentioned that the SOA is in contact with regulatory bodies to ensure that new fellows who complete the necessary certificates are qualified to sign SAOs in the U.S. No time was available for discussion.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Committees/Member Meetings/C CMTE/2023_Summer/CASTF/Aug 12 Minutes.docx

Draft: 6/28/23

Casualty Actuarial and Statistical (C) Task Force
Virtual Meeting
June 13, 2023

The Casualty Actuarial and Statistical (C) Task Force met June 13, 2023. The following Task Force members participated: Chris Nicolopoulos, Chair, represented by Christian Citarella (NH); Chlora Lindley-Myers, Vice Chair, represented by Julie Lederer (MO); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Mark Fowler represented by Charles Hale (AL); Ricardo Lara represented by Mitra Sanandajifar (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); Michael Yaworsky represented by Greg Jaynes (FL); Doug Ommen represented by Travis Grassel (IA); Amy L. Beard represented by Larry Steinert (IN); Vicki Schmidt represented by Craig VanAalst (KS); James J. Donelon represented by Nichole Torblaa (LA); Kathleen A. Birrane represented by Ron Coleman and Walter Dabrowski (MD); Timothy N. Schott represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Phil Vigliaturo (MN); Troy Downing represented by Mari Kindberg (MT); Eric Dunning represented by Michael Muldoon (NE); Alice Kane represented by Anna Krylova (NM); Scott Kipper represented by Gennady Stolyarov (NV); Judith L. French represented by Maureen Motter (OH); Glen Mulready represented by Cuc Nguyen (OK); Andrew R. Stolfi represented by Ying Liu (OR); Michael Humphreys represented by Michael McKenney (PA); Cassie Brown represented by Miriam Fisk (TX); Kevin Gaffney represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); and Allan L. McVey (WV).

1. Adopted the Report of the Actuarial Opinion (C) Working Group

Fisk said the Actuarial Opinion (C) Working Group met May 25 to expose a draft response to the referral from the Financial Analysis (E) Working Group asking for discussion of the use of predictive analytics in reserving and consideration of drafting guidance for a 30-day public comment period ending June 26. The Actuarial Opinion (C) Working Group will meet June 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss individual companies' Statements of Actuarial Opinion (SAOs).

The Working Group will also meet July 12 to discuss potential changes to the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2023* (2023 Regulatory Guidance) and 2024 opinion instructions.

Fisk made a motion, seconded by Darby, to adopt the oral report of the Actuarial Opinion (C) Working Group. The motion passed unanimously.

2. Adopted the Report of the Statistical Data (C) Working Group

The Statistical Data (C) Working Group reviewed data for the 2021 *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report) and the 2021 Auto Insurance Average Premium Supplement. NAIC staff are compiling the reports for Working Group review and consideration of adoption.

The Working Group met May 25 in regulator-to-regulator session to discuss the Tableau dashboard created by NAIC staff using the *Report on Profitability by Line by State* (Profitability Report) data. NAIC staff are making suggested changes, and they will update the dashboard on StateNet soon. The Working Group will continue to meet in regulator-to-regulator session to review the development of auto and homeowners Tableau dashboards.

Darby made a motion, seconded by Dyke, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

3. Discussed the D&O Insurance Coverage Supplement and the Cyber Insurance Supplement

Citarella said Irwin Goldfarb (American International Group [AIG]—Retired) presented at the Task Force’s May 2 meeting, proposing to improve the Director and Officer (D&O) Insurance Coverage Supplement and the Cyber Insurance Supplement to make the data more meaningful and appropriate for users. For the D&O Insurance Coverage Supplement, Goldfarb proposed that the data be changed from calendar to accident year. He proposed that Cyber become its own line in Schedule P; if that cannot be accomplished, the data should be changed from calendar to accident year in the Cyber Insurance Supplement.

The Task Force decided to continue to study the ideas. Citarella said he wants to know whether there are other supplements that require accident year reporting. The Task Force discussed a Cyber Insurance Supplement blanks proposal that is deferred at the Blanks (E) Working Group. Sara Robben (NAIC) said companies can write first-party and third-party cybersecurity insurance on one policy. Since there is not an option for reporting both first-party and third-party information on the Cyber Insurance Supplement, insurers must choose one. This means the numbers reported do not always truly reflect first-party and third-party information.

Tip Tipton (Thrivent) said state insurance regulators and interested parties are discussing the blanks proposal to find a solution that works for all. Rachel Underwood (Cincinnati Insurance Companies) said cyber can be reported in the annual statement on Annual Statement Line (ASL) 17 (Other Liability), but it can also be reported in other lines. She said commercial first party is usually reported on ASL 17, but endorsements are often reported in other lines, and theft is often reported on the theft line.

4. Discussed the Monitoring of Other NAIC Committee Groups

Citarella asked for volunteers to help monitor other NAIC committee groups that have some connection to the Task Force. He said in the normal course of work, the requirement would be to identify any issue that might be of interest to the Task Force and notify Citarella, Lederer, and Kris DeFrain (NAIC). The next step would be for someone to present the issues of interest about the other group’s project to the Task Force. The Task Force would then decide whether to get involved. He said on rare occasions, the volunteer may be asked to speak on behalf of the Task Force to the other group.

The following are the volunteers for each committee group:

EXECUTIVE (EX) COMMITTEE

- Special (EX) Committee on Race and Insurance—Phil Vigliaturo (MN)
- Climate and Resiliency (EX) Task Force—George Bradner (CT)

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

- Catastrophe Insurance (C) Working Group—Wanchin Chou (CT)
- Workers’ Compensation (C) Task Force—Michael McKenney (PA), primary, and Sandra Darby (ME), alternate
- Title Insurance (C) Task Force—Anna Krylova (NM)

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

- Speed to Market (D) Working Group—Tom Botsko (OH) in consultation with Maureen Motter (OH)

SERFF

- System for Electronic Rates & Forms Filing (SERFF) Product Steering Committee's (PSC's) SERFF Modernization Project—Sandra Darby (ME)

FINANCIAL CONDITION (E) COMMITTEE

- Capital Adequacy (E) Task Force and Property and Casualty Risk-Based Capital (E) Working Group—Tom Botsko (OH)
- Catastrophe Risk (E) Subgroup—Wanchin Chou (CT)
- Blanks (E) Working Group—Michael McKenney (PA)
- Statutory Accounting Principles (E) Working Group—OPEN

INNOVATION, CYBERSECURITY, AND TECHNOLOGY (H) COMMITTEE

- Innovation, Cybersecurity, and Technology (H) Committee; Algorithmic Bias Coordination Forum; and Big Data and Artificial Intelligence (H) Working Group—Christian Citarella (NH)
- Cybersecurity (H) Working Group—Cynthia Amann (MO)

Citarella said Tom Botsko (OH) provided a written report saying there is a new ad hoc group under the Capital Adequacy (E) Task Force that will be evaluating the risk-based capital (RBC) formula holistically, as well as specific factors that should be reviewed. Additionally, it will be evaluating whether factors ought to be added/deleted and whether there should be an adjustment to covariance in the RBC formula.

Citarella said he might add the Transparency and Readability of Consumer Information (C) Working Group to the list in the future.

Birny Birnbaum (Center for Economic Justice—CEJ) said the Working Group adopted a rate filing checklist, but it is not a filing checklist per se; it is a list of information needed by the state insurance regulators working in consumer service. The purpose was limited to providing the information state insurance regulators need to respond to consumer questions.

Citarella will contact Joy Hatchette (MD) to discuss future communication.

5. Discussed Reviews of Future Actuarial Papers

Lederer said state insurance regulators are invited to join ad hoc discussions about new American Academy of Actuaries (Academy), Actuarial Standards Board (ASB), or other professional actuarial papers. She said if those discussions uncover any regulatory concerns, then the Task Force will be informed and can discuss whether to submit comments to the actuarial organization and what those comments should be.

Lederer said there is a new exposure draft of an Actuarial Standard of Practice (ASOP) on enterprise risk management (ERM). She said the proposal is that the new ASOP would replace existing ASOPs 46 and 47 on ERM, and it would be made consistent with the new ASOP on capital adequacy standards. She said comments are due Sept. 15.

The ad hoc regulatory group will meet June 22 to discuss the new ERM ASOP and any regulatory implications. Please request a meeting invitation from DeFrain if you are interested.

6. Discussed LCM Form Implementation

Ng-Ashcraft said Alaska is implementing the new form to replace its old forms. McKenney said Pennsylvania notified insurers, allowing the new form to be used as an option.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2023_Summer/CASTF/06132023 min.docx

Draft: 6/6/23

Casualty Actuarial and Statistical (C) Task Force
Virtual Meeting
May 2, 2023

The Casualty Actuarial and Statistical (C) Task Force met May 2, 2023. The following Task Force members participated: Chris Nicolopoulos, Chair, represented by Christian Citarella (NH); Chlora Lindley-Myers, Vice Chair, represented by Julie Lederer (MO); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Mark Fowler represented by Charles Hale (AL); Ricardo Lara represented by Mitra Sanandajifar and Lynne Wehmuller (CA); Andrew N. Mais represented by Wanchin Chou (CT); Michael Yaworsky represented by Greg Jaynes (FL); Dana Popish Severinghaus represented by Anthony Bredel and Judy Mottar (IL); Doug Ommen represented by Travis Grassel (IA); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by John Sobhanian (LA); Kathleen A. Birrane represented by Ron Coleman and Walter Dabrowski (MD); Timothy N. Schott represented by Sandra Darby (ME); Grace Arnold represented by Phil Vigliaturo (MN); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Richard Cohen (NC); Jennifer Catechis represented by Anna Krylova (NM); Scott Kipper represented by Gennady Stolyarov (NV); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Michael McKenney (PA); Michael Wise represented by Will Davis (SC); Cassie Brown represented by J'ne Byckovski and Miriam Fisk (TX); Kevin Gaffney represented by Rosemary Raszka (VT); and Allan L. McVey represented by Juanita Wimmer (WV).

7. Adopted the Report of the Actuarial Opinion (C) Working Group

Fisk said the Actuarial Opinion (C) Working Group will meet to discuss the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2023* (2023 Regulatory Guidance) and a draft response to the referral from the Financial Analysis (E) Working Group on the use of predictive analytics in reserving. The Actuarial Opinion (C) Working Group will hold a regulator-to-regulator meeting, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss individual companies' statements of actuarial opinion.

Fisk made a motion, seconded by Darby, to adopt the report of the Actuarial Opinion (C) Working Group. The motion passed unanimously.

8. Adopted the Report of the Statistical Data (C) Working Group

The Working Group is reviewing data for the 2021 *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report) and the 2021 Auto Insurance Average Premium Supplement. NAIC staff requested data from statistical agents for the 2020/2021 *Auto Insurance Database Report* (Auto Report), which is scheduled to be released in December 2023.

The Working Group continues to consider Arthur Schwartz's (LA) proposed changes to statistical reports. These will be discussed during an open meeting at the beginning of June.

The Working Group plans to meet in regulator-to-regulator session at the end of May to discuss the Tableau dashboard created by NAIC staff using the *Report on Profitability by Line by State* (Profitability Report) data. NAIC staff are also creating similar dashboards for the Auto Report and Homeowners Report. The dashboards are available on StateNet, labeled "Stat Data Reports" under the Property and Casualty Insurance heading.

Darby made a motion, seconded by Schallhorn, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

9. Heard a Report on the D&O Insurance Coverage Supplement and the Cyber Insurance Supplement

Irwin Goldfarb (AIG-Retired) presented a proposal to improve the Director and Officer (D&O) Insurance Coverage Supplement and the Cyber Insurance Supplement and make the data more meaningful and appropriate for users. He said the quarterly D&O supplement is the only source of industry D&O data. The issue is that the data is by calendar year, yet this is a longer-tailed line. While the line is claims made, a calendar year loss ratio on a long-tail line can be slightly or significantly misleading. Goldfarb explained an exhibit (Attachment Two-A) showing the loss plus defense and cost containment (DCC) expense ratios. He said the by-year ratios show some volatility, but when compared, that volatility is a lot lower than volatility reported by companies for their public D&O business, where public D&O is a substantial part, 60–70%, of all D&O.

Within D&O, the largest drivers of losses in the public space have been securities class action lawsuits. An example of improper data use occurred when one publication compared the table of loss ratios to security class action cases to determine if the lawsuits were affecting losses. The problem with that is they were using calendar year loss ratios, so the impact of those lawsuits will lag and show up in later calendar years.

Goldfarb said naïve companies sometimes use the supplement's information to decide to enter the market. This can easily influence companies down the wrong path. Larger carriers have their own data, so they are likely not affected by the reporting of calendar year losses. Goldfarb said the supplement should show accident year losses.

Goldfarb said D&O may not be large enough in some companies to warrant its own actuarial analysis. Those companies may be using allocation methods, perhaps using professional liability, to allocate a portion of the incurred but not reported (IBNR) data to create the D&O supplement.

Answers to Task Force member questions included responses that Goldfarb believes: 1) insurers would be supportive of the change, and the report card would be more valid; 2) insurers' systems should already be in place to perform these calculations; 3) some companies may need allocations of IBNR data, but they are probably already doing that; 4) if someone has a small book of business, accident year data can still be volatile; and 5) if the market for the line of business is small, it might be easier to determine the experience for each company, but that is the same for Schedule P today.

Next, Goldfarb discussed the Cyber supplement. He said the cyber line of business has increased from \$2.7 billion to \$7.3 billion, and significant rate increases are being filed. With this growth and the shorter tail of cyber insurance compared to the other lines in the Other Liability Claims Made (OLCM) line of business, the OLCM Schedule P data is becoming less useful. Goldfarb recommended that Schedule P be modified so cyber is its own line of business. If that cannot be accomplished, he suggested that the Cyber supplement be changed to an accident-year basis. He said there would be added value because the supplement data can be used to take cybersecurity out of the OLCM Schedule P data before conducting reserve analyses. He said the remainder of OLCM is more homogeneous with longer tails compared to the shorter tail for cyber.

10. Heard a Report About the COE and NAIC Catastrophe Activities

Jeff Czajkowski (NAIC), Jennifer Gardner (NAIC), and Shaveta Gupta (NAIC) presented about the current activities at the Center for Insurance Policy and Research's (CIPR's) Center of Excellence (COE) regarding catastrophes (Attachment Two-B). Citarella asked them to update the Task Force on progress in the fall.

11. Discussed the Monitoring of Other NAIC Committee Groups

Citarella asked Task Force members who are active in other NAIC groups to volunteer to keep the Task Force updated on relevant issues and activities.

12. Discussed Reviews of Future Actuarial Papers

Lederer said state insurance regulators are invited to join discussions about new American Academy of Actuaries (Academy), Actuarial Standards Board (ASB), or other professional actuarial papers. She said if those discussions uncover any regulatory concerns, then the Task Force will be informed and can discuss whether to submit comments to the actuarial organization and what those comments should be.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

CENTER FOR INSURANCE POLICY AND RESEARCH

Key Points:

- CAT Model Center of Excellence (COE) fully operational and staffed with CAT risk modeling and resilience subject matter experts
 - *Broader and different mandate than the NAIC model rate review team*
- Integrated and aligned well with the CAT modeling community
- Regulator oriented tools, training, and research are all well underway
- Engaged with individual state departments and NAIC committees

MISSION STATEMENT

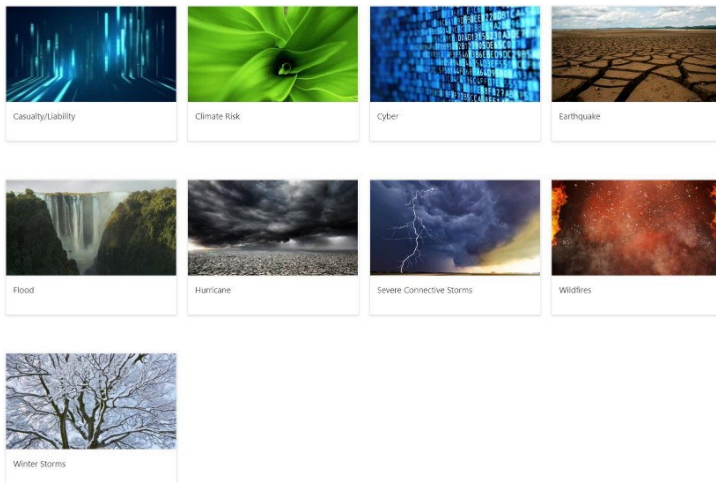

The purpose of the NAIC Catastrophe Modeling Center of Excellence (COE) is to **provide state insurance regulators with the necessary technical expertise, tools, and information to effectively regulate their markets.**

3

Regulator Access to Catastrophe Modeling Information – CAT COE SharePoint

- Access is restricted through a permissioned site and all regulators who wish to obtain access must sign a data use agreement.

SharePoint Access Statistics

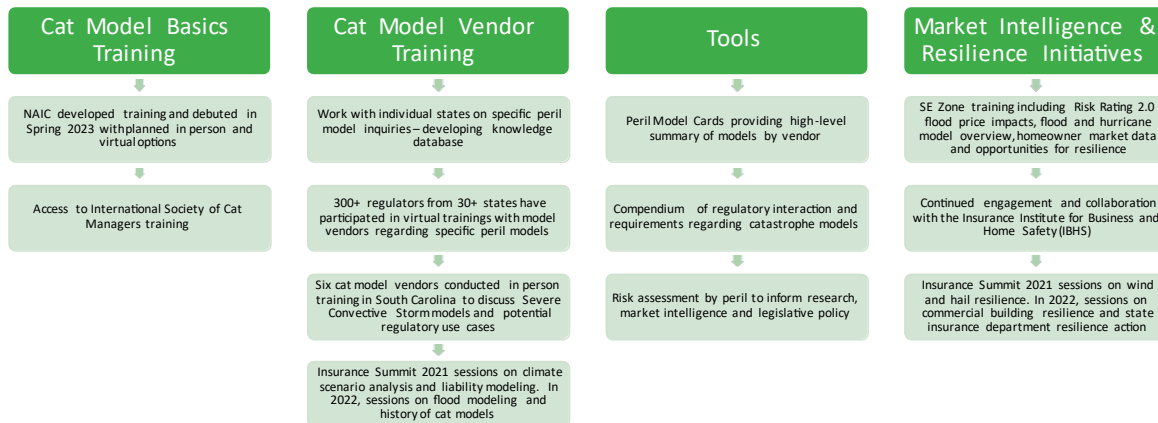

- Signed contracts with 7 catastrophe model vendors and added available technical documentation to the Sharepoint site
- Shared with 200 (+) identified regulators
- 27 States/Territories have obtained access to the site

Regulators who would like access to the material should send an email to Amy Lopez at alopez@naic.org requesting a link to sign the COE data use agreement.

Repository of model documentation, training materials, research papers and other tools for regulators.

Actuarial Opinion (C) Working Group
Virtual Meeting
August 2, 2023

The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Aug. 2, 2023. The following Working Group members participated: Miriam Fisk, Chair (TX); Anna Krylova, Vice Chair (NM); Amy Waldhauer and Susan Andrews (CT); Chantel Long (IL); Julie Lederer (MO); Michael Muldoon (NE); Tom Botsko (OH); and Kevin Clark and James DiSanto (PA).

13. Exposed the 2023 Regulatory Guidance

The Working Group continued to discuss changes proposed at its July 12 meeting. A majority of the Working Group members want to modify the qualification documentation requirement in the 2024 instructions to: 1) only require qualification documentation on initial appointment; and 2) require Board review only at that time. With that as an expectation, the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2023* (2023 Regulatory Guidance) would note the possibility of such a change for the following year.

The Working Group agreed to some changes, proposed by Lederer, to the 2023 Regulatory Guidance to better reflect the instruction language about what to do when a material error is found. State insurance regulators would also suggest that the company or Appointed Actuary contact the regulators if a less-than-material error is found because regulators might still advise the issuance of a corrected opinion. Michelle Larkowski (American Academy of Actuaries—Academy) asked whether the state insurance regulators wanted that requirement to be binding; if so, she suggested that regulators should revise the opinion instructions. She said some state insurance regulators have responded to the reissuance of the opinion because surplus numbers and materiality changed, and they instructed that the opinion should not have been reissued because the change was minimal. The Working Group decided to leave the guidance in the 2023 Regulatory Guidance and then consider adding it to the 2024 instructions.

Fisk informed the Working Group that she would expose the document, after adjusting for changes discussed, for a 30-day public comment period ending Sept. 1.

14. Discussed Actuarial Opinion Instructions

The Working Group discussed potential changes to instructions for the 2024 Property/Casualty (P/C) Statement of Actuarial Opinion (SAO). Long suggested removing the requirement for a Board review of qualification documentation because it is more of a compliance check that does not provide much additional value. She said life and health actuaries are not required to produce qualification documentation. Fisk said when the qualification documentation is done well, it is a valuable document. She said when done poorly, it is a red flag that the actuary does not appear knowledgeable about recent changes in instructions. She said it is also helpful to know how the actuary is qualified when conducting risk-focused financial exams.

Krylova said one reason the qualification documentation was created was to ensure that the actuaries passing exams through the Society of Actuary's (SOA's) general insurance track were qualified. Kris DeFrain (NAIC) said the SOA is making some changes to its examination process, which might need to be considered before making

decisions to eliminate the qualification documentation completely. Ann Weber (SOA) said the SOA can present to the Working Group the changes expected to be made in fall 2025.

Long proposed a change in the instructions for the “disagreement letter” when there is a change in appointed actuary. Long noted that appointed actuaries might have disagreements with companies about reserving issues at interim periods and not solely related to the SAO at year end. Long proposed adding wording to encourage the former appointed actuary to comment on reserving disagreements more broadly. Fisk said the company’s “disagreement letter” often says there are no disagreements regarding matters of opinion, and actuaries may believe they cannot disclose any more in their response letter. Andrews said a letter is probably not going to fix the issue and noted that this portion of the instructions was originally intended to be similar to the required notifications when there is a change in external auditor.

Long also proposed removing the Appointed Actuary’s address from the SAO signature block.

Fisk proposed changes to the instructions for the 2024 Title SAO, to make the title instructions more consistent with the P/C instructions and to correct a couple of instructions. The Working Group will discuss these changes after the 2023 Summer National Meeting, and it will likely expose the proposals for comment at that time.

Fisk said there is no plan to make any changes to the 2024 Actuarial Opinion Summary instructions.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.

Actuarial Opinion (C) Working Group
Virtual Meeting
July 12, 2023

The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met July 12, 2023. The following Working Group members participated: Miriam Fisk, Chair (TX); Amy Waldhauer (CT); David Christhilf (DC); Chantel Long (IL); Sandra Darby (ME); Julie Lederer (MO); Michael Muldoon (NE); Tom Botsko (OH); Andrew Schallhorn (OK); and James Di Santo (PA).

15. Adopted a Financial Analysis (E) Working Group Referral on Predictive Analytics in Reserving

On May 9, 2022, the Financial Analysis (E) Working Group requested that the Actuarial Opinion (C) Working Group discuss the use of predictive analytics in reserving and consider drafting guidance. The Actuarial Opinion (C) Working Group exposed a draft response to the referral on May 25 for a 30-day public comment period ending June 26. No comments were received.

Waldhauer made a motion, seconded by Botsko, to adopt the referral response to send to the Financial Analysis (E) Working Group (Attachment Five-A) The motion passed unanimously.

16. Discussed Regulatory Guidance

The Working Group discussed 2023 Regulatory Guidance. Lederer suggested: 1) eliminating the detail about changes made in 2021 and 2022 and adding a statement that the 2023 instructions were not significantly modified; 2) removing the comment that qualification documentation might change in the 2023 instructions because it did not; 3) using wording in the instructions about material errors or making sure guidance does not contradict what is in the instructions; and 4) potentially eliminating the COVID-19 guidance. Fisk recommended adding guidance to contact the domestic regulator if unsure whether to reissue an opinion. Working Group members were asked whether any additional guidance should be offered, including whether there should be guidance about recent inflation. Clark suggested leaving the decision to include inflation as a risk factor to the Appointed Actuary.

17. Discussed Actuarial Opinion Instructions

The Working Group discussed potential changes to instructions for the 2024 Property/Casualty (P/C) Statement of Actuarial Opinion. Long suggested changing the qualification documentation requirements and removing the requirement for a Board review as she does not find it useful. Armon said the Casualty Actuarial Society (CAS) is auditing continuing education (CE) requirements for a percentage of the membership. Fisk said people who are not actuaries might believe that anyone with a credential would be qualified, but that is not the case. Michelle Larkowski (Risk & Regulatory Consulting—RRC) suggested having the requirements only at the initial appointment. Working Group members were asked to submit any proposed instruction changes.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.

MEMORANDUM

TO: Judy Weaver, Chair, Financial Analysis (E) Working Group

FROM: Miriam Fisk, Chair, Actuarial Opinion (C) Working Group
Anna Krylova, Vice-Chair, Actuarial Opinion (C) Working Group

RE: Actuarial Opinion (C) Working Group Response to Enhanced Regulatory Guidance Referral

DATE: July 12, 2023

Background

On May 9, 2022, a memorandum from the Financial Analysis (E) Working Group (FAWG) was received by the Actuarial Opinion (C) Working Group (AOWG) requesting that the AOWG consider whether additional guidance is needed for regulatory actuaries and/or financial analysts/examiners to address concerns about additional solvency risks resulting from the use of predictive analytics in reserve setting.

FAWG noted that one of the factors contributing to the recent failure of an insurer was inadequate reserving due in part to the insurer's use of a customized, unproven predictive model for reserving and regulators' difficulty in reviewing/challenging the model's reserve estimates, due to lack of experience and expertise in this area.

It is our understanding that the situation leading to the referral involved a case reserving model using predictive analytics to establish ultimate case reserves for individual open claims based on the details of each claim. The company made significant changes to its claims handling processes to incorporate the results of the new model. Claim payment patterns dramatically accelerated and case reserve levels changed materially, so the company's data became more difficult for actuaries to use in reserve analyses and increased the uncertainty around any resulting estimates. Company management remained optimistic and expected the changes to have a favorable impact that ultimately did not materialize.

AOWG Response

Regulatory actuaries have not traditionally been involved in examining individual case reserves or companies' guidelines for setting case reserves.¹ Similarly, companies' reserving actuaries and Appointed Actuaries have not traditionally been involved in establishing claim handling guidelines or setting case reserves for individual claims.

Traditional actuarial reserve estimation methods are generally based on the assumption that future claims activity can be predicted based on historical claims activity to date. Therefore, significant changes to a company's operations, such as claims payment or handling practices, case reserve adequacy, or

¹ In fact, on a recent call of the Actuarial Opinion Working Group, no participants had ever performed an in-depth review of a case reserving predictive model. However, we recognize that the use of predictive analytics in insurance is growing, and regulators will be faced with reviewing an increasing variety of complex models.

underwriting, may result in historical patterns being less predictive of future patterns and may cause the results of the analysis to be highly uncertain or contain significant bias, regardless of whether predictive analytical models are involved in setting case reserves.

This issue is recognized in the current P&C claims handling/reserving risk repository in the NAIC Financial Condition Examiners Handbook, as reflected in the following risk statements:

- Changes in the legal environment or changes in the insurer’s underwriting, case reserving or claims-handling processes are not appropriately considered within the insurer’s reserving assumptions and methodologies.
- Actuarial analysis relied upon by the insurer’s management in determining carried reserves are not based on appropriate methods and/or reasonable assumptions.
- The loss and loss adjustment expense (LAE) reserve computations are not performed correctly or the selected estimates are unreasonable.

FAWG raised a valid concern that “the use of customized predictive analytical models without sufficient knowledge, actuarial adjustments of data, and reasonability checks could result in additional solvency risks at other insurers.” When the results of a complex model are reflected in a company’s financial statements, we believe it is most important for examiners to evaluate management’s understanding and use of any models relied upon in a financial reporting context, and examiners should not need to have extensive modeling expertise to do this.

We would suggest that the [“Model and Data Regulatory Questions” document](#) being developed by the Big Data and AI (H) Working Group will provide a good set of questions to ask about a model. These questions will have the benefit of being consistent and standardized for use by various regulator groups and are intended to apply to any type of predictive model – reserving or otherwise. The “Main General Questions” section of the document provides suggested questions that could be used by regulators to obtain a high-level understanding of a model. For example, this section recommends asking about the model’s intended purpose, data inputs, assumptions, testing/validation, and governance. The quality of management’s responses to these or similar questions might also indicate whether management has an adequate understanding of the model and could help regulators identify initial areas of concern.

We recognize that it may become necessary to compile more specific guidance to assist examiners and analysts in evaluating risk related to the use of predictive models in a reserving context. We would need to seek assistance from regulators and industry professionals with this specific expertise since, as noted above, the Actuarial Opinion Working Group members currently have no experience reviewing these models.

Draft: 6/6/23

Actuarial Opinion (C) Working Group
Virtual Meeting
May 25, 2023

The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met May 25, 2023. The following Working Group members participated: Miriam Fisk, Chair (TX); Anna Krylova, Vice Chair (NM); Susan Andrews (CT); David Christhlf (DC); Chantel Long (IL); Sandra Darby (ME); Julie Lederer (MO); Michael Muldoon (NE); Tom Botsko (OH); Andrew Schallhorn (OK); and James Di Santo (PA).

18. Discussed a Financial Analysis (E) Working Group Referral on Predictive Analytics in Reserving

The Working Group discussed a draft response to a referral from the Financial Analysis (E) Working Group asking for discussion of the use of predictive analytics in reserving and consideration of drafting guidance.

Krylova made a motion, seconded by Botsko, to expose the draft referral response for a 30-day public comment period ending June 26. The motion passed unanimously.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.

Statistical Data (C) Working Group
E-Vote
July 19, 2023

The Statistical Data (C) Working Group conducted an e-vote that concluded July 19, 2023. The following Working Group members participated: Sandra Darby, Chair (ME); Charles Hale (AL); David Christhlf (DC); Arthur Schwartz (LA); Christian Citarella (NH); Carl Sornson (NJ); Tom Botsko (OH); and Brian Ryder (TX).

1. Adopted the Auto Database Report Average Premium Supplement

The Working Group reviewed and considered for adoption the 2021 *Auto Insurance Database Report Average Premium Supplement* (Auto Supplement).

A majority of the Working Group members voted in favor of adopting the Auto Supplement. The motion passed.

Having no further business, the Statistical Data (C) Working Group adjourned.

Title of Exposure Draft: Proposed Actuarial Standard of Practice, Enterprise Risk Management**Comment Deadline: September 15, 2023**

Instructions: Please review the exposure draft, and give the ASB the benefit of your recommendations by completing this comment template. Please fill out the tables within the section below, adding rows as necessary. Sample for completing the template provided at the following link: <http://www.actuarialstandardsboard.org/email/2020/ASB-Comment-Template-Sample.docx>

Each completed comment template received by the comment deadline will receive consideration by the drafting committee and the ASB. The ASB accepts comments by email. Please send to comments@actuary.org and include the phrase 'ASB COMMENTS' in the subject line. Please note: Any email not containing this exact phrase in the subject line will be deleted by our system's spam filter.

The ASB posts all signed comments received to its website to encourage transparency and dialogue. Comments received after the deadline may not be considered. Anonymous comments will not be considered by the ASB nor posted to the website. Comments will be posted in the order that they are received. The ASB disclaims any responsibility for the content of the comments, which are solely the responsibility of those who submit them.

I. Identification:

Name of Commentator / Company
National Association of Insurance Commissioners' Casualty Actuarial and Statistical Task Force (CASTF)

II. ASB Questions (If Any). Responses to any transmittal memorandum questions should be entered below.

Question No.	Commentator Response

III. Specific Recommendations:

Section II (e.g. 3.2.a)	Commentator Recommendation (Please provide recommended wording for any suggested changes)	Commentator Rationale (Support for the recommendation)
1.2	Add "an ORSA Report or" between "reviewing" and "all" in this sentence: "If the actuary is performing actuarial services that involve reviewing all or part of an ERM framework, the actuary should use the guidance in this ASOP to the extent practicable within the scope of the review."	The reviewing actuary subject to this ASOP will often be a regulator reviewing an ORSA report, so we believe it would be appropriate to include specific mention of the ORSA report. In addition, the reviewing actuary may not be tasked with reviewing the ERM framework itself. Rather, the reviewer's principal (often, the state's insurance commissioner) may have asked the reviewing actuary to review the ORSA report to ensure compliance with state statutes. The proposed addition to the wording would allow for this possibility.
2.9	Recommended wording:	The Actuarial Standards Board sets standards for appropriate practice in the United States. Therefore,

	<p>"A report produced with the following objectives:</p> <p>a. To provide information on the organization's material and relevant risks; and</p> <p>b. To provide a group-level perspective on risk and capital."</p>	<p>when the ASOP refers to the ORSA report, the ASOP can (and maybe should) use a definition of the report that aligns with the NAIC's ORSA Guidance Manual.</p> <p>We are particularly concerned about parts b. and c. in the current definition because this could suggest that the ORSA report is a regulatory exercise whose main intended user is the insurance regulator. Rather, the ORSA process is an internal exercise that should benefit all stakeholders of the organization, not just provide information to the regulator.</p> <p>The recommended definition is adapted from page 1 of the ORSA Guidance Manual (https://content.naic.org/sites/default/files/publication-orsa-guidance-manual.pdf), which outlines the primary goals of the ORSA process.</p>
<p>3.3</p>	<p>We recommend providing a definition of "risk classification" in section 2.</p>	<p>In ASOP No. 12 ("Risk Classification (for All Practice Areas)," risk classification involves assigning risks to groups. In Section 3.3 of the proposed ERM ASOP, risk classification seems to entail prioritizing or ranking risks. Adding a definition to Section 2 would clarify the usage in this ASOP.</p>

IV. General Recommendations (If Any):

Commentator Recommendation (Identify relevant sections when possible)	Commentator Rationale (Support for the recommendation)

Methods to Identify and/or Mitigate Bias

Mike Woods, MAAA, FCAS, CSPA
Member, P/C Committee on Equity and Fairness

Casualty Actuarial and Statistical (C) Task Force—Summer National Meeting — August
12, 2022

Introduction

- [Issue brief](#) discusses principles to be considered that might assist regulators in selection of suitable methodologies for identifying and/or mitigating bias.
- Structure of issue brief
 - Actuarial standards of practice
 - Definitions of unfair discrimination and disproportionate outcomes
 - Principles for approaches to identify and address unfair discrimination
 - Data collection, classification, and other considerations
 - Methods of identifying potential bias
 - Methods of preventing and addressing potential bias

Actuarial Standards and Guidance

- ASOP No. 12, *Risk Classification*—Requires correlation between risk characteristics and losses and expenses, not the establishment of a cause-and-effect relationship
- ASOP No. 23, *Data Quality*—Provides guidance around the use of data
- ASOP No. 56, *Modeling*—Provides guidance with respect to designing, developing, selecting, modifying, using, reviewing, or evaluating models

© 2023 American Academy of Actuaries. All rights reserved.
http://www.actuary.org/actuarial-standards-and-guidance

Principles for Identifying and/or Mitigating Bias

- Understandable to public
- Rates that continue to differentiate based on expected cost
- Adaptable to new data, innovation, and technology
- Consider intersectionality of protected classes
- Consistent application to all insurers
- Consider multivariate effects
- Assess impact to insurance marketplace
- Monitor results after initial approval
- Continually refresh data on protected classes

© 2023 American Academy of Actuaries. All rights reserved.
http://www.actuary.org/actuarial-standards-and-guidance

Other Considerations

- Protected class data collection
 - Directly from insureds
 - Third-party databases
 - Impute using statistical methods
- Classification
 - Classes that are capable of being objectively determined
 - Practical limitations in data collection (e.g., cost, efficiency)
 - Credibility of results
 - Frequency of reviewing definitions
- Others
 - Unintended impact to insureds (affordability, availability)
 - Multiple methods could be considered
 - Small companies could face additional challenges

Methods for Identifying Bias

- **Disproportionate Impact Analysis**—Study the impact that each rating variable has on each protected class's premiums. How much does each rating attribute cause higher premiums for each class of insureds?
- **Fairness Metrics**—Compare model predictions to actual outcomes. Is there bias (by protected class) in the prediction error in the loss model that supports the rating plan?
- **Insurance Data Disclosure**—Require insurers to release data on protected classes (such as loss ratios, bind rates, rejection rates, etc.). Allow the public to see whether there is bias in an insurer's practices.

Methods for Identifying Bias

- **Loss Ratio Test**—Compare loss ratios by variable of interest to demonstrate whether they are materially different by protected class.
- **Proxy Test**—Include protected class data in the rating model and see if the variable of concern continues to have predictive power.
- **Rational Explanation**—Require carriers to describe a potentially causal relationship between the variable of concern and losses.

© 2023 American Academy of Actuaries. All rights reserved.
http://www.actuary.org/actuarial-actuarial-actuarial

Methods for Mitigating Bias

- **Allow Only Pre-Approved Variables**—States would provide a list of variables that companies are allowed to use in policy rating.
- **Prohibit Named Variables**—Each state would provide a list of variables that cannot be used in policy rating.
- **Limit Rate Spread**—Limit the spread of rating factors (e.g., no surcharge can exceed 30%) or limit the spread of premiums (e.g., the highest premium cannot be 3x greater than the lowest premium).

© 2023 American Academy of Actuaries. All rights reserved.
http://www.actuary.org/actuarial-actuarial-actuarial

Methods for Mitigating Bias

- **Rate Factor Adjustment**—Adjust rate factors (manually or algorithmically) until a test to identify bias has been passed.
- **Solidarity Tax and Rebate**—Collect a tax from all policyholders and redistribute that tax as a rebate to those that have been identified as deserving a subsidy.
- **Statistical Model**—Build an initial model using all rating variables and the protected class variables; then, algorithmically remove any proxy effects from the rating variables (and the protected class variables).

May not be reproduced without express permission.

Conclusion

- Growing discussion around unintended bias and unfair discrimination
- There are many potential methods to identify and/or mitigate bias that have been discussed
 - There are likely to be even more methods in the future as discussions continue
- The American Academy of Actuaries is ready to assist regulators in their review of the technical components of these methods as well as in identifying strengths and weaknesses, particularly in relation to the principles noted in this presentation
- We hope these observations are helpful and we welcome further discussion

The Evolution of the FSA Pathway

NAIC presentations

Stuart Klugman, FSA, CERA, PhD

SOA Senior Staff Fellow

August 2023

We've heard your feedback

FSA candidates encounter significant challenges along the pathway

Lack of flexibility or customization

Less relevant to global markets

Little guidance on what to study

Slow grading process

No exam feedback

Difficult source materials that lack focus

Introducing a range of improvements for a better candidate experience

-  Flexible pathway
-  Exams offered up to 3 times per year
-  Increased global relevancy
-  Faster grading
-  Local regulatory material moved outside of FSA
-  Exam feedback
-  Enhanced syllabus and better guidance
-  Improved source materials

SOCIETY OF ACTUARIES

3

Regulatory Material Shift

Current Challenge

- In-depth U.S. and Canadian regulatory material lacks relevance to global markets

SOA Shift

- Detailed local regulatory material moved outside of the current FSA requirements
- Fundamental regulatory principles and frameworks will still be covered in the FSA pathway
- FSA will qualify actuaries to sign General Statements of Actuarial Opinion

CERTIFICATES:

- Stand-alone, optional regulatory certificates will be offered. Certificates can be taken when needed.
- The SOA is collaborating with regulatory bodies to develop the certificates

SOCIETY OF ACTUARIES

4

Flexible Pathway

Current Challenge

- Forced track structure lacks flexibility and customization
- Highly specialized tracks are less relevant for developing markets

SOA Shift

- Shifting from “tracks” to a flexible pathway
- Flexibility to focus on a single practice area or create a combination of courses relevant to you
- 5 courses required:
 - 4 Technical courses (one must build on another)
 - 1 Decision Making and Communications (DMAC) Course
- + Fellowship Admissions Course (FAC)

5

Choose from About 20 Courses

6

SURPLUS LINES (E) TASK FORCE

Surplus Lines (C) Task Force Aug. 13, 2023, Minutes.....	7-126
2024 Proposed Charges (Attachment One)	7-127
Year-End 2022 Surplus Lines Industry Results (Attachment Two).....	7-128

Draft: 8/17/23

Surplus Lines (C) Task Force
Seattle, Washington
August 13, 2023

The Surplus Lines (C) Task Force met in Seattle, WA, Aug. 13, 2023. The following Task Force members participated: James J. Donelon, Chair, and Stewart Guerin (LA); Larry D. Deiter, Vice Chair, and Tony Dorschner (SD); Mark Fowler represented by Jimmy Gunn (AL); Peni Itula Sapini Teo (AS); Ricardo Lara represented by Libio Latimer (CA); Michael Conway represented by Keilani Fleming (CO); Karima M. Woods represented by Angela King (DC); Michael Yaworsky represented by Bradley Trim (FL); Doug Ommen represented by Travis Grassel (IA); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt represented by Craig VanAalst (KS); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn (NC); Scott Kipper represented by Nick Stosic (NV); Glen Mulready represented by Diane Carter (OK); Michael Humphreys represented by Michael McKenney (PA); Michael Wise represented by Will Davis (SC); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); and Mike Kreidler represented by David Forte (WA).

1. Adopted its Spring National Meeting Minutes

Director Deiter made a motion, seconded by Beckner, to adopt the Task Force's March 21, 2023, minutes (*see NAIC Proceedings – Summer 2023, Surplus Lines (C) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Surplus Lines (C) Working Group

Guerin reported that the Surplus Lines (C) Working Group met May 22 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to approve three insurers for admittance to the NAIC *Quarterly Listing of Alien Insurers*.

VanAalst made a motion, seconded by Biehn, to adopt the report of the Surplus Lines (C) Working Group. The motion passed unanimously.

3. Adopted its 2024 Proposed Charges

Commissioner Donelon stated that the 2024 proposed charges for the Task Force and the Surplus Lines (C) Working Group included a few edits to add clarification regarding non-U.S. domiciled insurers participating in the U.S. market.

Walker made a motion, seconded by Biehn, to adopt the Task Force's 2024 proposed charges (Attachment One). The motion passed unanimously.

4. Heard a Summary on Surplus Lines Industry Results

Daleo summarized the year-end 2022 surplus lines industry results (Attachment Two). His summary included details on overall writings and trends in the industry. He also summarized market exposure for cybersecurity and private flood. Following his summary, he indicated that the results of the industry would be posted to the Surplus Lines (C) Working Group web page.

Having no further business, the Surplus Lines (C) Task Force adjourned.

Draft: 7/6/23

Adopted by the Property and Casualty Insurance (C) Committee—

Adopted by the Surplus Lines (C) Task Force—

2024 Draft Charges

SURPLUS LINES (C) TASK FORCE

The mission of the Surplus Lines (C) Task Force is to monitor the surplus lines market and regulation, including the activity and financial condition of U.S. and ~~alien non-U.S.~~ surplus lines insurers participating in the U.S. market by providing a forum for discussion of issues and to develop or amend relevant NAIC model laws, regulations and/or guidelines.

The **Surplus Lines (C) Task Force** will:

- A. Provide a forum for discussion of current and emerging surplus lines-related issues and topics of public policy, and determine appropriate regulatory response and action.
- B. Review and analyze ~~quantitative and qualitative industry~~ data on U.S. domestic and ~~alien non-U.S.~~ surplus lines ~~industry insurers participating in the U.S. market results and trends.~~
- C. Monitor federal legislation related to the surplus lines market, and ensure all interested parties remain apprised.
- D. Develop or amend relevant NAIC model laws, regulations, and/or guidelines.
- E. Oversee the activities of the Surplus Lines (C) Working Group.

The **Surplus Lines (C) Working Group** will:

- A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, and ~~operate~~ in open session when discussing surplus lines topics and policy issues, such as amendments to the International Insurers Department (IID) Plan of Operation.
- B. Maintain and draft new guidance within the IID Plan of Operation regarding standards for admittance and continued inclusion on the NAIC *Quarterly Listing of Alien Insurers*.
- C. Review and consider appropriate decisions regarding applications for admittance to the NAIC *Quarterly Listing of Alien Insurers*.
- D. Analyze renewal applications of alien surplus lines insurers on the NAIC Quarterly Listing of Alien Insurers, and ensure solvency and compliance per the IID Plan of Operation guidelines for continued listing.
- E. Provide a forum for surplus lines-related discussion among jurisdictions.

TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force Aug. 14, 2023, Minutes 7-131

Draft: 8/18/23

Title Insurance (C) Task Force
Seattle, Washington
August 14, 2023

The Title Insurance (C) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: Eric Dunning, Chair (NE); Kevin Gaffney, Vice Chair (VT); Mark Fowler represented by Erick Wright (AL); Karima M. Woods represented by Angela King (DC); Michael Yaworsky represented by Anoush Brangaccio, Jeffrey Joseph, and Bradley Trim (FL); Vicki Schmidt represented by Julie Holmes (KS); James J. Donelon represented by Chuck Myers (LA); Kathleen A. Birrane represented by Mary Kwei (MD); Grace Arnold represented by Paul Hanson (MN); Troy Downing (MT); Mike Causey represented by Tracy Biehn (NC); Judith L. French represented by Tom Botsko and Maureen Motter (OH); Glen Mulready represented by Erin Wainner and Diane Carter (OK); Michael Humphreys represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Patrick Smock (RI); Michael Wise represented by Will Davis and Rachel Moore (SC); and Larry D. Deiter represented by Tony Dorschner (SD).

1. Adopted its Spring National Meeting Minutes

Commissioner Gaffney made a motion, seconded by Botsko, to adopt the Task Force’s March 23 minutes (see *NAIC Proceedings – Summer 2023, Title Insurance (C) Task Force*). The motion passed unanimously.

2. Heard an Update on the Administration of the Survey of State Insurance Laws Regarding Title Data and Title Matters

Director Dunning stated that after investigating various survey administrative tools, NAIC staff have decided that using Microsoft Forms for the survey questions would make the most sense. The survey is anticipated to be administered to states shortly following the Summer National Meeting.

3. Heard an Update on the Compiling of Consumer Complaint Data Related to the Title Industry

Myers stated that the Task Force is charged this year with “obtaining information on consumer complaints submitted to states regarding title insurance to determine if updates are needed to insurance regulatory best practices or standards.” He leads the subsequently formed drafting group. Other drafting members include Montana; Nebraska; Ohio; Pennsylvania; Rhode Island; Washington, DC.

A draft survey of questions to send to states to collect title-related complaint information was drafted. The survey was not sent to states, as the drafting group became aware of the NAIC Complaints Database System (CDS) maintained by the NAIC’s Market Regulation Department. NAIC staff were then directed to obtain the title-related complaint data from the CDS and compile it for analysis. Myers and NAIC staff then met with NAIC Market Regulation staff to better understand the submission process and how data is captured in the CDS. Additionally, Myers investigated how the Louisiana Department of Insurance (DOI) tracks and reports title-related complaints.

The drafting group met May 22 to review the draft survey of questions and four years of title complaint information compiled from the NAIC CDS. The drafting group found that more than 50% of complaint reasons were coded as “state-specific” for each year. Complaint dispositions can also be coded as “state-specific.” As this does not provide much information for analysis, NAIC staff were instructed to reach out to states reporting a significant number of complaint dispositions and reasons as “state-specific” for additional detail. Requests for additional information were sent to California, Florida, Missouri, and Texas.

California responded that all of its “state-specific” coded reasons for complaints were for escrow handling. Florida responded that more than half of its reasons for complaints came from agent handling, failure to disburse funds, and premium refunds. Texas reported that over half of its “state-specific” reasons were for closing, contract disputes, and earnest money. Texas also reported that over half of its “state-specific” dispositions were for contract language, information furnished, and questions of fact. Missouri declined to provide information citing the task as being too laborious.

The drafting group plans to meet again following the Summer National Meeting to discuss if additional detail is needed to identify trends. As part of its discussions, it will contemplate how reporting to the NAIC CDS could be enhanced to allow for more transparency on title-related complaints. Currently, title is captured under the CDS’s miscellaneous category, which does not offer the same coding options as those that have their own category.

4. Heard a Presentation on Issues with NTRAPS

Sylvia Smith-Turk (Stewart Title) stated that Non-Title Recorded Agreements for Personal Services (NTRAPS) are agreements that obligate the current owner to use the other party’s services in the future and further attempt to bind successor owners by purporting to create a real property interest. Failure to comply with these agreements may give rise to a lien against the property to secure liquidated damages. How these agreements are marketed to property owners and the terms, duration, and enforcement of these agreements are concerning. There are no regulatory disclosure requirements regarding these agreements. Consumers may not fully understand the implications of these agreements. The act of recording NTRAPS in property records can create a long-term barrier to the sale or refinancing of real estate or hamper estate administration. The practice of submitting NTRAPS for inclusion in property records characterized as liens, covenants, encumbrances, or security interests in exchange for money recently emerged throughout the country.

Smith-Turk stated that these agreements are harmful to consumers because they obligate current and future property owners to utilize the service providers for up to 40 years. Consumers do not have the expertise of real estate professionals or attorneys. They may not have the benefit of legal counsel and may not fully understand the agreement or the long-term implications of the ability to transfer or finance their property. Elderly homeowners or those in need of the financial incentives being offered are particularly at risk, and NTRAPS can result in a significant monetary loss when transferring or financing their home. Additionally, NTRAPS provisions allow the listing agreement to be assigned without notice to the property owner.

The American Land Title Association (ALTA) supports efforts to protect consumers by prohibiting the filing of unfair real estate fee agreements in property records, a practice that creates impediments and increases the cost and complexity of selling, refinancing, or transferring real estate.

ALTA advocates for state laws and regulations preventing the enforcement of NTRAPS. ALTA’s model legislative bill: 1) makes agreements unenforceable; 2) prohibits the recording of these agreements in property records; 3) creates penalties for recording these agreements in property records; and 4) provides for the recovery of damages and the removal of agreements from property records. The proposed legislation protects consumers and provides state insurance regulators with the ability and authority to assist consumers in seeking damages caused by NTRAPS. There have been over 30 bills introduced in 21 states and 15 laws passed.

Attorneys General from Florida, Massachusetts, New Jersey, North Carolina, Ohio, and Pennsylvania have filed complaints stating that NTRAPS being used in the marketplace are deceptive, unfair, and unconscionable business practices.

5. Heard a Presentation on Current Fraud Trends in the Title Space, Including Seller Impersonation Fraud

Thomas Cronkright (CertifID) stated that business email compromise (BEC) losses have increased four-fold over the past five years. BEC is a scam targeting businesses and individuals performing wire transfers of funds. Legitimate email accounts are compromised through social engineering and computer intrusion to conduct unauthorized wire transfers. Cryptocurrency has enabled accelerated funds movement, and compromises have evolved to include spoofed phone calls, videos, and websites. Open source of information, Multiple Listing Service (MLS) data syndication, and multiple transactional parties make real estate a top target. The pandemic led to rapid growth in digital closings without creating a safety net. Emerging technologies and expanded personal digital footprints create a growing divide between businesses that protect their customers and those that do not. Vulnerable businesses are reliant on the belief in trusted communications, focus on the manual detection of suspicious behavior, and believe they are too small to be a target. Protected businesses verify identities before sharing sensitive information, leverage technology to inspect every case thoroughly, and recognize that everyone is a target.

New technologies have led to advanced social engineering. SpoofCard is an application that offers users the ability to change what someone else sees on their caller ID display when they receive a phone call. A current practice in the industry to confirm identity has been to call someone and reach them live over the phone, which is known as the “call-back” procedure. Some errors and omissions insurance policies even require a call back before funds are initiated, or coverage may be denied if a loss occurs. The challenge is, you often cannot get a hold of someone in real time, so they need to call you back. As an example, a hacker could spoof a title company and call the buyer when it is time to wire funds to close. Likewise, a fraudster could impersonate a seller and call the title company and provide them fraudulent wiring information for net proceeds to be transferred after closing.

Deepfakes—artificial intelligence (AI) voice replication—can impersonate real estate professionals to gain access to sensitive information about clients and defraud them. All it requires is a short voice sample of the human voice you want to replicate for the AI to learn it instantly.

Fake AI-generated property tours online could deceive buyers and agents about property conditions. Influence Bots—open-source intelligence—use social media to influence users of social platforms. SIM swap—SS7 Network—is a type of account takeover fraud that generally targets a weakness in two-factor authentication and two-step verification, in which the second factor or step is a text message (SMS) or a call placed to a mobile telephone. AI-generated attack emails use ChatGPT AI text-generating interfaces to create malicious messages designed to spear phish, scam, harass, and spread fake news. These AI-based systems can also be used for BEC scams.

Seller impersonation fraud is a new type of scam hitting the real estate industry due to fewer opportunities for other fraud techniques from a decline in home sales. Fraudsters are impersonating an owner to sell unoccupied property, including vacant lots, they do not own. A fraudster will identify vacant lots using public records. Posing as the seller, the scammer contacts a real estate agent to list the property for below market value. The scammer quickly accepts the offer, with a preference for cash sales and then requests a remote notary signing and impersonates the notary. The funds are transferred to the scammer and not discovered until later. Florida and Texas have the highest percentage of vacant land sales as a percentage of total sales. The U.S. Secret Service and CertifID issued a joint bulletin recently advising of the rise in vacant land fraud.

Fraud attempts on mortgage payoffs increased by five times in the second quarter versus the prior three months. Payoff fraud is when fraudsters impersonate a lender or another title company to receive the funds from disbursement after the settlement process, either from refinancing or the sale of a property. Fraudsters use common tactics found in other wire fraud scams to send a falsified payoff statement with wiring instructions to the targeted settlement agent. Shifts in deposit relations stemming from the three high-profile bank failures opened the door for fraudsters.

The CertifID Fraud Recovery Services (FRS) team received an unprecedented number of reports of wire fraud in 2022. Cases increased by 145% year-over-year, with a \$158,000 average loss reported per case. Average wire fraud loss for businesses and consumer cases were \$295,000 and \$107,000, respectively. A layered protection process of education and engagement, technology, insurance coverage, and incidence response planning are needed to mitigate the impact.

Having no further business, the Title Insurance (C) Task Force adjourned.

WORKERS' COMPENSATION (C) TASK FORCE

Workers' Compensation (C) Task Force July 20, 2023, Minutes 7-136

Draft: 8/2/23

Workers' Compensation (C) Task Force
Virtual meeting (*in lieu of meeting at the 2023 Summer National meeting*)
July 20, 2023

The Workers' Compensation (C) Task Force met July 20, 2023. The following Task Force members participated: Alan McClain, Chair, and Jimmy Harris (AR); John F. King, Vice Chair, and Steve Manders and Paula Shamburger (GA); Mark Fowler represented by Jimmy Gunn, Yada Horace, and Erick Wright (AL); Ricardo Lara represented by Yvonne Hauscarriague, Margaret Hosel, Giovanni Muzzarelli, Mitra Sanandajifar, and Sarah Ye (CA); Michael Yaworsky represented by Greg Jaynes (FL); Doug Ommen represented by Matthew Cunningham and Travis Grassel (IA); Dean L. Cameron represented by Maria Delvillar and Randy Pipal (ID); Vicki Schmidt represented by Chris Hollenbeck, Julie Holmes, and Sara Hurtado (KS); Sharon P. Clark and Sue Hicks (KY); James J. Donelon represented by Charles Hansberry (LA); Gary D. Anderson represented by Jackie Horigan and Matthew Mancini (MA); Timothy N. Schott represented by Brock Bubar, Sandra Darby, and Robert Wake (ME); Grace Arnold represented by Connor Meyer, and Phil Vigliaturo (MN); Chlora Lindley-Myers represented by Julie Lederer and Jo LeDuc (MO); Mike Causey represented by Sharon Thornton-Hall (NC); Scott Kipper represented by Anna Krylova and Gennady Stolyarov (NV); Glen Mulready represented by Cuc Nguyen (OK); Andrew R. Stolfi represented by TK Keen (OR); Michael Humphreys represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Michael Wise represented by Will Davis and Melissa Manning (SC); Larry D. Deiter represented by Tony Dorschner (SD); and Kevin Gaffney, Rosemary Raszka, Zachary Rothammer, and Shane Silverman (VT). Also participating were: Tom Zuppan (AZ); Lucretia Prince (DE); Reid McClintock and Julie Rachford (IL); Linda Grant (IN); Paige Dickerson, and Tina Nacy, (MI); Christian Citarella (NH); Carl Sornson (NJ); Marianne Baker (TX); Rebecca Nichols, Lee Ann Robertson, and Zuhairah Tillinghast (VA); and David Haushalter (WI).

1. Adopted its Spring National Meeting Minutes

Commissioner King made a motion, seconded by Commissioner Clark, to adopt the Task Force's Spring National Meeting minutes (*see NAIC Proceedings – Spring 2023, Workers' Compensation (C) Task Force*). The motion passed unanimously.

2. Heard a Presentation from Lewis & Ellis on Workers' Compensation Rating

The Task Force heard a presentation from Katie Koch (Lewis & Ellis) on workers' compensation ratemaking. Workers' compensation laws, by design, protect workers by providing financial compensation. Workers' compensation payments include medical benefits for work-related injuries or illness, regardless of fault.

Workers' compensation insurance emerged in the early 20th century, and by mid-1900, most states had some form of legislation for workers' compensation. The National Council on Compensation Insurance (NCCI) and regional bureaus developed advisory rates that insurers widely adopted. The introduction of open competition in the workers' compensation market led to a reevaluation of pricing procedures.

The NCCI and other state rating bureaus typically provide loss costs instead of advisory rates today. Insurers must independently justify various components of the premium rate, including profit and contingency provisions, expense loads, investment income offsets, and other loss cost deviations. The loss cost variations include experience rating modifications and schedule rating, allowing insurers to deviate from bureau rates or loss costs.

Insurers consider the expense costs of participation in involuntary pools and special fund assessments. Additionally, insurers evaluate the cost implications of workers' compensation reforms enacted in state legislatures.

Pricing actuaries are often involved in determining rates that cover expected losses and expenses during the policy period while allowing the insurer to make a reasonable profit. Actuaries use two methods for determining rates. The first method is the loss ratio method, which quantifies needed revisions from current rates. The second method is the pure premium method, which quantifies the required rate per exposure unit and can be used in the deviation of rating factor relativities. Actuaries use the loss ratio methodology for an overall state rate indication and the pure premium methodology for classification ratemaking.

There are challenges when comparing workers' compensation rates across states. Experience rating, schedule rating, large deductible policies, and retrospective rating can significantly affect the final premium a policyholder pays under the existing overarching rating regime.

Experience rating involves identifying and collecting individual employers' payroll and loss information. It permits employer-specific deviations from manual rates with a foundation in a particular employer's historical loss experience.

Retrospective rating involves an endorsed insurance policy such that the final premium adjusts according to the losses experienced by the insured employer rather than according to industry-wide loss experience. This method takes actual losses during the policy period to modify the initial premium to one that more accurately reflects the loss experience of the individual employer.

Schedule rating refers to modifying manual rates either upward or downward to reflect the individual risk characteristics of the insured, generally done at the employer level.

The published loss costs of the state rating bureau (bureau), or NCCI, by industry code, are foundational to today's process. Typically, loss costs are reviewed and revised yearly. Insurers are permitted to use their own loss cost multipliers (LCMs), including a company-specific expense provision. Insurers may also use a loss cost modification factor (LCMF), which adjusts the rate level considering company-specific loss experience. There are often limitations on the degree to which an LCMF in a specific program is permitted to deviate.

Most states permit rating and schedule rating, which facilitates additional rate segmentation, but there may be some differences in specific rules. Some states are administrative pricing states, which may be the most restrictive in permitting insurers to deviate from a bureau filing. A workers' compensation model in a rate filing would likely not be allowed. Anyone can find state differences regarding laws and benefits by visiting the Workers Compensation Research Institute's (WCRI's) web page.

Workers' compensation rating laws can vary by state regarding the specific regulations and methodologies used to determine premium rates. Insurers use classification systems to establish the level of risk associated with each occupation. Classification systems influence premium rates. While many states have similar classification systems, some may have unique or more detailed classifications.

Many states permit insurers to use an experience modification factor, or an experience rating system, to adjust an employer's premium based on their historical claim experience. The experience modification factor compares an employer's actual claims history with the expected claims for companies in the same industry. A factor above 1.0 indicates higher-than-average claims, resulting in higher premiums. A factor below 1.0 indicates lower-than-average claims, leading to reduced premiums.

Some states have a competitive market where multiple insurers can provide workers' compensation insurance, allowing insurers to compete for business. Other states operate in a monopolistic system, where a state fund, or agency, is the sole provider of workers' compensation insurance.

Benefit levels provided under workers' compensation insurance, like medical coverage, disability payments, and vocational rehabilitation, can vary by state. Factors like average wage levels, cost of living, and specific state regulations may influence benefit levels.

Workers' compensation rating formulas consider factors such as industry classification, claims history, payroll, and other factors believed to be relevant. Although many states have similar risk classification plans, these formulas' specific components and weighting can differ.

IBM defines a predictive model as a statistical tool or algorithm that leverages patterns and relationships in historical data to make predictions or forecasts about future events. It involves training a model on a dataset and then using that model to make predictions about new, unseen data.

Insurers commonly use predictive models in personal lines products. The purpose of using the models is to promote more accurate risk segmentation, which correlates with expected costs. Predictive models must use a robust historical dataset. Using modeling approaches allows more formal control that eliminates some of the guesswork.

The use of workers' compensation models is lagging behind the use of personal lines models. The NCCI and rate bureau methods are sophisticated but not typically interpreted as applying a true "model" definition. Model usage is less prevalent in workers' compensation than in personal lines.

According to studies conducted by Robert Hartwig (University of South Carolina), there has been no statistically discernible relationship between workers' compensation underwriting performance and periods of recession over the past century. Workers' compensation rates have also been flat or decreased in recent years.

One hurdle to model rollouts in workers' compensation includes internal resource constraints and prioritization compared to other lines of insurance. Additionally, there may be pushback on regulatory or company management acceptance.

Workers' compensation has experience ratings and scheduled ratings built in. However, these components must be managed in a modeling process. The management of these components might increase the complexity of a model due to the extent there are differences by state.

There are some impacts of model usage on workers' compensation. One effect might be that if the regulatory framework permits models, insurers can conceivably use models to deviate from bureau loss cost plans and the current rating structure. Additionally, insurers could modify risk segmentation based on cost expectations. Due to state differences, there will likely be unique complexities in workers' compensation models that differ from personal lines pricing. However, workers' compensation models could offer risk management and pricing insights.

A good pricing model needs to comply with state laws and regulations. When used on a dataset not used in building the model, the model should predict the target variable, such as claim severity, claim frequency, pure premium, and loss ratio. A good model considers the dataset size; a more extensive dataset may permit a more complex model structure than a smaller dataset. Acknowledging that different data set sizes offer different credible insights is necessary. Finally, a good model uses appropriate input characteristics that meaningfully contribute to a model's ability to predict the target variable. For example, the input variable can be demonstrated to have statistical significance or influence on the model results and improve the predictions of the target variable.

A good pricing model has appropriate control and offset variables to mitigate the risk of predictions without influencing a particular variable's model contributions (e.g., policy year and state). Sometimes an insurer will put a policy year in for a control variable when using multiple years of data because they do not want to distort their model results. Another control variable would be the state because each state likely has differences. The control variable is the variable that the modeler does not want to influence their target variable predictions.

Another factor that makes a good pricing model is integrating it into the model process. Insurers will have a current rating plan, but introducing a model into the rating plan requires an approach to control how the model gets integrated. For example, this will ensure there is no double counting.

When stakeholders, like regulatory communities, and consumers are concerned about the black box aspect of pricing models, it is important to ensure they:

- Understand the data underlying the model.
- Understand how the model validation works.
- Have some model memorandum or write-up.
- Get intuitive results.
- Have measured reliance (i.e., how the model improves a situation and why building a model is important).

Insurers may have concerns about protecting their proprietary information. Additionally, there are concerns regarding the time and speed-to-market, as well as compliance costs.

Commissioner McClain said everyone wants good data and analytics, and predictive modeling speaks to this. He said he has heard from stakeholders that they like the methods in place for years, as they have proved reliable. Commissioner McClain also heard that some insurers apply the models differently. He has heard from Arkansas' local industry concerns about the uniform applicability of models.

McKenney said he thought the presentation was helpful and liked how it touched on state insurance regulator concerns and state-by-state differences. He said Pennsylvania has had some workers' compensation insurers try to come in with predictive models, and Pennsylvania does not think their law allows it. McKenney said their workers' compact uses words like a uniform classification system, a uniform experience rating plan, and exclusive means. He said bringing in something that is essentially another way of classifying risk provides prospective pricing that deviates from what is supposed to be the exclusive means of providing prospective pricing in Pennsylvania's Act. McKenney said he understands that state-by-state laws vary. However, predictive models are not used as often in workers' compensation as in other lines of business.

Grassel said the workers' compensation industry has thrived for five to 10 years. He asked Koch if the workers' compensation market would deteriorate if she thought there might be more pressure on predictive modeling products. Grassel said workers' compensation insurance was a line of insurance needing improvement, say 25 years ago, and now it is the one that is performing the best.

Koch said she believes if the risk segmentation abilities deteriorate and the experience starts to deteriorate, there will be more efforts to use modeling. She said if insurers see ways predictive modeling could improve results, they would do so in jurisdictions that permit it.

Wake said he questions whether the improved performance in workers' compensation is due to improved performance. Instead, he wonders if the improved performance is a different inflation and investment environment in recent decades.

Wake asked if insurers need lower combined ratios to sustain the same level of performance. He said that combined ratios are not the only thing determining success or failure in workers' compensation because it is a long tail line; so much of the probability depends on investment return. Wake asked if the structure of investment return changes in low inflation and if a low nominal return economy needs more profitability from underwriting than investment. Koch said that if the investment returns are coming in lower than expected, that will put upward pressure on rates and pricing.

3. Discussed Other Matters

Commissioner McClain said the Task Force would meet in a couple of months to hear a presentation regarding the unintended consequences of the legalization of cannabis on workers' compensation.

Having no further business, the Workers' Compensation (C) Task Force adjourned.

Draft: 8/22/23

Market Regulation and Consumer Affairs (D) Committee
Seattle, Washington
August 15, 2023

The Market Regulation and Consumer Affairs (D) Committee met in Seattle, WA, Aug. 15, 2023. The following Committee members participated: Jon Pike, Chair (UT); Mike Causey, Co-Vice Chair, represented by Jackie Obusek (NC); Michael Humphreys, Co-Vice Chair, and David Buono (PA); Peni Itula Sapini Teo (AS); Karima M. Woods (DC); Trinidad Navarro and Susan Jennette (DE); Dean L. Cameron (ID); Sharon P. Clark (KY); Chlora Lindley-Myers represented by Cynthia Amann and Jo LeDuc (MO); Jon Godfread represented by John Arnold (ND); Michael Wise (SC); Cassie Brown, Matthew Tarpley, and Jamie Walker (TX); Kevin Gaffney represented by Karla Nuisl (VT); and Jeff Rude (WY). Also participating were: Dana Popish Severinghaus and Erica Weyhenmeyer (IL); Larry D. Deiter (SD); Rebecca Nichols (VA); and Mike Kreidler and John Haworth (WA).

1. Adopted its July 27 Minutes

Commissioner Pike said the Committee met July 27 and took the following action: 1) adopted the pet insurance Market Conduct Annual Statement (MCAS) data call and definitions; 2) adopted a new charge for the Producer Licensing (D) Task Force to amend the NAIC's *Public Adjuster Licensing Model Act* (#228); and 3) received the Voluntary Market Regulation Certification Program from the Market Regulation Certification (D) Working Group.

Commissioner Clark made a motion, seconded by Commissioner Navarro, to adopt the Committee's July 27 minutes (Attachment One). The motion passed unanimously.

2. Adopted Revisions to the *Market Regulation Handbook*

Tarpley said revisions to the NAIC *Market Regulation Handbook*, Chapter 4—Collaborative Actions, Section E. Conclusion of Collaborative Enforcement Actions are meant to provide non-regulators with transparency and insight regarding the multistate settlement process that occurs in the Market Actions (D) Working Group. The revisions were adopted by the Market Conduct Examination Guidelines (D) Working Group on July 18.

Director Cameron made a motion, seconded by Commissioner Humphreys, to adopt the revisions to Chapter 4 of the *Market Regulation Handbook* (Attachment Two). The motion passed unanimously.

3. Adopted the Voluntary Market Regulation Certification Program

Commissioner Pike said during the Committee's call, the Market Regulation Certification (D) Working Group reported that it had completed its work, and the final draft of the Voluntary Market Regulation Certification Program, guidelines, checklist, and implementation plan have been exposed on its web page since May 9.

Commissioner Kreidler said the completed Voluntary Market Regulation Certification Program consists of 11 requirements; checklists and guidelines for each requirement; a scoring matrix; and the implementation plan. He said the program is a long-needed response to the federal government's critiques of market conduct regulation in the separate states and territories of the U.S. It is also a step forward to promoting best practices and consistency for all NAIC members' market regulation activities, and it promotes collaboration among the NAIC members.

Haworth presented an overview of the contents of the program to the Committee. He said the program has 11 requirements that are broken into five major categories, including: 1) the appropriate statutory authorities for

market regulation departments to conduct market regulation activities and maintain the confidentiality of information obtained from their own activities and received from other NAIC jurisdictions; 2) staffing resources and qualifications to conduct market regulation activities and/or to oversee contractors; 3) the use of the *Market Regulation Handbook*; 4) the reporting of timely, accurate, and complete data to NAIC databases and participation MCAS; and 5) collaboration with other jurisdictions through NAIC working groups.

Haworth said in the first three years of the program, jurisdictions will have the ability to self-certify themselves using the program checklist and scoring matrix. After three years, jurisdictions will have the option to either self-certify or be fully certified by an independent panel of state insurance regulators. Re-certification would occur every five years.

Commissioner Clark made a motion, seconded by Director Cameron, to adopt the Voluntary Market Regulation Certification Program and Scoring Definitions (Attachment Three). The motion passed unanimously.

4. Adopted its Task Force and Working Group Reports

A. Antifraud (D) Task Force

Commissioner Navarro said the Antifraud (D) Task Force met Aug. 14. The Task Force discussed its current charges in preparation for developing its 2024 charges, and he requested that suggestions be submitted by Sept. 22. He said the Task Force will meet in October to adopt its 2024 proposed charges.

Commissioner Navarro said the Task Force heard a presentation concerning Workers' Compensation Premium Fraud from the United Brotherhood of Carpenters and Joiners of America (UBC). He said the Task Force discussed the importance of workers' compensation insurance fraud related to the construction industry and agreed that additional discussions in regulator-to-regulator and open meetings are necessary to further address this type of insurance fraud.

Commissioner Navarro said the Task Force received a report from the Improper Marketing of Health Insurance (D) Working Group. The Working Group met July 27 to discuss the revised draft amendments to the NAIC's *Unfair Trade Practices Act* (#880). He said the Working Group also met Aug. 14 to discuss the revised draft and comments and adopt the amendments to Model #880. He said the Task Force will expose the adopted amendments for comment and meet in September to consider them for adoption.

Commissioner Navarro said the Task Force received an update from the Antifraud Technology (D) Working Group. He said the Working Group chair is working with NAIC staff concerning the redesign of the NAIC's Online Fraud Reporting System (OFRS). The Working Group will be holding conference calls to discuss necessary enhancements to the OFRS to include fields provided from the National Insurance Crime Bureau (NICB) data.

Commissioner Navarro also said the Task Force heard a presentation from the Coalition Against Insurance Fraud (CAIF) regarding a research study on who commits insurance fraud and why. The study showed how different generations across the nation view insurance fraud. He said the Task Force also received reports on matters of interest from the CAIF and the NICB.

B. Market Information Systems (D) Task Force

Director Severinghaus said the Market Information Systems (D) Task Force met July 31. She said this year, the Task Force is beginning work on implementing the recommendations contained in the Artificial Intelligence (AI) report it adopted last year. She said the Market Information Systems Research and Development (D) Working Group is working on the first recommendation to develop methods to ensure better MIS data quality, and the Market

Analysis Procedures (D) Working Group is working on the second recommendation to assess MIS data and scoring methodologies for its effectiveness and make suggestions for needed improvements. The Task Force heard reports from both working groups on their progress with their charges related to the AI report.

Director Severinghaus said the Task Force also heard a report from NAIC staff regarding the progress on a variety of projects that affect the MIS, including those that are incorporated into the *State Connected* strategic plan and those prioritized through the Uniform System Enhancement Request (USER) forms.

C. Producer Licensing (D) Task Force

Director Deiter said the Producer Licensing (D) Task Force met May 31 and adopted a new charge to review and amend, as needed, Model #228 to enhance consumer protections in the property/casualty (P/C) claims process. He said the Task Force also adopted new Continuing Education Recommended Guidelines for Instructor Approval to create a more uniform process for the approval of continuing education (CE) instructors and a quicker process for such approval. He said these items were adopted by the Committee during its July 27 meeting.

Director Deiter said if the new charge is adopted by the Committee, the Task Force will move forward with drafting proposed revisions to Model #228. He said the model will be amended to strengthen regulatory standards for the following four issues: 1) individuals acting as unlicensed public adjusters; 2) contractors who are also acting as public adjusters on the same claim; 3) limiting the assignment of benefit rights to the contractor; and 4) limits on public adjuster compensation. He said Commissioner Navarro has agreed to lead this effort due to recent legislative changes regarding public adjusters in Delaware. He also said because some of the issues to be discussed on potential fraudulent practices, it will be helpful to have Commissioner Navarro, who chairs the Antifraud (D) Task Force, lead this effort.

Director Deiter said during its May 31 meeting, the Task Force continued its discussion of the template for the review of 1033 requests, which are required by the federal Violent Crime Control and Law Enforcement Act of 1994. He said the Task Force discussed the following three issues: 1) whether the definition of “conviction” should include pleas of abeyance and expungements should be excluded from this definition; 2) whether states use the long-form or short-form for requests and why one form is preferred; and 3) the factors a jurisdiction may consider when evaluating a 1033 waiver request and how states inform individuals about the 1033 waiver application process. He said NAIC staff are working with a small group of subject matter experts (SMEs), and the Task Force will continue its discussions in the coming months.

Director Deiter said the Task Force also received a report from the National Insurance Producer Registry (NIPR) Board of Directors. He said NIPR’s year-to-date (YTD) revenue was \$24 million, which is 3.7% over budget. The NIPR senior team and Board of Directors have begun work on the NIPR strategic plan for 2024–2026, and a vote on the final plan is scheduled for the end of the year. Director Deiter said NAIC staff are coordinating with NIPR and states, including any back-office system support vendors, to conduct an analysis of how long it will take to implement proposed changes and the cost to implement. The Task Force will be discussing the time and cost estimates in the coming months to determine the next steps.

Director Deiter said the Task Force also adopted the reports for the Adjuster Licensing (D) Working Group and the Uniform Education (D) Working Group.

D. Market Analysis Procedures (D) Working Group

LeDuc said the Market Analysis Procedures (D) Working Group will meet July 17. She said the Working Group was assigned a new charge to “assess current market analysis data to identify needed improvements in the effectiveness of the data for market analysis and the predictive abilities of the market scoring systems utilizing

the data.” She said in considering this charge, the Working Group began by compiling a list of what data market analysts use. She said the list is not exhaustive, but it is extensive and covers data provided through the NAIC MIS, data available within the states, and data obtained from sources outside the NAIC and states. She said the Working Group will continue to add to the list as data sources continue to be identified, but it will also begin identifying how market analysts use the data and discuss the data’s effectiveness.

LeDuc said the Working Group will also begin its assessments of the scoring systems that are in the NAIC MIS, which includes the Market Analysis Prioritization Tool (MAPT) and the MCAS-MAPT rankings.

LeDuc said the Working Group also adopted the Other Health MCAS standard ratios (Attachment Four) to be posted publicly after each annual filing. She said they will be effective for the 2023 data year collected in 2024.

LeDuc said the Working Group is also discussing the inclusion of fraternal insurance organizations in the MCAS. She said fraternal are exempted from filing the MCAS, and the Working Group is discussing whether the exemption should remain.

LeDuc said the Working Group is also putting together a plan to provide regulator-only training on market analysis tools and methods using the tools for market analysis. She said the training sessions will be informal and address topics most in demand. She noted that there are quite a few new market analysts that will benefit from informal sessions with more experienced market analysts.

E. Market Conduct Annual Statement Blanks (D) Working Group

Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group met July 19. She said the Working Group is discussing revisions to the homeowners and private passenger auto (PPA) blanks to clarify to companies which closed claims to report and how to report them. She said a proposal will be considered for adoption during the Working Group’s next meeting.

Weyhenmeyer said the Working Group also received a request to permanently move the MCAS filing deadline for the short-term limited-duration (STLD) and other health MCAS blanks to May 31 to match the deadline already established for the health MCAS blank.

Weyhenmeyer also said in the last couple years, the Working Group adopted two MCAS blanks with less than 30 days of exposure after the final draft was complete. She said to avoid this in the future, the Working Group is working on adding guidelines to the written process for adopting new blanks and revising data elements. She said the guidelines will encourage a 60-day exposure prior to the June 1 deadline date for adoption.

F. Market Conduct Examination Guidelines (D) Working Group

Tarpley said the Market Conduct Examination Guidelines (D) Working Group met March 28 and July 18.

Tarpley said during its March 28 meeting, the Working Group discussed its 2023 charges and items to be carried forward from 2023 to 2024, including the travel insurance in-force policy standardized data request (SDR), the travel insurance claims SDR, and an exposure draft of the *Market Regulation Handbook’s* Chapter 23—Conducting the Life and Annuity Examination.

Tarpley said during its July 18 meeting, the Working Group adopted revisions to the *Market Regulation Handbook’s* Chapter 4, Section E. He said the revisions provide non-regulators with insight on the multistate settlement process that occurs in the Market Actions (D) Working Group. He said the Working Group also discussed a June 6 draft of Chapter 23 and reviewed comments received on the draft. The comment period was

extended to Sept. 4. Tarpley said revisions to Chapter 23 arise from the changes recently made to the *Suitability in Annuity Transactions Model Regulation* (#275). He said the Working Group also received updates on the SDRs for travel insurance in-force policies and claims.

G. Market Regulation Certification (D) Working Group

Commissioner Kreidler said the Market Regulation Certification (D) Working Group met June 6 and adopted the Voluntary Market Regulation Certification Program. He said the Working Group is on hold until further instruction from the Committee.

H. Speed to Market (D) Working Group

Nichols said the Speed to Market (D) Working met July 25. She said the Working Group reviewed suggested changes to the uniform product coding matrices (PCMs). She said three suggestions for additional types of insurance (TOIs)/sub-TOIs were submitted for the P/C matrix and the Life, Health, and Annuity matrix. She said the Working Group adopted new sub-TOIs for paid family medical leave products for the Life, Health, and Annuity matrix. She said alternative solutions, such as new filing types were also discussed for a couple of the suggestions. She said two suggestions for the P/C matrix were tabled to see if a solution can be provided by the System for Electronic Rates & Forms Filings (SERFF) Modernization project.

Nichols said the Working Group's revisions to the *Product Filing Review Handbook* are nearly complete. She said the next steps are to expose the revisions and ask for Working Group member volunteers to review a few of the chapters for any technical gaps or inaccuracies. She expressed appreciation to Petra Wallace (NAIC) for her support, hard work, and commitment to the work on the *Product Filing Review Handbook*.

LeDuc made a motion, seconded by Commissioner Navarro, to adopt the other health MCAS standardized ratios and the following reports: 1) the Antifraud (D) Task Force; 2) the Market Information Systems (D) Task Force; 3) Producer Licensing (D) Task Force; 4) the Market Analysis Procedures (D) Working Group (Attachment Five); 5) the Market Conduct Annual Statement Blanks (D) Working Group (Attachment Six); 6) the Market Conduct Examination Guidelines (D) Working Group (Attachment Seven); 7) the Market Regulation Certification (D) Working Group (Attachment Eight); and 6) the Speed to Market (D) Working Group (Attachment Nine). The motion passed unanimously.

5. Heard an Update on International Issues Regarding Market Regulation

Commissioner Pike said the Committee has a standing charge to coordinate with the International Insurance Relations (G) Committee to develop input and submit comments to the International Association of Insurance Supervisors (IAIS) or other related groups on issues regarding market regulation concepts.

Nikhail Nigam (NAIC) said the NAIC is a member of the IAIS and serves on its Market Conduct Working Group (MCWG). He said the MCWG is tasked with developing and enhancing high-level principles-based supervisory and supporting material in relation to market conduct supervision. He said the MCWG coordinates with other international bodies dealing with the market conduct of insurers and intermediaries and financial consumer protection. The MCWG reports to the IAIS Policy Development Committee, and it is composed of representatives of IAIS members with experience in market conduct supervision and regulation.

Nigam said in June, the MCWG finalized a Members Report on the Use of Conduct Indicators in Insurance Supervision. He said the report provides members with guidance on the identification, assessment, and appropriateness of specific types of indicators and data-gathering techniques. He said the report puts an emphasis on adopting more outcomes-based approaches to conduct supervision in many jurisdictions. He said the MCWG

believes the ability to draw informative, actionable, and well-targeted “indicators” from data is central to achieving this objective. He said the report follows a member survey conducted in 2021 and 2022 focusing on current supervisory approaches and challenges regarding the use of data and key indicators to assess conduct-related outcomes. He said the NAIC provided two examples. The first focused on claims handling and a review of the NAIC MCAS and the data it collects on claims and underwriting for various lines of business. The second NAIC example reviewed the use complaints index.

Nigam said another project the MCWG has been focusing on is related to Diversity, Equity, and Inclusion (DE&I), and the NAIC has been involved in these efforts at both the MCWG, as well as the Governance Working Group (GWG) of the IAIS. He said the project focuses on the link between DE&I and insurers’ governance, risk management, and corporate culture. He said the project is exploring the hypothesis that applying a DE&I paradigm to the Insurance Core Principle (ICP) 19 requirement of fair treatment of customers can result in better outcomes and fairer treatment for diverse consumers. He said the NAIC has regularly updated the IAIS on the work of the Special (EX) Committee on Race and Insurance, and it held a special session where the NAIC’s DE&I Director, Evelyn Boswell, presented on the work of her team and the assistance they provide to NAIC members.

Nigam said a few other initiatives being worked on at the MCWG include work to incorporate climate risk into ICP 19. He said the IAIS’s Climate Risk Steering Group and the MCWG are working on an application paper for supervisors that will focus on instances when sustainability-related risks and considerations can lead to the unfair treatment of consumers.

Nigam said the MCWG is focused on supporting the parent committees and secretariat at the IAIS in developing its strategic plan for the next five years. He said one initiative has been proposed by the MCWG to share Suptech tools and initiatives.

6. Heard a Presentation on the Use of Visualization in Market Analysis

Commissioner Pike said the Market Analysis Procedures (D) Working Group has a charge this year to assess the effectiveness of data used by market analysts. He said to provide some background on this work, he asked LeDuc to provide the Committee with an overview of the current state of market analysis techniques, especially regarding the use of tools to provide visualizations of the data used by analysts.

LeDuc said the visualization of data leverages human perception skills to allow the analyst to absorb more information and remember it more easily. She said this allows analysts to analyze a large quantity of data more quickly and identify more complex issues. The analyst can identify new trends, patterns and anomalies when they are able to visualize data using visualizations incorporating graphs, charts, and the deliberate use of color instead of viewing a mere dataset of numbers. LeDuc said this gives analysts a better understanding of the data, removes subjectivity, and creates repeatable outcomes for verification. Additionally, LeDuc noted that this is further enhanced when incorporating text analytics, machine learning, predictive analytics, and network analysis. She said to fully utilize visualizations and advanced analytics, the data needs to be available, accessible, usable, consumable, reliable, consistent, and complete.

LeDuc provided examples illustrating how to create effective visualizations used to provide comparisons of data over time, the relationships between different categories and data points, the composition of data over multiple periods of time, and the distribution of data points. She gave examples of the best ways to create visualizations to answer the different questions that can be asked about the data.

LeDuc said there are best practices to keep in mind when creating data visualizations. She said the visualization should be kept as simple as possible to answer the question being asked. It should direct the focus of the user to the most relevant points in the data. The data and visualization should be clearly explained and identified to the

user reviewing the visualization. LeDuc also emphasized that the use of color must be intentional and with the purpose of clearly bringing out the meaning in the data.

LeDuc showed how the MAPT and the MCAS data can be made more useful by presenting the data into visualizations.

LeDuc concluded with things to consider: 1) the visualization should add value; 2) it is important to consider the cost and benefits of obtaining and creating new data sources; 3) visualizations change both the process and mindset in the analysis of data; and 4) using visualizations moves market analysis from an examiner's skillset to an analyst's skillset.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Committees/D Cmte/2023 Summer/_Final Minutes/08_D Cmte T.docx

Draft: 8/8/23

Market Regulation and Consumer Affairs (D) Committee
Virtual Meeting
July 27, 2023

The Market Regulation and Consumer Affairs (D) Committee met July 27, 2023. The following Committee members participated: Jon Pike, Chair (UT); Mike Causey, Co-Vice Chair, represented by Jackie Obusek (NC); Michael Humphreys, Co-Vice Chair (PA); Trinidad Navarro (DE); Dean L. Cameron represented by Shannon Hohl (ID); Sharon P. Clark (KY); Chlora Lindley-Myers (MO); Michael Wise (SC); Cassie Brown represented by Leah Gillum (TX); Kevin Gaffney and Karla Nuisl (VT); and Jeff Rude (WY). Also participating were: Erica Weyhenmeyer (IL); and John Haworth (WA).

1. Adopted its Spring National Meeting Minutes

Director Lindley-Myers made a motion, seconded by Commissioner Clark, to adopt the Committee's March 24 minutes (see *NAIC Proceedings – Spring 2023, Market Regulation and Consumer Affairs (D) Committee*). The motion passed unanimously.

2. Adopted the Pet Insurance MCAS Data Call and Definitions

Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group developed the Pet Insurance Market Conduct Annual Statement (MCAS) data call and definitions as requested by the Market Analysis Procedures (D) Working Group and the Committee. She said the data call and definitions were developed by a group of subject matter experts (SMEs), which included state insurance regulators, industry representatives, and consumer representatives. She said Matt Gendron (RI) led the discussions of the SMEs, who presented the draft Pet Insurance MCAS data call and definitions to the Market Conduct Annual Statement Blanks (D) Working Group to solicit public comments. The Working Group adopted the Pet Insurance MCAS data call and definitions on May 30. The Pet Insurance data call includes the collection of data for underwriting, claims, marketing and sales, lawsuits, and complaints.

Commissioner Clark made a motion, seconded by Director Lindley-Myers, to adopt the Pet Insurance MCAS data call and definitions. The motion passed unanimously.

3. Adopted the Revised Producer Licensing (D) Task Force Charges

Commissioner Clark said the National Association of Public Insurance Adjusters (NAPIA) requested that the Producer Licensing (D) Task Force amend the NAIC's *Public Adjuster Licensing Model Act* (#228) to address the following issues: unlicensed public adjusters, contractors who are also acting as public adjusters on the same claim, and the assignment of benefit rights to contractors. She said the Task Force will also consider additional consumer protections regarding compensation limits for public adjusters, and this will also be included as part of the model law review if the proposed charge is adopted today.

Commissioner Clark said the Task Force adopted the charge to "Review and amend, as needed, the *Public Adjuster Licensing Model Act* (#228) to enhance consumer protections in the property and casualty claims process" during its May 31 call, and it is now presenting the charge to the Committee for its considerations. She said if the charge is adopted today, Commissioner Navarro, who chairs the Antifraud (D) Task Force, will lead this work under the Producer Licensing (D) Task Force since Delaware recently considered new legislation regarding the public adjusters and the issues to be reviewed potentially touch on fraudulent activities.

4. Adopted the Continuing Education Recommended Guidelines for Instructor Approval

Commissioner Clark said the guidelines being presented today were developed by the Uniform Education (D) Working Group after industry representatives approached the Working Group to discuss the difficulties of obtaining approval for continuing education (CE) instructors in some jurisdictions and the lack of uniformity across jurisdictions. The Working Group responded to the feedback by surveying jurisdictions regarding requirements for CE instructor approval and moved forward to develop the guidelines. Commissioner Clark said the members of the Producer Licensing (D) Task Force hope the guidelines create a more uniform process for approval of CE instructors and a quicker process for such approval.

Commissioner Clark made a motion, seconded by Commissioner Navarro, to adopt: 1) the following charge for the Producer Licensing (D) Task Force: “Review and amend, as needed, the *Public Adjuster Licensing Model Act* (#228) to enhance consumer protections in the property and casualty claims process”; and 2) the Continuing Education Recommended Guidelines for Instructor Approval. The motion passed unanimously.

5. Received the Voluntary Market Regulation Certification Program

Haworth, on behalf of Commissioner Kreidler, chair of the Market Regulation Certification (D) Working Group, said the Working Group met June 6 and completed its work to revise the Voluntary Market Regulation Certification Program, which includes a checklist, guidelines, and scoring matrix. The revisions are a result of a pilot program involving 18 states. Haworth said each of the states reviewed the certification program, and using the guidelines and checklists, they attempted to self-certify themselves. He said each of the states was requested to provide input on what worked, what did not work, and what changes could be made to improve the program and make it more useful for market regulation activities in the departments of insurance (DOIs).

Haworth thanked the 18 pilot states and the SMEs that compiled the changes to finish the work of revising the program. The redline and clean versions of the Voluntary Market Regulation Certification Program and its implementation plan are posted on the Working Group’s web page. Haworth said the Voluntary Market Regulation Certification Program is now ready for the Committee’s consideration.

Commissioner Pike said the Committee would be receiving the Voluntary Market Regulation Certification Program, but it is not prepared to consider the adoption of the program today. He requested that the Committee members review the Voluntary Market Regulation Certification Program prior to the Summer National Meeting, where the Committee will engage in a lengthier review of the program with the goal of considering a motion to consider the adoption of the program.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

[SharePoint/NAIC Support Staff Hub/Committees/D Cmte/2023 Summer/July 27 Call](#)

Chapter 4—Collaborative Actions

E. Conclusion of Collaborative Enforcement Actions

When a collaborative effort produces findings for which a regulatory penalty or sanction is contemplated, such action should be memorialized in a written consent order, voluntary settlement agreement or similarly titled settlement document. States may contemplate a collaborative enforcement action at the same time as a pending civil court action concerning similar issues, such as a class action lawsuit. Such an enforcement action may or may not occur simultaneously with a settlement of the civil action. Negotiations for coordinated regulatory and civil settlement should be the responsibility of the Lead State(s).

In the event a collaborative effort is challenged, or Lead States cannot reach a settlement, they should develop a resolution strategy. Lead States should outline their strategy and recommendations to ensure violations are appropriately addressed in the correct jurisdictions. Examiners from Participating States must be made available for follow-up proceedings, if required. Expenses associated with the appearance of any examiners at a proceeding arising out of the examination must be borne by the states conducting the action.

1. *Best Practices for Multistate Settlement Agreements*

The purpose of this document is to outline best practices that will meet the needs of multiple jurisdictions affected by the business practices of regulated persons/entities. It is important to recognize that although state departments of insurance have the authority to perform multistate examinations and investigations of potential violations of insurance law, the states cannot require regulated persons/entities to participate in a multistate settlement agreement (MSA). Thus, multistate settlement agreements are commonly entered into by way of mutual agreement with the applicable regulated entity as a way to uniformly and efficiently resolve regulatory matters.

The *Best Practices for Multistate Settlement Agreements* document is intended to provide guidance to regulators with respect to engaging in multistate settlement negotiations and drafting multistate settlement agreements. It is recognized that the terms of the agreement may vary depending on the subject matter of the examination/investigation, the nature of the violation, the duration of noncompliance, the number of consumers affected, and the number of states in which the regulated entity is doing business, among other considerations. However, agreements should be negotiated and drafted in a manner that is intended to promote participation by regulators and effectively address the issues of concern to regulators. With this in mind, best practices have been developed to effectuate the greatest amount of participation among the states in multistate settlement agreements. A complete copy of the *Best Practices for Multistate Settlement Agreements*, adopted by the Market Actions (D) Working Group, is available to regulators. Below are some provisions of the document, which have been provided in order to promote transparency about the MSA process.

A. Procedure

Who Leads Settlement Negotiations?

States seeking to initiate a multistate settlement are encouraged to bring such matters to the attention of the Market Actions (D) Working Group (MAWG). MAWG's main role is to support collaborative actions among the states to address common regulatory compliance issues. MAWG reviews submissions from state regulators or other sources that identify regulated entities that have a current or potential market regulatory issue that impacts multiple jurisdictions. MAWG determines if it will take a role in initiating regulatory action.

If MAWG does take a role in initiating a multistate regulatory action, according to established procedures, MAWG will participate in determining whether the Managing Lead State (MLS) in any MAWG initiative should be the state of domicile or another state. More than one Lead State may be designated by MAWG. The Lead State(s) will assume the responsibility for developing final action, including developing any MSA.

Provide Periodic MAWG Updates

At least one Lead State should be available to participate in MAWG and Collaborative Action Designee (CAD) conference calls. Participation in these calls will provide an opportunity for the Lead State(s) to address issues and questions presented by MAWG members and CADs and to update the states on the progress and direction of active collaborative actions.

B. Contents of MSAs**1. Background****a. Statutory Authority**

The MSA should include any and all relevant statutory authority of the MLS.

b. The Parties

The MSA should define the parties to the agreement:

1. Regulated Entity – The MSA should state the name of each and every company and/or individual that is party to the agreement. Because state databases, as well as NAIC databases, are populated on a company level, insurance companies that are a party to the agreement should be listed separately rather than as a group;
2. Lead State(s) – The MSA should indicate the states that have taken a leadership role in the examination/investigation and development of the MSA;
3. Domestic Regulators – The MSA may indicate the state where the regulated entity is domiciled;
4. Participating State(s) – Often defined in an MSA as “the insurance regulators of each of the remaining jurisdictions and the District of Columbia that agree to and approve the MSA;
5. Signatory Regulators – Often defined in an MSA to include the Lead State(s) and Participating State(s) collectively; and
6. Monitoring Regulators – If the regulators who will be overseeing corrective action plans, claims reassessments, progress reports, or follow up examinations subsequent to the MSA are different from the Lead State(s), a set of monitoring regulators should be defined.

c. Recitals/Recitation of Events Leading Up to the Action

The MSA should include a statement of the facts that gave rise to the necessity of an MSA. The recitals should contain:

1. A statement regarding the jurisdiction of the Lead State(s) over the regulated entity;
2. An explanation as to the commencement or initiation of the action that gave rise to the MSA;
3. Identification of multistate areas of concern. The MSA should list the issues that gave rise to collaborative action; and
4. Violations that are being pursued by the Lead State(s).

d. Scope of the MSA

The MSA should include a statement as to the scope of the agreement with as much specificity as possible. As part of determining the scope of the MSA, the Lead State(s) should review the particular company’s corporate governance to determine if the agreement should include corporate governance features.

The parties to the MSA may agree that specific issues will not be addressed by the MSA. Any stipulations between the parties to reserve an issue from consideration should be specifically stated in the MSA. Any potential Participating State that wishes to reserve an issue yet participate in the collaborative action must notify the MLS of the state’s conditions for participation. Such reservation should be for good cause and

as limited as possible. The reservation of an issue should be communicated to the regulated entity by the MLS. Such a reservation may require a separate written agreement between the potential Participating State and the regulated entity. It should be understood that the regulated entity is not required to accept the reservation. In such instances, the state and regulated entity may choose to handle that state's issues in a separate action.

2. Remedies/Remediation

a. Corrective Action

A primary goal of any MSA should be to achieve compliance with the regulated entity on a national basis. The MSA should define any required corrective action with specificity, including a specified period of time for completion. Corrective actions should be reasonably calculated to undo past harm, where possible, and to eliminate future violation of the insurance laws in the Participating State(s).

The Lead State(s) or Monitoring Lead State(s) should retain the authority to oversee any compliance efforts that require communication with policyholders/consumers to ensure that the regulated entity communicates directions, instructions and information in a manner that is easily understood by affected consumers. Further, the corrective action plan should incorporate contact information that affords policyholders/consumers an opportunity to seek information from persons with knowledge over the subject matter.

b. Follow-up Audits/Examinations

A follow-up audit or examination process in an MSA should proceed in a timely manner after any period of corrective action and should be as objective and transparent as possible. The MSA should indicate:

1. The regulators that will be responsible for the follow-up audit or examination;
2. The date the follow-up audit or examination is scheduled to begin;
3. The time period that the follow-up audit or examinations is expected to cover;
4. The examination standards from the handbook that will be applied during the audit/examination;
5. The compliance expectations of the examination team;
6. Consequences that will be applied as a result of the regulated entity failing to meet specified compliance thresholds; and
7. Whether participating regulators are precluded from conducting their own examinations until the adoption of the follow-up examination for the issues involved.

c. Self-Reporting

The MSA may provide for periodic self-reporting. If self-reporting is required as a condition of the MSA, the Lead State(s) or Monitoring State(s) must be prepared to review and provide feedback to the regulated entity that is required to provide the reports. Should the Lead State(s) determine that self-reporting is a condition to settlement, the MSA should specify the following:

1. Reporting deadlines;
2. Required contents of the reports;
3. The regulator(s) responsible for receiving the reports;
4. The expectations of the regulator(s) responsible for receiving the reports;
5. Expected compliance standards;
6. Any penalties or other consequences for failing to meet compliance standards based solely on reporting; and
7. Any penalties or other consequences for failing to meet reporting deadlines without obtaining an extension.

d. Penalties/Fines Costs

Penalty and fine provisions should be structured in a manner that is consistent with the laws of the Participating States. For instance, many states do not permit penalties to be designated as “administrative costs” or “assessments.” Further, some states do not have a mechanism that allows a penalty to be paid to a third party in the form of a contribution or charitable donation.

C. Consent Orders of Other Adoption Orders

A Participating State may elect or be required by law to execute a Consent Order or other type of Adoption Order that adopts an MSA. Any Consent Order or other Adoption Order executed should be consistent with the terms of the MSA and should not include any additional duties or obligations upon the parties to the agreement that are not specifically required by that state’s law. A Participating State should not reserve any issues from inclusion in the MSA that were not communicated to the MLS at the time of indicating a willingness to participate in the collaborative action.

Any required or elected Consent Order or other Adoption Order shall be executed and final within any participation deadlines established by the MSA.

Any state that had indicated a willingness to participate in the collaborative action but does not intend to execute or participate in the MSA shall advise the MLS of the Participating State’s intent to not participate. The Participating State is encouraged to explain the reasons for not intending to participate in the MSA. By doing so, the Lead State(s) may be in a position to renegotiate with the regulated entity in order to address the outstanding reservations or concerns of the Participating State.

D. Confidentiality

1. Report

Final examination/investigation reports establish the foundation for future administrative action. These reports should be shared with participating regulators as soon as is practicable after they are completed.

Where permitted by law, final examination/investigation reports should be open for public disclosure after final administrative action has been taken. Any limitation to the public distribution of final examination/investigation reports should be clearly stated in the MSA, including any waiting period required prior to public disclosure. It may be practical to include the report as an exhibit in the MSA. Reasons for any limitations for making documents public should be listed.

2. Exhibits

In many instances, final examination/investigation reports include exhibits. Exhibits attached to reports should be handled with the same confidentiality and public disclosure standards applied to the final examination/investigation reports.

a. MSA and Other Adoption Orders

Unless otherwise required by law, the MSA and any other order entered into by the Participating State adopting the MSA should not be confidential after the order is executed and final. Rather, final actions of regulators, as well as duties imposed upon regulated persons/entities pursuant to the MSA, should be transparent and available for public disclosure.

b. Settlement Offers/Negotiations

Notes, materials, draft documents, discussions, and any other information developed during the course of settlement negotiations should be considered a component of the examination/investigation work papers and should not be subject to public disclosure after the MSA has been finalized. The release of preliminary settlement information to the public that is an integral part of negotiations would have a detrimental effect on future settlement negotiations.

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Purpose

The mission of the NAIC Market Regulation Certification Program is to establish and maintain minimum standards that promote sound practices relating to the market conduct examination, market analysis and related continuum activity functions performed for insurance consumer protection. Insomuch as the program is anticipated to evolve and improve over time, it is anticipated that additional functions necessary for sound consumer protection may be developed in the future. The certification program is designed to provide an initial process that facilitates each jurisdiction's ability to conduct self-evaluation. An ultimate goal is to develop measurable and meaningful standards that can be independently evaluated and monitored.

Program standards, assessment checklist items and guidelines should:

- Provide a roadmap regarding resources, abilities and functions for jurisdictions wishing to build, maintain, or improve upon, their market regulation program.
- Promote consistency while respecting individual jurisdictional differences and circumstances by promoting use of NAIC resources.
- Demonstrate accountability and responsiveness to those impacted by the business of insurance, and to others that are charged with evaluating and assessing the effectiveness of state-based insurance regulation.
- Promote an environment of continuous process improvement for enhancing outcomes relating to insurance consumer protection.
- Improve predictability and understanding of processes for regulated entities.
- Enhance jurisdictional coordination and information-sharing.
- Enhance protection of insurance consumers through promotion of sound market regulation processes.

Definitions

When referenced in this document, the following terms mean:

- **Chief Market Regulator** is either elected or appointed and is the Commissioner of Insurance, Superintendent, Director, Secretary of Commerce, or other chief who oversees the regulation of insurance in each state or jurisdiction.
- **Department** is the chief governmental office invested with the responsibility of regulating the insurance industry within a jurisdiction.
- **Jurisdiction** is the territory within which power can be exercised. Within this document, jurisdiction will include but is not limited to: Departments of Insurance, Insurance Divisions, and other state specific agency titles which may include terms such as: Administration, Bureau, Commerce, Financial Services, Business Regulation, and Other Departments/Divisions that include the regulation of insurance. For example: Department of Professional and Financial Regulation, Office of Consumer Affairs and Business Regulation, Business and Industry, Banking and Insurance.

NOTE: When responding to checklist items for each requirement, if the response is N/A (not applicable), please provide an explanation for the "N/A" response in the comments.

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Voluntary Market Regulation Certification Guidelines and Checklists

Requirement 1 – Department’s Authority

The jurisdiction or department shall have the statutory authority to conduct market regulation activities, including market analysis; comprehensive and targeted market conduct examinations; the continuum of market regulation actions, including enforcement; and collaboration and coordination with other regulatory jurisdictions.

Objective

The objective of this requirement is to ensure the department has the statutory authority to effectively fulfill its market regulation responsibilities.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 1, the jurisdiction must have the general authority to collect and analyze information and have authority to coordinate with other jurisdictions. If the jurisdiction does not have the authority to coordinate with other jurisdictions, it will not pass this requirement. Additionally, a jurisdiction should have authority to conduct analysis, examinations, and enforcement. Requirements to have reasonable cause to conduct an examination does not negatively impact the evaluation. Ability to perform these items without having the ability to perform continuum actions should be considered as “marginally passing but with strong recommendations for additional authority.”

Guidelines

When determining the department’s authority for conducting market regulation activities, several different considerations should be evaluated. Direct legal authority may exist in the jurisdiction’s insurance code or within its regulations. Insurer examination acts, specific market regulation acts, acts that outline the authority and duties of the department are all potential items to review. Generally, such authority is cited when requesting documents from an insurer. Jurisdictions may also have broad oversight authority within other consumer protection laws.

Additional authority may be implied or may exist on a less direct basis. Examples could include insurance consumer protection-related insurance laws or regulations and their associated enforcement provisions. Other potential areas of authority are activities performed pursuant to the powers or orders of the insurance commissioner, director, or superintendent (i.e., the applicable chief market regulator of the jurisdiction).

When evaluating checklist items for Requirement 1, it may be beneficial to look beyond the mere capability to perform the listed functions. If not directly addressed within the insurance code or regulations, consider whether direct authority for all mentioned items would be desirable (most continuum items would fall under examination, investigation, or analysis categories). Having direct authority may provide valuable guidance on such issues as application of administrative procedure act requirements, status of examination, investigational or analysis records, handling of associated costs, etc.

Consider which consumer protections model laws and regulations have been adopted in the jurisdiction. Investigation, subpoena, and cease and desist powers are found in most unfair trade and producer laws. Most chief market regulators also have a general powers statute that may contain similar enforcement authorities.

The key basic models or similar versions should include:

Comprehensive and targeted market conduct exams	
Continuum of market regulation actions (including enforcement)	

Complete the following if this is an Interim Annual Review:

	YES	NO
Have there been any significant changes to the procedures since last year’s review? If “Yes,” please provide an explanation.	_____	_____

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 2 – Department’s Authority Regarding the *Market Regulation Handbook*

The department shall have sufficient authority by appropriate statute, regulation, rule, or other authority to utilize the most recent version of the *Market Regulation Handbook*. When a department initiates a market conduct examination or continuum activity, it shall be guided by the version of the *Market Regulation Handbook* in effect at the time the examination was initiated.

Objective

The objective of this requirement is to promote guidance and consistent handling of examination processes and continuum activities through the use of the *Market Regulation Handbook*. Additionally, this promotes guidance and consistent handling of examination processes and continuum activities within each jurisdiction on an individual basis when it is deemed appropriate to deviate from the *Market Regulation Handbook*.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 2, the jurisdiction must at a minimum have sufficient authority by appropriate statute, regulation, rule, or other authority to utilize the most recent version of the *Market Regulation Handbook*, and be able to demonstrate when conducting examinations or continuum activities their use of applicable *Market Regulation Handbook* review standards and related materials to the extent they are consistent with jurisdictional law. The department’s policies and procedures should properly reference the use of those materials set forth in the *Market Regulation Handbook*.

Guidelines

When determining the department’s authority by appropriate statute, regulation, rule, or other authority to utilize the most recent version of the *Market Regulation Handbook*, the department should identify the statute, regulation, rule, or other authority to use the *Market Regulation Handbook* within their response.

When evaluating checklist items for Requirement 2, a jurisdiction should be able to demonstrate, on an individual basis, when it is deemed appropriate to deviate from, or necessary to use an earlier version of, the *Market Regulation Handbook*. The jurisdiction must also be able to demonstrate that it has followed its own established policies and procedures for adopting processes that deviate from the *Market Regulation Handbook*.

Checklist

	YES	NO
2a. Does the department have authority by statute, rule or other authority to utilize the <i>Market Regulation Handbook</i> ?	_____	_____

REFERENCE _____

2b. When conducting examinations or continuum activities, does the department incorporate applicable <i>Market Regulation Handbook</i> review standards and related materials to the extent they are consistent with state laws?	_____	_____
--	-------	-------

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

2c. Does the department have examination-specific policies and procedures in addition to those guidelines set forth in the *Market Regulation Handbook*?

2d. If the answer to item 2c. is “Yes”, is the jurisdiction able to demonstrate that it has followed its own established policies and procedures in adopting any process that deviates from the *Market Regulation Handbook*?

Complete the following if this is an Interim Annual Review:

Have there been any significant changes to the procedures since last year’s review? If “Yes,” please provide an explanation.

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 3 – Department Staffing: Resources

The department must have either, or a combination of:

- Its own staff sufficient to perform market regulation work, including market analysis, examinations and other continuum actions.
- Statutory authority sufficient to engage competent contractors on an as-needed basis and appropriate department staff to oversee and manage such contractors.

Objective

The objective of this requirement is to ensure the department has sufficient resources to meet the needs of the department's market regulation activities.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 3, the jurisdiction, must be able to respond “Yes” to each of the following checklist items:

- Item 3a.
- Item 3d. and/or 3e.
- Item 3n.

Furthermore, if the answer to checklist item 3e. is “Yes”, then a “Yes” response is required for item 3k., item 3l., and item 3m.

All remaining Requirement 3 checklist items should be collected and evaluated from year-to-year to evaluate the jurisdiction's abilities.

Guidelines

Requirement 3 provides guidance on whether a jurisdiction has resources and capabilities to conduct market analysis, market conduct examinations and/or continuum activities. The standard recognizes that some jurisdictions use contracted services to perform these functions. In the event that contracted services are used, the standard inquires if the jurisdiction has the authority to hire contractors, established processes for selecting contractors and whether the jurisdiction engages in oversight of the contracted services. It is understood that jurisdictions vary in their usage of examinations versus continuum activities.

This requirement anticipates that some data will be obtained through the *Insurance Department Resources Report*. Those results should be reviewed in the event that classifications differ. Additionally, it is anticipated that each jurisdiction will evaluate changes in its level of resources from year to year.

The number of staff listed below should be expressed in terms of full-time equivalent (FTE) positions. The use of FTEs recognizes that most employees perform multiple functions within a department, for example, if two employees each spend half their time doing market analysis that would equate to 1 full-time equivalent position.

To evaluate its own status regarding the checklist for Requirement 3, each jurisdiction determines its specific appropriate level of staffing and or use of contracted services. Levels will vary from jurisdiction to jurisdiction. Factors such as population size, premium volume, complexity of insurance issues with a particular jurisdiction, complaints, legal requirements, directives for conducting market conduct activities and ability to keep abreast of emerging market issues are valid factors when evaluating the jurisdiction's needs. Jurisdictions are encouraged to establish resource levels that permit them to meet their obligations or needs for market analysis, market conduct examinations and/or continuum actions.

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

During each jurisdiction’s evaluation of its staffing levels, it may also be helpful to determine what NAIC resources are relied upon for market regulation functions and how the use of those resources has changed over time. If additional NAIC resources are identified that may be beneficial, it is a good idea to bring forth those suggestions to NAIC staff. This will help to provide opportunities and diagnostic tools for improvement.

Where independent contractors are used to fulfill staffing needs, the department must be engaged and responsible throughout the examination and be responsive to issues and concerns that might arise.

Checklist

Sufficient Staff and Resources (Market Analysis)

The department should have the resources to analyze effectively on a periodic basis the market behavior of insurers doing business in the jurisdiction.

- | | YES | NO |
|--|-------|-------|
| 3a. Does the department have analysts on staff or under contract whose responsibility is to conduct market analysis of insurers doing business in the jurisdiction? | _____ | _____ |
| 3b. If the department utilizes contract analysts, please describe in a separate attachment the manner and extent of utilization in the department’s recent activities. | | |
| 3c. Indicate below the number of FTE contract and staff analysts for each of the last three years. | | |

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 4 – Department Staffing: Qualifications

With respect to qualifications, the department:

- Shall ensure market regulation staff and contractors are qualified by establishing qualifications consistent with the standards for experience, education (including designations) and licenses in the *Market Regulation Handbook Core Competencies* (“Appendix D – Core Competencies – Resources – Staff and Training, Standard 2” and Appendix D – Core Competencies – Resources – Contractor Examiner, Standard 2” or successor documents).
- Should have a policy that encourages the professional development of all staff involved with market regulation through job-related college courses, professional designation programs or other training programs.

Objective

The objective of this requirement is to ensure the department staff is properly qualified to perform the market regulation functions for which they are responsible and have access to training and professional development opportunities.

Measurement

In order to successfully meet this requirement, the department must have policies and procedures in place regarding the appropriate credentials or minimum educational and experience requirements for selecting and hiring contractors. Furthermore the department should be able to demonstrate that it supports the hiring qualified staff and contractors; that it encourages and supports educational and training pursuits; that Examiners-in-Charge possess or are making progress toward completing appropriate designations; that the department recognizes licenses and other highly technical credentials of professionals and experts to perform certain market regulation activities where appropriate; and that it has a succession plan in place to ensure the maintenance of skills and records.

Guidelines

Notes to Evaluators:

- Equivalent substitutions may be considered with appropriate justification.
- Employees are exempt from this requirement if they have more than 20 years of service with the department or are less than five years from retirement.
- If collective bargaining or jurisdictional personnel policies prohibit any portion of such requirements, the department must show evidence that it has made good faith attempts to include such requirements.
- Evidence of good faith activities include, but are not limited to, the following:
 - The department adopts procedures to include a statement encouraging professional education.
 - The department has made arrangements to be a testing location for organizations such as Life Office Management Association (LOMA) or The Institutes.
 - The department attempts to secure funds for the professional development of market regulation personnel.

Hiring of Staff and Contractors

This area evaluates the effort of the department as it relates to the hiring of qualified staff and/or contractors. The department should have a policy or procedure in place on necessary credentials or minimum educational and experience requirements for selecting and hiring staff and contractors.

- The policies/procedures of the department should call for the inclusion of preferences for relevant experience, education and credentials in its job announcements/descriptions. In addition, the department should include in its specifications in requests for proposals (RFPs) requirements that contracted personnel (*with emphasis on supervisory personnel*) have relevant experience, and credentials.

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Relevant credentials would include a Market Conduct Management (MCM)¹ designation and any of the following designations:

- Certified Insurance Examiner (CIE)
- Accredited Insurance Examiner (AIE)
- Chartered Life Underwriter (CLU)
- Fellow, Life Management Institute (FLMI)
- Chartered Property Casualty Underwriter (CPCU)
- Certified Insurance Counselor (CIC)
- Fellow, Academy for Healthcare Management (FAHM)
- Professional in Insurance Regulation (PIR)
- Chartered Healthcare Consultant (ChHC)

Staff Development

The department should have a staff development program that encourages and supports educational and training pursuits, including training, courses, webinars, and certifications offered by the NAIC. Successful completion of this aspect of the requirement varies depending on an employee's length of service in insurance regulation.

(1) Staff Examiners/Analysts with More than Five Years of Service in Insurance Regulation

Examiners and analysts with more than five years of service with the department are “presumed qualified” and should be rated as a pass if they meet either of the following:

- Hold a juris doctor degree (J.D.) and an MCM designation.
- Hold an MCM designation and either an AIE or CIE designation.

Examiners and analysts with more than five years of service in the position of market conduct analyst or market conduct examiner who specialize in a particular line of business are “presumed qualified” and should be rated as a pass if they meet either of the following:

- Hold an MCM designation and either a CLU, FLMI, CPCU, CIC, FAHM or ChHC designation.
- Hold an MCM designation, a PIR designation and an associate's level designation from either The American College of Financial Services, The Institutes, America's Health Insurance Plans (AHIP) or similar organization such as LOMA or the Society of Financial Examiners (SOFE).

If all examiners and analysts with more than five years of service do not have the above qualifications, rate a pass if:

- The department has a training policy and/or job specifications that require completion and/or experience to attain the next highest level in their job classification series.
- The department has a policy that allows voluntary access to NAIC designation programs, and the department must show good faith attempts for encouragement and budgetary allowances to provide for voluntary training

¹ NAIC market conduct examination training may substitute for an MCM designation.

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

at other sources of professional education such as the Insurance Regulatory Examiners Society (IRES), The American College of Financial Services, The Institutes, LOMA or AHIP.

(2) Staff Examiners/Analysts with Less than Five Years of Service

When the department has staff with less than five years of service, the department should:

- Have a formal training program whereby new personnel have a clear requirement to attain, within five years, an MCM designation and either a CIE, AIE, CLU, FLMI, CPCU, CIC, FAHM, PIR or ChHC designation.
 - Personnel with a J.D. and five years of regulatory experience are exempt, with the exception they must earn an MCM designation or complete NAIC market conduct examination training.
- The department must have a policy that allows voluntary access to NAIC designation programs and the department must show good faith attempts for encouragement and budget allowances to provide for voluntary training at other sources of professional education such as IRES, The American College of Financial Services, The Institutes, LOMA or AHIP.

Examiner-in-Charge Qualifications

Examiners-in-Charge (EICs) should possess (or be making progress towards completion of) relevant designations. Relevant designations would include a Market Conduct Management (MCM) designation and any of the following designations as appropriate by lines of business:

- CIE
- AIE
- CLU
- FLMI
- CPCU
- CIC
- FAHM
- PIR
- ChHC

When an EIC with specific qualifications is not available, other qualifications are acceptable so long as the department is compliant with checklist item 4c. (development program).

Recognition of Licenses & Technical Credentials of Professionals & Experts

The department should recognize licenses and other highly technical credentials of professionals and experts such as attorneys, actuaries, cybersecurity experts, certified public accountants, IT experts and other professionals and specialists as qualified to perform certain market regulation activities.

In evaluating this aspect of the requirement, it is important to determine if the department retained and utilized appropriate staff or contractors with highly technical credentials when appropriate. Note: it is possible that no examinations or continuum activities requiring highly technical specialties were conducted during the review period.

Succession Plan

The department should have a succession plan in place to ensure maintenance of skills and records. At a minimum, the department should maintain written procedure manuals and cross-train employees.

Draft: 5/9/23

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 5 – Confidentiality and Information-Sharing

The department shall have the authority and capability to:

- Request, hold and produce examination, investigation, and continuum workpapers, on a confidential basis and protect it from subpoena, as permitted by jurisdictional law.
- Maintain confidentiality of confidential information shared by other jurisdictional or federal agencies; and only share confidential information with jurisdictional and federal agencies that agree, in writing, to adequately protect such confidential information.

Objective

The objective of this requirement is to ensure the department is able to maintain the confidentiality of its own work product and the work product of jurisdictions with which it collaborates. This is foundational to all collaborative efforts.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 5, the jurisdiction must answer “Yes” to checklist item 5a., item 5b., item 5c and item 5d.

Guidelines

The jurisdiction’s treatment of examination, investigation, and continuum workpapers and information shared by or with other jurisdictions has a significant impact on the various jurisdictions’ ability to communicate and collaborate on confidential matters. The provisions within each jurisdiction’s laws, regulations or case law may vary regarding the extent to which workpapers are confidential or to timing which such information becomes a public document. Some laws may extend beyond workpapers and apply to examination reports, as well. Research and documentation of the applicable jurisdiction’s confidentiality provisions should provide clear guidance for individuals within the market regulation division. Checklist item 5a. does not anticipate a uniform confidentiality framework among jurisdictions, but rather is viewed as a necessity to adequately fulfill the requirements of checklist item 5c.

Entering into the Multi-State Information-Sharing Agreement with other jurisdictions and the NAIC is also a necessary part of being able to adequately maintain confidentiality of information shared by other jurisdictions.

Checklist

	YES	NO
5a. Does the jurisdiction have laws, regulations or case law that specify how the confidentiality of market conduct examination workpapers is to be handled?	_____	_____

REFERENCE _____

5b. Has the department entered into the Multi-State Information-Sharing Agreement with other departments and the NAIC and does the department have written policies/procedures and communicate such policies/procedures to staff?	_____	_____

5c. Does the department have written policies and procedures and communicated such policies and procedures to employees relating to the protection of confidential information which includes PII and PHI, handling of public records requests and requirements for confidentiality agreements when it becomes necessary to share confidential information with other federal and international regulatory or law enforcement agencies, not otherwise covered by the multi-state agreement? _____

5d. Does the department have a records retention schedule which outlines plans for secure storage and timeline for destruction of work papers? _____

Information-sharing agreements with federal or international regulatory agencies or law enforcement agencies may be handled either on a case-by-case basis or by way of properly executed memorandums of mutual understanding.

Complete the following if this is an Interim Annual Review:

Have there been any significant changes to the procedures since last year’s review? If “Yes,” please provide an explanation. **YES** **NO**

COMMENTS:

Requirement 6 – Collaboration with Other Jurisdictions

The department participates in collaborative actions with other jurisdictions.

The department follows the referral or reporting procedures outlined in the Market Actions (D) Working Group’s Policies and Procedures for any material action that has a potential for collaborative action. In order to determine if a referral or reporting to the Market Actions (D) Working Group is necessary, the department will notify all other Collaborative Action Designees (CADs) via meeting, bulletin board, or other method, of proposed activities that have the potential for collaboration.

In addition, the Market Analysis Chief (MAC), MAWG member, CAD and/or CAD alternate shall actively monitor the Market Regulation and Market Analysis Bulletin Boards.

The department will consider joining called Market Actions (D) Working Group collaborative actions relevant to its jurisdiction and provide a response indicating whether or not it will join the collaborative action.

[Collaboration-National Analysis. Formerly Req. 11] The department participates* in the review of national analysis data annually.

*Participation means either performing analysis on one of the selected companies or participating in the selection process. Please note if none of the selected companies wrote business in the jurisdiction. It should be noted that the national analysis process is subject to change. Therefore, it is understood that in the future it may be necessary to revisit what it means to “participate.”

Objective

The objective of this requirement is to encourage collaboration with other jurisdictions to help to keep market regulation more effective and efficient by preventing duplication of effort. Sharing of key information among jurisdictions helps to identify

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

marketplace issues as they arise. By encouraging a multi-jurisdictional response to issues when practical, jurisdictions can more effectively direct their resources. Also, this requirement promotes collaboration and the sharing of perspectives and approaches to analyzing data among jurisdictions.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 6, the jurisdiction must answer “Yes” to checklist item 6a. The jurisdiction should answer yes to item 6b. and item 6c., and item 6e. and item 6f. unless there is an applicable explanation given in checklist item 6g.

When evaluating checklist items for the MAWG national analysis process, it is important to remember that participation means either performing analysis on one of the selected companies or participating in the selection process.

To evaluate whether the jurisdiction “passes” the national analysis portion of this requirement, the jurisdiction should answer “Yes” to checklist item 6i., in addition to providing a name of the individual (or individuals) who participate in the annual national analysis project .

Drafting Note: Assumes at least one company to be reviewed is licensed or conducting business in the jurisdiction.

Guidelines

The first portion of Requirement 6 relates to participation in the Market Actions (D) Working Group and is followed by checklist item 6a., item 6b., item 6c. and item 6d. The second portion of Requirement 6 relates to how the jurisdiction joins or considers joining Market Actions (D) Working Group actions and is followed by checklist item 6e., item 6f. and item 6g.

For regulators to fully adhere with Requirement 6, especially as it relates to handling of referrals, it is important to become familiar with both the *Market Regulation Handbook*, Chapter 6—Collaborative Actions, and the Market Actions (D) Working Group’s Policies and Procedures.

Actively monitoring includes responding to posts or responding directly to the sender of a posting.

Examples of actively monitoring the bulletin boards could include regularly:

- Responding substantively to a bulletin board post.
- Reaching out directly to the poster.
- Communicating with other divisions within the department.
- Raising the issue to the Chief Market Regulator Forum (CMRF).

Examples of reasonable explanations for checklist item 6d. and item 6g. may include, but are not limited to, such justifications as:

- The issue has minimal or no consumer impact.
- The issue is not yet sufficiently defined, investigated, or analyzed.
- There are no known laws or regulations to address the issue.
- There are reasons why expediency to address the matter in the jurisdiction is of utmost concern.
- Significant differences in the jurisdiction’s particular insurance laws or regulations.

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

- The matter has been previously addressed in a satisfactory manner by the jurisdiction.
- An executive decision made at the chief market regulator or general counsel level.

The MAWG national analysis process involves multiple jurisdictions conducting detailed analysis on companies that are shown as outliers. The approach to detailed analysis may differ among jurisdictions; therefore, participation encourages the sharing of ways to analyze data. The national analysis process is an evolving one that uses NAIC staff to provide information to the states. The states that participate in national analysis ultimately decide what to do with companies subject to their national analysis. Their results and recommendations are presented to the Market Actions (D) Working Group.

Additionally, it is important to know that the Market Action (D) Working Group’s annual national analysis process uses the Market Conduct Annual Statement (MCAS) and other existing data to identify companies of national (or multi-jurisdictional) interest that exhibit potential market conduct issues. The goal is to find and address issues common across jurisdictions, while reducing the strain on single jurisdictional resources.

Overall, jurisdictions should work together to test the results of the market analysis process against their findings to refine the process. By doing this, the jurisdictions can develop a more efficient market analysis process that will provide more useful information about companies’ market activities. By working together in this manner, jurisdictions will achieve the goal referenced above.

Checklist

Participation in the Market Actions (D) Working Group

	YES	NO
6a. Does the department have procedures for staff to follow when reporting potential collaborative actions to the department’s CAD?	_____	_____
6b. If the department identified a potential collaborative action, did the department notify all CADs—via meeting, bulletin board or other communication—of the activities identified that may have the potential for collaboration?	_____	_____
6c. If the department received a positive response to its inquiries to other CADs regarding a potential collaborative action, did the department refer the action to Market Actions (D) Working Group using the reporting procedures outlined in the Market Actions (D) Working Group’s Policies and Procedures, including completing the Request for Review form and submitting the form to the designated NAIC support staff?	_____	_____
6d. If the answer to item 6b. or item 6c. is “No,” please provide a brief explanation.		

Examples of reasonable explanations:

- The issue has minimal/no consumer impact.
- The issue is not yet sufficiently defined, investigated, or analyzed.

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 7 – Market Conduct Annual Statement

The department participates in the centralized collection of the Market Conduct Annual Statement (MCAS) and utilizes the data in its market analysis process.

Objective

The objective of this requirement is to encourage utilization of the centralized collection of the MCAS to enhance each jurisdiction’s market analysis process. By using the data collected in the MCAS process, departments are able to reduce expenses and resources that would have to be used if data was requested and companies had to submit data to multiple jurisdictions.

Measurement

In order to successfully meet this requirement, jurisdictions should be able to verify that they utilize the data obtained from MCAS for market analysis. This verification can be accomplished by producing evidence of completed baseline analysis and Level 1 analysis which pull data from MCAS. Documentation of completed analysis will ensure usage of the MCAS data.

Guidelines

The department has written procedures that show that the use of MCAS data is a part of their market analysis process and assists in making decisions as to the next step in their regulation process.

In the event the department participates but does not require each line of insurance that is part of the MCAS program, a one-year “grace period” is allowed for newly adopted lines of insurance as being acceptable for a “pass.” Additionally, intention to perform analysis for newly adopted lines that have not yet been reported is acceptable for a “Yes” response to item 7c. If the department participates in MCAS but does not participate in all lines after the one-year grace period has elapsed, consider that the jurisdiction has passed with a strong recommendation to add the additional line(s).

In the event a department conducts its own individualized MCAS program, consider that scenario as marginally passing with a strong recommendation to participate in the standardized NAIC program.

Checklist

	YES	NO
7a. Does the department require eligible companies to file the MCAS with the NAIC?	_____	_____
7b. Does the department require that the MCAS be prepared in accordance with the NAIC MCAS user guides and instructions?	_____	_____
7c. Does the department utilize the data obtained from the MCAS for market analysis? (Examples of utilization include, but are not limited to, such activities as performing baseline or Level 1 analysis.)	_____	_____

YES

NO

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 8 – Electronic Data Entry with the NAIC

The department enters data no less frequently than on a quarterly basis (but preferably monthly) to all NAIC systems, including, but not limited to, the Complaint Database System (CDS) and the Regulatory Information Retrieval System (RIRS). Except for immediate concerns as defined in the *Market Regulation Handbook*, the department enters data into the Market Actions Tracking System (MATS) concerning upcoming examinations. Additionally, the department enters continuum actions into MATS when initiating the action.

Objective

The objective of this requirement is to ensure that regulators in other jurisdictions are completely and timely informed of market conduct actions that have occurred, are ongoing, or that are anticipated.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 8, the jurisdiction must answer “Yes” to checklist item 8a., item 8b and 8d., unless there is an applicable explanation, briefly explained, in applicable checklist item 8e. With respect to checklist item 8c., further clarification of what continuum items must be entered will be forthcoming; however, any item resulting in a formal order must be entered into RIRS. Source documents should be reviewed in order to ensure timeliness. Only entries after the certification program is adopted should be measured.

Guidelines

The Market Information Systems Research and Development (D) Working Group report on reporting timeliness, accuracy and completeness will be attached.

- Timeliness, accuracy and completion standards may be implemented upon consideration by the Market Regulation Certification (D) Working Group.
- Only entries after the certification program is adopted should be measured. De minimis variations (i.e., less than five business days) should be given a “pass.”

Any back-end system that auto-populates the referenced NAIC systems will meet this requirement. If a jurisdiction is using a back-end system which does not currently auto-populate the referenced NAIC systems, that jurisdiction must ensure that the information is entered in the NAIC systems. This may require dual entry until such time as the back-end system auto-populates the NAIC systems.

Significant Market Actions:

The *Market Regulation Handbook* provides guidance on continuum actions for example, “The continuum of market actions includes such initiatives as office-based information gathering, interview with the company, correspondence, policy and procedure reviews, interrogatories, desk audits, on-site audits, investigations, enforcement actions, company self-audits and voluntary compliance programs.” Such significant actions should be reported in MATS as determined by the department.

- If checklist item 8d. is answered “Yes,” ensure each examination is called 60 days prior to the start of the examination unless there is reason (noted in item 8e.) of “immediate concern” as set forth in the *Market Regulation Handbook*). Examples of immediate concerns include, but are not limited to:
 - Fraud allegations.
 - Imminent consumer harm.
 - Blatant disregard of a department order.
 - Imminent solvency concern.

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 9 – Participation in NAIC Market Conduct and Market Analysis Working Groups

The department participates in or monitors NAIC market conduct and market analysis-related working groups as a member or interested regulator.

Objective

The objective of this requirement is to ensure jurisdictions are aware of market conduct and market analysis initiatives, and stay abreast of developments and improvements with respect to market analysis and examination tools, techniques and standards so that they can be applied in jurisdictions’ ongoing market regulation efforts.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 9, the jurisdiction must, at a minimum, be able to answer “Yes” to checklist item 9a. and item 9c., as well as document who in the department or jurisdiction participates in or monitors the Market Analysis Procedures (D) Working Group and the Market Conduct Examination Guidelines (D) Working Group.

Guidelines

NAIC market conduct and market analysis-related working groups provide a national forum for jurisdictions to share and coordinate efforts.

When evaluating checklist items for Requirement 9, it is important to remember participation in the working group and task force meetings is tracked through the NAIC. In the absence of the ability to participate in every applicable meeting or conference call, it is anticipated that a passing jurisdiction will monitor the applicable working group activities through a review of available materials, minutes, and regulator materials.

At each jurisdiction’s discretion, consideration may be given to monitoring the Market Information Systems (D) Task Force and applicable working groups, task forces reporting to the Market Regulation and Consumer Affairs (D) Committee and other working groups, task forces and Committee relevant to consumer issues and market regulation.

Checklist

	YES	NO
9a. Does the department participate in or monitor the Market Analysis Procedures (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?	_____	_____
9b. If the answer to item 9a. is “Yes”, who in the department, by functional title, participates in or monitors the Market Analysis Procedures (D) Working Group?		
9c. Does the department participate in or monitor the Market Conduct Examination Guidelines (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?	_____	_____
9d. If the answer to item 9c. is “Yes”, who in the department, by functional title, participates in or monitors the Market Conduct Examination Guidelines (D) Working Group?

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 10 – Collaborative Action Designee

The department appoints a collaborative action designee (CAD). The department’s Market Actions (D) Working Group member, CAD and/or CAD alternate attends at least 50% of the discussions, either telephonically or in person, of the Market Actions (D) Working Group meetings they are eligible to attend every year.

Objective

The objective of this requirement is to promote collaboration with other CADs.

Measurement

To evaluate whether a jurisdiction “passes” Requirement 10, the jurisdiction must answer “Yes” to checklist item 10a., and item 10c. If the answer to item 10b is “No,” the jurisdiction is strongly encouraged to appoint a CAD alternative when possible.

Guidelines

When evaluating checklist items for Requirement 10, it is important to remember that the CAD is the one contact identified by the chief market regulator of each jurisdiction to have full responsibility for all communications related to collaborative efforts, including, but not limited to, multi-jurisdictional issues. This includes participating in, or assigning a designee to participate in, certain meetings or conference calls of the Market Actions (D) Working Group. While the market analysis chief (MAC) oversees the internal jurisdictional process of identifying entities with potential market regulatory issues, the CAD oversees the process of communicating about those entities and collaborating with other CADs, potentially through the Market Actions (D) Working Group.

The CAD is the person identified with authority to receive information regarding collaborative actions from the Market Actions (D) Working Group. Additionally, the department’s Market Actions (D) Working Group member, CAD or CAD alternate must attend at least 50% of the discussions, either telephonically or in person, of the Market Actions (D) Working Group meetings they are eligible to attend every year.

Checklist

	YES	NO
10a. Has the department appointed a CAD?	_____	_____
10b. Has the department appointed a CAD alternate?	_____	_____
10c. Does the CAD and/or CAD alternate attend at least 50% of all meetings and conference calls of the Market Actions (D) Working Group they are eligible to attend?	_____	_____

Complete the following if this is an Interim Annual Review:

Have there been any significant changes to the procedures since last year’s review? If “Yes,” please provide an explanation.	_____	_____
--	-------	-------

COMMENTS:

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

Requirement 11 – Interdivisional Collaboration

The Department of Insurance has established and follows a systematic procedure for interdivisional communication (as referenced in the *Market Regulation Handbook*).

Objective

The objective is to establish and maintain a systematic procedure for interdivisional communication, as well as specific guidance regarding which requirements govern or define interdivisional collaboration. This includes identifying warning signs that all staff should share with the market analysis chief (MAC). In particular, all insurance department staff should report to the MAC when information of concern that may result in consumer harm is received in the department.

Measurement

To evaluate whether the jurisdiction “passes” Requirement 11, the jurisdiction must answer “Yes” to checklist item 11a., item 11b., and item 11c.

Guidelines

Insurance department staff should effectively communicate and coordinate with various areas within the department or other jurisdiction agencies/legislature, as appropriate. Such communication should consist of information shared by other areas of the department as well as key findings resulting from research conducted by the staff. Evidence of this communication should be clearly documented. The communication process should include a formal method that allows for pertinent information from other areas (e.g. legal, rates and forms, actuarial, etc.) within the department that could impact market conduct to be shared with the staff. Examples may include regularly scheduled department head meetings, department managers’ meetings, information requests to other areas of the department, etc.

As a means of improving the sharing of information among the jurisdictions, at the conclusion of an investigation that resulted from interdivisional communication, all jurisdictions are encouraged to contact the jurisdiction’s market analysis chief (MAC) in an affected jurisdiction and inform them of the results of the investigation.

When evaluating checklist items for Requirement 11, it is important to remember that market conduct problems do not occur in a vacuum. Complaint activity, legal issues, financial concerns or irregularities in rate and form filings often accompany them. At the same time, market conduct problems may be an early warning sign of other problems with a company, so it is essential for information to be shared and discussed between the MAC and other department staff. This should be done on a systematic basis, including, at a minimum, a quarterly meeting or questionnaire requesting other work areas within the department to report unusual activity that may be of interest to the MAC, such as patterns of adverse financial data, consumer complaints, policy termination activity, producer misconduct or use of noncompliant forms or rates.

Checklist

	YES	NO
11a. Has the department established procedures for the market analysis chief (MAC), or appropriate designee, to communicate interdepartmentally with the appropriate staff, either through written channels or by sufficient demonstration of action (such as regularly scheduled department head meetings, department managers’ meetings, or information requests to other areas of the department)?	_____	_____

Draft: 5/9/23

Guidelines and Checklist adopted by the Market Regulation and Consumer Affairs (D) Committee – 8/15/23
Guidelines and Checklist adopted by the Market Regulation Certification (D) Working Group – 6/6/2023

11b. Does the MAC, or appropriate designee provide the appropriate interdepartmental staff with market concerns such as, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct or use of noncompliant forms or rates, related to the following functional areas:

- i. Consumer Services
- ii. Enforcement
- iii. Legal
- iv. Forms and Filing
- v. Financial
- vi. Market Analysis
- vii. Market Conduct

_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

11c. On a quarterly basis, does the MAC, or appropriate designee, solicit information from the above functional areas regarding adverse patterns on, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct, or use of noncompliant forms or rates?

COMMENTS:

1st assessment	all mandatory must be met
1st 5-year re-assessment	50% of remaining available points
2nd 5-year re-assessment	90% of remaining available points

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 1				
1a	Does the department have the general authority to collect and analyze information whenever it is deemed necessary?			
1b	Does the department have the authority to collaborate and coordinate with other regulatory agencies?			
1c	Is the department's authority broad enough to cover market analysis, comprehensive and targeted market conduct examinations and the continuum of market regulation actions, including enforcement?			
Requirement 2				
2a	Does the department have authority by statute, rule or other authority to utilize the <i>Market Regulation Handbook</i> ?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
2b	When conducting examinations or continuum activities, does the department incorporate applicable <i>Market Regulation Handbook</i> review standards and related materials to the extent they are consistent with state laws?			
2c	Does the department have examination-specific policies and procedures in addition to those guidelines set forth in the <i>Market Regulation Handbook</i> ?			
2d	If the answer to item 2c. Is "Yes", is the jurisdiction able to demonstrate that it has followed its own established policies and procedures in adopting any process that deviates from the <i>Market Regulation Handbook</i> ?			
Requirement 3				
3a	Does the department have analysts on staff or under contract whose responsibility is to conduct market analysis of insurers doing business in the jurisdiction?			
3b	If the department utilizes contract analysts, please describe in a separate attachment the manner and extent of utilization in the department's recent activities.			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3c(1)	Indicate below the number of FTE contract and staff analysts for each of the last three years.			
3c(2)	Indicate below the number of market analysis reviews for which market analysis was performed in the prior review period. Market analysis means formal review of a company through existing processes (e.g., Level 1, Level 2).			
3d	Does the department have examiners on staff whose responsibility is to examine and/or conduct continuum actions of insurance companies as indicated by the department's market analysis or as prescribed by jurisdiction laws?	Read 3d and 3e together. Satisfaction of one satisfies both.		
3e	Does the department utilize contract examiners to examine and/or conduct continuum actions of insurance companies as indicated by the department's market analysis or as prescribed by jurisdiction laws?	Read 3d and 3e together. Satisfaction of one satisfies both.		
3f	If the department utilizes contract examiners, please describe in a separate attachment the manner and extent of utilization in the department's recent activities.			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3g	Indicate below the number of FTE market examiners, including supervisory personnel on the department's staff and/or the number of individual contract examiners used compared to the last three years.			
3h	Has the department performed any targeted exams or market continuum actions in the prior two years?			
3i	If the answer to item 3h. is "Yes," please provide a list of such exams or market continuum actions and the scope of the exams/actions.			
3j	If the answer to item 3h. is "No," does the department have the on-staff resources or the ability to contract additional resources to perform targeted exams/actions, if deemed necessary?			
3k	Does the department have the authority to hire contractors as specialists to perform market regulation?	If 3e is "yes"		
3l	If the department has authority to hire contractors, does it have either a statewide or departmental established process it follows for selecting contractors for market regulation purposes? Briefly explain.	If 3e is "yes"		

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3m	Does the department oversee and manage contractors? Briefly explain.	If 3e is "yes"		
3n	Does the department have policies and procedures, subject to periodic review and updates, for identifying and addressing market conduct issues using market analysis and market conduct continuum activities, including examinations?			
3o	If the answer to item 3n. is "Yes," what quantitative and subjective measurements are available to evaluate whether the department is adhering to its policies and procedures?			
3p	Based on the review of staff resources, please provide an explanation of any significant changes in resources and/or workload over the three-year period covered in the data above.			
Requirement 4				
4a	Does the department have policy and procedures in place on necessary credentials or minimum educational and experience requirements for selecting and hiring staff consistent with the detailed credentials listed in the Certification guidelines?		Allows for unions*. Continue to discuss	

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
4b	Does the department have policy and procedures in place on necessary credentials or minimum educational and experience requirements for selecting and hiring contractors consistent with the detailed credentials listed in the Certification guidelines?			
4c	Does the department have a staff development program that encourages and supports educational and training pursuits, including training, courses, webinars and certifications offered by the NAIC?			
4d	Does each Examiner-in-Charge possess or is the Examiner-in-Charge making progress towards completion of noted designations?			
4e	Does the department recognize licenses and other highly technical credentials of professionals and experts such as attorneys, actuaries, cybersecurity experts, certified public accountants, information technology (IT) experts and other professionals and specialists as qualified to perform certain market regulation activities?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
4f	Does the department maintain written procedure manuals to demonstrate a succession plan?			
4g	As a separate attachment, provide a list of market analysts/examiners that includes the following: name; professional designation(s); title; years employed by the department (include functional area); type of college degree; and prior regulatory or insurance experience. Also indicate those market conduct analysts/examiners that are contractual and whether each is full-time with the department.			
Requirement 5				
5a	Does the jurisdiction have laws, regulations or case law that specify how the confidentiality of market conduct examination workpapers is to be handled?			
5b	Has the department entered into the Multi-State Information Sharing Agreement with other departments and the NAIC and does the department have written policies/procedures and communicate such policies/procedures to staff?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
5c	Does the department have written policies and procedures and communicated such policies and procedures to employees relating to the protection of confidential information which includes PII and PHI, handling of public records requests and requirements for confidentiality agreements when it becomes necessary to share confidential information with other federal and international regulatory or law enforcement agencies, not otherwise covered by the multi-state agreement?			
5d	Does the department have a records retention schedule which outlines plans for secure storage and timeline for destruction of work papers?			
Requirement 6				
6a	Does the department have procedures for staff to follow when reporting potential collaborative actions to the department's CAD?			
6b	If the department identified a potential collaborative action, did the department notify all CADs—via meeting, bulletin board or other communication—of the activities identified that may have the potential for collaboration?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
6c	If the department received a positive response to its inquiries to other CADs regarding a potential collaborative action, did the department refer the action to Market Actions (D) Working Group using the reporting procedures outlined in the Market Actions (D) Working Group's Policies and Procedures, including completing the Request for Review form and submitting the form to the designated NAIC support staff?			
6d	If the answer to item 6b., or item 6c. is "No," please provide a brief explanation.			
6e	Does the department have written procedures for reviewing and evaluating its participation in potential collaborative actions brought to its attention, either through the Market Actions (D) Working Group or by another department?			
6f	For any collaborative action for which the department declined participation, has the department provided a response to the Market Actions (D) Working Group?			
6g	If the answer to item 6e. or item 6f. is "No," please provide a brief explanation.			
6h	Does the MAC, Market Actions (D) Working Group member, CAD and/or CAD alternate actively monitor the bulletin board discussions?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
6i	Does the department participate in the review of national analysis data on an annual basis?			
6j	If the answer to item 6i is "Yes", who in the department, by functional title, participates in the annual national analysis project?			
6k	Does your state participate in one national analysis team at least every other year?			
		Pam's Note - 6.k. and 6.l. should be deleted to track changes we made elsewhere in Requirement 6 , since the natic		
6l	Who in the department, by functional title, participates on a national analysis team at least every other year?			
Requirement 7				
7a	Does the department require eligible companies to file the MCAS with the NAIC?			
7b	Does the department require that the MCAS be prepared in accordance with the NAIC MCAS user guides and instructions?			
7c	Does the department utilize the data obtained from the MCAS for market analysis? (Examples of utilization include, but are not limited to, such activities as performing baseline or Level 1 analysis.)			
Requirement 8				
8a	Does the department enter or transmit data at least quarterly into the CDS?			
8b	Does the department enter or transmit data at least quarterly into RIRS?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
8c	Does the department enter non-examination continuum actions into MATS when initiated and the resulting applicable final status reports or updates (if applicable) at least quarterly?			
8d	Did the department enter at least 75% of examinations into MATS at least 60 days before the start of the examination as set forth in the <i>Market Regulation Handbook</i> ? (Note: The start of the examination is the date the department began work on the examination materials received from the examined entity.)			
8e	If the answer to item 8a., item 8b., item 8c., or item 8d. is "No," please provide an explanation.			
Requirement 9				
9a	Does the department participate in or monitor the Market Analysis Procedures (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?			
9b	If the answer to item 9a. is "Yes", who in the department, by functional title, participates in or monitors the Market Analysis Procedures (D) Working Group?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
9c	Does the department participate in or monitor the Market Conduct Examination Guidelines (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?			
9d	If the answer to item 9c. is "Yes", who in the department, by functional title, participates in or monitors the Market Conduct Examination Guidelines (D) Working Group?			
9e	List any other market conduct or market analysis-related working groups and/or task forces that the department participates in or monitors.			
Requirement 10				
10a	Has the department appointed a CAD?			
10b	Has the department appointed a CAD alternate?			
10c	Does the CAD and/or CAD alternate attend at least 50% of all meetings and conference calls of the Market Actions (D) Working Group they are eligible to attend?			
Requirement 11				
11a	Does your state participate in the review of national analysis data on an annual basis?			
11b	Who in the department, by functional title, participates in the annual national analysis project?			

moved to 6

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
11e	Does your state participate in one national analysis team at least every other year? Has the department established procedures to ensure participation on a national analysis team at least every other year?			
11d	Who in the department, by functional title, participates on a national analysis team at least every other year?			
Requirement 11				
11a	Has the department established procedures for the market analysis chief (MAC), or appropriate designee, to communicate interdepartmentally with the appropriate staff, either through written channels or by sufficient demonstration of action (such as regularly scheduled department head meetings, department managers' meetings, or information requests to other areas of the department?)			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
11b	Does the MAC, or appropriate designee provide the appropriate interdepartmental staff with market concerns such as, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct or use of noncompliant forms or rates, related to the following functional areas: i. Consumer Services ii. Enforcement iii. Legal iv. Forms and Filing v. Financial vi. Market Analysis vii. Market Conduct			
11c	On a quarterly basis, does the MAC, or appropriate designee, solicit information from the above functional areas regarding adverse patterns on, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct, or use of noncompliant forms or rates?			
11d	Does the MAC participate in communication with other insurance departments regarding market analysis by posting and responding to NAIC Market Regulation and Market Analysis Electronic Bulletin Board inquiries?		eted as it is covered in Req-6

Market Analysis Procedures (D) Working Group
Virtual Meeting
July 17, 2023

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 17, 2023. The following Working Group members participated: Jo LeDuc, Chair (MO); John Haworth, Vice Chair (WA); Crystal Phelps (AR); Maria Ailor and Tolanda Coker (AZ); Don McKinley (CA); Steve DeAngelis (CT); Susan Jennette (DE); Scott Woods and Pamela Lovell (FL); Erica Weyhenmeyer (IL); Shannon Lloyd (KS); Lori Cunningham (KY); Nina Hunter (LA); Salama Karim-Camara (MD); Timothy N. Schott (ME); Jeff Hayden (MI); David Dachs (MT); Martin Swanson and Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman and Erin Porter (NJ); Leatrice Geckler (NM); Larry Wertel (NY); Landon Hubbard (OK); Karen Veronikis (PA); Brett Bache (RI); Rachel Moore (SC); Melissa Gerachis (VA); Karla Nuisl (VT); Rebecca Rebholz and Mary Kay Rodriguez (WI); and Theresa Miller (WV). Also participating was: Tony Dorschner (SD).

1. Adopted its June 12 Minutes

LeDuc said the Working Group met June 12 to discuss data sources for market analysis, the standardized ratios for the Other Health Market Conduct Annual Statement (MCAS), and the exemption of fraternal from MCAS reporting.

Gerachis made a motion, seconded by Jennette, to adopt the Working Group's June 12 minutes (Attachment Five-A). The motion passed unanimously.

2. Adopted Other Health Insurance MCAS Ratios

LeDuc said clarifications were added to the proposed ratios and re-posted to the Working Group's web page. She said the changes were not substantive, and the ratios have been exposed for about six weeks.

Samantha Burns (America's Health Insurance Plans—AHIP) suggested that ratio 4 measuring the average days to a decision on denied claims should be limited to decisions made on clean claims because the time to receive the appropriate documentation to make a decision is often outside the control of the insurance company. She also suggested that ratio 10 measuring the number of complaints received per 1,000 policies should be limited to complaints received by the department of insurance (DOI).

Rodriguez said the complaint ratio is the same formula as used in other MCAS lines. She said the Other Health MCAS blank does not collect information on clean claims, only denied claims, and the days to make a decision on denials are collected in the MCAS blank. LeDuc noted that the ratios are used to determine whether an analyst needs to look more closely at a company, not to determine compliance.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ supports the proposed Other Health ratios, and there was no lack of clarity even if others may disagree with them. He said they are useful.

Rebholz made a motion, seconded by Geckler, to adopt the Other Health MCAS standard ratios. The motion passed unanimously.

3. Discussed Lunch and Learn Trainings

LeDuc said she would like to continue the work Haworth began last year to determine what training needs exist and how best to meet the demand. She proposed that the Working Group sponsor “lunch and learn” trainings to all market analysts on a regular schedule. She said the name of these sessions could be something different than “lunch and learn” trainings. She said it would be regulator-only training, so actual live data can be used, and the attendees can bring in actual analysis for discussion. She said she is using the Casualty Actuarial and Statistical © Task Force’s book club as a model. It would not be presentations as much as get-togethers to discuss and learn from fellow market analysts.

LeDuc said it could begin with a basic overview of a specific tool (e.g., the Market Analysis Prioritization Tool [MAPT], the Market Analysis Review System [MARS], or the Complaints Database System [CDS], depending on demand), the design of the tool itself, what the data means, and how the tool weighs and scores data. She said once that basic understanding is shared, additional lunch and learns could build on that groundwork and move into doing actual analysis using the tool.

LeDuc said it is best to keep very flexible and address topics that are most in demand, and then find an experienced state insurance regulator, or regulators, who can provide the training to meet that demand. She said she envisions this to be a monthly event.

Veronikis said it is a fabulous idea and would be helpful for training new analysts. Moore agreed that extra training is always welcome. Dorschner said this is a great idea for the smaller states who do not have the resources. Rodriguez said she supports the idea, and the iSite+ summary reports should be included as well. LeDuc said she agrees, and there are so many topics that the sessions could be daily and not get through everything.

Geckler said monthly is a good idea, and she asked when this would be implemented. LeDuc said she wants to start as quickly as possible, but in August there is the NAIC Summer National Meeting and the Insurance Regulatory Examiners Society (IRES) Career Development Seminar (CDS). Jennette said the NAIC Insurance Summit is in September.

Weyhenmeyer, Miller, Lovell, Gerachis, and Belanger expressed support for the idea.

LeDuc said she would work with Haworth and NAIC support staff to set up a schedule, and she will contact state insurance regulators to assist.

4. Discussed the Inclusion of Fraternal Insurance Companies in the MCAS

LeDuc said the attachment to the agenda helps get a big picture of how much premium fraternal account for by jurisdiction in actual dollars and as compared to non-fraternal business. She said in some jurisdictions, there is a very significant presence of business written by fraternal, but as a percentage of the market nationally, fraternal only account for about 2.5% of the written premium. She said the 2.5% is nearly \$10 billion in premium. She said she sent each member of the Working Group state-specific information on the fraternal marketplace in their states.

LeDuc said comments were received from Maine, Pennsylvania, the CEJ, and several fraternal companies and trade associations.

Schott said Maine is statutorily unable to collect data from fraternal. They are not opposed to including them in MCAS reporting, but Maine could not require them to report.

Veronikis said she is still waiting to hear from the Pennsylvania department's legal staff to see if they have the authority to require fraternal to report the MCAS. She said the fraternal in Pennsylvania range in premium size from only \$12 to up to \$273 million. She said she always assumed the fraternal were small, and this surprised her. She said she wants to dig deeper.

Todd Martin (American Fraternal Alliance—AFA) said there should be a reason for making a change to the MCAS. He said nothing has changed in the fraternal marketplace since the last time fraternal were considered for inclusion in the MCAS by the Working Group. He said there is a very low incidence of market conduct incidents with fraternal, and other means are available for assessing and addressing market conduct issues. LeDuc said Missouri does not receive the complaint logs of fraternal. She asked if that was being offered. Martin said he thinks it could be.

Birnbaum said Martin's comments show a misunderstanding of the purpose of the MCAS. He said the purpose of the MCAS is not to respond to issues that arise, but to identify problems. He said it is in the company and state insurance regulator's interests to identify problems without the time and resources required for examinations. He said he reviewed the websites of the fraternal that submitted comments. He said some of them are larger than many life insurance companies that are required to file an MCAS. Additionally, the companies are no longer distinguished for special treatment by financial analysts, and they now file their financial annual statement on the Life statement blank. He said small fraternal companies would be exempt from reporting an MCAS due to the premium threshold, just as small life companies are.

Ailor said if fraternal are required to file an MCAS, analysts should have the ability to review them in the MARS. She said the analysts in Arizona were unable to open an MARS review on any fraternal. She said given the amount of business generated by fraternal, they should be seriously considered for inclusion in the MCAS. She also noted that the \$50,000 premium threshold in the MCAS should be looked into to see if it is still the correct amount for a threshold. LeDuc said the threshold was set around 2004 when the MCAS was first developed, and she agreed that it should be reconsidered in a separate conversation.

Swanson said Nebraska's position is unchanged from the 2019 position expressed by Director Bruce R. Ramage (NE) in his comments to the Working Group in 2019. Nebraska has very few complaints, and it utilizes its examination authority to do a good job in monitoring the fraternal market. He said adding fraternal to the MCAS is not needed.

Nuissl asked what the impact will be on fraternal to report the MCAS. She asked if fraternal capture all the data elements that need to be reported in the MCAS and whether it may be an undue hardship on the fraternal companies. Ailor said if the Working Group required them to file, they would be permitted adequate time to prepare. Martin said he would be happy to look at the Life MCAS blank to see what the lift may be for fraternal. Birnbaum said fraternal range in size, and whereas some small companies may have difficulties, the large fraternal would have the same systems in place as large life companies. He suggested that if the fraternal indicate that the data will be difficult for them to collect, they should be required to specify which data and the reasons.

Le Duc said this discussion will continue at the Working Group's next meeting.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Sharepoint/Member Meetings/D CMTE/2023 Summer National Meeting/MAPWG/0717/07 MAPWG .docx

Draft: 6/21/23

Market Analysis Procedures (D) Working Group
Virtual Meeting
June 12, 2023

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 12, 2023. The following Working Group members participated: Jo LeDuc, Chair (MO); John Haworth, Vice Chair (WA); Teri Ann Mecca (AR); Maria Ailor and Tolanda Coker (AZ); Don McKinley (CA); Tracy Garceau (CO); Steve DeAngelis (CT); Susan Jennette (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Shannon Lloyd (KS); Lori Cunningham (KY); Mary Lou Moran (MA); Raymond Guzman (MD); Timothy N. Schott and Connie Mayette (ME); Jeff Hayden (MI); Martin Swanson and Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman and Erin Porter (NJ); Hermoliva Abejar (NV); Larry Wertel (NY); Guy Self (OH); Landon Hubbart (OK); Karen Veronikis (PA); Matt Gendron and Brett Bache (RI); Rachel Moore (SC); Tracy Klausmeier (UT); Melissa Gerachis (VA); Karla Nuisl (VT); and Mary Kay Rodriguez (WI). Also participating was: Lance Hirano (HI).

1. Adopted its May 8 Minutes

LeDuc said the Working Group met May 8 to discuss data sources for market analysis, the standardized ratios for the Other Health Market Conduct Annual Statement (MCAS), and the exemption of fraternal from MCAS reporting.

Haworth made a motion, seconded by Gendron, to adopt the Working Group's May 8 minutes (Attachment Five-A1). The motion passed unanimously.

2. Discussed NAIC MIS Data

LeDuc said the Working Group is identifying what data sources market analysts use as the first part of its charge to "assess currently available market analysis data to identify needed improvements in the effectiveness of the data for market analysis and the predictive abilities of the market scoring systems utilizing the data." She said the current version contains the additions and re-ordering discussed in May. She said once the Working Group has satisfactorily identified these sources, it will begin the task of assessing the data.

Veronikis said the use of artificial intelligence (AI) techniques in market analysis is new and promising. She said there are large quantities of data available for examinations in the Regulatory Information Retrieval System (RIRS) and the Market Actions Tracking System (MATS), and AI analysis techniques will enable analysts to sort through the large quantities of data to find correlations between effects and possible causes, such as changes in company leadership. She cautioned about biases that can re-enforce themselves by the AI technique focusing only on issues that have repeated. She recommended that AI be limited in its self-learning and require human intervention as algorithms are developed.

Birny Birnbaum (Center for Economic Justice—CEJ) said any data source could be useful for market analysis when used at the right time and in the right context. Data can be useful in some circumstances but not useful in other circumstances. Birnbaum said a question to ask is whether the data are available and in a format that is useful. He said creating a list of data sources is useful, but the Working Group needs to determine if a data source could be available for AI applications. He said it should also be considered whether the source could be used by itself or if it would need to be used in conjunction with other sources and how easily that can be accomplished. LeDuc asked the Working Group as it moves through the list of sources to consider whether each source can be used alone, in conjunction with other sources, or if it must be used in conjunction with other data. She said a good example

would be the American Community Survey (ACS) data, which by itself would not provide much useful information, but adds insight when used with other market analysis data.

Ailor asked for identification of where the data on the list can be obtained. She said newer and even experienced analysts do not necessarily know where to find the sources of data listed. LeDuc said an additional column will be added with information on where the data source can be located.

LeDuc asked for comments to be sent to Helder by July 7.

3. Discussed Proposed Other Health Insurance MCAS Ratios

LeDuc asked Rodriguez to review the draft proposed standard ratios for the Other Health MCAS blank.

Rodriguez said the subject matter expert (SME) group met four times, and it is proposing the adoption of 15 ratios.

Rodriguez said ratio 1 provides the percentage of closed claims denied, rejected, or returned. She said the SME group changed the title of the ratio for clarity.

Rodriguez said ratios 2 and 3 look at the total number of denials and determine the percentage of denials for pre-existing conditions and due to inadequate documentation. Hirano asked if there was a definition for inadequate documentation. LeDuc said the MCAS blank has a set of definitions that is available. Rodriguez said that term was not specifically defined. Birnbaum noted that these are only ratios. If there are definitional issues, they will show up in the reported data rather than the ratio. Ailor suggested that this could be addressed in training.

Rodriguez said ratios 4 and 5 allow analysts to measure the average number of days to decide on a denied claim and an approved claim. She said both ratios are new. She said a note was added to clarify that the average is determined as a sum of all company data, and it is a true average for the state. She said that is the case for all ratios, and she asked why a note needed to be added to these two. Birnbaum said the two ratios are different in that the numerator is first calculated per company and then calculated using those individual results to determine the statewide number of days to a decision.

Rodriguez said ratios 6, 7, and 8 are measurements of cancellations. She said ratio 6 measures free look cancellations; ratio 7 is the percentage of cancellations initiated by the policyholder; and ratio 8 is the percentage of cancellations initiated by the company.

Rodriguez said ratio 9 was unchanged, and it provides analysts with the loss ratio.

Rodriguez said ratios 10 and 11 are complaint measurements. She said ratio 10 is the number of complaints per 1,000 policies in force and claims handled during the period.

Rodriguez said ratio 11 is a new ratio, and it measures the percentage of complaints that lead to claims reprocessing.

Rodriguez said ratios 12 and 13 are lawsuit ratios that measure the number of lawsuits per 1,000 policies and claims handled, as well as the percentage of those lawsuits that were closed with consideration to the consumer.

Rodriguez said ratios 14 and 15 utilize data elements that have never been collected before in the MCAS. She said since this MCAS blank has data on commissions, the SME group agreed that it would be helpful to measure the average commission per policy and average commission as a percentage of written premium. She said the SME

group also recognized that there was some uncertainty on how, and whether, commissions were paid on renewals, so it added a caveat to the ratio. She said even with the caveat, the SME group believed it was a worthwhile ratio to add to the set of standard ratios, but she suggested re-visiting them in a couple years.

LeDuc said Birnbaum was a member of the SME group and submitted some suggested improvements that the SME group did not have time to consider, so she would like the Working Group to consider them. She said they do not change the substance of the ratios.

Birnbaum said the CEJ supports the ratios, and it is not suggesting any changes to the ratios themselves. He proposed that the language, “the above calculation is the total number of days for all insurers to a decision on denied claims divided by the total number of denied claims for all insurers to produce the statewide average time to a decision” be appended to ratios 4 and similar language to ratio 5 for approved claims. He said he agrees with the denominator chosen for ratios 7 and 8, but he said the title needs to be changed to accurately reflect what the denominator is. He suggested using the term “policies during the period” rather than “policies in force.” He also suggested new titles for ratios 14 and 15 to better reflect what the ratios measure. For ratio 14, he suggested “Average Dollars of Commission per Policy,” and for ratio 15, he suggested “Percentage Commissions to Written Premium.” Haworth asked if language similar to what was added to ratios 4 and 5 needs to be added to ratios 14 and 15 since those two are also averages. Birnbaum said it was not necessary since no separate calculation needs to be made per company to derive ratios 14 and 15. There were no objections to the recommendations.

LeDuc said the ratios with Birnbaum’s suggestions will be posted to the Working Group web page. She asked for comments by July 7, and they will be considered for adoption during the Working Group meeting.

4. Discussed the Inclusion of Fraternal Insurance Companies in the MCAS

LeDuc said during the May meeting of the Working Group, Virginia asked the Working Group to again consider whether to require fraternal companies to file MCAS data to participating states. She said in the past, the MCAS has excluded fraternal companies because they are not uniformly regulated across the states.

LeDuc said the Working Group last considered lifting the exemption in late 2019 because at that time, fraternal companies began filing their financial annual statements on the life, health, and property/casualty (P/C) statement types. She said this enabled them to access the MCAS to report their data. However, she noted that since no motion was made to require fraternal companies to file, fraternal companies continued to be exempt.

LeDuc said regardless of what is ultimately decided, an individual state can always require a fraternal company licensed in their state to file an MCAS. She said the MCAS data belongs to the state to which it is reported, and that state can require any company licensed in its jurisdiction to file an MCAS. Overall, however, on a national basis, the MCAS requirements exempt fraternal companies from filing an MCAS.

LeDuc said numerous comments from fraternal insurers were sent to both the Working Group and individual states. She said for the most part, the comments were the same. She invited any fraternal organizations that submitted comments to address the Working Group.

Allison Koppel (American Fraternal Alliance—AFA) said fraternal companies typically serve the middle market of life and annuity customers, and their insureds are members of the fraternal society and participate in the governance of the society. She said this close relationship between the members and the fraternal insurer results in fewer complaints and market conduct issues. She said MCAS reporting would be unduly burdensome, and there are more effective ways to collect market conduct data from fraternal companies, such as complaint logs and routine market

conduct examinations. She said fraternal are committed to their members and eager to work with departments of insurance (DOIs) to protect consumers.

Swanson said the current exemption for fraternal is appropriate. He said fraternal are regulated differently in different states, and it has never been a concern to get needed market conduct information from fraternal. He said in 2019, Nebraska's Director of Insurance, Bruce R. Ramge, sent a comment letter that still reflects Nebraska's position. LeDuc said it would be re-posted for the current discussion.

LeDuc said in the last meeting, she asked the state insurance regulators to look at the landscape of fraternal in their jurisdictions. She said in Missouri, the majority of fraternal are very small, but there are a handful of fraternal that are very large, with one writing over \$96 million in premium. Gerachis said in Virginia, there were 18 fraternal that wrote more than the \$50,000 MCAS reporting threshold, and nine wrote in excess of \$1 million dollars in premium each. She said there are many small companies that report an MCAS, and it seems unfair to exempt fraternal because of their size. Ailor said in Arizona, there are quite a few fraternal with insignificant amounts of premium, but there is one fraternal with more than \$67 million.

Birnbaum said an MCAS was designed for the efficient analysis of consistent and regularly reported data. He said market conduct examinations and complaints do not provide consistent data. He said it makes no more sense to exempt fraternal from reporting an MCAS than it would to exclude them from reporting their financial annual statements. He said state insurance regulators cannot assume that there are no market conduct issues with fraternal. Complaints are not a good substitute for MCAS data since many consumers are unaware that they can file a complaint with DOIs. Regarding an exemption due to size, he said many mutual insurers are small, but they are not exempt. He said market conduct examinations are not a good substitute for regular, consistent reporting, and it is not as efficient as an MCAS. He said reporting to an MCAS is more in the interest of fraternal than relying on examinations, as it is less costly to routinely report data.

Todd Martin (AFA) said there should always be a cost/benefit analysis for any regulatory burden by the state insurance regulators and industry. He said the reasons to remain exempt are the same as they were historically and in 2019.

Le Duc said the discussion will continue at the July meeting. She asked for comments by July 7.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Sharepoint/Member Meetings/D CMTE/2023 Summer National Meeting/MAPWG/0612/06 MAPWG .docx

Draft: 5/30/23

Market Analysis Procedures (D) Working Group
Virtual Meeting
May 8, 2023

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 8, 2023. The following Working Group members participated: Jo LeDuc, Chair (MO); John Haworth, Vice Chair (WA); Crystal Phelps (AR); Tolanda Coker (AZ); Don McKinley (CA); Tracy Garceau (CO); Steve DeAngelis (CT); Cheryl Wade (DC); Scott Woods (FL); Erica Weyhenmeyer (IL); Shannon Lloyd (KS); Mary Lou Moran (MA); Raymond Guzman (MD); Connie Mayette (ME); Jeff Hayden (MI); Troy Smith and David Dachs (MT); Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman and Erin Porter (NJ); Hermoliva Abejar (NV); Larry Wertel (NY); Ben Hauck (OH); Landon Hubbart (OK); Karen Veronikis (PA); Matt Gendron and Brett Bache (RI); Rachel Moore (SC); Tanji J. Northrup (UT); Will Felvey and Melissa Gerachis (VA); Isabelle Turpin Keiser (VT); Darcy Paskey, Rebecca Rebholz, and Mary Kay Rodriguez (WI); and Theresa Miller (WV). Also participating was: Shane Quinlan (NC).

1. Adopted its April 10 Minutes

LeDuc said the Working Group met April 10. The Working Group discussed its charges and goals for 2023 and the standardized ratios for the Other Health Market Conduct Annual Statement (MCAS).

Haworth made a motion, seconded by Mayette, to adopt the Working Group's April 10 minutes (Attachment Five-A1a). The motion passed unanimously.

2. Discussed NAIC Market Information Systems Data

LeDuc said the Working Group is charged with assessing currently available market analysis data to identify needed improvements in the effectiveness of the data for market analysis and the predictive abilities of the market scoring systems utilizing the data. This includes looking at the predictive power of current market scoring systems, assessing how much each variable should be weighted in its productiveness, and dropping any variables that have no utility. Once the data sources are identified, the Working Group can then consider how to improve the scoring systems through the inclusion of additional data or more rigorous statistical methods, such as those accomplished through artificial intelligence (AI) technologies. To help begin the discussion, LeDuc said she, Haworth, and Randy Helder (NAIC) began drafting a list of data sources used in market analysis. She said the list includes NAIC data, state data, and non-NAIC data sources. She said the list is not exhaustive, and she invited all interested state insurance regulators and other parties to add to it. She noted that some of the NAIC data sources are used more frequently than others, and some of the state sources of data overlap with the NAIC but provide more specific detail or types of data, such as consumer inquiries in addition to complaints. She said the non-NAIC sources of market analysis data may be helpful to market analysts as state insurance regulators look to make more robust and predictive scoring mechanisms. Garceau said she appreciates having the list started, and it will help her and others to focus their efforts.

Jules Bonk (unknown affiliation) asked whether the NAIC data includes lawsuits. LeDuc said she is unaware of an NAIC source for lawsuits other than the data element in the MCAS requirement for a company to report the number of lawsuits. She said LexisNexis and Westlaw are listed in the non-NAIC sources.

Haworth suggested looking into Google Play and the Apple App Store as possible sources to obtain and review company telematics devices and applications, as well as interviewing companies concerning the reliability of the devices. He noted that there are also customer reviews of the applications on both application stores. LeDuc said these can be added to the list. Miller suggested adding the state's data on rate and form filings.

Birny Birnbaum (Center for Economic Justice—CEJ) said this is a good list of data sources, and the Working Group is tasked with looking for what data is amenable to predictive analytics and AI applications for market analysis. He said some of the identified sources are excellent for extensive investigation, but they are not timely enough for market analysis. Regarding lawsuits, he said there are companies that track lawsuits, and there is statistical data reported to statistical agents on a quarterly basis. He said expanding this to all companies on a transactional data source would provide data amenable to predictive analytics. Additionally, he said testing in the marketplace is a good source of data. He asked how the Working Group wants to proceed. LeDuc said she is looking for feedback on whether there are sources that were missed and should be included on the list and whether the data source is effective and timely for market analysis, whether with AI or more rigorous statistical techniques. She said the lawsuit and statistical agent information would be good suggestions to add to the list.

Gendron suggested adding Demotech to the section on rating agencies. He also suggested moving the Financial Industry Regulatory Authority (FINRA) up the list next to the U.S. Securities and Exchange Commission (SEC) because it examines broker-dealers that can be affiliated with insurers and issues a report of actions against securities licensees, which can be checked against lists of insurance agents and insurance agent applications. Bache suggested adding MCAS dashboards. LeDuc said she can add that, but she said she struggles with the difference between the actual source of the data and the reports generated with the source. LeDuc asked for comments to be sent to Helder by June 2.

3. Discussed Proposed Other Health Insurance MCAS Ratios

Rodriguez said the subject matter expert (SME) group met and began discussions on the proposed ratios. She said the SME group also considered comments received from Birnbaum and Delaware. She said the title for ratio 1 was changed for clarity. She said ratios 3 and 4 were deleted because of system issues with performing the calculations necessary for developing an average of the reported median days. She said another meeting is scheduled to review the second half of the proposed ratios. Birnbaum said he agrees with eliminating ratios 3 and 4, but he said it would be helpful to have ratios to measure the length of time to settle claims. Rodriguez agreed and said it would be looked into.

4. Discussed Other Matters

Gerachis said Virginia would like the Working Group to reconsider the MCAS exemption of fraternal insurance companies. She said there are fraternal with large premium amounts in Virginia that are not in its line of sight. LeDuc said Virginia is not alone in having fraternal with large premiums. She said historically, fraternal were exempt from MCAS because they were not regulated like insurance companies across all jurisdictions. She asked Helder if this should be considered at the Market Conduct Annual Statement Blanks (D) Working Group or with the Market Analysis Procedures (D) Working Group. Helder said the Market Conduct Annual Statement Blanks (D) Working Group is concerned with the blanks, not who is reporting to the MCAS. He said the last time fraternal were considered was by the Market Analysis Procedures (D) Working Group. LeDuc said the discussion will be on the next agenda.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Draft: 4/25/23

Market Analysis Procedures (D) Working Group
Virtual Meeting
April 10, 2023

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 10, 2023. The following Working Group members participated: Jo LeDuc, Chair (MO); John Haworth, Vice Chair (WA); Teri Ann Mecca (AR); Maria Ailor (AZ); Don McKinley (CA); Tracy Garceau (CO); Nick Gill (CT); Pratima Lele (DC); Scott Woods (FL); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy N. Schott and Connie Mayette (ME); Jeff Hayden (MI); Troy Smith (MT); Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman and Erin Porter (NJ); Larry Wertel (NY); Ben Hauck (OH); Landon Hubbard (OK); Karen Veronikis (PA); Matt Gendron and Brett Bache (RI); Rachel Moore (SC); Tanji Northrup (UT); Will Felvey (VA); Isabelle Turpin Keiser (VT); Darcy Paskey, Rebecca Rebholz, and Mary Kay Rodriguez (WI); and Theresa Miller (WV). Also participating was: Shane Quinlan (NC).

1. Adopted its Aug. 22, 2022, Minutes

LeDuc said the Working Group met Aug. 22, 2022, and adopted pet insurance as the next line of business in the Market Conduct Annual Statement (MCAS).

Haworth made a motion, seconded by Ailor, to adopt the Working Group's Aug. 22, 2022, minutes (*see NAIC Proceedings – Fall 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Three*). The motion passed unanimously.

2. Discussed its Charges and Goals for 2023

LeDuc said all last year's charges remain, but one additional charge was added by the Market Regulation and Consumer Affairs (D) Committee. She said the new charge is to, "assess currently available market analysis data to identify needed improvements in the effectiveness of the data for market analysis and the predictive abilities of the market scoring systems utilizing the data." She said this charge is also included in the Market Information Systems (D) Task Force charges, and the Working Group will report to the Task Force its progress throughout the year.

LeDuc reminded the Working Group that the Task Force charged the Market Information Systems Research and Development (D) Working Group to research and make recommendations surrounding the incorporation of artificial intelligence (AI) techniques into the NAIC's Market Information Systems (MIS). She said the Working Group's recommendations were discussed by the Task Force and ultimately adopted by the Task Force at the 2022 Summer National Meeting. She said while the report was generally favorable to incorporating AI techniques into the MIS, it recognized that the data used in the MIS is not as complete as would be needed for AI to be useful. Additionally, the effectiveness of the data collected and the scoring systems likely need improvement.

LeDuc said she and Haworth are suggesting that the best place to start is to hear from the Working Group members and other interested state insurance regulators about what data they use, how they use the data, and their thoughts on the data's effectiveness. She said the only scoring systems currently in the MIS are the Market Analysis Prioritization Tool (MAPT) scoring and the Market Conduct Annual Statement (MCAS)-MAPT rankings. She said the Working Group will consider these later in the year, but the Working Group should first dedicate itself to the effectiveness of the data, because if the effectiveness of the data is not good, the scoring will also be lacking.

LeDuc proposed that the Working Group dedicate this year to this charge alone. She said this charge intersects with the Working Group's charges to, "Recommend changes to the market analysis framework based on results over the past five years," and "Discuss other market data collection issues and make recommendations, as necessary." She said the other charge is to, "Consider recommendations for new lines of business for the MCAS." She said in the last couple years, the Working Group has added other health insurance, travel insurance, and pet insurance to the MCAS, and a pause on this charge will assist participating states to incorporate these new MCAS lines into their baseline analyses.

Ailor said the pause on considering new lines was a good idea. She asked if the pause was just for this year or open-ended. LeDuc said it can only be for the year. She said the Market Conduct Annual Statement Blanks (D) Working Group has a charge to review the older lines of business in the MCAS every three to five years. Weyhenmeyer noted that the pet insurance line of business is still being drafted and may not make the deadline for adopting for use with the 2024 data year. Quinlan said his department still has staffing concerns, and the new lines of business in the MCAS feel like force-feeding their analysts.

Haworth said the newer lines of business have still not been incorporated into the current MIS tools, such as the Market Analysis Review System (MARS). LeDuc suggested that with a pause, perhaps the resources used to incorporate the new lines of business can be re-assigned to incorporate the new incoming data into the MIS tools.

Birny Birnbaum (Center for Economic Justice—CEJ) said consideration of MCAS lines of business is a charge given to the Working Group from the Market Regulation and Consumer Affairs (D) Committee, and it cannot just be paused without getting approval from the Committee. He said a new line of business added this year would not be implemented until the 2025 data year and collected for the first time until 2026. He said pausing puts the implementation dates out even further. He said regarding the resource issues, the MCAS enables departments to quickly review companies in a specific line of business and avoid the resource needs of investigations and ad hoc data calls. He also noted that there were market conduct issues with business owners' policies during the COVID-19 pandemic that could have been addressed with the type of data available in the MCAS, and title insurance has many market conduct issues to be investigated. LeDuc said these discussions are necessary before the Working Group goes to the Committee regarding pausing on MCAS line of business considerations.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said there have been years that the Working Group considered lines of business but decided not to add a line of business. She said it could be done the same way this year. Birnbaum said he agrees.

LeDuc asked for comments to be sent to Randy Helder (NAIC) by April 28 regarding the data used by jurisdictions and the effectiveness of the data. Birnbaum asked how a current inventory of data in the MIS relates to what is needed to incorporate AI techniques in the MIS. He said to evaluate potential AI applications, the Working Group should start with identifying AI applications that would be useful for market analysis and then determine the data needs required for those AI applications. He said the Working Group could then compare what MIS data is available against the data needs for the AI applications. LeDuc said Birnbaum's suggestion was a good second step, but the Working Group needs to know what data is available and how it is being used. She said that is the charge of the Working Group. Birnbaum said he agrees, and his suggestion and the approach outlined by LeDuc are not mutually exclusive and could be worked on at the same time.

Haworth said the Working Group needs to also consider the format in which the data is presented to analysts. He said the data tables for the analysis of private passenger auto (PPA) insurance analysis are different than those for health insurance analysis. Additionally, he said, the NAIC is reformatting the data table to make them for useful for queries. He cautioned against building applications for databases that may become obsolete.

3. Discussed Proposed Other Health Insurance MCAS Ratios

LeDuc said in 2022, the Market Conduct Annual Statement Blanks (D) Working Group adopted the Other Health MCAS blank. She said after a new MCAS blank is adopted, it is the responsibility of the Market Analysis Procedures (D) Working Group to develop and adopt scorecard ratios for the new blank. She said the scorecard ratios are the ratios that are publicly made available on the MCAS web page, and they are usually on a state-wide basis, so no individual company ratios are identifiable. She said there are typically about 10 ratios that are identified for publication on the MCAS scorecard for a line of business, but the Working Group can adopt however many ratios that make sense.

LeDuc said a set of proposed ratios was prepared to begin the discussion of which ratios the Working Group will adopt for the Other Health MCAS blank. She said the ratios are just suggestions, and the Working Group can adopt all or just some of them. She said the Working Group could also come up with different ratios or different ways of calculating the ratios. She said there are 10 proposed ratios. She said they are the typical ratios found in the MCAS blanks, but four of them are different than what the Working Group has adopted in the past. She referenced that the proposed ratios include a loss ratio, as well as a suggestion to post the median days to make decisions to approve and make decisions to deny claims. She noted that the median day ratio may be a little strange, as it would be, in effect, an average of the median days that are reported. She said the Working Group could decide not to include these on the scorecard. She also referenced a proposed ratio for the average commission paid on policies issued. She said for the first time, the MCAS is asking companies to report on commissions paid and the commissions that were returned on canceled policies. She said any scorecard ratio discussion should consider the usefulness of the ratios being posted.

LeDuc said she was not certain whether the ratio results will include enough companies in each state to make the ratios meaningful and ensure confidentiality. She said a concern to address should be whether the ratios are posted only on a national basis like is done for the health insurance MCAS ratio.

Ailor asked how soon the ratios need to be adopted. Helder said by September, but no later than October. Ailor asked if a subject matter expert (SME) group would be formed to review the proposal and make recommendations for the Working Group to consider. LeDuc said SME groups have been used in the past.

Garceau said she is fairly new to the MCAS. She said the proposed ratios look good, but she cannot find any information on what a good ratio would be. She said she had not received a response from the NAIC on her question regarding ratios. LeDuc said that was a good question, and training is needed for new market regulation analysts. She said there is no bright line on what is a good ratio or a bad ratio. Helder noted that most of the proposed ratios are also found on most of the MCAS lines of business, and they are likely considered useful by market analysts. The other ratios were included because there were data elements that were unique to the Other Health blank, so it was assumed that the drafters believed the data elements were useful.

Brown said there is no target ratio that companies are supposed to reach to be determined as a good or bad market participant. The market analysts are comparing a company's ratios to other company ratios to find the outliers. LeDuc said that is how she has used ratios. She said each state and ratio is different, so the market analysts look for companies that are outliers with either a high or low ratio.

LeDuc asked for volunteers to form an SME group to work on the Other Health MCAS ratios. Garceau, Rodriguez, and Birnbaum volunteered. LeDuc asked others who would like to volunteer to contact Helder.

4. Discussed Other Matters

Haworth said the MCAS Filing Status report in iSite+ does not include any travel insurers because there is nowhere on the financial annual statement for companies to report their travel insurance premiums, and it is not possible to know if a company is required to file a travel insurance MCAS blank. However, he said all companies received a call letter in December 2022, which listed all the lines of business to be reported in the MCAS and the participation requirements. LeDuc said there may need to be extra diligence on the part of the participating MCAS jurisdictions to ensure that all companies that need to file actually do file.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Sharepoint/Member Meetings/D CMTE/2023 Summer National Meeting/MAPWG/0410/04 MAPWG .docx

Draft: 8/2/23

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
July 19, 2023

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 19, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Scott Woods (FL); Paula Shamburger (GA); Shannon Lloyd (KS); Salama Karim-Camara (MD); Jeff Hayden (MI); Jennifer Hopper, Teresa Kroll, and Jo LeDuc (MO); Robert McCullough (NE); Leatrice Geckler (NM); Ben Hauck (OH); Karen Veronikis (PA); Rachel Moore (SC); Tony Dorschner (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); John Kelcher (WA); and Letha Tate (WV). Also participating was: Brett Bache (RI).

1. Adopted its June 22 Minutes

The Working Group met June 22 to: 1) discuss Market Conduct Annual Statement (MCAS) directions for determining when a claim is closed on the personal property and homeowners lines of business; and 2) discuss the MCAS data element revision process timeline.

Kelcher made a motion, seconded by Wiseman, to adopt the Working Group's June 22 minutes (Attachment Six-A). The motion passed unanimously.

2. Discussed the Reporting of Closed Claims for PPA and Homeowners Lines of Business

Bache proposed to edit the wording of the data related to the reporting of claims closed with payment so that they read "number of claims closed in your system with the date of final payment within X days."

Weyhenmeyer asked for any comments or thoughts from the Working Group, state insurance regulators, or other interested parties regarding this proposal. No thoughts or comments were made. She said that this will be left open for comments through Aug. 18 and that the Working Group's next meeting will be set for the week of Aug. 21.

3. Discussed the MCAS Data Element Revision Process Timeline

Weyhenmeyer said that Pennsylvania and Missouri submitted comments on this topic. She said that these comments can be found on the Working Group's web page.

Veronikis proposed that there be a 30-day timeline to review what the subject matter expert (SME) group has submitted.

LeDuc said that comments were on the same line as Pennsylvania and suggested a longer timeline for review. She suggested the SMEs have their work and additions available by April 1 to the full Working Group, to give adequate time for Working Group members and interested parties to read, digest, and provide thoughtful feedback on any proposals.

Weyhenmeyer proposed to keep the current timeline and list some best practices in the revision process document.

Weyhenmeyer said that she and Rebholz have drafted some suggestions for these revisions. These best practices incorporate many of the comments that Pennsylvania and Missouri made, including: 1) asking more states to participate in the SME group, with a minimum of five states; 2) exposing the draft to the Working Group at least 60 days before the voting deadline of June 1; 3) as LeDuc suggested, exposing the SME draft documents at each Working Group meeting; and 4) encouraging that the Working Group start those weekly SME groups at the beginning of the discussion rather than at the end. Comments to these suggestions need to be submitted no later than Aug 18. to Hal Marsh (NAIC).

4. Discussed Filing Deadlines for Other Health and STLD Lines of Business

Weyhenmeyer received a letter from the health industry representatives, America's Health Insurance Plans (AHIP) and Blue Cross Blue Shield Association (BCBSA), asking to consider May 31 as the uniform filing deadline in order to be in line with the health filing deadline.

Demetria Tittle (BCBSA), representing the Health Industry Parties (HIP) group, said that in addition to the comprehensive major medical products covered under the health MCAS, many carriers under the HIP group also offer products covered under other health MCAS lines. The HIP group shares the NAIC's goal to deliver accurate and timely MCAS reports that serve as a tool for regulatory oversight. With the MCAS submission deadline, specifically for the short-term, limited-duration (STLD) and other health MCAS filings, these are scheduled to divert from their June 30 deadline to April 30 beginning in 2024 and 2025, respectively, for these filings. Tittle requested that the Working Group consider a uniform MCAS filing date that is consistent with the May 31 deadline, previously approved for health MCAS in 2022. Tittle presented two points for consideration: 1) a consistent billing date for all health care will promote a consistent review for health carriers' MCAS filings for the regulators, as well as carriers, in their workflow process; and 2) states may face receiving health carrier submissions across three different deadline dates in 2024. Here there is an opportunity to help avoid confusion and create consistency related to these filing dates. This is being brought up now so that the Working Group could consider adoption of this recommendation at the Summer National Meeting. Then the Executive (EX) Committee and Plenary can consider it for adoption at the Fall National Meeting. This is detailed further in the comment letter submitted.

Weyhenmeyer asked that comments on this topic be submitted no later than Aug. 18.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Committees/D CMTE/2023 Summer/MCAS Blanks WG/Document 1.doc

Draft: 7/6/23

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
June 22, 2023

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 22, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Tolanda Coker (AZ); Pamela Lovell (FL); Shannon Lloyd (KS); Lori Cunningham (KY); Raymond Guzman (MD); Jeff Hayden (MI); Jennifer Hopper, Teresa Kroll, and Jo LeDuc (MO); Martin Swanson (NE); Karen Veronikis (PA); Rachel Moore (SC); Shelli Isiminger (TN); Melissa Gerachis (VA); John Haworth (WA); and Theresa Miller (WV). Also participating was: Brett Bache (RI).

1. Adopted its May 30 and May 22 Minutes

The Working Group met May 30 to: 1) adopt the Pet Market Conduct Annual Statement (MCAS) Data Call and Definitions; and 2) discuss MCAS directions for determining when a claim is closed on the personal property and homeowners lines of business. The Working Group also met May 22 to adopt the Pet Insurance MCAS Data Call and Definitions.

Haworth made a motion, seconded by Martin, to adopt the Working Group's May 30 (Attachment Six-A1) and May 22 (Attachment Six-A2) minutes. The motion passed unanimously.

2. Discussed MCAS Directions for Determining When a Claim is Closed on the PPA and Homeowners Lines of Business

Bache stated that when doing the Market Analysis Review System (MARS) and looking at data from various companies, the Working Group is finding outlying data with potential concerns with claims delays. The Working Group has been going back to companies who have claims closed with payments and asking what their interpretation of the data is. It is finding that companies differ on how data is reported and how and when a claim is closed within the system. Other companies have found that the system automatically closes after around 30, 60, or 90 days. Therefore, when the final payment is made, it does not close in the system; rather, it stays open for a period of time, which is ultimately used for reporting the MCAS. When going back, it was noticed within the Data Call and Definitions document that there are two definitions for claims closed with a payment : 1) claims closed with payment; and 2) median days. This may be causing confusion for the companies. Companies using different ways of reporting when their claims are closed in the system is not indicative of whether there are actual issues with their claims payments, causing room for additional questions. A suggestion was made to clarify these definitions or add interrogatories and require companies to state how they determine when a claim is closed. This would give more info on instances of extreme claims delays.

Haworth stated that there is space on line 24 for claims comments in the interrogatories, but it is optional. He suggested adding instructions on how to fill that out.

Weyhenmeyer asked for a volunteer from the Working Group to draft this interrogatory.

Hopper reminded the Working Group that the definitions are on all the MCAS links, and they need to be updated there as well.

Randy Helder (NAIC) asked for clarification regarding whether this would say the company has the option to report one way or the other and then put that into the interrogatories. He said he believes giving companies this option would not allow the companies to be compared equally.

Hayden stated that companies have system limitations on how they report the data. When going back, it appears that there are a lot of claims closed late or delayed, when it is actually a limitation of reporting when a claim is paid. Giving them the opportunity to explain the data they are providing will help clarify the data. Hayden asked the Working Group if it is experiencing companies manually going into that level of detail when they are reporting MCAS data. He said in his experience, the Working Group is getting that info, and it is a cause for investigation into things that are not necessarily issues.

Haworth answered that the Working Group spent months asking the same questions. Often, companies have it listed as a reserve, and the claim is not closed until 30 or 60 days after the final payment. There are some situations where it gives a false positive. This is happening with small and large companies. What the number represents is known, so it is run anyway.

Bache stated that after talking to companies, it does not appear that they can manually look up the final payment date. Instead, they have the close date. The states would have to do that. Adding some clarification in the interrogatories is more for when the claim is closed in the system, as it would help the states with some of those false positives.

Birny Birnbaum (Center for Economic Justice—CEJ) said he believes the definitions are clear, but because of company systems, they cannot comply with the instructions. If the companies need to adjust their systems to meet the reporting requirements, then they need to do that. Birnbaum stated that he wants to ensure that companies are reporting consistently regardless of what they say their system capabilities are.

Weyhenmeyer and Bache agreed that there needs to be a more specific language request.

Katie Dzurec (Regulatory Insurance Advisors LLC—RIA) asked if this will be applied to all lines of business or just home and auto. Weyhenmeyer said the Working Group will start with home and auto and see how that goes.

3. Discussed the MCAS Data Element Revision Process Timeline

Weyhenmeyer stated that the timeline requires adoption by the Working Group prior to June 1 to implement or the following day and year. Since the development of new lines of business takes time, the Working Group is not able to move that deadline. It would be beneficial to have more state insurance regulators participate in subject matter expert (SME) group discussions. One option to consider is encouraging participation from the beginning and not delaying the start of that work. Another suggestion is that when SME updates are provided, the Working Group's meetings include a current draft in the meeting materials. The third idea is that reporting changes for existing lines of business could have a later deadline for approval.

LeDuc proposed that the SME group has a deadline for getting the final product to the Working Group in time to give a 45-day public comment period.

Weyhenmeyer asked that comments on this topic be submitted no later than July 14.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

Draft: 6/15/23

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
May 30, 2023

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 30, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Tolanda Coker (AZ); Scott Woods (FL); Paula Shamburger (GA); Shannon Lloyd (KS); Ron Kreiter (KY); Mary Lou Moran (MA); Salama Camara (MD); Jeff Hayden (MI); Jennifer Hopper and Teresa Kroll (MO); Jonathan Wycoff (NV); Guy Self (OH); Rachel Moore (SC); Shelli Isiminger (TN); Shelley Wiseman (UT); John Haworth (WA); and Theresa Miller (WV). Also participating was: Brett Bache (RI).

1. Adopted Revisions to the Pet MCAS Data Call and Definitions

Weyhenmeyer discussed the revisions made to the draft Pet Market Conduct Annual Statement (MCAS) data call and definitions as a result of comments received by the Working Group. In two instances, there was a copy-and-paste error where “travel” was used instead of “pet.” Those errors were corrected. Other revisions include: 1) the question referenced in interrogatory 15 was changed from 13 to 14; and 2) the Policy/Certificate was added to the definition of “Right to Examine and Return the Policy (Free Look).” Additionally, as a result of the discussion around the definition of “wellness program,” the term being defined was changed from “wellness program” to “noninsurance wellness program.” The middle section of the definition was also removed.

Birny Birnbaum (Center for Economic Justice—CEJ) stated his support for the draft edits.

Weyhenmeyer asked for a motion to adopt the draft Pet MCAS data call and definitions. The draft will be moved to the Market Regulation and Consumer Affairs (D) Committee for consideration for the 2024 data year reporting.

Rebholz made a motion, seconded by Haworth, to adopt the revisions to draft Pet MCAS data call and definitions. The motion passed unanimously.

2. Discussed MCAS Directions for Determining When a Claim is Closed on the Personal Property and Homeowners Line of Business

Bache said regarding claims displays, it has been noticed that different companies interpret when to report something as closed differently. Some companies are reporting claims as closed when they are closed in their internal systems. Other companies are reporting that claims are closed when the final payment is made. When looking at the MCAS definition, there were different definitions of when a claim is closed with payment. The definition of “median days” is when the final payment is made. This definition was put into place so all companies would have the same interpretation so the median days would be calculated correctly. The definition for “private passenger” and “homeowners” explains when the claim is closed in the system. That is where the difference of interpretation was coming from, and the actual data that was needed was not being received. Bache asked the Working Group to see if there was any clarification. Bache’s comments will be shared with the Working Group for review.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2023/WG Mtg 0530/MCAS Blanks WG Minutes May 30.docx

Draft: 5/30/23

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
May 22, 2023

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 22, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Maria Ailor and Tolanda Coker (AZ); Scott Woods (FL); Paula Shamburger (GA); Ron Kreiter (KY); Mary Lou Moran (MA); Jennifer Hopper, Teresa Kroll, and Jo LeDuc (MO); Martin Swanson (NE); Ben Hauck (OH); Karen Veronikis (PA); Shelli Isiminger (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); John Haworth (WA); and Letha Tate (WV). Also participating was: Brett Bache (RI).

1. Adopted its April 6 Minutes

The Working Group met April 6 to: 1) adopt revisions to the Market Conduct Annual Statement (MCAS) participation requirements; and 2) adopt a clarification to the Other Health MCAS blank.

Haworth made a motion, seconded by Rebholz, to adopt the Working Group's April 6 minutes (Attachment Six-A2a). The motion passed unanimously.

2. Considered Adoption of the Pet Insurance MCAS Data Call and Definitions

Bache said the drafting group held about 15 meetings over six months to complete the drafting of the Pet Insurance MCAS blank. He said there were 40 to 45 participants, including state insurance regulators, industry members, consumer representatives, and media. He said the drafting group began with Other MCAS blanks and tailored them to the pet insurance line of business. He said the drafting group tried to balance the needs of state insurance regulators with the work required by companies to file the MCAS.

Birny Birnbaum (Center for Economic Justice—CEJ) said he supports the Working Group's adoption of the proposed MCAS pet insurance data elements and definitions. He acknowledged the constructive participation of several pet insurance industry representatives. He identified two issues that surfaced during the subject matter experts' (SME's) work. First, in pet insurance policies, there is an initial claimant request in which eligibility is determined, and then there are subsequent benefit requests following the establishment of claimant eligibility. Birnbaum said industry members represented during SME discussions that they do not track claims in this manner, and they are not able to report the overall claim eligibility separately from individuals' line items within a claim request. He said industry members represented that all items are reviewed when claims come in, and some parts may be approved, some may be approved in part, and some may be disqualified or denied. He said this resulted in data elements asking the company to represent a percentage of the dollar amount they approved. He said he believes it is important for state insurance regulators to understand the limitations of this way of reporting.

Second, Birnbaum noted that the MCAS blank requires companies to report claims experience by type of policy form rather than coverage. He said there are three major coverages found in a pet insurance policy—accident, illness, and wellness. He said the *Pet Insurance Model Act* (#633) identifies and treats accident claims differently from wellness claims. He said industry members represented that they do not track claims experience by coverage, and to do so would be a major effort. He said industry offered to report by type of policy, which effectively means one policy type—accident and illness—because all pet insurance policies include accident and illness benefits. He said there is a separate category for stand-alone insurance just for wellness, but this is rare. He said virtually all the experience is going to be reported in the accident and illness policy category, whether that benefit request is

for accident, illness, or wellness. He said more meaningful MCAS reporting would require claims experience reporting by all three separate coverages. He said this was suggested during the SME group meetings, but industry argued that this would be unreasonable for them in the short term. He said Pet Insurance MCAS reporting by coverage would be more useful for state insurance regulators.

Ailor said Arizona's comments were technical in nature. The only comment that required more discussion was the definition of "wellness program." It appears to allow for differentiation based on whether states have different definitions within their laws. Ailor asked if that is to change, how it is going to be treated, how insurance companies will know what to report to which state, and how that will be taken into consideration when developing the ratios. She said if there are going to be differences in the definition by state, that may affect the data reported by the insurers.

Bache stated that this is something NAIC staff added to the definition afterward, so he is not sure how they would track that or change it within the MCAS and whether that is going to be changed from year-to-year or how it would work. Teresa Cooper (NAIC) stated that the language was taken from Model #633. She suggested removing the state-specific references and only using the first and last sentences of the definition.

Birnbaum stated that the entire definition of "wellness program" can be deleted. Wellness is defined in Model #633, and it is well understood. MCAS reporting is limited to wellness as insurance. Birnbaum said it does not make a difference because the MCAS blank does not break out claims by coverage. Everything is reported in the accident and illness policy category, whether it provides accident, illness, or wellness coverage. For a wellness claim to be reported, the company will have to have filed and gotten approval for a separate insurance policy with wellness. He said if the company did that, it clearly understands what wellness is. He suggested deleting the definition.

Rebholz said she agrees with Cooper, and he suggested taking out the middle part and leaving the definition as is. She said it provides a little more description and clarity. She said there are frequently asked questions (FAQ) that can be used in case questions start coming in on wellness programs. Bache said he agrees.

Birnbaum said the definition will lead people to believe a wellness program can be part of the policy. He said the first sentence of the definition is inconsistent with what is understood to be in a pet insurance policy.

Weyhenmeyer said the definition distinguishes a wellness program from wellness coverage in a policy. She said a wellness program is not part of the insurance policy, but it is referenced in the blank and should be defined.

Cooper said if the definition does not specifically define a particular data element, it can be addressed in an FAQ or adjusted later for clarity. Rebholz said interrogatory question 1.19 asks if a non-insurance wellness program is offered. She said this may be why the definition was included. Rodriguez said data element 2.34 also references wellness included in the policy as opposed to wellness only.

Birnbaum suggested changing the title from "Wellness Program" to "Non-Insurance Wellness Program." Rebholz and Bache said they agree. Ailor said she agrees, and she suggested that the state-specific statements in the definition also be removed, leaving only the first and last sentences.

Weyhenmeyer asked if the consensus is to remove the state-specific portions in the middle of the definition and re-title it "Non-Insurance Wellness Program." Bache said that is correct.

LeDuc said she is uncomfortable making changes without time to consider the ramifications when there is a deadline to be met. She said she does not recall seeing the comments and does not have time to think about the

suggested revisions. She asked that copies of the comments be distributed to the Working Group, interested state insurance regulators, and interested parties. Cooper said they would be, and she noted that they are also posted on the Working Group's web page. Rebholz asked if Cooper could redline this as an open suggested change that resulted from the Working Group's discussion. Cooper said she would do so.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) said NAPHIA would like to be part of standardized ratio development. She said the data coming in may be a bit challenging in some areas, but NAPHIA will be able to provide a lot of assistance. She said she also encourages the Working Group to re-evaluate the Pet Insurance MCAS on a regular basis after it has been adopted to determine the usefulness of the data being reported. She said if there are interrogatories or data elements that state insurance regulators are not using, they should be addressed and potentially removed from the MCAS, but she also suggested caution in making revisions or additions in the initial years of data collection. She said it could take a couple of years to see what is happening with the data.

Weyhenmeyer said there will be another meeting scheduled prior to June 1 to consider adoption of the Pet Insurance MCAS blank.

3. Discussed Other Matters

Bache said Rhode Island would like to discuss some definitions in the Private Passenger Auto (PPA) and Homeowners MCAS blanks. He said it can wait until the Working Group finishes its considerations of the Pet Insurance MCAS blank.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2023/WG Mtg 0522/MCAS Blanks WG Minutes May 22.docx

Draft: 04/17/23

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
April 6, 2023

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 6, 2023. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Tolanda Coker (AZ); Scott Woods (FL); Tia Taylor (GA); Shannon Lloyd (KS); Lori Cunningham (KY); Mary Lou Moran (MA); Jeffrey Hayden (MI); Jo LeDuc (MO); Martin Swanson (NE); Leatrice Geckler (NM); Karen Veronikis (PA); Rachel Moore (SC); Shelli Isiminger (TN); Melissa Gerachis (VA); John Haworth (WA); and Letha Tate (WV). Also participating were: Matt Gendron (RI).

1. Discuss Market Conduct Annual Statement (MCAS) Participation Requirements

Rebholz stated the first agenda item is to discuss the MCAS Participation Requirements document. She said NAIC staff received a question related to a sentence in the document and they have asked for insight from the Working Group. The document has been updated through the years to accommodate new lines of business and thresholds established for the new lines of business. There is one sentence in the document that is being questioned. The entire bulleted item reads as follows, “Each company in a holding company system must file separately for each state in which it does business. Data for the members of a group or insurance holding company cannot be combined into a single filing for the purposes of this project. Data must be reported separately for each group member unless it involves only inter-company arbitration.” The last sentence is in question.

Rebholz asked the working group members and other state regulators if anyone recalls the intent or meaning of the sentence. Hearing no response, Rebholz asked for a motion to remove the sentence from the Participation Requirements document. Haworth moved and Geckler seconded to have the sentence removed.

Birnbaum (Center for Economic Justice – CEJ) suggested that the first part of the sentence to be eliminated was still wanted “Data must be reported separately for each group member” and only the last part of the sentence should be deleted “unless it involves only inter-company arbitration” as that was the confusing part. Rebholz acknowledged that Birnbaum made a fair point and asked for thoughts from the group. Rebholz went on to say that the line right before the sentence in question says “Data for the members of a group or insurance holding company cannot be combined into a single filing...” and asked Birnbaum if that met the need of saying that companies must report separately. Birnbaum conceded the point and stated he had no objections to deleting the sentence. Hearing no further discussion, the motion passed unanimously.

2. Hear a Pet Subject Matter Expert (SME) Group Update

Rebholz asked Matt Gendron (RI) to provide an update on the work being done to create the PET MCAS Reporting Blank and definitions.

Gendron stated that the SME Group has been working for several months, meeting every other week, and has decided to start meeting weekly. There are five or six Regulators who are attending every call. There are consumer representatives that are on most of the calls and several trade associations and insurance company professionals helping to flush out details and put specificity into the interrogatories and schedules. Gendron identified that there are several schedules in the draft Pet MCAS reporting blank. He said the work was being done in tandem with both Regulators, keeping in mind what they need, and also keeping in mind the potential of

creating cost for insurers which will be passed on to consumers. He said the SME Group is trying to be circumspect in their requests. Gendron stated he was happy to take any questions.

Rebholz thanked Gendron and asked the group if there were any questions. No questions were asked.

3. Review the Other Health Data Element

Rebholz reviewed an adopted data element for the Other Health MCAS that is to be reported for the 2023 data year. Rebholz identified that NAIC staff has received questions related to claims question 3-80 and its intent. The data element in question reads, "Aggregate dollar amount of paid claims during the period". Rebholz said Mary Kay Rodriguez (WI) led the SME group in developing the Other Health MCAS. Rodriguez was consulted and it is proposed that the proper wording should be "Total dollar amount of paid claims during the period". Where the word "Total" replaces the word "Aggregate". Rebholz said this edit is outside the date guidelines for updates to MCAS reporting, but the intent here is not being changed. We are asking for the wording to be edited for clarity only. No comments were made regarding the proposed wording change.

Haworth made a motion to replace the word "Aggregate" with "Total" so that the sentence reads "Total dollar amount of claims paid during the period." Isiminger seconded the motion. The motion passed unanimously.

4. Hear an Update on MCAS Filings

Rebholz reminded state regulators to be on the lookout for MCAS waiver and extension requests. She recommended that those responsible for decisioning MCAS waivers and extensions set up Personalized Information Capture System (PICS) events so they will receive notification of the requests as they are submitted through the MCAS application. Rebholz said any questions about how to set up PICS events, can be directed to Hal Marsh (NAIC) or Teresa Cooper (NAIC). Rebholz said state regulators can also view extension and waiver requests using the Extension and Waiver Tableau dashboard that can be accessed through iSite+. This year the extension process has been updated to provide companies with two-week intervals for requesting extensions. This was done at the request of the Market Analysis Procedures (D) Working Group. Companies will now be able to submit more than one extension request, but each request will be limited to a two-week period. Filings are coming in as anticipated. All lines of business except Health and Short Term Limited Duration (STLD) will be due April 30th. Health is due May 31st and STLD is due June 30th.

5. Discuss Any Other Matters Brought Before the Working Group

Rebholz asked if there were any other items to be brought before the working group. No additional items were brought forward.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2023/WG Mtg 0406/MCAS Blanks WG Minutes April 6.docx

Draft: 8/1/23

Market Conduct Examination Guidelines (D) Working Group
Virtual Meeting
July 18, 2023

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 18, 2023. The following Working Group members participated: Matthew Tarpley, Chair, Thomas Morgan and Stacie Parker (TX); Erica Weyhenmeyer, Vice Chair (IL); Steven Matlock and Teri Ann Mecca (AR); Catherine O'Neil (AZ); Kurt Swan (CT); Pratima Lele (DC); Susan Jennette (DE); Paula Shamburger and Tia Taylor (GA); Paula Wallin (IA); Ron Kreiter (KY); Mary Lou Moran (MA); Airic Boyce, Jeff Hayden, and Danielle Torres (MI); Cynthia Amann, Julie Hesser, Jennifer Hopper, Teresa Kroll, and Win Nickens (MO); Tracy Biehn (NC); Ralph Boeckman and Erin Porter (NJ); Myra L. Morris (NM); David Cassetty (NV); Sylvia Lawson (NY); Rodney Beetch (OH); Landon Hubbard and Shelly Scott (OK); Sandra Emanuel and Tashia Sizemore (OR); Paul Towsen (PA); Brett Bache and Matt Gendron (RI); Andrea Baytop, Julie Fairbanks, Melissa Gerachis, Joy Morton, and Bryan Wachter (VA); John Kelcher and Jeanette Plitt (WA); and Barbara Belling, Darcy Paskey, Mark Prodoehl, Mary Kay Rodriguez, and Jody Ullman (WI).

1. Adopted its March 28 Minutes

The Working Group met March 28 and took the following action: 1) heard opening remarks made by the Working Group chair, which included a welcome to returning Working Group members and to new members; 2) discussed its 2023 charges; and 3) discussed next steps on carry over items from 2022, which include a travel in-force policy standardized data request (SDR), a travel claims SDR, and an Aug. 22 exposure draft of Chapter 23—Conducting the Life and Annuity Examination of the *Market Regulation Handbook* (Handbook).

Weyhenmeyer made a motion, seconded by Kreiter, to adopt the Working Group's March 28 minutes (Attachment Seven-A). The motion passed unanimously.

2. Discussed Revisions to the June 6 Draft Chapter 23—Conducting the Life and Annuity Examination of the Handbook

Tarpley said the revisions to the Chapter 23 exposure draft relate to the revisions to the *Suitability in Annuity Transactions Model Regulation* (#275) that the NAIC adopted in early 2020.

Tarpley said revisions to Chapter 23 were first circulated April 19, 2022, and they were first presented during the Working Group's April 21, 2022, meeting. The subject matter experts (SMEs) who prepared that initial exposure draft of Chapter 23 reviewed comments received on the chapter in late May 2022 from Virginia, Missouri, and the Insured Retirement Institute (IRI). They created a revised draft, which was posted and distributed on Aug. 22, 2022, and discussed during the Working Group's Sept. 8 meeting. The SMEs' Aug. 22 revisions to that draft were shown in yellow highlight to differentiate them from the revisions occurring prior to their review.

In September 2022, the Working Group received comments on the draft from the IRI; from the Center for Economic Justice (CEJ); and jointly from the CEJ/Independent Insurance Agents & Brokers of America (IIABA). Individuals who submitted those comments presented them at the Working Group's Oct. 20 meeting, which was the last Working Group meeting of 2022. The SMEs reviewed the draft that carried over from 2022 and made edits to marketing and sales examination standards 9 and 10, which were distributed on June 6 for a public comment period ending July 6.

Bache said the SMEs reviewed the Aug. 22 draft, taking into consideration the comments received in September 2022. He said that the Annuity Suitability (A) Working Group is still discussing the issues surrounding the safe harbor provision of Model #275 and that the SMEs added the following language to marketing and sales examination standards 9 and 10:

“As of June 2023, the Annuity Suitability (A) Working Group is still discussing the issue of how the Safe Harbor provisions of the *Suitability in Annuity Transactions Model Regulation (#275)*, Section 6E may apply. This examination standard may be revisited after those discussions are complete.”

The purpose of the added language is to include a placeholder in the examination standards affected by the safe harbor so that when the Annuity Suitability (A) Working Group eventually issues safe harbor guidance, marketing and sales examination standards 9 and 10 can subsequently be revised to include additional examiner guidance. Then they can be reopened for exposure and discussion during a future Market Conduct Examination Guidelines (D) Working Group meeting.

Kroll presented comments submitted July 6 regarding the placement of the new Marketing and Sales Supplemental Checklists, K, L, M, and N. The new checklists are located after marketing and sales examination standards 10, 12, 16, and 17, respectively. Kroll suggested that the new checklists be included together as a group and in alphabetical sequence, with the already existing checklists in Chapter 23. Bache agreed, saying that checklists K–N would be better placed at the end of Chapter 23 so that they are included after checklists A–J.

Sarah Wood (IRI) presented comments submitted July 6. Wood said that the IRI had provided comments in 2022, some of which were reiterated in its July 6 comments, regarding language that should be incorporated within Chapter 23 to better align the examiner guidance with the February 2020 updates to Model #275.

Wood suggested that the language the IRI provided in its comment letter regarding annuity suitability training requirements be added as a new criteria to Supplemental Checklist L:

“A producer who has completed an annuity training course approved by the department of insurance prior to the effective date of the regulation shall, within six (6) months after the effective date of the regulation, complete either: (a) A new four (4) credit training course approved by the department of insurance after the effective date of the regulation; or (b) An additional one-time one (1) credit training course approved by the department of insurance and provided by the department of insurance-approved education provider on appropriate sales practices, replacement and disclosure requirements under the amended regulation.”

Wood suggested that in marketing and sales standards 2, 3, and 9, the bullet “The consumer has had another annuity exchange or replacement and, in particular, an exchange or replacement within the preceding 36 months” be changed to “... within the preceding 60 months.” Wood also suggested that in Supplemental Checklist K, the edited sentence “Nothing in this subsection restricts an insurer from delegating performance of a function (including maintenance of procedures) required under this subsection” be changed back to “Nothing in this subsection restricts an insurer from contracting for performance of a function (including maintenance of procedures) required under this subsection.” Bache recommended adopting all of the IRI’s suggested changes to the draft.

Birny Birnbaum (CEJ) said that he was speaking not only on behalf of the CEJ, but also on behalf of the Consumer Federation of America (CFA) and the (IIABA), both of whom were unable to attend the meeting. Birnbaum said that it is premature for the Working Group to adopt the draft with the SMEs’ suggested changes “As of June

2023...” in marketing and sales examination standards 9 and 10 since the Annuity Suitability (A) Working Group continues to have ongoing discussions on the application of the safe harbor provisions of Model #275. Birnbaum said that the added language, which states that guidance is in flux, compromises the guidance provided in the draft. Birnbaum said the exposure draft, in its current form, would lead to: 1) insurers and producers claiming safe harbor and contesting efforts by market conduct examiners; and 2) inconsistency in regulatory oversight among the states because of the lack of substantive guidance.

Birnbaum said the requirements of Marketing and Sales Examination 16 only contain one of the requirements of Model #275; the model specifies four obligations: 1) care; 2) disclosure; 3) conflict of interest; and 4) documentation. He asked that the Working Group refrain from adopting the exposure draft until the Annuity Suitability (A) Working Group has developed safe harbor guidance. Birnbaum stated that an alternative resolution to that suggestion would be to remove all references to safe harbor provisions from the draft and adopt, so that the non-safe harbor guidance items in the draft can be implemented and used by examiners.

Tarpley said that the purpose of adopting the exposure draft as currently written is to establish new tools/examination standards for examiners to use while the Working Group awaits guidance from the Annuity Suitability (A) Working Group on the safe harbor issue. Tarpley asked if Birnbaum had submitted written comments stating his objections to the June 6, 2022, draft. Birnbaum said that he had last provided written comments relating to Chapter 23 in 2022.

Tarpley said that he would not want the Working Group to adopt a draft that contains an open or unresolved issue. Therefore, he extended the comments due date to Sept. 4. Tarpley asked that Birnbaum submit written comments by the comments due date containing specific suggested changes to the draft chapter. Tarpley said that the SMEs will reconvene after that date to review all comments received and prepare a revised exposure draft for exposure and the Working Group’s review during its next scheduled meeting.

Wood said the IRI is supportive of the current language in the exposure draft of Chapter 23. Wood asked if the IRI should resubmit its comments from 2022. Tarpley said that all comments received in 2022 were already taken into consideration and discussed during Working Group meetings in September and October 2022. Tarpley asked the CEJ and the IRI and any others who intend to submit comments not to reiterate previously submitted comments; all entities are asked to identify new issues/concerns they have not previously submitted.

3. Adopted the June 6 Exposure Draft of Chapter 4—Collaborative Actions of the Handbook

Tarpley said the purpose of the exposure draft of Chapter 4—Collaborative Actions of the Handbook is to incorporate changes to provide non-regulators with transparency and insight regarding the multistate process that occurs at the Market Actions (D) Working Group. Tarpley said the draft was circulated June 6 for a public comment period ending July 6.

Tarpley said that comments on the draft were received from Kroll. Kroll suggested adding the following language as a new last paragraph to Subsection A. Procedure, of Section E. Conclusion of Collaborative Enforcement Actions, to ensure that all lead states have an opportunity to weigh in on the language before presenting it to the company(ies):

“Prior to sharing the MSA with the Company, the MSA should be provided to the lead states for review. A period of at least 10 working days should be allowed for the lead states to provide feedback. All feedback should be considered by the group in drafting a final version of the MSA.

The final MSA should be agreed to by all lead states prior to sharing with the entity(ies) examined.”

Tarpley said that he will present Kroll’s suggested change to Subsection A. Procedure during the 2023 Market Actions (D) Working Group’s annual meeting for consideration, and if it decides to incorporate the language into its procedures, as is, or revised, Chapter 4 can be subsequently changed to align with the language MAWG incorporated. Chapter 4 can then be re-exposed for the Market Conduct Examination Guidelines (D) Working Group’s consideration.

Kroll suggested removing “a follow-up audit, examination,” from the first sentence of Subsection B.2.c. Self-Reporting of Section E. Conclusion of Collaborative Enforcement Actions so that the sentence would then read: “The MSA may provide for periodic self-reporting.” Tarpley agreed with Kroll’s change.

Kroll said that some state laws may not treat exhibits the same as the report. Missouri law considers exhibits to be workpapers, and exhibits are, therefore, confidential. The final report is a public document in Missouri. Kroll therefore asked whether Subsection 2. Exhibits of Subsection D. Confidentiality of Section E. Conclusion of Collaborative Enforcement Actions should be changed to allow consistency with each state’s laws or if the intention of Subsection D.2. is to follow the managing lead state’s laws. Tarpley said that he will present this suggested change during the Market Actions (D) Working Group’s annual meeting and obtain its feedback. Depending on the Market Actions (D) Working Group’s reply, changes can be incorporated into Chapter 4, which will subsequently be re-exposed for the Market Conduct Examination Guidelines (D) Working Group’s consideration.

Kroll said that the sentence “The release of preliminary settlement information to the public that is an integral part of negotiations would have a chilling effect on future settlement negotiations.” in Subsection D.2.b. Settlement Offers/Negotiations should be changed to: “The release of preliminary settlement information to the public that is an integral part of negotiations would have a detrimental effect on future settlement negotiations.” Tarpley agreed with Kroll’s change.

Weyhenmeyer made a motion, seconded by Kroll, to adopt the Chapter 4 draft, as revised during the meeting, to include Kroll’s suggested edits to Subsection B.2.c. Self Reporting and to Subsection D.2.b. in Section E. Conclusion of Collaborative Enforcement Actions. The motion passed unanimously.

4. Discussed Other Matters

Tarpley said that SMEs are working on revisions to a travel insurance in-force SDR and a travel insurance claims SDR. A revised exposure draft of each will be circulated for review and discussion during a future Working Group meeting.

Tarpley said that the Working Group had identified in 2022 a need for a short term, limited-duration (STLD) in-force SDR and a STLD claims SDR. Tarpley said that due to recently proposed federal rule changes relating to STLD plans, the Working Group will table that work and consider developing the SDRs when federal guidance is finalized.

Tarpley said that he would like to begin focusing on two of the Working Groups charges to:

- Discuss the development of uniform market conduct procedural guidance (e.g., a library, depository or warehouse with market conduct examination templates, such as an exam call letter, exam exit agenda, etc.) for inclusion in, or for use in conjunction with, the *Market Regulation Handbook*.

- Coordinate with the Innovation, Cybersecurity and Technology (H) Committee to develop market conduct examiner guidance for the oversight of regulated entities' use of insurance and non-insurance consumer data and models using algorithms and artificial intelligence (AI).

Tarpley said that Wallace will be sending an email inquiry to Working Group members, with the purpose of creating regulator-only SMEs for each of the above subject areas, to begin discussing the charges. Should there not be enough Working Group volunteers, Tarpley said Wallace will then reach out to interested regulators to volunteer to join the discussion.

Tarpley said a notice of the day and time of the next Market Conduct Examination Guidelines (D) Working Group meeting will be sent as soon as it is available.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

Draft: 4/11/23

Market Conduct Examination Guidelines (D) Working Group
Virtual Meeting
March 28, 2023

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 28, 2023. The following Working Group members participated: Matthew Tarpley, Chair (TX); Erica Weyhenmeyer, Vice Chair, and Patrick Tallman (IL); Chris Erwin and Teri Ann Mecca (AR); Tolanda Coker (AZ); Nick Gill (CT); Pratima Lele and Cheryl Wade (DC); Susan Jennette and Frank Pyle (DE); Simone Edmonson, Paula Shamburger, and Tia Taylor (GA); Paula Wallin (IA); Ron Kreiter (KY); Mary Lou Moran (MA); Airic Boyce and Jeff Hayden (MI); Teresa Kroll, Jo LeDuc, and Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger and Ellen Walsh (NH); Ralph Boeckman and Erin Porter (NJ); Leatrice Geckler and Myra L. Morris (NM); Rodney Beetch (OH); Landon Hubbard and Shelly Scott (OK); Sandra Emanuel, Brian Fordham, and Tashia Sizemore (OR); Paul Towsen (PA); Brett Bache, Segun Daramola, and Brian Werbeloff (RI); Julie Fairbanks and Bryan Wachter (VA); Isabelle Turpin Keiser and Karla Nussl (VT); Jeanette Plitt (WA); and Barbara Belling, Diane Dambach, Darcy Paskey, Mark Prodoehl, Rebecca Rebholz, and Jody Ullman (WI).

1. Heard Opening Remarks

Tarpley extended a welcome to all returning Working Group members and to new members, Gill and Walsh, representing Connecticut and New Hampshire. Tarpley said the Working Group will meet approximately every four to six weeks, and it does not meet at national meetings or in lieu of national meetings.

2. Discussed its 2023 Working Group Adopted Charges

Tarpley said the Working Group charges are on its web page. He mentioned that there was one change from its 2022 charges. Charge #4 to, “Develop market conduct procedural guidance ...” was changed to, “Discuss the development of market conduct procedural guidance” Tarpley said charges #1–3 to develop examination standards, monitor NAIC models, and develop standardized data requests (SDRs) are related to the carry-over items; i.e., exposure drafts from 2022. Regarding charge #5 to, “Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee ... ,” he and Weyhenmeyer are monitoring the initiatives of the Innovation, Cybersecurity, and Technology (H) Committee to ascertain if guidance in the *Market Regulation Handbook* (Handbook) will be affected. He said he would like to focus on the 2022 carry-over items before working on new material and Working Group charges #4 to, “Discuss the development of uniform market conduct procedural guidance ... ,” charge #6 to, “Discuss the effectiveness of group supervision of market conduct risks ... ,” and charge #7 to, “Discuss the role of market conduct examiners in reviewing insurers’ corporate governance”

Tarpley said he and Weyhenmeyer are monitoring the activity of the Accelerated Underwriting (A) Working Group, which is considering making a referral to the Market Conduct Examination Guidelines (D) Working Group pertaining to the addition of state insurance regulator guidance to the Handbook regarding the use of artificial intelligence (AI) for life insurance underwriting. Birny Birnbaum (Center for Economic Justice—CEJ) said he placed a related link about AI into the chat of the meeting regarding a vendor that purports to use behavioral data in a database of over 250 million individuals for risk assessment for health insurance and homeowners insurance. He said the vendor claims that by using this data, its customers can have a better understanding of the stratification of risk for their book of business, underwriting, pricing, and claims settlement.

Tarpley said he welcomed the Working Group’s input regarding other lines of business and/or subject areas that could potentially be addressed in the Handbook. He said the Market Actions (D) Working Group identified

additional information regarding regulatory settlement agreements that can be added to the corresponding chapter in the Handbook. Tarpley said he will add this as a topic in a future Working Group meeting.

3. Discussed Carry-Over Items from 2022

Tarpley said carry-over items from 2022 include: 1) a travel in-force policy SDR; 2) a travel claims SDR; and 3) revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook related to the best interest provisions of the *Suitability in Annuity Transactions Model Regulation* (#275). He said the two travel SDRs were first discussed at the Working Group’s Sept. 8, 2022, meeting, and there was discussion at its Oct. 20, 2022, meeting about the SDRs, as well. He said he is asking the subject matter experts (SMEs) that developed the initial SDR exposure drafts to reconvene to consider the comments received in 2022 from Missouri, Virginia, and the CEJ and revise the SDRs, as they deem appropriate. He said the revised exposure drafts will then proceed to the Working Group for a new exposure period. After the exposure period concludes, if additional comments are received, additional revisions may be made at that time, after which, the Working Group may consider the SDRs for adoption.

Tarpley said since the Working Group received numerous comments on the draft Chapter 23 of the Handbook in 2022, he has asked the SMEs that developed the initial draft Chapter 23 to revise the chapter, as they deem appropriate, considering the comments the Working Group received in 2022. He said the revised exposure draft will then proceed to the Working Group for a new exposure period for the Working Group’s review and further consideration.

Birnbaum said the issue raised in the comments received by the Working Group in 2022 about the Chapter 23 exposure draft was regarding the safe harbor provisions of Model #275, what they signify, and how they should be implemented. He said the Annuity Suitability (A) Working Group was working in 2022 on a frequently asked questions (FAQ) document that was also tied to this same issue; i.e., safe harbor enforcement, supervision, etc. He said the Annuity Suitability (A) Working Group’s work on the FAQ document has ceased due to the comments it has received from interested parties—that Working Group has not met since 2022.

Tarpley discussed the importance of coordination with the Annuity Suitability (A) Working Group regarding this issue. He said he will ask the SMEs to discuss the safe harbor issue, as it affects the draft revisions to Chapter 23, and identify a way of moving forward on the exposure draft, perhaps by carving out content that is applicable to the safe harbor and adding it in later when those issues are resolved.

4. Discussed Other Matters

Tarpley said a notice of the day and time of the next Market Conduct Examination Guidelines (D) Working Group meeting will be sent as soon as it is available.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

[03-28.docx](#)

Draft: 6/13/23

Market Regulation Certification (D) Working Group
Virtual Meeting
June 6, 2023

The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 6, 2023. The following Working Group members participated: Mike Kreidler, Chair, and John Haworth (WA); Chelsy Maller (AK); Crystal Phelps (AR); Mary Kwei (MD); Jo LeDuc (MO); Tracy Biehn (NC); Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman (NJ); Don Layson (OH); Glynda Daniels (SC); Shelley Wiseman (UT); Don Beatty (VA); Karla Nuisl (VT); Theresa Miller (WV); and Bryan Stevens (WY).

1. Adopted its May 9 Minutes

Commissioner Kreidler said the Working Group met May 9 to discuss the revisions to the Market Regulation Certification Program.

Beatty made a motion, seconded by Biehn, to adopt the Working Group's May 9 minutes (Attachment Eight-A). The motion passed unanimously.

2. Reviewed the Pilot Program Suggested Revisions to the Market Regulation Certification Program

Haworth said the revisions to the Market Regulation Certification Program include the requirements, guidelines, and checklist. They also include the scoring matrix, which was created to give jurisdictions an understanding of how a certification review would be scored.

Haworth said the revisions were first exposed in April, and the Working Group made some minor changes suggested by Julie Fairbanks (VA) that were incorporated and exposed for the May meeting. He said there were no comments during the May meeting, and no written comments were received since the May meeting, so he said the Working Group was ready to consider the revisions for adoption. LeDuc said she had minor typographical corrections to suggest, such as a closing parenthesis and other similar suggestions. Haworth said those could be made after the adoption of the revisions since they are minor.

Stevens made a motion, seconded by LeDuc, to adopt the revision to the Market Regulation Certification Program. The motion passed unanimously.

Haworth said the adoption will be reported at the Market Regulation and Consumer Affairs (D) Committee during the Summer National Meeting in Seattle, WA.

Commissioner Kreidler thanked Haworth and the Working Group for its efforts in finishing the work on the Market Regulation Certification Program.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/D Cmte/2023 Summer National Meeting/MRCWG/0606/06 MRCWG

Draft: 5/26/23

Market Regulation Certification (D) Working Group
Virtual Meeting
May 9, 2023

The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 9, 2023. The following Working Group members participated: Mike Kreidler, Chair, and John Haworth (WA); Sarah Bailey (AK); Crystal Phelps (AR); Erica Weyhenmeyer (IL); Jo LeDuc (MO); Teresa Knowles (NC); Martin Swanson and Robert McCullough (NE); Maureen Belanger (NH); Ralph Boeckman (NJ); Don Layson (OH); Shelly Scott (OK); Shelley Wiseman (UT); Don Beatty and Katie Johnson (VA); Karla Nuisl (VT); Theresa Miller (WV); and Bryan Stevens (WY).

1. Adopted its Spring National Meeting Minutes

Commissioner Kreidler said the Working Group met Feb. 27 in lieu of meeting at the Spring National Meeting.

LeDuc made a motion, seconded by Beatty, to adopt the Working Group's Feb. 27 minutes (*see NAIC Proceedings – Spring 2023, Market Regulation and Consumer Affairs (D) Committee, Attachment One*). The motion passed unanimously.

2. Reviewed the Pilot Program Suggested Revisions to the Market Regulation Certification Program

Haworth said the revisions to the Market Regulation Certification Program documents come primarily from the suggestions received by the states that participated in the pilot program. He said last year, the Working Group appointed a subject matter expert (SME) group to go over all the suggestions and incorporate them into the Market Regulation Certification Program. He thanked the SME group for their hard work. He said the group included Bailey, LeDuc, Nuisl, Chelsy Maller (AK), Pam O'Connell (CA), Tracy Biehn (NC), Hermoliva Abejar (NV), Andrea Baytop (VA), Marcia Violette (VT), and Bill Cole (WY).

Haworth said the documents to be adopted are the requirements, guidelines, checklist, and scorecard. He said the Working Group previously adopted the scorecard, but since changes to the requirements, guidelines, and checklists necessitated changes to the scorecard, the Working Group will need to adopt those changes to the scorecard as well.

Haworth said the documents have been exposed on the Working Group web page for a month, and they were attached to the notice for this meeting on April 21. He said the Working Group received some comments from Julie Fairbanks (VA) with some grammatical changes, which have been posted and changed within the document.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.

Draft: 8/12/23

Speed to Market (D) Working Group
Virtual Meeting
July 25, 2023

The Speed to Market (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 25, 2023. The following Working Group members participated: Rebecca Nichols, Chair (VA); Jimmy Harris (AR); Shirley Taylor and Susan Buth (CO); Trinidad Navarro and Frank Pyle (DE); Shannon Hohl (ID); Julie Rachford (IL); Tammy Lohmann (MN); Camille Anderson-Weddle (MO); Ted Hamby (NC); Cuc Nguyen (OK); Mark Worman (TX); Tracy Klausmeier (UT); and Lichiou Lee (WA). Also participating was: Maureen Motter (OH).

1. Adopted its Nov. 10, 2022, Minutes

The Working Group met Nov. 10, 2022, to: 1) adopt its July 12, 2022, minutes; 2) receive an update on edits to the *Product Filing Review Handbook* (Handbook); and 3) receive an update in the System for Electronic Rates and Forms Filings (SERFF) and the Product Steering Committee (PSC).

Lohmann made a motion, seconded by Lee, to adopt the Working Group's Nov. 10, 2022, minutes (*See NAIC Proceedings – Fall 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven*). The motion passed unanimously.

2. Discussed Suggestions Received for the PCM and the UTD

Motter started with three suggestions made for the Life, Health, and Annuities Product Coding Matrix (PCM): 1) there should be a new type of insurance (TOI) code to deal with mental health parity filings. The question of whether someone is making a change just to the mental health parity piece of the health filing or if this is a certification finding of some sort came up when reviewing for clarification.

Lee said mental health is part of form and rate filings. This would not be a new TOI if the company submitted just a mental health coverage; it would be a violation of their law, and it needs to be part of our health care benefit. Lee questioned why this would be a new TOI; it would just be part of a certification as part of a health plan, which has a separate TOI.

Hamby said North Carolina has seen filings that were specific to address the compliance matter. To be able to identify these individually, North Carolina is using a filing label. A new TOI is not the way that it should go. It is not a product type; it is in relation to a product.

Motter stated that comments were received from the SERFF Modernization Team, and these may be things that can be incorporated in the modernization. Regarding the first suggestion, she asked if there is anyone who believes the new TOI is the way to go. No comments were received. The second suggestion was from Colorado; it is seeing a paid family medical leave product submitted. The question would be whether there would be interest in having these as a new TOI or continuing to have them as H21 other filing types.

Lee said this is not a benefit; this is a state-paid benefit. The department of insurance (DOI) does not receive the filing for paid family medical leave; this is part of disability filing.

Harris has added this line, and it will be available Aug. 1. For now, they are filed under Health Other, but he is in support of adding this new TOI for paid family medical leave. This would pay a benefit if Family Medical Leave Act (FMLA) was needed. This is a product that would pay a benefit as a result of someone else's situation. Since this does not fit under Health products and it is not a life insurance product, this was added in the statute that any company admitted in Arkansas with life or health can market the product. This was brought to Arkansas by a couple of companies who wanted to sell the product but were not allowed because it would require a law change.

Hamby has seen this type of filing, but like Arkansas, he did not have the coding for it. It came down to who the beneficiary of the benefit is. North Carolina was seeing that the benefit was paying the employer when they had to accommodate an employee for family medical leave.

Lohmann said Minnesota has a new statute. Companies are not required to provide the coverage; under the statute, they will be able to purchase coverage and offer it as an option for companies that are required. It will be a variation of disability. Filings for this coverage will be received. Minnesota considers this a disability, and it is using filing labels to flag them.

Motter said this sounds like something that will be seen more. She asked what the appropriate TOI would be, if it would be limited one and added to the end of the Hs, or if this will fall under health as opposed to any where else in the credit coding matrix for life health and annuity.

Buth said Colorado has a statutory law, similar to what Washington mentioned. Large companies can opt out if they have their own; i.e., where companies enter the market to sell to large companies to have their own family leave. This is similar to disability; i.e., where we are putting this now with some state labels. Butth said Colorado would support this.

Motter asked if the name "paid family medical leave" would be the appropriate name for this new TOI. This will be an individual product or group product. Motter asked if filers would put this where it needs to be if this is the name it is given. She asked if there is a description for the product, similar to what is in the PCMs today.

Buth said Colorado believes that would be appropriate. She said most would be a group product.

Motter asked if this would be a sub-TOI H11g, group health disability income in the H11i individual health disability income, and have family medical leave also be one of your sub-TOI under those, or whether it should stand on its own and be an H27. If it is a sub-TOI would be looking at H11, G006, and H11i, it would be at 10 for I's.

Lohmann said Minnesota would like it as a sub-TOI, individual and group. It sounds like there may be interest from several states due to the fact that these types of filings are becoming more prevalent, especially by the effective date of Jan. 1.

Motter asked if we move forward with these two new sub-TOIs, how everyone would feel taking this offline to come up with a description and then sharing it with everyone.

Lohmann agreed to a call for the descriptions.

Motter moved on to the third suggestion. The life and health would be having a new TOI for an occupational accident product, similar to workers' compensation for independent workers (e.g., truckers). It is a benefit similar to workers' compensation that is offered on an individual basis, and it only covers the independent worker, no passengers or new family members. The question posed is whether this is not the same as what was recently

added to the PCM 16.005 on the property/casualty (P/C) side called occupational accident workmen's comp. It is insurance that covers the occupational accident to include comparable workers' compensation. Motter asked if this is also needed on the life and health side. It was already thought that a lot of accident and health (A&H) already provides 24/7 coverage.

Klausmeier said this is filed under the life and health instance, not the P/C instance, for Utah.

Lohmann said that is the same in Minnesota. Minnesota does not use 16.005 because it does not want this mixed in with workers' compensation. There have been legal issues with that, so it has to be on the life and health side on an individual basis only. When they come in as group, they get rejected.

Motter asked those that receive these types of products on the life and health instance whether it is a problem to continue to receive them this way or to perhaps add a label (e.g., truckers or whatever it may be). If there is a need for this granularity, she asked if others would also see this same need.

Lohmann said Minnesota would not see the need right now. There has been some thought of legal changes, but at this time, there would be no need for this sort of granularity.

Motter this can also be brought up at another time as these start to roll in. As of now, it seems there is no desire to move forward with this one. It sounds like there is agreement for two new sub-TOIs for paid family medical leave; a description is to be determined, including those in H11, G006, and H11lo10.

Rachford asked for clarification on the third proposal to add a TOI of occupational accidents on the life and health side, so filings associated with occupational accident could be identified as such. It receives these on the life and health side, so she asked why we would not want do to that if it allows it to show additional granularity.

Motter said yes, some are saying they do not want that additional granularity at this time; they are receiving them as H02I and continue to use a filing label.

Buth said Colorado is receiving operational accident under H21 and would like to see an additional TOI in the life and health instance.

Motter said Colorado is receiving these as H21, and others are receiving them as H02I. The question would be how many states would turn this on.

Lee said Washington would not turn it on; it does not allow these due to independent contracts.

Hamby said North Carolina has had a filing relative to this kind of product. There was a question of why this is limited to individual truckers; the answer at the time was that there was some sponsoring association related to independent truckers that was pushing for a benefit plan like this. Any self-employed individual may want this type of coverage.

Buth said Colorado uses the term "self-employed contractor" as well.

Motter asked whether with these self-employed persons, they have 24/7 coverage under their health policy or if there is something different about these products.

Klausmeier said Utah specifically includes them, as they are doing their job, so it allows for workers' compensation type of coverage.

Motter asked if these are individual policies and whether it would make sense to have a sub-TOI under individual health accident only that ends up covering these or if this would be a separate TOI.

Buth said Colorado does not allow work-related injuries under health. The separate TOI would give a spot to out it, and yes, it is for while they are working.

Motter said there are only one or two states that want to turn this on. She asked how the Working Group feels about holding this off until next year to see if other states are interested. It sounds like a couple states feel very strongly about the need for this. We also need to be mindful that we do not create TOIs and sub-TOIs that do not get turned on by multiple states. If we were to deadline and make changes to the PCM for an effective date of Jan. 1, Motter asked how much time would be needed for the approval process and implementation. The following suggestions were made: 1) we are holding off at this present time; 2) we are going to move forward with the sub-TOI, working on a description to provide to the PCM; and 3) sharing information in our minutes to let folks know that there seems to be strong consideration, but we need more buy in. If we know there is interest, we can move forward and pass it before the end of the year.

Rachford made a motion, second by Buth, to move forward with all three suggestions. The motion passed unanimously.

Motter said moving on to the P/C suggestions, they are taking the first two suggestions together. This would allow filings to be received from rating bureaus and ratio organizations as an advisor of their rates rules, forms, or loss costs in SERFF, but also allow them to submit licensing material. States suggest that there be a new TOI for the rating organizations and the other for advisor organizations and possibly some sub-TOIs, depending on what documentation is coming in.

Bridget Kieras (NAIC) said an item intended for SERFF modernization is the processes that allow you to accept content that is not traditional rate and form product filing, so we can keep this in one system.

Motter made the suggestion to table adding a TOI, keep this on the radar, and have states work with the SERFF Modernization Team to think this through. The last P/C suggestion is to add a TOI just for third-party models: one for the initial filing and a second for any subsequent revision of the model. Motter asked if there is any interest in requiring these models to be separate from the filing submission and having an un-granular TOI or having them all fall under one TOI instead of the product TOI. Not hearing any input on that with respect to P/C filing submission suggestions for the PCM, she said suggestions one and two will be put on the SERFF modernization wish list, but there is no interest in suggestion three.

Klausmeier made a motion, second by Lohmann, to move forward with the P/C PCM suggestions. The motion passed unanimously.

3. Heard a Report from the Compact

Karen Schutter (Interstate Insurance Product Regulation Commission—Compact) said North Dakota will be joining the Compact on Aug. 1, and it will be open for filings on Aug. 16, opted out of long-term care (LTC). There are 47 compacting states, including Washinton, DC and Puerto Rico. States that are not Compact members include New York, California, Florida, South Dakota. The Compact is speaking with them and South Carolina, who repealed the Compact last year. One of the important things the Compact does is develop uniform standards, which are the product requirements, with over 100 product standards in place. The Product Standards Committee (PSC) has in

place new individual disability income standards for key person and buying and selling. The PSC has drafted a new suite of standards for the group whole life for employer group life that is going to be recommended in the near future. Members are working on index-linked variable annuity (ILVA), as well as opening up the group standards to accommodate non-employer groups. The states will fire PCM firmly in charge of approving whether the non-employer group needs the eligibility requirement in their states. Once they decide that, then they can use the Compact to pre-product. The Working Group is in the process of asking what new or amended standards the PSC should consider working on next year. The Compact has held three roundtables, which led to the creation of the Adjunct Services Committee, looking at the idea of whether the Compact provides additional adjunct services, given its platform and the expertise of life annuity, LTC, and disability income fields. The Compact will meet Aug. 15 to discuss a briefing of this new standard, discuss strategic planning, and make an amendment to group annuity. In the site redesign, there is a collaborative space through iSite+.

4. Heard a Report on the SERFF Modernization Project

Kieras said the first two phases of SERFF modernization are in production. Phase one, involving improving the legacy search, should now be seeing significantly faster response times. All user notes have a document search that includes support for phrases and document comparison. Phase Two, an introduction of Tableau dashboards, also involved a move of SERFF's legacy historical data to the enterprise data warehouse. These dashboards are available to all states; they are being piloted to industry. The Compact will be the first to move to the new platform, closely working with them, an industry filer focus group, and a Compact member state focus group, as that functionality is being redesigned. This should be released in the first or second quarter of 2024, and then moved to the life business type. SERFF will now recognize three business types, instead of two, adding something called a TOI Group to improve search and reporting. As the Working Group reviews the PCM, in the future, not everything will have to have a TOI to be submitted and served, in the hopes that new ways will be designed to get information that does not fall into the PCM. SERFF is planning a state workshop in October 2023, targeting users in the life and annuity and credit area, as well as P/C workshops in 2024.

Having no further business, the Speed to Market (D) Working Group adjourned.

ANTIFRAUD (D) TASK FORCE

Antifraud (D) Task Force Aug. 14, 2023, Minutes..... 8-103
Improper Marketing of Health Insurance (D) Working Group July 27, 2023, Minutes (Attachment One).... 8-106

Draft: 8/25/23

Antifraud (D) Task Force
Seattle, Washington
August 14, 2023

The Antifraud (D) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: Trinidad Navarro, Chair (DE); John F. King, Vice Chair (GA); Lori K. Wing-Heier represented by Kayla Erickson (AK); Mark Fowler represented by Jimmy Gunn (AL); Alan McClain represented by Russ Galbraith (AR); Barbara D. Richardson represented by Maria Ailor (AZ); Ricardo Lara represented by George Mueller (CA); Andrew N. Mais represented by Kurt Swan (CT); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Randy Pipal (ID); Sharon P. Clark represented by Rob Roberts (KY); Kathleen A. Birrane represented by Joe Smith (MD); Anita G. Fox represented by Joseph Garcia and Michele Riddering (MI); Grace Arnold represented by Tony Ofstead (MN); Chlora Lindley-Myers represented by Carrie Couch and Marjorie Thompson (MO); Mike Chaney represented by Vanessa Miller (MS); Troy Downing represented by Ted Bidon (MT); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented Martin Swanson (NE); Alice T. Kane represented by Leatrice Geckler and Roberta Baca (NM); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Brian Downs (OK); Andrew R. Stolfi represented by Dorothy Bean and Stephanie Noren (OR); Michael Wise represented by Joshua Underwood (SC); Jon Pike represented by Armand Glick (UT); Scott A. White represented by Juan A. Rodriguez Jr. and Richard Tozer (VA); and Kevin Gaffney represented by Mary Block (VT).

1. Adopted its Spring National Meeting Minutes

Commissioner King made a motion, seconded by Mueller, to adopt the Task Force's March 23 minutes (*see NAIC Proceedings – Spring 2023, Antifraud (D) Task Force*). The motion passed unanimously.

2. Discussed its 2023 Charges

Commissioner Navarro said it is that time of year when the Task Force will be reviewing its charges for 2024. He said NAIC staff will distribute the Task Force's 2023 charges for review and suggestions with a deadline of Sept. 22. He said the Task Force will meet in October to review the suggested revisions and potentially adopt its 2024 charges.

3. Heard a Presentation on Workers' Compensation Premium Fraud

Matthew Capece (United Brotherhood of Carpenters and Joiners of America—UBC) provided a presentation concerning the construction industry's fraud schemes. He said construction employees who are not cheating the system on their premiums are punished in the marketplace, while crooked contractors take over the market. He said involvement from state insurance departments is important to entertain further discussions to assist with putting practices into place that protect the market. He said there are billions of dollars worth of premium fraud taking place in the construction industry, with a study showing that in 2021, there were \$5 billion lost in premium fraud. He provided simple and complex labor broker fraud schemes that use the current system to profit. He said these bad actors include insurance brokers, attorneys, accountants, and money service businesses. He said the laws broken by these fraudulent actions include tax fraud, wage theft, child labor, money laundering, mail and wire fraud, labor trafficking, racketeering, and conspiracy. The Task Force discussed the presentation and agreed that further discussions would need to take place within open- and closed-door settings.

4. Received a Report from the Improper Marketing of Health Insurance (D) Working Group

Greg Welker (NAIC) said the Working Group met July 27. He said prior to the meeting, the Working Group had been working on its charge to “Review existing NAIC Models and Guidelines that address the use of lead generators for sales of health insurance products, and identify models and guidelines that need to be updated or developed to address current marketplace activities.” He said following the Spring National Meeting, a group of subject matter experts (SMEs) met to discuss and finalize draft amendments. Prior to the July 27 meeting, the Working Group distributed the revised draft for comments. Welker said during the July 27 meeting, the Working Group discussed comments received. The Working Group agreed on suggested revisions and updated the draft amendments. Welker said a new draft was distributed for review and comments following the July 27 meeting and before the Summer National Meeting. He said the Working Group will meet at the Summer National Meeting to discuss comments received and finalize the revisions. The Task Force adopted the report (Attachment One).

5. Heard an Update from the Antifraud Technology (D) Working Group

Glick said the Working Group has not met, but he has continued to work with NAIC staff concerning the Online Fraud Reporting System (OFRS) redesign efforts. He said the redesign is completed; however, the NAIC is internally working to update the web services used to electronically transfer data to the states using that service. He said the Working Group will be meeting to discuss the necessary enhancements that states would like the OFRS to contain to assist with the referrals system.

6. Heard a Presentation from the CAIF

Matthew J. Smith (Coalition Against Insurance Fraud—CAIF) said the focus of this presentation is to bring awareness to the psychology of insurance fraud. He said a study was completed by surveying 1,500 U.S. consumers with 29 questions regarding how they perceive insurance fraud. He said the results showed that more than 53 million Americans do not view insurance fraud as a crime. He said compared to tax fraud or stealing, the results show that depending on age, the perception of insurance fraud may be considered a business practice and not a real crime. He said the older the generation, the more severe insurance fraud is considered a crime. The study showed that younger generations do not feel they are directly affected by insurance fraud that is committed by others across the U.S. Smith said the study asked questions on what type of insurance fraud individuals would be willing to commit, including auto claims, homeowners, workers’ compensation, and medical services. He said it is a routine moral failure that the millennial generation does not perceive theft the same as others. He said due to the advancement in technology, the lines of ownership and the concept of whether theft is bad have blurred. He said the CAIF’s research showed that 35.8 million Americans admit to lying in order to get lower auto insurance rates, which is a 204.8% increase in only two years. He said when viewing the generations—Generation Z, millennials, Generation X, baby boomers, and Silent Generation—the acceptance of lying is much lower with older generations. He said Generation Z and millennials are the most sought-after policyholders given their age. The Working Group discussed and agreed to have further discussions with the CAIF concerning its study.

7. Heard Reports from Interested Parties

A. CAIF

Smith said the CAIF is celebrating its 30th anniversary this year. He said the CAIF is working on its next study, “Keys to Unlocking SIU Success.” He said this study will be for industry only to assist insurers so they have adequate resources and employees. He said this will be delivered in December. He said the Global Insurance Fraud Summit will take place in October in Edinburgh, Scotland, and there will be two open spots on the agenda for the NAIC to participate in a panel and provide an update on the movement within the NAIC and the Task Force. He said during the Global Insurance Fraud Summit, the CAIF will be continuing its work with others to create a standard definition

of insurance fraud, as there is not a standard definition. He said the CAIF, and the International Association of Special Investigation Units (IASIU) have adopted the current working definition. Lastly, he said the CAIF's Annual Meeting will take place Dec. 7–8 in Washington, DC.

B. NICB

Rich DiZinno (National Insurance Crime Bureau—NICB) said there are three topics he would like to focus on for his update. He said the goal for the NICB is not just to provide fraud directors with more data in terms of fraud reporting, but to provide more effective data to help better tailor information that can be used to advance their investigations and prosecutions. He said as the Antifraud Technology (D) Working Group continues to determine what technological improvements are needed, the NICB and the NAIC will continue to work together to ensure we build on those moving forward. He said he met in Kansas City, MO, with Welker and NAIC staff to discuss some of the issues on both sides. He said the meeting was a good foundation, and the NICB walked away with a better understanding of both sides so it can achieve meeting the desirables that fraud directors need.

DiZinno said the next issue he wants to highlight is the significant development in Wisconsin. He said this past legislative session, the NICB worked with industry partners and the Wisconsin Department of Insurance (DOI) to help create a new fraud investigator statute. He said the NICB applauds the work completed by industry and the Wisconsin DOI. The NICB will continue to work with Wisconsin to build out the fraud unit.

DiZinno said the NICB National Conference of Insurance Crime Attorneys (NCICA) is coming up Oct. 18–19, taking place in Schomburg, IL. He said the basic idea is to discuss more effective means to facilitate the investigation and prosecution of insurance crimes and fraud.

8. Discussed Other Matters

Welker said the NAIC Insurance Summit will take place Sept. 11–14. He said the Insurance Summit will cover a wide range of insurance topics, including antifraud, market regulation, finance, producer licensing, and communication. He said for the past few years, there has been a separate antifraud track. He said this year, which will continue, with six sessions Sept. 13 and 14. He said the Insurance Summit information can be found on the NAIC's web page.

Having no further business, the Antifraud (D) Task Force adjourned.

[AFTF 8.14.23 Minutes.docx](#)

Draft: 8/9/23

Improper Marketing of Health Insurance (D) Working Group
Virtual Meeting
July 27, 2023

The Improper Marketing of Health Insurance (D) Working Group of the Antifraud (D) Task Force met July 27, 2023. The following Working Group members participated: Martin Swanson, Chair, Laura Arp, Michael Anderson, and Robert McCullough (NE); Frank Pyle, Vice Chair, represented by Susan Jennette and Trinidad Navarro (DE); Cheryl Hawley and Maria Ailor (AZ); Amy Stegall and Kurt Swan (CT); Andria Seip (IA); Erica Weyhenmeyer (IL); Danielle Torres and Kristie Taber (MI); Cam Jenkins (MN); Amy Hoyt (MO); Tony Dorschner and Travis Jordan (SD); Monica L. Pinon and Thomas Morgan (TX); and John Haworth and Tyler Robbins (WA).

1. Discussed Draft Amendments for Model #880

Swanson said the Working Group has been focusing on its charge to “Review existing NAIC Models and Guidelines that address the use of lead generators for sales of health insurance products, and identity models and guidelines that need to be updated or developed to address current marketplace activities.” He said throughout 2022, the Working Group worked on draft amendments to the *Unfair Trade Practices Act* (#880) and distributed each revised exposure draft to the Working Group, interested state insurance regulators, and interested parties for review and comment. The Working Group met as necessary to review the comments and revise the amendments as appropriate per its charge. During the Spring National Meeting, the Working Group met to review the current draft and any comments received to date. Following the Spring National Meeting, the Working Group met with subject matter experts (SMEs) to review and finalize the draft amendments. Swanson said on July 10, a revised draft was distributed for comment with a deadline of July 21. He said three comments were received from Missouri, the American Health Insurance Plans (AHIP), and the NAIC Consumer Representatives. He said for the purpose of today’s meeting the Working Group will discuss the comments received and finalize the draft amendments.

Hoyt said Missouri reviewed the draft amendments and has submitted comments. She said the first set of comments was concerning Section 2—Definitions. She said Model #880 currently contains a definition of the term “customer.” She said items E.1, E.2, and E.3 under the definition of “Health Insurance Lead Generator” each contain the term “consumer” or “consumers.” She said if the intent is that consumer means something different from customer, Missouri suggests adding a definition of the term “consumer.” The Working Group discussed and agreed that the language for “Health Insurance Lead Generator” should be changed to only use the term “customer.” In addition, the Working Group agreed to add a drafting note to include language stating, “Public means all the general public and any person.”

Hoyt said the next suggestion was to include a definition for “lead-generating device.” She said under the current proposal, it appears that an employer providing information about available health plan choices to its employees would be considered a “health insurance lead generator.” She said the normal activities of non-licensed or regulated entities, such as a State Health Insurance Assistance Program (SHIP) providing Medicare information and counseling services, would also be considered “health insurance lead generators.” She said item E.3 of the current definition does not appear to be limited in any way to health insurance. She said the concern is that this lack of limitation could bring other potential entities under the definition of “Health Insurance Lead Generator.” She said the language within the *Advertisements of Accident and Sickness Insurance Model Regulation* (#40) and the *NAIC Model Rules Governing Advertisements of Medicare Supplement Insurance with Interpretive Guidelines* (#660) currently include a definition related to lead generators. She said these models define “Lead-generating device” as any communication directed to the public that, regardless of form, content, or stated purpose, is

intended to result in the compilation or qualification of a list containing names and other personal information to be used to solicit residents of this State for the purchase of [accident and sickness/Medicare supplement] insurance. The Working Group discussed this and agreed to add the new definition with the language supplied by Missouri.

Hoyt said the next suggestion concerns Section 3—Unfair Trade Practices Prohibited. She said Missouri believes the addition of “or any entity engaged in the business of insurance” to this section significantly broadens the scope of Model #880. She said it is Missouri’s understanding that the charge is limited to addressing the use of lead generators for sales of health insurance products. Including “any entity engaged in the business of insurance” appears to go beyond the scope of the charge, as the new language is not limited to health insurance. The Working Group discussed and agreed to remove the language “or any person engaged in the business of insurance.”

Hoyt said the next suggestion concerns Section 4—Unfair Trade Practices Defined. She said the inclusion of the new paragraph C in Section 4, “Failure to Maintain Marketing and Performance Record,” specific to “health insurance lead generators” is duplicative. She said Missouri recommends that the new paragraph be removed and the existing provision for “Failure to Maintain Marketing and Performance Records,” paragraph J, be revised to incorporate “health insurance lead generators.” The Working Group discussed this change.

Jenette said Delaware has used the definition of “records” in its language and could provide that to be inserted into Model #880. The Working Group agreed. Jeanette said she would send the language to NAIC staff to be inserted into Model #880.

Swanson said these revisions would be applied to the current draft, and a new draft would be distributed prior to the Working Group meeting at the Summer National Meeting. He said the plan for the Working Group would be to distribute the new draft and finalize the revisions at the Summer National Meeting. If necessary, the Working Group will hold a call following the Summer National Meeting to adopt the draft amendments. Swanson said once adopted, it would be exposed to the Task Force.

Having no further business, the Improper Marketing of Health Insurance (D) Working Group adjourned.

MARKET INFORMATION SYSTEMS (D) TASK FORCE

Market Information Systems (D) Task Force July 31, 2023, Minutes 8-109

Draft: 8/8/23

Market Information Systems (D) Task Force
Virtual Meeting (*in lieu of meeting at the 2023 Summer National Meeting*)
July 31, 2023

The Market Information Systems (D) Task Force met July 31, 2023. The following Task Force members participated: Dana Popish Severinghaus, Chair (IL); Chlora Lindley-Myers, Vice Chair (MO); Barbara D. Richardson represented by Cheryl Hawley (AZ); Ricardo Lara represented by Pam O'Connell (CA); Andrew N. Mais represented by Kurt Swan (CT); Sharon P. Clark (KY); James J. Donelon represented by Adam Patrick (LA); Grace Arnold represented by Teresa Fischer (MN); Justin Zimmerman represented by Ralph Boeckman (NJ); Scott Kipper (NV); Cassie Brown represented by Rachel Cloyd (TX); Nathan Houdek represented by Rebecca Rebholz (WI); and Allan L. McVey represented by Jeannie Tincher (WV). Also participating were: Brad Gerling and Jo LeDuc (MO).

1. Considered its Charges and Goals for 2023

Director Severinghaus said much of the Task Force's work this year will be to monitor the work of the Market Information Systems Research and Development (D) Working Group and the Market Analysis Procedures (D) Working Group. The Task Force will also be overseeing the enhancements to the Market Information Systems (MIS) that have been requested by members, as well as those that are part of the NAIC's *State Connected* strategic plan.

Director Severinghaus said the Task Force has two new charges related to the artificial intelligence (AI) recommendations it adopted last year. The Task Force is charging the Market Information Systems Research and Development (D) Working Group to address the first recommendation, which is to develop methods to ensure better data quality.

Director Severinghaus said the Market Analysis Procedures (D) Working Group does not report to the Task Force, but the Market Regulation and Consumer Affairs (D) Committee has given the Working Group the charge to address the second AI report recommendation to assess the current market analysis data and its effectiveness and identify any needed improvements. She said the Task Force will hear regular reports from the Working Group on its progress.

Director Severinghaus said the remaining charges for the Task Force and the Market Information Systems Research and Development (D) Working Group remain the same.

2. Adopted the Report of the Market Information Systems Research and Development (D) Working Group

Director Severinghaus said the Market Information Systems Research and Development (D) Working Group has a new chair, Gerling. She said the Working Group's long-time chair, Brent Kabler (MO), retired in June. She said the Task Force appreciated the leadership that Kabler provided the Working Group. She said the Task Force is fortunate that Gerling worked with Kabler for the last few years in Missouri, and she noted that he comes highly recommended by Director Lindley-Myers.

Gerling said the Working Group met May 22 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings and reviewed its goals for 2023. He said the Working Group has a new charge related to the AI recommendations report that was adopted last year. The Working Group will be assessing the quality of the market information data and providing recommendations for methods to ensure better data quality in order to make the current data more useable for the effective use of AI.

Gerling said the Working Group also heard a report from NAIC staff support regarding iSite+ tools and reports to consider for sunset in light of other tools and data that are now available. He said this includes Tableau dashboards, ThoughtSpot, and the NAIC Enterprise Data Warehouse. NAIC staff will be developing a survey of the states regarding the states' usage of current reports available on iSite+. Gerling said the goal is to be sure the states have improved reports and visualizations of all the data and reports that they currently use and need but do not maintain multiple reports that duplicate each other or are not used.

Finally, Gerling said NAIC staff reported on the status of the MIS Data Analysis Metrics Report, which measures the accuracy, completeness, and timeliness of data uploaded into the MIS. Due to resource concerns, the Working Group is discussing whether the reports can be provided on an annual basis and still meet the needs of the Working Group.

Commissioner Clark made a motion, seconded by Rebholz, to adopt the report of the Market Information Systems Research and Development (D) Working Group. The motion passed unanimously.

3. Heard a Report from the Market Analysis Procedures (D) Working Group

LeDuc said the Market Analysis Procedures (D) Working Group was assigned a charge from the Market Regulation and Consumer Affairs (D) Committee to "assess current market analysis data to identify needed improvements in the effectiveness of the data for market analysis and the predictive abilities of the market scoring systems utilizing the data." She said this charge arises from the AI recommendations adopted by the Task Force, so the Working Group will regularly report to the Task Force on its progress.

LeDuc said the Working Group began by compiling a list of what data market conduct analysts use. She said this list is not exhaustive, but it covers data provided through the NAIC MIS, data available within the states, and data obtained from sources outside the NAIC and the states.

LeDuc said the Working Group will continue to add to the list as data sources continue to be identified, but now that that list is quite extensive, the Working Group will begin identifying how market analysts use the data and discuss the data's effectiveness.

LeDuc said the Working Group will also begin its assessments of the scoring systems that are in the NAIC MIS. She said this includes the Market Analysis Prioritization Tool (MAPT) and the Market Conduct Annual Statement (MCAS) rankings.

Director Severinghaus asked how the Working Group is going to make the assessments of the effectiveness and predictive abilities of the data. She asked if there would be informational interviews conducted. LeDuc said the Working Group would start with the most prominently used sources and discuss them at the Working Group level, but she expects that there will also be one-on-one interviews.

4. Received an Update on MIS Projects and USER Forms

Chris Witt (NAIC) began with the status of *State Connected* projects that affect the MIS. He said *State Connected* Project 3.4 is the MCAS modernization project. He said the MCAS utilizes the Financial Data Repository (FDR) system backend. The FDR is being rewritten, and that rewrite is in the investigative phase. Much of what happens with the MCAS modernization will come out of the FDR rewrite. He said there should be work on a proof of concept for the FDR rewrite within six months.

Witt said the *State Ahead* project for the Enterprise Data Asset Management Phase II is nearly complete. He said

there are six states—Florida, Georgia, Michigan, Minnesota, Mississippi, and Ohio—that the NAIC is still working with to set up database connections. It is anticipated that the completion of all states will be by the end of 2023.

Witt said the Market Actions Tracking System (MATS) Web Service interface with State Based Systems (SBS) is on hold while the SBS focuses on improving the performance of the SBS Market Regulation services. The SBS plans to resume work on the MATS interface in the fourth quarter of this year.

Witt said *State Connected* Project 3.2 encompasses all the USER forms related to the Regulatory Information Retrieval System (RIRS), including the implementation of new codes and the support for attachments in the RIRS. He said work on the common architecture should begin in August. That needs to be done before the new coding can be implemented. The NAIC will be reaching out to the SBS states, the Vertafore states, and the states that send data to the NAIC directly to begin the work of implementing the new RIRS codes.

Witt said the Market Analysis Review System (MARS) merger work needs to wait until the RIRS coding and MCAS work are completed because the resources are not available to do them concurrently.

Having no further business, the Market Information Systems (D) Task Force adjourned.

Producer Licensing (D) Task Force
Virtual Meeting (*in lieu of Meeting at the 2023 Summer National Meeting*)
May 31, 2023

The Producer Licensing (D) Task Force met May 31, 2023. The following Task Force members participated: Larry D. Deiter, Chair (SD); Sharon P. Clark, Vice Chair (KY); Alan McClain (AR); Barbara D. Richardson (AZ); Ricardo Lara represented by Tyler McKinney (CA); Andrew N. Mais represented by Jill Marocchini (CT); Doug Ommen represented by Mathew Cunningham (IA); Dean L. Cameron represented by Lori Thomason (ID); Amy L. Beard represented by Steve Embree (IN); Vicki Schmidt represented by Monicka Richmeier and Dan Klucas (KS); James J. Donelon represented by Lorie Gasior (LA); Kathleen A. Birrane represented by Lorelei Brillante (MD); Anita G. Fox represented by Jill Huisken (MI); Chlora Lindley-Myers represented by Brenda Horstman (MO); Troy Downing (MT); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented Janelle Middlestead (ND); Eric Dunning represented by Kevin Schlautman (NE); Judith L. French represented by Karen Vourvopoulos (OH); Glen Mulready represented by Courtney Khodabakhsh (OK); Michael Humphreys represented by Adriane Force (PA); Elizabeth Kelleher Dwyer represented by Rachel Chester (RI); Cassie Brown represented by Jodie Delgado (TX); Jon Pike represented by Randy Overstreet (UT); Scott A. White represented by Richard Tozer and (VA); Mike Kreidler represented by Jeff Baughman (WA); Nathan Houdek represented by Rebecca Rebholz (WI); Allan L. McVey represented by Greg Elam and Robert Grishaber (WV); and Jeff Rude represented by Bryan Stevens (WY).

1. Adopted its Dec. 8, 2022, Minutes

Commissioner Clark made a motion, seconded by Tozer, to adopt the Task Force's Dec. 8, 2022, minutes (*see NAIC Proceedings – Fall 2022, Producer Licensing (D) Task Force*). The motion passed unanimously.

2. Discussed the Template for the 1033 Process

Director Deiter said the next item is to continue the discussions regarding the 1033 template for consideration of 1033 waiver requests, which are required by the federal Violent Crime Control and Law Enforcement Act of 1994. He said there are three issues he would like to raise due to the written comments that were submitted. He said the first issue is the definition of "conviction" and whether pleas of abeyance and expungements should be excluded from this definition. The second issue is whether states use the long-form or short-form for requests and why one form is preferred. The third issue is about the factors a jurisdiction may consider when evaluating a 1033 waiver request and how states inform individuals about the 1033 waiver application process.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said expungements should not be included in the definition of "conviction," and the exclusion of expungements would be consistent with the standard used by federal financial service regulators, such as the Federal Deposit Insurance Corporation (FDIC). He said it is important to have a consistent interpretation of the federal statute, and the inclusion or exclusion of expungements should not be based on how a state insurance department interprets a state law. David Leifer (American Council of Life Insurers—ACLI) and Maeghan Gale (National Association of Insurance and Financial Advisors—NAIFA) said they support Bissett's comments on the exclusion of expungements from the definition of "conviction." Gale said including expungements in the definition of "conviction" would expand the scope of individuals who need to obtain a waiver and would result in an unnecessary barrier to entry into the business of insurance. Chester said she agrees that expungements should be excluded from the definition of "conviction." Overstreet said the definition of "conviction" is consistent with the definition used in Utah.

Stevens said Wyoming also considers crimes against individuals, such as aggravated assault or attempted murder. Bissett said he is not defending individuals who have committed these types of crimes. He said these types of crimes should be considered as part of the normal state licensing process, and the review of a 1033 waiver request is probably not the correct mechanism for considering these types of crimes in determining whether an individual should be granted a producer license. Director Richardson agreed that the 1033 waiver process should focus on felonies involving breach of trust and not all felonies.

Stevens said Wyoming uses the long-form to discourage individuals who are not serious about entering into the business of insurance. Vourvopoulos said Ohio uses the long-form. Delgado said Texas does not use the long-form or short-form and considers 1033 waiver requests as part of the licensing application process. Baughman and Chester said their states use the short-form to simplify the process. Khodabakhsh said Oklahoma uses the long-form because this helps eliminate applications from individuals who do not qualify for a waiver.

Regarding factors to review when considering a 1033 waiver request, Commissioner Clark said Kentucky considers the length of time since the felony, whether any restitution was made, and the applicant's job history since the conviction. Tozer said Virginia considers the items referenced by Commissioner Clark, whether the applicant had his/her civil rights restored, and whether the applicant has a pattern of unlawful activity. He said Virginia also reviews an applicant's references and whether the criminal conviction had an impact on the insurance industry.

Commissioner Clark suggested that additional discussions of the template for the 1033 waiver process should include a regulator with law enforcement expertise in addition to regulators with licensing expertise. She said she agrees with a Kentucky regulator with law enforcement expertise participating in future discussions. Director Deiter requested that NAIC staff continue working with the small group of subject matter experts (SMEs) from Connecticut, Kentucky, Missouri, Pennsylvania, and Rhode Island to review the comments and provide an updated draft for further consideration by the Task Force.

3. Adopted a New Public Adjuster Licensing Charge

Director Deiter said the National Association of Public Insurance Adjusters (NAPIA) requested that the NAIC *Public Adjuster Licensing Model Act* (#228) be amended to address the following issues: 1) unlicensed public adjusters; 2) contractors who are also acting as public adjusters on the same claim; and 3) the assignment of benefit rights to contractors. Because the amendment of this model falls outside the scope of the Task Force's changes, he said the following charge is being proposed: "Review and amend, as needed, Model #228 to enhance consumer protections in the property/casualty (P/C) claims process." If adopted today, he said Commissioner Trinidad Navarro (DE), who chairs the Antifraud (D) Task Force, will lead this workstream under the Producer Licensing (D) Task Force since the issues also touch on potentially fraudulent activities.

Baughman made a motion, seconded by Tozer, to adopt the proposed public adjuster licensing charge. The motion passed unanimously.

4. Adopted the NAIC *Continuing Education Recommended Guidelines for Instructor Approval*

Tozer said industry representatives approached the Uniform Education (D) Working Group to discuss the difficulties of obtaining approval for continuing education (CE) instructors in some jurisdictions and the lack of uniformity across jurisdictions. This led to the Uniform Education (D) Working Group surveying jurisdictions regarding requirements for CE instructor approval. Tozer said this led to the development of the *Continuing Education Recommended Guidelines for Instructor Approval*, which the Uniform Education (D) Working Group unanimously adopted in November 2022.

Baughman made a motion, seconded by Stevens, to adopt the *Continuing Education Recommended Guidelines for Instructor Approval*. The motion passed unanimously.

5. Adopted the Reports of the Adjuster Licensing (D) Working Group and the Uniform Education (D) Working Group

Tozer said the Uniform Education (D) Working Group met May 18 to discuss: 1) its 2023 charges; 2) state producer licensing examination pass rates; 3) continued efforts to obtain state signatures for the Continuing Education Reciprocity (CER) Agreement, which 47 jurisdictions have signed; 4) denial of CE credit for online courses; 5) how jurisdictions accommodate individuals with a disability or medical waiver; and 6) the approval and denial of courses across jurisdictions and whether jurisdictions have experienced CE providers forum shopping for a home state to approve a CE course.

Greg Welker (NAIC) said the Adjuster Licensing (D) Working Group met March 29 to discuss: 1) adjuster licensing reciprocity; 2) the uniform application of a Designated Home State license; 3) whether the NAIC *Independent Adjuster Licensing Guideline* (#1224) should be amended and converted to an NAIC model act; and 4) how to have more consistent and uniform state reporting of adjuster licensing information to the NAIC. For example, he said the Working Group is discussing whether an adjuster who lives in Rhode Island but works remotely in Texas should be permitted to report Texas as his/her home state. Another example is whether all adjusters who work for a company with a corporate office in Rhode Island should be issued a home state license in Rhode Island regardless of the residency of each individual.

Stevens made a motion, seconded by Overstreet, to adopt the reports of the Uniform Education (D) Working Group (Attachment One) and the Adjuster Licensing (D) Working Group (Attachment Two). The motion passed unanimously.

6. Received a Report from the NIPR Board of Directors

Director Deiter said the National Insurance Producer Registry's (NIPR's) year-to-date revenue is \$24 million, which is 3.7% over budget. The NIPR senior team and Board of Directors have begun work on the NIPR strategic plan for 2024–2026, with a vote on the final plan scheduled for the end of the year.

Director Deiter said Superintendent Adrienne A. Harris (NY) has approved the expansion of NIPR services for New York. With the New York implementation and the work currently underway with Washington, NIPR will have implemented all states on NIPR for major products by year-end.

Director Deiter said NIPR continues to implement the Contact Change Request (CCR) application for business entities. To date, 34 states have implemented CCR for business entities, which allows industry to update address, email, and telephone changes through NIPR. NIPR has processed over 76,000 transactions since the initial implementation of CCR for business entities.

Director Deiter said NIPR is continuing to expand electronic solutions for the states and industry to process additional licensee updates, including name changes and changes to Designated Responsible Licensed Producers (DRLPs). To date, NIPR has implemented the ability for licensees to change a name for the states of Connecticut, Missouri, and Rhode Island, and it has processed over 1,300 transactions for these states. In a few weeks, NIPR will implement Connecticut as a pilot state for DRLP changes.

Director Deiter said NIPR and the NAIC continue to offer producer licensing zone training for states. The program covers producer licensing practices and current and emerging industry issues, and it encourages dialogue among peer regulators. The two-and-a-half-day training is intended for state and U.S. territory producer licensing personnel.

Having no further business, the Producer Licensing (D) Task Force adjourned.

Draft: 5/26/23

Uniform Education (D) Working Group
Virtual Meeting
May 18, 2023

The Uniform Education (D) Working Group of the Producer Licensing (D) Task Force met May 18, 2023. The following Working Group members participated: Richard Tozer, Chair (VA); Lorelei Brillante, Vice Chair (MD); Charlene Ferguson (CA); Vanessa Miller (MS); Otis Phillips (NM); Karen Vourvopoulos (OH); Pat Murray (VT); and Jeff Baughman (WA). Also participating were: Jackie Russo (IA); Lee Ellen Webb (KY); Rachel Chester (RI); and Bryan Stevens (WY).

1. Discussed its 2023 Charges

Tozer said that the Working Group's 2023 charges have remained the same since 2022. However, the Producer Licensing (D) Task Force will be meeting May 31, so the Working Group could get additional direction.

2. Discussed Exam Pass Rates

Tozer said he has continued to work with NAIC staff to collect pass rate data from the continuing education (CE) vendors for all states. He said Commissioner Sharon P. Clark (KY) requested that the Working Group display pass rate information for in-person and virtual meetings. Tozer said he will also work with NAIC staff to begin collecting 2022 data at the first of the year. Tozer said this request will be included in reports moving forward. The Working Group discussed the process of collecting this data and changes that may assist the NAIC in obtaining this information from state CE vendors.

3. Discussed Recommended Guidelines for CE Instructor Approval

Tozer said that on Nov. 30, 2022, the Working Group adopted the *Continuing Education Recommended Guidelines for Instructor Approval*. He said the guidelines passed unanimously and will be on the agenda for consideration of adoption by the Producer Licensing (D) Task Force meeting May 31.

4. Discussed Producer Declining CE Credit (Online Course)

Tozer said he was contacted concerning individuals taking CE courses through a vendor after Virginia declined the CE courses. Tozer said the vendor was offering individuals the CE courses and individuals were then requesting CE credit from Virginia.

Baughman said Washington encountered the situation with a provider which was informed by the department that they had to check a specific box to receive credit. Baughman said Washington kept having issues with producers thinking that they completed a course for CE credit when they did not. Baughman said Washington is working with the vendor so CE credit will automatically be given unless the applicant unchecks a specific box. The Working Group members said they have encountered the same situation in their states.

5. Discussed Accommodations for Disabilities/CE/Medical Waivers

Tozer said the next agenda item concerns accommodations for individuals with disabilities. He said in the past, requests have been received for waivers based on a disability, such as a hearing impairment. He said in Virginia,

the CE board administers the CE program in the commonwealth. Therefore, the insurance department does not actually control the CE programs. Tozer said Virginia also had an issue where the CE board referenced a request for waiving CE due to a medical situation concerning vision issues. He said this was denied because the CE providers can offer alternative ways of delivering the instructions for CE.

Baughman said Washington regulations allow waivers for medical and military reasons; however, medical waivers require a statement from an attending physician.

Vourvopoulos said Ohio has requirements in place for all CE vendors to meet the federal Americans with Disabilities Act of 1990 (ADA) accommodations. Additionally, they must meet language requirements regarding medical extensions, much like Washington's regulations.

6. Discussed Other Matters

Brilliante said she has questions specific to course approval in home states she would like to present to the Working Group, including: 1) What happens when the home state does not approve a course and then submit the course to another state as the home state? How do providers select this other state?; and 2) What should the process be when a company changes provider vendors? Should the courses maintain the previous home state or change to the new vendor's home state, which would mean another substantive review of the course?

Chester said Rhode Island would not want individuals shopping for a home state to approve their course if their original home state has already denied the course. Barb Gavitt (A.D. Banker & Company) said there are circumstances where another state would approve a course when the home state does not. Therefore, the vendor would need to use the approving state as their home state. Tozer said this should fall under true reciprocity since one state has already denied approval.

The Working Group discussed the online course approval guidelines and formula for establishing credit hours offered per course.

Having no further business, the Uniform Education (D) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Committees/D Committees/2023 Summer/PLTF/UEWG ...

Draft: 4/23/23

Adjuster Licensing (D) Working Group
Virtual Meeting
March 29, 2023

The Adjuster Licensing (D) Working Group of the Producer Licensing (D) Task Force met Mar. 29, 2023. The following Working Group members participated: Rachel Chester (RI); Peggy Dunlap (AR); Charlene Ferguson (CA); Lee Ellen Webb (KY); Lorie Gasior (LA); Vanessa DeJesus (NM); Courtney Khodabakhsh (OK); Jodie Delgado (TX); Richard Tozer (VA); Jeff Baughman (WA) and Bryan Stevens (WY).

1. Discussed 2023 Charges

Chester said the Working Group last met in September and we touched on the discussions which took place at the 2022 Securities and Insurance Licensing Association (SILA) Education Conference. She said during that meeting we focused on state laws and procedures that are affecting licensing reciprocity. Chester said the direction for this meeting is to continue an open discussion concerning adjuster licensing reciprocity. Chester inquired if there were any states that would like to speak with changes or hot topics taking place in their state.

Fromholtz said Arizona has issues continuing to emerge where insurers are trying to get substantive policy statements. Fromholtz said Arizona statutes will not permit Arizona to license adjusters who are employed by an insurer. Fromholtz said because Washington and New Mexico require a resident license prior to the issuance on a non-resident license, insurers are requesting Arizona to issue a substantive policy statement that Arizona will not license adjusters who are employed by an insurer. Fromholtz said Arizona statutes exempt a company adjuster from licensure; however, there is nothing prohibiting a company adjuster from obtaining an adjuster license.

Dunklin said it is the same for Alabama, per state statutes Alabama is not allowed to license staff adjusters. Dunklin said if a staff adjuster applies for an independent adjuster license, Alabama will issue them that license. Dunklin said the insurance department has run into some confusion for nonresident licensees who hold a resident staff adjuster license. Some states issue both staff adjuster licenses and independent adjuster licenses and some states do not differentiate between the two.

Chester said the next topic for discussion is Designated Home State (DHS). Chester said Rhode Island checks every person's DHS selection because there is no electronic way to complete that process. Chester said an applicant can apply and select any state as the DHS and then the insurance department must determine if the DHS is correct.

Chester said it is important for the Working Group to review how our decisions affect the availability of adjusters. Chester said the Working Group should focus on the goal of achieving a uniform and reciprocal licensing process for adjusters. Chester said the Working Group should review the NAIC 2008 *Independent Adjuster Licensing Guideline* and the 2011 *Independent Adjuster Reciprocity Best Practices & Guidelines*. Chester said she would like the 2008 Independent Adjuster Licensing Guideline converted into an NAIC model act. Chester said she will work with NAIC staff to determine the next steps for this process.

2. Discussed Public Adjusters

Chester said there was a question concerning public adjusters and the discussion of creating a Public Adjusters (D) Working Group. Greg Welker (NAIC) said Commissioner Sharon P. Clark (KY) mentioned this during the Producer Licensing (D) Task Force report to the Market Regulation and Consumer Affairs (D) Committee at the NAIC Spring

National meeting. Welker said Commissioner Trinidad Navarro (DE) will lead the Working Group because some of the issues to be address touch on potential insurance fraud.

3. Any Other Matters

Chester said she will work with NAIC staff support to develop a schedule to continue the Working Group's discussions focusing on 1) creating greater adjuster licensing efficiencies though electronic processing of adjuster licenses and 2) converting the 2008 *Independent Adjuster Licensing Guideline* converted into an NAIC model act.

Having no further business, the Adjuster Licensing (D) Working Group adjourned.

Draft: 8/17/23

Financial Condition (E) Committee
Seattle, Washington
August 15, 2023

The Financial Condition (E) Committee met in Seattle, WA, Aug. 15, 2023. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Nathan Houdek, Vice Chair, and Amy Malm (WI); Mark Fowler (AL); Michael Conway (CO); Michael Yaworsky represented by Virginia Christy (FL); Amy L. Beard and Roy Eft (IN); Doug Ommen, Carrie Mears and Kevin Clark (IA); Timothy N. Schott and Vanessa Sullivan (ME); Mike Chaney represented by David Browning (MS); Chlora Lindley-Myers and John Rehagen (MO); Justin Zimmerman (NJ); Adrienne A. Harris represented by John Finston and Bob Kasinow (NY); Michael Wise (SC); Cassie Brown and Jamie Walker (TX); and Scott A. White (VA).

1. Adopted its July 19 and Spring National Meeting Minutes

The Committee met July 19 and took the following action: 1) adopted life risk-based capital (RBC) proposals 2023-09-IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals); 2) adopted the *Mortgage Guaranty Insurance Model Act* (#630); and 3) adopted a new charge for a new group titled the Generator of Economic Scenarios (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group.

Commissioner Houdek made a motion, seconded by Commissioner White, to adopt the Committee's July 19 (Attachment One) and March 24 minutes (*see NAIC Proceedings – Spring 2023, Financial Condition (E) Committee*). The motion passed unanimously.

2. Adopted the Reports of its Task Forces and Working Groups

Superintendent Dwyer stated that the Committee usually takes one motion to adopt its task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards; i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial. She reminded Committee members that after the Committee's adoption of its votes, all the technical items included within the reports adopted will be sent to the NAIC Members for review shortly after the conclusion of the Summer National Meeting as part of the Financial Condition (E) Committee Technical Changes report. Pursuant to the technical changes report process previously adopted by the Executive (EX) Committee and Plenary, the Members will have 10 days to comment. Otherwise, the technical changes will be considered adopted by the NAIC and effective immediately. With respect to the task force and working group reports, Superintendent Dwyer asked the Committee: 1) whether there were any items that should be discussed further before being considered for adoption and sent to the Members for consideration as part of the technical changes; and 2) whether there were other issues not up for adoption that are currently being considered by task forces or workings groups reporting to this Committee that require further discussion. The response to both questions was no.

In addition to presenting the reports for adoption, Superintendent Dwyer noted that the Financial Analysis (E) Working Group met Aug. 12, July 20, June 14 and 21, May 24, and May 25 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met Aug 12, July 20, and May 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies. Finally, the National Treatment and Coordination (E) Working Group met in regulator-to-regulator session Aug. 2, July 26, and June 15, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance), to continue work on its goals.

Walker made a motion, seconded by Acting Superintendent Schott, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Two); Mortgage Guaranty Insurance (E) Working Group (Attachment Three); Restructuring Mechanisms (E) Working Group (Attachment Four); and Risk-Focused Surveillance (E) Working Group (Attachment Five). The motion passed unanimously.

3. Adopted the Macroprudential Reinsurance Worksheet

Kasinow summarized the work by the Macroprudential (E) Working Group leading up to its adoption of the reinsurance worksheet in June. He emphasized that the worksheet was designed for regulators to assess cross-border reinsurance treaties where there are different regulatory systems involved and is intended to assist in identifying if there are true economic impacts from the reinsurance transaction. He noted that it is not intended to be used for every reinsurance contract and that it should be used in a way to avoid duplicating requested information. It is geared toward life insurance contracts. However, there is no reason to limit the tool to life; it can be used on property/casualty (P/C) reinsurance contracts. The worksheet is an optional tool and will not be included in the *Financial Analysis Handbook*, but it is available on StateNet to be used when deemed appropriate.

Rehagen made a motion, seconded by Commissioner Ommen, to adopt the macroprudential reinsurance worksheet (Attachment Six). The motion passed unanimously.

4. Adopted INT 23-01: Net Negative (Disallowed) IMR

Dale Bruggeman (OH), Chair of the Statutory Accounting Principles (E) Working Group, summarized Interpretation (INT) 23-01: Net Negative (Disallowed) IMR. Bruggeman started with a timeline of the work. He noted that the Working Group exposed the idea of an initial project as a short-term Interpretation at the 2022 Fall National Meeting, and it heard comments at the 2023 Spring National Meeting. At that meeting, the Working Group gave NAIC staff directions for a proposed interpretation to be exposed. The Working Group heard comments on that exposure at a meeting in June and re-exposed a revised interpretation at that time. On Aug. 13, the Working Group adopted INT 23-01. Bruggeman noted the adopted interpretation is effective immediately and through year-end 2025, which gives industry, regulators, and others a few years to develop a long-term approach. The adopted INT reflects the following:

- The requirement for RBC to be over 300% authorized control level (ACL) RBC after adjustment to remove admitted positive goodwill, EDP equipment and operating system software, deferred tax assets (DTAs), and admitted negative interest maintenance reserve (IMR) (referred to as softer assets).
- Allowance to admit up to 10% of adjusted capital and surplus (excluding those softer assets), first in the general account, and then if all disallowed IMR in the general account is admitted and the percentage limit is not reached, then to the separate account proportionately between insulated and non-insulated accounts—those that have assets at book value. (The adjustments are the same that occur for the RBC adjustment and reduce capital and surplus before applying the 10% percentage limit.)
- Application guidance for admitting/recognizing IMR in both the general and separate accounts, including a specific name to use in each. Also, reporting entities shall allocate an amount equal to the general account admitted net negative (disallowed) IMR from unassigned funds to an aggregate write-in for special surplus funds (line 34) (named as “Admitted Disallowed IMR”). Although dividends are contingent on state-specific statutes and laws, the intent of this reporting is to provide transparency and preclude the ability for admitted negative IMR to be reported as funds available to dividend.

- No exclusion for derivatives losses included in negative IMR if the reporting entity can demonstrate historical practice in which realized gains from derivatives were also reversed to IMR (as liabilities) and amortized.
- Inclusion of a new reporting entity attestation, which continues the existing practice that losses cannot be deferred as a result of a forced sale due to liquidity issues, along with commentary that assets were sold as part of prudent asset management, following documented investment or liability management policies.

Bruggeman said that it was important to note that this interpretation does not place key reliance on asset adequacy testing (AAT) as requested by the Life Actuarial (A) Task Force. AAT performed by actuaries will still use the IMR as a natural liability or as an admitted asset. He said it is important to note that the larger the admitted asset within AAT, the greater the chance of having an additional AAT reserve requirement. Bruggeman also noted that the Working Group started the longer-term project through exposure of agenda item 2023-14. The Working Group also exposed some blanks instructional provisions for when interest related realized gains/losses go through IMR (that is deferred from the income statement) and when the result goes through the asset valuation reserve (AVR) calculation and thus through the income statement. There were some holes in how the instructions read. The Working Group intends to use an ad hoc technical group, and with any required approvals from the parent groups, to nail down the issues and get any needed help from the Life Actuarial (A) Task Force and/or the American Academy of Actuaries (Academy).

Commissioner Houdek made a motion, seconded by Acting Superintendent Schott, to adopt INT 23-01 (Attachment Seven). The motion passed with New York abstaining.

5. Heard a Presentation from the OFSI on the Use of AI

Jacqueline Friedland (Office of the Superintendent of Financial Institutions—OFSI) provided an overview of some of the work that OFSI had conducted relative to data analytics, including its use of artificial intelligence (AI) (Attachment Eight). Friedland emphasized a number of areas during her presentation, including that her presentation and her approach to things were influenced by her background as an actuary, where data is a powerful source of information that can enhance efficiency and effectiveness. She discussed Canada's financial condition testing (FCT) report that is required annually of insurers and how it is the single most important report used for prudential regulation in Canada. She described her past experience, starting with Canada and the expectations she set out for her staff in using the reports, and how using natural language generation AI can increase efficiencies and effectiveness in such reviews by her staff.

Friedland also discussed her work and that of her staff in retooling the reports for their use with International Financial Reporting Standard (IFRS) 17 *Insurance Contracts*. Her greatest emphasis was placed on the next topic, the Risk Assessment Data Analytics Report (RADAR), which is an interactive dashboard of common financial risk indicators across insurance and banking. At its core, the report pulls in various data elements and color codes the area of data to indicate, based upon industry data, whether the area being reviewed by the regulator is an area of concern or where follow-up is needed. The system uses a comprehensive and interactive training program that was developed using various inputs, including the NAIC's Insurance Regulatory Information System (IRIS) ratios manual.

Additionally, Friedland discussed OFSI's use of the Meltwater media monitoring tool, which allows insurance supervisors to monitor media and social media across companies, industries, and topics. It is particularly helpful for parent company monitoring. Finally, Friedland discussed the use of natural language processing (NLP) for reinsurance. OFSI is seeking more details about the use of reinsurance across the industry, in terms of attachment points, participation, limits, etc. NLP allows OFSI to extract unstructured data that lacks consistency from actuarial reports to where it is more usable.

6. Exposed the Framework for Regulation of Insurer Investments

Superintendent Dwyer reminded meeting participants that included with the materials for the meeting was a draft *Framework for Regulation of Insurer Investments*. She explained that the purposes of this document are to: 1) provide a holistic overview of what various working groups and task forces are doing in this area; and 2) state that this work is under the purview of the commissioners and other regulators making up the Committee. Superintendent Dwyer said she intends to hear from all interested parties as the Committee finalizes this document, but the Committee does not plan to stop any of the work that is currently underway related to this project. The three main pieces of that work that are underway are: 1) work at the Risk-Based Capital Investment Risk and Evaluation (E) Working Group to modify the life RBC formula; 2) work at the Valuation of Securities (E) Task Force that authorized the Structured Securities Group (SSG) to begin financially modeling collateralized loan obligations (CLOs) beginning December 2024; and 3) work at the Valuation of Securities (E) Task Force that proposes to establish processes and procedures by which the Securities Valuation Office (SVO) would be authorized to challenge the credit rating for a filing exempt (FE) security. Superintendent Dwyer noted that during this meeting, she wanted to hear comments from regulators.

Rehagen noted that the document is good, especially the enhancements and the different regulatory initiatives regulators are undertaking because they need this type of ability with the increasing complexity of investments—specifically, having services that assist regulators in determining how risky a security it is. Superintendent Dwyer noted that it was drafted by a small ad hoc group of committee members and that having everyone’s input on it will be helpful.

Mears noted the document would have a major impact on the Valuation of Securities (E) Task Force. She said that speaking for Iowa, she supports the framework and wanted to reiterate that none of the existing work will be pausing. Mears said the Valuation of Securities (E) Task Force, which she chairs, will continue its deliberative process, and take into account all the feedback received from interested parties, but the Task Force will still be moving forward in that direction. Mears noted that the framework, if supported, provides a future vision of what centralized investment expertise is available to U.S. regulators. She said that it is understandable that many of these initiatives will be costly and will take some time as issues arise. She said that whether it is with the Valuation of Securities (E) Task Force or the Risk-Based Capital Investment Risk and Evaluation (E) Working Group, the framework looks beyond the different economic cycles or stresses that could be in place and allows regulators to be thoughtful and deliberative. Mears said this is an opportune time for the document given the work ahead.

Commissioner Beard thanked Superintendent Dwyer for her leadership on this document. She noted the Committee took a measured approach and was able to expedite this important issue in discussions. Commissioner Beard stated appreciation for the non-prescriptive approach that the framework will allow the regulators to take. She said it gives peace of mind knowing that the Committee participates in the process and that the Committee will be able to rely on the subject matter experts (SMEs) for their expertise.

Commissioner White made a motion, seconded by Commissioner Houdek, to expose the framework draft for a 45-day public comment period ending Oct. 2. The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.

SharePoint/NAICSupportStaffHub/Member Meetings/E CMTE/2023-2-Summer/081523 E Minutes.docx

Draft: 7/24/23

Financial Condition (E) Committee
Virtual Meeting
July 19, 2023

The Financial Condition (E) Committee met July 19, 2023. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Nathan Houdek, Vice Chair (WI); Mark Fowler (AL); Michael Conway represented by Rolf Kaumann (CO); Michael Yaworsky represented by Chris Struk (FL); Doug Ommen (IA); Amy L. Beard represented by Roy Eft (IN); Timothy N. Schott (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Chaney represented by Chad Bridges (MS); Justin Zimmerman represented by David Wolf (NJ); Adrienne A. Harris represented by John Finston and Bob Kasinow (NY); Michael Wise (SC); Cassie Brown represented by Jamie Walker (TX); and Scott A. White represented by Doug Stolte (VA). Also participating were: Philip Barlow (DC); Jackie Obusek (NC); and Tom Botsko (OH).

1. Adopted Life RBC Proposals 2023-09-IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals)

Superintendent Dwyer stated that this item related to the topic of residual interest investments, which the Committee began discussing a couple of years ago and in early 2022, asked the newly formed Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group to address. Barlow described how the Working Group had been working on this issue since early 2022 and on into the first half of the year until it was recently adopted. He described that earlier in the year, the Working Group adopted the structure in the Life RBC formula that created a new reporting line for residual investments within the formula. He stated that the Working Group also adopted a structure earlier this year for a sensitivity test related to the residual tranches. Factors for both of these structures were not adopted until more recently, which went through a lot of discussion at the Working Group level before ultimately being adopted. Barlow noted that the two proposals before the Committee collectively represent a proposal submitted by the Texas Department of Insurance (DOI), and that was unanimously adopted by the Working Group. He discussed the features of the proposal, including a factor for residual investments starting at 30% for 2023 and 45% for 2024 and going forward but leaving space for a proposal to be submitted that supports either a higher or lower factor for 2024 if deemed more acceptable based upon data provided by the sponsor of the proposal. The sensitivity test for the residual investments for 2023 is set at 15%, and 0% for 2024 since the factor already reflects the full 45%. Botsko commended Barlow for the great work done on this project and to all of the Working Group members that provided the Capital Adequacy (E) Task Force with the proposal that was unanimously adopted at that level.

Walker made a motion, seconded by Stolte, to adopt proposals 2023-09-IRE and 2023-10-IRE (Attachment One-A). The motion passed unanimously.

2. Adopted a New Charge and a New Group Titled the Generator of Economic Scenarios (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group

Barlow described that this was an issue the Life Risk-Based Capital (E) Working Group had been working on with the Life Actuarial (A) Task Force for some time, and it involves replacing the current generator of economic scenarios (GOES) that is used for both reserves and capital. He stated that he would not go into all the details; this is being done, but the work is proceeding with substantial progress, and new charges are being requested to establish some governance and related structure around the GOEA once it is developed. He noted that this was adopted by the Life Insurance and Annuities (A) Committee. He stated that Iowa has agreed to chair the Subgroup,

and Ohio has agreed to vice chair the Subgroup. He also stated that while a good membership has already volunteered, anyone interested can contact NAIC staff or himself.

Finston made a motion, seconded by Kaumann, to form the new subgroup named the Generator of Economic Scenarios (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group with the proposed charges as presented (Attachment One-B). The motion passed unanimously.

3. Adopted Model #630

Obusek stated that the Mortgage Guaranty Insurance (E) Working Group was charged with updating the *Mortgage Guaranty Insurance Model Act* (#630) to strengthen and modernize the model in response to the 2008 financial crisis. The last time the model was substantially updated was 1976. Obusek noted that the Executive (EX) Committee approved the Request for NAIC Model Law Development in July 2013. At that time, the development of a capital model to accompany Model #630 was the key focus of the Financial Condition (E) Committee's attention. The Working Group worked with two different consulting firms over several years to attempt to build a capital model, which was met with several challenges. In April 2021, the Working Group referred a draft mortgage guaranty exhibit to the Blanks (E) Working Group, and the exhibit was finalized and integrated into the blank, effective year-end 2021. In May 2022, the Mortgage Guaranty Insurance (E) Working Group decided to pause the development of the capital model and continue collecting data for further analysis in the future. As a result, the Working Group focused on finalizing the amendments to Model #630. Obusek noted that the Model #630 Drafting Group consisted of all of the members of the Working Group represented by herself as the chair; Kurt Regner (AZ); Monica Macaluso and Joyce Zeng (CA); Robert Ballard (FL); Rehagen (MO); Margot Small (NY); Diana Sherman (PA); Amy Garcia (TX); and Amy Malm and Levi Olson (WI). Obusek stated that over the next 14 months, the drafting group met 12 times, and Model #630 was exposed for public comment on Oct. 7, 2022; Feb. 27, 2023; and May 11, 2023. During those exposures, various comments were received from the mortgage guaranty consortium and the consumer representatives and discussed both by the drafting group and during open meetings of the Working Group. She noted that many of the comments received were addressed through changes integrated into the draft model included in the proposed changes. Some of the more significant amendments dealt with the reserving requirements related to contingency reserves and waivers with respect to risk in-force. The Working Group adopted the amended Model #630 during its July 13 conference call. Superintendent Dwyer reminded the Committee that in order to advance Model #630 to the Executive (EX) Committee and Plenary for consideration, a two-thirds majority vote is needed by the Financial Condition (E) Committee members in total; therefore 10 members would need to vote yes.

Commissioner Houdek made a motion, seconded by Rehagen, to adopt Model #630 (Attachment One-C). The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

This proposal applies a .45 base RBC factor in the life RBC formula for residual tranches.

Additional Staff Comments:

DF – The Working Group adopted a factor of .30 for yearend 2023 to be replaced by .45 beginning with yearend 2024 with consideration of positive or negative adjustment based on additional information.
EY- The Task Force adopted this proposal and 2023-10-IRE together during June 30 meeting.

**** This section must be completed on all forms.**

Revised 2-2023

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

The adoption by the Working Group of proposal 2023-04-IRE provides the structure for this sensitivity test. This proposal is to address the factor to be applied in that test.

Additional Staff Comments:

DF – The Working Group adopted a factor of .15 for yearend 2023.
EY- The Task Force adopted this proposal and 2023-09-IRE together during June 30 meeting.

**** This section must be completed on all forms.**

1. The **Generator of Economic Scenarios (GOES) (E/A) Subgroup** of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force will:
 - A. Monitor that the economic scenario governance framework is being appropriately followed by all relevant stakeholders involved in scenario delivery.
 - B. Review material economic scenario generator updates, either driven by periodic model maintenance or changes to the economic environment and provide recommendations.
 - C. Regularly review key economic conditions and metrics to evaluate the need for off-cycle or significant economic scenario generator updates and maintain a public timeline for economic scenario generator updates.
 - D. Support the implementation of an economic scenario generator for use in statutory reserve and capital calculations.
 - E. Develop and maintain acceptance criteria that reflect history as well as plausibly more extreme scenarios.

Section 1. Title

This Act may be cited as the Mortgage Guaranty Insurance Act.

Section 2. Definitions

The definitions set forth in this Act shall govern the construction of the terms used in this Act but shall not affect any other provisions of the code.

A. “Authorized Real Estate Security” means:

- (1) An amortized note, bond or other instrument of indebtedness, except for reverse mortgage loans made pursuant to [insert citation of state law that authorizes reverse mortgages] of the real property law, evidencing a loan, not exceeding one hundred three percent (103%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument that constitutes, or is equivalent to, a first lien or junior lien or charge on real estate, with any percentage in excess of one hundred percent (100%) being used to finance the fees and closing costs on such indebtedness; provided:
 - (a) The real estate loan secured in this manner is one of a type that a creditor, which is supervised and regulated by a department of any state or territory of the U.S or an agency of the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate;
 - (b) The loan is to finance the acquisition, initial construction or refinancing of real estate that is a:

MO-630-1

Mortgage Guaranty Insurance Model Act

- (i) Residential building designed for occupancy by not more than four families, a one-family residential condominium or unit in a planned unit development, or any other one-family residential unit as to which title may be conveyed freely; or
 - (ii) Mixed-use building with only one non-residential use and one one-family dwelling unit; or
 - (iii) Building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes.
- (c) The lien on the real estate may be subject to and subordinate to other liens, leases, rights, restrictions, easements, covenants, conditions or regulations of use that do not impair the use of the real estate for its intended purpose.
- (2) Notwithstanding the foregoing, a loan referenced in Section 2A(1) of this Act may exceed 103% of the fair market value of the real estate in the event that the mortgage guaranty insurance company has approved for loss mitigation purposes a request to refinance a loan that constitutes an existing risk in force for the company.
- (3) An amortized note, bond or other instrument of indebtedness evidencing a loan secured by an ownership interest in, and a proprietary lease from, a corporation or partnership formed for the purpose of the cooperative ownership of real estate and at the time the loan does not exceed one hundred three percent (103%) of the fair market value of the ownership interest and proprietary lease, if the loan is one of a type that meets the requirements of Section 2A(1)(a), unless the context clearly requires otherwise, any reference to a mortgagor shall include an owner of such an ownership interest as described in this paragraph and any reference to a lien or mortgage shall include the security interest held by a lender in such an ownership interest.
- B. “Bulk Mortgage Guaranty Insurance” means mortgage guaranty insurance that provides coverage under a single transaction on each mortgage loan included in a defined portfolio of loans that have already been originated.
- C. “Certificate of Insurance” means a document issued by a mortgage guaranty insurance company to the initial insured to evidence that it has insured a particular authorized real estate security under a master policy, identifying the terms, conditions and representations, in addition to those contained in the master policy and endorsements, applicable to such coverage.
- D. “Commissioner.” The term “commissioner” shall mean the insurance commissioner, the commissioner’s deputies, or the Insurance Department, as appropriate.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the word “commissioner” appears.

- E. “Contingency Reserve” means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.
- F. “Domiciliary Commissioner” means the principal insurance supervisory official of the jurisdiction in which a mortgage guaranty insurance company is domiciled.
- G. “Effective Guaranty” refers to the assumed backing of existing or future holders of securities by virtue of their issuer’s conservatorship or perceived access to credit from the U.S. Treasury, as opposed to the direct full faith and credit guarantee provided by the U.S. government.
- H. “Loss” refers to losses and loss adjustment expenses.
- I. “Master Policy” means a document issued by a mortgage guaranty insurance company that establishes the terms and conditions of mortgage guaranty insurance coverage provided thereunder, including any endorsements thereto.
- J. “Mortgage Guaranty Insurance” is insurance against financial loss by reason of nonpayment of principal,

MO-630-2

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2023

interest or other sums agreed to be paid under the terms of any authorized real estate security.

- K. “Mortgage Guaranty Quality Assurance Program” means an early detection warning system for potential underwriting compliance issues which could potentially impact solvency or operational risk within a mortgage guaranty insurance company.
- L. “NAIC” means the National Association of Insurance Commissioners.
- M. “Pool Mortgage Guaranty Insurance” means mortgage guaranty insurance that provides coverage under a single transaction or a defined series of transactions on a defined portfolio of loans for losses up to an aggregate limit.
- N. “Right of Rescission” represents a remedy available to a mortgage guaranty insurance company to void a certificate and restore parties to their original position, based on inaccurate, incomplete or misleading information provided to, or information omitted or concealed from, the mortgage guaranty insurance company in connection with the insurance application, resulting in an insured loan that did not meet the mortgage guaranty insurance company’s eligibility requirements in effect on the date of submission of the insurance application.
- O. “Risk in Force” means the mortgage guaranty insurance coverage percentage applied to the unpaid principal balance.

Section 3. Insurer’s Authority to Transact Business

A company may not transact the business of mortgage guaranty insurance until it has obtained a certificate of authority from the commissioner.

Section 4. Mortgage Guaranty Insurance as Monoline

A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.

Section 5. Risk Concentration

A mortgage guaranty insurance company shall not expose itself to any loss on any one authorized real estate security risk in an amount exceeding ten percent (10%) of its surplus to policyholders. Any risk or portion of risk which has been reinsured shall be deducted in determining the limitation of risk.

Section 6. Capital and Surplus

- A. **Initial and Minimum Capital and Surplus Requirements.** A mortgage guaranty insurance company shall not transact the business of mortgage guaranty insurance unless, if a stock insurance company, it has paid-in capital of at least \$10,000,000 and paid-in surplus of at least \$15,000,000, or if a mutual insurance company, a minimum initial surplus of \$25,000,000. A stock insurance company or a mutual insurance company shall at all times thereafter maintain a minimum policyholders’ surplus of at least \$20,000,000.
- B. **Minimum Capital Requirements Applicability.** A mortgage guaranty insurance company formed prior to the passage of this Act may maintain the amount of capital and surplus or minimum policyholders’ surplus previously required by statute or administrative order for a period not to exceed twelve months following the effective date of the adoption of this Act.
- C. **Minimum Capital Requirements Adjustments.** The domiciliary commissioner may by order reduce the minimum amount of capital and surplus or minimum policyholders’ surplus required under Section 6A under the following circumstances:
 - (1) For an affiliated reinsurer that is a mortgage guaranty insurance company and that is or will be engaged solely in the assumption of risks from affiliated mortgage guaranty insurance companies, provided that the affiliated reinsurer is in run-off and, in the domiciliary commissioner’s opinion,

MO-630-3

Mortgage Guaranty Insurance Model Act

the business plan and other relevant circumstances of the affiliated reinsurer justify the proposed reduction in requirements.

- (2) For mortgage guaranty insurance companies that are in run-off and not writing new business that is justified in a business plan, in the domiciliary commissioner's opinion.

Section 7. Geographic Concentration

- A. A mortgage guaranty insurance company shall not insure loans secured by a single risk in excess of ten percent (10%) of the company's aggregate capital, surplus and contingency reserve.
- B. No mortgage guaranty insurance company shall have more than twenty percent (20%) of its total insurance in force in any one Standard Metropolitan Statistical Area (SMSA), as defined by the U.S Department of Commerce.
- C. The provisions of this section shall not apply to a mortgage guaranty insurance company until it has possessed a certificate of authority in this state for three (3) years.

Section 8. Advertising

No mortgage guaranty insurance company or an agent or representative of a mortgage guaranty insurance company shall prepare or distribute or assist in preparing or distributing any advertising media or communication to the effect that the real estate investments of any financial institution are "insured investments," unless the advertising media or communication clearly states that the loans are insured by mortgage guaranty insurance companies possessing a certificate of authority to transact mortgage guaranty insurance in this state or are insured by an agency of the federal government.

Section 9. Investment Limitation

Investments in notes or other evidence of indebtedness secured by a mortgage or other liens upon residential real property shall not be allowed as assets in any determination of the financial condition of a mortgage guaranty insurer. This section shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contract of sale are acquired in the course of good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired. This section shall not apply to investments backed by the full faith and credit of the U.S. Government or investments with the effective guaranty of the U.S. Government. This section shall not apply to investments held by a mortgage guaranty insurance company prior to the passage of this Act.

Section 10. Reserve Requirements

- A. **Unearned premium Reserves, Loss Reserves, and Premium Deficiency Reserves.** Financial reporting will be prepared in accordance with the Accounting Practices and Procedures Manual and Annual Financial Statement Instructions of the NAIC.
- B. **Contingency Reserve.** Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:
- (1) The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.
- (2) Except as provided within this Act, a mortgage guaranty insurance company's contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, to provide for reserve buildup. The portion of the contingency reserve established and maintained for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.
- (3) Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:

MO-630-4

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2023

- (a) Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or
- (b) Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts which are in excess of the requirements of Section 15 as required in [insert section of the mortgage guaranty Insurance model law requiring minimum policyholder's position] as filed with the most recently filed annual statement.
 - (i) The mortgage guaranty insurance company's domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a segregated account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.

- C. **Miscellaneous.** Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.

Section 11. Reinsurance

- A. **Prohibition of Captive Reinsurance.** A mortgage guaranty insurance company shall not enter into captive reinsurance arrangements which involve the direct or indirect ceding of any portion of its insurance risks or obligations to a reinsurer owned or controlled by an insured; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity owned or controlled by an insured or an insured's officer, director or employee or any member of their immediate family that has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing.
- B. **Reinsurance Cessions.** A mortgage guaranty insurer may, by written contract, reinsure any insurance that it transacts, except that no mortgage guaranty insurer may enter into reinsurance arrangements designed to circumvent the compensating control provisions of Section 17 or the contingency reserve requirement of Section 10. The unearned premium reserve and the loss reserves required by Section 10 shall be established and maintained by the direct insurer or by the assuming reinsurer so that the aggregate reserves shall be equal to or greater than the reserves required by direct writer. The cession shall be accounted for as provided in the accounting practices and procedures prescribed or permitted by the applicable Accounting Practices and Procedures Manual of the NAIC.

Section 12. Sound Underwriting Practices

- A. **Underwriting Review and Approval Required.** All certificates of mortgage guaranty insurance, excluding policies of reinsurance, shall be written based on an assessment of evidence that prudent underwriting standards have been met by the originator of the mortgage. Delegated underwriting decisions shall be reviewed based on a reasonable method of sampling of post-closing loan documentation to ensure compliance with the mortgage guaranty insurance company's underwriting standards.
- B. **Quality Control Reviews.** Quality control reviews for bulk mortgage guaranty insurance and pool mortgage guaranty insurance shall be based on a reasonable method of sampling of post-closing loan documentation for delegated underwriting decisions to ensure compliance with the representations and warranties of the creditors or creditors originating the loans and with the mortgage guaranty insurance company's underwriting standards.
- C. **Minimum Underwriting Standards.** Mortgage guaranty insurance companies shall establish formal underwriting standards which set forth the basis for concluding that prudent underwriting standards have been met.

MO-630-5

Mortgage Guaranty Insurance Model Act

- D. **Underwriting Review and Approval.** A mortgage guaranty insurance company's underwriting standards shall be:
- (1) Reviewed and approved by executive management, including, but not limited to the highest-ranking executive officer and financial officer; and
 - (2) Communicated across the organization to promote consistent business practices with respect to underwriting.
- E. **Notification of Changes in Underwriting Standards.** On or before March 1 of each year, a mortgage guaranty insurance company shall file with the domiciliary commissioner changes to its underwriting standards and an analysis of the changes implemented during the course of the immediately preceding year. The annual summary of material underwriting standards changes should include any change associated with loan to value ratios, debt to income ratios, borrower credit standing or maximum loan amount which has resulted in a material impact on net premium written of +/- 5% from prior year to date.
- F. **Nondiscrimination.** In extending or issuing mortgage guaranty insurance, a mortgage guaranty insurance company may not discriminate on the basis of the applicant's sex, marital status, race, color, creed, national origin, disability, or age or solely on the basis of the geographic location of the property to be insured unless the discrimination related to geographic location is for a business purpose that is not a mere pretext for unfair discrimination; or the refusal, cancellation, or limitation of the insurance is required by law or regulatory mandate.

Drafting Note: States and jurisdictions should consult their constitution or comparable governance documents and applicable civil rights legislation to determine if broader protections against unacceptable forms of discrimination should be included in Section 12F.

Section 13. Quality Assurance

- A. **Quality Assurance Program.** A mortgage guaranty insurance company shall establish a formal internal mortgage guaranty quality assurance program, which provides an early detection warning system as it relates to potential underwriting compliance issues which could potentially impact solvency or operational risk. This mortgage guaranty quality assurance program shall provide for the documentation, monitoring, evaluation and reporting on the integrity of the ongoing loan origination process based on indicators of potential underwriting inadequacies or non-compliance. This shall include, but not limited to:
- (1) **Segregation of Duties.** Administration of the quality assurance program shall be delegated to designated risk management, quality assurance or internal audit personnel, who are technically trained and independent from underwriting activities that they audit.
 - (2) **Senior Management Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to an enterprise risk management committee or other equivalent senior management level oversight body.
 - (3) **Board of Director Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to the board of directors or a designated committee of directors established to facilitate board of director oversight.
 - (4) **Policy and Procedures Documentation.** Mortgage guaranty quality assurance program, excluding policies and procedures of reinsurance, shall be formally established and documented to define scope, roles and responsibilities.
 - (5) **Underwriting Risk Review.** Quality assurance review shall include an examination of underwriting risks including classification of risk and compliance with risk tolerance levels.
 - (6) **Lender Performance Reviews.** Quality assurance monitoring provisions shall include an assessment of lender performance.

MO-630-6

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2023

- (7) **Underwriting Performance Reviews.** Quality assurance monitoring provisions shall assess compliance with underwriting standard.
 - (8) **Problem Loan Trend Reviews.** Quality assurance monitoring provisions shall assess prospective risks associated with timely loan payment including delinquency, default inventory, foreclosure and persistency trends.
 - (9) **Underwriting System Change Oversight.** Underwriting system program changes shall be monitored to ensure the integrity of underwriting and pricing programs, which impact automated underwriting system decision making.
 - (10) **Pricing and Performance Oversight.** Pricing controls shall be monitored to ensure that business segment pricing supports applicable performance goals.
 - (11) **Internal Audit Validation.** Periodic internal audits shall be conducted to validate compliance with the mortgage guaranty quality assurance program.
- B. **Regulator Access and Review of Quality Assurance Program.** The commissioner shall be provided access to an insurer's mortgage guaranty quality assurance program for review at any reasonable time upon request and during any financial regulatory examination. Nothing herein shall be construed to limit a regulator's right to access any and all of the records of an insurer in an examination or as otherwise necessary to meet regulatory responsibilities.

Section 14. Policy Forms and Premium Rates Filed

- A. **Policy Forms.** Policy forms, endorsements, and modifications (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall be filed with and be subject to the approval of the commissioner. With respect to owner-occupied, single-family dwellings or a mixed-use building described in Section 2A(1)(b), which is owner-occupied at the time of loan origination and for at least 50% of the days within the twelve (12) consecutive months prior to borrower default, the borrower shall not be liable to the insurance company for any deficiency arising from a foreclosure sale.
- B. **Premium Rates.** Each mortgage guaranty insurance company (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall file with the commissioner the rate to be charged including all modifications.
- C. **Premium Charges.** Every mortgage guaranty insurance company shall make available to insureds the premium charges for mortgage guaranty insurance policies via a company website or an integration with a third-party system. The premium rate provided shall show the entire amount of premium charge for the type of mortgage guaranty insurance policy to be issued by the insurance company.

Drafting Note: Open rating states may delete a portion or all of Section 14 and insert their own rating law.

Section 15. Risk in Force and Waivers

- A. **Risk in Force.** A mortgage guaranty insurance company shall not at any time have outstanding risk in force, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding twenty-five (25) times its capital, surplus and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total risk in force exceeding twenty-five (25) times its capital, surplus and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total risk in force no longer exceeds twenty-five (25) times its capital, surplus and contingency reserve. Total risk in force shall be calculated on an individual entity basis.
- B. **Waiver.** The commissioner may waive the requirement found in Section 15A at the written request of a mortgage guaranty insurer upon a finding that the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of Section 15A and shall, at a minimum, address the factors specified in Section 15C.

MO-630-7

Mortgage Guaranty Insurance Model Act

- C. **Waiver Criteria.** In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, all of the following factors, among others, may be considered:
- (1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.
 - (2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.
 - (3) The nature and extent of the mortgage guaranty insurer's reinsurance program.
 - (4) The quality, diversification, and liquidity of the mortgage guaranty insurer's assets and its investment portfolio.
 - (5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.
 - (6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.
 - (7) The adequacy of the mortgage guaranty insurer's reserves.
 - (8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.
 - (9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.
 - (10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.
 - (11) The capital contributions which have been infused or are available for future infusion into the mortgage guaranty insurer.
 - (12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including, but not limited to, the quality and type of the risks included in the aggregate insured risk.
- D. **Authority to Retain Experts.** The commissioner may retain accountants, actuaries, or other experts to assist in the review of the mortgage guaranty insurer's request submitted pursuant to Section 15B. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.
- E. **Specified Duration.** Any waiver shall be:
- (1) For a specified period of time not to exceed two years; and
 - (2) Subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by Section 15A.

Section 16. Conflict of Interest

A mortgage guaranty insurer may underwrite mortgage guaranty insurance on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate only if the insurance is underwritten on the same basis, for the same consideration and subject to the same insurability requirements as insurance provided to nonaffiliated lenders. Mortgage guaranty insurance

MO-630-8

underwritten on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate shall be limited to 50% of the insurer's direct premium written in any calendar year, or such higher percentage established in writing for the insurer in the domiciliary commissioner's discretion, based on the domiciliary commissioner's determination that a higher percentage is not likely to adversely affect the financial condition of the insurer.

Section 17. Compensating Balances Prohibited

Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.

Section 18. Limitations on Rebates, Commissions, Charges and Contractual Preferences

- A. **Inducements.** A mortgage guaranty insurance company shall not pay or cause to be paid either directly or indirectly, to any owner, purchaser, lessor, lessee, mortgagee or prospective mortgagee of the real property that secures the authorized real estate security or that is the fee of an insured lease, or any interest therein, or to any person who is acting as an agent, representative, attorney or employee of such owner, purchaser, lessor, lessee or mortgagee, any commission, or any part of its premium charges or any other consideration as an inducement for or as compensation on any mortgage guaranty insurance business.
- B. **Compensation for Placement.** In connection with the placement of any mortgage guaranty insurance, a mortgage guaranty insurance company shall not cause or permit the conveyance of anything of value, including but not limited to any commission, fee, premium adjustment, remuneration or other form of compensation of any kind whatsoever to be paid to, or received by an insured lender or lessor; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity in which an insured or an officer, director or employee or any member of their immediate family has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing, except for the value of the insurance itself or claim payments thereon as provided by contract or settlement.
- C. **Rebates.** A mortgage guaranty insurance company shall not make a rebate of any portion of the premium charge, as shown by the schedule required by Section 14C. No mortgage guaranty insurance company shall not quote any rate or premium charge to a person that is different than that currently available to others for the same type of coverage. The amount by which a premium charge is less than that called for by the current schedule of premium charges is an unlawful rebate.
- D. **Undue Contractual Preferences.**
 - (1) Any contract, letter agreement, or other arrangement used to clarify any terms, conditions, or interpretations of a master policy or certificate shall be documented in writing.
 - (2) Any contractual or letter agreements used to modify or clarify general business practices and administrative, underwriting, claim submission or other information exchange processes shall not contain provisions which override or significantly undermine the intent of key provisions of the mortgage guaranty insurance model act, including mortgage insurer discretion, rights and responsibilities related to:
 - (a) Underwriting standards.
 - (b) Quality assurance.
 - (c) Rescission.

Mortgage Guaranty Insurance Model Act

- E. **Sanctions.** The commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company, or in his or her discretion, issue a cease and desist order to a mortgage guaranty insurance company that pays a commission, rebate, or makes any unlawful conveyance of value under this section in willful violation of the provisions of this Act. In the event of the issuance of a cease and desist order, the commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company that does not comply with the terms thereof.
- F. **Educational Efforts and Promotional Materials Permitted.** A mortgage guaranty insurance company may engage in any educational effort with borrowers, members of the general public, and officers, directors, employees, contractors and agents of insured lenders that may reasonably be expected to reduce its risk of Loss or promote its operational efficiency and may distribute promotional materials of minor value.

Section 19. Rescission

All mortgage guaranty insurance company master policies shall include a detailed description of provisions governing rescissions, re-pricing, and cancellations, which specify the insurer's and insured's rights, obligations and eligibility terms under which those actions may occur to ensure transparency.

Section 20. Records Retention

- A. **Record Files.** A licensed mortgage guaranty insurance company shall maintain its records in a manner which allows the commissioner to readily ascertain the insurer's compliance with state insurance laws and rules during an examination including, but not limited to, records regarding the insurer's management, operations, policy issuance and servicing, marketing, underwriting, rating and claims practices.
- B. **Retention Period.** Policy and claim records shall be retained for the period during which the certificate or claim is active plus five (5) years, unless otherwise specified by the insurance commissioner. Recordkeeping requirements shall relate to:
 - (1) Records to clearly document the application, underwriting, and issuance of each master policy and certificate of insurance; and
 - (2) Claim records to clearly document the inception, handling, and disposition.
- C. **Record Format.** Any record required to be maintained by a mortgage insurer may be created and stored in the form of paper, photograph, magnetic, mechanical or electronic medium.
- D. **Record Maintenance.** Record maintenance under this Act shall comply with the following requirements:
 - (1) Insurer maintenance responsibilities shall provide for record storage in a location that will allow the records to be reasonably produced for examination within the time period required.
 - (2) Third-Party maintenance related responsibilities shall be set forth in a written agreement, a copy of which shall be maintained by the insurer and available for purposes of examination.

Section 21. Regulations

The commissioner shall have the authority to promulgate rules and regulations deemed necessary to effectively implement the requirements of this Act.

MO-630-10

PROJECT HISTORY – 2023**MORTGAGE GUARANTY INSURANCE MODEL ACT (#630)****1. Description of the Project, Issues Addressed, etc.**

The current NAIC *Mortgage Guaranty Insurance Model Act* (#630) was first adopted in 1976 and amended in 1979. Model #630 was created to provide effective regulation and supervision of mortgage guaranty insurers. Model #630 defines mortgage guaranty insurance as insurance against financial loss by reason of nonpayment of principal, interest, or other sums agreed to be paid on any note secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate. Mortgage guaranty insurance may also cover against financial loss by reason of nonpayment of rent under the terms of a written lease. As of April 2012, eight states had adopted the most recent version of the model in a substantially similar manner. An additional 12 states have adopted an older version of the model, legislation, or regulation derived from other sources such as bulletins and administrative rulings.

The Mortgage Guaranty Insurance (E) Working Group was formed in November 2012. By early 2013, the Working Group developed a list of potential regulatory changes to Model #630 to address changes in mortgage lending and mortgage finance since the model's original approval in the 1970s and to respond to the lessons learned during the 2008 national recession and housing market downturn. As a result, a Request for NAIC Model Law Development was made and approved by the Executive (EX) Committee at the 2013 Summer National Meeting.

Development of the modernized model has a long history dating back to the fall of 2012. At that time, development of a capital model to accompany Model #630 was the key focus of attention. During 2013, mortgage guaranty insurers engaged Oliver Wyman to begin working on a Mortgage Guaranty Capital Model. Over the next several years, the Mortgage Guaranty Capital Model was developed. It was determined in December 2016 that a secondary contractor would need to be hired to further assess the reliability of the Mortgage Guaranty Capital Model. In September 2017, Milliman began its work to review and validate the Mortgage Guaranty Capital Model.

In March 2018, Milliman provided its assessment of the capital model to the Working Group. It indicated that inconsistencies and errors were found in the data preparation steps used to: 1) estimate the capital model coefficients and the application of the same capital model coefficients; and 2) forecast future loan performance. Milliman stated that these inconsistencies and errors were material to the capital model and would need to be addressed before the Mortgage Guaranty Capital Model could be implemented.

As a result, Milliman continued its work on the Mortgage Guaranty Capital Model, and in December 2019, it was exposed for public comment. The comments regarding the exposure were expected to be discussed during the 2020 Spring National Meeting. However, due to the COVID-19 pandemic, this meeting was cancelled. The Working Group also began working on an annual statement exhibit to begin collecting data for the capital model. In April 2021, the Mortgage Guaranty Insurance (E) Working Group referred the exhibit proposal to the Blanks (E) Working Group. The exhibit was finalized and implemented into the blank effective year-end 2021. In May 2022, the Mortgage Guaranty Insurance (E) Working Group decided to pause the development of the capital model and continue collecting data for further analysis in the future. As a result, the Working Group focused on finalizing the model.

Mortgage Guaranty Insurance Model Act (#630)Project History

2. Name of Group Responsible for Drafting the Model and States Participating

The Mortgage Guaranty Insurance (E) Working Group comprised the drafting Group and consisted of the following states during 2023: North Carolina (chair); Arizona; California; Florida, Missouri, New York, Pennsylvania; Texas; and Wisconsin.

3. Project Authorized by What Charge and Date First Given to the Group

The Executive (EX) Committee approved the Request for NAIC Model Law Development during the 2013 Summer National Meeting. Throughout the course of model development, the Financial Condition (E) Committee chair approved extensions due to extenuating circumstances.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated.

The Working Group formed a drafting group, which consisted of: Jackie Obusek (NC–Chair); Kurt Regner (AZ); Monica Macaluso (CA); Robert Ballard (FL); John Rehagen (MO); Margot Small (NY); Melissa Greiner (PA); Amy Garcia (TX); and Amy Malm (WI). Following the lengthy hiatus from the development of the model, due to work being completed on the Mortgage Guaranty Capital Model, the drafting group began finalization of model in May 2022 without consideration of the capital model. During its May meeting, the drafting group discussed the overall approach to finalizing the model and a rather aggressive timeline for completion.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The Working Group met in open session on Oct. 6 and Dec. 13, 2022, and March 22, 2023. During these sessions, interested regulators and parties submitted comment letters to the Working Group. The drafting group held nine regulator-only discussion and planning calls between May 2022 and March 2023. The Working Group exposed the model for public comment on Oct. 7, 2022, and again on Feb. 27, 2023, and May 11, 2023. Comments were received from: the California Department of Insurance (DOI); the Center for Economic Justice (CEJ); and the Mortgage Guaranty Consortium (Arch Mortgage Insurance Company, Enact Mortgage Insurance Corporation, Essent Guaranty Inc., Mortgage Guaranty Insurance Corporation, National Mortgage Insurance Corporation, and Radian Guaranty Inc).

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)**Section 10, Reserve Requirements – Contingency Reserve**

The most significant issue raised during development was related to the recording of the contingency reserves when reinsurance is used. The specific provision is: “The Mortgage Guaranty Insurance company shall make an annual contribution to the Contingency Reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.” The mortgage insurers indicated that many reinsurers do not complete a statutory financial statement and would not have the ability to record the contingency reserve. The drafting group members discussed the topic and agreed to leave the provision as stated.

Mortgage Guaranty Insurance Model Act (#630)Project History

Section 21, No Private Right of Action Provision

The mortgage guaranty insurers proposed the following provision for inclusion in the model: “No Private Right of Action. Nothing in this Act is intended to, or does, create a private right of action based upon compliance or noncompliance with any of the Act’s provisions. Authority to enforce compliance with this Act is vested exclusively in the Commissioner.” Following discussion by the drafting group, the provision was added to the model and included in the Feb. 27, 2023, exposure. The drafting group received several comments on the provision. Following discussion, Section 21 was removed from the model.

7. List the Key Provisions of the Model (sections considered most essential to state adoption)**Section 10. Reserve Requirements**

- A. **Unearned Premium Reserves, Loss Reserves, and Premium Deficiency Reserves.** Financial reporting will be prepared in accordance with the *Accounting Practices and Procedures Manual* (AP&P Manual) and Annual Financial Statement Instructions of the NAIC.
- B. **Contingency Reserve.** Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:
- (1) The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve, which, in the aggregate, shall be equal to 50% of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.
 - (2) Except as provided within this act, a mortgage guaranty insurance company’s contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months to provide for reserve buildup. The portion of the contingency reserve established and maintained for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.
 - (3) Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:
 - (a) Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or
 - (b) Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts that are in excess of the requirements of Section 15 as required in (insert section of the mortgage guaranty insurance model law requiring minimum policyholder’s position) as filed with the most recently filed annual statement.
 - (i.) The mortgage guaranty insurance company’s domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a segregated

Mortgage Guaranty Insurance Model Act (#630)Project History

account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.

C. **Miscellaneous.**

- (1) Unearned premium reserves and contingency reserves on risks insured before the effective date of this act may be computed and maintained as required previously.

Section 15. Risk in Force and Waivers

- A. **Risk in Force.** A mortgage guaranty insurance company shall not at any time have outstanding risk in force, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding 25 times its capital, surplus, and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total risk in force exceeding 25 times its capital, surplus, and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total risk in force no longer exceeds 25 times its capital, surplus, and contingency reserve. Total risk in force shall be calculated on an individual entity basis.
- B. **Waiver.** The commissioner may waive the requirement found in subsection (a) of this section at the written request of a mortgage guaranty insurer upon a finding that the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of subsection (a) of this section and shall, at a minimum, address the factors specified in subsection (j) of this section.
- C. **Waiver Criteria.** In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, all of the following factors, among others, may be considered:
 - (1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.
 - (2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.
 - (3) The nature and extent of the mortgage guaranty insurer's reinsurance program.
 - (4) The quality, diversification, and liquidity of the mortgage guaranty insurer's assets and its investment portfolio.
 - (5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.
 - (6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.

Mortgage Guaranty Insurance Model Act (#630)Project History

- (7) The adequacy of the mortgage guaranty insurer's reserves.
 - (8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.
 - (9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.
 - (10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.
 - (11) The capital contributions that have been infused or are available for future infusion into the mortgage guaranty insurer.
 - (12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including the quality and type of the risks included in the aggregate insured risk.
- D. **Authority to Retain Experts.** The commissioner may retain accountants, actuaries, or other experts to assist the commissioner in the review of the mortgage guaranty insurer's request submitted pursuant to subsection (i) of this section. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.
- E. **Specified Duration.** Any waiver shall be (i) for a specified period of time not to exceed two years and (ii) subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by subsection (a) of this section.

8. Any Other Important Information (e.g., amending an accreditation standard)

None. It is not an accreditation standard, and the Working Group is not making a recommendation that it be considered as an accreditation standard.

Section 1. Title

This Act may be cited as the Mortgage Guaranty Insurance Act.

Section 2. Definitions

The definitions set forth in this Act shall govern the construction of the terms used in this Act but shall not affect any other provisions of the code.

- A. ~~“Authorized real estate security,” for the purpose of this Act,~~ Real Estate Security” means an:
 - (1) An amortized note, bond or other evidence instrument of indebtedness, except for reverse mortgage loans made pursuant to [insert citation of state law that authorizes reverse mortgages] of the real property law, evidencing a loan, not exceeding ninety-five one hundred three percent (95103%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument that constitutes, or is equivalent to, a first lien or charge on real estate junior lien or charge on real estate, with any percentage in excess of one hundred percent (100%) being used to finance the fees and closing costs on such indebtedness; provided:
 - (a) ~~(1)~~ The real estate loan secured in this manner is one of a type that a bank, savings and loan association, or an insurance company creditor, which is supervised and regulated by a department of this any state or territory of the U.S or an agency of the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable

MO-630-1

Mortgage Guaranty Insurance Model Act

to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate;

~~(2b) The improvement on loan is to finance the acquisition, initial construction or refinancing of real estate that is a:~~

~~(i) Residential building designed for occupancy by not more than four families, a one-family residential condominium or unit in a planned unit development, or any other one-family residential unit as to which title may be conveyed freely; or~~

~~(ii) Mixed-use building with only one non-residential use and one one-family dwelling unit; or~~

~~(iii) Building or buildings designed for occupancy as specified by Subsections A(1) and A(2) of this section; and by five (5) or more families or designed to be occupied for industrial or commercial purposes.~~

~~(3c) The lien on the real estate may be subject to and subordinate to the following:~~

~~(a) The lien of any public bond, assessment or tax, when no installment, call or payment of or under the bond, assessment or tax is delinquent; and~~

~~(b) Outstanding mineral, oil, water or timber other liens, leases, rights, rights-of-way, easements or rights-of-way of support, sewer rights, building restrictions or other restrictions or easements, covenants, conditions or regulations of use, or outstanding leases upon the real property under which rents or profits are reserved to the owner thereof that do not impair the use of the real estate for its intended purpose.~~

~~(2) Notwithstanding the foregoing, a loan referenced in Section 2A(1) of this Act may exceed 103% of the fair market value of the real estate in the event that the mortgage guaranty insurance company has approved for loss mitigation purposes a request to refinance a loan that constitutes an existing risk in force for the company.~~

~~(3) An amortized note, bond or other instrument of indebtedness evidencing a loan secured by an ownership interest in, and a proprietary lease from, a corporation or partnership formed for the purpose of the cooperative ownership of real estate and at the time the loan does not exceed one hundred three percent (103%) of the fair market value of the ownership interest and proprietary lease, if the loan is one of a type that meets the requirements of Section 2A(1)(a), unless the context clearly requires otherwise, any reference to a mortgagor shall include an owner of such an ownership interest as described in this paragraph and any reference to a lien or mortgage shall include the security interest held by a lender in such an ownership interest.~~

~~B. "Bulk Mortgage Guaranty Insurance" means mortgage guaranty insurance that provides coverage under a single transaction on each mortgage loan included in a defined portfolio of loans that have already been originated.~~

~~C. "Certificate of Insurance" means a document issued by a mortgage guaranty insurance company to the initial insured to evidence that it has insured a particular authorized real estate security under a master policy, identifying the terms, conditions and representations, in addition to those contained in the master policy and endorsements, applicable to such coverage.~~

~~D. "Commissioner" means [insert the title of the principal insurance supervisory official] of this state, or the [insert the title of the principal insurance supervisory official]'s deputies or assistants, or any employee of the [insert name of the principal insurance regulatory agency] of this state acting in the [insert the title of the principal insurance supervisory official]'s name and by the [insert the title of the principal insurance supervisory official]'s delegated authority. "Commissioner." The term "commissioner" shall mean the insurance commissioner, the commissioner's deputies, or the Insurance Department, as appropriate.~~

~~**Drafting Note:** Insert the title of the chief insurance regulatory official wherever the word "commissioner" appears.~~

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

- E.
- ~~B.~~ “Contingency reserve”Contingency Reserve means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.
- ~~C.~~ “Mortgage guaranty insurance” is ~~F.~~ “Domiciliary Commissioner” means the principal insurance supervisory official of the jurisdiction in which a mortgage guaranty insurance company is domiciled, ~~or that principal insurance supervisory official’s deputies or assistants, or any employee of the regulatory agency of which that principal insurance supervisory official is the head acting in that principal insurance supervisory official’s name and by that principal insurance supervisory official’s delegated authority.~~
- G. “Effective Guaranty” refers to the assumed backing of existing or future holders of securities by virtue of their issuer’s conservatorship or perceived access to credit from the U.S. Treasury, as opposed to the direct full faith and credit guarantee provided by the U.S. government.
- H. “Loss” refers to losses and loss adjustment expenses.
- I. “Master Policy” means a document issued by a mortgage guaranty insurance company that establishes the terms and conditions of mortgage guaranty insurance coverage provided thereunder, including any endorsements thereto.
- J. “Mortgage Guaranty *
- ~~(1)~~ Insurance” is insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any ~~note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on the real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families;~~authorized real estate security.
- ~~(2)~~ Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any ~~note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on the real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes; and~~
- ~~(3)~~ Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, ~~provided the improvement on the real estate is a building or buildings designed to be occupied for industrial or commercial purposes.~~
- ~~K.~~ “Mortgage Guaranty Quality Assurance Program” means ~~an early detection warning system for potential underwriting compliance issues which could potentially impact solvency or operational risk within a mortgage guaranty insurance company.~~
- ~~L.~~ “NAIC” means the National Association of Insurance Commissioners.
- ~~M.~~ “Pool Mortgage Guaranty Insurance” means ~~mortgage guaranty insurance that provides coverage under a single transaction or a defined series of transactions on a defined portfolio of loans for losses up to an aggregate limit.~~
- ~~N.~~ “Right of Rescission” represents ~~a remedy available to a mortgage guaranty insurance company to void a certificate and restore parties to their original position, based on inaccurate, incomplete or misleading information provided to, or information omitted or concealed from, the mortgage guaranty insurance company in connection with the insurance application, resulting in an insured loan that did not meet the mortgage guaranty insurance company’s eligibility requirements in effect on the date of submission of the insurance application.~~
- ~~O.~~ “Risk in Force” means ~~the mortgage guaranty insurance coverage percentage applied to the unpaid principal balance.~~

Section 3. Insurer’s Authority to Transact Business

MO-630-3

Mortgage Guaranty Insurance Model Act

A company may not transact the business of mortgage guaranty insurance until it has obtained a certificate of authority from the commissioner.

Section 4. Mortgage Guaranty Insurance as Monoline

A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.

Section 5. Risk Concentration

A mortgage guaranty insurance company shall not expose itself to any loss on any one authorized real estate security risk in an amount exceeding ten percent (10%) of its surplus to policyholders. Any risk or portion of risk which has been reinsured shall be deducted in determining the limitation of risk.

Section 6. Capital and Surplus

- A. Initial and Minimum Capital and Surplus Requirements. A mortgage guaranty insurance company shall not transact the business of mortgage guaranty insurance unless, if a stock insurance company, it has paid-in capital of at least ~~\$410,000,000~~ and paid-in surplus of at least ~~\$415,000,000~~, or if a mutual insurance company, a minimum initial surplus of ~~\$225,000,000~~. A stock insurance company or a mutual insurance company shall at all times thereafter maintain a minimum policyholders' surplus of at least ~~\$1,500,000,000~~.

~~**Section 4. Insurer's Authority to Transact Business**~~

~~No mortgage guaranty insurance company may issue policies until it has obtained from the commissioner of insurance a certificate setting forth that fact and authorizing it to issue policies.~~

- B. Section 5. Minimum Capital Requirements Applicability. A mortgage guaranty insurance company formed prior to the passage of this Act may maintain the amount of capital and surplus or minimum policyholders' surplus previously required by statute or administrative order for a period not to exceed twelve months following the effective date of the adoption of this Act.
- C. Minimum Capital Requirements Adjustments. The domiciliary commissioner may by order reduce the minimum amount of capital and surplus or minimum policyholders' surplus required under Section 6A under the following circumstances:
- (1) For an affiliated reinsurer that is a mortgage guaranty insurance company and that is or will be engaged solely in the assumption of risks from affiliated mortgage guaranty insurance companies, provided that the affiliated reinsurer is in run-off and, in the domiciliary commissioner's opinion, the business plan and other relevant circumstances of the affiliated reinsurer justify the proposed reduction in requirements.
 - (2) For mortgage guaranty insurance companies that are in run-off and not writing new business that is justified in a business plan, in the domiciliary commissioner's opinion.

Section 7. Geographic Concentration

- A. A mortgage guaranty insurance company shall not insure loans secured by a single risk in excess of ten percent (10%) of the company's aggregate capital, surplus and contingency reserve.
- B. No mortgage guaranty insurance company shall have more than twenty percent (20%) of its total insurance in force in any one Standard Metropolitan Statistical Area (SMSA), as defined by the ~~United States~~ U.S. Department of Commerce.
- C. The provisions of this section shall not apply to a mortgage guaranty insurance company until it has possessed a certificate of authority in this state for three (3) years.

MO-630-4

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

Section 68. Advertising

No mortgage guaranty insurance company or an agent or representative of a mortgage guaranty insurance company shall prepare or distribute or assist in preparing or distributing any ~~brochure, pamphlet, report or any form of~~ advertising media or communication to the effect that the real estate investments of any financial institution are “insured investments,” unless the ~~brochure, pamphlet, report or~~ advertising media or communication clearly states that the loans are insured by mortgage guaranty insurance companies possessing a certificate of authority to transact mortgage guaranty insurance in this state or are insured by an agency of the federal government, ~~as the case may be.~~

Section 79. Investment Limitation

~~A mortgage guaranty insurance company shall not invest~~ Investments in notes or other evidences of indebtedness secured by a mortgage or other liens upon residential real property shall not be allowed as assets in any determination of the financial condition of a mortgage guaranty insurer. This section shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of ~~the~~ good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired. ~~This section shall not apply to investments backed by the full faith and credit of the U.S. Government or investments with the effective guaranty of the U.S. Government. This section shall not apply to investments held by a mortgage guaranty insurance company prior to the passage of this Act.~~

Section 8. ~~Coverage Limitation~~ 10. Reserve Requirements

~~A. Unearned premium Reserves, Loss Reserves, and Premium Deficiency Reserves. Financial reporting will be prepared in accordance with the Accounting Practices and Procedures Manual and Annual Financial Statement Instructions of the NAIC.~~

~~B. Contingency Reserve. Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:~~

~~(1) The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.~~

~~(2) Except as provided within this Act, a mortgage guaranty insurance company’s contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, to provide for reserve buildup. The portion of the contingency reserve established and maintained for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.~~

~~(3) Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:~~

~~(a) Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or~~

~~(b) Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts which are in excess of the requirements of Section 15 as required in [insert section of the mortgage guaranty Insurance model law requiring minimum policyholder’s position] as filed with the most recently filed annual statement.~~

~~(i) The mortgage guaranty insurance company’s domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a~~

MO-630-5

Mortgage Guaranty Insurance Model Act

segregated account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.

C. **Miscellaneous.** Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.

Section 11. Reinsurance

- A. **Prohibition of Captive Reinsurance.** A mortgage guaranty insurance company shall not enter into captive reinsurance arrangements which involve the direct or indirect ceding of any portion of its insurance risks or obligations to a reinsurer owned or controlled by an insured; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity owned or controlled by an insured or an insured's officer, director or employee or any member of their immediate family that has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing.
- B. **Reinsurance Cessions.** A mortgage guaranty insurer may, by written contract, reinsure any insurance that it transacts, except that no mortgage guaranty insurer may enter into reinsurance arrangements designed to circumvent the compensating control provisions of Section 17 or the contingency reserve requirement of Section 10. The unearned premium reserve and the loss reserves required by Section 10 shall be established and maintained by the direct insurer or by the assuming reinsurer so that the aggregate reserves shall be equal to or greater than the reserves required by direct writer. The cession shall be accounted for as provided in the accounting practices and procedures prescribed or permitted by the applicable Accounting Practices and Procedures Manual of the NAIC.

Section 12. Sound Underwriting Practices

- A. **Underwriting Review and Approval Required.** All certificates of mortgage guaranty insurance, excluding policies of reinsurance, shall be written based on an assessment of evidence that prudent underwriting standards have been met by the originator of the mortgage. Delegated underwriting decisions shall be reviewed based on a reasonable method of sampling of post-closing loan documentation to ensure compliance with the mortgage guaranty insurance company's underwriting standards.
- B. **Quality Control Reviews.** Quality control reviews for bulk mortgage guaranty insurance and pool mortgage guaranty insurance shall be based on a reasonable method of sampling of post-closing loan documentation for delegated underwriting decisions to ensure compliance with the representations and warranties of the creditors or creditors originating the loans and with the mortgage guaranty insurance company's underwriting standards.
- C. **Minimum Underwriting Standards.** Mortgage guaranty insurance companies shall establish formal underwriting standards which set forth the basis for concluding that prudent underwriting standards have been met.
- D. **Underwriting Review and Approval.** A mortgage guaranty insurance company's underwriting standards shall be:
- (1) A mortgage guaranty insurance company shall limit its coverage net of reinsurance ceded to a reinsurer in which the company has no interest to a maximum of twenty five percent (25%) of the entire indebtedness to the insured or in lieu thereof, a mortgage guaranty insurance company may elect to pay the entire indebtedness to the insured and acquire title to the authorized real estate security.

Section 9. Reviewed and approved by executive management, including, but not limited to the highest-ranking executive officer and financial officer; and

(2) Communicated across the organization to promote consistent business practices with respect to underwriting.

- E. **Notification of Changes in Underwriting Standards.** On or before March 1 of each year, a mortgage guaranty insurance company shall file with the domiciliary commissioner changes to its underwriting

MO-630-6

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

standards and an analysis of the changes implemented during the course of the immediately preceding year. The annual summary of material underwriting standards changes should include any change associated with loan to value ratios, debt to income ratios, borrower credit standing or maximum loan amount which has resulted in a material impact on net premium written of +/- 5% from prior year to date.

Nondiscrimination. In extending or issuing mortgage guaranty insurance, a mortgage guaranty insurance company

- ~~A. A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.~~
- ~~B. A mortgage guaranty insurance that anywhere transacts the classes of insurance defined in Section 2A(2) or 2A(3) is not eligible for a certificate of authority to transact in this state the class of mortgage guaranty insurance defined in Section 2A(1). However, a mortgage guarantee insurance company that transacts a class of insurance defined in Section 2A may write up to five percent (5%) of its insurance in force on residential property designed for occupancy by five (5) or more families.~~

~~**Section 10. Underwriting Discrimination**~~

- ~~A. Nothing in this chapter shall be construed as limiting the right of a mortgage guaranty insurance company to impose reasonable requirements upon the lender with regard to the terms of a note or bond or other evidence of indebtedness secured by a mortgage or deed of trust, such as requiring a stipulated down payment by the borrower may not =~~
- ~~F. ~~B.~~ No mortgage guaranty insurance company may discriminate in the issuance or extension of mortgage guaranty insurance on the on the basis of the applicant's sex, marital status, race, color, creed ~~or national origin, national origin, disability, or age~~ or solely on the basis of the geographic location of the property to be insured unless the discrimination related to geographic location is for a business purpose that is not a mere pretext for unfair discrimination; or the refusal, cancellation, or limitation of the insurance is required by law or regulatory mandate.~~
- ~~C. No policy **Drafting Note:** States and jurisdictions should consult their constitution or comparable governance documents and applicable civil rights legislation to determine if broader protections against unacceptable forms of discrimination should be included in Section 12F.~~

~~**Section 13. mortgage guaranty insurance Quality Assurance**~~

- ~~A. **Quality Assurance Program.** A mortgage guaranty insurance company shall establish a formal internal mortgage guaranty quality assurance program, which provides an early detection warning system as it relates to potential underwriting compliance issues which could potentially impact solvency or operational risk. This mortgage guaranty quality assurance program shall provide for the documentation, monitoring, evaluation and reporting on the integrity of the ongoing loan origination process based on indicators of potential underwriting inadequacies or non-compliance. This shall include, but not limited to:~~
- ~~(1) **Segregation of Duties.** Administration of the quality assurance program shall be delegated to designated risk management, quality assurance or internal audit personnel, who are technically trained and independent from underwriting activities that they audit.~~
 - ~~(2) **Senior Management Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to an enterprise risk management committee or other equivalent senior management level oversight body.~~
 - ~~(3) **Board of Director Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to the board of directors or a designated committee of directors established to facilitate board of director oversight.~~
 - ~~(4) **Policy and Procedures Documentation.** Mortgage guaranty quality assurance program, excluding policies and procedures of reinsurance, shall be formally established and documented to define scope, roles and responsibilities.~~

MO-630-7

Mortgage Guaranty Insurance Model Act

- (5) **Underwriting Risk Review.** Quality assurance review shall include an examination of underwriting risks including classification of risk and compliance with risk tolerance levels.
- (6) **Lender Performance Reviews.** Quality assurance monitoring provisions shall include an assessment of lender performance.
- (7) **Underwriting Performance Reviews.** Quality assurance monitoring provisions shall assess compliance with underwriting standard.
- (8) **Problem Loan Trend Reviews.** Quality assurance monitoring provisions shall assess prospective risks associated with timely loan payment including delinquency, default inventory, foreclosure and persistency trends.
- (9) **Underwriting System Change Oversight.** Underwriting system program changes shall be monitored to ensure the integrity of underwriting and pricing programs, which impact automated underwriting system decision making.
- (10) **Pricing and Performance Oversight.** Pricing controls shall be monitored to ensure that business segment pricing supports applicable performance goals.
- (11) **Internal Audit Validation.** Periodic internal audits shall be conducted to validate compliance with the mortgage guaranty quality assurance program.

- B. **Regulator Access and Review of Quality Assurance Program.** The commissioner shall be provided access to an insurer's mortgage guaranty quality assurance program for review at any reasonable and thorough examination of the evidence supporting credit worthiness of the borrower and the appraisal report reflecting market evaluation of the property and has determined that prudent underwriting standards have been met time upon request and during any financial regulatory examination. Nothing herein shall be construed to limit a regulator's right to access any and all of the records of an insurer in an examination or as otherwise necessary to meet regulatory responsibilities.

Section 1414. Policy Forms and Premium Rates Filed

- A. **Policy Forms.** All policy forms and endorsements, and modifications (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall be filed with and be subject to the approval of the commissioner. With respect to owner-occupied, single-family dwellings, the mortgage guaranty insurance policy shall provide that a mixed-use building described in Section 2A(1)(b), which is owner-occupied at the time of loan origination and for at least 50% of the days within the twelve (12) consecutive months prior to borrower default, the borrower shall not be liable to the insurance company for any deficiency arising from a foreclosure sale.
- B. **Premium Rates.** Each mortgage guaranty insurance company (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall file with the department commissioner the rate to be charged and the premium including all modifications of rates and premiums to be paid by the policyholder.
- C. **Premium Charges.** Every mortgage guaranty insurance company shall adopt, print and make available a schedule of insureds the premium charges for mortgage guaranty insurance policies. Premium charges made in conformity via a company website or an integration with the provisions of this Act shall not be deemed to be interest or other charges under any other provision of law limiting interest or other charges in connection with mortgage loans, a third-party system. The schedule premium rate provided shall show the entire amount of premium charge for each type of mortgage guaranty insurance policy to be issued by the

MO-630-8

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000~~2023~~

insurance company.

Drafting Note: Open rating states may delete a portion or all of ~~this provision~~Section 14 and insert their own rating law.

Section 12. ~~Outstanding Total Liability~~15. Risk in Force and Waivers

- ~~A. A mortgage guaranty insurance~~**Risk in Force.** A mortgage guaranty insurance company shall not at any time have outstanding ~~a total liability~~**risk in force**, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding twenty-five (25) times its capital, surplus and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total ~~liability~~**risk in force** exceeding twenty-five (25) times its capital, surplus and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total ~~liability~~**risk in force** no longer exceeds twenty-five (25) times its capital, surplus and contingency reserve. Total ~~outstanding liability~~**risk in force** shall be calculated on a ~~consolidated an individual entity~~ basis ~~for all mortgage guarantee insurance companies.~~
- ~~B. Waiver.~~ The commissioner may waive the requirement found in Section 15A at the written request of a mortgage guaranty insurer upon a finding that ~~are part of a holding company system~~**the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of Section 15A and shall, at a minimum, address the factors specified in Section 15C.**
- ~~C. Waiver Criteria.~~ In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, ~~all of the following factors, among others, may be considered:~~
- ~~(1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.~~
 - ~~(2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.~~
 - ~~(3) The nature and extent of the mortgage guaranty insurer's reinsurance program.~~
The quality, diversification, and liquidity of the
 - ~~(4) mortgage guaranty insurer's assets and its investment portfolio.~~
 - ~~(5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.~~
 - ~~(6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.~~
 - ~~(7) The adequacy of the mortgage guaranty insurer's reserves.~~
 - ~~(8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.~~
 - ~~(9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.~~
 - ~~(10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.~~
 - ~~(11) The capital contributions which have been infused or are available for future infusion into the mortgage guaranty insurer.~~

MO-630-9

Mortgage Guaranty Insurance Model Act

(12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including, but not limited to, the quality and type of the risks included in the aggregate insured risk.

D. **Authority to Retain Experts.** The commissioner may retain accountants, actuaries, or other experts to assist in the review of the mortgage guaranty insurer's request submitted pursuant to Section 15B. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.

E. **Specified Duration.** Any waiver shall be:

(1) For a specified period of time not to exceed two years; and

(2) Subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by Section 15A.

Section 16. Conflict of Interest

A mortgage guaranty insurer may underwrite mortgage guaranty insurance on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate only if the insurance is underwritten on the same basis, for the same consideration and subject to the same insurability requirements as insurance provided to nonaffiliated lenders. Mortgage guaranty insurance underwritten on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate shall be limited to 50% of the insurer's direct premium written in any calendar year, or such higher percentage established in writing for the insurer in the domiciliary commissioner's discretion, based on the domiciliary commissioner's determination that a higher percentage is not likely to adversely affect the financial condition of the insurer.

Section 17. Compensating Balances Prohibited

Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.

Section 18. Limitations on Rebates, Commissions, Charges and Contractual Preferences

A. **insuraneInducements.** A mortgage guaranty insurance company shall not pay or cause to be paid either directly or indirectly, to any owner, purchaser, lessor, lessee, mortgagee or prospective mortgagee of the real property that secures the authorized real estate security or that is the fee of an insured lease, or any interest therein, or to any person who is acting as an agent, representative, attorney or employee of such owner, purchaser, lessor, lessee or mortgagee, any commission, or any part of its premium charges or any other consideration as an inducement for or as compensation on any mortgage guaranty insurance business.

B. **Compensation for Placement.** In connection with the placement of any mortgage guaranty insurance, a mortgage guaranty insurance company shall not cause or permit the conveyance of anything of value, including but not limited to any commission, fee, premium adjustment, remuneration or other form of compensation of any kind whatsoever to be paid to, or received by an insured lender or lessor; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity in which an insured or an officer, director or employee or any member of their immediate family has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing, except for

MO-630-10

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

the value of the insurance itself or claim payments thereon as provided by contract or settlement.

~~C. C. No mortgage guaranty insurance~~**Rebates.** A mortgage guaranty insurance company shall not make a rebate of any portion of the premium charge, as shown by the schedule required by Section ~~14C. No mortgage guaranty insurance~~**14C.** No mortgage guaranty insurance company shall not quote any rate or premium charge to a person that is different than that currently available to others for the same type of coverage. The amount by which a premium charge is less than that called for by the current schedule of premium charges is an unlawful rebate.

D. Undue Contractual Preferences.

(1) Any contract, letter agreement, or other arrangement used to clarify any terms, conditions, or interpretations of a master policy or certificate shall be documented in writing.

(2) Any contractual or letter agreements used to modify or clarify general business practices and administrative, underwriting, claim submission or other information exchange processes shall not contain provisions which override or significantly undermine the intent of key provisions of the mortgage guaranty insurance model act, including mortgage insurer discretion, rights and responsibilities related to:

(a) Underwriting standards.

(b) Quality assurance.

(c) Rescission.

E. Sanctions. The commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company, or in his or her discretion, issue a cease and desist order to a mortgage guaranty insurance company that pays a commission, rebate, or makes any unlawful ~~rebate~~conveyance of value under this section in willful violation of the provisions of this Act. In the event of the issuance of a cease and desist order, the commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company that does not comply with the terms thereof.

Section 14. Compensating Balances Prohibited

~~F. Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section.~~**Educational Efforts and Promotional Materials Permitted.** A mortgage guaranty insurance company may engage in any educational effort with borrowers, members of the general public, and officers, directors, employees, contractors and agents of insured lenders that may reasonably be expected to reduce its risk of Loss or promote its operational efficiency and may distribute promotional materials of minor value.

Section 19. Rescission

All mortgage guaranty insurance company master policies shall include a detailed description of provisions governing rescissions, re-pricing, and cancellations, which specify the insurer's and insured's rights, obligations and eligibility terms under which those actions may occur to ensure transparency.

Section 20. Records Retention

A. Record Files. A licensed mortgage guaranty insurance company shall maintain its records in a manner which allows the commissioner to readily ascertain the insurer's compliance with state insurance laws and rules during an examination including, but not limited to, records regarding the insurer's management, operations, policy issuance and servicing, marketing, underwriting, rating and claims practices.

MO-630-11

Mortgage Guaranty Insurance Model Act

~~B. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.~~

~~Section 15. — Retention Period. Policy and claim records shall be retained for the period during which the certificate or claim is active plus five (5) years, unless otherwise specified by the insurance commissioner. Recordkeeping requirements shall relate to:~~

~~(1) Records to clearly document the application, underwriting, and issuance of each master policy and certificate of insurance; and~~

~~(2) Claim records to clearly document the inception, handling, and disposition.~~

~~C. Record Format. Any record required to be maintained by a mortgage insurer may be created and stored in the form of paper, photograph, magnetic, mechanical or electronic medium.~~

~~D. Record Maintenance. Record maintenance under this Act shall comply with the following requirements:~~

~~(1) Insurer maintenance responsibilities shall provide for record storage in a location that will allow the records to be reasonably produced for examination within the time period required.~~

~~(2) Third-Party maintenance related responsibilities shall be set forth in a written agreement, a copy of which shall be maintained by the insurer and available for purposes of examination.~~

Conflict of Interest

~~A. — If a member of a holding company system, a mortgage guaranty insurance company licensed to transact business in this state shall not, as a condition of its certificate of authority, knowingly underwrite mortgage guaranty insurance on mortgages originated by the holding company system or an affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly, by the holding company system or an affiliate.~~

~~A. — B. — A mortgage guaranty insurance company, the holding company system of which it is a part, or any affiliate shall not as a condition of the mortgage guaranty insurance company's certificate of authority, pay any commissions, remuneration, rebates or engage in activities proscribed in Sections 13 and 14.~~

Section 16. — Reserves~~A. — Unearned Premium Reserves~~

~~A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve as set forth by regulation adopted by the commissioner of insurance.~~

~~B. — Loss Reserve~~

~~A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves that accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:~~

~~(1) Insured loans that have resulted in the conveyance of property that remains unsold;~~

~~(2) Insured loans in the process of foreclosure;~~

~~(3) Insured loans in default for four (4) months or for any lesser period that is defined as default for such purposes in the policy provisions; and~~

~~(4) Insured leases in default for four (4) months or for any lesser period that is defined as default for such purposes in policy provisions.~~

~~C. — Contingency Reserve~~

MO-630-12

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000~~2023~~

~~Each mortgage guaranty insurance company shall establish a contingency reserve out of net premium remaining (gross premiums less premiums returned to policyholders net of reinsurance) after establishment of the unearned premium reserve. The mortgage guaranty insurance company shall contribute to the contingency reserve an amount equal to fifty percent (50%) of the remaining unearned premiums. Contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, except that withdrawals may be made by the company in any year in which the actual incurred losses exceed thirty-five percent (35%) of the corresponding earned premiums, and no releases shall be made without prior approval by the commissioner of insurance of the insurance company's state of domicile.~~

~~If the coverage provided in this Act exceeds the limitations set forth herein, the commissioner of insurance shall establish a rate formula factor that will produce a contingency reserve adequate for the added risk assumed. The face amount of an insured mortgage shall be computed before any reduction by the mortgage guaranty insurance company's election to limit its coverage to a portion of the entire indebtedness.~~

~~D. Reinsurance~~

~~Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company that is properly licensed to provide reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Act in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Act.~~

~~E. Miscellaneous~~

- ~~(1) Whenever the laws of any other jurisdiction in which a mortgage guaranty insurance company subject to the requirement of this Act is also licensed to transact mortgage guaranty insurance require a larger unearned premium reserve or contingency reserve in the aggregate than that set forth herein, the establishment of the larger unearned premium reserve or contingency reserve in the aggregate shall be deemed to be in compliance with this Act.~~
- ~~(2) Unearned premium reserves and contingency reserves shall be computed and maintained on risks insured after the effective date of this Act as required by Subsections A and C. Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.~~

Section 1721. Regulations

The commissioner shall have the authority to promulgate rules and regulations deemed necessary to effectively implement the requirements of this Act.

Group Capital Calculation (E) Working Group
Virtual Meeting
July 27, 2023

The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met July 27, 2023. The following Working Group members participated: John Rehagen, Chair (MO); Susan Berry, Vice Chair (IL); William Arfanis (CT); Philip Barlow (DC); Ray Spudeck (FL); Kevin Clark (IA); Roy Eft (IN); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); Ben Slutsker (MN); Lindsay Crawford and Anthony Quandt (NE); David Wolf (NJ); Dale Bruggeman (OH); Diana Sherman (PA); Trey Hancock (TN); Mike Arendall (TX); and Connie Duong (VA). Also participating was: Kim Hudson (CA).

1. Discussed the Comment Letter Received from the ACLI

Jennifer McAdam (American Council of Life Insurers—ACLI) presented the ACLI's comment letter regarding the group capital calculation (GCC) scalar methodology proposal. She said the ACLI fully supports this proposal, and it believes excess relative risk (ERR) scalars are the most appropriate methodology for the GCC, specifically because ERR scalars recognize differences in reserve methodologies across jurisdictions. They can also adjust to significant changes in jurisdictional solvency regimes. Many global insurers are already using the ERR methodology to allocate group capital. In adopting ERR scalars, the ACLI wants to be sure to design methodological solutions to limit volatility in GCC results and have resources available for maintaining and updating ERR scalar calculations going forward. Therefore, the ACLI and several of its members have agreed to engage a team of consultants to help the NAIC address these issues for selected life and health scalars. The project aims to be completed by the end of the year.

The ACLI will identify sources of data in each jurisdiction, including a list of insurers making up each industry average and solvency ratios for each insurer included in the average and the first point of regulatory intervention. The project will also result in a recommendation of methodological solutions to address changes to scalars over time, including the length of the historical data series needed to provide accurate scalar estimates with limited volatility over time and methodologies for adjusting scalars to account for significant changes in jurisdictional solvency regimes. For example, Bermuda is having a solvency regime change in 2023, and Japan is in 2025. Additionally, McAdam made another point that was not included in the ACLI's comment letter. She said ERR scalars would work for the aggregation method (AM). This is why it is so urgent that the NAIC approve the ERR scalars. The GCC is supposed to be the U.S. AM, and the AM probably needs them for the comparability assessment, which starts very soon. Because the ACLI wants the GCC to be the AM in the U.S., approving ERR scalars for the GCC will help keep the process parallel and moving forward. The ACLI has put a lot of time and effort into planning for this project, and it plans to expend significant resources to get this work accomplished, which will benefit its members and all U.S. insurers.

Martin Mair (MetLife), chair of the ACLI's GCC Working Group, presented a side-by-side suitability comparison of the ACLI's and UnitedHealth Group's (UHG's) proposals for scalars. There are seven points.

The first point is the breadth of the industry support behind these two alternative proposals. The ACLI's proposal is supported by a broad group of life insurance companies, as well as the life trade ACLI, while the UHG's proposal is supported by a single company. While both scalar methodologies were proposed as early as 2017, there has been considerable development over time in the ERR scalars as opposed to the UHG's scalars.

The second point is that between 2020 and 2021, the American Academy of Actuaries (Academy) did an exhaustive vetting of the major scalar types that were around at the time to debate whether they were legitimate and what the pros and cons of each approach were. The ERR scalars were included as one of the scalar methodologies vetted by the Academy. The UHG's relative total asset requirement (TAR) approach was not vetted by the Academy; therefore, it bypassed that review from the Academy.

The third point is that the relative TAR scalars have not been calculated in the GCC field testing, which would not have a history leading up to the adoption if the NAIC were to adopt this approach. In contrast, the ERR scalars have been included in the GCC field testing, and the companies have been generating those results for quite some time, and they have a relatively long history of what those calculations look like.

The fourth point is that the relative TAR methodology requires additional collection of reserve data by each jurisdiction, which can be quite onerous to do. The ACLI does not have that type of additional reporting requirement.

The fifth point is that the NAIC would need some support in terms of how to collect the data to make a transition from a placeholder scalar to a more sophisticated scalar. This is why the ACLI has arranged for a team of consultants to help with this transition, which includes Oliver Wyman, the company that did the original consulting work back in 2015. The UHG's proposal has no such support for the transition.

The sixth point is that the UHG's proposal prefers to maintain the placeholder scalars, to which there are two major drawbacks. It is almost universally known that it is wrong to convert overseas capital to a risk-based capital (RBC) equivalent on a one-for-one basis from a theoretical perspective. So, the first major drawback is that it is an inaccurate calculation to begin with. The other major drawback is that the proposal does not have a mechanism for adjusting for a jurisdictional regime change. At the end of the year, Bermuda is enacting a significant change in its solvency regime. A placeholder scalar will not adjust for it. So, volatility will be seen in the GCC figures based on changing ratios in Bermuda. At the end of 2025, Japan is going to be implementing a major regime change, moving from its current solvency margin ratio (SMR) basis to the insurance capital standard (ICS) solvency II basis. Mair said a very significant change in Japan's solvency ratios is expected to be seen. They are expected to change from 700% to 800% on average and eventually to around 300% post-2025, which is a major downward shift in ratios. A major drop in the GCC ratios will be seen using placeholder scalars for those companies that have operations in Japan. The ACLI's proposal for switching to the ERR adjusts for these changes, whereas the UHG's proposal does not. This is one of the selling points for getting funding from six companies in addition to the ACLI, particularly given the Bermuda change, which is happening at the end of the year. If the transition cannot be done by then, Mair is not sure whether that funding is going to be available in a future year to make it happen. So, it is now or never to make this scalar change.

The seventh point is that the ACLI's proposal of ERR scalars appropriately reflects the first point of regulatory intervention. The ERR scalars reflect the action of a prudent insurance company in multiple jurisdictions. A prudent insurer does not want to get to a point where they must submit a capital plan to a state insurance regulator and signal to the marketplace on the potential difficulty. ERR scalars use the first point of regulatory intervention as one of its primary benchmarks. Prudent insurers should try to stay out of that territory. The ERR scalars do not reflect the regulatory takeover but rather the first point of regulatory intervention. Therefore, the ACLI believes it aligns with what a prudent insurer would do in each major jurisdiction. Altogether, there are seven excellent reasons the ACLI believes its proposal is superior to the UHG's proposal.

In addition, Mariana Gomez-Vock (ACLI) provided some background. The ACLI has been highly engaged in every GCC exposure from 2017 to the present. It can attest that the process has robust stakeholder participation and opportunities to comment, particularly in 2020, when state insurance regulators met once a week to finalize the

GCC instructions, including the scalar methodology. There were at least 10 meetings of the ACLI's GCC Working Group during which scalar methodology was discussed. The Working Group settled on two final scalar options among multiple approaches. Initially, there were the pure relative ratio approach and the ERR approach. Both were included in the Academy's study, along with two other methods that the Academy proposed. The pure relative ratio approach is very similar to the ERR. The difference is how it treats available capital. Ultimately, the state insurance regulators decided that ERR was used as a placeholder for the sensitivity test of the GCC. Gomez-Vock said the Working Group and NAIC staff have three to four years' worth of data on the ERR. Lastly, she said she has a lot of respect for the state insurance regulators' commitment and the time they spent to really evaluate and consider views from all stakeholders with respect to the process.

Clark had a follow-up question related to a comment Mair made. He asked why it is now or never to decide on a methodology change. Mair said the NAIC needs some help from the industry in terms of making the transition. The ACLI and six volunteer companies agreed to provide the funding to make the transition happen. A major incentive for the companies to provide funding is that they do not want their own GCC figures to be volatile when there is a jurisdictional regime change. One of those regime changes coming up at the end of the year is in Bermuda. Therefore, companies want to have some type of mechanism to adjust for those changes. If the scalar methodology change does not happen this year, about one-third of the companies that provide funding are primarily involved in the Bermuda regime change and might fall off the list of providing funding. He is not sure whether the ACLI will be able to pull the funding together if this is not approved for this year.

Berry expressed her concerns regarding different methodologies between property/casualty (P/C), health, and life insurance companies. Gomez-Vock responded by pointing out that the ERR works for P/C and health insurance companies. She said the only reason these two lines of insurance companies were not included in the funding plan is that they did not have as much of a vested interest in participating. Scalars tend to be a much bigger deal for life insurers, which have long-term liabilities and liquid assets.

Rehagen asked how it would work in terms of ERR scalar percentages if the relative difference for health insurers is a lot different than the relative difference for life insurers. Gomez-Vock said it is designed to make the average operating ratios relative. Therefore, it is an average operating ratio for the life insurers, an average operating ratio for P/C insurers, and an average operating ratio for the health insurers. Mair agreed with what Gomez-Vock said. He said there will be different industry averages for each segment, and they may have different regulatory intervention rates as well. Each of them is going to vary by jurisdiction, but the methodology should be consistent.

Clark asked whether no comments on the exposure from the P/C trade should be taken as an agreement with the methodology and whether there are any past discussions that shed light on the level of consensus across the trades. Gomez-Vock said the ACLI aligned relatively closely with the American Property Casualty Insurance Association (APCIA) on the group capital type of issues. Based on her recent conversations with them, the scalar is not as big of a deal to them because they have short-term liabilities and assets.

Stephen Broadie (APCIA) said the APCIA does not disagree with the methodology. When it was presented to its members, they did not have a tremendous amount of interest in it. They are not opposed to the ERR methodology.

Rey Villarreal (Genworth) made a comment and expressed concern about the application, specifically. He said Genworth is a life and mortgage insurer. The lack of scaling applied to different lines of business to calibrate continues to be a concern. Genworth has brought it up in the past, and it pointed this out in its GCC filing.

Berry asked Broadie whether the P/C industry will be concerned with the ERR methodology at a later point. Broadie said they have looked at the ERR approach, and they do not have concerns with it.

Tom Finnell (America's Health Insurance Plans—AHIP) said he is going to ask AHIP's members with significant international business whether they can support the ERR proposal or not.

Gomez-Vock said current scalars are different for different lines of insurance companies. In addition, she said people have had many opportunities to object if they had serious concerns because companies with international business have already been calculating the scalar when completing the sensitivity test of the GCC.

James Braue (UHG) made a clarification on the last two points for their relative TAR approach, which was presented by Mair in the suitability comparison. He said this approach basically takes exactly what was done for the ERR approach and adds in the reserves. Therefore, there was no intention to use a different benchmark to speak for the capital, and it only reflects the reserves directly. Therefore, the last two points for the relative TAR approach should have been shown as "Yes" instead.

2. Discussed the Comment Letter Received from the UHG

Braue presented the UHG's comment letter, and he said the only theoretical assumption that it is making is the one that is stated to underlie the ERR, which is that insurers will tend to hold the same level of conservatism across all jurisdictions. Everything the UHG is doing from here out is just arithmetic. In addition, Braue pointed out a mistake in the arithmetic of the UHG's mathematical demonstration, which was used to show that the ERR approach can produce very incorrect results under certain circumstances. The UHG believes it is its responsibility to point out that the ERR approach has this mathematical flaw in it. Braue continued to point out that there is a relatively easy methodological fix to this problem, as the ACLI noted, that would require additional information about the different jurisdictions. He said he could not comment on how easy or difficult it would be to obtain that information. Based on the information the UHG has, it cannot say anything about how large this potential error is in any given jurisdiction. It is up to the Group Capital Calculation (E) Working Group to decide how much of a concern this potential for error is.

Mair made a comment and said the ERR methodology accounts for reserve differences across jurisdictions. MetLife does not believe there is a significant error in the calculation, which was not pointed out in the Academy's study. Mair said the ERR scalars are the best option for the current time, given all the vetting and calculations that have happened. Any better option can be adopted in the future.

Kevin Mackay (MetLife) said he does not believe the UHG's example works because it does not calculate the ERR properly. Braue said a company in any jurisdiction can deviate from the average, while the premise of the ERR approach is that the average company will maintain the same level of conservatism regardless of jurisdiction.

Rehagen asked Mair about the outlier identification. Mair explained how the ERR approach works. For example, if a company's solvency ratio in a jurisdiction is significantly above the average, which is considered an outlier, when the ratio gets mapped into the GCC, it will be above the average capital that is reflected in the GCC.

3. Discussed the Scalar Methodology Proposal

Berry said she has reservations about moving forward when the Working Group has not heard from health insurers. In addition, she is curious whether any of the P/C companies with a large amount of international business have any different thoughts on this.

Joyce said he agreed with Berry's concerns, but he wondered whether it will be easily resolved by giving the P/C and health industry a short window to provide any concerns. If they do not provide any concerns by then, the Working Group can consider moving forward with the proposal. In addition, he asked whether any of the NAIC

staff have any concerns about the proposal. Ned Tyrrell (NAIC) asked whether the proposal, which was driven by life insurers, includes P/C and health insurers. Gomez-Vock said the Working Group could consider adopting it for the life industry at least and then give the health and P/C industry two additional weeks to inform the Working Group of their views. Tyrrell asked whether consultants could produce scalars for all industries or for the life industry only. Gomez-Vock said the ACLI could not bear the significantly incremental cost of producing scalars for the P/C and health industries.

Joseph B. Sieverling (Reinsurance Association of America—RAA) said there is no perfect way to estimate scalars. The ERR is the best approach based on the RAA's evaluation in 2019 and 2020.

Rehagen said he had some concerns that the procedure for updating should include all types of companies.

Weaver said she believes there was enough time for everybody to weigh in, and she was fine moving forward with the ACLI's proposal. Berry said she did not take issue with moving forward with life scalars and then developing P/C and health scalars later. She said she took issue with the possibility that there is a different methodology, which is her only concern. Clark said he had some concerns about how this might affect the scalar methodology for the AM. Barlow asked whether any information is expected to be received in the short term to help address this question. Tyrrell said the assessment is starting soon, but it is not going to be completed until late 2024.

4. Adopted the Scalar Methodology Proposal for Life Insurance Companies

Rehagen said it is important to get a methodology to maintain the scalar.

Weaver made a motion, seconded by Crawford, to move forward with the ACLI's proposal.

Bruggeman asked whether the ACLI's proposal is for all types of companies or just for life insurers. Weaver said she is willing to limit it to life insurers and then give P/C and health insurers two more weeks if this is the will of the Working Group.

Rehagen took a vote. All were in favor of adopting the ERR scalar proposal (Attachment Two-A) except for Berry. Berry was opposed to this motion because it leaves open the possibility for different methodologies. She said she would prefer to wait an additional two weeks to see if there are any methodology recommendations from the other two lines of insurance companies and then move forward altogether.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

Group Capital Calculation (E) Working Group
Virtual Meeting
June 13, 2023

The Group Capital Calculation (E) Working Group of the Group Capital Calculation (E) Working Group met June 13, 2023. The following Working Group members participated: John Rehagen, Chair (MO); Susan Berry, Vice Chair (IL); Susan Bernard and Michelle Lo (CA); John Loughran (CT); Philip Barlow (DC); Ray Spudeck (FL); Roy Eft (IN); Kevin Clark (IA); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); Ben Slutsker (MN); Lindsay Crawford and Anthony Quandt (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Doug Hartz (OR); Diana Sherman (PA); Trey Hancock (TN); Amy Garcia (TX); David Smith (VA); and Amy Malm (WI).

1. Exposed the Proposed Scalar for the 2023 GCC

Rehagen announced that Susan Berry (IL) had agreed to serve as the Working Group's vice chair. He then provided background on the topic for the day. He said there were several conversations over the past year about moving forward with the scalar proposal and also discussions around making sure any scalar that is considered for adoption has a good process for updating, as well as not having the scalars move things around too much from one period to the next.

Martin Mair (MetLife), representing the American Council of Life Insurers (ACLI), presented the group capital calculation (GCC) scalar proposal for the 2023 GCC. He said that currently the GCC includes multiple scalar methodologies in the calculation and is set up with a placeholder scalar as the primary calculation, which is an unscaled approach, and all the other scalar methodologies are set up to be sensitivities within the calculation. The ACLI proposal is to adopt the excess relative ratio (ERR) approach as the primary scalar methodology, and all the other scalar methodologies will continue to be viewed as sensitivities to the primary approach. He said these scalar methodologies need to be maintained and updated as Rehagen mentioned and so always reflect current conditions without too much volatility into the system. He said different scalar approaches do not give dramatically different answers in terms of converting overseas capital ratios into a risk-based capital (RBC) ratio equivalent.

Mair pointed out some advantages of the ERR approach. The first one is that the scalar methodology best recognizes differences in required reserves across different jurisdictions. He used the Japanese solvency regime as an example, which sees a typical solvency ratio of 800% for a life insurance company compared to 400% in the U.S. He said the difference in reserving requirements accounts for most of the differences in the capital ratios across different jurisdictions. He said the Solvency II-like jurisdictions tend to have relatively low reserve requirements relative to the U.S., which is balanced by a higher required capital. As a result, solvency ratios generally end up lower. In addition, he said the second advantage is that the ERR approach preserves insurer excess capital and aligns with the prudent insurer solvency management.

Mair said this approach uses two benchmarks to establish the scalar. The first one is the average insurer solvency ratio in each jurisdiction because companies generally want to keep somewhere around the industry average to maintain competitiveness in the marketplace. The second one is the point of first regulatory intervention where there is a capital plan required of the insurer by the regulator. He said the capital level is managed to be around the industry average not only under normal circumstances, but also under a stress situation such as the great financial crisis or severe increases in the interest rates that the local operation in the jurisdiction can continue to operate without a regulatory intervention to maintain independence under stress. The ERR approach incorporates

both of these elements as benchmarks. He said this is how many insurers manage their capital, and MetLife is one of them.

Rehagen asked whether this is for life insurance only. Mair said this proposal is going to cover both life and health insurance. He said this approach should be the primary approach for all insurance companies, and the ACLI thinks this is the best approach across different lines.

Mair continued to explain why it is important to make this change now. He said the consistency in the solvency regime around the world is about to change, and there will be significant changes to the solvency regime in the next few years. Bermuda is going to make some significant changes to its solvency regime at the end of the year, which is expected to have a significant change to its ratios. Additionally, Japan is expected to adopt the insurance capital standard (ICS) at the end of 2025. The current placeholder scalars are unresponsive to these changes, which would cause significant volatilities in the GCC ratio, and this is caused by nothing other than a regulatory regime change. He said the reason to set up a responsive scalar mechanism/methodology is to get prepared for regulatory regime changes and to be able to make proper adjustments to the scalar so that the GCC ratio remains relatively stable.

In addition, Mair talked about how to support this approach and make the change robust over time. He said last time the ACLI took a deeper dive into this was in 2015 and 2016. There is a need for ongoing work both from identifying data sources for the average solvency ratio in 14 jurisdictions and what the point of first regulatory intervention is in each jurisdiction, as well as a number of outstanding methodological issues such as representative insurers and their jurisdictions. So, a consultant will work through these with the industry and the NAIC. The ACLI put out bids for this work and has identified a dream team of consultants to work on this project. One of them is Oliver Wyman, which did in-depth work back in 2015 and 2016, and it has agreed to work on this project to support the transition. The other one is Lou Felice, who was with the NAIC in 2015 and was a central figure in pulling this together with health scalars as one of his specialties. The total cost is estimated to be \$300,000 for 2023. The ACLI and six individual insurers have agreed to share the cost. It is up to the Working Group to decide whether all these are acceptable. He said if acceptable, they will start to engage the consultants and work on the project. He said they hope to have 2023 year-end data for the GCC be based on the scalar methodology.

Tom Finnell (America's Health Insurance Plans—AHIP) asked whether the proposed scalars are for life and health business combined or are separate scalars for the health business. Mair said the ACLI is thinking of separate health scalars for selected jurisdictions, and Japan is one of them.

Rehagen asked Mair whether he had any reaction to the June 1 meeting of the Federal Reserve Board's (FRB's) Insurance Policy Advisory Council (IPAC), which is a group of volunteers in the industry advising on insurance matters. During the meeting, the group provided an update to its project on scalars, which is going to be combined into a paper later this summer. Mair said the ACLI had discussions with the FRB on whether there would be any issue if the NAIC adopts the ERR approach in light of the IPAC scalar review, and the answer they received was that there is no perceived conflict between the two. IPAC's scalar review is an educational tool. Because the ICS methodology does not include anything like scalars and everything is based on a mark-to-market basis, there is no need to convert from one jurisdiction to another since they are all treated equally. The FRB did not feel that the selection of one scalar methodology over another would have any impact on the comparability assessment.

Rehagen said he is interested in seeing if there is any inconsistency between what they come up with and the NAIC approach. Mair said the answer he got was that this would neither improve the chances for comparability nor degrade the chances for favorable comparability assessments.

Rehagen asked whether any Working Group members, other insurance regulators, and interested parties have any questions. Ned Tyrrell (NAIC) asked about where the data is coming from and the scope of the data. He wondered whether there are any jurisdictions where it would be as easy to get scalars for property/casualty (P/C) insurance without too much extra effort beyond what would be needed to get the life or health scalars.

Mair said the industry and consultants would work together and make recommendations to the NAIC. He said it is up to the NAIC to be comfortable with and approve them. He said the focus of this project is to find the data and develop those methodologies for the life and selected health jurisdictions. He said he does not know the answer to Tyrrell's question. However, he speculated that it may be easier for P/C once data sources are identified for the other sectors. Tyrrell said various online databases are available for free for European P/C insurance companies and Canadian companies. Mair said Lou Felice might be able to help identify the data sources not only for life and health, but also for P/C along the way.

Quandt asked whether it would be more lenient than risk-based capital (RBC) if insurers move their risks to a jurisdiction with lighter reserve requirements to release capital. Mair said there is a rough equivalence across the major jurisdictions in terms of the overall level of conservatism in the combination of the reserves, capital requirements, and capital ratios. In the major jurisdictions, there are a lot of entities that operate across different jurisdictions, which run to relatively similar levels of conservatism overall even though their capital ratios look different. Tyrrell asked whether a similar level of conservatism would be RBC at 200% or 300%. Mair said RBC at 200%. Tyrrell asked what the equivalent for a European entity would be. Mair said it would typically be about 250% for life, which is a similar level of conservatism on a holistic basis of reserves, capital, and capital ratio.

Without further questions, the Working Group agreed to expose the GCC scalar proposal for a 30-day public comment period ending July 13.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

ACL GCC Scalar Proposal

June 2023

ACL Proposal and Projected Support

The primary GCC calculation currently relies on placeholder scalars, which convert non-US available and required capital figures into an RBC equivalent on a 1:1 basis. Other scalar methodologies are reported on a sensitivity basis.

ACL has pointed out significant shortcomings of placeholder scalars and has proposed that Excess Relative Ratio (ERR) scalars would generate superior GCC figures for regulators and industry.

ACL has solicited consultant bids to facilitate a potential transition from placeholder scalars to ERR scalars during 2023 for the Life and Health sectors. This project has two major components:

1. Identify data sources for solvency ratios and regulatory intervention levels by jurisdiction
2. Work with NAIC to develop appropriate methodologies for generating ERR scalars over time (use of moving averages, dealing with jurisdictional solvency regime change, identifying representative insurers, etc.)

ACL and six individual insurers have agreed to fund the total \$300,000 consultant cost to engage Oliver Wyman and Lou Felice to help NAIC transition to ERR scalars during 2023.

2

Executive Summary

Replacing placeholder scalars with ERR will appropriately recognize non-U.S. business in the GCC formula

Credible approaches – Prob. of Negative Outcomes (PNO), Pure & Excess Ratio - produce directionally similar scalars

Excess Ratio approach has two critical advantages relative to other ratio-based approaches:

1. Excess Ratio best recognizes *cross-jurisdictional differences in required reserves*
2. Excess Ratio best reflects *capital management practices of prudent global insurers*

3

ERR Scalar Benefits for US Insurers

Replacing placeholder scalars with ERR scalars provides multiple benefits for US insurers:

1. Unlike placeholder scalars, ERR scalars can be designed to adjust immediately to solvency regime changes, avoiding uneconomic GCC volatility through time
2. Since ERR scalars recognize cross-jurisdictional differences in required reserves, ERR scalars produce GCC figures most accurately aligned with RBC – facilitating insurers’ most efficient allocation of capital
3. By helping select representative insurers in each jurisdiction, industry can improve the accuracy of each jurisdictional scalar
4. By providing input into scalar update methodologies, insurers can align future GCC figures with their internal forecasts
5. ERR scalars can also be leveraged for IAIS comparability purposes – to convert GCC into ICS-equivalent figures

4

Improving GCC Accuracy

Replacing the existing approach with ERR scalars will improve GCC accuracy and avoid the following potential criticisms of current placeholder:

- No justification for assuming available & required capital is equivalent globally
- Placeholder scalar penalizes insurers in the many jurisdictions with Solvency II-like regimes

Credible scalars are **directionally consistent** converting overseas capital to RBC

- Japan SMR is discounted heavily when converted to RBC equivalent
- Conversely, Solvency II-like ratios are increased upon conversion to RBC

Different scalar approaches use similar underlying data (regulatory intervention points, industry average ratios) across risk-sensitive jurisdictions, resulting in roughly similar scalar estimates

5

Unique Advantages of Excess Ratio Approach

Excess Ratio methodology best recognizes differences in required reserves across jurisdictions

- JGAAP reserves are very stringent, balanced by lower required capital
- Jurisdictions with Solvency II-like regimes often have relatively low reserve requirements, balanced by higher required capital

Excess Ratio preserves insurers' excess capital and aligns with prudent insurers' solvency management:

- Ongoing Competitiveness:** Manage local solvency ratio within range of industry average to ensure ability to sell new products
- Independence Under Stress:** Manage local solvency to remain independent of regulatory intervention during the inevitable periods of market stress

6

Appendix 1: Excess Ratio Scalars in GCC Template

	Life	Non-Life	Health
Canada	15%	28%	
Bermuda	44%	44%	
Japan	101%	121%	72%
Solvency II (EU)	31%	47%	
Solvency II (UK)	31%	47%	
Australia	30%	30%	30%
Switzerland	16%	56%	
Hong Kong	100%	100%	
Singapore	100%	100%	100%
Chinese Taipei	100%	100%	100%
South Africa	100%	100%	100%
Mexico	100%	100%	
China	100%	100%	
South Korea	100%	100%	

7

Appendix 2: How does the Excess Relative Ratio Adjust for Key Differences?

The Excess Relative Ratio scalar is a total balance sheet-based approach that recognizes different accounting conservatism levels to equilibrate capital requirements:

* Also accounts for differences in asset valuation and admissibility rules (e.g., for eligible assets). For reference, assets admitted under Regime B but not Regime A may be considered a "coste-savings" in Regime B that is subsequently removed when raising Regime B's conservatism margin to equate Regime B and Regime A.

8

Appendix 3: Distinguishing Between Alternative Scalar Approaches

1. Shareholder Approach – 1.0
Scalar = 1.0x

Resultant capital ratios
100% → 100%

- Restating the entity's balance sheet to US creates net increase in total assets, as available capital rises the same.
- Scaled capital ratio unrealistically low.

2. The Pure Relative Ratio Approach (aka "Operating Ratio" approach)
Scalar = 0.7x

Resultant capital ratios
100% → 64%

- Restating the entity's balance sheet to US creates net increase in total assets, as available capital stays the same.
- Scaled capital ratio in-line with US insurers, but with larger cushion of "excess capital".

3. The Excess Relative Ratio Approach (aka "total balance sheet approach")
Scalar = 0.2x

Resultant capital ratios
100% → 66%

- No net increase in assets from restating the entity's balance sheet to US.
- Scaled capital ratio in-line with US insurers, with comparable level of "excess capital".

1. Scalar = 100% of SCR / 100% NEC C/L (applied to required capital)
2. Scalar = 100% of SCR / 150% NEC C/L (scaled to required capital)
3. See previous slide for scalar calculation and application notes

Appendix 4: Sample Demonstration of Excess Scalar

A US-based life insurer has significant operations in both Europe (Solvency II) and Japan. In each jurisdiction, the insurer has an industry-average solvency ratio.

How are excess scalars developed, and what is the insurer's GCC ratio?

Assumptions	US	SII	Japan
(a) Industry Avg Ratio (%)	400%	200%	800%
(b) First Regulatory Intervention (%)	100%	100%	200%
(c) Current Available Capital (\$)	\$400	\$200	\$400
(d) Available Capital at Intervention (\$)	\$100	\$100	\$100
(e) Required Capital (\$)	\$100	\$100	\$50
(a)-(b) (c)	300%	100%	300%
(f) Excess Ratio	N/A	0.333	1.00
(f) Country (f) US = (f) Excess Scalar ¹			

¹Actual excess scalars listed on GCC Template (slide 6) are 0.31 (SII) and 1.01 (Japan)

Appendix 5: Applying Excess Scalars to SII and Japan

Country scaled capital example

Excess scalars are first applied to required capital

	SII	Japan
Available Capital at Intervention	\$100	\$100
Scalar	0.333	1.00
X (b) = (c)	\$33	\$100
– (a) = (d)	Required Capital Difference (\$67)	50

Available Capital is adjusted by the change in required capital

	SII	Japan	
Current Available Capital	\$200	\$400	
Required Capital Difference	(\$67)	50	
– (d)	Scaled Available Capital	\$133	\$400

Group capital aggregation example

	US	SII	Japan	GROUP
Scaled Available Capital	\$400	\$133	\$400	\$933
Scaled Required Capital	\$100	\$33	\$100	\$233
Solvency Ratio	400%	400%	400%	400%

Appendix 6: Sample Methodological Issues in Generating Scalars

A robust framework for generating scalars should address issues including:

- How long of an historical time series is required (e.g., 5-year rolling average)?
- What minimum percentage of the industry should be included in the average?
- What circumstances justify excluding certain companies from the calculation (e.g., outlier ratios or ratings, very different business model, not representative of IAIG's)?
- How should jurisdictional scalars adjust when there is a regulatory regime change?
- Should there be a minimum trigger for year-over-year changes in scalars? Excluding a change in solvency regime, should scalars generally be static for a period of time and revised every few years?
- What outcomes suggest that a particular scalar is not appropriate?

Date: 8/11/23

Mortgage Guaranty Insurance (E) Working Group
Virtual Meeting
July 13, 2023

The Mortgage Guaranty Insurance (E) Working Group of the Financial Condition (E) Committee met July 13, 2023. The following Working Group members participated: Jackie Obusek, Chair (NC); Kurt Regner (AZ); Monica Macaluso (CA); Bradley Trim (FL); John Rehagen (MO); Margot Small (NY); Diana Sherman (PA); Chris Miller (TX); and Amy Malm and Levi Olson (WI).

1. Adopted its Spring National Meeting Minutes

Rehagen made a motion, seconded by Macaluso, to adopt the Working Group's March 22 minutes (*see NAIC Proceedings – Spring 2023, Financial Condition (E) Committee, Attachment One*). The motion passed unanimously.

2. Adopted Amendments to Model #630

Obusek commented that during the Spring National Meeting, the Working Group discussed draft revisions to the *Mortgage Guaranty Insurance Model Act (#630)* (Attachment Three-A). Following this discussion, the drafting group met and integrated revisions to the draft and re-exposed Model #630 for a 15-day public comment period that ended May 26. As a result of the exposure, a letter was received from the Center for Economic Justice (CEJ) and the mortgage guaranty consortium (MGC) (Attachment Three-B). Obusek asked to hear from those who submitted comments.

Birny Birnbaum (CEJ) indicated that the CEJ requested three changes to the draft revised model. The first change is that Section 21—No Private Right of Action be stricken and replaced with an explicit private right of action for violations of those provisions of the model for which consumer harm can be directly demonstrated and which avoid any provision that interferes with solvency regulation. Birnbaum noted that there is no other personal lines model law that has a provision barring a private right of action, and the inclusion in the model law would be unprecedented. He further commented that a private right of action is warranted based on the history of private mortgage insurers' actions leading up to the 2008 financial crisis. He said the proposed ban on private litigation is unfair by limiting consumer access to courts while leaving insurers free to sue consumers.

Birnbaum indicated that the next two amendment requests relate to Section 18A—Inducements and Section 18C—Rebates. He proposed that both be stricken, as they water down critical consumer protections by allowing room for insurers to engage in anti-competitive and unsound business practices. He stated that the recent revisions to the *Unfair Trade Practices Act (#880)* focus on a declaration that insurer risk mitigation efforts are not illegal rebates; however, there is no loss mitigation associated with an inducement. He reasoned that Section 18C should be removed because there is no way for a rebate, as set out in the proposed model, to comply with the remaining portion of the paragraph because if the rebate is set forth in the filed rates, it is not a rebate but a rate discount. He further indicated that referencing Model #880 is inapplicable because rebates are not policy form provisions approved by the state insurance regulator.

Birnbaum stated that the MGC requested the deletion of the anti-deficiency judgment protection in Section 14A—Policy Forms, and the CEJ opposed the change and urged retention of the anti-deficiency protection for several reasons: 1) permitting deficiency judgments penalizes consumers who are victims of economic conditions that depress home prices; 2) deficiency collection is often limited; and 3) the CEJ found no anomaly in prohibiting a

mortgage insurer from pursuing a deficiency judgment while permitting a lender to do so. Therefore, the industry proposal would potentially subject a consumer to two deficiency lawsuits for the same deficiency.

Benjamin Schmidt (Radian Guaranty Inc.) commented on behalf of the MGC. He stated that Radian Guaranty Inc.'s comment letter included the same stance that the MGC had already provided regarding Section 10B(1). He stated that the language in the exposure would discourage the use of reinsurance, as reinsurers may not file statutory financial statements and in those instances would not have a way to report contingency reserves. He indicated that the suggested language from the MGC would clarify that the Contingency Reserve requirement is achieved based on the maintenance by the reinsurer of equivalent collateralized or segregated assets supporting the reinsurance obligations even if the reinsurer does not file a statutory financial statement. He also commented on Section 14A, stating that the second sentence should be removed entirely based on the comments from the MGC's prior letter. He indicated that the sentence was partially deleted following its November 2022 comment letter; however, it may have inadvertently been restored to the current draft after the MGC flagged a fragment of the sentence that remained in the February exposure draft.

Obusek indicated that the comments heard were not new topics, and they have already been discussed. She stated that after materials for the meeting were posted, there was additional communication with the CEJ on the issues raised in its comment letter. As a result of those discussions, she proposed an amendment to Section 18A and Section 18C to remove the first sentence and Section 21 entirely from the model.

Hearing no further discussion, Malm made a motion, seconded by Rehagen, to adopt the proposed amendments to Model #630 with an amendment to Section 18A and Section 18C to strike, "Unless set forth in the policy and subject to the [state equivalent of the Unfair Trade Practices Act #880]" and strike in its entirety Section 21. The motion passed with New York opposing.

Having no further business, the Mortgage Guaranty Insurance (E) Working Group adjourned.

Section 1. Title

This Act may be cited as the Mortgage Guaranty Insurance Act.

Section 2. Definitions

The definitions set forth in this Act shall govern the construction of the terms used in this Act but shall not affect any other provisions of the code.

- ~~A.~~ A. —“Authorized ~~real estate security,~~” for the purpose of this Act, Real Estate Security” means ~~an:~~
- (1) An amortized note, bond or other evidence instrument of indebtedness, except for reverse mortgage loans made pursuant to [insert citation of state law that authorizes reverse mortgages] of the real property law, evidencing a loan, not exceeding ninety-five one hundred three percent (95103%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument that constitutes, or is equivalent to, a first lien or charge on real estate junior lien or charge on real estate, with any percentage in excess of one hundred percent (100%) being used to finance the fees and closing costs on such indebtedness; provided:
- (a) ~~(1)~~—The real estate loan secured in this manner is one of a type that a ~~bank, savings and loan association, or an insurance company~~ creditor, which is supervised and regulated by a department of ~~this~~ any state or territory of the U.S or an agency of the federal government, is

MO-630-1

Mortgage Guaranty Insurance Model Act

authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate;

~~(2b)~~ The improvement on loan is to finance the acquisition, initial construction or refinancing of real estate that is a:

~~(i)~~ Residential building designed for occupancy by not more than four families, a one-family residential condominium or unit in a planned unit development, or any other one-family residential unit as to which title may be conveyed freely; or

~~(ii)~~ Mixed-use building with only one non-residential use and one one-family dwelling unit; or

~~(iii)~~ Building or buildings designed for occupancy as specified by Subsections A(1) and A(2) of this section; and by five (5) or more families or designed to be occupied for industrial or commercial purposes.

~~(3c)~~ The lien on the real estate may be subject to and subordinate to the following:

~~(a)~~ The lien of any public bond, assessment or tax, when no installment, call or payment of or under the bond, assessment or tax is delinquent; and

~~(b)~~ Outstanding mineral, oil, water or timber other liens, leases, rights, rights of way, easements or rights of way of support, sewer rights, building restrictions or other restrictions or, easements, covenants, conditions or regulations of use, or outstanding leases upon the real property under which rents or profits are reserved to the owner thereof that do not impair the use of the real estate for its intended purpose.

~~(2)~~ Notwithstanding the foregoing, a loan referenced in Section 2A(1) of this Act may exceed 103% of the fair market value of the real estate in the event that the mortgage guaranty insurance company has approved for loss mitigation purposes a request to refinance a loan that constitutes an existing risk in force for the company.

~~(3)~~ An amortized note, bond or other instrument of indebtedness evidencing a loan secured by an ownership interest in, and a proprietary lease from, a corporation or partnership formed for the purpose of the cooperative ownership of real estate and at the time the loan does not exceed one hundred three percent (103%) of the fair market value of the ownership interest and proprietary lease, if the loan is one of a type that meets the requirements of Section 2A(1)(a), unless the context clearly requires otherwise, any reference to a mortgagor shall include an owner of such an ownership interest as described in this paragraph and any reference to a lien or mortgage shall include the security interest held by a lender in such an ownership interest.

~~B.~~ “Bulk Mortgage Guaranty Insurance” means mortgage guaranty insurance that provides coverage under a single transaction on each mortgage loan included in a defined portfolio of loans that have already been originated.

~~C.~~ “Certificate of Insurance” means a document issued by a mortgage guaranty insurance company to the initial insured to evidence that it has insured a particular authorized real estate security under a master policy, identifying the terms, conditions and representations, in addition to those contained in the master policy and endorsements, applicable to such coverage.

~~D.~~ “Commissioner” means [insert the title of the principal insurance supervisory official] of this state, or the [insert the title of the principal insurance supervisory official]’s deputies or assistants, or any employee of the [insert name of the principal insurance regulatory agency] of this state acting in the [insert the title of the principal insurance supervisory official]’s name and by the [insert the title of the principal insurance supervisory official]’s delegated authority.” Commissioner.” The term “commissioner” shall mean the insurance commissioner, the commissioner’s deputies, or the Insurance Department, as appropriate.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the word “commissioner” appears.

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

- E.
- ~~B.~~ “~~Contingency reserve~~“Contingency Reserve” means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.
- ~~C.~~ “~~Mortgage guaranty insurance~~” is F. “Domiciliary Commissioner” means the principal insurance supervisory official of the jurisdiction in which a mortgage guaranty insurance company is domiciled, ~~or that principal insurance supervisory official’s deputies or assistants, or any employee of the regulatory agency of which that principal insurance supervisory official is the head acting in that principal insurance supervisory official’s name and by that principal insurance supervisory official’s delegated authority.~~
- G. “Effective Guaranty” refers to the assumed backing of existing or future holders of securities by virtue of their issuer’s conservatorship or perceived access to credit from the U.S. Treasury, as opposed to the direct full faith and credit guarantee provided by the U.S. government.
- H. “Loss” refers to losses and loss adjustment expenses.
- I. “Master Policy” means a document issued by a mortgage guaranty insurance company that establishes the terms and conditions of mortgage guaranty insurance coverage provided thereunder, including any endorsements thereto.
- J. “Mortgage Guaranty *
- ~~(1)~~ Insurance” is insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any ~~note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on the real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families;~~authorized real estate security.
- ~~(2)~~ Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on the real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes; and
- ~~(3)~~ Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, provided the improvement on the real estate is a building or buildings designed to be occupied for industrial or commercial purposes.
- K. “Mortgage Guaranty Quality Assurance Program” means an early detection warning system for potential underwriting compliance issues which could potentially impact solvency or operational risk within a mortgage guaranty insurance company.
- L. “NAIC” means the National Association of Insurance Commissioners.
- M. “Pool Mortgage Guaranty Insurance” means mortgage guaranty insurance that provides coverage under a single transaction or a defined series of transactions on a defined portfolio of loans for losses up to an aggregate limit.
- N. “Right of Rescission” represents a remedy available to a mortgage guaranty insurance company to void a certificate and restore parties to their original position, based on inaccurate, incomplete or misleading information provided to, or information omitted or concealed from, the mortgage guaranty insurance company in connection with the insurance application, resulting in an insured loan that did not meet the mortgage guaranty insurance company’s eligibility requirements in effect on the date of submission of the insurance application.
- O. “Risk in Force” means the mortgage guaranty insurance coverage percentage applied to the unpaid principal balance.

MO-630-3

Mortgage Guaranty Insurance Model Act

Section 3. Insurer's Authority to Transact Business

A company may not transact the business of mortgage guaranty insurance until it has obtained a certificate of authority from the commissioner.

Section 4. Mortgage Guaranty Insurance as Monoline

A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.

Section 5. Risk Concentration

A mortgage guaranty insurance company shall not expose itself to any loss on any one authorized real estate security risk in an amount exceeding ten percent (10%) of its surplus to policyholders. Any risk or portion of risk which has been reinsured shall be deducted in determining the limitation of risk.

Section 6. Capital and Surplus

- A. **Initial and Minimum Capital and Surplus Requirements.** A mortgage guaranty insurance company shall not transact the business of mortgage guaranty insurance unless, if a stock insurance company, it has paid-in capital of at least \$~~10~~10,000,000 and paid-in surplus of at least \$~~15~~15,000,000, or if a mutual insurance company, a minimum initial surplus of \$~~25~~25,000,000. A stock insurance company or a mutual insurance company shall at all times thereafter maintain a minimum policyholders' surplus of at least \$~~1,500~~20,000,000.

Section 4. Insurer's Authority to Transact Business

No mortgage guaranty insurance company may issue policies until it has obtained from the commissioner of insurance a certificate setting forth that fact and authorizing it to issue policies.

- B. **Section 5. Minimum Capital Requirements Applicability.** A mortgage guaranty insurance company formed prior to the passage of this Act may maintain the amount of capital and surplus or minimum policyholders' surplus previously required by statute or administrative order for a period not to exceed twelve months following the effective date of the adoption of this Act.
- C. **Minimum Capital Requirements Adjustments.** The domiciliary commissioner may by order reduce the minimum amount of capital and surplus or minimum policyholders' surplus required under Section 6A under the following circumstances:
- (1) For an affiliated reinsurer that is a mortgage guaranty insurance company and that is or will be engaged solely in the assumption of risks from affiliated mortgage guaranty insurance companies, provided that the affiliated reinsurer is in run-off and, in the domiciliary commissioner's opinion, the business plan and other relevant circumstances of the affiliated reinsurer justify the proposed reduction in requirements.
 - (2) For mortgage guaranty insurance companies that are in run-off and not writing new business that is justified in a business plan, in the domiciliary commissioner's opinion.

Section 7. Geographic Concentration

- A. A mortgage guaranty insurance company shall not insure loans secured by a single risk in excess of ten percent (10%) of the company's aggregate capital, surplus and contingency reserve.
- B. No mortgage guaranty insurance company shall have more than twenty percent (20%) of its total insurance in force in any one Standard Metropolitan Statistical Area (SMSA), as defined by the ~~United States~~U.S Department of Commerce.
- C. The provisions of this section shall not apply to a mortgage guaranty insurance company until it has possessed

MO-630-4

NAIC Model Laws, Regulations, Guidelines and Other Resources—July ~~2000~~2023

a certificate of authority in this state for three (3) years.

Section 68. Advertising

No mortgage guaranty insurance company or an agent or representative of a mortgage guaranty insurance company shall prepare or distribute or assist in preparing or distributing any ~~brochure, pamphlet, report or any form of~~ advertising media or communication to the effect that the real estate investments of any financial institution are “insured investments,” unless the ~~brochure, pamphlet, report or~~ advertising media or communication clearly states that the loans are insured by mortgage guaranty insurance companies possessing a certificate of authority to transact mortgage guaranty insurance in this state or are insured by an agency of the federal government, ~~as the case may be.~~

Section 79. Investment Limitation

~~A mortgage guaranty insurance company shall not invest~~Investments in notes or other evidences of indebtedness secured by a mortgage or other liens upon residential real property ~~shall not be allowed as assets in any determination of the financial condition of a mortgage guaranty insurer.~~ This section shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of ~~the~~ good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired. ~~This section shall not apply to investments backed by the full faith and credit of the U.S. Government or investments with the effective guaranty of the U.S. Government. This section shall not apply to investments held by a mortgage guaranty insurance company prior to the passage of this Act.~~

~~Section 8. Coverage Limitation~~**10. Reserve Requirements**

~~A. Unearned premium Reserves, Loss Reserves, and Premium Deficiency Reserves.~~ Financial reporting will be prepared in accordance with the Accounting Practices and Procedures Manual and Annual Financial Statement Instructions of the NAIC.

~~B. Contingency Reserve.~~ Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:

(1) ~~The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.~~

(2) ~~Except as provided within this Act, a mortgage guaranty insurance company’s contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, to provide for reserve buildup. The portion of the contingency reserve established and maintained for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.~~

(3) ~~Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:~~

(a) ~~Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or~~

(b) ~~Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts which are in excess of the requirements of Section 15 as required in [insert section of the mortgage guaranty Insurance model law requiring minimum policyholder’s position] as filed with the most recently filed annual statement.~~

(i) ~~The mortgage guaranty insurance company’s domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the~~

MO-630-5

Mortgage Guaranty Insurance Model Act

contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a segregated account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.

C. **Miscellaneous.** Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.

Section 11. Reinsurance

A. **Prohibition of Captive Reinsurance.** A mortgage guaranty insurance company shall not enter into captive reinsurance arrangements which involve the direct or indirect ceding of any portion of its insurance risks or obligations to a reinsurer owned or controlled by an insured; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity owned or controlled by an insured or an insured's officer, director or employee or any member of their immediate family that has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing.

B. **Reinsurance Cessions.** A mortgage guaranty insurer may, by written contract, reinsure any insurance that it transacts, except that no mortgage guaranty insurer may enter into reinsurance arrangements designed to circumvent the compensating control provisions of Section 17 or the contingency reserve requirement of Section 10. The unearned premium reserve and the loss reserves required by Section 10 shall be established and maintained by the direct insurer or by the assuming reinsurer so that the aggregate reserves shall be equal to or greater than the reserves required by direct writer. The cession shall be accounted for as provided in the accounting practices and procedures prescribed or permitted by the applicable Accounting Practices and Procedures Manual of the NAIC.

Section 12. Sound Underwriting Practices

A. **Underwriting Review and Approval Required.** All certificates of mortgage guaranty insurance, excluding policies of reinsurance, shall be written based on an assessment of evidence that prudent underwriting standards have been met by the originator of the mortgage. Delegated underwriting decisions shall be reviewed based on a reasonable method of sampling of post-closing loan documentation to ensure compliance with the mortgage guaranty insurance company's underwriting standards.

B. **Quality Control Reviews.** Quality control reviews for bulk mortgage guaranty insurance and pool mortgage guaranty insurance shall be based on a reasonable method of sampling of post-closing loan documentation for delegated underwriting decisions to ensure compliance with the representations and warranties of the creditors or creditors originating the loans and with the mortgage guaranty insurance company's underwriting standards.

C. **Minimum Underwriting Standards.** Mortgage guaranty insurance companies shall establish formal underwriting standards which set forth the basis for concluding that prudent underwriting standards have been met.

D. **Underwriting Review and Approval.** A mortgage guaranty insurance company's underwriting standards shall be:

(1) A mortgage guaranty insurance company shall limit its coverage net of reinsurance ceded to a reinsurer in which the company has no interest to a maximum of twenty five percent (25%) of the entire indebtedness to the insured or in lieu thereof, a mortgage guaranty insurance company may elect to pay the entire indebtedness to the insured and acquire title to the authorized real estate security.

Section 9. Reviewed and approved by executive management, including, but not limited to the highest-ranking executive officer and financial officer; and

(2) Communicated across the organization to promote consistent business practices with respect to underwriting.

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000~~2023~~

~~E. **Notification of Changes in Underwriting Standards.** On or before March 1 of each year, a mortgage guaranty insurance company shall file with the domiciliary commissioner changes to its underwriting standards and an analysis of the changes implemented during the course of the immediately preceding year. The annual summary of material underwriting standards changes should include any change associated with loan to value ratios, debt to income ratios, borrower credit standing or maximum loan amount which has resulted in a material impact on net premium written of +/- 5% from prior year to date.~~

~~**Nondiscrimination.** In extending or issuing mortgage guaranty insurance, a mortgage guaranty insurance company~~

~~A. A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.~~

~~B. A mortgage guaranty insurance that anywhere transacts the classes of insurance defined in Section 2A(2) or 2A(3) is not eligible for a certificate of authority to transact in this state the class of mortgage guaranty insurance defined in Section 2A(1). However, a mortgage guarantee insurance company that transacts a class of insurance defined in Section 2A may write up to five percent (5%) of its insurance in force on residential property designed for occupancy by five (5) or more families.~~

~~**Section 10. Underwriting Discrimination**~~

~~A. Nothing in this chapter shall be construed as limiting the right of a mortgage guaranty insurance company to impose reasonable requirements upon the lender with regard to the terms of a note or bond or other evidence of indebtedness secured by a mortgage or deed of trust, such as requiring a stipulated down payment by the borrower may not.~~

~~B. No mortgage guaranty insurance company may discriminate in the issuance or extension of mortgage guaranty insurance on the on the basis of the applicant's sex, marital status, race, color, creed or national origin, national origin, disability, or age or solely on the basis of the geographic location of the property to be insured unless the discrimination related to geographic location is for a business purpose that is not a mere pretext for unfair discrimination; or the refusal, cancellation, or limitation of the insurance is required by law or regulatory mandate.~~

~~C. **No policy.** Drafting Note: States and jurisdictions should consult their constitution or comparable governance documents and applicable civil rights legislation to determine if broader protections against unacceptable forms of discrimination should be included in Section 12F.~~

~~**Section 13. mortgage guaranty insurance Quality Assurance**~~

~~A. **Quality Assurance Program.** A mortgage guaranty insurance company shall establish a formal internal mortgage guaranty quality assurance program, which provides an early detection warning system as it relates to potential underwriting compliance issues which could potentially impact solvency or operational risk. This mortgage guaranty quality assurance program shall provide for the documentation, monitoring, evaluation and reporting on the integrity of the ongoing loan origination process based on indicators of potential underwriting inadequacies or non-compliance. This shall include, but not limited to:~~

~~(1) **Segregation of Duties.** Administration of the quality assurance program shall be delegated to designated risk management, quality assurance or internal audit personnel, who are technically trained and independent from underwriting activities that they audit.~~

~~(2) **Senior Management Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to an enterprise risk management committee or other equivalent senior management level oversight body.~~

~~(3) **Board of Director Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to the board of directors or a designated committee of directors established to facilitate board of director oversight.~~

MO-630-7

Mortgage Guaranty Insurance Model Act

- (4) **Policy and Procedures Documentation.** Mortgage guaranty quality assurance program, excluding policies and procedures of reinsurance, shall be formally established and documented to define scope, roles and responsibilities.
- (5) **Underwriting Risk Review.** Quality assurance review shall include an examination of underwriting risks including classification of risk and compliance with risk tolerance levels.
- (6) **Lender Performance Reviews.** Quality assurance monitoring provisions shall include an assessment of lender performance.
- (7) **Underwriting Performance Reviews.** Quality assurance monitoring provisions shall assess compliance with underwriting standard.
- (8) **Problem Loan Trend Reviews.** Quality assurance monitoring provisions shall assess prospective risks associated with timely loan payment including delinquency, default inventory, foreclosure and persistency trends.
- (9) **Underwriting System Change Oversight.** Underwriting system program changes shall be monitored to ensure the integrity of underwriting and pricing programs, which impact automated underwriting system decision making.
- (10) **Pricing and Performance Oversight.** Pricing controls shall be monitored to ensure that business segment pricing supports applicable performance goals.
- (11) **Internal Audit Validation.** Periodic internal audits shall be conducted to validate compliance with the mortgage guaranty quality assurance program.

- B. Regulator Access and Review of Quality Assurance Program.** The commissioner shall be provided access to an insurer's mortgage guaranty quality assurance program for review at any reasonable and thorough examination of the evidence supporting credit worthiness of the borrower and the appraisal report reflecting market evaluation of the property and has determined that prudent underwriting standards have been met upon request and during any financial regulatory examination. Nothing herein shall be construed to limit a regulator's right to access any and all of the records of an insurer in an examination or as otherwise necessary to meet regulatory responsibilities.

Section 1414. Policy Forms and Premium Rates Filed

- A. **Policy Forms.** All policy forms and endorsements, and modifications (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall be filed with and be subject to the approval of the commissioner. With respect to owner-occupied, single-family dwellings, the mortgage guaranty insurance policy shall provide that or a mixed-use building described in Section 2A(1)(b), which is owner-occupied at the time of loan origination and for at least 50% of the days within the twelve (12) consecutive months prior to borrower default, the borrower shall not be liable to the insurance company for any deficiency arising from a foreclosure sale.
- B. **Premium Rates.** Each mortgage guaranty insurance company (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance) shall file with the department commissioner the rate to be charged and the premium including all modifications of rates and premiums to be paid by the policyholder.
- C. **Premium Charges.** Every mortgage guaranty insurance company shall adopt, print and make available a schedule of insureds the premium charges for mortgage guaranty insurance policies. Premium charges

MO-630-8

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

~~made in conformity via a company website or an integration with the provisions of this Act shall not be deemed to be interest or other charges under any other provision of law limiting interest or other charges in connection with mortgage loans—a third-party system. The schedule premium rate provided shall show the entire amount of premium charge for each the type of mortgage guaranty insurance policy to be issued by the insurance company.~~

Drafting Note: Open rating states may delete a portion or all of ~~this provision~~ Section 14 and insert their own rating law.

Section 12. ~~Outstanding Total Liability~~ 15. Risk in Force and Waivers

- ~~A. A mortgage guaranty insurance~~ **Risk in Force.** ~~A mortgage guaranty insurance~~ company shall not at any time have outstanding ~~a total liability~~ **risk in force**, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding twenty-five (25) times its capital, surplus and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total ~~liability~~ **risk in force** exceeding twenty-five (25) times its capital, surplus and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total ~~liability~~ **risk in force** no longer exceeds twenty-five (25) times its capital, surplus and contingency reserve. Total ~~outstanding liability~~ **risk in force** shall be calculated on ~~a consolidated an individual entity~~ basis ~~for all mortgage guarantee insurance companies.~~
- ~~B. Waiver.~~ The commissioner may waive the requirement found in Section 15A at the written request of a mortgage guaranty insurer upon a finding that ~~are part of a holding company system~~ the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of Section 15A and shall, at a minimum, address the factors specified in Section 15C.
- ~~C. Waiver Criteria.~~ In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, all of the following factors, among others, may be considered:
- ~~(1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.~~
 - ~~(2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.~~
 - ~~(3) The nature and extent of the mortgage guaranty insurer's reinsurance program.~~
~~The quality, diversification, and liquidity of the~~
 - ~~(4) mortgage guaranty insurer's assets and its investment portfolio.~~
 - ~~(5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.~~
 - ~~(6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.~~
 - ~~(7) The adequacy of the mortgage guaranty insurer's reserves.~~
 - ~~(8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.~~
 - ~~(9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.~~
 - ~~(10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.~~

MO-630-9

Mortgage Guaranty Insurance Model Act

(11) The capital contributions which have been infused or are available for future infusion into the mortgage guaranty insurer.

(12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including, but not limited to, the quality and type of the risks included in the aggregate insured risk.

D. **Authority to Retain Experts.** The commissioner may retain accountants, actuaries, or other experts to assist in the review of the mortgage guaranty insurer's request submitted pursuant to Section 15B. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.

E. **Specified Duration.** Any waiver shall be:

(1) For a specified period of time not to exceed two years; and

(2) Subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by Section 15A.

Section 16. Conflict of Interest

A mortgage guaranty insurer may underwrite mortgage guaranty insurance on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate only if the insurance is underwritten on the same basis, for the same consideration and subject to the same insurability requirements as insurance provided to nonaffiliated lenders. Mortgage guaranty insurance underwritten on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate shall be limited to 50% of the insurer's direct premium written in any calendar year, or such higher percentage established in writing for the insurer in the domiciliary commissioner's discretion, based on the domiciliary commissioner's determination that a higher percentage is not likely to adversely affect the financial condition of the insurer.

Section 17. Compensating Balances Prohibited

Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.

Section 18. Limitations on Rebates, Commissions, Charges and Contractual Preferences

A. **Insurance Inducements.** Unless set forth in the policy and subject to the [state equivalent of the Unfair Trade Practices Act #880], a mortgage guaranty insurance company shall not pay or cause to be paid either directly or indirectly, to any owner, purchaser, lessor, lessee, mortgagee or prospective mortgagee of the real property that secures the authorized real estate security or that is the fee of an insured lease, or any interest therein, or to any person who is acting as an agent, representative, attorney or employee of such owner, purchaser, lessor, lessee or mortgagee, any commission, or any part of its premium charges or any other consideration as an inducement for or as compensation on any mortgage guaranty insurance business.

B. **Compensation for Placement.** In connection with the placement of any mortgage guaranty insurance, a mortgage guaranty insurance company shall not cause or permit the conveyance of anything of value, including but not limited to any commission, fee, premium adjustment, remuneration or other form of compensation of any kind whatsoever to be paid to, or received by an insured lender or lessor; any subsidiary

MO-630-10

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000/2023

or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity in which an insured or an officer, director or employee or any member of their immediate family has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing, except for the value of the insurance itself or claim payments thereon as provided by contract or settlement.

~~C. C. — No mortgage guaranty insurance~~Rebates. Unless set forth in the policy and subject to the [state equivalent of the Unfair Trade Practices Act #880], a mortgage guaranty insurance company shall not make a rebate of any portion of the premium charge, as shown by the schedule required by Section 11C. No mortgage guaranty insurance~~14C. No mortgage guaranty insurance~~ company shall not quote any rate or premium charge to a person that is different than that currently available to others for the same type of coverage. The amount by which a premium charge is less than that called for by the current schedule of premium charges is an unlawful rebate.

D. Undue Contractual Preferences.

~~(1) Any contract, letter agreement, or other arrangement used to clarify any terms, conditions, or interpretations of a master policy or certificate shall be documented in writing.~~

~~(2) Any contractual or letter agreements used to modify or clarify general business practices and administrative, underwriting, claim submission or other information exchange processes shall not contain provisions which override or significantly undermine the intent of key provisions of the mortgage guaranty insurance model act, including mortgage insurer discretion, rights and responsibilities related to:~~

~~(a) Underwriting standards.~~

~~(b) Quality assurance.~~

~~(c) Rescission.~~

~~E. Sanctions.~~ The commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company, or in his or her discretion, issue a cease and desist order to a mortgage guaranty insurance company that pays a commission, rebate, or makes any unlawful ~~rebate~~conveyance of value under this section in willful violation of the provisions of this Act. In the event of the issuance of a cease and desist order, the commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company that does not comply with the terms thereof.

~~Section 14. Compensating Balances Prohibited~~

~~F. Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section.~~ Educational Efforts and Promotional Materials Permitted. A mortgage guaranty insurance company may engage in any educational effort with borrowers, members of the general public, and officers, directors, employees, contractors and agents of insured lenders that may reasonably be expected to reduce its risk of Loss or promote its operational efficiency and may distribute promotional materials of minor value.

~~Section 19. Rescission~~

All mortgage guaranty insurance company master policies shall include a detailed description of provisions governing rescissions, re-pricing, and cancellations, which specify the insurer's and insured's rights, obligations and eligibility terms under which those actions may occur to ensure transparency.

~~Section 20. Records Retention~~

MO-630-11

Mortgage Guaranty Insurance Model Act

~~A. **Record Files.** A licensed mortgage guaranty insurance company shall maintain its records in a manner which allows the commissioner to readily ascertain the insurer's compliance with state insurance laws and rules during an examination including, but not limited to, records regarding the insurer's management, operations, policy issuance and servicing, marketing, underwriting, rating and claims practices.~~

~~B. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.~~

~~**Section 15. — Retention Period.** Policy and claim records shall be retained for the period during which the certificate or claim is active plus five (5) years, unless otherwise specified by the insurance commissioner. Recordkeeping requirements shall relate to:~~

~~(1) Records to clearly document the application, underwriting, and issuance of each master policy and certificate of insurance; and~~

~~(2) Claim records to clearly document the inception, handling, and disposition.~~

~~C. **Record Format.** Any record required to be maintained by a mortgage insurer may be created and stored in the form of paper, photograph, magnetic, mechanical or electronic medium.~~

~~D. **Record Maintenance.** Record maintenance under this Act shall comply with the following requirements:~~

~~(1) Insurer maintenance responsibilities shall provide for record storage in a location that will allow the records to be reasonably produced for examination within the time period required.~~

~~(2) Third-Party maintenance related responsibilities shall be set forth in a written agreement, a copy of which shall be maintained by the insurer and available for purposes of examination.~~

~~**Section 21. — No Private Right of Action**~~

~~This Act may not be construed to create or imply a private cause of action for violation of its provisions nor may it be construed to curtail a private cause of action which would otherwise exist in the absence of this Act.~~

~~**Conflict of Interest**~~

~~A. — If a member of a holding company system, a mortgage guaranty insurance company licensed to transact business in this state shall not, as a condition of its certificate of authority, knowingly underwrite mortgage guaranty insurance on mortgages originated by the holding company system or an affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly, by the holding company system or an affiliate.~~

~~A. — B. — A mortgage guaranty insurance company, the holding company system of which it is a part, or any affiliate shall not as a condition of the mortgage guaranty insurance company's certificate of authority, pay any commissions, remuneration, rebates or engage in activities proscribed in Sections 13 and 14.~~

~~**Section 16. — Reserves**~~

~~A. — Unearned Premium Reserves~~

~~— A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve as set forth by regulation adopted by the commissioner of insurance.~~

~~B. — Loss Reserve~~

~~— A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves that accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:~~

~~(1) — Insured loans that have resulted in the conveyance of property that remains unsold;~~

MO-630-12

NAIC Model Laws, Regulations, Guidelines and Other Resources—July 2000~~2023~~

- ~~(2) Insured loans in the process of foreclosure;~~
- ~~(3) Insured loans in default for four (4) months or for any lesser period that is defined as default for such purposes in the policy provisions; and~~
- ~~(4) Insured leases in default for four (4) months or for any lesser period that is defined as default for such purposes in policy provisions.~~

~~C. Contingency Reserve~~

~~Each mortgage guaranty insurance company shall establish a contingency reserve out of net premium remaining (gross premiums less premiums returned to policyholders net of reinsurance) after establishment of the unearned premium reserve. The mortgage guaranty insurance company shall contribute to the contingency reserve an amount equal to fifty percent (50%) of the remaining unearned premiums. Contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, except that withdrawals may be made by the company in any year in which the actual incurred losses exceed thirty five percent (35%) of the corresponding earned premiums, and no releases shall be made without prior approval by the commissioner of insurance of the insurance company's state of domicile.~~

~~If the coverage provided in this Act exceeds the limitations set forth herein, the commissioner of insurance shall establish a rate formula factor that will produce a contingency reserve adequate for the added risk assumed. The face amount of an insured mortgage shall be computed before any reduction by the mortgage guaranty insurance company's election to limit its coverage to a portion of the entire indebtedness.~~

~~D. Reinsurance~~

~~Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company that is properly licensed to provide reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Act in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Act.~~

~~E. Miscellaneous~~

- ~~(1) Whenever the laws of any other jurisdiction in which a mortgage guaranty insurance company subject to the requirement of this Act is also licensed to transact mortgage guaranty insurance require a larger unearned premium reserve or contingency reserve in the aggregate than that set forth herein, the establishment of the larger unearned premium reserve or contingency reserve in the aggregate shall be deemed to be in compliance with this Act.~~
- ~~(2) Unearned premium reserves and contingency reserves shall be computed and maintained on risks insured after the effective date of this Act as required by Subsections A and C. Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.~~

Section ~~1722~~. Regulations

The commissioner shall have the authority to promulgate rules and regulations deemed necessary to effectively implement the requirements of this Act.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

1976 Proc. II 15, 17, 647, 686, 747-753 (adopted).

MO-630-13

**Consumer Organizations’ and NAIC Consumer Representatives’ Comments to the
NAIC Mortgage Guaranty Insurance (E) Working Group
On the May 11, 2023 Exposure Draft of the Mortgage Guaranty Insurance Model Act
May 26, 2023**

The undersigned NAIC consumer representatives and consumer organizations strenuously oppose the new provision eliminating a private right of action for violations of the act. While different from the “no private right of action” provision in the prior draft of the model law, the latest version of “no private right of action” in the May 11, 2023 exposure draft remains unwarranted and profoundly anti-consumer.

We also object to the watering-down of essential consumer protections.

A Private Right of Action is Necessary and Justified for Violations of Sections 8 (Advertising), 11A (Prohibition of Captive Reinsurance), 12 F (Nondiscrimination), 16 (Conflict of Interest), 18A (Inducements), 18B (Compensation for Placement), 18C (Rebates), 18F (Educational Materials) and 19 (Rescission)

The current NAIC mortgage guaranty insurance model act – adopted many years prior to the 2008 financial crisis – contains no provision limiting any consumer’s right of action against the insurance company for violations of the act. It is unclear what rationale or basis or changes in the market exist to support the new “no private right of action” provision.

The current model includes, in Section 13, anti-rebating and anti-kickback provisions to protect consumers from collusion among mortgage insurers and lenders – practices that harm consumers. Despite these anti-kickback provisions in the model law, some insurance regulators not only failed to stop kickback schemes, such as captive reinsurance, but approved these anti-consumer schemes. Private rights of action garnered some relief for consumers who suffered losses because of the prohibited kickback schemes.

Historical experience demonstrates that regulatory oversight alone failed to protect mortgage guaranty insurance consumers and private rights of action helped address regulatory and market failures to provide some redress for harmed consumers. It is illogical that regulators would now insert a provision eliminating a private right of action for consumer redress in the revised model.

Industry’s sole argument for the “no private right of action” is the ephemeral chestnut of “potential frivolous litigation.” While we have pointed to justified litigation, industry has offered no examples of “frivolous litigation.” We have previously pointed out that while industry wants to prevent consumers from going to court for protection against and redress from

Consumer Organizations' and NAIC Consumer Representatives' Comments to the
NAIC Mortgage Guaranty Insurance (E) Working Group
May 26, 2023
Page 2

abusive mortgage guaranty insurer practices, the insurers themselves have no qualms about going to court against consumers. It would be an unfair double standard for regulators to endorse a “no private right of action” by consumers while leaving insurers’ access to the courts untouched.

The addition of the “no private right of action” provision is unprecedented. There is no other personal line of insurance with such an anti-consumer provision. There is certainly no such provision in any of the NAIC model laws for lines of insurance that, like mortgage guaranty insurance, are subject to reverse competition – not for consumer credit insurance and not for title insurance.¹ Lines of insurance subject to reverse competition demand greater consumer protection tools, not fewer.

It would not be objectionable to limit the private right of action to only those provisions of the model for which consumer harm can be directly demonstrated and which avoid any provisions that would interfere with regulatory oversight of mortgage guaranty insurer solvency. A private right of action for violations of Sections 8, 11A, 12F, 16, 18A, 18B, 18C, 18F and 19 will not interfere with regulatory oversight of mortgage guaranty financial condition or market conduct – just as private rights of action for any other personal line of insurance complement regulatory oversight of insurers’ market conduct in those other lines of insurance.

The revised “no private right of action” language – “neither creates a private right of action for violation of its provisions nor may it be construed to curtail a private right of action which would otherwise exist in the absence of the Act” – is very broad and could be interpreted to have the same effect as simply stating no private right of action. For example, the revised model now includes “limitations” on rebates, commissions and inducements instead of outright prohibitions. It is unclear what or how any other state laws specifically reference any of these prohibited practices and, consequently, how a private right of action would otherwise exist in the absence of the law. If a private right of action otherwise exists, it is likely because there is a federal law governing the behavior of mortgage insurers and state law will not usurp those private rights of action regardless of whether the new mortgage guaranty insurance model mentions “otherwise existing” private rights of action.

¹ “Reverse competition means competition among insurers that regularly takes the form of insurers vying with each other for the favor of persons who control, or may control, the placement of the insurance with insurers. Reverse competition tends to increase insurance premiums or prevent the lowering of premiums in order that greater compensation may be paid to persons for such business as a means of obtaining the placement of business. In these situations, the competitive pressure to obtain business by paying higher compensation to these persons overwhelms any downward pressures consumers may exert on the price of insurance, thus causing prices to rise or remain higher than they would otherwise.” NAIC Credit Personal Property Model Act, 3X.

Consumer Organizations' and NAIC Consumer Representatives' Comments to the
NAIC Mortgage Guaranty Insurance (E) Working Group
May 26, 2023
Page 3

Watering Down of Important Consumer Protections

Section 18A is significantly weakened from a consumer protection standpoint. The model upends a fundamental anti-competitive practice – no inducements by insurers for the steering of business to the insurer – and makes such inducements permissible if included in the policy and subject to the Unfair Trade Practices Act. This is precisely the wrong way to regulate a line of business subject to reverse competition in which the insurers compete not for individual consumers, but for the lenders who select the mortgage guaranty insurer and steer the borrowers to those insurers. It was reverse competition in mortgage guaranty insurance markets that motivated a variety of inducement mechanisms to secure business from lenders leading up to the financial crisis of 2008. It was reverse competition that compromised mortgage guaranty insurers' risk management practices.

The recent revisions to the UFTA model act attempt to encourage risk mitigation efforts by insurers without conflicting with anti-rebate concerns. There is no risk mitigation associated with an inducement. Section 18A should be revised to delete the proposed addition at the beginning of the paragraph to clearly prohibit inducements.

The change to Section 18C – permitting rebates if set forth in the policy and subject to the UTPA – is also bewildering. The draft section states:

Rebates: Unless set force (sic) in the policy and subject to the [state equivalent of the Unfair Trade Practice Act (Model #880)], a Mortgage Guaranty Insurance company shall not quote any rate or premium charge to a person that is different than that currently available to others for the same type of coverage. The amount by which a premium charge is less than that called for by the current schedule of premium charges is an unlawful rebate.

There is simply no way for a “rebate” as set out in the first phrase (set forth in the policy and subject the UTPA) to comply with the remaining portion of the paragraph. If the “rebate” is set forth in the filed rates, it is not a “rebate,” but a rate discount. If the “rebate” is available to all for the same type of coverage, it is not a “rebate,” but a rate discount. Further, reaching to the recent revisions of the NAIC UTPA model does not help; those recent revisions were intend to promote loss prevention and loss mitigation efforts without conflicting with anti-rebating prohibitions. If the “rebate” is set out in the policy form, then the UTPA is inapplicable because rebates are not policy form provisions approved by the regulator.

Consumer Organizations' and NAIC Consumer Representatives' Comments to the
NAIC Mortgage Guaranty Insurance (E) Working Group
May 26, 2023
Page 4

Private mortgage insurers do not engage in risk mitigation with borrowers – lenders and mortgage services are the entities that do such activities. While private mortgage insurers may engage in risk mitigation with lenders and servicers – because the mortgage insurance is for the benefit of the mortgage owner – there is no rationale for providing a “rebate” to lenders or services and such activity would clearly be a prohibited inducement or rebate.

RE: MI Industry Group Comment Letter – May 2023 Model Act Exposure Draft

Dear Ms. Obusek:

The Private Mortgage Guaranty Insurance Industry Group (“Industry Group”) submits the following comments with regard to Sections 10(B)(1) and 14(A) of the *Mortgage Guaranty Insurance Model Act* exposed on May 11, 2023 (“May 2023 Model Act”).

Section 10(B)(1) – Contingency Reserve

The Industry Group recommends the following revision to draft Section 10(b)(1) and accompanying drafting notes for the Working Group’s consideration. This proposal is meant to avoid adoption of a Model Act that would discourage the use of reinsurance by requiring the same amount of annual contribution to the Contingency Reserve irrespective of whether premiums are being ceded pursuant to a reinsurance agreement or treaty. Both a Contingency Reserve requirement and collateralized or otherwise specifically segregated assets required to be maintained pursuant to a reinsurance agreement or treaty serve the same function of providing assurance of claims paying ability. Form should not be elevated over function by granting credit towards the Contingency Reserve requirement only where the dedicated funding is able to be formally accounted for as a Contingency Reserve on a statutory financial statement, particularly since collateral held in a segregated trust could be considered to provide even more certain access to such funds for the cedent than assets commingled within a reinsurer’s general investment portfolio to support a recorded Contingency Reserve entry.

The current exposure draft requires an annual contribution to the Contingency Reserve “*which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.*” The Working Group addressed the interaction of reinsurance with the Contingency Reserve by adding the language “*or net earned premiums reported if the reinsurer maintains the contingency reserve.*” However, except in the case where the reinsurer is another mortgage guaranty insurance company, the impact of this language would unfortunately be illusory because reinsurers that are not mortgage guaranty insurance companies do not file a statutory financial statement that shows a contingency reserve entry.

The suggested drafting approach below would clarify that the Contingency Reserve requirement is deemed to be achieved based on the maintenance by the reinsurer of equivalent collateralized or otherwise specifically segregated assets supporting the reinsurance obligations, in trust or

otherwise, even if the reinsurer does not file a statutory financial statement that shows a contingency reserve entry.

B. Contingency Reserve. *Each Mortgage Guaranty Insurance company shall establish a Contingency Reserve subject to the following provisions:*

- (1) The Mortgage Guaranty Insurance company shall make an annual contribution to the Contingency Reserve which in the aggregate shall be equal to fifty percent (50%) of (a) the direct earned premiums reported in the annual statement or (b) earned premiums net of reinsurance reported if the reinsurer maintains the Contingency Reserve or equivalent assets that support its reinsurance obligation. Credit for maintenance of the Contingency Reserve or equivalent assets in connection with reinsurance shall apply to the extent of and during the period that such amounts are maintained. In the event of a release of such amounts before the 120 month period in subpart (B)(2) of this Section for any reason other than as approved under subpart (B)(3) of this Section, the Mortgage Guaranty Insurance company shall reestablish such amounts in its Contingency Reserve effective as of the date of the next annual contribution to the Contingency Reserve.*

In conjunction with this version of Section 10(B)(1), we also propose adding the following drafting note:

Drafting Note: *As used in this section, the term “reinsurance” includes traditional forms of insurance as well as other similar mechanisms or constructs, such as insurance linked notes with a reinsurance feature, that permit the primary direct insurer to transfer risk in a manner that allows that insurer to record such risk transfer and any capital support attendant thereto either as an asset or a reduction from liability on its statutory financial statements in accordance with statutory accounting principles. As used in this section, the phrase “equivalent assets” includes the maintenance by the reinsurer of collateral in a trust or segregated account to support the reinsurer’s obligation, or the direct insurer recording a liability for funds held under the reinsurance treaty.*

Finally, we also offer an optional drafting note that may accompany Section 10 to the extent that the Working Group deems it to be helpful. While the Industry Group does not view it to be essential, the optional drafting note is intended to memorialize, for the avoidance of any doubt, that the contingency reserve provision in this model law that is unique to the mortgage guaranty insurance line should not be construed as being in conflict with the provisions of either the Covered Agreement or the NAIC’s separate model law relating to credit for reinsurance.

Drafting Note: *In accordance with The Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance (“Covered Agreement”), states should not interpret this section in a manner that would violate or contravene the Covered Agreement. Nothing in this section is intended to be in conflict with NAIC Model 785 Credit for Reinsurance Law or NAIC Model 786 Credit for Reinsurance Regulation.*

Section 14(A) – Policy Forms

The Industry Group continues to recommend the deletion in its entirety of the second sentence in Section 14(A) relating to deficiencies arising from a foreclosure sale.

Citing experiences from the great financial crisis involving moral hazards such as the temptation of a borrower to strategically default on a mortgage loan notwithstanding having the financial wherewithal to repay amounts due, the Industry Group previously commented that the ability to evaluate loans for pursuit of deficiency actions on a case by case basis supports the overall solvency of the mortgage guaranty insurance industry.¹ There is a divergence among states with regard to the pursuit of deficiency judgments -- many states permit such actions while some states have passed an anti-deficiency judgment law of general effect that applies to both loan servicers and mortgage guaranty insurers alike. We commented that it would be an anomalous result if scenarios were to arise in certain states where the loan servicer is allowed to pursue the borrower for a deficiency arising from a foreclosure sale while the mortgage insurer is restricted from doing so.² Finally, we offered reassurance to the Working Group that in those states that do have anti-deficiency judgment acts, the Master Policy form already acknowledges the limitations on the mortgage guaranty insurer to pursue deficiencies arising from a foreclosure sale in those particular jurisdictions.³ Therefore, we requested to remove this sentence from the Model Act draft exposed in October 2022.

Following the submission of the November 18, 2022 Comment Letter, the Working Group did, in fact, remove the language referring to deficiency actions from the February 2023 Model Act exposure draft, but appeared to have inadvertently retained a fragment of the sentence. Believing this to be a typographical error in need of correction, we flagged this sentence fragment in the attachment to our March 14, 2023 Comment Letter. However, the May 2023 Model Act corrected the typographical error by restoring the original draft prohibition on pursuit of deficiency actions, rather than by deleting the sentence fragment. Therefore, we again raise this matter to the Working Group's attention and request to remove the second sentence of Section 14(A) in its entirety for the reasons in our prior comment letter and summarized above.

Conclusion

The Industry Group supports the Working Group's efforts to update the Model Act, and we would be pleased to make representatives of each company available for a telephonic conference to discuss the comments in this letter if that would be of assistance to you.

Respectfully submitted on behalf of the Industry Group companies below,

**Arch Mortgage Insurance Company,
Enact Mortgage Insurance Corporation,
Essent Guaranty, Inc.,
Mortgage Guaranty Insurance Corporation,
National Mortgage Insurance Corporation, and
Radian Guaranty Inc.**

Restructuring Mechanisms (E) Working Group
Virtual Meeting
May 4, 2023

The Restructuring Mechanisms (E) Working Group of the Financial Condition (E) Committee met May 4, 2023. The following Working Group members participated: Elizabeth Kelleher Dwyer, Co-Chair, and Matt Gendron (RI); Glen Mulready Co-Chair, and Andrew Schallhorn (OK); Leo Liu (AR); Rolf Kaumann (CO); Jared Kosky and Jack Broccoli (CT); Judy Mottar and Vincent Tsang (IL); Robert Wake (ME); Judy Weaver (MI); Fred Andersen (MN); John Rehagen (MO); Lindsay Crawford (NE); John Sirovetz (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Diana Sherman (PA); Amy Garcia (TX); Doug Stolte and David Smith (VA); Steve Drutz (WA); and Amy Malm (WI).

1. Received and Considered Comments on Exposed Draft Guidance and New Language to Address Previous Comments

Superintendent Dwyer announced that during the April 4 meeting, the Working Group exposed draft Best Practices guidance and requested wording to address issues discussed during the meeting. Superintendent Dwyer noted the Working Group received twelve comments (Attachment Four-A) and the discussion will focus on the comments received related to the exposed redline changes, as well as the new language to address previous comments, that later of which will be exposed sometime after this call.

A. Accreditation Requirements

Superintendent Dwyer explained that with respect to the question of making the Best Practices document currently being developed and debated and accreditation requirement, the product would proceed to the Financial Condition (E) Committee. They would decide whether to refer the Best Practices to the Financial Regulation Standards and Accreditation (F) Committee, who would decide what portions, if any, of the Best Practices document would become an accreditation standard.

B. Guaranty Fund Coverage

Robin Marcotte (NAIC) summarized the comments on the next issue dealing with retaining guaranty fund coverage. Superintendent Dwyer asked for comments from individuals that did not support the existing language in the draft Best Practices document on the topic of guaranty fund coverage. Wayne Mehlman (American Council of Life Insurers—ACLI) stated they support the existing language on guaranty fund coverage in the Best Practices document. Kristen DiCarmine (New York Life) stated they had no objections and that they would follow the document as it is considered at various stages for accreditation. Rehagen stated appreciation for the language included but noted that he was struck that the legal opinion requirement was removed. Superintendent Dwyer explained that as an attorney, she would prefer the company tell her as a regulator whether their attorney opines on the guaranty fund protection being retained. She explained that within the departments of insurance, she believes they understand the issue well enough and if they do not, she is not sure they could seek a legal opinion but that would be a reason for not requiring a formal legal opinion.

Bill O'Sullivan (National organization of Life and Health Guaranty Associations—NOLHGA) stated he agreed with Superintendent Dwyer on the reason for removing the legal opinion language because guaranty fund coverage, both on the life and property casualty side, will be determined at the time the company is placed into liquidation. He stated there could be all sorts of factors in making the determination regarding potential limitation and exclusions of coverage that would be difficult to estimate at the time of the transaction. He stated he believes it

was more important is that certain factors are met and as included in the previously exposed revised language. Superintendent Dwyer stated that as an attorney, she preferred that to a representation at a point in time from some outside law firm. Rehagen stated that he was concerned that all states would not adopt the language but since the language has specific factors that must be addressed and assessed, he found the reason for taking that certification requirement out of the draft Best Practices document. Robert Romano (Norton Rose Fulbright and on behalf of Protucket Insurance Company) stated their comment is focused on the distinction between how guaranty fund coverage for life and health and property and casualty are managed and that at least in theory, they should be the same in the end. O'Sullivan responded that for life and health coverage, for there to be guaranty fund coverage, the insurer must be a member of the state guaranty fund association, which means they must be licensed or have been licensed in the state. Barbara Cox (National Conference of Insurance Guaranty Funds—NCIGF) stated that for property casualty business, the insolvency company must issue the covered business. She stated that NCIGF supports state regulation and that it would be good if the successor insurer was also a licensed insurer under the supervision of the state regulator, but current that does not ensure coverage on the property casualty side. The Receivership and Insolvency (E) Task Force is currently modifying the language that will address this issue. Cox noted the hope was for the language to be adopted by the Summer National Meeting. Romano suggested that once the language Ms. Cox is referring to is adopted by all the states, the Best Practices document will need to be updated. Peter L. Hartt (Randall and Quilter) stated they defer to the expertise of others, but they were simply looking for clarification on the purpose of licensure is. Superintendent Dwyer responded that she believes the guaranty fund representatives were correct that while licensure is especially important in life and annuity, not as important you sometimes could have coverage and guaranties in property and casualty in a separate way. Superintendent Dwyer asked one final time for objections to the previously exposed language for this item, as well as editorial changes for the remainder of the section and there were none.

C. Independent Expert

Marcotte summarized the comments on the next issue dealing with the use of an independent expert. Mehlman stated that the ACLI principles on this topic require an independent expert on both an insurance business transfer (IBT) and a corporate division (CD), and the development of such principles was after months of negotiations between members. Superintendent Dwyer noted that this issue had been discussed extensively and noted she believed most everyone believes that most transactions there is a need for such an expert, but that the Department's staff knows the company and the Department would on occasion find that and independent expert was not necessary. Superintendent Dwyer added that as drafted, this would require the Department to set that out and make a very explicit statement on why. Mehlman responded that they appreciate that but that he can only restate what is in the ACLI principles that require an independent expert regardless. Birny Birnbaum (Center for Economic Justice—CEJ) stated his company takes no issue with the language, but noted it demonstrates a greater need for a policyholder advocate. He noted it is unclear where there would be any kind of public report assessing the impact on policyholders and if there is no independent expert then there is really an even greater need for policyholder advocates to be part of the process. Superintendent Dwyer asked one final time for objections to the previously exposed language for this item, as well as editorial changes for the remainder of the section and there were none.

D. Other Redline Changes Edits to Previously Exposed Draft Best Practices

Superintendent Dwyer asked for objections to the remaining redline changes in the previously exposed document, as well as editorial changes noted by NAIC staff and the chair, and there were none.

E. New Language on Proforma Financials

Marcotte summarized the comments on the next issue dealing with proforma financial statements noting that both comments support the position of the Working Group on this issue. Birnbaum stated that while three years of proforma financial statements may be adequate for some types of analysis associated with these proposed transactions, it is certainly not enough time to consider the treatment of policyholders. This would include for example fees, expenses, and changes thereon that gets at servicing issues. An example would be a transaction dealing with variable annuities where the transferee has a history of increased expense provisions on those types of products. There were no additional comments, but the revised language will be included for additional comments in the next exposure.

F. New Language on Evaluating Policyholder Impacts & Not Creating Monoline Insurers

DiCarmine discussed their previous comments discussed during the last call on no worse off and how to evaluate that and how their proposed language submitted attempts to address this concern of theirs. Malm asked for clarification of the use of the term monoline insurers since that has a connotation among regulators to include things such as mortgage guaranty insurance and financial guaranty insurance. Superintendent Dwyer suggested something like “the domestic regulator should consider whether the transfer or the transferee will become a monoline company following the transaction. Birnbaum suggested the idea of the concern is good and for whatever that means for a life insurer but questioned the language fix. He set forth a number of related issues that he thinks should be addressed in the financial analysis of the receiving company. Superintendent Dwyer suggested perhaps “consider or evaluate” is better than “ensure” to leave room for those lines of business. DiCarmine described how supplemental benefits could be an example of a life insurer monoline of business where perhaps the transferor previously sold life and annuities as well. Marcotte suggested the better term might be diversification. Superintendent Dwyer agreed with Marcotte and suggested this language be modified in the next version of the draft Best Practices.

G. New Language on Policyholder Advocate

Superintendent Dwyer stated that she understood the concerns raised in the comment letter by the Center for Economic Justice but that personally having worked at an insurance department for 25 years, she believes that the states are the policyholder advocate. Superintendent Dwyer noted that while the commentor believes there is a conflict, she respectfully disagreed with that view. Superintendent Dwyer asked if there were others that shared similar views. Bonnie Burns (California Health Advocate) stated she supported the comments from the Center for Economic Justice. Burns stated that while departments can help consumers with these issues, those consumers may not get to a department of insurance for a variety of reasons. Burns noted she has a lot of experience with people who have questions beyond what the department of insurance can manage.

Superintendent Dwyer asked for an example. Burns noted that if a consumer was considering taking legal action and has indicated such to the department of insurance who is unable to help with information. Or sometimes there are provider issues that come up outside of the department’s expertise. Birnbaum stated that the way the draft Best Practices was currently structured, there is a communication plan that alerts policyholders to the business transfer and gives the consumer an opportunity to participate in any kind of public forum. So, the problem is if the consumer calls in and makes a comment its not framed in a way that is helpful to the regulator because the consumer does not really understand the process and does not understand the requirements placed upon the regulator to decide. If there were a policyholder advocate, they could not only take the information provided to them for serving in that capacity, and they could also sort of supplement that information with additional information from the consumer and other consumers and put into the context that is relevant for the regulator to consider. He described how in a long-term care rate filing, many regulators hold a hearing on those types of issues, where the consumer calls in, makes comments, but they are not comments that a regulator can use in terms of the requirements. As previously noted, a policyholder advocate could assist in the situation. Burns

noted how she was a consumer, and this was not her area of expertise and would be relying on Birnbaum. Burns noted that consumers come to her for information about how things affect them and what if anything they can do to assist and people in the insurance department are unable to talk to them in that way. Superintendent Dwyer responded that she wanted to be clear, but that she was not saying that policyholder advocates and things that consumer advocates do have no value. She noted that long-term care rate filings and provider issues are not what is at issue, rather the issue is whether a book of business should be transferred from one company to another without any change in the policy. Birnbaum agreed this was different than a proceeding to approve a policy form or a rate but there is a similarity and while he understands that its regulators responsibility to make sure there are no adverse or materially adverse impact on those policyholders, but any type of situation in which there an impact on policyholders and the benefits of having a policyholder advocate. Superintendent Dwyer asked the members of the Working Group if any of them wanted to change their view on this issue and the addition of such language and no one responded.

H. Hong Kong Legislation

Marcotte noted that Dave Wolf (NJ) had provided some language on the Hong Kong legislation that he had some previous experience with and had questioned on the April 4 call if it included “material” in its requirement of an adverse effects. The Working Group deferred discussion on the topic until NAIC staff could review the legislation more closely and Mr. Wolf could be on to discuss more specifically his view.

I. No Material Adverse Effects

Superintendent Dwyer noted this issue was discussed on the last call and the Working Group expressed a preference for using “material” specifically in addition to “no adverse effect.” Robert Woody (American Property Casualty Insurers Association—APCIA) noted how this standard had been used in other places and how he thought there are some circumstances where material might even be defined. Without such a standard, the door could be opened to very minor issues becoming an obstacle to a transaction. Stephen DiCenso (Milliman) noted that he thought the comments he submitted stand on their own and if there needs to be further elaboration, there is some documentation in the minutes of an example that he provided. Romano stated his agreement and that there needed to be changes made throughout the document for consistency. Hartt agreed with the other comments and too also emphasized the need for consistency throughout the document. Birnbaum noted that industry seems to favor the no material adverse effect language which seems to imply there can be some assessment of all policyholder with one assessment when in fact if you look at the corporate division narrative, it refers to evidence demonstrating that the interests of all classes of policyholders and stakeholders will be protected. There could be a variety of positive and negative effects and part of this has to do with material, which is who gets to decide what is material. The question is how you determine what a material adverse effect is and how do you ensure consistency or uniformity across the states. Stolte stated he agreed with Birnbaum and more specifically that he does not think a policyholder should have any adverse impact from one of these transactions; something he finds problematic. Superintendent Dwyer noted she would ask NAIC staff to draft up something that will be included in the next exposure.

J. Other Comments

Marcotte noted that comments were received on the topic of runoff, and as has been noted in the past, the inclusion of that topic in the current Best Practices was related to the fact that the group was charged to address the issue but that ultimately that topic may need to be placed elsewhere in a different document. Carolyn Fahey (AIRROC) expressed AIRROCs willingness to work with the Working Group to further examine some of the questions related to runoff and the distinct differences between runoff and restructuring. Mehlman asked about the status of the White Paper. Superintendent Dwyer responded that the White Paper was waiting on these Best

Practices and that once these are finished, they will be incorporated into the White Paper, by reference. Superintendent Dwyer stated they are trying to get both done by the end of the year.

Having no further business, the Restructuring Mechanisms (E) Working Group adjourned.

[https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/E CMTE/2023-2-Summer/Restructuring Mech WG/5-4-23/5-4-23 Restructure WG.docx](https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/E%20CMTE/2023-2-Summer/Restructuring%20Mech%20WG/5-4-23/5-4-23%20Restructure%20WG.docx)

Draft: 4/20/23

Restructuring Mechanisms (E) Working Group
Virtual Meeting
April 4, 2023

The Restructuring Mechanisms (E) Working Group of the Financial Condition (E) Committee met April 4, 2023. The following Working Group members participated: Elizabeth Kelleher Dwyer, Co-Chair, and Matt Gendron (RI); Glen Mulready Co-Chair, and Andrew Schallhorn (OK); Leo Liu (AR); Rolf Kaumann (CO); Jared Kosky and Jack Broccoli (CT); Fred Moore, Judy Mottar, and Vincent Tsang (IL); Robert Wake (ME); Judy Weaver (MI); Fred Andersen (MN); John Rehagen and James Le (MO); Lindsay Crawford (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Diana Sherman (PA); Amy Garcia (TX); Doug Stolte and David Smith (VA); Dan Petterson (VT); Tim Hays (WA); and Amy Malm (WI).

1. Discussed the Merger of the Restructuring Mechanisms (E) Subgroup into the Restructuring Mechanisms (E) Working Group

Superintendent Dwyer said at the Spring National Meeting, the merger of the Restructuring Mechanisms (E) Subgroup into the Restructuring Mechanisms (E) Working Group was announced during the Financial Condition (E) Committee meeting. It was also noted that the membership and charges would be merged into the Working Group, with Ohio added as one new member. Members were asked to contact NAIC staff if they would like to make any changes to their listed representative; although, it was noted that a merger of the two groups is appropriate given that many of the representatives are the same. Superintendent Dwyer noted that the Subgroup developed a first draft of regulatory principles and best practices for insurance business transfers (IBTs) and corporate divisions (CDs), but the merged Working Group would now complete that work. Commissioner Mulready stated that the goal is to have all products of the Working Group, including the best practices, finalized by the Fall National Meeting.

2. Adopted the Restructuring Mechanisms (E) Subgroup's Nov. 9, 2022, Minutes

Malm made a motion, seconded by Commissioner Mulready, to adopt the Restructuring Mechanisms (E) Subgroup's Nov. 9, 2022, minutes (*see NAIC Proceedings – Fall 2022, Financial Condition (E) Committee, Attachment Seven*). The motion passed unanimously.

3. Exposed Proposed Revisions to Best Practices

Superintendent Dwyer announced that included in the materials were proposed revisions to the best practices that address: 1) the use of an independent expert for CDs; and 2) language to address comments from the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF). The concept of the changes was previously authorized by the Restructuring Mechanisms (E) Subgroup, and NAIC staff developed language to address both concepts. Superintendent Dwyer indicated that there was a desire to expose the proposed revisions for a 21-day public comment period ending April 26 so the comments could be discussed during the Working Group's next meeting, which is scheduled for May 4. Rehagen stated that the exposure period is shorter than normal, but he appreciates the reason and is therefore not opposed to it. Superintendent Dwyer indicated that the changes appear to be non-controversial and therefore proposed a shorter proposed exposure period, but comments may suggest otherwise which would cause another exposure period. William O'Sullivan (NOLHGA) stated his appreciation for NAIC staff working with him on the changes that are intended to preserve guaranty fund coverage by requiring the successor entity to continue to be licensed in the appropriate jurisdictions. Superintendent Dwyer noted that the Receivership and

Insolvency (E) Task Force is developing changes to the *Property and Casualty Insurance Guaranty Association Model Act* (#540) that would provide similar assurances for property/casualty (P/C) contracts.

Kaumann made a motion, seconded by Commissioner Mulready, to expose the revisions to the best practices until April 26. The motion passed unanimously.

4. Heard an Update on RBC Runoff Referrals

Bruggeman stated that the referral from the Working Group to the Property and Casualty Risk-Based Capital (E) Working Group had been discussed, and after that, the Capital Adequacy (E) Task Force requested that the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group also review and discuss it. He noted that the Life Risk-Based Capital (E) Working Group reviewed and discussed the issue of runoffs for its formula, and it concluded that no changes were needed. He also noted that the Health Risk-Based Capital (E) Working Group came to the same conclusion as the Property and Casualty Risk-Based Capital (E) Working Group, which is that resulting insurers should be monitored through the state analysis and examination functions. They also concluded that if a change is ultimately made to the health risk-based capital (RBC) formula, they would recommend that it be defined as a voluntary or involuntary, and includes the characteristics of: 1) non-renewing of policies for at least 12 months; 2) no plan or intention to write new business or assume new business; and 3) no additional runoff blocks of business. Additionally, if the remaining reserves are zero, the runoff is probably complete or almost complete.

5. Continued Discussion of the Review of Previously Submitted Comments

A. No Worse Off

Superintendent Dwyer noted that the first topic that has been discussed by the Restructuring Mechanisms (E) Subgroup but for which the Restructuring Mechanisms (E) Working Group would need to conclude is the issue of “no worse off” language. Superintendent Dwyer stated that standards such as “best interest of the policyholder” or “no material adverse effect,” was the United Kingdom (UK) standard and standards previously interpreted by Courts provide a clearer standard. Commissioner Mulready noted that Oklahoma modeled the language in its law after the Part VII UK standard, and he suggested the same for these NAIC best practices. He noted that the “no material adverse effect” language has worked for over 20 years and over 300 transactions. Stolte stated that Virginia prefers “no worse off” since it does not believe a policyholder should experience any type of adverse impact, and materiality is in the eye of the beholder. Commissioner Mulready responded that he appreciates the comment on materiality, but he noted that the process is so robust, and the materiality in the process would be in the eyes of the independent expert, as well as the state insurance regulator and the judge.

Superintendent Dwyer stated that while the standards are financial, language that has previously been used and for which case law exists would be preferred. She noted that it was not clear where “no worse off” language was derived from. Stolte noted that they were not lawyers, but they were just trying to protect the policyholders in the transaction. He noted that this would have no impact on Virginia policyholders because of the Virginia anti-innovation law, and the company would be required to come to the Virginia state insurance regulator for approval. Smith added that the “no worse off” language was a compromise between the best interests of the policyholders and the “no material adverse effect.” Kosky noted that Connecticut law uses a best interest rule, and its CD law uses similar language.

Luann Petrellis (Catalina Re) voiced support for the “no material adverse impact” standard. It has been widely used through the UK Part VII Transfers for many years without any subsequent financial difficulties in any transaction. She also emphasized that materiality is a universally accepted standard of review, and there is a

wealth of legal precedent interpreting what that means. There is an aspect of subjectivity in any of these standards, but there are tried and true tested procedures with material adverse impact, and there have been successfully completed transactions in the U.S. that utilized that standard. Petrellis noted that during legislative processes on this topic, everyone in the industry from all points of view agreed with this language, and using any other standard would likely result in inconsistency. Stephen DiCenso (Milliman) provided an example of the issue, noting that if an insurer had an RBC of 500, and then after the transaction it was 400, some might argue that the policyholder was worse off, but in either of those two cases, judgment would indicate that there is no material impact. That example supports the “no material adverse effect” standard. Peter L. Hartt (Randall and Quilter) stated that he concurs with the comments from DiCenso and Petrellis, and he stated that Randall and Quilter’s concerns would be the unintended consequences of experimenting with new terminology that has not been well tested. Kristen DiCarmine (New York Life) noted that the points raised in its joint letter are different than those others have made, and she emphasized that there are some financial and administrative elements that would help to define “no worse off” or not materially adverse. She suggested adding language that would address this comment. Superintendent Dwyer asked DiCarmine to send in such language.

James Mills (Enstar) stated that “no material adverse effects” goes beyond just UK Part VII Transfers, and more precisely, it is a term of art used broadly in contract evaluation. He noted that there was a comprehensive framework that would be used, and it is important to recognize what exists in statutes that legislatures have enacted. He agreed with the point made by DiCenso, and he argued that any dividend payment by an insurer would be detracting from the financial stability of its policy, but state insurance regulators evaluate capital adequacy, not capital maximization, within insurers, and there are difficulties in the insurance industry. Stolte responded that these are best practices, and in Virginia, its law is to consider the best interests of the policyholder, and nothing done by the Working Group will change that. Superintendent Dwyer agreed with Stolte regarding nothing within the Working Group changing Virginia law, and the same goes for other state laws. She stated the Working Group’s product will be to set high financial standards for these transactions. She asked if there were states besides Virginia and Connecticut that were against the use of the “no material adverse effect.”

Broccoli responded that Connecticut is fine with that standard for IBTs, and its position previously described was with respect to CDs. No other states responded. Superintendent Dwyer summarized that the Working Group would utilize “no material adverse effect.” She added that the Working Group will work on this further regarding how to measure the standard. It will also look at whether the standard would be different for reinsurers. Wolf asked if it would be possible to remove material from the standard. He believes that the standard in Hong Kong was “no adverse effect on policyholders.” Superintendent Dwyer stated that in addition to the concepts mentioned by New York Life, the Working Group would ask Wolf to provide information on the Hong Kong standard.

B. Due Process

Rehagen noted that in Missouri, it is illegal to transfer policies without policyholder consent, as it pertains to assumption reinsurance. Superintendent Dwyer stated in such a situation, it would be up to the court to decide. She asked if there was specific language in the standards as far as the coordination of other states or access to the filings. Rehagen said years ago, there were some transactions for which effected states were not notified, however, communication between the states has greatly improved. He suggested a requirement that states be notified ahead of time. Superintendent Dwyer stated that requiring the state to notify and coordinate might be fine but advised against specifics regarding the format of communication deferring to the most efficient method of delivery. Robin Marcotte (NAIC) discussed how the current best practices draft suggests requiring a communication plan from the company, which then needs to be approved by the state insurance regulator. The current draft requires that this plan coordinate with other affected state insurance regulators and allowing them to have adequate time to assess the impact and the opportunity to submit written comments or attend public

hearings. Gendron stated that clarification is needed as to when notification is required and who is responsible for that notification.

Birny Birnbaum (Center for Economic Justice—CEJ) discussed how the parties receiving notice other than the policyholders have the resources and expertise to meaningfully engage the process. He stated that consequently, there is a need for a policyholder advocate as part of the process. This position would receive and interpret comments from policyholders or simply answer questions when they do not understand the notice they receive. Birnbaum also stated that with respect to the independent expert, this person would likely focus on those things that can be easily quantified, such as material impact and administration capacity. He stated that this would be necessary for personal policies and commercial policies that are more similar to personal policies, such as small business policies. Superintendent Dwyer asked Birnbaum how that person would be defined and what language he would propose to address this issue. Birnbaum responded that the establishment of the policyholder advocate would be part of the process, as well as part of the communication plan, but it would also need to have access to the same kind of confidential information as the state insurance regulator. Commissioner Mulready responded that he believed that was part of the process already, as the current three-step process includes ensuring that there is no material adverse impact on the policyholders by the independent expert. He noted that the state insurance regulator is also already meant to protect the consumer, and the judge is reviewing the information to conclude that it is for that purpose.

DiCarmine noted the need to ensure opportunities for policyholders to meaningfully participate, both in person and remotely. Superintendent Dwyer stated that current statutes make provisions for this and there might be additional participation through Court order. Birnbaum questioned what the policyholder would do without a policyholder advocate that could more easily consider the complexity of the transaction and multiple moving parts. Thus, he asserted that participation would likely not be meaningful because the policyholder does not have the resources or skill set to evaluate the transaction. This advocate would not diminish the commissioner's role. Superintendent Dwyer explained that in this situation, the insurance department would sit down with the policyholder to explain the transaction to them. Wayne Mehlman (American Council of Life Insurers—ACLI) stated that for IBTs and CDs, while the ACLI does not suggest the need for policyholder consent, it suggests the need to require notice, a public hearing, and an independent expert for a review.

C. Do Not Create Monoline Companies

DiCarmine stated a comment on not allowing IBT and CD to create monoline companies was included in comments that were made by New York Life and two other insurers. She stated that New York Life could work on some language for the Working Group to consider.

D. Pro Forma Financial Statements

Superintendent Dwyer stated that the next issue deals with financial strength and how many years of pro forma financial statements are needed. Weaver stated that the Restructuring Mechanisms (E) Subgroup discussed the question of three or five years, but noted that Michigan requires five years. Consequently, five years was recommended by Weaver, but she also suggesting that the domestic regulator would have the ability to require more than five years in the appropriate circumstances. Malm stated support for five years with the potential for more depending upon the line of business. Commissioner Mulready stated that the Oklahoma statute requires three years, but more can be requested. He suggested that five years seemed like too many. Kosky agreed with Commissioner Mulready, and he noted that Connecticut requires three years, with more in the appropriate situation. Broccoli agreed with Kosky and Commissioner Mulready, but he noted that if the company has no access to capital, a state insurance regulator would probably want a longer period of time, even more than five years.

E. CD Procedures Similar to Form A Procedures

Kosky stated that Connecticut made comments at a past Restructuring Mechanisms (E) Subgroup meeting that it views the process for reviewing a CD similarly to a Form A Change in Control. Kosky noted that it has always been Connecticut's plan to review CDs under the same lens as a Form A. He also noted that under Connecticut law, the commissioner shall approve the division unless the commissioner finds that the interest of any policyholder will not be adequately protected or constitutes fraud. Marcotte noted that Locke Lord LLP made similar comments on the Subgroup's exposure. Superintendent Dwyer suggested language that indicated that for a CD or anything that an actual court of record does not approve, there must be a robust process within the department. Kosky suggested that there be six or seven standards would be appropriate for a CD that the commissioner review regarding approval. Superintendent Dwyer asked about a hearing. Kosky stated that the law was a "may" standard for the commissioner in holding a hearing as deemed appropriate. Marcotte described how in the current proposed best practices, there was an intent to avoid duplication between listing the same standards for IBTs and CDs, and many of the financial review requirements are combined unless there is a specific statement about something being different between the two.

F. Retention of Licenses

O'Sullivan noted that comments have been made to the Working Group and the Restructuring Mechanisms (E) Subgroup since their inception regarding a need for an insurance company to retain its licenses in states after an IBT or CD to retain guaranty fund coverage. He noted that for life insurers, any successor company needs to retain its licenses in its states to be considered a member of the guaranty fund association and, therefore, provide guarantee fund coverage. He noted that there were some regulatory discussions that some sort of streamlined licensing may be needed to address this issue. Wake indicated concern about the unintended consequences of requiring states to automatically license all surviving companies. Superintendent Dwyer asked about the status of the #540 model language at the Receivership and Insolvency (E) Task Force. O'Sullivan indicated that such changes were meant to address issues related to P/C. Wake noted that there was a consensus of the Task Force to use a surgical approach with limited changes. He noted that if licenses were not retained, there was concern about straining the orphan clause and existing coverage in the domestic state. He noted that that was perhaps not a bad consideration because it forces the domestic state to think through the transaction, given the ramifications if things do not go well.

Peter Gallanis (NOLHGA) discussed the decision at the Task Force to not address the life issues with an IBT and CD because of the fundamental differences between the P/C and life and health. For instance, there are differences in the types of contracts that are covered in P/C and life and health. Gallanis noted his concern that tugging on a thread in this sweater could have unintended consequences. Therefore, the recommendation for life and other long-term contracts issued by life insurers is to have the same licensure in the same states post-transaction and pre-transaction. If that cannot be met, perhaps the transaction should not be approved.

Weaver noted that the Financial Analysis (E) Working Group has made some reference or referrals to the National Treatment and Coordination (E) Working Group that states have seen issues in which other states are not ensuring that companies are licensed in the states when there is a merger. This step is needed to ensure states can properly regulate and oversee that business.

Having no further business, the Restructuring Mechanisms (E) Working Group adjourned.

To: Restructuring Mechanisms (E) Working Group
Re: Best Practices Redline Exposure April 2023
Date: April 26, 2023

To start, I will say that I think adding the licensing requirement for life was a positive change.

My main concern is removing the requirement for a legal opinion in Section VII of the Best Practices Procedures for IBT/Corporate Divisions.

The language contained in the Best Practices Procedures for IBT/Corporate Divisions related to guaranty association coverage involving property and casualty insurance assumes that each U.S. jurisdiction has laws that address the issue that we are concerned about....guaranty fund coverage not being reduced, eliminated, or otherwise changed as a result of the transaction.

The Drafting Note contained on page 5 acknowledges that the Receivership Law (E) Working Group is still working on this very issue. Assuming that the Working Group obtains consensus and recommends changes to the Property and Casualty Insurance Guaranty Association Model Act (#540), there are no assurances that states will actually adopt the changes. For this reason, it does not seem unreasonable to me in a best practices scenario, to suggest that interested parties obtain a legal opinion regarding guaranty fund protection for policyholders of restructured entities.

RE: Revised Draft of its *Best Practices Procedures for IBTs and Corporate Divisions*

Dear Superintendent Dwyer and Commissioner Mulready:

The American Council of Life Insurers (ACLI) appreciates this opportunity to comment on the Restructuring Mechanisms Working Group's revised draft of its *Best Practices Procedures for IBTs and Corporate Divisions*.

We would first like to thank the Working Group for developing this document since it will help regulators better understand the various procedures that need be followed as they review proposed IBT and corporate division transactions.

There are, however, several items that we'd like to bring to your attention.

- (1) The page numbers in the Table of Contents will need to be renumbered due to language that was added to the revised draft.
- (2) *Section V, Subsection 1 – Use of an Independent Expert* allows for an in-house Department expert to review a proposed corporate division transaction instead of an independent expert, though an independent expert is preferred. As we previously mentioned to this Working Group in our letter dated June 21, 2022, our *Principles on IBT and Corporate Division Legislation* state that independent experts must be utilized during the reviews of both IBT and corporate division transactions.
- (3) In *Section VII – Analysis of Issues Affecting Policyholders, Claimant and other Stakeholders*, we suggest that Subsection 2.a. be deleted since policyholder consent is not required for IBT or corporate division transactions. Other requirements, including those for notice, public hearing, independent expert review (or in-house expert review for corporate divisions), robust regulatory review and court

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 95 percent of industry assets in the United States.

acli.com

approval (for IBTs) are designed to protect policyholders who are not otherwise able to consent to, or opt-out of, a proposed transaction.

(4) *Section IX, Subsection 1.a. – Guaranty Association Coverage* states:

Prior to approving a proposed restructuring transaction, a commissioner should make a factual determination regarding guaranty association coverage issues based on the criteria outlined below.

a. For restructuring transactions involving life, annuity or health insurance, the assuming or resulting insurer(s) should be licensed so that policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to the restructuring transaction. This means that the assuming insurer or resulting insurer(s) must be licensed in all U.S. jurisdictions where the transferring or dividing insurer was licensed or had ever been licensed with respect to the policies being transferred or allocated in the transaction.

We strongly support this section of the revised draft and urge that it not be modified. It is very important from a life and health insurance guaranty association (G/A) coverage standpoint that a successor entity be licensed in the same state(s) where the original entity was licensed (or had ever been licensed) with respect to the policies being transferred or allocated, since each state requires an insurer to be licensed in its state in order for it to be a “member insurer” of its state’s G/A.

If a successor entity is placed into liquidation and its policyholders are not covered by the same state G/As as they were prior to a restructuring transaction, and instead receive “orphan” coverage through the successor entity’s domiciliary state G/A, it is possible that the domiciliary state G/A: (1) may not provide the same level of G/A coverage as the policyholders’ state G/As and/or (2) may not have enough assessment capacity to pay policyholders’ claims on a timely basis, either of which would harm policyowners.

It should be noted that the NAIC updated its *Life and Health Insurance Guaranty Association Model Act* many years ago to state that G/A coverage should generally be provided to policyholders by their resident state G/As, rather than by an insolvent insurer’s domiciliary state G/A. One reason for this was to prevent assessment capacity issues.

Given these concerns, and the importance of having a strong life and health insurance G/A safety net, we urge the Working Group to maintain the licensing requirement language that is in the revised draft.

Thanks again for this opportunity to provide comments. If you have any questions, feel free to contact me at waynemehlman@acli.com or 202-624-2135.

Sincerely,

Wayne Mehlman

Chair, Restructuring Mechanisms Working Group
National Association of Insurance Commissioners

RE: Principles for Insurance Business Transfers (IBT) and Division Statutes

Dear Superintendent Dwyer:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to provide comments on the draft *Principles for Insurance Business Transfer (IBT) and Division Statutes*.

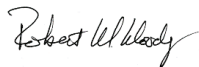

As the Working Group is aware, there is a broad diversity of views on IBTs and division statutes within APCIA's membership, and APCIA has therefore generally refrained from either supporting or opposing such legislation when it is proposed in state legislatures. However, APCIA members have reached consensus on a set of guiding principles that should be reflected in any IBT, or division legislation considered. APCIA has previously shared those principles with the Working Group (and they are attached hereto for your reference). We are pleased that, with only one exception noted below, the Working Group's draft Principles document generally reflects APCIA's consensus principles, and in some cases has adopted language directly from those principles. We are grateful to the Working Group for the careful consideration it has given to our members' views.

One of our principles requires that any regulatory review of proposed IBT or division statutes must establish that the terms and impact of the transaction "do not have a *material* adverse impact on policyholders, reinsurers, or guaranty associations"(emphasis added). We note that the draft Principles document makes numerous references to regulatory consideration of potential adverse impacts but omits the word "material." A "no material adverse impact" standard is utilized in the UK's Part VII regime (on which existing U.S. IBT laws generally are based), as well as in various state laws, including for example, in Oklahoma where IBTs are successfully occurring. Omission of the word "material" could open the door to minor and relatively insignificant issues becoming an obstacle to an otherwise sound transaction. We therefore urge the Working Group to consider using the "material adverse impact" standard in the Principles document.

One of our members has also expressed concern that some of the language in the draft referring to parental guarantees might be used to require such guarantees where they are not needed and are unobtainable, thus preventing an otherwise sound transaction from even being reviewed. Not all insurers will necessarily have a parent company at all or may not have one that is capable of providing a financial guarantee. Many successful IBT transactions have occurred without a parental guarantee. While a parental guarantee might be useful in some circumstances, the lack of one need not necessarily be an insurmountable roadblock to *any* transaction that is otherwise fully reserved, conservative, and prudent. We urge the Working Group to ensure that the language of the draft provides regulators with clear and adequate flexibility on this point.

We appreciate the Working Group's past and continuing consideration of our views.

Sincerely,

Robert W. Woody
Vice President & Counsel
APCIA

Principles for Insurance Business Transfers (IBT) and Division Statutes

Due Process

- Robust due process must be afforded to stakeholders impacted by a transaction (policyholders, reinsurers, guaranty associations). This should include:
 - Notice to stakeholders as determined by the regulator
 - Public hearing
 - Opportunity to submit written comments

Guaranty Fund Coverage

- No impacted policyholder should lose or gain guaranty fund protection as a result of a transaction.

Robust Regulatory Review Process

- The regulatory review must be robust and should, at a minimum, include the following findings:
 - The assets to be allocated to insurers involved in the transaction are adequate to cover the insurer's liabilities.
 - The impact and terms of the transaction do not have a material adverse impact on policyholders, reinsurers, or guaranty associations.
 - The review should consider the plans of any insurer involved in the transaction to liquidate another involved insurer, sell its assets, consolidate, merge, or make other changes, and the resulting impact on policyholders, reinsurers, and guaranty associations.

Independent Expert

- The regulatory review process for insurance business transfers will utilize an independent expert to advise and assist the regulator in reviewing proposed transactions (including advising on any material adverse impact on policyholders, reinsurers, or guaranty associations) and to provide any other assistance or advice the regulator may require.

Court Approval

- Court approval must be required for insurance business transfer transactions but not for divisions.

April 26, 2023

Superintendent Elizabeth Kelleher Dwyer,
Chair of the Restructuring Mechanisms (E) Working Group

Re: Best Practices Procedures for IBT/Corporate Divisions
Exposure Draft 4-4-23

Superintendent Dwyer and Members of the Restructuring Mechanisms (E) Working Group,

AIRROC is pleased to offer comments in response to the draft “Best Practices Procedures for IBT/Corporate Divisions”. As a non-profit association AIRROC and its Board do not advocate for any specific position but provide resources and information. For that reason, AIRROC is not commenting on any specific aspects of the proposed best practices.

AIRROC is the only US based non-profit association focusing on the legacy sector of the insurance and reinsurance industries. Membership is on a corporate level and given the impact and importance of legacy business to the entire industry, AIRROC has attracted many talented and experienced participants that all have legacy or runoff business in their portfolio. The members include major US and international insurance and reinsurance companies, legacy acquirers, well-known rehabilitations, receiverships and liquidations, brokers, run-off managers and state insurance departments.

Because of our belief in the importance of clarity and discussion on the topic of runoff, AIRROC is requesting that the working group remove “Section X – Run-off Procedures” from the Best Practices Procedures for IBT/Corporate Divisions. We believe that the subject is distinct from the issues that this document is being developed to address, and that its inclusion confuses the distinct topics of restructuring and runoff. We would support the further discussion of runoff for inclusion in the white paper the committee is developing or in independent guidance as appropriate. We look forward to working with the members on identifying best practices around this important subject.

As referenced in the PwC Global Runoff Survey from 2022, the size of the global runoff market is \$960 bn with \$464 bn of those liabilities in North America. This is an increasingly important segment of the insurance market, and its management encompasses a broad range of insurers and activities. While this is an important indicator of the demand for more restructuring mechanisms within the insurance industry in recent years, it is important to note that these are distinct and separate issues.

Over the past two or more decades, the term “runoff” has been expanded to refer not only to the runoff of a particular contract, but also to entire books of business, to the insurance or reinsurance company itself and finally, to the entire sector of the market in which such business is administered. There have been many changes since the development of the 1997 Restructure White Paper, and before duplicating its analysis in a modern document it would be prudent to undertake a thorough discussion as to whether it remains relevant to today’s insurance industry.

How can runoff be defined? Runoff business is most widely defined as lines of business that are no longer written. The definition can vary widely by individual companies so this should be considered carefully. The definition of runoff can have different meanings based on situations.

Insurance and reinsurance companies voluntarily place lines of business into runoff for varying reasons: to discontinue a line of business for which they no longer have expertise or profitable experience, to re-focus their business strategy, to improve claims handling by transfer to those better equipped, and consequently improve their capital deployment. Also, as you are all aware, a state regulator can also put a company into receivership, insolvency or liquidation to protect the rights of policyholders, so the state appointed receiver administers the runoff. It is worth making the point that this “involuntary runoff” is very different from a “voluntary runoff” where there is a conscious decision by management to cease underwriting or dispose of a certain line of business as a strategic step. A “voluntary runoff” in these situations is in essence strategic portfolio management.

As the NAIC looks at the options and new states continue to adopt laws that create tools for restructuring, this is an opportunity to create a structure that can underpin the insurers in your state. Restructuring mechanisms provide the opportunity for insurers to grow and serve policyholders by giving them a way to change their operations to improve efficiency and let those that are experts in runoff take the helm.

In conclusion, AIRROC is asking that the Restructuring Mechanisms (E) Working Group consider three main points:

- 1) Remove Section X from the draft “Best Practices Procedures for IBT/Corporate Divisions”.
- 2) Work with AIRROC and our member companies to conduct an updated analysis of the runoff sector in lieu of relying on a 1997 White Paper.
- 3) Consider adding this analysis to the in progress White Paper or in separate guidance.

AIRROC looks forward to a continued dialogue with the NAIC and more specifically the Restructuring Mechanisms (E) Working Group.

Respectfully Submitted,

Carolyn W. Fahey
Executive Director, AIRROC

cc: Robin Marcotte and Dave Daveline, NAIC

Comments of the Center for Economic Justice

To the NAIC Restructuring Mechanisms (E) Working Group

Regarding Draft “Best Practices for IBT/Insurer Divisions”

April 26, 2023

The Center for Economic Justice offers the following comments on April 4, 2023 exposure draft of “Best Practices for IBT/Insurer Divisions.” Our comments focus on the need for a policyholder advocate in any IBT and Division transaction.

Overview and Rationale

The purpose of a policyholder advocate – or consumer advocate, generally – in regulatory proceedings is to ensure that consumer interests have an advocate with sufficient resources and expertise to engage substantively in the regulatory proceeding on behalf of consumers as a necessary counterweight to essentially unlimited resources available to the industry entities seeking a particular regulatory outcome.

The meetings of this working group provide a good example. Each meeting is well attended by numerous industry participants and their advocates and lobbyists. While CEJ has participated in a number of the working group’s calls, there is clearly a massive disparity in resources between industry’s and the sole consumer advocate’s participation.

Now consider this experience at the state level where – with rare exceptions – there is no consumer advocate participating in any regulatory proceeding, let alone an IBT or division proceeding.

A few arguments have been offered in opposition to formalizing the designation and participation of a policyholder advocate in IBT or division proceedings. One argument is that affected policyholders can participate in the process through mechanisms set out in the communication plan. Assuming such participation even occurs, it is unclear how a consumer can meaningfully participate in proceeding marked by highly technical and legal issues with many key documents marked as confidential and unavailable to the consumer.

CEJ Comments to NAIC Restructuring Mechanisms WG
April 26, 2023
Page 2

Such proposed individual consumer participation is analogous – but even less understandable to a consumer – than asking a consumer to participate in a review of an auto or long-term care insurance rate filing or a policy form filing. Absent the technical and legal expertise to address the criteria imposed on the regulator, consumer participation will almost certainly be limited to generalized concern or complaints which have little impact in an IBT or division proceeding.

In contrast, if the IBT or division proceeding required the appointment and participation of a policyholder advocate with adequate funding for such participation, policyholders would have a true advocate with the skills and resources to gather and understand consumer concerns as well as evaluate the proposed transaction from the viewpoint of the consumer.

CEJ knows firsthand the impact of the involvement of a consumer advocate in regulatory proceedings. CEJ routinely weighed on rate and form filings in Texas for various lines of insurance and, in most cases, the preliminary decision by the regulator or the proposal by the insurer was modified – changes that would not have occurred in the absence of a consumer advocate.

Another argument is that the Commissioner is charged with protecting consumers and, consequently, is the consumer's advocate. While insurance regulators are charged with consumer protection, that responsibility is not the same as serving as a consumer advocate in a proceeding in which the Commissioner must make a regulatory decision. If insurance commissioners were consumer advocates, there'd be no need for a consumer participation program at the NAIC or for public participation in regulatory proceedings. The fact that public participation is required for most regulatory proceedings – particularly those that directly impact certain consumers – is recognition that the regulator is not consumer advocate.

Another argument is the there is an expert hired by the Commissioner to evaluate the impact on consumers. In every IBT transaction, we've learned about, the independent expert is an actuary whose primary responsibility is to ensure the receiving entity is as financially strong and administratively competent as the insurer transferring the business. While actuaries have great expertise in certain areas, they don't have expertise in all areas related to consumer protection. Nor is the independent expert a consumer advocate. In all these proceedings the insurance entities are able to provide as much information and explanation and rationale as they want to the Commissioner and to the independent expert – there is no policyholder advocate to do the same for consumers or rebut industry assertions when so warranted.

CEJ Comments to NAIC Restructuring Mechanisms WG
April 26, 2023
Page 3

For these reasons, CEJ urges the working group to include the appointment and funding of a policyholder advocate for both IBTs and divisions. A policyholder advocate is necessary for both types of transactions. With IBTs, the consumer is forced without consent to do business with an insurance company the consumer did not select. Consequently, there are policyholder issues that go beyond technical financial analysis or some assessment of administrative capability.

As with IBTs, an insurer engaging in a division is doing so because it provides significant financial benefits to the insurer. In any situation in which the proposed transaction is based on financial gain for the proposing insurer, there is a need for a policyholder advocate to ensure consumer concerns are identified and given consideration. In the case of divisions, it is vitally important that policyholders are not moved to a new entity with less financial strength. We recognize that regulators' main task is evaluating these transactions is just that type of financial analysis, but regulators sometimes miss things – in part due to representations made by the proposing insurer. One example would be some regulators' approval of lender-affiliated reinsurance transactions by private mortgage insurers leading up to the financial crisis. Some regulators saw these transactions as legitimate risk-spreading when, in fact, they represented the absence of risk management because they were kickbacks from the insurer to the lender to convince the lender to select the particular private mortgage insurer.

Specific Recommendations for the Document

Section II (1)(d)

Section II (1) sets out procedures for IBTs and divisions. The procedures are a list of information required of the applicants for the transaction. Section II(1)(d) states:

The effect of the IBT on the **transferring company's and assuming company's** policyholders, **(including with respect to guaranty association coverage)**, claimants and other stakeholders.

With the exception of this Section II (1)(d) and new language related to guaranty fund coverage impacts, all the information requested in this section about the IBT is financial information spelled in great detail. The fact that 12 of the information items are for financial information with only 1 item for non-financial information raises our concern that non-financial impacts and impacts not easily quantifiable will not be deemed important and reinforces the need and our proposal for a policyholder advocate in the proceeding.

We suggest Section II(1)(d) be expanded to itemize certain information that should be provided by changing the period at the end of the section to a comma and adding the following:

CEJ Comments to NAIC Restructuring Mechanisms WG
April 26, 2023
Page 4

. . . including

- the assuming company’s historical performance relative to the transferring company’s performance serving policyholders and claimants, including
 - percentage of claims denied;
 - time to settle claims;
 - number of consumer-disputed claim settlements;
 - number and type of consumer complaints;
 - number of type of regulatory investigations and enforcement actions;
 - nature and effectiveness of routine policyholder communications
 - ability of policyholders to access information about the policies and company procedures; and
 - any other comparison of non-financial performance between the transferring assuming companies’ historical performance relevant for assessing policyholder impact of the proposed transaction.
- the capability and performance of the assuming company’s infrastructure and systems for communications with policyholders;
- the capability and performance of the assuming company’s infrastructure and systems for claims settlement, including dispute resolution related track record of assuming company;
- the capability and performance of the assuming company’s infrastructure and systems to assist policyholders to understand and use their policies;
- any changes in the nature of regulatory oversight of the assuming company from the transferring company and regulatory oversight of the transferred policies following the transaction;
- the quality and readability of the assuming company’s templates for consumer notices and disclosures; and
- any other aspect of company non-financial performance potentially impacted by the transaction.

Section II (2) (e)

Section II (2) provides a list of information required of the insurer proposing a corporate division and item II (2)(e) is the sole item requiring information about policyholder impact. Item II (2) (k) adds a set of questions about the future marketing and products which is important information, but does not address impact on current policyholders. We suggest expanding item II(2)(e) along the lines of our proposed expansion of item II(1)(d), above.

Page 5

Provisions for adding a policyholder advocate

In section III (1), add “Appointment and Report of Policyholder Advocate.”

In section III (2) add “Appointment and Report of Policyholder Advocate.”

In section IV (2) High Level of Confidence, add a paragraph (c):

- (c) Appoint and provide sufficient funding for a policyholder advocate to
- i. represent and advocate on behalf of policyholders in the proceeding;
 - ii. review all documents, whether deemed confidential or not, submitted or prepared in connection with the proposed transaction;
 - iii. submit requests for information to the proposing companies to the extent the requested information is relevant for assessing the consumer impacts of the proposed transaction;
 - iv. offer recommendations for effective communication with affected policyholders and other stakeholders;
 - v. obtain comments and feedback from affected policyholders regarding the proposed transaction;
 - vi. provide a report with a recommendation for the Commissioner to approve or disapprove the proposed transaction with the rationale for the recommendation and communicate that report to the Commissioner, proposing insurers, affected policyholders and other stakeholders. The full report provided to the Commissioner and proposing insurers may contain confidential information if necessary for supporting the recommendation. A report provided to any other persons, including affected policyholders, must redact confidential information; and
 - vii. participate in regulatory and legal proceedings and meetings regarding the proposed transaction

Add a new section: Appointment of the Policyholder Advocate

- a. The appointment and funding of a policyholder advocate to provide substantive representation and advocacy in the proceeding is essential to ensure consumer interests are adequately represented.
- b. The Commissioner will appoint a policyholder advocate with demonstrated experience and skills to:
 - i. Effectively represent consumers;
 - ii. Provide the necessary technical and non-technical analysis;
 - iii. Effectively communicate with parties to the transaction;
 - iv. Coordinate and utilize experts as needed; and
 - v. Contribute value to the proceeding.

CEJ Comments to NAIC Restructuring Mechanisms WG
April 26, 2023
Page 6

- c. In appointing the policyholder advocate, the Commissioner shall not appoint a person with a material conflict of interest that might compromise the advocate's ability or willingness to adequately represent consumers. In considering persons for appointment as policyholder advocate, the Commissioner shall solicit recommendations from consumer organizations within and outside the state.
- d. The Commissioner shall appoint the policyholder advocate as soon as practical following receipt of the transaction application, but no later than 21 days after receipt of the transaction application.
- e. The Commissioner shall direct the proposing companies to provide funding for the policyholder advocate within 7 days of the Commissioner's appointment of the policy advocate in amount of the greater of \$50,000 or 0.01% of the total value of the liabilities in the transaction. The \$50,000 minimum should be increased annually by the annual change in the Consumer Price Index starting in 2024.
- f. The Commissioner shall audit the expenditures of the policyholder advocate and the appointment of the policyholder advocate shall be conditioned upon the advocate taking personal responsibility for any misuse of funds.
- g. (See earlier comments for specific tasks and responsibilities of the policyholder advocate)

Please see our comments above regarding the policyholder advocate's role in the communication plan with stakeholders.

Thank you for your consideration of our comments.

ENSTAR (US) Inc.

Comments to Restructuring Mechanisms (E) Working Group – April 26, 2023

Dear Superintendent Elizabeth Kelleher Dwyer:

Thank you to the working group members and NAIC staff for the continued work and discussion relating to the *Best Practices Procedures for IBT/Corporate Divisions* (“Best Practices”). Enstar provided comments on the Best Practices during its last exposure period, and we continue to believe that regulatory best practices should be founded in the legislation that states are enacting to enable insurance business transfers (“IBT”) and corporate divisions. The Best Practices diverge from statutory requirements and purposes in several notable areas, including the development of pro-forma financial statements, the creation of new policyholder rights, and the necessity and method of obtaining policyholder consent, which we addressed in our prior letter and reaffirm without repeating here.

With the increasing interest in restructuring mechanisms and the few states that have passed enabling legislation at this time, it is likely that regulators will be asked to review or even participate in the oversight of restructuring transactions without similar legislation in their own states, which is especially applicable to IBT. We believe that it is important for regulators in this position who may seek out the work of this working group to provide guidance for their review have a clear understanding of why elements of the Best Practices differ from existing state law and similar NAIC frameworks. For example, the NAIC Form A model regulation requires three-year financial projections, and the NCOIL IBT Model Act requires three years of pro-forma financials, with all states with similar acts requiring the same or an unspecified amount. However, the Best Practices recommend five years of pro-formas, without addressing a reason for the difference from existing laws and models. For this and other similar changes to already established review standards, we would appreciate that the working group provide context for the differences. In doing so, the working group can help insurers and states with existing laws from being placed into a position of trying to explain why their standards and this document are not in alignment, when those standards are what came first and are the basis of the creation of the Best Practices.

Page 2 of 2
26 April 2023

We also would encourage the reconsideration of *Section X – Run-off Procedures* in this document. IBT and division transactions may or may not result in runoff, and runoff can be created and exist without a restructuring transfer occurring. Runoff is frequently managed voluntarily, without negative solvency implications. Court-authorized transfers for insolvent companies (similar to the IBT framework) have occurred in states without IBT legislation under the authority of the receivership court. However, these types of transfers are not addressed by the Best Practices, and as such this section on involuntary runoff seems out of place in a discussion of voluntary, solvent restructuring transactions. We believe this section would be best suited for a separate document, and we would appreciate additional discussion of the purpose and objectives of this section should it remain a part of the Best Practices.

Sincerely,

Chair of the Restructuring Mechanisms (E) Working Group

RE: Best Practices Procedures for IBT/Corporate Divisions

Dear Ms. Dwyer:

Below are comments that I have for Best Practices Procedures for IBT/Corporate Divisions. I appreciate the opportunity to submit these to the Restructuring Mechanisms (E) Working Group.

Page 5 – n. ii. 2nd line - delete duplicate **that**

Page 9 – 2. High Level of Confidence – **Per comments below, I would recommend deleting this section and incorporating relevant areas into the prior section.**

Page 9 – 2. 1st line - establish, at a high level of confidence -

Part VII guidance, for example, does not say anything about levels of confidence and it does not ask the IE to “establish” anything, rather give their opinion. Rather, the guidance says that the IE should give their “opinion of the likely effects of the scheme...” and “analyse and conclude on how groups of policyholders are affected differently by the scheme, and whether such effects are material in the independent expert’s opinion. Where the independent expert considers such effects to be material, they should explain how this affects their overall opinion.”

Page 9 –2. 2nd line – no adverse effects - suggest adding **"material"**

Page 10 – b. iii 1st line – adverse impact – suggest **“material adverse effect”**

Page 10 – 3. a. 1st line - Prescribed conservative assumptions - **These should be defined, and as to why they need to be conservative.**

Page 11 – 4. 1st line - Assessment of risk capital - **It seems unclear as to the situations where no additional capital can be accessed.**

Page 11 – 4. a. 1st line - before some add **“, under”**

Page 11 – 4. b. iv. 1st line - after capital **remove comma**

Page 12 – 5. a. 2nd line - add space after **the**

Page 12 – Section V 1st line – after an add **Independent**

Page 12 – d. 2nd line - to establish at a high level of confidence that policyholders and other key stakeholders experience no adverse effects – **same comments as earlier**

Page 12 – e. 4th line - a neutral or better condition – suggest replacing with **not materially adverse impacted**

Page 12 – e. 9th line - **remove space after change**

Page 13 – f. 2nd line - **add space after to**

Page 14 – 3rd line - put the policyholders and other key stakeholders in the same or better position - **create no material adverse effect on**

Page 14 – 1. a. 1st line - “ground up” - **What is this intended to mean? I think it should be clarified that independent actuarial tests are not required but could be performed if needed.**

Page 14 – 1. a. iii. 1st line - “insurer’s – **clarify which insurer(s)**

Page 14 – 2. a. 2nd line - in the same or better condition – suggest replacing with **not materially adverse effected by**

Page 20 – Drafting Note: 2nd line - delete **to**

Page 23 – Independent Consultant – 4th line - within the past twenty-four (24) months - **This time frame seems onerous. You could also ensure that the expert has the time and capacity to undertake the work.**

Page 23 – Independent Consultant – 6th line - **add space after this**

Re: Comments on Working Group’s Re-Exposure of Best Practices

The undersigned companies welcome the opportunity to comment on the revised Best Practices document re-exposed by the Working Group. We appreciate the thought and time that the Working Group members have devoted to refining the exposure, and, overall, **believe that the Best Practices document provides a strong foundation for ensuring appropriate solvency and consumer protections will apply to Insurance Business Transfer (“IBT”) and Corporate Division (“CD”) (collectively, “IBT/CD”) transactions.**

Use of Independent Expert

In prior comment letters, the undersigned companies have maintained that we strongly believe that every IBT/CD should require an independent expert (“IE”) report, and that the IE report should be publicly available. We note that the Best Practices require IE reports for IBTs; we welcome and appreciate this position. After working with the Working Group, we believe that the Best Practices document strikes an appropriate balance in the use of IEs for CD transactions. We further believe it would be appropriate for any report generated by an in-house department of insurance also be made public in order to allow interested policyholders and stakeholders to participate in a public hearing on the CD.

Guaranty Associations

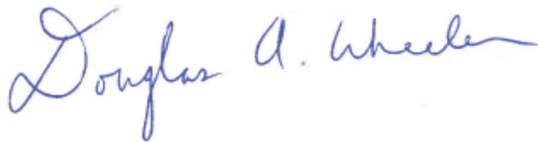

We reiterate our support for Section IX(1)(a) of the NAIC Best Practices Procedures for IBT/Corporate Divisions. This section requires that for restructuring transactions involving life, annuity or health insurance, the assuming or resulting insurer(s) should be licensed in each state where the transferor or predecessor insurer(s) are licensed so that policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to the restructuring transaction. It is important from a Life and Health Guaranty Association coverage standpoint that the successor entity be licensed and regulated in a similar fashion. The NAIC Life & Health GA Model Act requires that an insurer be licensed (or formerly licensed) in a state to be considered a member of that state’s guaranty association.

If the policyowners are not covered by the same guaranty association as they were prior to the restructuring transaction (and instead receive coverage via the insurer’s domestic guaranty association), the domestic guaranty association may not have the necessary assessment capacity to pay claims on a timely basis, nor offer the same level of guaranty association coverage as the previous guaranty association, further harming policyowners. Given these concerns, and the importance of maintaining a strong guaranty association safety net, we urge the Working Group

to include the licensing requirement in its Best Practices document. In addition, we recommend an accreditation requirement that policyowners must have coverage under the same guaranty association both before and after the transaction, which will require licensing of the acquiring insurer in each of the jurisdictions where customers of the existing insurer reside.

We appreciate the efforts of the Working Group in getting to this point. Once the Best Practices document has been finalized, we urge the Working Group to take the appropriate steps so that its requirements become accreditation standards. A robust accreditation system has proven over time as the most effective tool to promote consistent and strong solvency regulation. We believe establishing the Best Practices as an accreditation standard is the best way to protect against the potentially significant adverse consequences from these transactions.

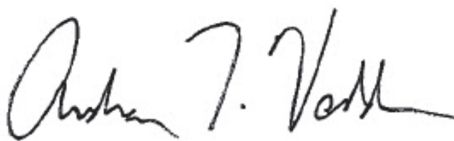

Sincerely,

Douglas A. Wheeler
Senior Vice President, Office of Governmental Affairs
New York Life Insurance Company

Kevin L. Howard

Western & Southern Financial Group

Andrew T. Vedder
Vice President – Enterprise Risk Management
The Northwestern Mutual Life Insurance Company

Northwestern Mutual , New York Life and Western and Southern Joint response to requested Wording

No Monolines

In Section IV.2, we would propose to insert the following language:

- c. The Domestic Regulator should ensure that neither the transferor nor transferee will be a monoline company following the transaction. In making this determination, the Domestic Regulator or Independent Expert, as appropriate, should determine that, following the transaction:
 - i. Neither the transferor nor transferee will have 90% or more of its reserves in the same line of business; and
 - ii. Both the transferor and transferee will have diversification across lines of business. In making this determination, the Domestic Regulator or Independent Expert should consider whether company is operating in a single industry segment, is offering differentiated types of insurance products, or is otherwise exposed to increased risk because of its insurable risk profile.

No Worse Off

In Section II.1 and II.2, we would propose to insert the following language as items (o)-(p) and (m)-(n) respectively:

- o./m.: Update to the Own Risk and Solvency Assessment reports (“ORSA”) demonstrating how the proposed transaction would impact the ORSA analysis for the dividing or transferring insurer as well as for any insurer that will be assuming policy liabilities if the proposed transaction is approved.
- p./n.: Documentation of how the administration of policies by the dividing or transferring insurer following the transaction will provide a continuing level and quality of service.

In Section IV.3, we would propose to insert the following language:

- e. The financial ratings for all companies involved in the transaction should have at least the same financial rating as the company transferring the policy liabilities. This should apply for all new companies as well as the ongoing rating for the transferring or dividing company.

In Section IV.4.b, we would propose the following language to address how to assess from an actuarial perspective whether insureds are “no worse off”, regardless of whether it is an IBT or a CD:

- b. ~~For IBTs or other transactions which will not have access to additional capital,~~ An actuarial report of the adequacy of ~~run-off~~ reserves (gross and net) being transferred should include an analysis of . . .

**JOINT SUBMISSION OF NOLHGA AND NCIGF
TO NAIC'S RESTRUCTURING MECHANISMS WORKING GROUP
REGARDING THE RESTRUCTURING MECHANISMS BEST PRACTICES EXPOSURE DRAFT**

April 26, 2023

The National Organization of Life & Health Insurance Guaranty Associations ("NOLHGA") and the National Conference of Insurance Guaranty Funds ("NCIGF") are writing to comment on the Restructuring Mechanisms Working Group's (the "Working Group") April 4, 2023 draft of its Best Practices Procedures for IBT/Corporate Divisions (the "Current Exposure").¹ NOLHGA and NCIGF appreciate the Working Group and NAIC staff's efforts to incorporate technical changes related to guaranty association/fund coverage. Representatives of both organizations worked closely with NAIC staff on the Current Exposure and are in full support of the Working Group's adoption of the language related to guaranty association/fund coverage.

As has been the case throughout the NAIC's drafting process of the Best Practices and the White Paper, our comments generally focus on the concept (recognized by the Restructuring Mechanisms Working Group in both documents) that the policyholder protection of guaranty system coverage should not be reduced, eliminated or otherwise changed as a result of a restructuring transaction. The changes in the Current Exposure set forth the specific standards that must be satisfied to ensure that guaranty association/fund protection a policyholder would have had prior to a restructuring transaction is preserved when a restructuring transaction is consummated. Those standards differ depending on the lines of insurance involved in a proposed insurance business transfer or corporate division, and those differences are reflected in the Current Exposure. The Current Exposure contemplates that an applicant will present evidence of how those standards are satisfied in a proposed restructuring transaction, and the commissioner reviewing a proposed restructuring transaction will make the factual determination regarding whether those standards have been satisfied.

NOLHGA and NCIGF are prepared to continue this dialogue and to work closely with the Working Group as the Current Exposure is finalized. Thank you for the opportunity to share our perspective on the Current Exposure, and we look forward to working with you as this project moves forward.

Kansas City, MO 64106

Re: Exposure of Best Practices Procedures for IBT/Corporate Divisions (“Best Practices Document”)

Dear Co-Chairs Dwyer and Mulready:

This letter is being submitted on behalf of the National Organization of Life and Health Insurance Guaranty Associations (“NOLHGA”) to express its support for the portions of the Best Practices Document seeking to ensure the preservation of life and health guaranty association (“L&H GA”) coverage for policyholders whose company is involved in an IBT or corporate division transaction (“Restructuring Transaction”).

For the reasons stated in NOLHGA’s comment letter of May 27, 2022 to the Receivership and Insolvency Task Force (copy enclosed), we believe the only effective way to preserve L&H GA Coverage in Restructuring Transactions is to require the successor entity in the transaction to be licensed in all states where the predecessor entity was ever licensed with respect to life, annuity and health policies being transferred in the transaction.

This approach will not only ensure that a successor entity’s inherited life, annuity and health policies remain eligible for coverage by the L&H GAs in those states, but also will ensure that the successor entity is subject to regulatory oversight in each of those states for the benefit of the policyholders in those states. This continuing regulatory oversight is particularly important for life, annuity and health personal lines of business since most of these products (e.g., life insurance, annuities, LTC and disability insurance) represent long term obligations by an insurer to provide essential financial security protection to individual consumers.

We want to express our appreciation to the Working Group for its efforts on the Best Practices Document, and for allowing us the opportunity to provide input and comments on the document. We look forward to discussing these matters with you on the next call of the Working Group.

Very truly yours,

A handwritten signature in black ink that reads "Peter G. Gallanis".

Kansas City, MO 64106

Re: Request for NAIC Model Law Development for the P&C Insurance Guaranty Association Model Act

Dear Ms. Koenigsman:

This letter is submitted with respect to the Receivership and Insolvency Task Force’s recent exposure of a “Request for NAIC Model Law Development” (“MLD”) relating to the Property & Casualty Insurance Guaranty Association Model Act (the “P&C Model Act”). We understand that the MLD’s sole purpose is to propose changes to the P&C Model Act tailored to ensure that P&C guaranty fund coverage is not lost, expanded, or otherwise affected by corporate division (“CD”) or insurance business transfer (“IBT”) transactions (collectively, “Restructuring Transactions”). Given that the MLD is solely focused on P&C GA coverage, NOLHGA has no position on the MLD but rather will defer to the views of those with expertise in P&C guaranty funds (e.g., the NCIGF and its members).¹

NOLHGA, however, would like to address comments submitted in response to the MLD that suggested consideration also should be given to amending the Life and Health Insurance Guaranty Association Model Act (“L&H GA Model Act”). In particular, one of the comments suggested that the L&H GA Model Act should be amended to deem successor entities in Restructuring Transactions, irrespective of their licensing status, to be member insurers of the life and health guaranty associations (L&H GA).

For the reasons that will be discussed further below, NOLHGA would reiterate its view that successor entities in Restructuring Transactions involving life and health policies should be licensed in all states where the predecessor entity was ever licensed with respect to the policies being transferred. This not only will ensure that the successor entity’s inherited life and health policies will remain eligible for coverage by the L&H GAs in those states, but it also will ensure that the successor entity is subject to regulatory oversight in each of those states for the benefit of each state’s insurance consumers. As reflected in the draft Restructuring Mechanisms White Paper², requiring licensing of a successor entity where it inherits business could be important to ensuring ongoing regulatory control over the entity and avoiding potential harm to insurance consumers.

¹ As previously noted, NOLHGA also does not have a position on whether states should adopt laws authorizing Restructuring Transactions. That is, NOLHGA neither supports nor opposes such laws but rather is focused on the potential implications of Restructuring Transactions to its member life and health insurance guaranty associations, and the protection its members provide to insurance consumers when their insurance company is placed in liquidation.

² The above reference, and similar references to “White Paper” in this letter, refer to the draft Restructuring Mechanisms White Paper, dated March 28, 2022, that was created by the Restructuring Mechanisms (E) Working Group of Financial Condition (E) Committee.

Most Life and Health Products Evidence Long-Term Policyholder Obligations

Virtually all life and annuity products, and many health products, represent long-term obligations by an insurer to provide essential financial security protection to its policyholders.³ Consumers who buy these products have an expectation that their insurer will provide this protection for decades into the future, or even for a lifetime (or longer, in the case of some annuities). This long-term commitment of life and health insurers is extremely important to policyholders since, as they age and/or experience health problems, they will find it increasingly difficult, if not impossible, to obtain similar coverage on comparable terms.

The nature of life and health products is quite different from most property and casualty products. Property and casualty products typically provide coverage on an annually renewable basis. This permits property and casualty policyholders to go back into the marketplace to seek replacement coverage if they become dissatisfied with their insurer's performance or the terms of their policy, or if their insurance company fails. In addition, property and casualty coverage typically does not become prohibitively expensive or completely unavailable to consumers because of advancing age or developing health conditions. As a result, property and casualty policyholders should have the ability to non-renew their coverage and obtain comparable replacement coverage if they became dissatisfied with the insurer that takes over their policy in a Restructuring Transaction. Importantly, many life and health insurance policyholders would not have that option, for the reasons stated above.

L&H GAs have Long-Term Obligations to Continue Coverage for Policyholders

Given the long-term nature of many life, annuity, and health insurance policy obligations, and the difficulty consumers may experience in replacing this coverage, L&H GAs have explicit statutory obligations to continue coverage for policyholders of insolvent insurers. This statutory duty to continue coverage often results in L&H GAs having obligations that continue for many years into the future. As an example, L&H GAs affected by the Penn Treaty/ANIC insolvencies have obligations for covering long term care policies that are projected to continue for the next 30 years or more.

There are Important Policy Reasons Member Insurers of L&H GAs Should be Licensed

Given the long-term nature of L&H GA Coverage obligations, and concerns about the risks to L&H GAs of backstopping the obligations of insurers that are not subject to regulation, the L&H Model Act has provided from its inception that insurers must be licensed to be members of a state's L&H GA.⁴ In effect, the licensing requirement ensures a level, regulatory playing field among insurers that will be eligible to have their products covered by the L&H GA. In this way, the L&H GA Model Act is designed

³ Certain forms of health insurance, which are renewed on an annual basis, are exceptions to this statement (e.g., most forms of conventional medical insurance issued today). However, other forms of health insurance (e.g., individual long term care insurance and disability income insurance) are guaranteed renewable for the life of the policyholder and therefore do represent long-term obligations to policyholders.

⁴ "Member Insurer" was defined in § 5(7) of the 1970 Model to include any person authorized to transact in this state any kind of insurance to which this Act applies under Section 3. **1971-4 NAIC Proc. 157, 162 (Dec. 14, 1970)**. "Authorized" was changed to "licensed" in this definition as part of the 1975 revisions. **1976-4 NAIC Proc. 296, 300 (Dec. 9, 1975)**. The commentary notes that this change was intended to ensure that all unauthorized insurers are excluded from the Act. **1976-4 NAIC Proc. 296, 299 (Dec. 9, 1975)**. The 1975 version of the Model also included a comment at the end of section entitled Scope, which included the following language: "Furthermore, it [this Model Act] applies only to direct insurance issued by persons licensed to transact insurance in this state at any time. Coverage issued by insurers which have not submitted to the application of a state's regulatory safeguards is excluded from protection by this act".

to protect L&H GAs (and their member insurers) from being generally responsible for the insurance obligations of entities that are not subject to state licensing and regulatory requirements.

In 1985, the L&H Model Act was amended to provide that the definition of “member insurer” includes insurers whose license or certificate of authority in this State may have been suspended, revoked, not renewed, or voluntarily withdrawn. This language was not intended to create a general exception to the requirement that insurers should be licensed to be members of the L&H GA, but rather was intended to avoid having policyholders become ineligible for GA coverage due to a state regulatory action.⁵ In many cases, financially troubled insurers will have their licenses suspended or revoked even before they are placed in receivership. The 1985 revision to the definition of member insurer was intended to avoid policyholders losing eligibility for GA coverage in those kinds of circumstances.

Concerns with Deeming Non-Licensed Successor Entities to be Member Insurers

As noted in the draft Restructuring Mechanisms White Paper, there is a fundamental regulatory interest in ensuring the licensing status of successor entities in Restructuring Transactions. If a successor entity to a Restructuring Transaction operates without a license in a state, it could result in a lack of regulatory knowledge and control regarding the company’s ongoing operations in that state, which in turn could make harm to consumers more likely. This harm potentially could encompass all aspects of state insurance regulation.

These potential harms also could expose L&H GAs to increased risks if successor entities in Restructuring Transactions are deemed member insurers of the GAs without being licensed and subject to regulation in the GAs’ home states. These risks could increase, based on the structure and the nature of the business that is the subject of the Restructuring Transaction. As an example, if the successor company is a newly formed or limited purpose entity running off risky forms of business (e.g., long term care policies), there could be substantial increased risk to a GA from such an entity not being licensed and regulated in the GA’s home state. This is exactly the type of situation that the drafters of the L&H Model Act sought to prevent by generally requiring member insurers to be licensed entities.

There is an additional concern with unlicensed, successor companies being deemed member insurers of the L&H GAs. This concern relates to Section 11.B of the L&H GA Model Act, which empowers the Commissioner to suspend or revoke the license of a member insurer that fails to timely pay its guaranty association assessments. This provision is commonly viewed as a practical and effective way to ensure that member insurers timely pay their L&H GA assessments. In the event successor companies are deemed to be member insurers without being licensed, the power of a commissioner to enforce the payment of assessments by those insurers by revoking their licenses would not be available.

In addition to the above concerns, NOLHGA believes that obtaining amendments to all 51 L&H GA Acts to include unlicensed entities as member insurers may not be a practical or realistic solution. While the Life and Health GA System has been quite successful over the years working with regulators and legislators to update state GA Acts to be consistent with the Model Act, those results have only been

⁵ As reflected in the NAIC Proceedings, the industry proponents of the 1985 amendments to the definition of “member insurer” provided the following explanation for those changes: “To emphasize the importance of what should be the clear dependence of coverage under the act on adequate regulation for solvency and competitive equality, the term “member insurer” has been modified and used to link more clearly the sections of the act relating to purpose, coverage, powers and duties, and assessments. Thus, the definition of member insurer has been expanded to include entities whose license may have been suspended or revoked. Insureds should not lose guaranty association coverage because of enforcement actions against an insurer under the laws and regulations designed to assure solvency, proper market conduct and competitive equality that all member insurers must adhere to. Equally, insurers should not be expected to extend coverage to entities that are not required to adhere to the same laws and regulations.” **1984-2 NAIC Proc. 440, 462 (June 3, 1984).**

possible because of the widespread support of state regulators and industry members for various Model Act improvements. Given the fundamental change and potential increased risks of deeming unlicensed insurers to be L&H GA members, amendments to achieve that purpose could be considered controversial and difficult to accomplish in many states.

The Draft White Paper's Recommendation for a Possible Solution to Licensing Issues

NOLHGA sees some promise in the draft White Paper's recommendation for a possible solution to addressing licensing issues in Restructuring Transactions. That recommendation, which appears on the last page of the draft White Paper, is to have the appropriate NAIC working group consider whether changes should be made to the licensing process for companies resulting from Restructuring Transactions of runoff blocks. In that regard, the draft White Paper notes, "A streamlined process that still ensures appropriate regulatory oversight (and any licensure necessary to preserve guaranty association coverage) may be appropriate in limited circumstances."

As noted above, the draft White Paper recognizes that the failure of a successor entity to be licensed in relevant states could result not only in the loss of L&H GA coverage, but also in a lack of regulatory knowledge and control regarding the company's ongoing operations, which in turn could result in harm to insurance consumers. This risk to consumers, by itself, would seem to be of sufficient concern to justify the NAIC's consideration of an alternative licensing process for successor entities in Restructuring Transactions.

Very truly yours,

Peter G. Gallanis

National Association of Insurance Commissioners**

Re: Comments to Best Practices Procedures for IBT/Corporate Divisions,
Exposure draft 4-4-23

Dear Superintendent Dwyer:

We thank the NAIC Restructuring Mechanisms Working Group (the "Working Group") for the opportunity to comment upon the draft Best Practices Procedures for IBT/Corporate Divisions, exposure draft 4-4-23 (the "Draft"). Our comments below should be considered in the context of our prior comments (the "ProTucket Letter"), copy attached, to the draft White Paper, then dated October 22, 2021 (the "White Paper"), relating to Insurance Business Transfers ("IBTs") and Corporate Divisions ("CDs") which we submitted on behalf of our client, ProTucket Insurance Company ("ProTucket"). We and ProTucket also submitted comments to a prior version of the Draft. We once again submit comments on behalf of that client.

Our comments are organized as follows: I. General Comments to the form and scope of the Draft; II. Comments of Substance addressing specific issues of substance raised in the Draft; and III. Miscellaneous Comments addressing organizational and other miscellaneous drafting issues.

I. General Comments.

The Draft appears to be a combination of text from varied source documents, including the 1997 White Paper on restructurings, the Illinois Corporate Division statute, the Rhode Island IBT law, United Kingdom Part VII practices and commentary from some market participants. These documents in many cases contain similar guidance expressed in different terms and sometimes contradict one another. It appears that the Draft was not intended to be a fully integrated, internally consistent, document, and we cannot tell whether commentators should be reviewing the Draft as a "concept piece" to raise issues for further discussion or as guidance to be published for the use of examining regulators as implied in its title, "Best Practices Procedures for IBT/Corporate Divisions."

If the Draft is intended as guidance for use by regulators, we fear that the duplication and excessive prescriptive provisions in the Draft, sometimes set forth in exacting detail, will place an onerous and excessively time-consuming burden on examiners and applicants. Even if the Draft is intended to merely suggest standards for review, examiners will be tempted to follow its guidance with rigor, especially in light of the novelty of the subject matter. If it is intended as

April 26, 2023
Page 2

guidance to regulators, we recommend that the Working Group seriously consider a different format and an approach that reduces duplications and moderates some of the more onerous provisions of the Draft. Some of the provisions that we suggest be reworked or deleted are set forth in Sections II and III below.

As an over-all general comment, we recommend that the Draft be revised to speak in one voice and to reconcile the similar points made in different sections. Without such a re-draft it is difficult to provide definitive comments, and we would suggest that commentators be given opportunities to comment further once the Working Group clarifies how it proposes to use the Draft.

The Working Group may have its own preferences, but we recommend that it consider drafting guidance that would use a pre-existing format already familiar to regulators -- to which the IBT and CD issues can be added -- rather than creating an altogether new format. Specifically, we suggest that the Working Group use the Form A format as a framework into which IBT and CD issues can be added.

II. Comments of Substance.

Beyond these general comments, we note the points of substance set forth below.

1. Definition of IBTs. (Page 1.) Just as in the case of CD's, IBT's will almost always involve a transfer of obligations and assets. The first sentence of the Draft should be amended accordingly.
2. Scope and Timing of Guidance. (Page 1.) The Draft indicates that it is not intended to provide guidance as a model law or regulation. We recommend that the Working Group consider the scope of guidance to be provided – and whether it should be issued, for example, as optional or mandatory addition to the Financial Analysis Handbook
3. Projections. (Page 5 et seq.) The Draft would request 5 years of financial pro-formas or projections (for example, Section II (1)(i).) Although some states may at times request 5, instead of 3, years, the term for projections in Form A and license applications is usually 3 years. We recommend that 3 years be used as the standard.
4. Guaranty Funds. (Page 5 et seq.) The Draft addresses guaranty fund issues for life and non-life separately (for example, Section II (1)(n)(i) and (ii)). It appears that the intention behind the different text for these lines is the same, yet the provisions are worded differently. As these issues are still under consideration by the relevant NAIC committees and interested parties, we suggest that the language describing the due diligence needed to assure post-transfer guaranty fund coverage be general to accommodate changing legislation.
5. Parental Guarantee. (Page 8.) The Draft (Section II (4)(b)) implies that an IBT or CD “should provide for a commitment of parental and other... support”. Requiring such support can effectively subvert the purpose of IBTs and CDs. Although there may be circumstances under which regulators may seek some level of external support for an IBT or CD, we recommend that this should not be generally required for such plans.

Protucket_ibt comments.docx

April 26, 2023
Page 3

6. Licenses. (Page 8.) The Draft (Section II (5)(a)) implies that the resulting insurer in an IBT or CD should have licenses “in all jurisdictions in which it [the predecessor insurer] wrote business.” We recommend that that text be deleted. It should be sufficient that the insurer “will be licensed in all jurisdictions where required to take on business as a result of the restructuring.” This text should also be understood to include circumstances where the transaction is structured to carve out those jurisdictions where the license, surplus line eligibility or other similar status is unnecessary to effect the transfer. For example, it should be sufficient to post collateral to support reinsurance credit as a substitute for a license.
7. Adverse Impact Standard. (Page 10 et seq.) The Draft refers to a number of standards to evaluate the impact of IBTs or CDs on stakeholders. Section IV (2)(b)(iii) requires that the transaction not have “any adverse impact”. Section VI (preamble) requires that “policyholders and key stakeholders” be “in the same or better position” after the transfer. Section V (1)(d) calls for “no adverse effects”. Section V (1)(e) requires that such participants be in “a neutral or better condition after” the transfer.

Such standards could be onerous and impractical for a number of reasons. In a transfer between two highly creditworthy parties, it would make little sense to object to a transfer from a \$12 Billion company equity to a company with \$10 Billion, both with the same high credit rating. When evaluating the impact on both the transferor and transferee, it would very difficult to maintain that both parties would be in precisely the same position before and after a transfer. Furthermore, it would depart from normal practice to require regulators to regulate to a zero level of risk.

Accordingly, we recommend that the Draft adopt a standard of “material adverse effect”. This standard is very frequently used in commercial contracts and indeed in NAIC guidance and insurance laws.

8. RBC. (Page 10 et seq.) The Draft refers to Risk Based Capital (RBC) on numerous occasions. As discussed in the ProTucket Letter, RBC can often be an imprecise and misleading measure of solvency for insurers in run-off. As the evaluation of IBT and CD transactions may often involve insurers in run-off or books of business in run-off, we urge the Working Group to continue its dialogue with other NAIC committees in consideration of this issue and to make some allowance in the Draft for the distortions resulting from the application of RBC when evaluating IBTs and CDs involving insurers or books of business in run-off. Adding a footnote in the Draft to this effect would help sustain interest in this issue.
9. Role of Non-Domiciliary Regulators. (Page 18.) The Draft (Section VIII (3)) requires that all affected US jurisdictions approve or non-object to an IBT or CD. Such a provision is inconsistent with the laws of states which have adopted IBT and CD statutes and pre-judges the deliberations of the Working Group. Furthermore, it would be inappropriate for the regulators of one non-domiciliary state to make their evaluations dependent upon whether another non-domiciliary state would require approval of the transfer. We recommend that this requirement be deleted.

Protucket_ibt comments.docx

April 26, 2023
Page 4

10. Run Off Procedures. (Page 20.) The Draft (Section X) appears to focus attention on run-offs resulting from an IBT or CD, possibly implicating insolvency. The Draft does not appear to discuss the broader issues arising from the business of running off solvent legacy books or the proper financial and regulatory aspects of this market, including the unique management, RBC, accounting and disclosure standards for prudent run-off administration. We believe that the current text can be misleading and confusing and would therefore recommend that this Section be deleted and the subject instead be treated to a separate more fulsome discussion elsewhere.

III. Miscellaneous Comments.

The following comments address organizational and other miscellaneous drafting issues.

1. Re-Ordering of Introductory Text. It may be useful to introduce the guidance by starting with a brief introduction/summary narrative of the regulatory approvals and expected timing before detailing the Company Information and Transactional Design in what is currently Sections I and II.
2. Consistency and Lack of Clarity. As indicated in our introductory comments, the Draft is derived from multiple sources that are sometimes inconsistent, duplicative and contradictory and some lack clarity. We recommend that these defects be corrected. For example:
 - a. Page 4 et seq., Section II (1) and (2). IBT's and CD's have many common characteristics, but are treated separately and inconsistently. It is preferable to treat them together under the same provisions, followed by a subsection to address those issues which are unique to one or the other.
 - b. Page 6, Section II (2)(f). This provision states that: "Nothing in this shall expand or reduce the allocation and assignment of reinsurance as stated in the reinsurance contract". We suggest it be re-worded for clarity.
 - c. Page 7 et seq., Section II (3), (4) and (5). These provisions at times indicate that they apply to both IBTs and CDs and at other times do not so indicate. We suggest this text be re-worded for clarity.
 - d. Page 8 et seq., Sections III and IV. We believe that these provisions are better read together. We suggest they be combined into one Section.
 - e. Pages 9 et seq., Sections IV and V. These provisions derive from multiple sources and at times appear to be unnecessarily burdensome. We suggest that these provisions be reviewed carefully to assure that they are consistent and sufficient for the purpose without imposing excessive burdens. For example, on a number of occasions, As stated in our general comments above, we suggest that the Draft be reformulated to more closely follow existing NAIC and state approval formats, in particular the format used for Form A reviews, with appropriate modifications to accommodate issues arising from IBTs and CDs.
 - f. Page 11, Section IV (4)(a). This text is confusing. We suggest it be re-worded for clarity.

3. Protected Cell Insurers. The ProTucket Letter (page 7, item 11) observed that the Working Group had been charged with identifying and addressing the legal issues associated with restructuring insurers using protected cells. Although those issues may have been set aside for future review, we ask that they not be forgotten. We recommend that the Draft, by way of footnote or otherwise, acknowledge that these issues will be considered at some future time when appropriate.

Because of the number and importance of the issues raised in the Draft, we urge the Working Group to remain open to further comments from interested parties.

We appreciate the opportunity to comment upon the Draft and are available to follow-up with further comments and further assistance that the Working Group.

Sincerely,

A handwritten signature in blue ink, appearing to read "RAR", written over a horizontal line.

VIA EMAIL

April 26, 2023

Superintendent Elizabeth Kelleher Dwyer
Commissioner Glen Mulready
Co-Chairs, NAIC Restructuring Mechanisms (E) Working Group

Attention: Robin Marcotte rmarcotte@naic.org
Dan Daveline ddaveline@naic.org

Re: Request for Comments – Best Practices Procedures for IBT/Corporate Divisions

Dear Superintendent Dwyer and Commissioner Mulready:

Thank you for the opportunity to comment on the most recent Best Practices exposure. R&Q Insurance Holdings Ltd. (RQIH) continues to support the mission of the Restructuring Mechanisms (E) Working Group and shares the view that state insurance markets would benefit from greater uniformity and robust regulatory standards for Insurance Business Transfers (IBTs) and similar mechanisms.

Properly structured and regulated IBTs can benefit state insurance markets and consumers by strengthening the management of complex risks while promoting capital and operational efficiencies for transferring insurers, leaving them sounder and enabling them to redeploy resources to meet other marketplace needs. But in our view some additional clarity in portions of the recent Best Practices exposure may be helpful in assuring these positive outcomes should the Working Group's proposal become a common standard amongst the states.

Our comments fall into five main categories: the standard of review; licensure requirements; parental guarantees; reinsurance transfers; and the expected end state of this NAIC process. These comments and some suggested clarifications to the exposure are detailed in the following.

Standard of Review

We support the “no material adverse impact” standard and appreciate that this appears to have become the consensus view of the Working Group and interested parties. We raise it here simply to reaffirm our view on the issue since it has been a topic of some ongoing discussions.

Hamilton HM11, Bermuda

As has been well articulated by numerous regulators and interested parties, this is a well-tested and well-understood standard in successful use in the Part VII regime in the UK (which regime forms the basis of existing IBT laws in the US), in Oklahoma where IBTs are successfully occurring, in the US courts, and in contract law.

We believe that the other standards that have been discussed from time to time are less tested and could create unintended consequences, increasing the amount of subjectivity that could be applied in practice. These alternate standards could, for example, result in the denial of a proposed IBT transaction simply because of non-material differences in the RBCs of the transferor and transferee. If such a standard of review were to take hold, proposed transactions may not get to the point of being evaluated for their holistic benefit to consumers and a state's insurance marketplace. Additionally, transactions of essentially identical parameters might be approved in one jurisdiction but not another, decreasing instead of increasing uniformity in the state system of insurance regulation.

We therefore encourage that “no material adverse impact” remain the standard as the Best Practices undergoes further development.

Licensure Requirements

In our understanding, the Working Group has historically discussed the need for licensure of IBT transferees as necessary to assure the continuation of guaranty fund eligibility for insureds who would have been eligible for that coverage prior to the IBT transaction. We wholeheartedly support this, and thus appreciate that the most recent exposure draft contains language from the guaranty associations appearing to make clear that the need for licensure of a P&C IBT transferee in a given state or states is related to the impact such licensure would have on guaranty fund coverage. We raise the issue here just to encourage additional clarity around this intent, perhaps through added language such as the following: *“The licensure of transferees in non-domiciliary states should be required if necessary to preserve eligibility for guaranty fund coverage.”* We would suggest this be appended to Section II, 1. n. ii (page 5 of the exposure) and in subsequent references.

Parental Guarantees

A key premise of the Best Practices is that conditions post-transaction should not be materially different from conditions pre-transaction. But the exposure includes parental guarantee language that could be interpreted as creating material differences by placing requirements on a transferred book of business that did not exist prior to the transfer. Especially in cases where no parental guaranty has been in place, we wonder why it would be required after the transfer. Further, some transferees may not be part of a holding company system with a parent positioned to make such a guaranty. Thus, requiring guarantees may prevent IBTs from occurring in the future.

Accordingly, we respectfully suggest that the current references to parental guarantees be amended to specify that consideration may be given to guarantees if they were in place at the transferring insurer at the time of the IBT and the transferee is part of a holding company system in which such a guarantee is feasible. For example, Section II, 4. b. (page 8) might be revised to read: *“Where the transferring insurer provided such commitment and the transferee is part of a holding company system enabling such parental commitments, the plan may provide for a commitment of parental and other legally enforceable plans for financial support to run off operations in the event of:...”*

We note that these proposed guarantees appear to emanate from recommendations in a 1997 NAIC whitepaper, which was an initial look at the issue of restructurings some 26 years ago and which thus predated the successful completion of a large number of such transfers in the UK and elsewhere without such requirements.

Reinsurance Transfers

The Best Practices document and the discussions to date have understandably focused on the potential impact of IBTs on individual consumers. But in practice these transactions sometimes involve only books of reinsurance, where the policyholder is not an individual but another insurance company. We suggest that this be recognized in the NAIC proposal with a statement indicating that a transfer solely involving reinsurance, where the transferred policyholder is another insurer, may be considered by regulators as a positive factor in their evaluation of the potential for any material adverse impact on consumers.

Expected End State of this NAIC Process

We believe that additional clarity may be helpful regarding the NAIC process on these Best Practices going forward. We understand that the current goal is to present a finalized document for approval at the NAIC Fall National Meeting, but are unsure of the thinking beyond that point, for example with respect to measures that would further encourage broad adoption amongst the states. Any guidance on this matter would be appreciated.

Thank you for your attention to our comments and proposed refinements to this important exposure. We are available at your convenience should you have any questions in this regard.

Sincerely,

Peter L. Hartt
US Head of Compliance and Regulatory Affairs
R&Q Insurance Holdings Ltd.

R&Q Insurance Holdings Ltd. ('RQIH'), headquartered and operating in Bermuda with extensive operations in the US and Europe, is a leading provider of finality solutions for run-off portfolios and global program capacity for MGAs and their reinsurers. R&Q has a proven track record over three decades of acquiring discontinued books of non-life business and non-life (re)insurance companies and captives in run-off. We have access to capital and the experience of managing run-off which enables us to free management and investors from the cost and constraints of handling discontinued business. We can do this on both sides of the Atlantic with our licensed platforms in the US, Bermuda and Europe.

Draft: 8/17/23

Risk-Focused Surveillance (E) Working Group
Seattle, Washington
August 14, 2023

The Risk-Focused Surveillance (E) Working Group of the Financial Condition (E) Committee met in Seattle, WA, Aug. 14, 2023. The following Working Group members participated: Amy Malm, Chair (WI); Lindsay Crawford, Vice Chair (NE); Blase Abreo (AL); Laura Clements and Michelle Lo (CA); William Arfanis and Jack Broccoli (CT); Ainsley Hurley and Bradley Trim (FL); Daniel Mathis (IA); Cindy Andersen (IL); Roy Eft (IN); Stewart Guerin (LA); Dmitriy Valekha (MD); Vanessa Sullivan (ME); Steve Mayhew and Judy Weaver (MI); Debbie Doggett, John Rehagen, and Shannon Schmoeger (MO); Angela Hatchell (NC); Pat Gosselin (NH); David Wolf (NJ); Mark McLeod (NY); Dwight Radel (OH); Diane Carter, Andrew Schallhorn, and Eli Snowbarger (OK); Diana Sherman (PA); Ted Hurley and John Tudino (RI); Johanna Nickelson (SD); Amy Garcia (TX); Jake Garn (UT); Greg Chew and David Smith (VA); Dan Petterson (VT); and Steve Drutz and Tarik Subbagh (WA).

1. Discussed Updated Guidance for Reviewing Affiliated Service Agreements

Malm stated that the first agenda item is to discuss an updated draft of proposed edits to NAIC handbooks to provide additional guidance for state insurance regulators in reviewing and monitoring transactions and service agreements between insurers and their affiliates. An updated draft of proposed revisions to both the NAIC's *Financial Analysis Handbook* and the *Financial Condition Examiners Handbook* was included in the meeting materials. The updated draft was revised in response to comments received during a recent exposure period, which ended May 8.

Comments were received from UnitedHealthcare and a joint group of interested parties, which primarily focused on placing guidance in the handbooks related to cost-plus reimbursement contracts. The comments were considered by members of the Affiliated Services Drafting Group in developing the updated draft, which included state insurance regulators from Connecticut, Idaho, Maine, North Carolina, Pennsylvania, Texas, Virginia, and Wisconsin.

Bruce Jenson (NAIC) provided an overview of the updated guidance, which included additional language on cost-plus reimbursement contracts whereby the rate charged under the agreement is based upon the cost to perform the service plus a negotiated fee/profit margin to recognize the risk of providing the service. He stated that the guidance indicates that these types of agreements should only be entered into as a method of last resort and may not be acceptable in all jurisdictions.

Chew stated that state insurance regulators recognize that the "method of last resort" language is not viewed favorably by the industry. He proposed the removal of that language from the draft and replacement with language indicating that the state insurance regulator should determine if the company has provided documentation sufficient to support the cost-plus methodology or if another methodology should be suggested. Malm and Broccoli expressed their support for this proposal.

Tom Finnell (America's Health Insurance Plans—AHIP) stated that interested parties object to the "method of last resort" language, as cost-plus methodology is widely used across the industry and is even required by some international jurisdictions for service agreements that involve international affiliates. He agreed that the change proposed by Chew would adequately address the industry concerns.

Malm stated that the guidance has been exposed multiple times over a period of almost two years and has gone through various iterations in response to the comments received. She stated although the guidance is not perfect, it is an improvement over what currently exists in NAIC handbooks, and it will be important in assisting states to review the increased number and complexity of affiliated service agreements being filed with state insurance departments.

Chew made a motion, seconded by Mathis, to refer the proposed guidance to the Financial Analysis Solvency Tools (E) Working Group and the Financial Condition Examiners Handbook (E) Technical Group for consideration of adoption. The motion passed unanimously.

2. Discussed Next Steps in Addressing the 2022 Macroprudential (E) Working Group Referral

Malm stated that the next agenda item is to discuss the Working Group's next steps in responding to the 2022 referral from the Macroprudential (E) Working Group. This referral relates to issues in affiliated service agreements that are being recognized more frequently in private equity (PE)-owned insurers. While the guidance just discussed does not yet address these issues, state insurance regulators wanted to finalize general affiliated services guidance before moving into the more specific topics raised in the referral.

The referral covers two different topics that the Risk-Focused Surveillance (E) Working Group was asked to consider related to affiliated investment management agreements (IMAs) and capital maintenance plans. Regarding the first topic, the referral recommends that the Working Group consider:

The material terms of the IMA and whether they are arm's length, address conflicts of interest — including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

The referral also includes some notes from state insurance regulator discussions on this topic, as well as comments received from Risk & Regulatory Consulting LLC (RRC). Malm asked Ed Toy (RRC) to provide an overview of the topic and issues the Working Group should consider in addressing the referral.

Toy stated that the review of IMAs should focus on several key areas to assess whether the agreements were fair and reasonable to the company and policyholders, including the following:

- Is the investment manager registered under the Investment Advisers Act of 1940 (40 Act), and does it acknowledge the fiduciary standard of care?
- Are investment guidelines included and sufficiently detailed to guide the investment managers' activities and allow the company to assess compliance and performance?
- Are the management fees fair and appropriate, reflecting the type of assets managed, the total assets under management, and the investment strategy in the context of the current market?
- Are there appropriate termination provisions?
- Are the investment managers allowed to engage sub-advisers? Does the company have control over such engagements? Who is responsible for the management fees of the sub-advisers?
- Are there adequate reporting requirements that include sufficient information for the company to monitor the investment manager and meet its reporting and regulatory needs?
- Is there language to address the potential for conflicts of interest?

Arfanis asked whether in Toy's experience most affiliated investment managers being utilized by insurers are registered under the 40 Act. Toy stated that his experience has been that 85–90% of affiliated investment managers are registered under the act. However, he stated that newer or less experienced insurance groups are more likely to utilize affiliated investment managers that are not registered under the act.

Jenson asked whether an IMA with broad investment guidelines could result in control of the insurer being ceded to a related party investment manager, as the investment manager could be placed in a position to make most investment decisions on behalf of the insurer. Toy indicated that it is important to ensure that IMAs provide sufficient guidance on the types of investments acceptable to the insurer to provide effective oversight and avoid granting control of the insurer through the agreement. All IMAs grant some discretionary authority to investment managers, but it is important to ensure that there are appropriate bounds to the discretion granted through the agreement.

Malm thanked Toy for his overview of the topic and recommended that a drafting group be formed to develop guidance to assist state insurance regulators in reviewing affiliated IMAs. She encouraged anyone interested in participating in the drafting group to contact NAIC staff to participate in the project.

Malm stated that the other topic addressed in the referral asks the Working Group to consider the following:

Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer's overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.

The referral encourages the Working Group to consider the development of additional guidance on how to require or strengthen capital maintenance agreements between an insurer and its parent company to address these concerns. Malm asked NAIC staff to develop some additional guidance on this topic for the Working Group to consider in a future meeting.

3. Discussed the Financial Analyst/Examiner Salary Survey

Malm stated that a survey of all the states to collect information on pay rates for common financial analysis and examination positions was closed on June 30. Responses to the survey were received from 40+ states and three different contact examination firms. NAIC staff are working to clean the data, adjust it for localized cost of living rates, and then aggregate it to calculate national and regional averages for the various positions.

After the current pay rates are analyzed and aggregated, NAIC staff plan to pull together external market data for comparison, including industry information and salary rates for federal and state banking regulators. The results will then be compared against the existing pay ranges in NAIC handbooks, which will likely result in proposed adjustments to the ranges. The proposed adjustments will be presented to the Working Group for review and adoption ahead of the Fall National Meeting.

4. Received an Update on 2023 Peer Review Sessions

Crawford stated that the NAIC Peer Review Program provides an opportunity for a group of experienced financial analysts and examiners to participate in reviewing each other's recently completed analysis and examination files.

The peer review discussions provide an opportunity to identify both best practices and opportunities for improvement within individual files and on an aggregate level across the country.

Crawford reported that three different peer review sessions have been held in 2023, all of which received excellent participation and feedback from all participants. A financial analysis session was held in February, with a total of 10 states participating in that session. In May, a financial exam session was held with a contractor-led examination theme. Six different states participated in that session, along with contract firm representatives, with a focus on identifying best practices in effectively utilizing contractors to conduct examinations. This session led to several new sound practices being identified and resulted in a referral being sent to the Financial Analysis Solvency Tools (E) Working Group and the Financial Condition Examiners Handbook (E) Technical Group on coordination between analysts and examiners during the fieldwork stages of an exam.

In July, a special Own Risk and Solvency Assessment (ORSA) financial analysis session was held with six states participating. The focus of this session was to identify sound practices in reviewing ORSA filings and incorporating them into financial analysis. Several new sound practices were identified through this session, which NAIC staff are still working to accumulate and finalize.

Crawford stated that due to other ongoing projects and construction at the NAIC central office, the Risk-Focused Surveillance (E) Working Group has decided not to hold any more peer review sessions in 2023. Instead, the Working Group plans to put together a comprehensive webinar for department chiefs and supervisors on the sound practices identified through NAIC peer review sessions to date. The goal of this webinar will be to encourage department leadership to support staff in their implementation of sound practices identified through peer review.

Crawford stated that plans for 2024 include holding another financial analysis session in the first quarter of the year, as well as scheduling two to three additional peer review sessions to meet demand once the NAIC central office is reconfigured.

Having no further business, the Risk-Focused Surveillance (E) Working Group adjourned.

Clarifications for the MWG Reinsurance Worksheet

**Summary Response to Comments Received
 Joint FSTF/MWG Call
 June 20, 2023**

<p>1. OPTIONAL TOOL: This worksheet is designed as an OPTIONAL tool to assist lead state/domiciliary regulators when reviewing reinsurance transactions to allow them to obtain the information necessary to understand the economic impacts, typically upon initial review of the proposed transaction but also potentially when the lead state/domiciliary regulator is performing a historical review of the transaction for some specific purpose.</p>
<p>2. NOT AN ONGOING FILING: This worksheet is NOT for use as an ongoing filing with the NAIC and/or the lead/domiciliary state. It is an EDUCATIONAL tool for lead state/domiciliary regulators to use on an ad hoc basis as needed.</p>
<p>3. ONLY USED IF NEEDED: The worksheet is NOT designed to be used with EVERY reinsurance transaction. It is designed as a consistent tool for lead state/domiciliary regulators to use when reviewing reinsurance transactions for which they need to determine the economic impacts of said reinsurance transactions. If a reinsurance transaction is easily understood without the use of this worksheet, then a worksheet would not be used by the lead state/domiciliary regulator.</p>
<p>4. NOT A FIXED TEMPLATE: The worksheet is NOT a fixed template which MUST be used to answer the lead state/domiciliary regulators’ information needs. If an insurer has materials used in its own assessment of the reinsurance transaction which answer the information needs of the lead state/domiciliary regulator expressed in the worksheet, then those materials may be accepted by the lead state/domiciliary regulator rather than requiring the insurer to use the worksheet format. Every effort should be made to avoid duplicate requests for information.</p>
<p>5. OPEN TO REINSURANCE TYPE: The worksheet was designed with life reinsurance transactions as the initial focus, but there is no reason to limit this tool to life reinsurance transactions. If the lead state/domiciliary regulator has a P/C reinsurance transaction for which they are struggling to understand the economic impact (despite any existing notes, interrogatories, and Schedule F disclosures for already approved transactions), the lead state/domiciliary regulator would be able to use the worksheet to request the needed information, with appropriate edits. Again, this worksheet should not be used if the lead state/domiciliary regulator has a clear understanding of the transaction from data already provided.</p>
<p>a. Similarly, the worksheet was designed with affiliated transactions as the initial focus, but a lead state/domiciliary regulator should use the template for unaffiliated transactions if existing information does not provide a clear understanding of the transaction.</p>
<p>6. NOT REINSURANCE POLICY: The Macroprudential (E) Working Group is working in coordination with the Reinsurance (E) Task Force. This optional, informational tool is not intended to impact any of its reinsurance policies or procedures, such as the qualified/reciprocal jurisdiction evaluation process or the U.S. Covered Agreement.</p>
<p>7. ONLY REFERENCED IN HANDBOOKS: The worksheet is not included in the Financial Analysis Handbook or the Examination Handbook, although it may be referenced there as an optional tool. The worksheet will be available on StateNet.</p>
<p>8. CONFIDENTIALITY: The worksheet would be confidential under a states existing confidentiality laws and regulations in place to assess such transactions.</p>

Transaction Details				
Please identify the following transaction details if applicable:				
Which party of the contract are you (assuming or retro)ceding?	Contract 1 (if needed)	Contract 2 (if needed)	Contract 3 (if needed)	Contract 4 (if needed)
Description risk category covered (mortality, longevity, Cat Risk, etc.)				
Start date				
End date				
Currency				
Sum Insured / Gross Notional amount / PML				
Capital at risk				
Line of Business (e.g. annuities, term, participating guarantee, etc.)				
Risks covered (e.g. longevity, mortality, etc.)				
Type of reinsurance treaty (XOL, Quota share – proportionate, etc.)				
Collateral value				
Value of guarantee				
Name(s) of the reinsurer(s) (please only include top 3 by premium share if more than one)				
Rating of reinsurer(s)				
Countries of reinsurer(s)				
Assets pledged by reinsurer				
Initial premium				
Initial fees				
Value of reserves				
Ceding commission structure				If yes, please provide a brief description
Any experience refund or loss carryforward features				If yes, please provide a brief description
Do you use or plan to use any form of derivatives for reinsurance purposes (e.g. longevity or mortality swaps)?				If yes, provide description of these derivatives
Was any debt or surplus note issued in connection with the transaction? Ex. Such as in an embedded value securitization				If yes, please provide a brief description
Please identify and describe if any of the following types of arrangements are associated with this transaction:	Description			
Trust	Please describe Exit mechanism if known			
Funds Withheld				
Coinsurance				
Modified Coinsurance				
Sidecars				
Any other Joint Venture or SPV				
Third-party capital				
Ceded and Retroceded Details	Reinsurer Name	Jurisdiction		
If ceding to an offshore affiliate please identify the assuming affiliated reinsurer(s) and their regulatory jurisdiction				
If ceding to an offshore affiliate and that affiliate is going to retrocede to another reinsurer, please identify the ultimate assuming reinsurer(s) and their regulatory jurisdiction				
Key Definitions				
PML -Probable Maximum Loss				
Capital at risk -required capital or capital charge				
Collateral value -the market value of securities pledged as collateral if a trust is set up in connection with the transaction.				
Value of the guarantee - For example, third party guarantees in non-standard types of reinsurance, e.g. an MGA owns affiliated insurers, an unaffiliated reinsurer reinsures with the MGA affiliate with a guarantee from the MGA.				

Interpretation of the Statutory Accounting Principles (E) Working Group

Net Negative (Disallowed) Interest Maintenance Reserve

INT 23-01 Dates Discussed

April 10, 2023, June 28, 2023, August 13, 2023

INT 23-01 References

Current:

*SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve
Annual Statement Instructions*

INT 23-01 Issue

1. The statutory accounting guidance for interest maintenance reserve (IMR) and the asset valuation reserve (AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within *SSAP No. 7* is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the annual statement instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance residing within the annual statement instructions.

2. As detailed in *SSAP No. 7*, paragraph 2, the guidance for IMR and AVR applies to life and accident and health insurance companies and focuses on IMR and AVR liability recognition and distinguishing between IMR and AVR:

2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

3. The IMR guidance in the annual statement instructions provides information on the net balance. A positive IMR represents net interest rate realized gains and is reported as a liability on a dedicated reporting line. A negative disallowed IMR represents net interest rate realized losses and is reported as a miscellaneous other-than-invested write-in asset in the general account and nonadmitted.

4. IMR balances between the general account and separate accounts are separate and distinct. Meaning, a net negative IMR in the general account only represents activity that occurred in the general account that was allocated to IMR. However, the net positive or negative balance of the general account influences how the net positive or negative balances are reported in separate account statements (and vice versa). (A net negative IMR balance in the general account may not be disallowed if there is a covering net positive IMR in the separate account. Negative IMR that is not disallowed is reported as a contra-liability.) The instructions for reporting the net negative and positive balances are detailed in the annual statement instructions:

Line 6 – Reserve as of December 31, Current Year

23-01T-1

INT 23-01

Appendix B

Record any positive or allowable negative balance in the liability line captioned "Interest Maintenance Reserve" on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the "Change in Disallowed Interest Maintenance Reserve" in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement. The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
 - b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
 - c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
 - d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
 - e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
 - f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.
5. In October 2022, the ACLI requested the Statutory Accounting Principles (E) Working Group to reassess the guidance for net negative (disallowed) IMR, with a request to consider admittance of those amounts. The ACLI noted that the nonadmittance of disallowed negative IMR can have adverse negative ramifications for insurers with two key themes:

23-01-2

Net Negative (Disallowed) IMR

INT 23-01

- a. In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.
- b. Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

6. In considering the request, the Working Group concluded that, for year-end 2022, there would be no change to statutory accounting guidance and deviations from statutory accounting principles would need to be approved via a permitted or prescribed practice. The Working Group then held company-specific educational sessions in January 2023 to receive detailed information regarding negative IMR and received a subsequent comment letter from the ACLI.

7. During the 2023 Spring National Meeting, the Working Group further discussed the topic of negative IMR and directed NAIC staff to proceed with drafting guidance for a 2023 solution and to begin work towards a long-term solution.

INT 23-01 Discussion

8. This interpretation prescribes limited-time, optional, statutory accounting guidance, as an exception to the existing guidance detailed in SSAP No. 7 and the annual statement instructions that requires nonadmittance of net negative (disallowed) IMR as a short-term solution. Specifically, this interpretation impacts the annual statement instruction rules regarding disallowed negative IMR detailed in rules 'b,' 'd' and 'f' shown in paragraph 4. As this interpretation overrides existing guidance, it will require a 2/3rd vote.

9. Reporting entities are permitted to admit net negative (disallowed) IMR with the following restrictions:

- a. Reporting entities that qualify pursuant to paragraph 9b, are permitted to admit net negative (disallowed) IMR up to 10% of the reporting entity's adjusted general account¹ capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner. The capital and surplus shall be adjusted to exclude any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted² net negative (disallowed) IMR.
- b. Reporting entities applying this interpretation are required to have a risk-based capital (RBC) greater than 300% after an adjustment to total adjusted capital (TAC) that reflects a reduction to remove any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted net negative (disallowed) IMR. Compliance with this adjusted RBC calculation shall be affirmed for all quarterly and annual financial statements for which net negative (disallowed) IMR is reported as an admitted asset in the

¹ The general account capital and surplus includes surplus reflected in the separate account; therefore, an aggregation of general account and separate account surplus is not necessary.

² As the separate account does not have "admitted" assets, broad reference to "admitted net negative (disallowed) IMR" throughout this interpretation includes what is admitted in the general account and what is recognized as an asset in the separate accounts.

INT 23-01

Appendix B

general account or recognized as an asset in the separate accounts. Reporting entities shall provide documentation to illustrate compliance with this requirement upon state regulator request. Reporting entities with an adjusted RBC calculation of 300% or lower are not permitted to admit net negative (disallowed) IMR in the general account or recognize IMR assets in the separate accounts.

- c. The net negative (disallowed) IMR permitted for admittance shall not include losses from derivatives that were reported at fair value prior to derivative termination³ unless the reporting entity has historically followed the same process for interest-rate hedging derivatives that were terminated in a gain position. In other words, there is a requirement for documented, historical evidence illustrating that unrealized gains from derivatives reported at fair value were reversed to IMR (as a liability) and amortized as part of IMR. Reporting entities that do not have evidence of this past application are required to remove realized losses from derivatives held at fair value from the net negative (disallowed) IMR balance to determine the amount permitted to be admitted. Reporting entities that begin a new process for the use of hedging derivatives, perhaps with a theoretical process to treat derivative losses and derivative gains similarly, but do not have evidence illustrating the historical treatment of derivative gains through IMR are not permitted to include derivative losses in the net negative (disallowed) IMR permitted to be admitted. This evidence is required separately for the general account, insulated separate account and non-insulated separate account if losses from derivatives previously reported at fair value are currently being allocated to IMR in those accounts.
10. Reporting entities that admit net negative (disallowed) IMR shall follow the following process:
 - a. All net negative (disallowed) IMR in the general account shall first be admitted until the capital and surplus percentage limit, as detailed in paragraph 9.a, is reached.
 - b. If all general account net negative (disallowed) IMR has been fully admitted, and the reporting entity is still below the paragraph 9.a capital and surplus limit, then the reporting entity can report net negative (disallowed) IMR as an asset in the separate accounts. Reporting entities that have both insulated and non-insulated separate accounts shall recognize IMR assets proportionately between the insulated and non-insulated statements until the aggregated amount recognized as an admitted asset in the general account and as an asset in the insulated and non-insulated statements reaches the percentage limit of capital and surplus detailed in paragraph 9a.
 11. Reporting entities that admit net negative (disallowed) IMR in the general account shall report the admittance in the balance sheet as follows:
 - a. Reporting entities shall report the net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 25) (named as “Admitted Disallowed IMR”) on the asset page. The net negative (disallowed) IMR shall be admitted to the extent permitted per paragraph 9a, with the remaining net negative (disallowed) IMR balance nonadmitted.
 - b. Reporting entities shall allocate an amount equal to the general account admitted net negative (disallowed) IMR from unassigned funds to an aggregate write-in for special surplus funds (line 34) (named as “Admitted Disallowed IMR”). Although dividends are

³ Reference to derivative termination throughout this interpretation includes all actions that close out a derivative, including, but not limited to, termination, expiration, settlement, or sale.

Net Negative (Disallowed) IMR

INT 23-01

contingent on state specific statutes and laws, the intent of this reporting is to provide transparency and preclude the ability for admitted negative IMR to be reported as funds available to dividend.

12. Reporting entities that record net negative (disallowed) IMR as an asset in the separate account shall report the recognition in the balance sheet as follows:

- a. Reporting entities shall report the permitted net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 15) (named as “Recognized Disallowed IMR”) on the asset page.
- b. Reporting entities shall allocate an amount from surplus equal to the asset recognized as disallowed IMR as an aggregate write-in for special surplus funds (line 19) (named as “Recognized Disallowed IMR) on the liabilities and surplus page.

13. Reporting entities admitting net negative (disallowed) IMR are required to complete the following disclosures in the annual and quarterly financial statements for IMR:

- a. Reporting entities that have allocated gains/losses to IMR from derivatives that were reported at fair value prior to the termination of the derivative shall disclose the unamortized balances in IMR from these allocations separately between gains and losses.
- b. Reporting entities shall complete a note disclosure that details the following:
 - i. Net negative (disallowed) IMR in aggregate and allocated between the general account, insulated separate account and non-insulated account,
 - ii. Amounts of negative IMR admitted in the general account and reported as an asset in the separate account insulated and non-insulated blank,
 - iii. The calculated adjusted capital and surplus per paragraph 9a, and
 - iv. Percentage of adjusted capital and surplus for which the admitted net negative (disallowed) IMR represents (including what is admitted in the general account and what is recognized as an asset in the separate account).
- c. Reporting entities shall include a note disclosure that attests to the following statements:
 - i. Fixed income investments generating IMR losses comply with the reporting entity’s documented investment or liability management policies,
 - ii. IMR losses for fixed income related derivatives are all in accordance with prudent and documented risk management procedures, in accordance with a reporting entity’s derivative use plans and reflect symmetry with historical treatment in which unrealized derivative gains were reversed to IMR and amortized in lieu of being recognized as realized gains upon derivative termination.
 - iii. Any deviation to 13.c.i was either because of a temporary and transitory timing issue or related to a specific event, such as a reinsurance transaction, that mechanically made the cause of IMR losses not reflective of reinvestment activities.

INT 23-01**Appendix B**

- iv. Asset sales were not compelled by liquidity pressures (e.g., to fund significant cash outflows including, but not limited to excess withdrawals and collateral calls).

INT 23-01 Status

14. The consensuses in this interpretation were adopted on August 13, 2023, to provide limited-time exception guidance to SSAP No. 7 and the annual statement instruction for the reporting of net negative (disallowed) IMR. The provisions within this interpretation are permitted as a short-term solution until December 31, 2025, and will be automatically nullified on January 1, 2026.

15. The effective date of this interpretation may be adjusted (nullified earlier or with an extended effective date timeframe) in response to Statutory Accounting Principles (E) Working Group actions to establish statutory accounting guidance specific to net negative (disallowed) IMR.

16. Further discussion is planned.

Net Negative (Disallowed) IMR

INT 23-01

Application Guidance for Admitting / Recognizing Net Negative (Disallowed) IMRGeneral Account:

1. Net negative IMR in the general account that exceeds net positive IMR in the separate accounts is considered “disallowed” general account IMR. (Determination of the disallowed IMR in the general account shall be compared against the aggregate IMR balance in all separate accounts.)
2. Net negative disallowed IMR in the general account shall be reported as an aggregate write-in for other-than-invested assets as “Admitted Disallowed IMR” on line 25 of the asset page and nonadmitted. The change in nonadmittance shall be reported on line 41 in the summary of operations.
3. To the extent the reporting entity is permitted to admit net negative disallowed IMR pursuant to the provisions in this interpretation, the reporting entity shall admit the disallowed IMR reported on line 25 of the asset page to the extent permitted, with the change in nonadmittance reflected on line 41 in the summary of operations.
4. Reporting entities shall report an amount equal to the general account admitted net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 34 of the Liabilities, Surplus and Other Funds page) named as “Admitted Disallowed IMR.”
5. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

Separate Account:

6. Net negative IMR in the separate account (aggregated IMR in both insulated and non-insulated separate accounts) that exceeds net positive IMR in the general account is considered “disallowed” separate account IMR. If the aggregate separate IMR is positive, with a negative IMR in the insulated separate account and positive IMR in non-insulated separate account (or vice versa), then the negative IMR in the insulated separate account is not permitted to be reported as an asset. In those situations, the separate account has an aggregate positive IMR balance.
7. Net negative (disallowed) IMR in the separate account permitted to be recognized as an asset, as the admittance in the general account did not utilize the full percentage of adjusted capital and surplus permitted within this interpretation, shall be proportionately divided between insulated and non-insulated separate accounts if both separate accounts are in a negative position. If the separate account IMR is an aggregate net negative, but only one separate account blank is in a negative position, then only the separate account blank with a net negative position can recognize disallowed IMR as an asset.
8. If negative IMR in the separate account has previously been recognized as a direct charge to surplus, the reporting entity shall recognize an asset as an aggregate write-in for other-than-invested assets as “Recognized Disallowed IMR” on line 15 of the separate account asset page, with an offsetting credit to surplus. This credit to surplus shall reverse the charge previously recognized. This process shall continue in subsequent quarters if additional separate account IMR is permitted as an asset to the extent IMR was previously taken as a direct charge to surplus. Once prior surplus impacts have been fully eliminated, then the entity shall follow the guidance for new net negative (disallowed) IMR as detailed in the following paragraph. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.
9. If the reporting entity enters a net negative (disallowed) IMR position (meaning, there has not been a prior charge to surplus for net negative (disallowed) IMR), then the entity shall recognize the asset as

INT 23-01

Appendix B

an aggregate write-in for other-than-invested assets as “Disallowed IMR” on line 15 of the separate account balance sheet, with an offsetting credit to IMR (line 3 of the liability page) until the IMR liability equals zero. This process shall continue in subsequent quarters if additional net negative IMR is generated from operations and is permitted as an asset under the provisions of this interpretation. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.

10. Reporting entities shall report an amount equal to the asset recognized reflecting net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 19) (named as “Recognized Disallowed IMR.” This shall be included in each separate account statement (insulated and non-insulated) if net negative disallowed IMR is recognized as an asset in that statement.
11. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

 Office of the Superintendent of Financial Institutions Canada / Bureau du surintendant des institutions financières Canada

NAIC Summer National Meeting

OSFI's Recent Journey with Insurance Data and Analytics August 15, 2023

Jacqueline Friedland, FCIA, FCAS, FSA
 Executive Director
 Risk Assessment and Intervention Hub

Outline

- Personal background
- It started with the FCT
- Another winter holiday, another analytics project (RADAR)
- Meltwater media monitoring tool
- More AI in use – reinsurance NLP pilot
- OSFI Blueprint and transformation
- OSFI data and analytics and next steps

2

Personal background – provides context for the story

- Actuary by training
- More than 35 years in industry (consulting and insurers)
- Author of CAS and SOA textbooks used for actuarial examinations
- Advisory committee member of University of Waterloo and University of Toronto actuarial programs
- Transformation expertise
- Mantra: enhance efficiency and effectiveness (neither at the expense of the other)
- Joined OSFI fall 2020 in P&C insurance
- Was not (am not) your typical supervisor

3

It started with FCT

- Obligation of AA to conduct FCT annually
- Single most important report from the perspective of prudential regulation – too important to only be understood by actuarial specialists
- Rigorous actuarial standards of practice and very strong relationship of CIA and OSFI have led to high quality of FCT reports
- FCT includes solvency and going concern scenarios
- Challenge I faced:
 - How do I teach supervisors (not actuarial specialists) how to use and what to look for in the FCT
 - How do I make the process for review of FCT reports most efficient and effective
- Benefits I had:
 - Teaching experience
 - President of the CIA

4

Looking for efficiency and effectiveness

- o Estimates of time to analyze FCT report:
 - 2 days max per insurer
 - ½ day read text with focus on executive summary and charts / tables
 - 1 day use FCT tool to help develop conclusions with respect to risk assessment
 - ½ day document findings and ratings
- o Use tool to answer questions such as:
 - Were the current selected scenarios, assumptions, and ripple effects, consistent with prior year for the same insurer and were they consistent with peers?
 - Was the affect of a particular adverse scenario on key financial metrics consistent with prior year for the same scenario for the insurer and consistent with peers for the same scenario?
 - Were the differences in actual results and expected results (which could be calculated given data entry from the prior year FCT) within a reasonable range, and specifically were they greater than the standard of materiality selected by the AA?
 - Were key financial ratios that could be derived from the base scenario (which is required by actuarial standards to be based on the insurer's plan) consistent with historical experience?
 - Were changes in the insurer's strategy appropriately reflected in the base and adverse scenarios?

FCT version 1 – P&C and mortgage insurers only

- o Started during Christmas break (2022), with six colleagues willing to be testers (tremendous benefits of early adopters)
- o Excel-based tool with five tabs: instructions, general information, adverse scenarios, analysis, VU (OSFI's supervisory system of record)
- o Clearly marked cells for data entry vs. calculations, conditional formatting drew user's attention in analysis tab, conditional tests made it clear where action was needed
- o Create Users Guide at same time that tool was developed (translation to French)
- o Special coding for each row and column to enable aggregation for peer group and trend analyses by our analytics teams
- o Roll out in January, require use immediately (training and drop-in sessions)
- o Data input in version 1 by lead supervisors (LSs)
- o First year of use, LS needed to enter prior and current year information

FCT version 1.5 – Intelligent Automation Information Extraction and Template Filling (AI / NLG)

FCT version 1.5 Conclusions – 1 of 2

- o Automated NLP tool was used to extract data from FCT report to validate quality of the FCT template submissions across 147 P&C insurers
- o The tool was developed in Python to identify and extract data from tables in PDF documents using several applications, including:
 - Coding via Jupyter Notebook in TES DSVM
 - Ghostscript – pdf interpreter
 - Pooler – pdf to xml converter
 - Python – delegator, Pandas, openpyxl
- o Each FCT report contained ~100 to 300+ pages and 100+ tables with limited standardized format
- o Results were promising as it was found that 85% of data were correctly extracted and filled, 11% were missing, and 4% were incorrectly captured
- o Causes of incorrect data capture primarily related to differing formats and non-standardized data (e.g., reporting in \$000 or \$M)

FCT version 1.5 Conclusions – 2 of 2

- o Data extracted from FCT (PDF) Report were compared against data submitted through FCT template to identify potential reporting errors across 95 P&C insurers’ base scenarios, about 10k data points
- o We discovered that 5.5% of data points in the base scenario were inconsistent
 - Some data divergence (3.7%) was due to unit difference, rounding, and negative sign
 - 1.3% of data points had potential reporting errors
 - 0.5% were due to data extraction errors

9

FCT version 2

- o Discussed work with FCT at OSFI’s P&C Actuarial Advisory Committee and with relevant CIA committees
- o P&C AAs agreed to complete the FCT template for FCTs prepared in 2022 (big saving for LSs)
- o FCT template (in Excel) became a regulatory return
- o Expanded to life AAs in 2023
- o No push back from AAs
- o Significant retooling required in 2023 due to IFRS 17
- o Test and learn – lots of learning as move to Power BI and then back to Excel
- o Still a work in progress!

10

Another winter holiday, another analytics project

- o Serve in new role with new industries, new data, and new metrics
- o See tons of Power BI dashboards but missing the “so what”
- o Ask for an Excel dump with ten years of quarterly data for each industry (P&C insurance, life insurance, and banks) and begin to play
- o Pull out my university statistics textbook (with a 1981 copyright date)
- o Begin to create Users Guide as I create the tool
- o Build with colleagues who will be the early adopters
- o Collaborate widely across teams – expect this will be big (and it was!)
- o Align metrics to OSFI’s new Supervisory Framework with emphasis on business risk and financial resilience
- o Strive to deliver v1 working in environment where the following are prioritized:
 - Efficiency over perfection
 - Innovation over status quo
 - Transparency over harmony

11

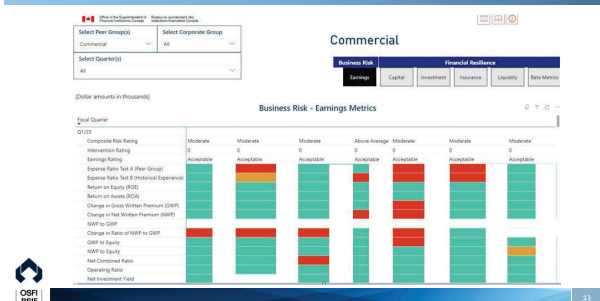

Risk Assessment Data Analytics Report (RADAR)

- o Interactive dashboard of common financial risk indicators across insurance and banking
- o Integrated with the new Supervisory Framework focusing on financial resilience
- o Includes business risk components and supervisory ratings
- o Initial step in the risk assessment and monitoring process for all institutions
 - For smaller, less complex institutions, use of RADAR may be all an LS needs
 - For larger institutions, use of RADAR helps focus and prioritize an LS’s work
- o Colour coding indication for areas of potential concern or follow up (calibrated across peers and historical trends)
- o Supported by comprehensive user guides and interactive training

12

Risk Assessment Data Analytics Report (RADAR)

Risk Assessment Data Analytics Report (RADAR)

How to Use RADAR

RADAR generates key financial metrics based on financial information obtained from FRIF's quarterly regulatory returns. For each quarter, monitoring would begin with a review of the FRIF's financial metrics. The LS would note any metrics outside of the usual ranges and the amounts by which such values deviate from the set ranges, if applicable.

A FRIF's financial metrics are used to determine the level of supervisory attention required. A metric that falls outside of the usual range is not necessarily considered adverse. In some quarters, it may not be unusual for financially stable FRIFs to have more than one metric with results outside of the usual range. For example, a rise or decline in the equity market may result in a significant change in shareholder equity for a company (or not available assets if a branch). Because shareholder equity (or not available assets) is used as the divisor in some of the metric calculations, these metrics may fall outside of their usual range. The metrics and trends are valuable in identifying FRIFs likely to experience financial difficulties. The metrics are not, in themselves, indicative of an adverse financial condition.

RADAR will be modified over time to reflect continuous improvement initiatives. Ongoing feedback to the SD&I team from LSs is strongly encouraged.¹

1. Earnings

1.1 Expense Ratio, Test A (Peer Group)
1.2 Expense Ratio, Test B (Historical Experience)

Purpose²

An insurer's expense ratio is a measure of profitability calculated by dividing the expenses associated with acquiring, underwriting, and servicing policies by the insurance revenue of the insurer. An insurer's expenses include (but are not limited to) advertising and marketing, employees' wages, commissions for the sales force, technology expenses, rental costs, and office equipment. The expense ratio is a measure of an insurer's efficiency before factoring in claims on the policies underwritten or investment gains or losses. The expense ratio is combined with the [solvency ratio](#) to determine an insurer's [solvency ratio](#).

Calculation

Under FRIS 4, the calculation of the expense ratio was:

$$\text{Expense ratio} = (\text{gross commissions} - \text{ceded commissions} + \text{taxes} + \text{other acquisition expenses} + \text{general expenses}) / \text{net earned premium}$$

Under FRIS 12, the calculation of the expense ratio is:

$$\text{Expense ratio} = (\text{amortization of insurance acquisition cash flows} - \text{amortization of reinsurance acquisition cash flows} + \text{general and operating expenses} - \text{interest on debt} - \text{other interest expense} - \text{other finance costs}) / (\text{insurance revenue} + \text{allocation for reinsurance premiums})$$

Test A (Peer Group)

This test compares the current quarter expense ratio to values that were selected based on a detailed review of the historical experience by different product types³ for federally regulated PFC insurers.

Meltwater Media Monitoring Tool (real AI) – 1 of 5

- o From the viewpoint of the leader who was never a supervisor ... what do I need to do to a successful LS?
 - Read, understand, assess the material sent by the insurer to me at quarter-end and year-end
 - Read, understand, assess the major actuarial reports including the valuation of insurance contract liabilities and the FCT reports
 - Conduct reviews (on-site, off-site, desk, thematic, etc.) on specific topics of interest and / or concern
 - Stay aware of what is happening with the insurer
- o Are there tools that can help me do any of the above more efficiently and effectively?
- o Meltwater is tremendous for staying aware
- o In our RMOG team, there are LSs with portfolios of 12-15 insurers, use of Meltwater is critical to their success in being informed in a timely manner – equally critical for our largest IAIGs

Meltwater Media Monitoring Tool – 2 of 5

- o Allows for monitoring of media and social media across companies, industries, and topics
- o Used for institution and parent company monitoring
- o Ability to identify media spikes, trends, risks, and sentiment

Meltwater Media Monitoring Tool – 3 of 5

Tracking customers comments about insurance and perceived climate risk issues.

Meltwater Media Monitoring Tool – 4 of 5

Negative Sentiment

More AI in use ... Reinsurance NLP Pilot

- o Rough reinsurance renewal season year-end 2022
- o Seeking details about reinsurance use (attachment points, percentage participation, limits, etc.)
- o Information exists in AA reports on liabilities and FCT but in varied, unstructured formats that lack consistency across insurers and time
- o Experimenting with natural language processing to extract details from actuarial reports
- o Quality of extraction is dependent on defined parameters and ability to train extraction model
- o Test and learn

Accounting Practices and Procedures (E) Task Force
Seattle, Washington
August 14, 2023

The Accounting Practices and Procedures (E) Task Force met in Seattle, WA, Aug. 14, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Jamie Walker (TX); Mike Causey, Vice Chair, represented by Jackie Obusek (NC); Mark Fowler represented by Sheila Travis (AL); Alan McClain represented by Chris Erwin (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by Yohannes Negash (DC); Trinidad Navarro represented by Rylynn Brown (DE); Michael Yaworsky represented by Ainsley Hurley (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by Debra Kaplan (MA); Timothy N. Schott represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver and Steve Mayhew (MI); Chlora Lindley-Myers represented by Debbie Doggett (MO); Troy Downing represented by Erin Synder (MT); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Jill Gleason (NE); Justin Zimmerman represented by John Sirovetz (NJ); D.J. Bettencourt represented by Pat Gosselin (NH); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Diane Carter (OK); Andrew R. Stolfi represented by Kirsten Anderson (OR); Michael Humphreys represented by Diana Sherman (PA); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Michael Wise represented by Thomas Baldwin (SC); Larry D. Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Trey Hancock (TN); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith (VA); Kevin Gaffney represented by Dan Petterson (VT); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted its Spring National Meeting Minutes

Walker directed the Task Force to its Spring National Meeting minutes. Obusek made a motion, seconded by Doggett, to adopt the Task Force's March 23 minutes (*see NAIC Proceedings – Spring 2023, Accounting Practices and Procedures (E) Task Force*). The motion passed unanimously.

2. Adopted its 2024 Proposed Charges

Walker directed the Task Force to its proposed 2024 charges, noting that the charges were unchanged from the prior year, as many of the charges are continuous in nature. Bruggeman made a motion, seconded by Hudson, to adopt the Task Force's 2024 proposed charges (Attachment Three). The motion passed unanimously.

3. Adopted the Report of the Statutory Accounting Principles (E) Working Group

Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which met Aug. 13. During this meeting, the Working Group adopted its July 5, June 28, May 16, April 12, April 10, and Spring National Meeting minutes. The May 16 meeting included adoption of editorial item 2023-11EP and adoption of Interpretation (INT) 22-02: *Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act Corporate – Alternative Minimum Tax*, which extended the interpretation for the second quarter 2023 statutory financial statements.

Bruggeman stated that during its Aug. 13 meeting, the Working Group adopted the following clarifications to statutory accounting guidance:

- A. *Statement of Statutory Accounting Principles (SSAP) No. 5R—Liabilities, Contingencies, and Impairments of Assets* and *Issue Paper No. 168—Updates to the Definition of a Liability*: Adopted revisions to the definition of a liability under statutory accounting. (Ref #2022-01)
- B. *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*: Adopted revisions to SSAP No. 24 to reject Accounting Standards Update (ASU) 2021-10, *Government Assistance*, and the incorporation of disclosures regarding government assistance. (Ref #2023-06)
- C. *SSAP No. 26R—Bonds*, *SSAP No. 43R—Loan-Backed and Structured Securities*, and other affected SSAPs to refine guidance for the principles-based bond project. (Note that SSAP No. 26R and SSAP No. 43R have updated titles effective Jan. 1, 2025.) (Ref #2019-21)
- D. *SSAP No. 34—Investment Income Due and Accrued*: Adopted revisions to clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure for SSAP No. 34 and annual statement instruction purposes. (Ref #2023-13)
- E. SSAP No. 43R: Adopted revisions to incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities. (Ref #2023-02)
- F. *SSAP No. 95—Nonmonetary Transactions* and *SSAP No. 104R—Share-Based Payments*: Adopted, with modification, *ASU 2019-08, Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*. The revisions add guidance to include share-based consideration payable to customers. (Ref #2023-07)
- G. *INT 20-01: ASU 2020-04 and 2021-01 – Reference Rate Reform*: Adopted proposal to revise the expiration date of INT 20-01 to Dec. 31, 2024. (Ref #2023-05)
- H. *INT 23-01: Net Negative (Disallowed) Interest Maintenance Reserve* was adopted with three editorial revisions. This INT provides optional, limited-time guidance, which allows the admittance of net negative (disallowed) interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. As detailed within the INT, it will be effective until Dec. 31, 2025, and automatically nullified on Jan. 1, 2026, but the effective date can be adjusted (e.g., nullified earlier or extended). In addition, the Working Group directed the formation of an ad hoc subgroup to work on a long-term solution. Upon adoption of the INT, NAIC staff will provide the Blanks (E) Working Group with a disclosure memorandum for posting on their website for year-end 2023. Additionally, a blanks proposal will be sponsored to incorporate the disclosures and attestation requirements into the notes and general interrogatories for year-end 2024. (Ref #2022-19)
- I. Appendix D—Nonapplicable GAAP Pronouncements: The following U.S. generally accepted accounting principles (GAAP) standards were rejected as they are not applicable to statutory accounting:
 - i. *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*. (Ref #2023-08)
 - ii. *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)*. (Ref #2023-09)

iii. *ASU 2022-05, Transition for Sold Contracts.* (Ref #2023-10)

Bruggeman stated that the Working Group exposed the following statutory accounting principle (SAP) concepts and clarifications to statutory accounting guidance until Sept. 29, except for INT 23-02T, INT 23-03T, Ref #2022-11, and Ref #2023-12, which have a comment deadline of Sept. 12:

- A. *SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term investments:* Exposed revisions to further restrict the investments that are permitted for cash equivalent or short-term investment reporting. These revisions are proposed to ensure that certain investment types are captured on designated Schedule BA reporting lines and to eliminate the potential to design investments to specifically qualify for short-term reporting. (Ref #2023-17)
- B. *SSAP No. 5R, SSAP No. 92—Postretirement Benefits Other Than Pensions, SSAP No. 102—Pensions, and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities:* Exposed revisions to adopt with modification certain aspects of *ASU 2016-19—Technical Corrections and Improvements*. Revisions also propose amending SSAP No. 92 guidance on insurance contracts to use the same terminology used in SSAP No. 102. (Ref #2023-18)
- C. *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve:* Expose the overall concept for a long-term project to capture accounting guidance for asset valuation reserve (AVR) and IMR in SSAP No. 7. (Ref #2023-14)
- D. *SSAP No. 20—Nonadmitted Assets and SSAP No. 21R—Other Admitted Assets:* Re-exposed the revisions that clarify that pledged collateral must qualify as an admitted invested asset for a collateral loan to be admitted. The revisions require audits and the use of net equity value for valuation assessments when the pledged collateral is in the form of partnerships, limited liability companies (LLCs), or joint ventures. (Ref #2022-11)
- E. *SSAP No. 21R and Bond Issue Paper:* Exposed a revised SSAP No. 21R to provide guidance for the accounting for debt securities that do not qualify as bonds, as well as proposed measurement guidance for residuals. (Ref #2019-21)
- F. *SSAP No. 43R:* Exposed an updated proposal to reflect revisions from the interim discussions and coordination on revisions to clarify the scope and reporting for investment structures that represent residual interests within SAPs. (Ref #2023-12)
- G. *SSAP No. 48—Joint Ventures, Partnerships, and Limited Liability Companies:* Exposure requests industry and regulator comment on a proposal to further define and provide examples for the investments captured as non-registered private funds, joint ventures, partnerships or LLCs, or residual interests and reported based on the underlying characteristics of assets. (Ref #2023-16)
- H. *SSAP No. 54R—Individual and Group Accident and Health Contracts:* Exposed clarifying revisions and an illustration to SSAP No. 54R to clarify that gross premium valuation (under A-010) and cash-flow testing (under *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* [AG 51]) are both required if indicated. (Ref #2023-22)
- I. *SSAP No. 92 and SSAP No. 102:* Exposed revisions to SSAP No. 92 and SSAP No. 102 to remove the transition guidance that was included in the initial adoption of SSAP No. 92 and SSAP No. 102, as it is past the 10-year effective period for that transition. (Ref #2023-21)

- J. *SSAP No. 93—Low-Income Housing Tax Credit Property Investments and SSAP No. 94R—Transferable and Non-Transferable State Tax Credits*: Exposed interested party comments on revisions to SSAP No. 93 and SSAP No. 94R and updates made in response to the comments received. (Ref #2022-14)
- K. *INT 03-02: Modification to an Existing Intercompany Pooling Arrangement*: Exposed the intent to nullify INT 03-02, as it is inconsistent with *SSAP No. 25—Affiliates and Other Related Parties*. (Ref #2022-12)
- L. *INT 23-02: Third Quarter 2023 Inflation Reduction Act – Corporate Alternative Minimum Tax*: Exposed a proposed INT that recommends that for third-quarter 2023, reporting entities should disclose whatever information is available regarding their applicable reporting entity status. (INT 23-02)
- M. *INT 23-03: Corporate Alternative Minimum Tax Guidance*: Exposed the INT, which provides guidance effective beginning year-end 2023 reporting of the corporate alternative minimum tax, which applies *SSAP No. 101—Income Taxes* with modification and provides disclosures. The exposed INT 23-03 includes that paragraph 11c of *SSAP No. 101* should be followed. (Ref #2023-04)
- N. *IMR/AVR Specific Allocations*: Exposed revisions to the *Annual Statement Instructions* to remove the guidance that permits the specific allocation of non-interest-related losses to IMR. (Ref #2023-15)
- O. *Appendix D—Nonapplicable GAAP Pronouncements*: The following U.S. GAAP standards were exposed with revisions to reject, as they are not applicable to statutory accounting:
 - i. *ASU 2018-09—Codification Improvements* (Ref #2023-19)
 - ii. *ASU 2020-10—Codification Improvements* (Ref #2023-20)

Bruggeman stated that the Working Group directed NAIC staff on the following items:

- A. *Review Annual Statement Instructions for Accounting Guidance*: To proceed with a broad project to review the annual statement instructions and ensure accounting guidance is included within the SSAPs. (Ref #2023-01)
- B. *Schedule BA Reporting*: Directed NAIC staff to sponsor a blanks proposal to revise Schedule BA: Other Long-Term Assets in accordance with the bond project for debt securities that do not qualify as bonds, with formal notice to the Valuation of Securities (E) Task Force and the Capital Adequacy (E) Task Force on the proposal to allow life reporting entities the ability to use existing Schedule BA reporting provisions for Securities Valuation Office (SVO)-assigned designations in determining risk-based capital (RBC) for debt securities that do not qualify as bonds. (Ref #2019-21)

Bruggeman stated that the Working Group received an update on U.S. GAAP exposures, noting that pending items will be addressed during the normal maintenance process.

Bruggeman made a motion, seconded by Clark, to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

4. Adopted the Report of the Blanks (E) Working Group

Gosselin provided the report of the Blanks (E) Working Group which met July 27. During this meeting, the Working Group adopted its May 31 minutes, which included adoption of its March 7 minutes. During its May 31 meeting, the Working Group adopted its editorial listing and the following proposals:

- A. 2022-17BWG Modified – Add a new disclosure paragraph for Note 8 – Derivative Instruments and Illustration. The new disclosure is to be data captured. Add electronic-only columns related to derivatives with excluded components to Schedule DB, Part A and Part B for both Section 1 and Section 2. Add new code column instructions for Schedule DB, Part A and B (SAPWG 2021-20).
- B. 2023-01BWG Modified – Remove pet insurance from the inland marine line of business and add a new line of business to Appendix – P/C Lines of Business. Add a pet insurance line within the existing property/casualty (P/C) blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. Add new Schedule P Parts 1 through 4, specific to pet insurance.
- C. 2023-02BWG Modified – Add an exhibit to identify premiums that are reportable for Market Conduct Annual Statement (MCAS) purposes.
- D. 2023-03BWG – Remove life crosschecks for columns 2, 6, and 10 on the Accident and Health Policy Experience Exhibit (AHPEE).
- E. 2023-04BWG Modified – Add instructions for the appointed actuary and qualified actuary contacts to the Jurat electronic-only section.
- F. 2023-08BWG – Add clarifying language for mutual insurance companies on Schedule Y, Part 3.
- G. 2023-10BWG Modified – Update the three primary issue periods on Long-Term Care Experience Reporting Form 2.
- H. 2023-11BWG Modified – Add additional instructions and illustrations to be data captured for Note 7 – Investment Income in the notes to the financial statement to disclose more information on interest.

Gosselin stated that during its May 31 meeting, the Working Group deferred three proposals: 2023-05BWG – Changes to the Cybersecurity supplement; 2023-07BWG – Delete the legal entity identifier (LEI) column for the select investment schedules; and 2023-09BWG – Add a new financial statement Note 37 – Life Insurance Net Amount at Risk by Product Characteristics.

Gosselin stated that on July 27, the Working Group deferred the following proposals for an additional comment period:

- A. 2023-05BWG Modified – Changes to the cybersecurity supplement to remove the reference to identity theft insurance from the General Instructions; remove the interrogatory questions from Part 1 that pertain to identity theft insurance; and remove the column for Identity Theft Insurance from Part 2 and Part 3. Remove claims-made and occurrence breakdown, as well as first-party and third-party breakdowns from data collection, and remove the question in the interrogatories regarding tail policies.
- B. 2023-07BWG – Update the code column and delete the LEI column for the following investment schedules: Schedules A, B, BA, D Part 2, D Part 6, and E Part 1.

- C. 2023-09BWG – Add a new financial statement Note 37 – Life Insurance Net Amount at Risk by Product Characteristics to the life and accident and health/fraternal blank for the updates to the life C-2 mortality risk charges for life RBC.

Gosselin stated that on July 27, the Working Group adopted its editorial listing and re-exposed 2023-06BWG – Split the Schedule D, Part 1 into two sections: one for issuer credit obligations and the other for asset-backed securities (ABS). Update the other parts of the annual statement that reference the bond lines of business.

Gosselin made a motion, seconded by Hudson, to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Accounting Practice and Procedures (E) Task Force adjourned.

Draft: 8/28/23

Statutory Accounting Principles (E) Working Group
Seattle, Washington
August 13, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met in Seattle, WA, Aug. 13, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Cindy Andersen (IL); Stewart Guerin and Melissa Gibson (LA); Judy Weaver and Steve Mayhew (MI); Doug Bartlett and Pat Gosselin (NH); Bob Kasinow (NY); Diana Sherman (PA); Jamie Walker and Amy Garcia (TX); David Smith (VA); and Amy Malm (WI).

1. Adopted its July 5, June 28, May 16, April 12, April 10, and Spring National Meeting Minutes

The Working Group conducted an e-vote that concluded July 5 to expose revisions to *Interpretation (INT) 23-01T: Net Negative (Disallowed) Interest Maintenance Reserve*. During its June 28 meeting, the Working Group took the following action: 1) heard comments and received Working Group direction on revisions to INT 23-01T. During its May 16 meeting, the Working Group took the following action: 1) heard comments and considered action on three items exposed during the Spring National Meeting, one of which has corresponding 2023 year-end blanks reporting revisions; and 2) exposed three agenda items. The Working Group conducted an e-vote that concluded April 12 to expose revisions to *INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax*. The Working Group also conducted an e-vote that concluded April 10 to expose tentative INT 23-01.

Additionally, the Working Group met Aug. 8 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to discuss the Summer National Meeting agendas.

Walker made a motion, seconded by Travis, to adopt the Working Group's July 5, (Attachment One-A), June 28 (Attachment One-B), May 16 (Attachment One-C), April 12 (Attachment One-D), April 10 (Attachment One-E) and March 22 (*see NAIC Proceedings – Spring 2023, Accounting Practices and Procedures (E) Task Force*) minutes. The motion passed unanimously.

2. Adopted Non-Contested Positions

The Working Group held a public hearing to review comments received on previously exposed items (Attachment One-F).

Malm made a motion, seconded by Hudson, to adopt the revisions detailed below as non-contested statutory accounting revisions. The motion passed unanimously.

A. Agenda Item 2023-02

Bruggeman directed the Working Group to agenda item 2023-02: Statement of Statutory Accounting Principles (SSAP) No. 43R – CLO Financial Modeling (Attachment One-G). Wil Oden (NAIC) stated that during the Spring National Meeting, the Working Group exposed statutory accounting principle (SAP) clarifications to *SSAP No.*

43R—*Loan-backed and Structured Securities* to incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not included as legacy securities.

B. Agenda Item 2023-05

Bruggeman directed the Working Group to agenda item 2023-05: ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848 (Attachment One-H). Jake Stultz (NAIC) stated that the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update (ASU) 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848* to extend the sunset date of the reference rate reform guidance that was included in *ASU 2020-04, Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and *ASU 2021-01, Reference Rate Reform (Topic 848), Scope*. As background, reference rate reform refers to the transition away from referencing the London Interbank Offered Rate (LIBOR) and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction-based. To address ASU 2020-04, the Working Group issued *INT 20-01: Reference Rate Reform*, and this INT was then revised to incorporate guidance from ASU 2021-01 (Attachment One-I). Stultz recommended adoption of the exposed revisions, which revise INT 20-01 to include the updated sunset date of Dec. 31, 2024, from ASU 2022-06.

C. Agenda Item 2023-07

Bruggeman directed the Working Group to agenda item 2023-07: *ASU 2019-08, Codification Improvements to Topic 718 and Topic 606* (Attachment One-J). Oden stated that in November 2019, the FASB issued *ASU 2019-08 Compensation, Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*, which includes amendments to Topics 718 and 606. The changes to Topic 718 include share-based payment transactions for acquiring goods and services from non-employees and superseded guidance in Subtopic 505-50, Equity—Equity-Based Payments to Non-Employees. The changes to Topic 606 expand the scope to include share-based payment awards granted to a customer in conjunction with selling goods or services. The exposed revisions were as follows: 1) revisions to *SSAP No. 104R—Share-Based Payments* to adopt ASU 2019-08, with modification, for statutory accounting; 2) revisions to *SSAP No. 95—Nonmonetary Transactions* to adopt ASU 2019-08, with modification by updating previously adopted U.S. generally accepted accounting principles (GAAP) guidance; and 3) revisions to *SSAP No. 47—Uninsured Plans*, which reject Topic 606 guidance in ASU 2019-08. For statutory accounting assessments, prior U.S. GAAP guidance related to share-based payments has been predominantly adopted with modification in SSAP No. 104R.

D. Agenda Item 2023-08

Bruggeman directed the Working Group to agenda item 2023-08: *ASU 2019-07, Codification Updates to SEC Sections* (Attachment One-K). Oden stated that the FASB issued *ASU 2019-07, Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*, which primarily affects the codifications of Financial Services—Depository and Lending (Topic 942), Financial Services—Insurance (Topic 944), and Financial Services—Investment Companies (Topic 946). The update amends and supersedes certain U.S. Securities and Exchange Commission (SEC) sections in Topic 942, Topic 944, and Topic 946 to align codification guidance with SEC Releases No. 33-10532, 33-10231, and 33-10442. These SEC releases amend a wide range of disclosure requirements that were determined to be redundant, duplicative, overlapping, outdated, or superseded by other relevant literature. Additionally, the SEC releases include several miscellaneous updates and corrections intended to clarify SEC guidance. Historically, SEC guidance

from ASUs has been rejected as not applicable for statutory accounting in *Appendix D—Nonapplicable GAAP Pronouncements*.

E. Agenda Item 2023-09

Bruggeman directed the Working Group to agenda item 2023-09: ASU 2020-09—Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470) (Attachment One-L). Oden stated that the FASB issued *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)*, which affects the codification in debt (Topic 470). The update amends and supersedes certain SEC sections in Topic 470 to align codification guidance with SEC Release No. 33-10762. No. 33-10762 amends the SEC financial disclosure requirements for guarantors and issuers of guaranteed securities registered or being registered, and issuers' affiliates whose securities collateralize securities registered or being registered in Regulation S-X to improve those requirements for both investors and registrants. The changes are intended to provide investors with material information given the specific facts and circumstances, make the disclosures easier to understand, and reduce the costs and burdens to registrants. Oden recommended adoption of the exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)* as not applicable to statutory accounting. This action is consistent with previous Working Group actions regarding similar SEC guidance.

F. Agenda Item 2023-10

Bruggeman directed the Working Group to agenda item 2023-10: *ASU 2022-05, Transition for Sold Contracts* (Attachment One-M). Oden stated that this agenda item has been drafted to consider *ASU 2022-05, Transition for Sold Contracts* for statutory accounting. The FASB issued the ASU in December 2022 to amend specific sections of *ASU 2018-12, Targeted Improvements for Long-Durations Contracts (LDTI)*. The amendments made by ASU 2022-05 are intended to reduce implementation costs and complexity associated with the adoption of LDTI for contracts that have been derecognized in accordance with the ASU before the LDTI effective date. The amendments in ASU 2022-05 amend the LDTI transition guidance to allow an insurance entity to make an accounting policy election on a transaction-by-transaction basis. An insurance entity may elect to exclude contracts that meet certain criteria from applying the amendments in the LDTI. Oden recommended adoption of the exposed revisions to reject ASU 2022-05 in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts*; *SSAP No. 51R—Life Contracts*; *SSAP No. 52—Deposit-Type Contracts*; *SSAP No. 56—Separate Accounts*; *SSAP No. 71—Policy Acquisition Costs and Commissions*; and *SSAP No. 86—Derivatives*.

G. Agenda Item 2023-13

Bruggeman directed the Working Group to agenda item 2023-13: PIK Interest Disclosure Clarification (Attachment One-N). Oden stated that this agenda item has been developed to further clarify, and incorporate a practical expedient, to the paid-in-kind (PIK) interest aggregate disclosure adopted in *SSAP No. 34—Investment Income Due and Accrued*. In response to questions received on how paydowns or disposals would affect PIK interest included in the cumulative balance, it was noted that clarifying guidance would assist with consistent application. Furthermore, without clarification, it was identified that companies and investment software vendors may interpret the need to detail the retrospective PIK allocations and paydowns or disposals as evidence for the resulting amount. The previously adopted disclosure in *SSAP No. 34* is not intended to change, but the proposed clarification and practical expedient guidance would also be included in the annual statement instructions. This agenda item will be used to subsequently provide a memo to blanks for year-end 2023 application and to formally revise the instructions for 2024.

3. Reviewed Comments on Exposed Items

A. Agenda Item 2019-21

Bruggeman directed the Working Group to agenda item 2019-21: Principles-Based Bond Definition. Stultz stated that during the Spring National Meeting, the Working Group exposed revisions that reflect most of the interested parties' comments to the statutory accounting guidance that details the bond definition and the accounting and reporting guidance for bonds, including asset-backed securities (ABS), debt securities that do not qualify as bonds, and other SSAPs that were also affected or that referenced the prior bond guidance. The revisions exposed for comment included documents related to *SSAP No. 26R—Bonds*, *SSAP No. 43R—Loan-Backed and Structured Securities*, *SSAP No. 21R—Other Admitted Assets*, and other SSAPs that were affected. Stultz stated that in addition to the documents proposing SAP revisions, during the Spring National Meeting the Working Group exposed a proposal to revise the reporting lines on Schedule BA to include debt securities that do not qualify as bonds, as well as to consolidate existing reporting lines.

Stultz noted that interested parties had no comment on the last exposed revisions to SSAP No. 26R, SSAP No. 43R, and the other SSAPs, and he recommend that those be adopted.

Stultz noted that interested parties provided comments on the exposed revisions to SSAP No. 21R. As a result, NAIC staff had further revised the SSAP No. 21R, and Stultz recommended that it be re-exposed for public comment, along with the bond project issue paper that details the direction and discussions in developing this project.

Finally, Stultz also recommended that the Working Group sponsor a blanks proposal to revise Schedule BA for debt securities that do not qualify as bonds, with formal notice to the Valuation of Securities (E) Task Force and the Capital Adequacy (E) Task Force.

Mike Reis (Northwestern Mutual), representing interested parties, stated that interested parties support adoption of the revisions SSAP No. 26R, SSAP No. 43R, and the other affected SSAPs.

Walker made a motion, seconded by Clark, to adopt the bond definition revisions in SSAP No. 26R (Attachment One-O) and SSAP No. 43R (Attachment One-P) and the other impacted SSAPs document (Attachment One-Q), with an effective date of Jan. 1, 2025. The motion passed unanimously.

Clark made a motion, seconded by Hudson, to expose the revised SSAP No. 21R and the bond project issue paper as recommended by NAIC staff. The motion passed unanimously.

Walker made a motion, seconded by Weaver, for the Working Group to sponsor a blanks proposal to revise Schedule BA in accordance with the bond project for debt securities that do not qualify as bonds and to provide notice of the actions to the Valuation of Securities (E) Task Force and to the Capital Adequacy (E) Task Force. The motion passed unanimously.

B. Agenda Item 2022-01

Bruggeman directed the Working Group to agenda item 2022-01: Conceptual Framework – Updates. Marcotte stated that during the Spring National Meeting, the Working Group exposed additional revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* and *Issue Paper No. 168—Updates to the Definition of a Liability* related to the definition change of a liability. The revisions incorporate the definition of a liability

from FASB *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 7, Presentation, and Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definition of an asset and of a liability. For U.S. GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance.

Marcotte stated that the Spring National Meeting exposure also included revisions to add an additional footnote to the definition of a liability in SSAP No. 5R, which defers to more topic-specific contradictory guidance in an SSAP, revises the relevant literature section of SSAP No. 5R to note the modification, and the additional exposure action in the issue paper. These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of a liability SSAP No. 5R. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic-specific liabilities guidance was incorporated to address variations from the definition of a liability.

Hudson made a motion, seconded by Weaver, to adopt the exposed revisions to SSAP No. 5R (Attachment One-R) and *Issue Paper No. 168—Updates to the Definition of a Liability* (Attachment One-S). The motion passed unanimously.

C. Agenda Item 2022-11

Bruggeman directed the Working Group to agenda item 2022-11: Collateral for Loans. Marcotte stated that during the Spring National Meeting, the Working Group re-exposed revisions to SSAP No. 21R to clarify that invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets. She stated that interested parties support the proposed changes but that the Working Group also received two comment letters from Security Benefit Life Insurance Company (SBL) that opposed the changes, noting that in some cases the fair value of the collateral of these types of investments was higher than audited book value. Marcotte stated that the second comment letter from SBL was asking for an accounting policy election to use fair value. She stated that normally collateral is measured at fair value. However, when this issue was initially brought to the Working Group, one of the concerns was that using Level 3 fair values for a related party loan could essentially admit a greater amount than if the assets were directly held.

Weaver stated that optionality is not consistent with the general practice of statutory accounting, noting that there had been some recent receiverships and exam reports with significant comments regarding this type of investment.

Smith agreed with Weaver and stated that the proposed fair value election would be left to the discretion of the commissioner, which would lead to inconsistencies between states.

Caleb Brainerd (SBL) stated that SBL supports the clarification that collateral loan secured by *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* investments require audits of the underlying collateral to be admissible assets under statutory accounting. He stated that the basis used to test the sufficiency of collateral for these types of collateral loans is a substantive change and recommended that the Working Group reconsider the issue prior to adopting this exposure. Specifically, SBL believes fair value is the most appropriate basis for determining the sufficiency of collateral. Fair value is the measure that reflects the value of assets that would be available to support policyholder liabilities in the event of foreclosure on collateral loans. Brainerd stated that fair value is also the basis upon which insurers have historically, and currently underwritten, collateral loans and aligns with covenants entered into

between the insurer and the borrowers within the corresponding loan agreements. Finally, continuing to use fair value will retain consistency across all collateral loans under statutory accounting and with the tests used for other types of collateralized financial instruments. He asked the Working Group to extend the exposure period to Sept. 12 to allow industry and the Working Group to further consider whether fair value should be retained as the basis for testing the sufficiency of collateral for collateral loans.

Bruggeman asked if the audited value of SSAP No. 48 and SSAP No. 97 entities which are pledged as such collateral approximates fair value in instances when the collateral was from investment entities. He noted that in his understanding, the audits of the pledged collateral from non-investment type entities, such as operating entities, may result in audited value that might not be a good proxy for fair value. That is, for such entities, the audited book value does not approximate fair value because many of the underlying assets are not reported as fair value.

Brainerd stated that in most instances, the SSAP No. 48 and SSAP No. 97 underlying collateral investments would likely be from entities that are considered investment companies. He noted that for investment entities, net asset value (NAV) is calculated, which approximates fair value. As such, audited equity and fair value of investment companies would be similar or the same. However, for some of the SSAP No. 48 and SSAP No. 97 investments that are not considered investment companies, their assets are not held at fair value. He noted that the investment company guidance is complex. As a result, the book value is often significantly lower than the fair value for non-investment entities. He stated that using book value could result in non-admitting loans that are in good standing that have been underwritten on the fair value of the collateral basis. In cases where collateral is not an investment company, SBL obtains independent fair value calculations or independent reviews of the fair value calculations, which are also subject to audit.

Bruggeman questioned whether a distinction needs to be made between affiliated and non-affiliated investments. He noted that the Working Group choice today was whether to adopt what was exposed or extend the exposure until after the Sept. 12 deadline. Additionally, he clarified that the question is whether non-investment companies should be allowed to use audits and measure the collateral at fair value instead of book value.

Clark stated that he agreed with the prior comments that there should not be optionality. He questioned what additional information should be provided if the decision-making process was extended. He asked if the rest of industry was willing to provide input.

Andrew Morse (Global Atlantic), representing interested parties, noted support for the current exposed guidance, but he stated that given the comments that fair value might be a better measurement for asset collateral adequacy, interested parties as a group feel that there are good arguments for using either the fair value measurement or the U.S. GAAP equity measurement. He stated that interested parties would support exposure until Sept. 12.

Bruggeman stated that for the non-investment entities, there would need to be more support for obtaining fair value. He noted that this agenda item originated because of a lack of support for the valuation of collateral, especially for level three fair values. Clark stated that he did not see the harm in allowing additional time for industry to build consensus on the issue.

Malm stated that as part of the extended comment period, industry should provide not just a consensus view, but if the consensus view is to use fair value, then also provide language around documentation and expectations of the valuations at fair value. She also requested that interested parties' comments also include details on the regulatory arbitrage related to going from book value to fair value, as well as the risk-based capital (RBC) impact.

Morse stated that the asset in question is a collateral loan, which has a value as a loan. That value does not change based on the underlying collateral unless part of the asset is nonadmitted. He stated that the asset itself is not fluctuating regularly based on the valuation of the collateral; it is typically carried at cost or amortized cost. He stated that the proposed revisions are just a check to see if there is sufficient collateral to support the collateral loan.

The Working Group noted no objections to re-exposing this agenda item until Sept. 12 to allow industry the opportunity to provide support for using fair value measurement.

D. Agenda Item 2022-12

Bruggeman directed the Working Group to agenda item 2022-12: Review of INT 03-02: Modifications to an Existing Intercompany Pooling Arrangement. Marcotte stated that on March 22, the Working Group re-exposed the intent to nullify INT 03-02, effective Dec. 31, 2023. The nullification is proposed because INT 03-02 is inconsistent with *SSAP No. 25—Affiliates and Other Related Parties* guidance regarding economic and non-economic transactions between related parties. Treatment of transfers of assets between affiliates should be consistent for all intercompany transactions, and there is not a compelling need to be different when valuing assets for intercompany reinsurance transactions. Marcotte stated that this agenda item was re-exposed to allow more time for comments. She recommended deferral of this agenda item to allow more time to review interested parties' comments and have further discussions with industry.

Hudson expressed support for the deferral recommendation.

Keith Bell (The Travelers Companies), representing interested parties, noted support for deferral and that he has started work on examples of when intercompany plan agreements would be modified. He stated that if INT 03-02 was nullified and the assets were changed to fair value, there would be a significant impact. He noted that changing interest rate environments could affect the amounts transferred. He stated that Travelers will provide a specific example to show the Working Group the mechanics of how it works.

Bruggeman requested that interested parties include examples to break out the differences between amending a pooling arrangement for existing members versus adding a company that was recently acquired and added to the pool. He stated that there are some definite distinctions between those situations.

The Working Group members had no objections to deferring action and re-exposing this item.

E. Agenda Item 2022-14

Bruggeman directed the Working Group to agenda item 2022-14: New Market Tax Credits. Oden stated that on May 16, the Working Group exposed revisions to *SSAP No. 93—Low-Income Housing Tax Credit Property Investments* and *SSAP No. 94R—Transferable and Non-Transferable State Tax Credits*.

Bruggeman stated that this agenda item was drafted in response to the federal Inflation Reduction Act and the subsequent issuance of ASU 2023-02, which amended U.S. GAAP guidance on the application of the proportional amortization method for income tax equity investments. Oden stated that since the project was started, its scope has been expanded in response to comments received. *SSAP No. 93* is proposed to include all qualifying tax credit investments irrespective of structure or tax credit program, and *SSAP No. 94R* is proposed to include all purchased and certain allocated state and federal tax credits. He stated that on June 30, the Working Group received comments from interested parties on the May 16 exposure drafts. Oden stated that the comments were included

in the hearing agenda for exposure in the Summer National Meeting, and staff responses were included in the agenda item. Oden provided a summary of the comments received and the proposed recommendations. He recommended the Working Group expose the revisions to SSAP No. 93 and SSAP No. 94R and direct staff to begin working with industry on revisions to the annual statement Schedule BA reporting lines, as well as how those reporting lines flow through to the asset valuation reserve.

Angelica Sanchez (New York Life), representing interested parties, commented that they agree with what has been proposed and reiterated the need for uniformity in accounting and reporting for tax credit investments and other types of tax credit certificates. She stated they also agree that the proportional amortization method is the right accounting to follow for investments where earnings are returned primarily through tax credits. She stated they appreciate the Working Group incorporating some of the interested parties' comments and providing such detailed explanations of issues where they did not necessarily agree with industry. She stated that interested parties agree with most of the changes made. Sanchez stated that there are two main items on which they will focus. First is that they did not intend to confuse things about referring to the retrospective accounting under U.S. GAAP. She stated that they will continue to work to obtain consensus with both industry and the Working Group on what makes the most sense for adoption and what the transition requirements should be. Second, currently all low-income housing tax credit investments are reported in a dedicated section on Schedule BA that allows them to have specific RBC charges that are different from most other investments on Schedule BA. She stated that interested parties recommend that the same should happen for any other type of tax credit investment that is within the scope of SSAP No. 93 since those investments tend to be very high credit quality investments.

Walker made a motion, seconded by Hudson, to direct NAIC staff to expose the additional revisions and to work with the Blanks (E) Working Group on drafting proposed revisions for Schedule BA. The motion passed unanimously.

F. Agenda Item 2022-19

Bruggeman directed the Working Group to agenda item 2022-19: Negative IMR (Attachment One-T). Marcotte stated this agenda item has been developed to discuss the interest maintenance reserve (IMR) within statutory accounting, specifically the current guidance for the nonadmittance of disallowed negative IMR. Although the statutory accounting guidance has been in place for several years, the rising interest rate environment has created an increased likelihood for reporting entities to move to a negative IMR position. Discussion of this topic began after receipt of an American Council of Life Insurers (ACLI) comment letter dated Oct. 31, 2022. Marcotte stated that since the receipt of the ACLI letter, the Working Group has discussed this issue and directed various actions. Most recently, on June 28, 2023, the Working Group met to hear comments on *INT 23-01: Net Negative (Disallowed) Interest Maintenance Reserve*, which was exposed to permit limited admittance of net negative (disallowed) IMR. As a result of that meeting, the Working Group directed NAIC staff to incorporate several revisions to the proposed INT 23-01. The revised INT was exposed via e-vote on July 5 for a shortened comment period ending July 21. Marcotte noted that interested parties provided three editorial revisions to the most recent exposure that were included in the meeting materials.

Marcotte recommended adoption of the exposed INT 23-01 with the editorial revisions noted. She stated that INT 23-01 would be automatically nullified on Jan. 1, 2026. NAIC staff would also provide the Blanks (E) Working Group with a disclosure memorandum for posting on its website. Marcotte stated that NAIC staff recommend the Working Group continue to work on a long-term solution. She stated that the ACLI suggested forming an ad hoc technical group, which would include members from the Working Group, the Life Actuarial (A) Task Force, industry, and the American Academy of Actuaries (Academy) as part of the long-term solution. She stated that

because INT 23-01 creates overrides of existing statutory accounting and annual statement instructions, the policy statement would require a two-thirds super majority vote of the Working Group present and voting to adopt.

Reis thanked state insurance regulators for working on an interim solution to not disincentivize prudent investment or risk management activity until the longer-term solution can be finalized. He said interested parties look forward to working with the Working Group or an ad hoc group. He stated that interested parties are supportive of the Life Actuarial (A) Task Force and the Academy being part of that group.

Bruggeman stated that this interpretation does not place any key reliance on asset adequacy testing. The asset adequacy testing will still use the interest maintenance reserve (IMR) as its natural process. He noted that, the larger the admitted asset within the asset adequacy testing, the greater the chance of an asset adequacy additional reserve requirement. He stated that the Working Group is not placing primary reliance on asset adequacy testing (AAT).

Hudson made a motion, seconded by Malm, to adopt *INT 23-01: Net Negative (Disallowed) Interest Maintenance Reserve*, reflecting the editorial revisions to the recent exposure discussed during the meeting (Attachment One-U). With this motion, the Working Group also agreed to form an ad hoc technical group, which would continue to work on this topic. The motion passed unanimously.

G. Agenda Item 2023-01

Bruggeman directed the Working Group to agenda item 2023-01: Review Annual Statement Instructions for Accounting Guidance. Stultz stated that this agenda item was developed to establish a project to review the annual and quarterly statement instructions to ensure that all accounting guidance is primarily reflected within the SSAPs. The focus of this project is to ensure that the annual or quarterly statement instructions are not the primary source of statutory accounting guidance. This agenda item and project was proposed due to limited situations in which the annual statement instructions have been identified as containing more detailed accounting guidance than the SSAPs.

Bruggeman directed NAIC staff to continue with this project.

H. Agenda Item 2023-04

Bruggeman directed the Working Group to agenda item 2023-04: Corporate Alternative Minimum Tax Guidance. Marcotte stated that this agenda item is to provide guidance regarding the corporate alternative minimum tax (CAMT) for year-end 2023 and after. Interested parties of the Working Group have submitted comments and a draft interpretation, which is included with the comment letters.

Marcotte provided a summary of the CAMT that is in effect for tax years beginning after 2022, noting that the CAMT is very different from the prior alternative minimum tax. She noted that the requirement to calculate the CAMT only applies to corporations on a tax-controlled basis with an average adjusted book income in excess of \$1 billion on average for the prior three years (with a \$100 million threshold for certain foreign-owned entities).

Marcotte stated that because the CAMT will only apply to a limited number of reporting entities, *INT 23-03: Inflation Reduction Act - Corporate Alternative Minimum Tax* had been developed separately from *SSAP No. 101 – Income Taxes*. She noted that INT 23-03 was organized to provide guidance for: 1) non-applicable reporting entities, which do not have to do the calculation; 2) applicable reporting entities, which must do the calculation

to determine the tax; and 3) applicable reporting entities with tax sharing agreements that exclude the entities from having to pay the CAMT.

Marcotte stated that the proposed INT 23-03 follows many of the principles in SSAP No. 101. For example, the consideration of the statutory valuation allowance assessment for the CAMT is determined on a group basis, and the statutory valuation allowance for other non-CAMT deferred tax assets (DTAs) is computed on a separate entity basis. She stated that INT 23-03 uses the applicable realization threshold limitations tables in SSAP No. 101, paragraph 11b. For example, most reporting entities will be above the 300% ex DTA RBC threshold in the tables and will admit CAMT credits in the admittance calculation that can be used within three years and up to 15% of statutory capital and surplus as adjusted in the SSAP No. 101 admissibility calculation. Marcotte stated that one of the exceptions to SSAP No. 101 that was proposed is to not require such entities (three-year/15%) to have to do the “with and without” calculation. She noted that the proposed guidance relies on tax allocation agreements for treatment of the CAMT and requires disclosures.

Marcotte highlighted that proposed transition guidance, which would allow reporting reliance on unapproved filed tax sharing agreements at year-end with domiciliary department of insurance consent, was not as specific as requested by industry because of *Insurance Holding Company System Regulatory Act* (Model #440) concerns. She noted that the transition guidance is focused on the subsequent events reporting exceptions. She noted that the meeting materials contained an updated attachment that tracked minor edits to the INT 23-03 since the initial materials posting.

Marcotte recommended exposure of INT 23-03 after the Working Group provides direction regarding paragraph 11.c. of SSAP No. 101. She stated that the third step in the SSAP No. 101 admissibility test admits DTAs to the extent of deferred tax liabilities (DTLs) if the DTAs can be offset on a tax return; this requires consideration of tax character. She stated that Working Group direction was requested on which version of paragraph 34 in the INT 23-03 discussion draft to include in the exposure. The first version would follow SSAP No. 101, paragraph 11.c. and admit CAMT credits to the extent of offsetting DTLs. The second version, which is a departure from SSAP No. 101, would not allow the admission of any CAMT credits under SSAP No. 101, paragraph 11.c.

Marcotte noted that Working Group direction was requested because although the CAMT credit does not expire, it has additional contingencies that make the use of the credit more questionable. The CAMT credit can only be used for non CAMT tax liabilities that are greater than the CAMT tax liability. She also noted that that if the tax-controlled group is a CAMT payor, the CAMT credit cannot be used. The CAMT is a credit, like a net operating loss carry forward, which does not have a reversal pattern. Instead, the entity must be eligible to use the CAMT credit. She also noted that while having more DTLs reverse increases the likelihood that the regular taxable income will exceed the CAMT liability, the result is not guaranteed.

Bruggeman stated that much of the INT 23-03 follows a general pattern of what is already in SSAP No. 101 with some subtle differences. He stated that he prefers to continue to follow the general pattern of SSAP No. 101, including allowing DTL offset in SSAP No. 101, paragraph 11.c. He stated that this avoids some misinterpretation by companies and auditors by continuing a pattern that has already been in place.

Hudson expressed support for the use of language consistent with SSAP No. 101, paragraph 11c. He stated that as the Working Group receives comments, it can evaluate them. Clark, Walker and Sherman also stated support following SSAP No. 101, paragraph 11.c.

Aimee Hoke (Nationwide), representing interested parties, stated that CAMT is a unique accounting consideration as the tax is consolidated in nature and applies an applicability test. She stated that industry supports the position

that the CAMT credits should be admitted against deferred tax losses under SSAP No. 101, paragraph 11.c. She stated that the CAMT credit operates in the same way as the prior alternative minimum tax (AMT) that was in place before 2018. The AMT DTAs were allowed to be used on the tax return and admitted against DTLs for that prior AMT. She stated that CAMT DTAs are no different from the other DTAs. They represent a future tax benefit. The premise of admitting DTAs against DTLs rests on the fact that DTLs will create future taxable income. In the case of CAMT DTAs, regular tax must exceed CAMT to be used. But for all other DTAs to be admitted, that entity would also need taxable income, so the basic mechanics are the same. A good example of a similar DTA is net operating losses (NOLs). NOL DTAs can only be used if the taxable group has taxable income but cannot be used to offset DTLs in the tax return. CAMT DTAs are evaluated for a valuation allowance, meaning that if the CAMT DTA is not expected to be realized, a valuation allowance would be set up.

Bruggeman asked whether industry supports having an earlier comment deadline for this exposure. He noted that tax sharing agreements for some entities will need to be updated prior to year-end. He summarized the proposed transition guidance, noting that statutory accounting cannot override Model #440 in the states but that the Working Group was trying to provide acceptable subsequent events transition guidance for the recognition of needed pending agreement updates, which may not be final until after the first of the year. Hoke stated support for the earlier comment deadline of Sept. 12.

Hudson made a motion, seconded by Walker, to expose INT 23-03 with the revisions to paragraph 34, which incorporate allowing admittance of the CAMT credits following the concepts in SSAP No. 101, paragraph 11.c. This exposure has a Sept. 12 comment deadline. Marcotte stated that because INT 23-03 creates overrides of existing guidance, the policy statement would require a two-thirds super majority vote of the Working Group present and voting to adopt. The motion passed unanimously.

I. Agenda Item 2023-06

Bruggeman directed the Working Group to agenda item 2023-06: Additional Updates on ASU 2021-10, Government Assistance. Marcotte stated that on Aug. 10, 2022, the Statutory Accounting Principles (E) Working Group adopted revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04. The revisions incorporated certain disclosures, adopted with modification from ASU 2021-10, to supplement existing disclosures regarding unusual or infrequent items.

Marcotte stated that with the follow-up questions about the adoption of the disclosures, most were regarding whether adoption with modification of the disclosures were intended to allow insurers to use the grant and contribution model. She stated that the intent was not to change accounting but to adopt the disclosures. The most recent exposure is to reject ASU 2021-10 instead of adopting it with modification, but still maintain government assistance disclosures. Marcotte stated that interested parties indicated they agreed with the proposed revisions but noted that some entities were using the grant and contribution model, and the discussion did not indicate whether it should be applied. She stated that there is no specific accounting guidance addressing accounting for government assistance transactions, and some of the health industry noted that in the absence of specific guidance, companies have looked to non-authoritative GAAP guidance, which supports the use of that model. Marcotte recommended adopting the exposed revisions to SSAP No. 24 to reject the ASU 2021-10 and include certain government assistance disclosures. She stated that the alternative is the disclosures could also be wholly rejected.

Hudson made a motion, seconded by Sherman, to adopt revisions to SSAP No. 24 as exposed (Attachment One-V). These revisions include the rejection of ASU 2021-10, while also maintaining government assistance disclosures. The motion passed unanimously.

J. Agenda Item 2023-12

Bruggeman directed the Working Group to agenda item 2023-12: *Residuals in SSAP No. 48 Investments*. Stultz stated that this agenda item proposes revisions to clarify the scope and reporting for investment structures that represent residual interests within statutory accounting principles. Previously, revisions have been incorporated in SSAP No. 43R to address the reporting of residual interests within securitization structures. With these revisions, residual interests, as defined within SSAP No. 43R, were required to be reported on Schedule BA on designated reporting lines beginning year-end 2022. After reviewing the 2022 reporting results, it was identified that the information for residuals may be underrepresented because of the various legal forms that residual investments can take. For example, a reporting entity could hold investments that have the substance of residual interests in the form of limited partnerships, joint ventures, or other equity fund investments. To ensure consistent reporting of all residual interests, this agenda item proposes guidance to clarify the reporting of in-substance residuals regardless of the structure of the investment vehicle in SSAP No. 48. Stultz stated that the application is really the issue, not the definition itself, and NAIC staff believe that these proposed changes address those issues. NAIC staff recommend the Working Group expose the agenda item with the expanded update proposal to reflect revisions to the interim discussions and coordination with interested parties, and they recommend this exposure have a shortened deadline of Sept. 12 with the intent of this agenda item being adopted for 2023 reporting.

Rose Albrizio (Equitable), representing interested parties, agreed with the shortened comment period.

Clark stated that he wanted to make clear that there are two separate agenda items discussing residuals at this meeting. He noted that this agenda item is more focused on reporting. The other agenda item provides more accounting and is also exposed.

Clark made a motion, seconded by Sherman, to expose the clarifying guidance for residuals in SSAP No. 48 until Sept. 12. The motion passed unanimously.

4. Considered Maintenance Agenda – Active Listing

Hudson made a motion, seconded by Kasinow, to expose the following agenda items for a public comment period. The motion passed unanimously. The comment deadline for exposures was Sept. 29 for all exposures except INT 23-02, which had a comment deadline of Sept. 12. The motion passed unanimously.

A. Agenda Item 2023-14

Bruggeman directed the Working Group to agenda item 2023-14: *Asset Valuation Reserve and Interest Maintenance Reserve*. Marcotte stated that this agenda item is a broad concept agenda item developed with the goal of incorporating accounting guidance for the AVR and the IMR into *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. Historically, this statement has included a brief overview of the AVR and IMR with the calculation and reporting guidance determined as directed by individual SSAPs or in accordance with the *Annual Statement Instructions for Life, Accident and Health/Fraternal Companies*. It has also been noted that there are some disconnects between the SSAPs and the IMR/AVR guidance included in the Annual Statement Instructions and that there are limited financial reporting cross-checks to the reporting within the AVR. Marcotte recommended the Working Group move this item to the maintenance agenda as a new SAP concept and expose this agenda item with an overall concept for a long-term project to capture accounting and reporting for IMR/AVR in SSAP No. 7.

B. Agenda Item 2023-15

Bruggeman directed the Working Group to agenda item 2023-15: IMR/AVR Specific Allocations. Marcotte stated that this agenda item has been developed to update guidance for IMR/AVR in the Annual Statement Instructions that currently establish specific allocation guidance. The principal concept of the IMR and AVR is that interest-related losses go to IMR, and non-interest-related losses go to AVR. This agenda item is to correct instructions that appear to direct an entity to allocate non-interest-related losses to IMR rather than correctly to the AVR.

Although the presence of examples for illustration are beneficial, the current annual statement instructions permit unintended allocations that do not reflect the intent of the principles. These have been specifically noted through inquiries to NAIC staff, particularly within the last year. NAIC staff believe these inquiries have been spurred by the discussions regarding the industry request to admit net negative IMR, therefore creating an incentive to allocate losses to IMR instead of AVR. This agenda item will focus on specific allocations within the annual statement instructions for NAIC designation changes for debt securities (excluding loan-backed and structured securities [LBSS]) and mortgage loans. Marcotte recommended the Working Group move this item to the maintenance agenda as a new SAP concept and expose the annual statement revisions to remove guidance that permits specific allocation and non-interest-related losses to IMR.

C. Agenda Item 2023-16

Bruggeman directed the Working Group to agenda item 2023-16: *Schedule BA Reporting Categories*. Oden stated that this agenda item has been developed to incorporate more detailed definitions for the annual statement reporting categories of SSAP No. 48 and residual interests on Schedule BA: Other Long-Term Invested Assets. Discussions identified that variations exist across industry on the types of investments included within each of the existing categories shown in Schedule BA. Oden stated that it was also noted that the annual statement instructions provide limited guidance, and the examples were not helpful for determining the reporting classifications. The intent of the recommended changes is to reduce reporting difficulty, improve consistency, and allow regulators to better assess the type and volume of investment types. Oden recommended that the Working Group move this item on the maintenance agenda as an SAP clarification and potential blank reporting change and expose the agenda item with a request for industry and regulator feedback. Specifically, comments were requested on what should be included as an investment with the underlying asset characteristics of the following categories: fixed income instruments, common stocks, real estate, mortgage loans, and others.

Bruggeman stated that as part of the discussion on this exposure, NAIC staff should coordinate with NAIC staff for the RBC items.

D. Agenda Item 2023-17

Bruggeman directed the Working Group to agenda item 2023-17: Short-Term Investments. Oden stated that this agenda item has been developed to review the guidance in SSAP No. 2R—*Cash, Cash Equivalents, Drafts, and Short-Term investments* and establishes principal concepts for the types of investments that should be permitted for reporting as either cash equivalents or short-term investments. This agenda item is in response to noted situations in which certain types of investments, particularly collateral loans or other Schedule BA items, have been specifically designed to meet the parameters for short-term reporting. Effectively, this agenda item, and the prior revisions to exclude certain investments from SSAP No. 2R, which were discussed as part of the bond project, will eliminate investments (except money market mutual funds and cash pooling dynamics) from being reported as cash equivalents or short-term investments unless they would qualify under SSAP No. 26R as an issuer credit obligation. Such investments will then only qualify as a cash equivalent or short-term investment if they have a

maturity date within three months (cash equivalents) or 12 months (short-term) from the date of acquisition or meet the specific requirements for money market mutual funds or cash pooling arrangements. This agenda item proposes to retain the guidance in SSAP No. 2R that prevents cash equivalent or short-term reporting for related party investments if the reporting entity does not reasonably expect to terminate the investment, the original maturity time has passed, and if the reporting entity reacquired a substantially similar investment. Oden recommended the Working Group move this item to the maintenance agenda as a new SAP concept and expose this agenda item with proposed revisions to further restrict the investments that are permitted to be reported as cash equivalent or short-term investments. With the adoption consideration of the bond definition, including the edits to exclude ABS and debt securities that do not qualify as bonds from SSAP No. 2R, this agenda item proposes edits to reflect the bond project changes, and it is proposed to have an effective date of Jan. 1, 2025. Additionally, subsequent blanks reporting changes will be considered to modify the cash equivalent and short-term reporting lines accordingly.

E. Agenda Item 2023-18

Bruggeman directed the Working Group to agenda item 2023-18: ASU 2016-19, *Technical Corrections and Improvements*. Oden stated that In December 2016, the FASB issued *ASU 2016-19, Technical Corrections and Improvements*, as part of a standing project on its agenda to address suggestions received from stakeholders on FASB codifications and to make other incremental improvements to U.S. GAAP. The changes made by ASU 2016-19 included minor clarifications, corrections, the addition of codification references, guidance relocations, and removal of redundant, outdated, or superseded guidance. Oden recommended that the Working Group move this item to the active listing as an SAP clarification and expose revisions to adopt with modification *ASU 2016-19, Technical Corrections and Improvements* for statutory accounting. The agenda item includes the details of the revisions to be exposed and the rationale for which guidance is recommended for inclusion and which was recommended for rejection. Unless noted otherwise, Oden recommended that all other amendments made within ASU 2016-10, as detailed in the agenda item, be rejected for statutory accounting in SSAP No. 5R, *SSAP No. 92—Postretirement Benefits Other Than Pensions*, *SSAP No. 102—Pensions*, and *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

F. Agenda Item 2023-19

Bruggeman directed the Working Group to agenda item 2023-19: ASU 2018-09, *Codification Improvements*. Oden stated that in July 2018, the FASB issued *ASU 2018-09, Codification Improvements*. This ASU is part of its standing project to facilitate FASB codification updates for technical corrections, clarifications, and other minor improvements. The changes made by ASU 2018-09 included minor clarifications, corrections, the addition of codification references, guidance relocations, and the removal of redundant, outdated, or superseded guidance. NAIC staff recommended that the ASU be rejected in *Appendix D—Nonapplicable GAAP Pronouncements* as not applicable for statutory accounting purposes.

G. Agenda Item 2023-20

Bruggeman directed the Working Group to agenda item 2023-20: *ASU 2020-10, Codification Improvements*. Oden stated that in October 2020, the FASB issued *ASU 2020-10 Codification Improvements*. The changes made by the ASU either move disclosure guidance to the disclosure section of the codification or add codification references to direct readers to the disclosure section, and this ASU does not provide any relevant new guidance. NAIC staff recommended that the ASU be rejected in *Appendix D—Nonapplicable GAAP Pronouncements* as not applicable for statutory accounting purposes.

H. Agenda Item 2023-21

Bruggeman directed the Working Group to agenda item 2023-21: *Removal of Transition Guidance from SSAP No. 92 and SSAP No. 102*. Stultz stated that on Dec. 18, 2012, the Statutory Accounting Principles (E) Working Group adopted SSAP No. 92 and SSAP No. 102. The adopted SSAPs included transition guidance that expired after 10 years, and this agenda item intends to remove that expired transition guidance from SSAP No. 92 and SSAP No. 102.

I. INT 23-02

Bruggeman directed the Working Group to *INT 23-02: Third Quarter 2023 Inflation Reduction Act – Corporate Alternative Minimum Tax*. Marcotte stated that this proposed new interpretation, *INT 23-02: Third Quarter 2023 Corporate Alternative Minimum Tax* is to provide temporary guidance for third quarter 2023 reporting for the corporate alternative minimum tax (CAMT). The Working Group has previously adopted *INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act – Corporate Alternative Minimum Tax*, which requires disclosure if the reporting entity is an applicable entity but does not require accrual of CAMT payable amounts, noting that a reasonable estimate is not possible. The Inflation Reduction Act was passed in August 2022, and it provides that the CAMT is effective beginning with the 2023 tax year. The proposed INT recommends that for third-quarter 2023, reporting entities should disclose whatever information is available regarding their applicable reporting entity status. If the reporting entity is able to make a reasonable estimate regarding the CAMT 2023 liabilities, such an estimate should be disclosed for third-quarter 2023. If a reasonable estimate is not possible because of pending material information, the fact that a reasonable estimate is not feasible should be disclosed. This agenda item is proposed to be exposed with a comment deadline of Sept.12. Marcotte stated that because INT 23-02 creates overrides of existing SSAP and annual statement instructions, the policy statement would require a two-thirds super majority vote of the Working Group present and voting to adopt.

J. Agenda Item 2023-22

Bruggeman directed the Working Group to agenda item 2023-22: Actuarial Guideline 51 and Appendix A-010 Interaction. Marcotte stated that this agenda item addresses the Feb. 23 request from the Financial Reporting and Solvency Committee of the Health Practice Council to the Long-Term Care Actuarial (B) Working Group of the American Academy of Actuaries, and to the Statutory Accounting Principles (E) Working Group requesting clarifications regarding some observed diversity in practice across issuers of long-term care insurance (LTCI) with regard to how the guidance in *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long Term Care Insurance Reserves* (AG 51), specifically Section 4.C, on determining when additional reserves may be necessary interacts with existing guidance on accident and health insurance reserve adequacy in *SSAP No. 54R—Individual and Group Accident and Health Contracts*, and Appendix A-010, *Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts*. The Academy referenced a survey that provided examples of the diversity of practices that have been observed. The fundamental question is regarding whether gross premium valuation only, cash-flow testing only, or both cash-flow testing and gross premium valuation are required. Marcotte recommended the Working Group add this agenda item to the maintenance agenda classified as an SAP clarification and expose clarifying revisions and an illustration to SSAP No. 54 to clarify that gross premium valuation under *Appendix A-010* and cash-flow testing under AG 51 are both required if indicated. In addition, Marcotte recommended providing notice of the exposure to the Long-Term Care Actuarial (B) Working Group and the Valuation Analysis (E) Working Group.

5. Discussed Other Matters

A. Review of U.S. GAAP Exposures

Marcotte identified two GAAP exposures with comment deadlines from July to August that are recommended for review by the Working Group in the normal maintenance process (Attachment One-W).

B. Comment Deadline

Marcotte stated that the comment deadline for exposures is Sept. 29 for all exposures except INT 23-02 (CAMT third quarter), INT 23-03 (CAMT year-end 2023); agenda item 2022-11: Collateral for Loans; and agenda item 2023-12: Residuals in SSAP No. 48 Investments, which have a comment deadline of Sept. 12.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

[https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/E CMTE/APPTF/2023-2 Summer/Summary and Minutes/SAPWG/Att1-SAPWG Minutes 08.13.23.docx](https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/E%20CMTE/APPTF/2023-2%20Summer/Summary%20and%20Minutes/SAPWG/Att1-SAPWG%20Minutes%2008.13.23.docx)

Draft: 7/11/23

Statutory Accounting Principles (E) Working Group
E-Vote
July 5, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded April 10, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Kim Hudson (CA); Bill Arfanis (CT); Rylynn Brown (DE); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. Exposed INT 23-01

The Working Group considered an e-vote exposure of a revised *Interpretation (INT) 23-01: Net Negative (Disallowed) Interest Maintenance Reserve*. This tentative INT proposes a limited-time, optional exception to statutory accounting to admit net negative (disallowed) interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. Revisions from the prior exposure as directed by the Working Group on June 28, include:

- Requirement for RBC over 300% after adjustment to remove admitted positive goodwill, EDP equipment and operating system software, DTAs and admitted IMR.
- Allowance to admit up to 10% of adjusted capital and surplus – first in the GA, and then if all disallowed IMR in the GA is admitted and the percentage limit is not reached, then to the SA account proportionately between insulated and non-insulated accounts. (The adjustments are the same that occur for the RBC adjustment and reduce capital and surplus before applying the 10% percentage limit.)
- There is no exclusion for derivatives losses included in negative IMR if the company can demonstrate historical practice in which realized gains from derivatives were also reversed to IMR (as liabilities) and amortized.
- Inclusion of a new reporting entity attestation.
- Effective date through Dec. 31, 2025, with a note that it could be nullified earlier or extended based on WG actions to establish specific guidance on net negative (disallowed) IMR.
- Application guidance for admitting / recognizing IMR in both the general and separate accounts.

Clark made a motion, seconded by Hudson, to expose the revised INT 23-01T for a public comment period ending July 21. The motion passed with 11 Working Group members responding with affirmative votes, meeting the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process requirement for a 2/3 vote of the membership for INTs that conflict with existing statutory accounting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Draft: 7/26/23

Statutory Accounting Principles (E) Working Group
Virtual Meeting
June 28, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met June 28, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown and Tom Hudson (DE); Cindy Andersen (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett and Pat Gosselin (NH); Bob Kasinow and Bill Carmello (NY); Diana Sherman (PA); Amy Garcia (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating was: David Wolf (NJ).

1. Reviewed Comments on Exposed Items

a. INT 23-01T

Bruggeman directed the Working Group to *Interpretation (INT) 23-01T: Net Negative (Disallowed) IMR* (Attachment One-B1) and the corresponding agenda item 2022-19: Negative IMR (Attachment One-B2). He directed Julie Gann (NAIC) to summarize the Life Actuarial (A) Task Force response letter dated June 15 (Attachment One-B3). Gann stated that the Task Force is moving forward with the development of an interest maintenance reserve (IMR) template, drafting guidance for 2023 and 2024 for the Working Group's potential admittance of some portion of aggregate negative IMR, and a recommendation to the Working Group to not rely on asset adequacy testing (AAT) as the sole or primary guardrail for aggregate negative IMR. Bruggeman noted that the key part of the recommendation was using AAT as the "sole or primary" guardrail, and the Working Group has been discussing the usage of AAT as the first-level safeguard and how it should be used in combination with other safeguards. IMR is included as a long-term agenda item for the Task Force as one of its primary concerns, which means it should be captured in the valuation documentation for the years ending 2022 and 2023.

Gann stated that in April, the Working Group exposed the limited-time optional INT to allow the admittance of net negative disallowed IMR in the general account up to 5% of adjusted capital and surplus. That 5% limit was directed by the Working Group at the Spring National Meeting. The exposed INT proposed restrictions as to what is permitted to be captured specifically for derivatives that have been reported at fair value and then for only general account IMR, with an exclusion for separate accounts. Detailed comments were received from the American Council of Life Insurers (ACLI), and NAIC staff request that the Working Group hear, discuss, and provide direction on the requested revisions to the INT. If the INT is revised, NAIC staff anticipate exposing a revised INT with a shortened comment period to allow for potential adoption consideration at the Summer National Meeting. Gann recommended that the Working Group defer the adoption of the INT until the Summer National Meeting, as there are a significant number of comments to consider. She then noted that the ACLI comment letter broke out eight key topics, and the first two topics—Surplus Considerations and Exclusion of Fair Value Derivatives from Determining Admitted Net Negative IMR—appeared to be the most significant. She also requested that the Working Group provide direction on the effective duration of the INT and whether there should be a sunset time frame. Bruggeman requested that the ACLI provide its overall comments to the Working Group prior to going through each of the eight topics individually.

Mike Reis (Northwestern Mutual), representing the ACLI, stated that he would like to begin by reading from the Financial Condition (E) Committee's *Asset Valuation Reserves and Interest Maintenance Reserves Blue Book* report from December 2002, which can be found at <https://naic.soutrounglobal.net/Portal/Public/en-US/RecordView/Index/547>, as it includes some foundational concepts. He stated that the main driver of the development of IMR

and asset valuation reserve (AVR) is that without these mechanisms, many circumstances gave rise to inappropriate results from the statutory formula valuation methods. For example, changes in value due to interest rate swings were recognized inconsistently on the asset and liability sides of the balance sheet. Liabilities are valued using interest rates fixed at issue, while some assets may be valued using current interest rates through trading activities. The development of AVR and IMR also recognized that trading gains and losses were transitory with reinvestment, where they are offset with new lower-yielding and higher-yielding assets, respectively; IMR should, theoretically, apply symmetrically. So, all points in the ACLI letter and items discussed today emanate from these concepts; consequently, with the non-admittance of negative IMR, the financial statements are not fairly represented. Reis continued by stating that to avoid incentivizing companies to manage the financial reporting outcomes rather than affect appropriate risk management practices, the ACLI believes an interim solution should have a surplus cap of at least 10% or greater, along with no adjustments to surplus or exclusions. The rationale for this is that IMR is different from other intangibles, and it is more akin to unrealized losses on bonds with no change in immediate claims-paying ability after trading.

Reis stated that for the interim solution, non-hedge accounting derivatives, which are still economically effective hedges and appropriate for the duration and risk management, should not be changed from current industry practice. The industry has been deferring effective hedge gains to IMR for decades. For the interim solution, book value separate accounts, both insulated and non-insulated, have the same products and risk management issues as the general account and should not be excluded. Also, any proof of reinvestment should be on a macro basis looking at the totality of the NAIC framework and recognizing the fungibility of cash. Reis suggested that a new technical working group with members of the Working Group, the Life Actuarial (A) Task Force, the American Academy of Actuaries (Academy), and industry members may be needed to help develop a long-term solution to these issues. Beyond this, the ACLI does not believe it is in the collective best interest to make interim changes to current IMR deferral practices, as this would drastically change longstanding and important risk management practices.

Bruggeman stated that the Working Group will begin its discussion of the second topic—Exclusion of Fair Value Derivatives from Determining Admitted Net Negative IMR—and he noted that non-accounting-effective hedges are recorded at fair value, and the unrealized gain/loss would already be in surplus. Disposal of a fair value hedge would result in an immediate adjustment to surplus via the IMR irrespective of the IMR's positive/negative position. This issue is one of the discussion points that the Working Group wants to understand better, as there is a difference between accounting-effective hedges and economic-effective hedges, and if it is not one of those two, then it would likely be a speculative hedge.

Mike Huff (Teachers Insurance and Annuity Association of America—TIAA), representing the ACLI, stated that Bruggeman made a good distinction between hedges that are accounting-effective versus economic-effective. He also noted that he would not even consider speculative hedges to be a hedge derivative position, as speculative hedges are not allowed under insurance law or company derivative use plans. The industry's interpretation is that accounting-effective and economic-effective hedges are both considered equally economically effective, but accounting-effective just happens to be specifically defined within the accounting guidance. All interest rate derivatives, both hedge accounting and fair-valued interest rate derivatives, are instruments that industry uses interchangeably with fixed-rate bonds as asset and liability management tools. As these instruments are used interchangeably, consistent treatment is considered important and within the spirit of the development of IMR. Historical industry practice has been to defer gains from fair value derivatives when the gain is related to a change in interest rates, and that has previously resulted in a significant deferral of gains into IMR and not into surplus. Huff noted that industry's position is that this is the appropriate accounting treatment, as it does not artificially inflate surplus, given the fact that there is then reinvestment into lower-rate assets. He stated that the ACLI wants to avoid the potentially adverse outcome of disincentivizing the prudent use of derivatives in asset-liability management (ALM) and risk management to ensure that financial statements reflect the fairest representation

of financial condition for companies, particularly in surplus. He then discussed the examples included in the ACLI's comment letter.

Bruggeman noted that the example scenarios place an emphasis on the income statement impact, whereas the Working Group has noted that the hedge is at fair value, which means that surplus has already been affected irrespective of whether the derivative has been disposed of. He then inquired as to whether disposals occur when derivatives are still economically effective or if that occurs after effectiveness has lapsed. Additionally, he requested clarification on what industry considers a derivative that is not economically effective. Huff stated that a hedge will occasionally become economically ineffective, but for the most part, this does not happen. Hedges that industry feels have become speculative are immediately taken off the books; likewise, industry would never put a derivative on the books that was not an economically effective hedge.

Bruggeman asked if, in the second scenario described in the ACLI comment letter, the hedge was to become economically ineffective, whether industry would dispose of the hedge before or after it became ineffective, and whether the gain/loss would be recorded through IMR. Huff responded that in all three scenarios, the hedge would be considered effective, as it has locked in the rate at 5%. Bruggeman clarified that he is trying to assess industry's practice for recording through IMR in the event that the hedge did become ineffective. Huff responded that he believes that while the hedge is effective, any realized gain/loss would go to IMR, and after it becomes ineffective, it would not. Bruggeman stated that there is a distinction that needs to be made between when there is an ineffective hedge that has been disposed of/terminated based on when it became ineffective. If the derivative is not interest-rate sensitive, it would not meet the blanks instructions on interest-rate sensitivity. The issue is gaining a proper understanding of what happens when a derivative becomes ineffective and how state insurance regulators would get assurance that when a derivative was disposed of it would roll through IMR only if it was still effective. He stated that he believes there is a breakpoint where, once it is ineffective, it is no longer an interest-rate-sensitive type of disposal that qualifies for IMR. Bruggeman stated that there is a need for these detailed discussions as part of a long-term IMR assessment, but he does not want to put reporting entities in a whipsaw position where they have been deferring all derivative gains to IMR over the years; now the derivative losses are not permitted through IMR.

Gann noted that due to the complexity of this discussion, she would like to make some clarifying comments. In the scenarios presented by the ACLI, she clarified that these are not actual hedges of specific assets. Rather, these are derivative hedges for the portfolio, which is why they do not qualify as accounting-effective hedges under statutory accounting. Industry considers these to be economic-effective hedges because they are in line with a company's derivative use plan; however, there is no metric or assessment that could occur to prove that the derivative is effective as required for accounting-effective hedges. So, if the hedge is in accordance with a company's derivative use plan, then industry considers them to be effective, and there would be very limited situations, if any, where a derivative would move from being considered an effective hedge. Gann noted that what industry is identifying as an effective hedge is not an accounting-effective hedge. As such, industry's interpretation would encompass many more derivatives than are considered effective hedges for accounting purposes under *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives*. Gann stated that she just wants to make sure that that was clear because the example appears to reflect a hedge of a single asset, but hedges of single assets could be designed to qualify as accounting-effective. Reis noted that hedges from the example scenarios could be assigned to assets that are subsequently purchased, and if that is to occur, the derivative arrangement could qualify as accounting-effective. The company would have to end up buying those assets for them to be assigned to the hedge, so the hedge is not assigned to a specific asset when it is initiated, but if assets are purchased, the hedge could be assigned. If the assets were purchased with a maturity duration of two years instead of a planned 10-year time frame, this could be a situation in which the hedge becomes ineffective.

Tom Karafin (Prudential) noted that hedges generate a gain or loss while they are effective, and the moment a derivative is to become ineffective, they take them off. However, the gain or loss was in existence during the hedge's effective life, and the current model says that gain/loss has become permanent and should follow the hedged item. As such, the gain/loss would continue to be reported through IMR.

Smith asked how certain the industry representatives are that during the periods in which interest rates were decreasing, everyone in industry was consistently applying this approach to defer gains in IMR over the life of the hedge versus recognizing all gains in surplus at the time of disposal. Reis responded that while no one would suggest that this is an absolute statement, all attendees to the ACLI working group meeting (approximately 30–40 representatives) responded that they were deferring hedge gains through IMR. Smith reiterated his concern that some of the more aggressive companies were not involved in the industry's discussion. For companies that have been deferring the gains, it would be punitive to not defer the losses, but there is a concern that some companies historically recognized the gains and now want to defer the losses. Bruggeman noted that they are looking to avoid an imbalance in which gains are recognized immediately in surplus, but the realized losses are deferred through IMR. He proposed a solution to have companies that have been following the approach in which derivative gains were historically taken to IMR continue doing so with derivative losses, but companies that have not previously recognized derivative gains through IMR would not be permitted to begin that practice under the INT with derivative losses. He stated that while it is a bit inconsistent, it would avoid the imbalance issue of reporting gains and losses differently.

Huff stated that he believes he can safely state that all the major players have been deferring derivative gains through IMR, and the big four accounting firms agreed with that treatment. Bruggeman noted that the Working Group wants to provide some kind of direction for NAIC staff, and in the long-term, they will need to work with the Life Actuarial (A) Task Force for a solution; however, for the short-term, there needs to be some kind of assurance that hedges were disposed of while they were still economically effective in order for gains or losses to go through IMR. This would provide state insurance regulators with some amount of comfort that ineffective hedges are not being run through IMR, especially if resulting in a loss. That said, economically effective hedges do not have any kind of metric for determining if the hedge is still economically effective, so state insurance regulators need more assurance that something was not deferred through IMR that should not have been. Huff stated that the vast majority of the time when hedges are unwound, as illustrated in the example scenarios, they are done so on a schedule, and the company will know the approximate time at which the hedge would be disposed of. While it is possible that a hedge may be unexpectedly unwound, it would be quite unusual for a company to have a hedge become ineffective prior to disposal because of this.

Clark stated that it does not make any sense to have different accounting treatment between unrealized and realized changes. The concept of IMR exists to create consistency for bonds for unrealized and realized losses. The same should hold for derivatives. It does not make sense to mark derivatives to market (fair value) when it is open (unrealized) only to reverse that treatment at termination (realized). This disconnect is one of the two things, at least in the long-term, that need to change to get accounting consistency. The second thing is the lack of measurement parameters around the effectiveness of a hedge. There is a reason U.S. generally accepted accounting principles (U.S. GAAP) and statutory accounting have a concept of effective hedge accounting, but with industry's interpretation, there is essentially a way around effective hedge accounting without any kind of overarching parameters, and that is a concern. Given the historical practice, the least disruptive thing to do would be to allow companies to continue with the practices they have already been doing. Clark stated that as for Smith's point, a company should not change its practice because of this interpretation, and in the interim, it would be appropriate for companies to continue with the practices they have already been doing.

Wolf stated that he supports that approach, and the guidance must specify that the company needs to continue following its past practices. If a company has been amortizing gains in IMR for similar derivative positions in the

past based on documented internal accounting policies, then it can continue to do so with like derivative positions that are now resulting in losses, but allowing new practices permitting derivative losses in IMR to go forward at this point should be avoided.

Bruggeman then directed the Working Group to discuss book value guaranteed separate accounts. He stated that he believes it makes sense to permit admitted IMR in a separate account. Although there is a distinction between insulated and non-insulated, he would like to avoid that discussion for this interpretation. Separate accounts for certain products are still general accounts affected, but that is not relevant for IMR purposes. Bruggeman then recapped the annual statement blanks instructions of how IMR from separate and general accounts are presented. He then inquired about the operational mechanics, such as if there was a cap based on surplus, whether it was 5% or 10%, and how that would affect the instructions for reporting negative IMR within general and separate accounts. Specifically, he inquired about whether the cap should first apply to the general account, with the separate account only admitting if the admittance in the IMR does not exceed the percentage permitted. He stated that he believes there is support for book value guaranteed separate accounts recognizing negative IMR, but it is an order of operations question between the general and separate accounts.

Brad Caprari (Prudential), representing the ACLI, stated that there has been a bit of back and forth on what the order of operations should be. The initial discussion was for negative IMR to be applied to the general account first and then to the extent that there remains availability within that 10% surplus limit, which would then apply to the separate account. This is also to say that the ACLI supports a 10% surplus limit. That said, the ACLI believes there should be proportionate admittance between insulated and non-insulated separate accounts. Caprari noted that he does not see any distinction between insulated versus non-insulated as it relates to the discussion of IMR, and there should be proportionate admittance there to the extent that someone has negative IMR that can be captured within the available cap of 10%.

Carmello asked for clarification on whether it is an insulated account with the negative IMR asset and whether the IMR would be held in that insulated account. Caprari replied that any admitted negative IMR asset or contra-liability would be held in the insulated account. Carmello noted that this does not really help the customers that have the insulated accounts, as they can only acquire real assets in the event of an insolvency, and he is concerned that this may be somehow benefiting the insulated customers, but that does not appear to be the case. Caprari said he agrees, and he noted that it is only tangible if taken into consideration with the reinvestment of funds, which will make up for the initial loss over time. Carmello then asked for clarification on how the order of operations would proceed if the general account is negative but the separate account is positive in excess of the general account. Caprari responded that it would be the cumulative total of the two accounts to determine the net negative position. If there is a cumulative net negative position, then it depends on whether one or both accounts are negative to determine how the cap is applied. If both accounts are negative, then the general account would apply first, and the separate account would be eligible for any amount of the cap left over.

Gann noted that the concept of admitted and non-admitted assets does not exist in the separate accounts, and the current process in the separate accounts is to take negative IMR as a direct charge to surplus. So, if the direction of the Working Group is to include separate accounts in the interpretation, NAIC staff will include this order of operation that was discussed. NAIC staff will also detail how to reflect this asset in the separate accounts, which would likely be a reversal of the prior hit to surplus, with a recognition of a miscellaneous aggregate write-in asset to reflect what is going to be permitted as admitted. NAIC staff do not recommend reporting it as a contra-liability, as it could be commingled with the non-disallowed negative IMR. Gann stated that it can be identified in the financial statements when reported separately as miscellaneous aggregate assets. When there are changes on what is permitted to be admitted in the separate account, the entry would be to remove the asset with a charge in surplus. As such, companies may be reversing and re-entering entries as the balance in IMR changes based on what is permitted to be admitted from percentage limitations. Gann stated that if separate accounts are

captured, the interpretation will include the recognition process to ensure consistency across industry. Bruggeman stated that there should be a proportional allowance in the insulated and non-insulated separate accounts if IMR is permitted without exceeding the percentage cap. He noted that there are separate account surpluses, and he asked if that counts when adding up all the surpluses.

Caprari stated that if you look at the general account blank, the reported surplus is the surplus the ACLI believes should be used for the cap, and it is inclusive of a separate account surplus. As such, there would not need to be any aggregation, and the ACLI prefers to use it as the cap instead of trying to aggregate out a separate account cap versus a general account cap. Gann stated that NAIC staff should have what they need to move forward with updating the interpretation, and she noted that the agenda does identify other things that may need to be considered in the future, perhaps as a long-term project for separate accounts with regard to the products that are used for book value. She also noted that on a broad scale, variations from what is permitted for book value under *SSAP No. 56—Separate Accounts* are not detailed, identifying that only three permitted practice disclosures were reported for items that were held at book value beyond what was permitted in SSAP No. 56. She also noted the need to assess overall accounting, reporting, and risk-based capital (RBC), if the separate account blanks are being used as an extension of the general account or a segregated general account, as the accounting and reporting in the separate account is not designed with that original intent. Bruggeman noted that this might represent an add-on to the current project, but IMR interpretation will proceed with IMR to be recognized from book value guaranteed separate accounts, whether insulated or non-insulated; and, as proposed by Caprari, if there is net negative IMR, then the amount admitted by the surplus cap goes to the general account first, and then whatever is left will be allocated to the insulated and non-insulated separate accounts proportionally.

Linus Waelti (New York Life Insurance Company), representing the ACLI, noted that state insurance regulators understand the importance of being able to distinguish between what they refer to as the good scenario, where the sale proceeds from the asset sale are going into a reinvestment, versus what they call the bad scenario, where that is happening inadequately and the proceeds from asset sales go to pay major cash outflows, whether they are expenses, claims, or withdrawals. To do a granular asset-to-asset mapping of proof of reinvestment is not going to be practical and will be highly challenging. So, the question comes down to what the package of safeguards should be that would give state insurance regulators comfort that the reinvestments are occurring adequately and appropriately. The ACLI recommended that state insurance regulators use existing safeguards, like AAT, to provide comfort in the activity. While AAT would not be considered the sole or primary safeguard, it certainly should play a role in combination with other safeguards, at least in the context of proof of reinvestment, to ensure that assets and reinvested assets are generating returns adequate to cover claim liabilities. The ACLI's position is that if claims payments become compromised by inadequate reinvestment or inappropriate reinvestment, the AAT analysis would identify that shortfall. The AAT shortfall would cause reserve strengthening, which would result in a direct impact on surplus, much like what would be seen if negative IMR was written off.

Waelti noted that in terms of other recommendations, the ACLI proposes the inclusion of a macro demonstration of reinvestment. This could involve the use of the cash flow statement to provide an aggregate view of cash activity, with a comparison of investment proceeds to the cost of investments acquired. This also helps navigate some of the problems with the fungibility of cash that would plague other demonstrations of proof of reinvestment. There are some imperfections with using a macro demonstration, as proceeds reported in the cash flow include maturities, and the amount reported as reinvestments includes cash in-flows from other sources, but at least at a high level, this would provide state insurance regulators with a view of the reinvestment occurring and whether it is at a healthy level. Another proposal from the ACLI is a company attestation that confirms that investment activities are in line with documented investment strategies and policies of the company. This company attestation could also be expanded to provide additional comfort to state insurance regulators as needed. Additionally, the ACLI suggests that a company will attest that asset sales are not being compelled by liquidity pressures, whether they are coming from collateral calls or from excess withdrawal activity.

Carmello asked if companies could potentially capture the information needed to perform granular asset-to-asset mapping as proof of reinvestment as a goal of the long-term project. Waelti responded that while some of this information is available on Schedule D, it would still be very difficult to perform asset-to-asset mapping due to the complexity and volume of activity. Carmello noted that in his mind, he is envisioning a short report that maps together and provides comfort to state insurance regulators that there is not a situation where asset sale proceeds are being used to cover claims instead of being reinvested. He stated that it seems Waelti is proposing that state insurance regulators would be able to get this type of report prepared by the companies if requested. Waelti responded that this would likely include some information from Schedule D, and they would need to work with state insurance regulators to determine what other information and commentary state insurance regulators are looking for. Bruggeman noted that this conforms with what is in the instructions; if there are excess withdrawal situations, those asset sale gains/losses do not go through IMR. The bigger question of the fungibility of cash is when a company sells a newly purchased asset, but they are not buying a fixed-income instrument with the proceeds. This may be something better addressed in the long term, but for the short term, what Carmello is requesting is a more distinct disclosure of the transactions or how they are done.

Carmello said he agrees, and he noted that on the long-term project, they should consider looking at the 150% factor to determine if it is still appropriate since it was a factor developed around 30 years ago when IMR was established. Bruggeman then asked Gann if state insurance regulators could ask for additional disclosure within AAT or if it would require a referral to the Life Actuarial (A) Task Force. Gann stated that this would likely require a referral to the Task Force. She also noted that the exposed interpretation was drafted with reference to an “immediate” investment of sale proceeds in another fixed-income instrument. While this language has been identified as potentially problematic, she noted that it was not intended to imply instantaneous action, but the company is investing directly in fixed-income instruments, not holding onto the cash, and investing six months down the road or in equities. Gann stated that the industry-proposed attestation can be included as an additional disclosure. Bruggeman clarified that he is not sure where this attestation disclosure would actually be reported. Gann noted that this could be done as a narrative disclosure for year-end 2023, but it is too late in the year for a data-captured disclosure. If the INT were to go on for a period of time, the disclosure could be included in the financial statements as a general interrogatory or as a new data-captured disclosure. Bruggeman noted that he would like to see some kind of distinct matching as part of the long-term solution and an assessment of whether the 150% factor for excess withdrawals still makes sense.

Bruggeman noted that there was not any disagreement on the topic of special surplus accounts, and the only comment he has is that the wording should be specific to ensure that everyone is using the same terminology so information entered can be easily aggregated. He noted that as soon as a “write-in” line is provided, state insurance regulators tend to lose all ability to aggregate data by line and column number. Specific wording should also be developed to make it easier to consistently identify and aggregate year-end data.

Bruggeman directed the Working Group to the topic of existing safeguards. Reis noted that industry is not opposed to additional safeguards, but he wants to make sure the rationale for each safeguard is clearly understood. Gann stated that the Life Actuarial (A) Task Force has communicated that AAT should not be relied on as the sole safeguard for the admittance of negative IMR. There is the ability for permitted practices, but there is the desire for a uniform standard, and there were only two permitted practices for year-end 2022. For derivatives, there is the reliance on a company’s filed derivative use plan, but NAIC staff do not receive these plans and cannot comment on what is included or how much is included regarding interest rate derivatives or what is going through IMR. For the long-term project, the Working Group could potentially expand Schedule DB to get more information, but that is not something that could be done for this year-end. NAIC staff are requesting comments on the ACLI proposed safeguards and direction on whether there are other safeguards that should be incorporated. Bruggeman noted that the Working Group’s direction is that what is included in the exposure is sufficient for consideration; although, it should be noted that AAT should not be the primary safeguard, and individual

circumstances that vary from what is permitted in the ultimate interpretation can still go through the permitted practice process. States should also be aware that derivative use plans are key components for the potential admittance of net negative IMR, as they review and assess those submissions. Wolf asked whether there would still be a safeguard around minimum RBC. Bruggeman confirmed that the 300% threshold for potential action would still be in place. Wolf stated that negative IMR should not be permitted for admittance when a reporting entity hits the 300% threshold. Wolf also noted support for calculating the 300% threshold with the removal of admitted negative IMR, goodwill, operating system software and electronic data processing equipment, and deferred tax assets similar to the calculation of adjusted capital and surplus.

Bruggeman noted that to have a line on RBC sensitivity would require a structure change to RBC, which cannot be completed for year-end 2023, as it would have needed to be exposed by at least the end of January. He noted that RBC sensitivity would be appropriate, especially if it resulted in an email sent to the domestic regulators, noting that the company's RBC, with or without this IMR, is well above 300%. Hudson noted that his understanding of Wolf's request was regarding whether the Working Group wants to include language that companies could not admit negative IMR if RBC was below 300%. Bruggeman responded that this should be included. Gann responded that this is included in the INT, but the comment was to calculate 300% after adjustments. Wolf agreed that this was his comment, as he wants to make sure that the 300% RBC is determined after adjustments to remove admitted negative IMR, goodwill, operating system software and electronic data processing equipment, and deferred tax assets. Reis noted that the industry is not opposed to providing disclosures, but he wants to make sure that the disclosures are discussed in the context of the cap.

Bruggeman asked the Working Group whether there should be a termination date for the INT, and he proposed a termination date three years after adoption. Hudson agreed with Bruggeman on including an end date on the INT, as it will provide pressure to resolve the issue. Bruggeman suggested an end date of Jan. 1, 2026. Reis stated that the industry is also supportive of an end date, and while the ACLI has not discussed a three-year end date, his opinion is that this time frame sounds reasonable for developing a long-term solution. Bruggeman said that three years is the best option, as it allows for that extra year that is often needed to develop and put the structure in place.

Bruggeman then directed the Working Group to discuss the proposed 5% cap on adjusted capital and surplus, and he asked if this cap should be adjusted surplus or straight surplus without any adjustments. He noted that the Working Group had previously discussed and settled on 5%, but he believes 10% makes more sense, as it would line up with the goodwill admittance limitation. Hudson asked whether the prior concern about the 300% company action level RBC was that the soft assets, including negative IMR, could not be used by the company after reaching the action level, which Wolf confirmed. Reis stated that negative IMR is akin to unrealized losses, and it is deferred because they are transitory due to the company reinvesting the proceeds in a higher or lower-yielding asset, and it does not change the claims accountability. It can be distinguished from other soft assets, and it is more akin to the soft asset of unrealized gains/losses that are on the balance sheet. Reis expressed that it is cleaner and more theoretically appropriate not to lump IMR in with other soft assets, as to do so would miss the point of why IMR was developed. Clark agreed and noted that the interim proposal to cap IMR based on capital and surplus is more related to the fact that the Working Group is not comfortable enough with all the existing safeguards to allow unlimited admittance of negative IMR. He noted that he would be ok with the 10% cap and no adjustments, as this is a different type of intangible compared to other soft assets.

Weaver stated concern that these intangibles are starting to add up, and if a company were in trouble, it would not be able to pay claims right away with some of these intangible assets. Reis responded that in the ACLI's comment letter, it details its position that the bonds are on the books at amortized cost, which is not the sales price at which bonds could be sold to pay claims, and IMR is no different. Clark stated that the 300% RBC threshold is intended to address this, as once the company reaches the solvency concern, it no longer gets to report IMR as

a soft asset, and the accounting becomes closer to a liquidation basis of accounting. Hudson stated that a reasonable compromise would be to go up to 10% but to use adjusted surplus and capital, noting that he would be uncomfortable going up to 10% using unadjusted surplus and capital. Bruggeman noted that the reason the ACLI is trying to make the distinction of using the RBC below 300% and then using adjusted surplus is if a company did get to 300% without all those soft assets and without negative IMR, then the company has to eliminate IMR as an admitted asset earlier as opposed to using the 10% of surplus as a cap.

Bruggeman then requested further comments and questions from the Working Group, noting that NAIC staff need to be provided with direction for drafting an updated INT for exposure, specifically requesting responses from members on the 10% cap and unadjusted versus adjusted surplus. Bartlett, Brown, Andersen, and Arfanis stated support for a 10% cap with adjusted surplus and capital. Smith stated that he prefers 5% with adjusted surplus and capital but could live with 10% adjusted surplus and capital, and Sherman agreed. Kasinow requested clarification on the calculation of adjusted surplus and capital. Gann clarified which items are excluded, and she noted that the calculation is further detailed in the meeting materials, found in paragraph 9a of the exposed INT. Kasinow stated support for 10% with adjusted surplus and capital. Reis asked the Working Group members voting for the use of adjusted surplus and capital what their theoretical basis for this was and if a higher cap could be considered since adjusted surplus and capital would further reduce the admitted amounts of IMR. He stated that the ACLI agreed that the 10% cap is reasonable, but he does not understand the foundation for using adjusted surplus and capital outside of a desire to be conservative. Malm stated support for 10% with unadjusted surplus and capital. Bruggeman noted that at this point, the vote is approximately eight for 10% adjusted versus two for 10% unadjusted out of 15 members.

Bruggeman noted that this majority vote would indicate that the Working Group is directing NAIC staff to draft the exposure with a 10% limitation using adjusted surplus and capital. Clark asked if Working Group members could change their minds when the vote for the adoption of the INT comes up. Bruggeman stated that members could, as this was originally exposed with a 5% limitation of adjusted capital and surplus, and now the Working Group is directing NAIC staff to draft an exposure with 10% using adjusted capital and surplus. Bruggeman noted that the Working Group will perform an e-vote exposure vote on the updated draft exposure.

2. Discussed Other Matters

Bruggeman requested any additional comments or discussion on other matters. Gann noted that the other items on the agenda are just notices. First, NAIC staff received an extension for comments from the June 1 referral from the Valuation of Securities (E) Task Force (Attachment One-B4) until July 7. The second thing is letting everyone know that the Insurance Core Principals (ICPs) 14 and 17 have been released for comments, both of which are available for review and comment on the International Association of Insurance Supervisors (IAIS) website.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Interpretation of the Statutory Accounting Principles (E) Working Group

2023 Net Negative (Disallowed) Interest Maintenance Reserve

INT 23-01T Dates Discussed

March 22, 2023

INT 23-01 References

Current:

*SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve
Annual Statement Instructions*

INT 23-01T Issue

1. The statutory accounting guidance for interest maintenance reserve (IMR) and the asset valuation reserve (AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within *SSAP No. 7* is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the annual statement instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance residing within the annual statement instructions.
2. As detailed in *SSAP No. 7*, paragraph 2, the guidance for IMR and AVR applies to life and accident and health insurance companies and focuses on IMR and AVR liability recognition and distinguishing between IMR and AVR:
 2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.
3. The IMR guidance in the annual statement instructions provides information on the net balance. A positive IMR represents net interest rate realized gains and is reported as a liability on a dedicated reporting line. A negative disallowed IMR represents net interest rate realized losses and is reported as a miscellaneous other-than-invested write-in asset in the general account and nonadmitted.
4. IMR balances between the general account and separate accounts are separate and distinct. Meaning, a net negative IMR in the general account only represents activity that occurred in the general account that was allocated to IMR. However, the net positive or negative balance of the general account influences how the net positive or negative balances are reported in separate account statements (and vice versa). (A net negative IMR balance in the general account may not be disallowed if there is a covering net positive IMR in the separate account. Negative IMR that is not disallowed is reported as a contra-liability.) The instructions for reporting the net negative and positive balances are detailed in the annual statement instructions:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned "Interest Maintenance Reserve" on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the "Change in Disallowed Interest Maintenance Reserve" in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement. The following information is presented to assist in determining the proper accounting:

<u>General Account IMR Balance</u>	<u>Separate Account IMR Balance</u>	<u>Net IMR Balance</u>
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

5. In October 2022, the ACLI requested the Statutory Accounting Principles (E) Working Group to reassess the guidance for net negative (disallowed) IMR, with a request to consider admittance of those amounts. The ACLI noted that the nonadmittance of disallowed negative IMR can have adverse negative ramifications for insurers with two key themes:

- a. In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.
- b. Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

6. In considering the request, the Working Group concluded that for year-end 2022, there would be no change to statutory accounting guidance and deviations from statutory accounting principles would need to be approved via a permitted or prescribed practice. The Working Group then held company-specific educational sessions in January 2023 to receive detailed information regarding negative IMR and received a subsequent comment letter from the ACLI.

7. During the 2023 Spring National Meeting, the Working Group further discussed the topic of negative IMR and directed NAIC staff to proceed with drafting guidance for both a 2023 solution and to begin work towards a long-term solution.

INT 23-01T Discussion

8. This tentative interpretation prescribes limited-time, optional, statutory accounting guidance, as an exception to the existing guidance detailed in SSAP No. 7 and the annual statement instructions that requires nonadmittance of net negative (disallowed) IMR in the general account as a short-term solution for 2023. This interpretation is specific for general account treatment only and assessment of possible revisions for the separate account will be considered as part of the long-term solution. Specifically, this interpretation impacts the annual statement instruction rules regarding disallowed negative IMR in the general account, detailed in rules 'b' and 'f' shown in paragraph 4. (As detailed within, admittance in the general account does not impact the determination or reporting of IMR in the separate accounts.) As this interpretation overrides existing guidance, it will require a 2/3rd vote.

9. Reporting entities are permitted to admit net negative (disallowed) IMR in the general account with the following restrictions:

- a. Reporting entities with an RBC greater than 300% are permitted to admit net negative (disallowed) IMR, as defined in paragraph 9.b., up to 5% of the reporting entity's general account capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted net negative IMR. Reporting entities with a 300% or lower RBC are not permitted to admit net negative (disallowed) IMR.
- b. Negative (disallowed) IMR admitted pursuant to paragraph 9.a. is limited to IMR generated from losses incurred from the sale of bonds, or other qualifying fixed income investments, that were reported at amortized cost prior to the sale, and for which the proceeds of the sale

were immediately used to acquire bonds, or other qualifying fixed income investments, that will be reported at amortized cost. (This provision intends to explicitly exclude derivative losses from derivatives reported at fair value that have been allocated to IMR from being admitted under this guidance¹.)

10. Reporting entities that admit net negative disallowed IMR in the general account pursuant to paragraph 9 shall report the admittance in the balance sheet as follows:

- a. Reporting entities shall report the net negative (disallowed) IMR as a write-in to miscellaneous other-than-invested asset (named as “Disallowed IMR”) on the asset page. The net negative (disallowed) IMR shall be admitted to the extent permitted per paragraph 9, with the remaining net negative (disallowed) IMR balance nonadmitted.
- b. Reporting entities shall allocate an amount equal to the general account admitted net negative (disallowed) IMR to special surplus. Although dividends are contingent on state specific statutes and laws, the intent of this reporting is to provide transparency and preclude the ability for admitted negative IMR to be reported as funds available to dividend.

11. Reporting entities admitting net negative (disallowed) IMR are required to complete the following disclosures in the annual and quarterly financial statements for IMR:

- a. Reporting entities that have allocated gains/losses to IMR from derivatives that were reported at fair value prior to the closing / termination / settlement / expiration of the derivative shall disclose the non-amortized impact to IMR from these allocations separately between gains and losses. This disclosure shall illustrate the removal of these balances from the total general account IMR to determine the net negative amount that is permitted to be admitted under paragraph 9.b.
- b. Reporting entities shall complete a note disclosure that details the gross negative (disallowed) IMR, the amounts of negative IMR admitted and nonadmitted, adjusted capital and surplus per paragraph 9.a. and the percentage of adjusted capital and surplus for which the admitted negative IMR represents.

12. The provisions in this interpretation intend to be specific on the following prohibitions:

- a. Negative IMR permitted to be admitted shall not include losses from derivatives that were reported at fair value prior to settlement / termination / expiration / closing of the derivative. (Only derivative losses from derivatives that qualified as effective hedges (and reported under ‘hedge accounting’ as detailed in *SSAP No. 86—Derivatives*), which hedged an item that had offsetting adjustments to IMR, are permitted to be included in the admittance calculation.) The allocation of derivative losses to IMR, for derivatives held at fair value and were not offset by a hedged asset that was also subject to IMR, is not in line with the original intent of the IMR guidance in *SSAP No. 86* or the annual statement instructions.

¹ It has been identified that some reporting entities have allocated derivative losses to IMR for derivatives that were reported at fair value throughout the derivative life, as they did not qualify as effective hedges under statutory accounting, and that were not hedging assets with offsetting amounts to the IMR. As detailed in paragraph 9.b., these losses shall be removed from the IMR balance in determining the net negative (disallowed) IMR balance permissible for admittance.

Consideration of this industry interpretation and clarification of derivatives through the IMR will be addressed as part of the long-term proposal.

- b. The admittance of net negative (disallowed) IMR in the general account shall have no impact on the reporting of IMR in the separate account. The comparison of general account and separate account IMR shall occur on the gross positive and negative balances prior to any admittance in the general account. Disallowed negative IMR in the separate account shall continue to be fully disallowed as a direct charge to surplus. The IMR annual statement instructions predate current guidance that requires insulated and non-insulated separate account blanks. Consideration of separate account treatment of IMR will be addressed in a long-term proposal that will assess the concepts of insulated separate accounts and whether the balances of the general account shall have any influence on how IMR shall be reported in those separate account statements.

INT 23-01T Status

13. The consensuses in this interpretation were adopted on _____, to provide limited-time exception guidance to SSAP No. 7 and the annual statement instruction for the reporting of negative (disallowed) IMR in the general account. The provisions within this interpretation are permitted until _____ and will be automatically nullified on _____.

14. Further discussion is planned.

**Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A**

Issue: Negative IMR**Check (applicable entity):**

	P/C	Life	Health
Modification of Existing SSAP	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item has been developed to discuss the interest maintenance reserve (IMR) within statutory accounting, specifically the current guidance for the nonadmittance of disallowed negative IMR. Although the statutory accounting guidance has been in place for several years, the rising interest rate environment has created an increased likelihood for reporting entities to move to a negative IMR position. This agenda item intends to provide information on the background of IMR, current accounting guidance, recent discussions of the Life Actuarial (A) Task Force and some broad financial results from year-end 2021 and interim 2022 financial statements. The intent is to provide this information to facilitate Working Group discussion.

The following provides a high-level overview of the use of the terms positive IMR and negative IMR for entities filing the Life, Accident & Health / Fraternal annual statement blank:

- A positive IMR means that the net realized interest related gains which are amortized in the IMR calculation are greater than net realized interest related losses which are being amortized in the IMR calculation. A positive IMR is reported as a statutory liability and amortized to income over time.
- A negative IMR means that net realized interest related losses which are amortized in the IMR calculation are greater than net realized interested related gains which are amortized in the IMR calculation. A disallowed negative IMR is reported as a nonadmitted asset and amortized to income as a loss over time.

As IMR occurs in the general and separate account, there are specific guidelines in determining whether the IMR reflects a net disallowed negative or position in the annual statement instructions. These are on page 5.

A letter from the American Council of Life Insurers (ACLI) dated Oct. 31, 2022, raised concerns with existing statutory accounting requirements on the nonadmittance of disallowed negative IMR noting negative ramifications for insurers. Key summarized positions from this ACLI letter include:

- In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.
- Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

Background of IMR

The IMR was first effective in statutory accounting in 1992 and requires that a realized fixed income gains or losses attributable to changes in interest rates (excluding gains/losses that are credit related), be amortized into income over the remaining term to maturity of the fixed-income investments (and related hedging programs) sold rather than being reflected in income immediately.

Minutes, including adopted materials – in the Blue Book (Life Statement), from the 2002 4th Quarter NAIC Proceedings discussing IMR are provided below. Please note the last section that includes “Future Directions” which identifies recognition of negative IMR as a major area of effort.

Description and other components of IMR from the Blue Book, captured in the 2002 4th Quarter NAIC Proceedings, provides the following definition and other details: (*Only key excerpts included.*)

The Interest Maintenance Reserve (IMR): captures for all types of fixed income investments, all of the realized capital gains and losses which result from changes in the overall level of interest rates as they occur. Once captured, these capital gains or losses are amortized into income over the remaining life (period to maturity) of the investments sold. Realized gains and losses on derivative investments, which alter the interest rate characteristics of assets/liabilities, also are allocated to the IMR and are to be amortized into income over the life of the associated assets/liabilities. Note: certain significant unusual transactions may require immediate recognition of any realized capital gains or losses, as described in a later section. This reserve is not subject to any maximum.

VII. IMR MINIMUMS/MAXIMUMS: A. Minimums: **The IMR can be negative for any line of business as long as the aggregate IMR for the Company is not less than zero. Any otherwise negative IMR value is carried over to subsequent years.** B. Maximums: There is no maximum of the IMR

VIII. BACKGROUND/PERSPECTIVE: To insure solvency of a company, its assets should be invested so that the company has a very high probability of paying its contractual liabilities when they become due. In order to assess whether a company is able to fulfill its obligations, it must present its liabilities and assets on a financially integrated basis. Since the accounting practices prescribed for the life insurance annual statement are an important element in this discipline, it is imperative that the accounting practices be consistent for assets and liabilities. If they are inconsistent, then the annual statement will not reveal whether assets exceed liabilities; more importantly, neither regulators nor management can determine the risk of insolvency for the company.

The Valuation Actuary’s Opinion includes a statement that the assets backing the liabilities make adequate provision for the company’s liabilities. That is, the Actuary must look beyond the statutory valuation formulas and satisfy himself that the cash flows generated by the assets will probably be sufficient to discharge the liabilities. Prior to the AVR and IMR, there were many circumstances under which the statutory formula valuation methods gave rise to inappropriate results. Some examples were:

- Changes in values due to interest rate swings were recognized inconsistently on the asset and liability sides of the balance sheet. Liabilities are valued using interest rates fixed at issue while some assets may be valued using current interest rates through trading activity.
- When the assets are poorly matched to the liabilities, a significant adverse swing in the interest rates will reduce financial strength and could lead to insolvency even though the balance sheet value of the assets exceeds the balance sheet value of the liabilities. Using long term assets to back demand liabilities is dangerous if there is a significant upswing in interest rates. In addition, individual insurance premiums are received and invested for many years after the issue date on which the reserve interest rate is determined, creating a potential for inadequate yields that is not reflected in standard accounting procedures.
- The potential for future asset losses was not well reflected in the balance sheet or earnings statement.

It is desirable that the valuation of the assets and liabilities be made as consistent as possible to 1) minimize the instances where, in order to render a clean opinion, the actuary must establish extra reserves due to interest rate gains or potential for defaults and 2) increase the likelihood that assets supporting liabilities are sufficient even in the absence of an Actuarial Opinion. The development of an AVR and IMR will correct many of these deficiencies in consistency.

XII. AVR AND IMR BUILT ON AND COMPLEMENT EXISTING VALUATION PRACTICES: The existing framework of asset and liability valuation practices, as augmented by the NAIC Model Standard Valuation Law, played a key role in designing the AVR and IMR, including:

A. Reserve valuation standards should contain a provision for future losses. Although it is well understood that in cash flow testing provision must be made for future asset losses, it may not be as well understood that historically the minimum valuation standards implicitly contained such a provision.

B. Interest assumptions in reserve valuation generally recognize the potential for mismatch. Dynamic valuation rates are lower for ordinary life than for guaranteed investment contracts, for example, because the mismatch is almost inevitable on the former. In addition, it is required in other regulations, and in the NAIC Model Standard Valuation Law, that cash flow testing should be used and may result in the adoption of lower than the dynamic valuation rates if mismatch exists. Hence, with the one exception noted in section (c), there is no need for the IMR reserves to make provision for the risk of mismatch.

C. Asset valuations for fixed interest securities usually reflect the outlook at the time of purchase of an asset. In particular, bond amortization tends to reflect the yields available at time of purchase and the expected cash flow. Liabilities are established at the same time, and the interest rate assumptions on them are those appropriate to the outlook at that time. **But if securities are traded, a new amortization schedule is established that may be based on an entirely different yield environment, which may not be consistent with the liabilities that have been established. Using the IMR to absorb trading gains is desirable and appropriate to eliminate this subsequently created mismatch.**

D. Equities present special valuation problems. Common stocks are valued at market rather than amortized value; hence they require different treatment. Real estate and similar investments, although usually valued at depreciated value, require special consideration because of the great likelihood of major changes in yield and yield expectation after purchase.

XXII. RESERVE MAXIMUM AND MINIMUM LEVELS: No maximum is placed on the Interest Maintenance Reserve. The aggregate minimum value for the IMR for the Company is zero. The IMR may be negative for any Line of Business as long as the aggregate for all lines equals zero. Provision is made in the accounting rules that if an aggregate negative IMR is developed in the absence of the zero minimum, that negative value is carried over to subsequent years.

The basic rationale for the IMR would conclude that neither a maximum nor a minimum is appropriate. If the liability values are based on the assumption that the assets were purchased at about the same time as the liabilities were established, then there should be no bounds to the reserve which corrects for departures from that assumption; if a company has to set up a large reserve because of trading gains, it is in no worse position than if it had held the original assets. As for negative values of the IMR, the same rationale applies. However, the concept of a negative reserve in the aggregate has not been adopted.

XXVIII. EXCESSIVE WITHDRAWALS:

A. Background: Major book-value withdrawals or increases in policy loans can occur at a time of elevated interest rates. If these withdrawals or increases are far in excess of the withdrawals provided for in the company's reserving and cash flow testing, and **if asset sales at this point are, in effect, forced**

sales to fund liabilities that are no longer on the books, the allocation of a negative amount to the IMR is not correct.

A company may also experience a “run on the bank” due to adverse publicity. This could occur even during a period of low interest rates, and the sale of assets to meet a run would conceivably produce gains. It is appropriate to register the gains immediately.

If the withdrawals were scheduled payments under a GIC, then there is a presumption that any gains or losses that might occur at the time of withdrawal should be added to the IMR since the gains or losses would be spurious if the company has followed a policy of matching its assets to its liabilities. Note that many of the situations where an upsurge in withdrawal activity generates real losses arise when a company has a severe mismatch between its assets and its liabilities. Such losses can be present even in the absence of any realized gains or losses. The primary protection as to the adequacy of reserves in these circumstances is the requirement for an actuary’s opinion.

- B. IMR Exclusions: All realized interest-related gains or losses which arise from the sale of investments required to meet “Excess Withdrawal Activity” as defined below will be excluded from the IMR and will be reflected in net income.

STANDARDS FOR ACTUARIAL RESERVES WITH AN IMR AND AN AVR

LXX. IMR RESERVE STANDARD The Interest Maintenance Reserve is a true actuarial reserve, and actuaries should use the assets supporting the Interest Maintenance Reserve when opining that the assets supporting the company’s reserves make adequate provision for the company’s obligations. **In the case of a negative IMR, the actuarial opinion should include an explicit statement that the impact of the negative IMR on reserve adequacy has been considered and that the reserves after deduction of the negative IMR still make adequate provision for the liabilities.**

LXXI. GENERAL EXPLANATION The IMR is designed to work with minimum statutory reserves based on formulas contained in laws or regulations. Where, for example, the valuation rate is based on the interest rate conditions prevailing in the year of deposit, the assets supporting the liabilities will be consistent with the liability assumptions. Disposal of the assets during a period of declining interest rates will produce interest-related gains, but these gains will be needed to support the liabilities that are still valued at the interest rate levels prevailing at time of deposit. Thus, it is appropriate in the case of positive IMR to treat the IMR as an additional reserve requirement above and beyond formula minimums.

In cash-flow-testing actuaries take future cash flows into account from existing assets. In an example such as described above, existing assets may well have been purchased at rates below those prevailing at the time reserves were established. The positive IMR that has been built up has captured the gains and not allowed them to be available for distribution. The IMR is recognized as part of the reserves available to meet future obligation cash flows.

Thus from either point of view a positive IMR is treated as a true actuarial reserve. The same arguments should apply equally well in the case of a negative IMR, but some concern has been expressed that in this case the net reserves are in effect lower than statutory formulas minimums, and therefore special considerations are required.

FUTURE DIRECTIONS

In late 2002, the interested persons (as its name had become) considered refinements of the AVR/IMR for the next several years, from that vantage point, some of the major areas of effort appear to be as follows:

- 1. There should be recognition of negative values of the IMR. The group had long recognized that the philosophical basis for the IMR supports negative values of the reserve as well as positive.**

There is a need to have investment return match the liabilities associated with the investment; and a need to remove the incentive for a company to make investment decisions based on the shortterm balance sheet effect; and these needs exist also on the negative side of the IMR.

No doubt there are concerns that a negative reserve of this type could somehow lead to an unsound condition, so there has been appended to this report a discussion entitled “Why Are Negative Values For the IMR Necessary?” It also seems as though there should be additional safeguards in the case of a negative IMR. Rather than put arbitrary limits on the amount of the negative reserve, however, consideration is being given to an actuary’s statement that an asset adequacy analysis has been carried out that demonstrates the soundness of the reserves.

(Staff Note: The NAIC library does not have a record of the report noted in the above paragraph.)

Current Accounting Guidance

The statutory accounting guidance for IMR (and the Asset Valuation Reserve – AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within that SSAP is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the Annual Statement Instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance within the Annual Statement Instructions.

The guidance in the Annual Statement instructions provides information on the net IMR balance, which takes into consideration both the positive and negative balances in the general and separate accounts. As detailed, disallowed negative IMR is reported so that it is a direct reduction to surplus on the Summary of Operations, page 4, line 41 change in nonadmitted assets:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned “Interest Maintenance Reserve” on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the “Change in Disallowed Interest Maintenance Reserve” in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement.

The following information is presented to assist in determining the proper accounting:

<u>General Account IMR Balance</u>	<u>Separate Account IMR Balance</u>	<u>Net IMR Balance</u>
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)

Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

The Statutory Accounting Statement of Concepts in the Preamble to the AP&P provides the following on Recognition:

Recognition

35. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

36. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

Life Actuarial (A) Task Force 2022 Guidance

The Life Actuarial (A) Task Force considered comments from the ACLI that the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR could result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency). The Task Force identified that VM-20 Section 7.D.7.b notes that "...the company shall use a reasonable approach to allocate any portion of the total company balance that is disallowable under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)." Question 22 of the AAA's Asset Adequacy Practice Note (Attachment 2) states that "... a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis." However, Question 22 also notes a 2012 survey data that showed varying practices across companies, including some companies that allocated negative IMR.

On Nov. 17, 2022, in order to assist state regulators in achieving uniform outcomes for year-end 2022, the Task Force exposed guidance until November 30, 2022:

Recommendation In order to assist state regulators in achieving uniform outcomes for year-end 2022, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, "appropriate", and "reasonable". Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the nonadmitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, if a company was granted a permitted practice to admit negative IMR as an asset, the company should allocate the formerly non-admitted portion of negative IMR, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset. This recommended guidance is for year-end 2022, to address the current uncertainty and concerns with the "double-counting" of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. Refinement of this guidance may be considered beyond year-end 2022.

The Oct. 31, 2022 ACLI Letter also identified the following references to IMR in the valuation manual and Risk-Based Capital Calculations:

Regulation	Use	IMR references
Actuarial Opinion and Memorandum Regulation (VM-30)	Asset adequacy analysis for annual reserve opinion	An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis.
Life principle-based reserves (VM-20)	Calculation of deterministic reserve	Calculate the deterministic reserve equal to the actuarial present value of benefits, expenses, and related amounts less the actuarial present value of premiums and related amounts, less the positive or negative pre-tax IMR balance at the valuation date allocated to the

		group of one or more policies being modeled
Life principle-based reserves (VM-20)	Calculation of stochastic reserve	Add the CTE amount (D) plus any additional amount (E) less the positive or negative pre-tax IMR balance allocated to the group of one or more policies being modeled
Variable annuities principle-based reserves (VM-21)	Reserving for variable annuities	The IMR shall be handled consistently with the treatment in the company's cash-flow testing, and the amounts should be adjusted to a pre-tax basis.
C3 Phase 1 (Interest rate risk capital)	RBC for fixed annuities and single premium life	IMR assets should be used for C3 modeling.

Assessment of 2020-2022 IMR Balances:

Note – The following amounts reflect the general account IMR Reserve balance. (This is the amount shown as a liability and shows the decrease in the positive IMR reported since 2020.) This detail does not show the disallowed negative IMR reported as an asset and nonadmitted. Also, information on the separate account IMR, which is a factor in determining in disallowed negative IMR, will not be known until the year-end financial statements are filed (March 1, 2023).

	GA 2022 – Q3	GA 2022 – Q2	GA 2022 – Q1	GA YE – 2021	GA YE – 2020
Aggregate IMR	27,601,001,445	31,859,274,989	37,697,176,149	40,598,068,038	35,229,578,726
Change from Prior	(4,258,273,544)	(5,837,901,160)	(2,900,891,889)	5,368,489,312	
% Change	(13.4%)	(21.5%)	(7.1%)	15.2%	

Review of GA IMR Reserve Decrease:

- From the first quarter (Q1) to second quarter (Q2), 25 companies had decreases in the IMR reserve balance over \$50M totaling \$4,717,657,986, representing 80% of the overall change. 13 of these companies had decreases of IMR over \$100M, totaling \$3,959,569,339, representing 68% of the change. Four of these companies had decreases of IMR over \$400M. One of these companies reported a zero IMR liability and reported a disallowed IMR on the asset page of approx. \$570M.
- From the first quarter (Q1) to second quarter (Q2), 49 companies increased their prior reported positive IMR by \$61,390,564. From the second quarter (Q2) to third quarter (Q3), 56 companies increase their prior reported positive IMR by \$60,316,403
- From the second quarter (Q2) to third quarter (Q3), 16 companies had decreases in the IMR reserve balance over \$50M totaling \$3,161,570,362, representing 74% of the change. 8 of these companies had decreases of IMR over \$100M, totaling \$2,580,832,015, representing 60% of the change. All of these companies were still in a net positive IMR position.
- For the 30 companies that reflected the largest decline in reported IMR between the first to second quarter and then the second to third quarter, the following key details are noted.
 - From the first (Q1) to second quarter (Q2), the top 30 companies reflected a decrease in \$4,923,166,733, which is 84% of the total decrease.
 - From the second (Q2) to third quarter (Q3), the top 30 companies reflected a decrease in \$3,642,088,165, which is 85.5% of the total decrease.
 - 19 companies were noted as being in the population for both periods. 29 of the 30 companies reported a net positive IMR in the third quarter. One company reported a zero IMR in Q3.
- For the 15 companies that had the largest declines between the first quarter (Q1) to second quarter (Q2), eight of those companies also had the largest declines from second quarter (Q2) to third quarter (Q3).
- A limited number of companies are reporting a negative IMR on the liabilities side. Seven companies reported a net negative IMR balance in the third quarter (Q3) for a total of 11,031,998. One company made up \$10.5M of the aggregate balance and this company initially went negative in the second quarter (Q2).

Six companies reported a net negative IMR balance for Q2 for a total of \$9,815,594. (The other companies with negative IMR were immaterial amounts.) *(Under the guidance in the A/S instructions, these companies should stop at zero and report the negative as disallowed nonadmitted asset.)*

Review of Disallowed IMR:

Although the assessment of the liability balance shows the decrease in positive IMR, it no longer tracks the decline for companies that go negative, as the reserve balance on the liability page should stop at zero. (This info may be identifiable from the IMR schedule, but not within the quarterly financials from a review of the IMR reported on the liability page.) As such, NAIC staff completed a review of the data to identify the companies that moved to a zero balance (from a prior positive balance) at year-end 2021 or in the 2022 quarters:

Companies that moved from a positive IMR (liability) to a zero balance:

- Initially went to zero in 2022 – Q3: 20 companies
- Initially went to zero in 2022 – Q2: 20 companies
- Initially went to zero in 2022 – Q1: 11 companies
- Initially went to zero YE 2021 – 20 companies (This is a comparison to YE 2020.)

For these 71 companies, NAIC staff has completed a manual review to the 2022 third quarter financial statements to determine if a disallowed IMR was reported as an aggregate write-in on the asset page. For these companies, 60 were identified with a disallowed IMR for a total of \$1 Billion as of the third quarter 2022.

Recommendation:

NAIC staff recommend that the Working Group include this item on their maintenance agenda as a New SAP Concept for discussion to assess the current guidance for disallowed negative IMR. NAIC staff recommend that at the Working Group's conclusion, documentation of the discussion, and resulting decisions, be captured for historical purposes in an Issue Paper.

Staff Review Completed by: Julie Gann - NAIC Staff, November 2022

Status:

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a New SAP Concept and exposed the agenda item with a request for comments by industry on potential guardrails and details on unique considerations. The Working Group directed NAIC staff to coordinate with the Life Actuarial (A) Task Force and request regulator-only sessions with industry to receive specific company information.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group directed NAIC staff regarding the consideration of negative interest maintenance reserve (IMR) with an intent to work on both a 2023 solution and a long-term solution as follows:

- a. Draft a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within asset adequacy testing (AAT); 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT (and documentation), as well as any liquidity stress test (LST) considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data (sales of bonds because of excess withdrawals should not use the IMR process); and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.
- b. Draft a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from total adjusted capital (TAC) and the consideration of sensitivity testing with and without negative IMR.
- c. Develop guidance for future Working Group consideration that would allow the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if RBC ratio is less than 300.
- d. Review and provide updates on any annual statement instructions for excess withdraws, related bond gains/losses and non-effective hedge gains/losses to clarify that those related gains/losses are through asset valuation reserve (AVR), not IMR.
- e. Develop accounting and reporting guidance to require the use of a special surplus (account or line) for net negative IMR.
- f. Develop governance related documentation to ensure sales of bonds are reinvested in other bonds.
- g. Develop a footnote disclosure for quarterly and annual reporting.

On April 10, 2023, the Working Group exposed a limited-time, optional INT to allow admittance of net negative (disallowed) IMR in the general account up to 5% of adjusted capital and surplus. The exposed INT proposed restrictions on what is permitted to be captured in the net negative IMR balance eligible for admittance as well as reporting and disclosure requirements.

MEMORANDUM

TO: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
Kevin Clark, Vice-Chair of the Statutory Accounting Principles (E) Working Group

FROM: Rachel Hemphill, Chair, Life Actuarial (A) Task Force
Craig Chupp, Vice-Chair, Life Actuarial (A) Task Force

RE: Life Actuarial (A) Task Force Response on Negative IMR

DATE: June 15, 2023

Background

On March 27, 2023 a memorandum from the Statutory Accounting Principles (E) Working Group (SAPWG) was received by the Life Actuarial (A) Task Force (LATF) with a referral for consideration of the Asset Adequacy Testing (AAT) implications of negative IMR. Specifically, the Working Group recommended a referral to the Task Force to consider the following:

1. Development of a template summarizing how IMR (positive and negative) is reflected within AAT.
2. Consideration of the actual amount of negative IMR that is to be used in AAT, noting that as negative IMR is included, there is a greater potential for an AAT liability.
3. Better consideration and documentation of cash flows within AAT, as well as any liquidity stress test considerations.
4. Ensuring that excessive withdrawal considerations are consistent with actual data. (Insurers selling bonds because of excess withdrawals should not use the IMR process.)
5. Ensuring that any guardrails for assumptions in AAT are reasonable and consistent with other financial statement / reserving assumptions.

Recommendation

On its April 27th call, LATF discussed the referral from SAPWG. LATF agreed on the following actions:

Develop IMR Template

LATF is drafting a template with additional disclosures on the reflection of IMR in Principle-Based Reserving (PBR) and AAT. We have requested input from the American Academy of Actuaries and the American Council of Life

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509	p 202 471 3990	f 816 460 7493
Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197	p 816 842 3600	f 816 783 8175
New York One New York Plaza, Suite 4210, New York, NY 20004	p 212 398 9000	f 212 382 4207

www.naic.org

Insurers on a potential template. The template's disclosures would aim to support verification of the requirements SAPWG is considering for potential admittance of negative IMR, including confirming:

1. That IMR is appropriately allocated for PBR and AAT,
2. That any negative IMR amounts reflected in starting assets do not generate income and so increase reserves in PBR and/or decrease reserve sufficiency in AAT,
3. That admitted negative IMR does not reflect bonds sold due to historical or anticipated future excess withdrawals, and
4. That admitted negative IMR only reflects bonds sold and replaced with similar bonds.

For items three and four above, we note that while LATF can request verification and justification from companies, this may be difficult for companies to demonstrate. For item three, we can require additional disclosures including actual to expected experience for withdrawals. For item four, it is not yet clear what verification companies could provide.

This template would be optional but recommended starting with 2023 reporting and could be required starting in 2025. Individual regulators could request this information during reviews if warranted before 2025.

Issue Guidance on Consistency

LATF is drafting guidance for year-end 2023 and 2024, consistent with the guidance LATF issued for year-end 2022 but updated for SAPWG's potential admittance of some portion of aggregate negative IMR. That is, LATF continues to affirm that a principle-based, reasonable, and appropriate allocation of IMR for PBR and AAT would be consistent with handling of the IMR asset for statutory reporting. LATF will also consider an Amendment Proposal Form to make changes directly in the Valuation Manual to clarify the treatment of negative IMR starting with the 2025 Valuation Manual. This work continues to address the concern raised that there would be a "double hit" if negative IMR were not admitted while being required to be reflected in PBR and/or AAT.

Recommendation to SAPWG Regarding AAT

LATF recommends to SAPWG that any decision to admit or not admit aggregate negative IMR should not rely on AAT at this time. We wish to clarify that AAT is not formulaic, is heavily judgment-based, and generally does not contain prescriptive guardrails on that judgment, such as the reinvestment guardrail and other guardrails that apply in PBR. In response to specific concerns around a lack of consistency in AAT asset assumptions, Actuarial Guideline (AG) 53 was developed to provide regulators with additional disclosures, but again does not contain guardrails. AG 53 review work is currently under way. Moreover, this is not the only area where concerns could arise regarding the reliability of specific AAT results. We do not believe it would be appropriate to admit negative IMR if doing so was depending on AAT as the sole or primary safeguard for any related solvency concerns.

RE: Referral regarding a Proposed Amendment to Update the Definition of an NAIC Designation in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)

DATE: June 1, 2023

Summary – The Valuation of Securities (E) Task Force (VOSTF) requested that the Securities Valuation Office (SVO) staff make a comprehensive review of the definition of an NAIC Designation in the P&P Manual. The SVO identified that there are portions of the definition in both Parts One and Two some of which are redundant. In addition to the redundancy, this splitting of the definition has led to some users to the interpretation that there are two meanings of an NAIC Designation: one meaning, found in Part One, applicable to all securities, whether assigned NAIC Designations pursuant to the Filing Exemption process or by the SVO and a second meaning, found in Part Two, applicable only to securities assigned NAIC Designations by the SVO. It is the SVO staff's belief that there is only one definition of an NAIC Designation and that it is applicable however the NAIC Designation is assigned. The revisions proposed in the amendment, which is included with this referral, reflect a consolidation of the instructions that define an NAIC Designation to make a single uniform definition. It also includes updates to the definition to address questions and concerns raised about the purpose of NAIC Designations versus credit rating provider ratings. Additionally, the SVO is recommending consolidating the current "NAIC Designation Subscript S" section in Part Two into the revised NAIC Designation section in Part One because the application of a Subscript S to an NAIC Designation for other non-payment risks signifies a change in the meaning of the NAIC Designation and is a policy of the Task Force.

The majority of this proposed amendment involves moving text from Part Two, the "*Operational and Administrative Instructions Applicable to the SVO*", into Part One, the "*Policies of the NAIC Valuation of Securities (E) Task Force*". A clean version of the amendment was included to simplify the review, with the new text also clearly highlighted.

Referral Request – Given the importance of NAIC Designations in quantifying investment risk for various NAIC regulatory purposes and guidance, the Task Force is sending this referral with a request that your groups consider the revised definition and assess whether or not it meets your needs. If the definition meets your needs, please informally let the SVO staff know that no response will be submitted. If the definition does not meet your needs, please notify the SVO staff by June 29th that you will be proposing modification to the definition and we request that you submit those modification or a request for

additional time by July 31st so that the revisions or matter can be considered and discussed at the NAIC's Summer National Meeting. Thank you for your consideration of this request.

Please contact Charles Therriault or Marc Perlman with any questions.

Draft: 5/25/23

Statutory Accounting Principles (E) Working Group
Virtual Meeting
May 16, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 16, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis and Michael Estabrook (CT); Rylynn Brown (DE); Stewart Guerin and Melissa Gibson (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Diana Sherman and Matt Milford (PA); Jamie Walker (TX); and Doug Stolte and David Smith (VA).

1. Reviewed Comments on Exposed Items

a. INT 22-02

Bruggeman directed the Working Group to *Interpretation (INT) 22-02: Extension of INT 22-02 Through Second Quarter 2023*. Robin Marcotte (NAIC) stated that on April 12, the Working Group conducted an e-vote to expose *INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax*. The exposure proposed to extend INT 22-02 from June 15 to July 1 to allow it to be applied to the second quarter of 2023 financial statements. Disclosures continue to be required. Marcotte stated that interested parties support the extension of INT 22-02, but they recommend that it be extended to Aug. 16, the day after the quarterly statements are due to be filed. She stated that NAIC staff recommend that the Working Group adopt the exposed INT 22-02 with a minor modification to incorporate the Aug. 16 extension date suggested by interested parties.

Hudson made a motion, seconded by Walker, to adopt INT 22-02 (Attachment One-C1) and its proposed extension from June 15 to Aug. 16. The motion passed unanimously.

b. Agenda Item 2023-03

Bruggeman directed the Working Group to agenda item 2023-03: C-2 Mortality Risk Note. Marcotte stated that the exposure proposes the addition of new financial statement notes that calculate the net amount at risk, which is used in the C-2 mortality risk charge calculation. She stated that the Blanks (E) Working Group proposal 2023-09BWG is being simultaneously exposed, and the Life Risk-Based Capital (E) Working Group is working on a project to modify its C-2 mortality risk charges. She stated that the purpose of the note was to provide the development of the net amount at risk and have financial statement links to the elements used in the risk-based capital (RBC) charge. She stated that comments from Connie Jasper Woodroof (CJW Associates) focused on possible redundancy issues in the proposed note because some items in the disclosure could currently be directly referenced from Exhibit 5 – Aggregate Reserve for Life Contracts or the similar Exhibit 3 – Aggregate Reserve of Life, Annuity and Accident and Health Contracts in the separate account statement. She stated that Woodroof recommended removing these elements from the proposal and noted that some of the elements in the exposure were not needed for the C-2 mortality risk charge. She stated that the interested parties' comments were focused on moving the proposed information out of the footnotes and to another location. She stated that NAIC staff reached out to the Life Risk-Based Capital (E) Working Group chair and its NAIC support staff, who confirmed that the annual statement notes for the 2023 year-end would be helpful, but they were not strictly necessary for the planned update to the C-2 mortality risk charges. She stated that NAIC staff recommend that the Statutory Accounting Principles (E) Working Group defer action on this agenda item and refer the comments received to the Life Risk-Based Capital (E) Working Group.

Rose Albrizio (Equitable) stated that interested parties believe this is something that should not be in Statements of Statutory Accounting Principles (SSAPs) or the annual statement footnotes because it is a data capture for the net amount of risk needed for the C-2 mortality risk. She stated that maybe it should be in the interrogatories if it is not currently available. She stated that interested parties reached the same conclusion that this would not impede their ability to do the C-2 mortality this year because the current format can be used to deliver the data.

Bruggeman stated that he does not have an issue with deferring this agenda item. In response to his inquiry, no other Statutory Accounting Principles (E) Working Group members noted a concern with deferral.

c. Agenda Item 2023-11EP

Bruggeman directed the Working Group to agenda item 2023-11-EP: AP&P Manual Editorial Updates. Julie Gann (NAIC) stated that at its March 23 meeting, the Working Group voted to expose various maintenance updates providing revisions to the *Accounting Practices and Procedures Manual* (AP&P Manual), such as editorial corrections, reference changes, and formatting. She stated that the primary revision to note was to *SSAP No. 86—Derivatives*. She stated that the change in the disclosure category from intrinsic value to volatility value was done because of a corresponding comment made to the Blanks (E) Working Group to improve that disclosure category. She stated that other editorial changes are to streamline references to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), as well as to address inconsistencies with how percentages are referenced—using a symbol (%) versus spelling out “percent.” She stated that interested parties support the changes. She stated that NAIC staff recommend that the Statutory Accounting Principles (E) Working Group adopt the exposed maintenance updates providing revisions to the AP&P Manual.

Weaver made a motion, seconded by Hudson, to adopt agenda item 2023-11EP (Attachment One-C2). The motion passed unanimously.

2. Exposed its Maintenance Agenda

Clark made a motion, seconded by Arfanis, to expose the following agenda items for a public comment period ending June 30. The motion passed unanimously.

a. Agenda Item 2023-12

Bruggeman directed the Working Group to agenda item 2023-12: Residuals in SSAP No. 48 Investments. Gann stated that this agenda item proposes revisions to clarify the scope and reporting for investments that represent residual interests that are not captured in the scope of *SSAP No. 43R—Loan-Backed and Structured Securities*. She stated that at the Spring National Meeting, there was a lot of discussion on how residual interests can exist in other investment structures and that previously adopted guidance only captured those that were in the scope of SSAP No. 43R, which requires those to be reported on Schedule BA – Other Long-Term Invested Assets on a dedicated reporting line for year-end 2022. She stated that the Working Group received a referral from the Valuation of Securities (E) Task Force. She stated that this agenda item is in response to that referral, as well as other discussions on this topic at the Spring National Meeting. She stated that the current population of residuals on the dedicated reporting line on Schedule BA may not reflect the entire population of residuals that are captured in other investment structures. She stated that this agenda item proposes to capture guidance in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*, so those investment structures would be separately reported on the residual line. The agenda item also has conforming edits to SSAP No. 43R and the *Annual Statement Instructions*. She stated that for those items that are not reported as residuals now because they are in the scope of SSAP No. 48, it is strictly a Schedule BA reporting line change because those items would currently

be under the joint venture, limited liability, or partnership line. Therefore, those investments that represent residuals will move to the Schedule BA residual line.

b. Agenda Item 2023-13

Bruggeman directed the Working Group to agenda item 2023-13: PIK Interest Disclosure Clarification. Gann stated that this agenda item was developed to further clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure adopted in *SSAP No. 34—Investment Income Due and Accrued* for year-end 2023 that identifies the amount of PIK interest as a cumulative balance on an aggregate basis. She stated that since adoption, NAIC staff have received questions on how that should be calculated, whether it be on a first in, first out (FIFO) basis or a weighted average basis. She stated that this agenda item proposes clarifying revisions to ensure consistency in identifying the amount of PIK interest included in the cumulative principal par balance. She stated that it does not change accounting or any ultimate amounts reported as assets on the balance sheet or income statement. She stated that this identifies the amount of PIK interest that is still being reported as an asset. She stated that the recommendation is to identify that any paydowns that occur would first be applied to reported PIK interest. She stated that there is also a practical expedient that says one can identify the PIK interest from the original par through to the current par, not to go less than zero. She stated that this is to provide clarification to the investment software vendors who are asking if they had to do a retroactive analysis to identify all the PIK interest received and the paydowns. She responded that the answer is no, and the resulting calculation should be the same. She stated that NAIC staff proposed revisions in a footnote to *SSAP No. 34*; however, most of the edits are proposed for inclusion in the *Annual Statement Instructions*, are editorial only, and can be provided by the Working Group in a memorandum to the Blanks (E) Working Group if they are adopted after the deadline to include them in the *Annual Statement Instructions* for year-end 2023.

c. Agenda Item 2022-14

Bruggeman directed the Statutory Accounting Principles (E) Working Group to agenda item 2022-14: New Market Tax Credit Projects. Wil Oden (NAIC) stated that this agenda item was drafted in response to the federal Inflation Reduction Act and the subsequent issuance of *Accounting Standards Update (ASU) 2023-02—Investments—Equity Method and Joint Ventures (Topic 323): Accounting for Investments in Tax Credit Structures Using the Proportional Amortization Method (A Consensus of the Emerging Issues Task Force)*, which amends U.S. generally accepted accounting principles (GAAP) guidance on the application of the proportional amortization method (PAM) for income tax equity investments. He stated that based on direction from the Working Group and feedback received from interested parties, this agenda item now includes *SSAP No. 94R—Transferable and Non-Transferable State Tax Credits*, and it has expanded the scope of *SSAP No. 93—Low-Income Housing Tax Credit Property Investments*.

Oden stated that *SSAP No. 93* is proposed to include all qualifying tax credit investments, irrespective of the structure or tax credit program. He stated that this represents a departure from U.S. GAAP, as *ASU 2023-02* only applies to income tax equity investments that elect to use PAM. He stated that as part of the proposed revisions, both *SSAPs* are intended to work together. *SSAP No. 93* provides guidance on the tax investment itself, whereas *SSAP No. 94R* provides guidance on tax credits allocated from the investments and purchase tax credits.

Oden stated that the proposed scope of *SSAP No. 94R* has been expanded to include all state and federal tax credits, whether allocated or purchased. Additionally, the revised version proposes to amend the requirement to report tax credits at cost, which effectively results in an off-balance sheet asset for tax credits purchased at a discount. Oden stated that tax credits would now be recorded at face value upon receipt; acquisitions at a premium would immediately realize the loss; and acquisitions at a discount would defer the gain as an Other liability until the reporting entity has utilized tax credits in excess of those acquisition costs. He stated that NAIC

staff recommend that the Working Group expose the draft revisions to SSAP No. 93 and SSAP No. 94R as new SSAP concepts with a public comment period ending June 30.

3. Discussed Other Matters

a. Valuation of Securities (E) Task Force Referral Response

Gann stated that the Working Group reviewed the Valuation of Securities (E) Task Force referral on the acquisition of commercially available data and deemed that a response was not necessary.

b. Update on the Referral to the Life Actuarial (A) Task Force on Negative IMR

Hemphill stated that there are a few action items that the Life Actuarial (A) Task Force would take in response to this referral.

First, the Task Force is working on a template that will have additional disclosures on the reflection of interest maintenance reserve (IMR) in principle-based reserving (PBR) and asset adequacy testing (AAT). Those disclosures would support the verification of the requirements that the Working Group is considering for admittance of negative IMR, including: 1) the admitted IMR is appropriately allocated for PBR and AAT; 2) negative IMR is reflected in starting assets and would not generate subsequent income; and 3) that would increase reserves in PBR or decrease reserve sufficiency for AAT. Hemphill noted that the template would include verifications for the company that any admitted negative IMR not reflecting bonds sold due to historical or anticipated future excess withdrawals and bonds generating admitted negative IMR would only be those sold and replaced with similar bonds. She stated that the Task Force was outlining a potential template that is consistent with the current Working Group exposure. She stated that if there were changes by the Working Group, the template would be modified accordingly. She stated that due to the *Valuation Manual* timing constraints, this template would be optional but could be recommended starting with year-end 2023 reporting. The earliest it could be required would be 2025; although, individual state insurance regulators could request or require the information earlier. She stated that the Task Force was working on a draft and had requested input from the American Academy of Actuaries (Academy) and the American Council of Life Insurers (ACLI) on the template.

Second, Hemphill stated that the Task Force was drafting guidance for companies for year-end 2023 and 2024, consistent with what was put out for 2022, to address the potential double-counting issue. She stated that the Task Force was continuing to affirm that a principle-based, reasonable, and appropriate allocation of IMR for PBR and AAT would be consistent with the handling of the IMR asset for statutory reporting. She stated that the Task Force does not believe any double counting is required because the language currently in the *Valuation Manual* endorses a principle-based, appropriate allocation and so would not imply a double hit. This guidance would be for 2023 and 2024, as any change in the *Valuation Manual* at this time would be applicable for 2025. Hemphill stated that the Task Force would work on an amendment proposal form to make clarifying changes directly to the *Valuation Manual* so the Task Force does not have to keep producing guidance each year-end, noting that a principle-based, appropriate allocation does not require such double counting.

Finally, Hemphill stated that the Task Force recommends to the Working Group that any decision to admit or not admit aggregate negative IMR would not rely on AAT as a guardrail at this time. The Task Force wants to clarify that national AAT is not formulaic and is heavily judgment-based, without prescriptive guardrails on that judgment, such as with the reinvestment guardrail or other guardrails that apply in PBR. She stated that in response to the specific concerns around the lack of consistency in AAT asset assumptions, *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53) was developed. She stated that AG 53 has additional disclosures but no prescriptive guardrails. She stated that the actuaries and

others are now working on reviewing initial AG 53 disclosures, but that it is not the only area where concerns could arise regarding the reliability of specific AAT assumptions or results. She stated that, in summary, the Task Force does not believe it would be appropriate to admit negative IMR if doing so depends on AAT as the sole or primary safeguard for any related solvency concerns. She stated that the Task Force has a few workstreams to work on over the upcoming months and would update the Working Group as it has additional work products.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

[https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member meetings/e cmte/apptf/2023-2 summer/sapwg/attachments/att1c-sapwg 5.16.23 minutes.docx](https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member%20meetings/e%20cmte/apptf/2023-2%20summer/sapwg/attachments/att1c-sapwg%205.16.23%20minutes.docx)

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 22-02: Third Quarter 2022 through ~~First~~Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax

INT 22-02 Dates Discussed

October 6, 2022; October 24, 2022, November 16, 2022; December 13, 2022; [April 12, 2023](#); [May 16, 2023](#)

INT 22-02 References

Current:

SSAP No. 9—Subsequent Events

SSAP No. 101—Income Taxes

INT 22-02 Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). The Act and the CAMT go into effect for tax years beginning after 2022. Reporting entities shall refer to the Act and the resulting regulations and other tax guidance to determine application, but a non-authoritative high-level summary based on information at the time of initial INT discussion regarding the CAMT is as follows:

- a. The CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by corporate alternative minimum foreign tax credit.
- b. The CAMT will only apply to "applicable corporations" (determined on an affiliated group basis) with average adjusted financial statement income in excess of \$1 billion for the three prior tax years. This threshold is reduced to \$100 million in the case of certain foreign-parented corporations. When a corporation becomes subject to the CAMT, it remains an applicable corporation for purposes of the CAMT, even if its average adjusted financial statement income is less than \$1 billion, unless an exception applies.
- c. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income.
- d. The Act includes references to the tax codes which provides a hierarchy for determining the "applicable financial statement." At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body is acceptable. If the taxpayer is part of an affiliated group of corporations filing a consolidated return, the adjustable financial statement income for the group considers the group's applicable financial statement.
- e. To determine its U.S. federal income tax liability, an applicable corporation will need to compute taxes under both systems—the regular tax system and the CAMT system. The CAMT is payable

to the extent the tentative CAMT exceeds the regular corporate income tax. Any CAMT paid is available indefinitely as a credit carryover that could reduce future regular tax in future years if the regular tax liability is in excess of CAMT tax liability.

- f. The Act directs the Treasury to issue regulations and other guidance relate to implementing the CAMT, so several issues are pending detailed clarifications including clarifying the definition of an applicable corporation, and providing guidance on the starting point for, and adjustments to, adjusted financial statement income, as well as the handling of separate company tax returns when required under current tax law that are unique to the insurance industry.

Interpretation Issues

2. This interpretation is focused on addressing third quarter 2022 transition accounting and reporting aspects of the new CAMT. While most insurers will not be subject to the CAMT, for those that know that they are subject, and those that could be subject to the CAMT, there are a variety of reporting uncertainties, particularly regarding reporting for third quarter 2022.

3. The CAMT is effective for the tax years on or after 2023.

4. Both statutory accounting principles and U.S. GAAP require the effects of tax changes on deferred taxes, including the valuation allowance (future realizability of existing DTAs) in the period in which the legislation is enacted (third quarter 2022). *SSAP No. 101—Income Taxes*, paragraph 7.e. requires the statutory valuation allowance adjustment as a direct reduction in the gross DTA if, based on the weight of available evidence, it is more likely than not that some or all of the gross DTAs will not be realized. Gross DTA less the statutory valuation allowance results in adjusted gross DTAs. The statutory valuation allowance adjustment is not reported as a separate line in the statutory financial statements (it is an off-balance sheet item that reduces the gross DTAs). The statutory valuation allowance is disclosed.

5. The statutory accounting calculation for admissible DTAs is determined using adjusted gross DTAs (gross DTAs reduced by the valuation allowance). For statutory accounting, admittance of adjusted gross DTAs in *SSAP No. 101* depends on a three-component calculation, for which the second step limits admittance of adjusted gross DTAs to those that are expected to be realized in a timeframe that does not exceed three years. The actual number of years permitted depends on specifics for each reporting entity (type and other information about the reporting entity), but the maximum timeframe is three years. The last step admits DTAs which can be offset by DTLs.

6. Guidance in *SSAP No. 9—Subsequent Events* requires consideration of Type I and Type II¹ subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued. For subsequent events identified after the statutory financial statements are filed (example, March 1), but before the audited financial statements are issued (example, June 1), reporting entities are generally required by their domestic state to amend their filed statutory financial statements to ensure that the statutory financial statements and the audited financial statements are consistent. Under this guidance, as additional information is made available on the impact of the Act, or information becomes available to update estimates and assessments, under existing statutory accounting guidance in *SSAP No. 9*, reporting entities would need to identify updated estimates as a Type I subsequent event in the audited financial statements.

¹ A Type I subsequent event relates to an event or transaction that provides additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Under *SSAP No. 9*, entities shall recognize in the financial statements the effects of all material Type I subsequent events. A Type II subsequent event pertains to events or transactions that provide evidence to conditions that did not exist at the balance sheet date but arose after that date. Type II events are disclosed in the financial statements.

Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

7. During the period of enactment (third quarter 2022) reporting entities filing statutory financial statements would normally have to consider the applicability of the CAMT and if applicable, determine the impact on the statutory valuation allowance as well as assess DTAs for admissibility (e.g., realization timeframe). These elements will be collectively referred to as “calculations impacted by the Act” or “calculations impacted by the CAMT.”

8. This interpretation will address the issue for what reporting entities are required to report or disclose regarding the calculations impacted by the CAMT for September 30, 2022, financial statements.

Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

9. SSAP No. 9 requires consideration of subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued.

10. For reporting entities that materially revise or establish calculations impacted by the CAMT subsequent to September 30, 2022 (including the statutory valuation allowance, the timing of determination of net admitted DTAs, and the determination of the applicability of the CAMT), this interpretation will address the extent a Type I or Type II subsequent event assessment is required for third quarter 2022 financial reporting.

INT 22-02 Discussion

11. The Statutory Accounting Principles (E) Working Group consensuses to the noted issues are included below.

Response: Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

12. Reporting entities that are aware they will be subject to the CAMT would normally reflect the effects of the Act on the calculations impacted by the CAMT if reasonably estimable for third quarter 2022. Because of the timing of the adoption of the Act and the considerable number of unknown variables for September 30, 2022, reporting, the Working Group has determined that a reasonable estimate is not determinable for third quarter 2022 interim financial statements for the calculations impacted by the CAMT.

13. Because reasonable estimates of calculations impacted by the CAMT are not determinable, reporting entities shall not recognize impacts related to CAMT for third quarter 2022 financial statements, but shall make the following disclosures regarding the CAMT and the Act:

- a. The Act was enacted during the reporting period on August 16, 2022.
- b. A statement regarding whether the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if it expects to be liable for CAMT in 2023. For example:
 - i. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it does not expect to be liable for CAMT in 2023.
 - ii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has not determined as of the reporting date if it will be liable for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT because a reasonable estimate cannot be made.

- iii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it expects to be liable for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT, because a reasonable estimate cannot be made.

Response: Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

14. For third quarter 2022 reporting, CAMT updated estimates or other calculations affected by the Act determined subsequent to third quarter statutory financial statement or filing date shall not be recognized as Type I subsequent events. Meaning, amended financial statements are not required to reflect updated estimates subsequent to the third quarter filing date and prior to the filing the third quarter financial statements. With the disclosure required under Issue 1, additional subsequent event disclosure (such as what would be required for Type II event) is not required.

15. Reporting entities shall be working in good faith to complete the accounting for the changes adopted under the Act.

INT 22-02 Status

16. The consensuses in this interpretation were adopted on October 24, 2022, to provide reporting guidance regarding the calculations impacted by the CAMT and provide limited-scope, limited-time exceptions to the valuation allowance and DTA calculations in response to legislation under SSAP No. 101 as well as Type I subsequent event requirements in SSAP No. 9 for September 30, 2022, statutory reporting. As detailed, the exceptions to SSAP No. 101 and SSAP No. 9 are effective for third quarter 2022.

17. On December 13, 2022, the Working Group adopted a consensus to extend this interpretation for December 31, 2022, and first quarter 2023 statutory financial statements. For application as of year-end 2022 and first quarter 2023:

- a. Consistent with paragraphs 12 and 13, the Working Group has concluded that a reasonable estimate is not determinable for December 31, 2022, and March 31, 2023, therefore impacts related to the CAMT in the year-end 2022 and March 31, 2023, financial statements are not required.
- ~~b. The reporting entity shall include disclosures in paragraph 13 in the year-end 2022 and March 31, 2023, financial statements. In addition, the reporting entity shall disclose the following:~~
 - ~~i. If, based on information regarding the projected adjusted financial statement income for 2023, the entity or the controlled group of corporations of which the reporting entity is a member has determined if it is an “applicable corporation” to determine if CAMT exceeds the regular federal income tax payable. That is, disclose if the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if average “adjusted financial statement income” is above the thresholds for 2023 tax year that they expect to be required to perform the CAMT calculations. This disclosure is about being applicable corporation, not if the entity is required to pay.~~
- e.b. Consistent with paragraph 14, CAMT updated estimates or other calculations affected by the Act determined subsequent to filing the December 31, 2022, and March 31, 2023, financial statements shall not be recognized as Type I subsequent events.
- d.c. For year-end 2022 financial statements, the subsequent event exception is expanded to encompass events that occur prior to the issuance of statutory financial statements as well as events that occur

before the date the audited financial statements are issued, or available to be issued. This provision intends to prevent reporting entities from having to amend statutory financial statements from material Type I subsequent events as a result of updated information / estimates received after the reporting date of year-end 2022 statutory financial statements pertaining to the accounting for the enactment of the Act.

18. On May 16, 2023, the Working Group adopted a consensus to extend this interpretation for the second quarter 2023 statutory financial statements. For application to the second quarter 2023 financial statements, reporting entities shall follow the guidance in this interpretation paragraphs 17.a. through 17.c.

~~18.~~19. With the extension, this interpretation will be automatically nullified on ~~June 15, 2023~~August 16, 2023.

~~19.~~20. No. further discussion is planned.

NAIC Accounting Practices and Procedures Manual
Editorial and Maintenance Update
May 16, 2023

Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual*, such as editorial corrections, reference changes and formatting.

SSAP/Appendix	Description/Revision
SSAP No. 86	Paragraph 43.g.ii.: Revise “Intrinsic Value” to reflect “Volatility Value”
P&P Manual References	All citations to the <i>Purposes and Procedures Manual of the NAIC Investment Analysis Office</i> (P&P Manual) are proposed to be reviewed and streamlined so they do not reflect a specific location in the P&P Manual or web page. These references will be eliminated to prevent inappropriate citations.
Percent References	Instances in which ‘percent’ is spelled out in combination with a number will be eliminated with retention of the % sign. This is a consistency change as the usage is currently inconsistent within the AP&P Manual.

Recommendation:

NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as a SAP Clarification, and expose editorial revisions as illustrated within.

SSAP No. 86R—Derivatives

Revise the reference to “Intrinsic Value” to reflect “Volatility Value.” This change was proposed by industry to clarify the disclosure category for the excluded component to the Blanks (E) Working Group and a corresponding revision is needed in SSAP No. 86R.

- 43.a. For hedging instruments with excluded components for determining hedge effectiveness:
- i. In the investment schedule, identify hedging instruments with excluded components and report the current fair value of the excluded component, the fair value of the excluded component that is reflected in the reported BACV for the hedging instrument (this item would not be applicable for foreign-currency forwards and currency swaps where the forward points or cross-currency basis, respectively, are the excluded component), and the change in fair value reported as an unrealized gain/loss.
 - ii. In the notes to the financial statements, provide information on the aggregate excluded components by category: Time Value, ~~Intrinsic~~-Volatility Value, Forward Points and Cross Currency Basis Spread. The aggregate amounts reported should include the following (as applicable): current fair value, recognized unrealized gain/loss, the fair value reflected in BACV, and for the excluded forward points (e.g., forward spot rates), the aggregate amount owed at maturity, along with current year and remaining amortization.

Purposes and Procedure Manual References

The following SSAPs will be revised to update references to the P&P Manual.

SSAP No. 25—Affiliates and Other Related Parties

- 21.h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with [SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities](#), ~~the Purposes and Procedure Manual of the NAIC Investment Analysis Office, “Procedures for Valuing Common Stocks and Stock Warrants.”~~

SSAP No. 26R—Bonds

- 4.a. Exchange traded funds (ETFs), which qualify for bond treatment, as identified in ~~Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office~~ and published on the SVO web page ~~at <https://content.naic.org/industry/securitiesvaluation-office>~~. (SVO-identified ETFs are reported on Schedule D – Part 1.)

SSAP No. 30R—Unaffiliated Common Stock

- 4.c. Shares of SEC registered Investment Companies³ captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks), including shares of funds referenced in the “NAIC Fixed Income-Like SEC Registered Funds List” as identified in ~~Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office~~ [and published on the SVO web page](#);
- 4.d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in ~~Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office~~ and published on the SVO web page ~~at <https://content.naic.org/industry/securities-valuation-office>~~;

SSAP No. 32R—Preferred Stock

- 4.a. Exchange Traded Funds, which qualify for preferred stock treatment, as identified in ~~Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office~~ and published on the SVO web page ~~at <https://content.naic.org/industry/securities-valuationoffice>~~. SVO-identified preferred stock ETFs shall follow the accounting provisions for perpetual preferred stock.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

64. By August 31 or one month after the audit report date of each year, the NAIC shall initiate a review of all SCA investments for which new Sub 2 form filings have been received as well as an annual update review of Sub 2 SCA investments already logged in the VISION database. The NAIC review shall encompass a review of the most recent annual statutory reporting by the parent insurance company's Schedule Y (to ascertain the identity of the members of the holding company system and to ensure that information for all SCA companies has been submitted), a review of the parent's financial statement blank to review the last reported value for the SCA investments and a review of the VISION database to determine whether SCA debt and SCA preferred securities have been assigned NAIC designations. As part of its analysis, the NAIC shall review the portion of the bond investments carried by the parent or a subsidiary insurer with a **Z** notation. If the NAIC determines that the portion of the **Z** bonds shown on the documentation is significant, the NAIC shall not

process the Sub 2 filing until the insurance company reports the bonds to permit removal of the Z notation. Beginning with year-end 2019, two new suffixes will apply: **YE** and **IF**. YE means that the security is a properly filed annual update that the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol YE is assigned by the SVO pursuant to the carryover administrative procedure described in ~~Part One, Section 3 f) (iii) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office~~. When the SVO assigns the symbol YE it also assigns the NAIC designation in effect for the previous reporting year. IF means that the security is an initial filing that has been properly filed with the SVO but which the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol IF is assigned by the SVO and communicates that the insurer should self-designate the security for year-end and identify it with the symbol IF. IF, therefore, also communicates to the regulator that the NAIC designation reported by the insurance company was not derived by or obtained from the SVO, but has been determined analytically by a reporting insurance company.

Percent References

The following SSAPs will be revised to update the percent reference.

SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets:

13. As directed by SSAP No. 101—*Income Taxes*, tax loss contingencies (including related interest and penalties) for current and all prior years, shall be computed in accordance with this SSAP, with the following modifications:
 - a. The term “probable” as used in this standard shall be replaced by the term “more likely than not (a likelihood of more than ~~50% percent~~)” for federal and foreign income tax loss contingencies only.
 - b. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.
 - c. If the estimated tax loss contingency is greater than ~~50% percent~~ of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to ~~100% percent~~ of the original tax benefit recognized.

As noted in SSAP No. 101, state taxes (including premium, income and franchise taxes) shall also be computed in accordance with this SSAP. These items (as detailed in SSAP No. 101) are not impacted by the modifications detailed in paragraphs 13.a.-13.c.

SSAP No. 16R—Electronic Data Processing Equipment and Software

4. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to ~~3% three percent~~ of the reporting entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any EDP equipment and operating system software, net deferred tax assets and net positive goodwill.^(INT 01-18)

SSAP No. 43R—Loan-Backed and Structured Securities

FN 10: Changes in the interest rate of a “plain-vanilla,” variable-rate beneficial interest (a plain-vanilla, variable-rate beneficial interest does not include those variable-rate beneficial interests with interest

rate reset formulas that involve either leverage or an inverse floater) generally should not result in the recognition of an other-than-temporary impairment. For plain-vanilla, variable-rate beneficial interests, the yield is changed to reflect the revised interest rate based on the contractual interest rate reset formula. For example, if a beneficial interest pays interest quarterly at a rate equal to LIBOR plus ~~2% percent~~, the yield of that beneficial interest is changed prospectively to reflect changes in LIBOR. However, changes in the fair value of a plain-vanilla, variable-rate beneficial interest due to credit events should be considered when evaluating whether there has been an other-than-temporary impairment.

SSAP No. 57—Title Insurance

- 19.g. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of 20% of admitted assets or ~~forty percent (40%)~~ of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

SSAP No. 60—Financial Guarantee Insurance

10. The contingency reserve shall be the greater of ~~50% fifty percent~~ of premiums written for each category or the amount provided by applying the following percentages to the principal guaranteed in each calendar year. The premiums written shall be net of reinsurance if the reinsurer has established a contingency reserve.
- | | | |
|----|--|---------------------------|
| a. | Municipal obligation bonds | 0.55% percent |
| b. | Special revenue bonds | 0.85% percent |
| c. | Investment grade Industrial Development Bonds (IDBs) secured by collateral or having a term of seven years or less, and utility first mortgage obligations | 1.00% percent |
| d. | Other investment grade IDBs | 1.50% percent |
| e. | Other IDBs | 2.50% percent |
| f. | Investment grade obligations, secured by collateral or having a term of seven years or less | 1.00% percent |
| g. | Other investment grade obligations not secured | 1.50% percent |
| h. | Non-investment grade consumer debt obligations | 2.00% percent |
| i. | Non-investment grade asset backed securities | 2.00% percent |
| j. | All other non-investment grade obligations | 2.50% percent |

SSAP No. 62R—Property and Casualty Reinsurance

- 116.a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents ~~fifty percent (50%)~~ or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

- 116.b. ~~Twenty-five percent (25%)~~ or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

Exhibit C – Assumptions

Premium = \$1,000 (assumes no commissions or allowances)
 Coverage Period = 1 year
 Initial expected recoveries = \$225 per year (at end of year) for five years
 Initial Implicit rate = ~~4% percent~~*

*present value of \$225 per year for five years at ~~4% percent~~ = \$1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63% ~~percent~~ and an asset of \$640 at the end of the year.

SSAP No. 65—Property and Casualty Contracts

37. If the reporting entity does not hold specific collateral for the policy, amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement and shall be aged according to the contractual due date. In the absence of a contractual due date, billing date shall be utilized for the aging requirement. Deductible recoverables that are greater than ninety days old shall be nonadmitted. However, if the reporting entity holds specific collateral for the high deductible policy, ~~10% ten percent~~ of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset in lieu of applying the aging requirement; however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted. The collateral requirements of this paragraph may be satisfied when an insured provides one collateral instrument to secure amounts owed under multiple policies, provided that the reporting entity has the contractual right to apply the collateral to the high deductible policy. Collateral obtained at a group level that is not supported by an existing pooling agreement requires a written allocation agreement among all collateral beneficiaries. The terms of such agreement must be fair and equitable. Documentation supporting any allocation of collateral among reporting entities must be maintained to allow proper calculation of the nonadmitted amounts and prohibit double counting of collateral.

SSAP No. 78—Multiple Peril Crop Insurance

3. Catastrophic insurance is designed to provide farmers with protection against extreme crop losses for a small processing fee. Buy-up insurance provides protection against more typical and smaller crop losses in exchange for a policyholder-paid premium. The government subsidizes the total premium for catastrophic insurance and a portion of the premium for buy-up insurance. Farmers who purchase buy-up crop insurance must choose both the coverage level (the proportion of the crop to be insured) and the unit price (such as, per bushel) at which any loss is calculated. With respect to the coverage level of production, farmers can choose to insure as much as ~~85% percent~~ of normal production or as little as ~~50% percent~~ of normal production at different price levels. With respect to the unit price, farmers choose whether to value their insured production at FCICs full estimated market price or at a percentage of the full price.
5. Companies participate in the MPCl program with FCIC through the Standard Reinsurance Agreement (SRA) per the terms of which the insurance companies share in the underwriting results of each policy. The SRA reinsurance terms provide a company the flexibility to limit its exposure on a state-by-state basis. MPCl premium is not expense loaded, therefore FCIC pays the insurance companies, on behalf of the policyholder, a percent of premium for administrative expenses

- associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims.
15. FCIC pays the insurance companies a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims. The expense payment associated with the catastrophic coverage shall be recorded as a reduction of loss expenses whereas the expense payment for the buy-up coverage shall be recorded as a reduction of other underwriting expenses. The company shall disclose the total amounts received for each type of coverage.

SSAP No. 86—Derivatives

- 26.c. The term highly effective describes a cash flow hedging relationship where the change in fair value of the derivative hedging instrument is within 80 to 125% ~~percent~~ of the opposite change in the fair value of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A;
- 27.c. The term highly effective describes a cash flow hedging relationship where the change in cash flows or present value of cash flows of the derivative hedging instrument is within 80 to 125% ~~percent~~ of the opposite change in the cash flows or present value of the cash flows of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A.
- Exhibit A, 19.c.ii. The variable-rate asset or liability has a floor or cap and the interest rate swap has a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. For purposes of this paragraph, comparable does not necessarily mean equal. For example, if an interest rate swap's variable rate is based on LIBOR and an asset's variable rate is LIBOR plus 2% ~~percent~~, a 10% ~~percent~~ cap on the interest rate swap would be comparable to a 12% ~~percent~~ cap on the asset.
- Exhibit A, 22 The fixed interest rate on a hedged item need not exactly match the fixed interest rate on an interest rate swap designated as a fair value hedge. Nor does the variable interest rate on an interest-bearing asset or liability need to be the same as the variable interest rate on an interest rate swap designated as a cash flow hedge. An interest rate swap's fair value comes from its net settlements. The fixed and variable interest rates on an interest rate swap can be changed without affecting the net settlement if both are changed by the same amount. That is, an interest rate swap with a payment based on LIBOR and a receipt based on a fixed rate of 5% ~~percent~~ has the same net settlements and fair value as an interest rate swap with a payment based on LIBOR plus 1% ~~percent~~ and a receipt based on a fixed rate of 6% ~~percent~~.

SSAP No. 92—Postretirement Benefits Other Than Pensions

49. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net periodic postretirement benefit cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10% ~~percent~~ of the greater of the accumulated postretirement benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active plan participants. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of the average remaining service period.

75. An employer shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than ~~5% percent~~ of total contributions to the plan as indicated in the plan's most recently available annual report.

- 108.b.i ~~Ten 10% percent~~ of the calculated surplus impact as of the transition date; and

SSAP No. 93—Low-Income Housing Tax Credit Property Investments

Exhibit A Assumptions

1. All cash flows (except initial investment) occur at the end of each year.
2. Depreciation expense is computed, for book and tax purposes, using the straight-line method with a 27.5 year life (the same method is used for simplicity).
3. The investor made a \$100,000 investment for a ~~5% percent~~ limited partnership interest in the project at the beginning of the first year of eligibility for the tax credit.
4. The partnership finances the project cost of \$4,000,000 with ~~50% percent~~ equity and ~~50% percent~~ debt.
5. The annual tax credit allocation (equal to ~~4% percent~~ of the project's original cost) will be received for a period of 10 years.
6. The investor's tax rate is ~~40% percent~~.

Chart Footnotes:

- (1) End-of-year investment for a ~~5% percent~~ limited liability interest in the project net of amortization in Column (2).
- (3) ~~4% Four percent~~ tax credit on \$200,000 tax basis of the underlying assets.

SSAP No. 100R—Fair Value

- 52.g. If a group of investments would otherwise meet the criteria in paragraph 45 but the individual investments to be sold have not been identified (for example, if a reporting entity decides to sell ~~20% percent~~ of its investments in private equity funds but the individual investments to be sold have not been identified), so the investments continue to qualify for the practical expedient in paragraph 39, the reporting entity shall disclose its plans to sell and any remaining actions required to complete the sale(s).

SSAP No. 101—Income Taxes

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109) with modifications for state income taxes^(INT 18-03), the realization criteria for deferred tax assets, and the recording of the impact of changes in deferred tax balances. One objective of accounting for income taxes is to recognize the estimated amount of taxes payable or refundable for the current year as a tax liability or asset.

A second objective is to recognize deferred tax liabilities and assets for the future tax consequences of events that have been recognized in a reporting entity's statutory financial statements or tax returns. However, the second objective is realistically constrained because (a) the tax payment or refund that results from a particular tax return is a joint result of all the items included in that return, (b) taxes that will be paid or refunded in future years are the joint result of events of the current or prior years and events of future years, and (c) information available about the future is limited. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement based upon estimates and approximations. For purposes of this statement, only adjusted gross deferred tax assets that are more likely than not (a likelihood of more than 50% ~~percent~~) to be realized shall be considered in determining admitted adjusted gross deferred tax assets.

- 3.a.i The term "probable" as used in SSAP No. 5R shall be replaced by the term "more likely than not (a likelihood of more than 50% ~~percent~~)" for federal and foreign income tax loss contingencies only.
- 7.e. Gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50% ~~percent~~) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce the gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).
- 1.3 SSAP No. 101 – Gross DTAs are reduced by a statutory valuation allowance adjustment that is determined on a separate company, reporting entity basis. Pursuant to paragraphs 2 and 7.e. of SSAP No. 101, gross DTAs are adjusted to an amount that is more likely than not to be realized (a likelihood of more than 50% ~~percent~~). Only adjusted gross DTAs shall be considered in determining admitted adjusted gross DTAs. See Question 2 for further discussion of the statutory valuation allowance adjustment. See Question 4 for a further discussion of the admissibility test. See Question 12 for further discussion of presentation and disclosure of the statutory valuation allowance adjustment.
- 1.11 SSAP No. 101 – FIN 48 is rejected for statutory accounting pursuant to paragraph 31 of SSAP No. 101. SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets provides guidance in determining the amount of federal and foreign income tax loss contingencies with the following modifications. The term "probable" as used in SSAP No. 5R is replaced by the term "more likely than not (a likelihood of more than 50% ~~percent~~)". In determining the amount of a federal or foreign income tax loss contingency, it shall be assumed that the reporting entity will be examined by the tax authority that has full knowledge of all relevant information. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized. See Question 9 for further discussion of income tax loss contingencies.
- 2.1 A – An enterprise shall record a gross deferred tax liability or asset for all temporary differences and operating loss, capital loss and tax credit carryforwards. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include AVR, IMR, Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased. In general, temporary differences produce taxable income or result in tax deductions when the related asset is recovered or the related liability is settled. A deferred tax asset or liability represents the increase or decrease in taxes payable or refundable in future years as a result of temporary differences and carryforwards at the end of the current year. Additionally, gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50% ~~percent~~) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets). This answer only addresses the recognition

of adjusted gross DTAs and gross DTLs and does not address the admissibility of such amounts. See Question 4 for a discussion of the admissibility criteria of SSAP No. 101.

- 5.12 The temporary difference related to property and casualty unearned premiums is typically ~~twenty percent (20%)~~ of the outstanding statutory unearned premium reserve. If a company issues only one-year policies, it is reasonable to assume that the entire temporary difference will reverse in one year. If a company writes multi-year contracts, management will be required to estimate the percentage of the unearned premium that will be earned within each year of the applicable reversal period and apply these percentages to the outstanding temporary difference.
- 5.14 For those temporary differences that do not have a defined reversal period, such as unrealized losses on common stock or deferred compensation liabilities, management will need to determine when the temporary difference is “expected” to reverse. For instance, assume a company has an unrealized loss of \$200 in its equity portfolio and that, on average, the portfolio turns over ~~twenty percent (20%)~~ per year. It would be appropriate for the company to conclude that \$40 of the temporary difference will reverse in each year in the applicable reversal period. When determining when the temporary difference would be “expected” to reverse, management should normally consider events that are likely to occur using information, facts and circumstances in existence as of the reporting date. The estimates used in this circumstance should not be extended to other tests of impairment. For instance, when the entity assumed a 20% turnover in its equity portfolio, it is not involuntarily required to record an impairment in accordance with paragraph 10 of SSAP No. 30R—Unaffiliated Common Stock.
- 10.3 As an example, assume Company X files its 20X1 federal income tax return and reports \$1,000,000 of taxable income comprised of \$800,000 of ordinary income and \$200,000 of capital gain income. Since the company is subject to taxation at a ~~21% percent~~ tax rate on all its income, it incurred federal income tax expense of \$210,000. In preparing its 20X1 statutory income tax provision, the company estimated that its liability for 20X1 federal income tax would be \$147,000 based on \$600,000 of ordinary income and \$100,000 realized capital gains.
- 10.8 For example, assume the reporting entity has DTAs of \$1,000 relating to temporary differences other than unrealized losses, and a \$100 DTL relating to unrealized gains as of the beginning of the year. Since the entity is subject to tax at ~~21% percent~~ and all of its DTAs are expected to reverse within one year, the entity recorded a \$900 net admitted DTA as of the beginning of the year.
- 12.20 The Company has not recognized a deferred tax liability of approximately \$30,000 of foreign withholding taxes for the undistributed earnings of its ~~100% percent~~ owned foreign subsidiaries that arose in 20X2 and prior years because the Company does not expect those unremitted earnings to reverse and become taxable to the Company in the foreseeable future. A deferred tax liability will be recognized when the Company expects that it will recover those undistributed earnings in a taxable manner, such as through receipt of dividends or sale of the investments. As of December 31, 20X2, the undistributed earnings of these subsidiaries were approximately \$200,000.

SSAP No. 102—Pensions

22. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that net gain or loss exceeds ~~10% percent~~ of the greater of the projected benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service.
79. A reporting entity shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. A reporting entity may disclose total

contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than ~~5% percent~~ of total contributions to the plan as indicated in the plan's most recently available annual report.

93.b.i. ~~Ten~~10% percent of the calculated surplus impact as of the transition date;

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

22. An exchange of debt instruments with substantially different terms is also considered a debt extinguishment and shall be accounted for in accordance with paragraph 21. A debtor's exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of the cash flows under the terms of the new debt instrument is at least ~~10% percent~~ different from the present value of the remaining cash flows under the terms of the original instrument. If the difference between the present value of the cash flows under the terms of the new debt instrument and the present value of the remaining cash flows under the terms of the original debt instrument is less than ~~10% percent~~, a creditor should evaluate whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification.
91. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to ~~102% percent~~ of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than ~~100% percent~~ of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals ~~102% percent~~ of the fair value of the loaned securities. If the collateral received from the counterparty is less than ~~100% percent~~ at the reporting date, the difference between the actual collateral and ~~100% percent~~ will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.
92. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to ~~105% percent~~ of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than ~~102% percent~~ of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals ~~105% percent~~ of the fair value of the loaned securities. If the collateral received from the counterparty is less than ~~100% percent~~ at the reporting date, the difference between the actual collateral and ~~100% percent~~ will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.
113. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

- a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to ~~95% percent~~ of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at any time the fair value of the collateral received from the counterparty is less than ~~95% percent~~ of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral

then held in connection with the transaction, at least equals ~~95% percent~~ of the fair value of the transferred securities. If the collateral is less than ~~95% percent~~ at the reporting date, the difference between the actual collateral and ~~95% percent~~ will be nonadmitted.

Reverse Repurchase Transaction

- b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to ~~102% percent~~ of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than ~~100% percent~~ of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals ~~102% percent~~ of the purchase price.
130. Exchanges of debt instruments or debt instrument modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor. If the cash flows under the terms of the new debt instrument are at least ~~10% percent~~ different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of, or modification to, debt instruments is consider substantially different and/or more than minor.

Illustration 3 Company C originates \$1,000 of loans that yield ~~10% percent~~ interest income for their estimated lives of 9 years. Company C transfers the entire loans to an entity and the transfer is accounted for as a sale. Company C receives as proceeds \$1,000 cash, a beneficial interest to receive ~~1% percent~~ on the contractual interest on the loans (an interest-only strip receivable), and an additional ~~1% percent~~ of the contractual interest as compensation for servicing the loans. The fair values of the servicing asset and the interest-only strip receivable are \$40 and \$60, respectively.

Illustration 4 – Facts

Transferor's carrying amount and fair value of security loaned	\$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5% percent annual rate	5
Transferor's rebate to the securities borrower at a 4% percent annual rate	4

SSAP No. 104R—Share-Based Payments

- 117.a.ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of ~~5% percent~~ or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than ~~5% percent~~ that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of ~~5% percent~~ shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.
122. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that ~~5% percent~~ of the employee's annual salary be withheld for future purchases of stock. If the

employee receives an increase in salary during the term of the award, the base salary on which the ~~5% percent~~ withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, ~~85% percent~~ of the grant date stock price).

SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees

11. The term “highly effective” describes a fair value hedging relationship where the change in fair value of the derivative instrument is within 80 to 125% ~~percent~~ of the opposite change in fair value of the hedged item attributed to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique.

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed editorial revisions as illustrated within the agenda item.

On May 16, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed editorial revisions, as illustrated above, to the *Accounting Practices and Procedures Manual*.

Draft: 4/25/23

Statutory Accounting Principles (E) Working Group

E-Vote

April 12, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded April 12, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Exposed INT 22-02

The Working Group considered exposure of *Interpretation (INT) 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act – Corporate Alternative Minimum Tax*. This proposes to extend the existing INT 22-02 from June 15 to July 1 so that the Interpretation can be used through the second quarter of 2023.

Key elements of INT 22-02 are that it does not require accrual of the Corporate Alternative Minimum Tax (CAMT), it requires disclosures. INT 22-02 provides overrides to existing guidance in *Statement of Statutory Accounting Principles (SSAP) No. 9—Subsequent Events* and *SSAP No. 101—Income Taxes*. The Working Group anticipates having calls this quarter to address accounting for the CAMT.

Arfanis made a motion, seconded by Clark, to expose INT 22-02 with a comment deadline of May 5. The motion passed unanimously. This meets the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process requirement for a 2/3 vote of the membership for INTs that conflict with existing statutory accounting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Meetings/E

CMTE/APPTF/2023-2

Draft: 4/25/23

Statutory Accounting Principles (E) Working Group
E-Vote
April 10, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded April 10, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); Rylynn Brown (DE); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. Exposed INT 23-01

The Working Group considered an e-vote exposure of *Interpretation (INT) 23-01: Net Negative (Disallowed) Interest Maintenance Reserve*. This INT proposes a limited-time, optional exception to statutory accounting to admit net negative (disallowed) interest maintenance reserve (IMR) in the general account up to 5% of adjusted capital and surplus. The tentative INT includes limitations on the negative IMR permitted to be admitted, with an explicit exclusion for losses captured in the IMR from derivatives that were reported at fair value prior to termination/settlement. It also specifically excludes separate account negative (disallowed) IMR from the admittance provisions. The INT details reporting requirements, which include an allocation to special surplus for the admitted net negative (disallowed) IMR, as well as disclosures on the derivative losses removed from IMR in determining the amount that could be admitted and disclosures on the overall IMR admittance calculation and the percentage of adjusted capital and surplus.

Hudson made a motion, seconded by Walker, to expose INT 23-01 for a public comment period ending May 5. The motion passed with 11 Working Group members responding with affirmative votes, meeting the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process requirement for a 2/3 vote of the membership for INTs that conflict with existing statutory accounting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Subsequent to the e-vote, the comment period for this exposure was extended to June 9.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Interested Parties' Proposal for Statutory Accounting for CAMT

Dear Mr. Bruggeman:

Interested parties would like to thank you for the continued meetings with the Statutory Accounting Principles Working Group (SAPWG) staff to discuss the interested parties' proposal for accounting for the Corporate Alternative Minimum Tax (CAMT). Over the past five months, interested parties has provided materials illustrating its proposal.

Interested parties is now providing a draft of suggested language for a recommended Interpretation addressing the statutory accounting for the CAMT. This draft is intended to aid the SAPWG staff by providing the interested parties' proposal in direct language suitable for an Interpretation. The draft Interpretation is more detailed than the previously provided material and also includes transitional guidance, as well as suggested disclosures. We believe this detailed language should help prevent different interpretations among the industry and the accounting firms.

In drafting this proposal, interested parties followed the guiding principles that you previously communicated. First, given that CAMT only applies to a limited number of large and profitable companies, *SSAP No. 101 – Income Taxes* does not need to, and should not, be opened and rewritten. Although guidance is necessary to address how the consolidated tax should be accounted for under statutory accounting, revising *SAAP No. 101* is not necessary as this draft clarifies the existing guidance in *SSAP No. 101*. Following this guiding principle, interested parties drafted guidance through an Interpretation, leaving *SSAP No. 101* intact. Next, given that the CAMT is calculated based on consolidated book income and not taxable income, you suggested the use of the tax sharing agreement to bridge the CAMT calculation to the separate company statutory statements. As such, the proposed Interpretation relies on tax sharing

agreements to allocate the consolidated CAMT for purposes of the admittance calculation. In addition, all insurance companies will have different organizational structures, various book income starting points (U.S. GAAP, STAT or IFRS), and other facts and circumstances that will lead to unique situations under the CAMT. To avoid situational guidance, you indicated the solution should be principles-based and cover all insurance companies. By using a hierarchy of filers, the proposal covers all insurance companies without the need to address company specific issues. Finally, you suggested the solution should be developed between the working group and the industry, not external audit firms. Utilizing industry and working group representatives to develop the guidance prevents external audit firms from deviating in how they require insurance companies to account for the CAMT.

Thank you for the attention you have given to the impact that CAMT will have on statutory accounting and for considering the interested parties' proposed treatment.

Please feel free to contact either one of us with any questions you may have.

Sincerely,

D. Keith Bell

Rose Albrizio

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 23-XX: Inflation Reduction Act – Corporate Alternative Minimum Tax

INT 23-XX References

Current:

SSAP No. 3 – Accounting Changes and Corrections of Errors

SSAP No. 9 – Subsequent Events

SSAP No. 101 – Income Taxes

INT 23-XX Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022 and included a new corporate alternative minimum tax (CAMT). The CAMT is effective for tax years beginning after December 31, 2022. Reporting entities shall refer to the Act and the related regulations and other tax guidance to determine application, but a non-authoritative high-level summary regarding the CAMT is as follows:
 - a. The tentative CAMT is 15% of the corporation’s “adjusted financial statement income” for the taxable year, reduced by the CAMT foreign tax credit for the taxable year.
 - b. The CAMT applies only to corporations (determined on a controlled group basis as defined for Federal income tax purposes) with average annual adjusted financial statement income in excess of \$1 billion for three prior taxable years. The threshold is reduced to \$100 million in the case of certain foreign-owned corporations. A corporation that meets the applicable threshold is an “applicable corporation.” Applicable corporations generally remain applicable corporations for subsequent taxable years, unless certain limited exceptions apply.
 - c. A corporation’s adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement, adjusted by various enumerated adjustments.
 - d. The Act provides a hierarchy for determining the applicable financial statement. At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or governmental body is acceptable. If the taxpayer is part of a tax-controlled group of corporations, the group’s applicable financial statement is the applicable financial statement for each member of the group.

- e. To determine its U.S. federal income tax liability, a corporation will need to compute taxes under both systems – the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the sum of the regular corporate income tax plus the base erosion anti-abuse tax (BEAT). Any CAMT paid is available indefinitely as a credit carryover that would reduce regular tax in future years when the regular tax liability is in excess of CAMT tax liability.
- f. The Act directs the Treasury to issue regulations and other guidance relating to implementing the CAMT, and many issues are pending detailed clarification, including issues that are unique to the insurance industry.

Interpretation Issues

2. This interpretation addresses statutory accounting and reporting aspects of the CAMT for year-end 2023 and subsequent reporting periods. While most insurers will not be applicable corporations, this interpretation provides comprehensive statutory accounting guidance for all reporting entities with respect to the CAMT. This interpretation incorporates a principles-based approach which progressively categorizes reporting entities for purposes of statutory accounting for the CAMT so that each step in the interpretation is dependent on the prior steps.
3. Although it is likely that most insurers that are applicable corporations will be members of a tax-controlled group of corporations and included in a consolidated Federal income tax return with other members of the group, this interpretation applies to all reporting entities, whether an unaffiliated corporation¹ that files a separate tax return, a member of a tax-controlled group not included in the common parent company's consolidated tax return that files a separate company tax return or a separate consolidated tax return with other members of the group, or as a member of the common parent's consolidated return group. For reporting entities that are included in a consolidated tax return, the fundamental statutory tax accounting issue for the CAMT is how to reflect in the reporting entity's separate company financial statements a portion of what is essentially an add-on tax for a consolidated tax return group that is based on the group's financial statement income. Unlike the alternative minimum tax (AMT) that applied under pre-2018 tax law, the new CAMT does not apply to every corporation and is not based on the corporation's regular taxable income with adjustments for minimum tax purposes. Instead, the determination of whether the CAMT applies is made on a tax-controlled group basis (scope determination), the tentative CAMT is based on the group's adjusted financial statement income (not adjusted regular taxable income), and any tax actually due (liability determination) is based on a comparison of consolidated tentative CAMT to consolidated regular tax. Even if a member of a tax-controlled group of corporations files its own separate Federal income tax return, the tax law does not provide for a separate company scope determination, but rather looks to the tax-controlled group for applicable corporation status and determination of the applicable financial statement.

¹ As used herein, an "unaffiliated" corporation is one that is not a member of a tax-controlled group.

4. As described in the rules below, this interpretation is based on the principle that the statutory tax accounting for the CAMT for reporting entities included in a consolidated tax return should be matched to the CAMT charges and credits that actually are expected to be paid by or to the reporting entity. For such reporting entities, this interpretation applies the provisions of the intercompany tax allocation agreement (also referred to as a tax sharing agreement or TSA) that governs allocation of consolidated taxes to individual members of the group.
 - a. Paragraph 16. of *SSAP No. 101* provides that in the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions between the affiliated parties shall be recognized if such transactions are economic transactions as defined in *SSAP No. 25*; are pursuant to a written TSA; and income taxes incurred are accounted for in a manner consistent with the principles of FAS 109 (the forerunner of what is now ASC 740), as modified by *SSAP No. 101*.
 - b. This interpretation provides the applicable statutory tax accounting rules for the CAMT for a reporting entity that is included in a consolidated tax return and is subject to a TSA. In such case, the rules are applied consistently with the modifications to ASC 740 pursuant to both *SSAP No. 101* and this interpretation, and CAMT expense or benefit is recognized in accordance with the TSA.
 - c. Consistent with paragraph 4 of *SSAP No. 3 – Accounting Changes and Corrections of Errors*, application of this interpretation shall not be considered a change in accounting principle.

INT 23-XX Discussion

5. A reporting entity is an “applicable corporation” for purposes of this interpretation if, either as an unaffiliated corporation or as a member of a tax-controlled group of corporations, the reporting entity is an “applicable corporation” as defined for CAMT purposes in the tax code or guidance thereunder. With limited exceptions, once a corporation is an applicable corporation under the tax law, it remains an applicable corporation for subsequent taxable years and for purposes of this interpretation. Applicable corporation status means that CAMT must be tentatively determined and compared to regular tax liability. However, no CAMT is actually payable unless tentative CAMT exceeds regular tax liability. CAMT in excess of regular tax liability gives rise to a credit that is carried forward indefinitely for use when regular tax liability exceeds CAMT.

Categories of Reporting Entities

6. In an annual determination, all reporting entities are separated into one of four categories – the first three of which are not required to account for CAMT in determining current or deferred income taxes under *SSAP No. 101*.
 - a. Category a. consists of unaffiliated reporting entities that do not reasonably expect to be an applicable corporation for the taxable year that includes the reporting period. A reporting entity that was an applicable corporation for the preceding taxable year is deemed to reasonably expect to be an applicable corporation for

- the current taxable year, unless one of the tax law exceptions to continued applicable corporation status applies. Category a. reporting entities are not required to recognize CAMT in any current or deferred tax computations under *SSAP No. 101*. Accordingly, non-applicable corporation status for the current reporting period applies both for purposes of determination of current taxes and determination of the amount “expected to be realized within the applicable period” in the admitted DTA calculation in paragraph 11.b.i. of *SSAP No. 101*.
- b. Category b. includes a reporting entity that is a member of a tax-controlled group of corporations, and the tax-controlled group does not reasonably expect to be an applicable corporation for the taxable year that includes the reporting period. As with category a. reporting entities, a category b. reporting entity that is a member of a tax-controlled group of corporations that was an applicable corporation for the preceding taxable year is deemed to reasonably expect to be an applicable corporation for the current taxable year, unless one of the tax law exceptions to continued applicable corporation status applies. On the other hand, because the tax law does not provide for a separate company scope determination for members of a tax-controlled group, but instead determines applicable corporation status on a tax-controlled group basis, a category b. reporting entity is not required to make a separate company scope determination as if it was an unaffiliated corporation. Like category a. reporting entities, category b. reporting entities are not required to recognize CAMT in any current or deferred tax computations under *SSAP No. 101*, and non-applicable corporation status for the current reporting period applies both for purposes of determination of current taxes and determination of the amount “expected to be realized within the applicable period” in the admitted DTA calculation in paragraph 11.b.i. of *SSAP No. 101*.
 - c. Category c. includes a reporting entity that is a member of a tax-controlled group of corporations, and the tax-controlled group reasonably expects to be an applicable corporation for the taxable year that includes the reporting period. However, the reporting entity is included in a consolidated Federal income tax return with other members of the tax-controlled group and is a party to a TSA that is in effect for the reporting period and pursuant to the terms of which the category c. reporting entity i) is excluded from charges for any portion of the group’s CAMT, and ii) is not allocated any portion of the group’s utilization of CAMT credit carryover. Paragraph 8.3 of *SSAP No. 101 Exhibit A – Implementation Questions and Answers (Q&A)* is not applicable to Category c. reporting entities with respect to the CAMT. Like category a. and b. reporting entities, category c. reporting entities are not required to recognize CAMT in any current or deferred tax computations under *SSAP No. 101*, and this accounting treatment for the current reporting period applies both for purposes of determination of current taxes and determination of the amount “expected to be realized within the applicable period” in the admitted DTA calculation in paragraph 11.b.i. of *SSAP No. 101*. See *Example 1d* in paragraph 10.b. of this interpretation for an illustration.
 - d. Category d. includes all other reporting entities. Accordingly, category d. includes a reporting entity that reasonably expects to be an applicable corporation for the

taxable year that includes the reporting period, either as an unaffiliated corporation or as a member of a tax-controlled group of corporations if, in the latter case, the reporting entity is not included in category c. A category d. reporting entity may be the common parent company of a consolidated return group. It may also be a member of an affiliated group of corporations (as defined for Federal income tax purposes) but excluded from the consolidated tax return and filing its own separate return (if, for example, the reporting entity is a life insurance company and i) the group has not made a “life-nonlife” consolidated return election, or ii) the reporting entity has been recently-acquired and is excluded from the life-nonlife consolidated return for a period of 5 years). Category d. reporting entities are required to consider CAMT in *SSAP No. 101* current and deferred tax computations in the manner set forth in the following paragraphs. Because CAMT is not payable by an applicable corporation unless it is in excess of regular tax liability, the calculations under category d. may or may not result in different current and deferred income taxes than if the CAMT was not taken into account.

Operational Rules for Category d. Reporting Entities

7. Category d. reporting entities are required to take CAMT into account under *SSAP No. 101* to the extent it is reasonably expected that the tax actually is (for the current period) or could be (for future years in the *SSAP No. 101* paragraph 11.b. applicable period) incurred a) by the reporting entity (if unaffiliated or affiliated but excluded from a consolidated tax return) or b) by the consolidated tax return group of which the reporting entity is a member and the consolidated CAMT is allocable in some part to the reporting entity pursuant to the group’s intercompany income tax allocation agreement. Such reporting entities recognize CAMT, if any, as a current tax expense for the taxable year that includes the reporting period and recognize CAMT credit utilization as a current tax benefit for such period. If the reporting entity is a party to a TSA, CAMT expense or CAMT credit utilization is based on the amount determined under the TSA. If the reporting entity pays CAMT or utilizes the CAMT credit to offset regular tax liability, its CAMT expense or CAMT credit utilization is based on the amount of such payments or receipts less allocations to other members of the consolidated tax group pursuant to the TSA.
8. A reporting entity is allowed an accounting policy election to either consider or disregard CAMT when evaluating the need for a valuation allowance for its regular tax DTAs.² The accounting policy election applies for valuation allowance purposes only - that is, in the determination of adjusted gross DTAs other than CAMT-related DTAs. This accounting policy election cannot be used to avoid a valuation allowance analysis for CAMT credit carryforward DTAs. The accounting policy election must be disclosed in the notes to the financial statements and applied consistently in subsequent reporting periods.

² ASC 740 does not specifically address whether future years’ CAMT should be anticipated in a valuation allowance assessment for regular tax DTAs. Accordingly, an accounting policy election is allowed for GAAP purposes as to whether to consider or disregard CAMT when evaluating the need for a valuation allowance for regular tax DTAs.

9. An adjusted gross deferred tax asset (DTA) is recognized for any CAMT credit carryforward that is more likely than not to be recognized (that is, after reduction of the gross DTA by any required valuation allowance) and is admissible under the conditions described in paragraph 10 of this interpretation. The valuation allowance analysis should include, for example, the risk that the reporting entity, or the tax-controlled group of corporations of which the reporting entity is a member, more likely than not may be unable to realize the CAMT credit carryforward. Because the CAMT credit utilization is determined at the consolidated group level for reporting entities that are part of a consolidated group, the reporting entity valuation allowance determination shall be consistent with the consolidated group determination. A valuation allowance analysis for a CAMT credit carryforward is required regardless of the accounting policy election described in paragraph 8.
10. The admissible amount of adjusted gross DTAs for a category d. reporting entity is determined under paragraph 11 of *SSAP No. 101* with the modifications set forth below.
- a. An RBC-reporting entity with an ExDTA Authorized Control Level Risk Based Capital (RBC) percentage – calculated as described in footnote 3 of paragraph 11.b. of *SSAP No. 101* - of greater than [450]% if a life insurance company and [400]% in all other cases is not required to take the CAMT into account in calculating the “with and without” tax liability for purposes of determining the amount expected to be realized under paragraph 11.b.i. of *SSAP No. 101* within the 3-year applicable period determined under paragraph 11.b. **[NOTE TO DRAFT:** An RBC ratio is being proposed for this financial strength test in part because *SSAP No. 101* already includes an RBC threshold in paragraph 11.b. An alternative financial strength test might incorporate an approach similar to that of Section 8.B.(3)(c) of the Credit for Reinsurance Model Regulation relating to certified reinsurers, wherein an assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. For this purpose, acceptable rating agencies include Standard & Poor’s, Moody’s Investor Service, Fitch Ratings, A. M. Best Company, or any other nationally recognized statistical rating organization.] The post-valuation allowance adjusted gross DTA for any CAMT credit carryforward is admitted by such entities without regard to paragraph 11.b.i. The 15% limitation of capital and surplus limitation of paragraph 11.b.ii. of *SSAP No. 101* continues to apply to admitted adjusted gross DTAs, including the adjusted gross DTA for any CAMT credit carryforward. See *Example 1c* below. A category d. reporting entity that accounts for CAMT pursuant to this paragraph 10.a. shall disclose that fact in the notes to the financial statements.
 - b. If this financial strength threshold is not met, the amount expected to be realized under paragraph 11.b.i. of *SSAP No. 101* within the applicable period determined under paragraph 11.b. is based on the reporting entity’s “with and without” regular tax liability reduced by CAMT, if any, reasonably expected to be incurred during the paragraph 11.b. applicable period. In the case of a reporting entity included in a consolidated Federal income tax return, the amount expected to be realized is reduced

by the portion of the consolidated CAMT, if any, reasonably expected to be allocable to the reporting entity pursuant to the group's TSA. CAMT credit utilization during the applicable period is recognized based on the same principles, with the opposite effect – that is, as an admitted DTA. The purpose of these computations is to account for CAMT in deferred taxes in the same manner as CAMT would be reflected in current taxes. The DTA for any CAMT credit carryforward not admitted under paragraph 11b. of *SSAP No. 101* is available to offset liabilities under paragraph 11c. of *SSAP No. 101* without any other considerations.

- c. Paragraph 8.3 of the *SSAP No. 101 Q&A* is not applicable to Category d. reporting entities with respect to the CAMT.
- d. Examples

Example 1a: Insurance company IC is a member of a tax-affiliated group of corporations that files consolidated Federal income tax return and that reasonably expects to be an applicable corporation for 20X3. For 20X3, IC falls below the financial strength threshold applicable for category d. but exceeds the RBC threshold in paragraph 11.b. of *SSAP No. 101* for use of a 3-year applicable period. At the end of 20X3, IC has a \$50x CAMT credit carryover DTA (pursuant to the consolidated group's TSA, IC was allocated a portion of the group's expected 20X3 current CAMT expense, which IC included in its 20X3 current tax expense). IC also has \$200x of regular tax adjusted gross DTAs (i.e., as already reduced by any required valuation allowance), of which \$150x reverses over the 3-year applicable period 20X4-20X6 and is expected to be realized in IC's with and without calculation under paragraph 11.b.i. of *SSAP No. 101*. The consolidated group expects to absorb its entire CAMT credit carryover, including the \$50x allocated to IC, in 20X4, and expects to incur CAMT in each of 20X5 and 20X6, of which \$5x each year is expected to be allocated under the TSA to IC. IC's 15% of surplus limitation under paragraph 11.b.ii. of *SSAP No. 101* is \$225x.

Ignoring for purposes of this example any DTA admittance under paragraphs 11.a. and 11.c. of *SSAP No. 101*, IC admits the \$50x adjusted gross DTA for the CAMT credit carryover expected to be utilized in 20X4 and reduces its \$150x of regular tax admitted DTAs by the \$10x CAMT expected to be incurred in 20X5 and 20X6, resulting in \$190x of DTA admitted under paragraph 11.b.i., which is less than the \$225x paragraph 11.b.ii. limitation. However, if the 15% of capital and surplus limitation was \$175x instead of \$225x, the \$190x would be limited to \$175x.

	DTAs	Regular DTAs Admitted Standalone	Impact of Consolidated CAMT	Admitted DTAs under 11.b.i	15% Surplus limitation under 11.b.ii	Non Admitted DTAs
Adjusted gross DTAs reversing in 3 years	200	150	(10)	140		60
CAMT Credit DTA	50		50	50		-
	250	150	40	190	225	60

Example 1b. The facts are the same as in *Example 1a* except that the consolidated group of which IC is a member expects to absorb in 20X4 only a portion of its CAMT credit carryover, of which \$30x would be allocated to IC, and expects to incur CAMT in each of 20X5 and 20X6, of which \$5x each year is expected to be allocated under the TSA to IC. The consolidated group also concludes that its remaining consolidated CAMT credit carryforward, of which \$20x would be allocated to IC, is not more likely than not to be realized.

In accordance with paragraph 9 of this interpretation, IC establishes a \$20x valuation allowance against its \$50x AMT credit carryforward DTA, resulting in an adjusted gross DTA of \$30x. Under paragraph 8 of this interpretation, IC makes an accounting policy election to disregard CAMT when evaluating the need for a valuation allowance for its regular tax DTAs. IC admits \$150x of regular tax adjusted gross DTAs and the \$30x adjusted gross DTA for its allocated portion of the CAMT credit carryforward. IC reduces its admitted adjusted gross DTAs by its \$10x share of the consolidated CAMT expected to be incurred in 20X5 and 20X6. The result is an admitted DTA of \$170x, \$20x less than an *Example 1a*, attributable to the \$20x valuation allowance against the CAMT credit carryforward.

Example 1c. The facts are the same as in *Example 1a* except that IC exceeds the financial strength threshold applicable for category d. Accordingly, IC would not reduce its admitted regular tax DTA by any CAMT for years after 20X3. However, IC would still have to perform a valuation allowance analysis on its \$50x CAMT credit carryforward at the end of 20X3 and reduce the adjusted gross DTA for such credit to the amount more likely than not to be realized. Assume the valuation allowance is \$20x and the adjusted gross DTA for the CAMT credit carryover is reduced to \$30x. IC's admitted DTA would be \$180x. Additionally, if IC's 15% of surplus limitation under paragraph 11.b.ii. was \$175x, IC's admitted adjusted gross DTA would be further reduced to \$175x.

Example 1d. If, in *Example 1a*, the TSA to which IC is a party excluded IC from any allocation of CAMT or CAMT credit utilization, IC would be a category c. reporting entity for 20X3, CAMT would be excluded from the calculations, and IC's admitted adjusted gross DTA would be \$150x.

- e. Also recognized are CAMT credit carryovers arising during the applicable period that become utilizable within the applicable period.

Example 2: The facts are the same as *Example 1a* except that the consolidated group (and IC) have no CAMT credit carryovers at the end of 20X3. Furthermore, the consolidated group reasonably expects to incur CAMT liability in each of 20X4 and 20X5 (instead of 20X5 and 20X6) and to utilize in 20X6 a portion of the CAMT credit carryovers generated in 20X4 and 20X5. Of these amounts, IC is expected to be allocated under the TSA \$5x of CAMT in each of 20X4 and 20X5, and \$6x of

CAMT credit utilization in 20X6. In determining admitted adjusted gross DTAs for the 20X3 reporting period, IC reduces its regular tax admitted adjusted gross DTA by its \$10x TSA-allocated portion of the consolidated group's CAMT for 20X4 and 20X5 but increases such admitted amount by its \$6x TSA-allocated portion of the consolidated group's CAMT credit utilization for 20X6.

- f. Projections of CAMT liability, if any, (and CAMT credit utilization) during the applicable period involve forward-looking data, groupings, estimates and other adjustments for both the reporting entity and the group of which it is a member. The manner in which this is done shall be conducted in a reasonable and consistent manner. A reporting entity shall retain internal documentation to support these computations and the methodologies so employed. Modifications are permitted should events or circumstances change from a previous period – such as a change in materiality or administrative costs associated with the computations, or system changes that affect the level of detail available. Entities that make such modifications should be prepared to rationalize the changes. Disclosure of material modifications, and the general reason for such, should be made in the notes to the financial statements.³
- g. *SSAP No. 101* provides that tax-planning strategies are required to be considered in the valuation allowance analysis and may be considered in determining the admission of DTAs under *SSAP No. 101* paragraph 11. A reporting entity may consider tax-planning strategies in making the determinations required under this interpretation. Because the CAMT scope and liability determinations are made at a group level, tax-planning strategies may be considered both at a group level and at the reporting entity level. However, tax-planning strategies at the group level shall not conflict with tax-planning strategies at the reporting entity level and vice versa.
- h. CAMT arising during the *SSAP No. 101* paragraph 11.b. applicable period that reduces the amount expected to be realized under paragraph 11.b. results in DTAs for CAMT credit carryforwards that may be taken into account in the *SSAP No. 101* paragraph 11.c. calculation.

Example 3: The facts are the same as in Example 2. The remaining \$4x of CAMT credit carryforward arising during the 3-year applicable period is taken into account in IC's 20X3 paragraph 11 calculation as part of the amount of adjusted gross DTAs, after application of paragraphs 11.a. and 11.b., that can be offset against existing gross DTLs.

Disclosures

11. The reporting entity shall disclose whether it is a category a., b., c., or d. reporting entity. Additionally, the following disclosures shall be made in the notes to the financial statements of category d. reporting entities:
 - a. The accounting policy election described in paragraph 8. of this interpretation.
 - b. Application of the RBC reporting threshold described in paragraph 10.a. of this interpretation

³ See paragraph 2.9 of the *SSAP No. 101 Q&A* for similar requirements in the context of grouping of assets and liabilities for measurement.

- c. Any disclosure required by paragraph 10.f. of this interpretation.
- d. In the disclosure required by paragraph 28.b. of *SSAP No. 101*, a statement as to whether the reporting entity may be charged with a portion of CAMT incurred by the consolidated group (or credited with a portion of the consolidated group's CAMT credit utilization).
- e. Inclusion of CAMT credit carryforwards, if any, in the disclosure required by paragraph 26.a. of *SSAP No. 101*.
- f. The impact of CAMT tax-planning strategies, if any, in the disclosure required by paragraph 22.f. of *SSAP No. 101*.

Transition Guidance

12. Even though the CAMT was enacted in 2022 and generally became effective January 1, 2023, the requirements for statutory tax accounting for the CAMT have effectively been deferred by INT 22-02.⁴ It is well understood that reporting entities have been awaiting the guidance provided in this interpretation to file requests for approval of TSA amendments or a new TSA relating to the CAMT. This paragraph 11. provides the applicable transition rules for year-end 2023 statutory accounting for requests for a timely-filed TSA amendment or a new TSA for the 2023 taxable year.

- a. Because the CAMT was newly-enacted effective for 2023, TSAs in effect for periods prior to the 2023 taxable year include no explicit provisions relating to the CAMT.⁵ Thus, category c. and category d. reporting entities may need to amend TSAs to deal with the CAMT effective for the entire 2023 taxable year. A reporting entity would file a request for amendment to a TSA or a new TSA on Form D – Prior Notice of a Transaction with its applicable domiciliary regulator(s) and commercial domiciliary regulator(s).
- b. Time is of the essence in both requesting and approving TSA amendments or a new TSA relating to the CAMT for the 2023 taxable year to be applicable to the 2023 reporting period. Accordingly, if, within [45] days after adoption of this interpretation, a reporting entity files the applicable Form D request(s) for TSA amendment or a new TSA to address the CAMT for 2023 and subsequent taxable years,⁶ such TSA amendment or new TSA shall be accounted for as applicable for the entire 2023 reporting period, regardless of whether the approved TSA allocates consolidated CAMT (or utilization of consolidated AMT credit carryforwards) to the reporting entity.
 - i. If the final approved TSA differs in its treatment of the CAMT allocation from the TSA originally requested on the Form D, the difference shall be recorded as follows:
 - 1. If Form D approval occurs subsequent to the balance sheet date, but before the issuance of the statutory financial statements and before

⁴ INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act – Corporate Alternative Minimum Tax (last updated April 12, 2023).

⁵ TSAs may include provisions relating to the pre-2018 AMT if not previously amended to remove such provisions.

⁶ That is, with an effective date of January 1, 2023, or, if not a calendar year taxpayer, the first day of the 2023 taxable year.

the date the audited financial statements are issued, or available to be issued, such approval shall be considered a Type I subsequent event within the meaning of *SSAP No. 9 – Subsequent Events*.

2. In the extraordinary circumstance that a Form D approval occurs after the period which defines a subsequent event in *SSAP No. 9*, the difference created by such approval shall be recognized and disclosed in the period in which the approval is given.
- ii. The transition guidance in this paragraph 12. does not apply to a reporting entity that does not file a Form D request for a CAMT-related TSA amendment or a new TSA within the time period specified in subparagraph b.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Interested Parties Comments on Exposures with Comments due June 9

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the items exposed for comment by the Statutory Accounting Working Group (the Working Group) during its March 22, 2023, meeting with comments due June 9.

Ref #2022-19: Negative IMR

The Working Group directed NAIC staff regarding the consideration of negative interest maintenance reserve (IMR) with an intent to work on both a 2023 solution and a long-term solution as follows:

- a. Draft a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within asset adequacy testing (AAT); 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT (and documentation), as well as any liquidity stress test (LST) considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data (sales of bonds because of excess withdrawals should not use the IMR process); and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.
- b. Draft a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from total adjusted capital (TAC) and the consideration of sensitivity testing with and without negative IMR.

- c. Develop guidance for future Working Group consideration that would allow the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if RBC ratio is less than 300.
- d. Review and provide updates on any annual statement instructions for excess withdraws, related bond gains/losses and non-effective hedge gains/losses to clarify that those related gains/losses are through asset valuation reserve (AVR), not IMR.
- e. Develop accounting and reporting guidance to require the use of a special surplus (account or line) for net negative IMR.
- f. Develop governance related documentation to ensure sales of bonds are reinvested in other bonds.
- g. Develop a footnote disclosure for quarterly and annual reporting.

Please see the comments in the letter submitted by ACLI on May 17th.

Principles-Based Bond Definition

The Working Group exposed changes to several SSAP's that propose statutory accounting changes under the principles-based bond project.

The exposure also proposes changes to Schedule BA to encompass debt securities that do not qualify as bonds and consolidate existing reporting lines.

Interested parties' comments are shown below related to each of the five separate documents exposed for comment.

SSAP No. 26R, SSAP No. 43R, and Other SSAPs

Interested parties have no comments on these exposures and are appreciative of the changes made and the responsiveness to interested parties' previous comments.

Schedule BA

Interested parties will respond to this exposure under separate cover as comments are more involved and not due until June 30, 2023.

SSAP No. 21R

Paragraphs 22 and 29

Interested parties understand that proposed paragraph 22 of SSAP No. 21 requires that the underlying collateral in an asset-backed security that fails the bond definition must qualify as admitted assets for the security to be admitted. Paragraph 22 also proposes to report these bonds at a value that does not exceed the fair value of the collateral with any amount above the fair value of the collateral being non-admitted. Interested parties have concerns with the proposal as this would be operationally very difficult to do since some asset-backed securities can have a

large number of assets and the fair value of the underlying collateral in the asset-backed security may not be readily available. This is very different from collateral loans in SSAP No. 21 where there are generally fewer assets that compose the underlying collateral. In addition, this would be costly as currently the servicer/trustee reports do not usually include fair value of the collateral so this would be a new service for which we would have to pay. Interested parties believe that accounting for these securities at the lower of cost or market of the security owned by the insurer will consider the performance of the underlying collateral. The unit of account is the security owned by the insurer and not the underlying collateral for the asset-backed security. The fair value of the bond will consider the fair value of the collateral to a great extent, but it will also take into account other key characteristics of the bond itself that impact the bond's fair value and will better reflect the consideration expected to be received upon maturity or sale of the security. If the collateral is an admitted asset, the entire carrying balance of the security should be admitted without having to quantify collateral fair value given the cost and complexity in doing so. Interested parties propose changes to paragraph 22 as a result of the comments above.

Interested parties also have comments regarding the new paragraph 29 that was added to clarify the accounting for residual tranches. We believe that the intent of paragraph 29 is to require non-admission of a residual tranche only if another tranche from the same securitization owned by the insurer fails the bond definition and the collateral is not an admitted investment. Interested parties propose changes to paragraph 29 to further clarify what we believe to be the intent of the paragraph.

We proposed the following changes to paragraphs 22 and 29 to address the aforementioned comments:

22. Debt securities in scope of this standard that do not qualify as bonds under SSAP No. 26R and for which the primary source of repayment is derived through rights to underlying collateral, qualify as admitted assets ~~only to the extent they are secured~~ if the underlying collateral primarily qualify as admitted invested assets. Any residual tranches or first loss positions held from the same securitization that did not qualify as a bond under SSAP No. 26R also only qualify as admitted assets to the extent the underlying collateral primarily qualify as admitted invested assets. Any amounts in excess of the fair value of the underlying admitted invested assets shall be non-admitted.

29. As stated in paragraph 22, Residuals are permitted to be admitted if debt securities from the same securitization qualify as bonds under SSAP No. 26R as an issuer credit obligation or an asset backed security. For example, if a debt security from a securitization does not qualify as a bond, and the source of repayment is derived through rights to the underlying collateral, the debt security is only permitted to be admitted if the underlying assets qualify as admitted assets. If the debt security from a securitization is nonadmitted due to the requirements under paragraph 22, then any residual interests or first loss positions held from the same securitization also do not qualify as admitted assets and would be reported as nonadmitted assets.

Paragraph 25

Interested parties also note that the way paragraph 25 below was written implies that the only securities that can fail the definition are asset-backed securities. Since an issuer credit obligation could also fail the bond definition (i.e., does not reflect a creditor relationship in substance), we believe the changes recommended below are needed to reference the appropriate accounting guidance under either SSAP No. 26 for issuer credit obligations or SSAP No. 43R for asset-backed securities.

25. Debt securities that do not qualify as bonds ~~are captured~~included in the scope of this statement. Debt securities included in the scope of this statement shall follow the guidance in SSAP No. 43R—Asset-Backed Securities or SSAP No. 26R Bonds, depending on whether they would have been classified as asset-backed securities or issuer credit obligations, respectively, should they have qualified as bonds. This includes the guidance, for calculating amortized cost, for determining and recognizing other-than-temporary impairments and for allocating unrealized and realized gains and losses between the asset valuation reserve (AVR) and interest maintenance reserve (IMR).

Paragraphs 30 and 31

In paragraph 31 of the exposure, NAIC asks the following question:

Exposure Question: Industry is requested to provide information on how residual tranches have been amortized and how they have been assessed for OTTI as there are no contractual principal or interest payments.

Regarding the calculation of amortized cost and the assessment of OTTI for residuals, it has generally been industry practice to follow the SSAP No. 43R guidance for beneficial interests (i.e., paragraphs 21-25 of the bond definition proposal titled “Accretable Yield and Changes to Effective Yield for Application of Prospective Method”), which requires estimates of cash flows to be calculated quarterly with prospective yield adjustments. If there is an adverse change in estimated cash flows at the reporting date, an OTTI is recorded. Under those circumstances, the residual is written down to the current estimate of cash flows discounted at a rate equal to the current yield used to accrete the residual with the resulting change being recognized as a realized loss. If the cash flows increase from the prior period, the yield is adjusted upward. To require recognition of a loss for the entire amount of the residual would not be a reasonable accounting result. Also, for insurers who are US GAAP filers, they also apply the prospective method discussed above for their US GAAP financial statements, if they have not elected the fair value option. As a result, interested parties propose the edits below to paragraphs 30 and 31, which also include clarification on AVR treatment of residuals:

30. Residuals shall be initially reported at cost, or allocated cost (using proportional fair values) if acquired along with debt tranches from the securitization. Subsequent to initial acquisition, residuals shall be reported at the lower of amortized cost or fair value, with changes in fair value (or from amortized cost to fair value) reported as unrealized gains or losses. To determine amortized cost, the reporting entity should apply SSAP No. 43R,

paragraphs 21-25 (i.e., prospective method). Unrealized and realized gains and losses on residuals are reported in the AVR.

31. Residuals shall be assessed for other-than-temporary impairment (OTTI) on an ongoing basis based on SSAP No. 43R. An OTT shall be considered to have occurred if it is probable that the reporting entity will not receive cash flows distributed to the residual tranche to cover the reported amortized cost basis. Upon identification of a probable OTTI, the reporting entity shall recognize a realized loss equal to the remaining amortized cost basis. Subsequent to the recognition of OTTI, the residual shall be reported with a zero book adjusted carrying value. Any subsequent cash flows received attributed to the residual tranche shall be reported as interest income.

Interested parties also note that the recent exposure by the Working Group that intends to expand the scope of what is considered a residual investment may require significant changes to the accounting laid out above. The accounting model for residuals issued in a securitization that we explain above is in line with the accounting for residuals that are more akin to a debt security. If the scope of a residual is expanded to include other types of residuals, this model may not fit those types of investments. Given this linkage, interested parties may have additional recommendations for the accounting discussed above as the residual investment definition is finalized.

Ref #2022-01: Conceptual Framework – Updates

The Working Group exposed additional revisions to *Issue Paper No. 16X—Updates to the Definition of a Liability* related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. The revisions to: 1) add an additional footnote to the definition of a liability in SSAP No. 5R which defers to more topic specific contradictory guidance 2) revise the relevant literature section of SSAP No. 5R to note the modification and 3) note the additional exposure action in the Issue Paper paragraph 18.

These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of an asset and a liability in SSAP No. 4 and SSAP No. 5R. For GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic specific liabilities guidance was incorporated to address variations from the definition of a liability. Examples of existing SAP variations from the definition of a liability include but are not limited to:

- a. *SSAP No. 7—Asset Valuation Reserves and Interest Maintenance Reserves – AVR* and *IMR* establish liabilities for regulatory objectives.
- b. *SSAP No. 62R—Property and Casualty Reinsurance* – contains the provision for reinsurance liability guidance which results in a liability that is a regulatory valuation allowance for overdue and slow paying reinsurance and also enforces *Credit for Reinsurance (Model No. 785)* collateral requirements.

- c. *SSAP No. 92—Post Retirement Benefits Other than Pensions*, provides liability recognition, which adopts several GAAP standards with modifications.

The additional exposed revisions to SSAP No. 16X and SSAP No. 5R are reflected in the Issue Paper and also shown below.

- **Exposed revisions – Topic Specific Footnote** - This language is proposed for incorporation as a footnote to the liability definition in SSAP No. 5R and its related and *Issue Paper No. 16X—Updates to the Definition of a Liability*.

New Footnote to paragraph 3 of SSAP No. 5R:

The guidance in this Statement regarding the definition of a liability is applicable unless another authoritative statement of statutory accounting principles provides more topic specific contradictory guidance. In such cases the topic specific guidance shall apply.

- Exposed revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* and *Issue Paper No. 16X—Updates to the Definition of a Liability* (New language shaded):

Relevant Literature

39. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements*. *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14. This statement incorporates the definition of a liability from *FASB Statement of Financial Accounting Concepts No. 8, Chapter 4, Elements of Financial Statements*, paragraphs E37 and E38 with modification reflected in this Statement regarding topic specific guidance.

Interested parties believe the proposed changes above are responsive to our previous comments and address the issue of having statutory accounting guidance in other authoritative sources, e.g., the *NAIC Annual Statement Instructions*.

Ref #2022-11: Collateral for Loans

The Working Group exposed revisions to *SSAP No. 21 – Revised—Other Admitted Assets* which clarify that the invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets. These revisions clarify that for specific investments, the comparison for admittance is between the net equity audited value of the pledged collateral to the collateral loan

balance. In addition, a consistency revision to *SSAP No. 20—Nonadmitted Assets*, paragraph 4.b. was exposed.

Interested parties support the proposed changes.

Ref #2022-12: Review of INT 03-02: *Modification to an Existing Intercompany Pooling Arrangement*

The Working Group re-exposed the intent to nullify INT 03-02, effective December 31, 2023. The nullification is proposed as INT 03-02 is inconsistent with SSAP No. 25 – *Affiliates and Other Related Parties*, guidance regarding economic and non-economic transactions between related parties. The guidance in INT 03-02 can result with, in essence, unrecognized gains (dividends) or losses through the use of statutory book valuation when using assets (bonds) to make payments to affiliates for modifications to existing intercompany reinsurance pooling agreements. Treatment of transfers of assets between affiliates should be consistent for all intercompany transactions and there is not a compelling need to be different when valuing assets for intercompany reinsurance transactions.

Interested parties note that there are several issues associated with nullifying INT 03-02 and transferring the assets that support the insurance liabilities at fair value versus book value as provided in the current guidance in the INT including the following:

- Inconsistent accounting among affiliates for a modification of the intercompany pooling agreement when some of the transfers generate a realized gain and others do not, depending on the assets transferred;
- The transfer of a bond in an intercompany pooling transaction that generates a realized gain would cause the intercompany pooling modification to be accounted for as retroactive reinsurance, which would violate the accounting guidance currently contained in SSAP No. 63;
- The use of retroactive reinsurance contradicts the basis of presentation in Schedule P for business subject to intercompany pooling agreements;
- Inconsistent presentation of underwriting assets and liabilities among participants in the pooling agreement; and
- Inconsistent accounting for intercompany transactions, as some gains would be deferred while other gains will be realized at the parent level, depending on the insurer's corporate ownership structure.

Depending on market interest rates at the time of a pooling modification, a gain or loss will result from the transfer of bonds at fair value. In times of declining interest rates, the fair value of bonds generally increase. During these times, if a bond with a fair value in excess of book value is transferred as part of a pooling modification and the transfer is accounted for at fair value, the transferor will recognize a gain. This gain will disqualify the transferor and transferee from accounting for the pooling modification as prospective reinsurance based on the accounting guidance in SSAP No. 62R paragraph 36d. However, the same pooling modification can have other participants qualify for prospective reinsurance due to no gain on transfer of the assets.

Prospective reinsurance versus retroactive reinsurance

The transferors, i.e., the ceding pool entities, that qualify for prospective reinsurance will record the premium and loss accounts as prospective reinsurance (i.e., the cedent's participation share of the total intercompany pool written and earned premium, reserves and losses are reported in the cedent's financial statements).

The transferors, i.e., the ceding pool entities, that do not qualify for prospective reinsurance will report written premiums, earned premiums, loss and loss adjustment reserves and losses and loss adjustment expenses without recognition of the retroactive reinsurance. Therefore, insurance accounts subject to pooling will not be reduced for cessions to the lead company of the pool or retrocessions by the lead company to the pool participants. Similarly, any transferees that do not qualify for prospective reinsurance, i.e., the assuming pool entities, will exclude the retroactive reinsurance from loss and loss expense reserves and all schedules and exhibits. SSAP No. 62R requires the following for retroactive reinsurance:

- The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;
- The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;
- The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;
- The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity.

As a result of the inconsistent accounting between pool entities that are required to account for the intercompany pooling as prospective reinsurance and the pool entities that are required to use retroactive reinsurance, the financial statements of the pool will be extremely confusing and lack useful financial information. The stand-alone financial statements of the legal entities of the pool will not be consistent and the combined audited financial statements of the pool will reflect insurance accounts that are accounted for and reported using different accounting methodologies for the same underlying transactions.

As a practical matter, it would be nearly impossible for an insurer to report intercompany pooling results and balances using both prospective and retroactive reinsurance. Premium, claim, and loss systems are not built to handle such inconsistent accounting for the same underlying transactions.

SSAP No. 62R versus SSAP No. 63

The application of retroactive reinsurance as a result of the nullification of INT 03-02 would also result in a conflict with the guidance in SSAP No. 63, *Underwriting Pools*. The highlighted wording in paragraphs 8 and 9 of SSAP No. 63 instructs the preparer to record the premiums and losses based on the legal entity's participation in the pool. The use of retroactive reinsurance would violate that guidance. Regarding the last sentence of paragraph 7, the use of retroactive reinsurance would also result in timing differences between entities in the pool as a result of certain entities deferring gains in surplus.

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity's obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

9. Underwriting results relating to intercompany pools shall be accounted for and reported as described in paragraph 8. While it is acceptable that intercompany pooling transactions be settled through intercompany arrangements and accounts, intercompany pooling transactions shall be reported on a gross basis in the appropriate reinsurance accounts consistent with other direct, assumed and ceded business.

Schedule P

Data reported in Schedule P is required to be reported net of intercompany pooling (i.e., only the reporting entity's share of the pool business is reported in Schedule P). This includes data related to premiums, losses and loss adjustment expenses, and claim counts.

Additionally, the *NAIC Annual Statement Instructions* for Schedule P require that when changes to pooling agreements impact prior accident years, historical data values in Schedule P must be

restated based on the new pooling percentages. This instruction effectively recognizes that Schedule F only provides useful information related to changes in intercompany pooling agreements if such changes are treated as prospective reinsurance.

Because intercompany pooling data would not be reflected in the Schedule P of the pool entities that are required to use retroactive reinsurance accounting, distorted data would result because only a portion of the intercompany pool's loss, premium, and claim count data would be reported on Schedule P (i.e., the only pooled data reported in Schedule P would be of the pool participants that qualify for using prospective reinsurance). Note that the use of retroactive reinsurance will apply until all of the claims subject to retroactive reinsurance are settled; therefore, the distortion of Schedule P for the pool entities will likely occur for decades depending on the underlying business. As a result, the Schedule P data for the intercompany pool used by actuaries, analysts, regulators, and the NAIC (including analysis used to update RBC factors) will not be useful or meaningful.

Other intercompany pooling issues

Because intercompany pooling agreements subject certain insurance assets (e.g., agents balances) to pooling, a mismatch would occur in the financial statements of pool participants that are required to use retroactive reinsurance accounting versus the participants that are not. For the ceding entities, insurance assets would reflect the reporting entity's share of the pool business, but premiums and losses will reflect the entity's business excluding the pooling. This would occur because insurance assets such as agents balances are not subject to retroactive reinsurance accounting.

Consistency of accounting

The NAIC has noted concerns that the "guidance in INT 03-02 can result with in essence, unrecognized gains (dividends) or losses through the using the statutory book valuation when using assets (bonds) to make payments to affiliates for modifications to existing intercompany reinsurance pooling agreements." The NAIC also notes that the "treatment of transfers of assets between affiliates should be consistent for all intercompany transactions and there is not a compelling need to be different when valuing assets for intercompany reinsurance transactions." Interested parties note the following:

- As our examples illustrate, the transfer of assets using fair value in an intercompany pooling modification can result in reported realized gains reflected in certain pool participants' financial statements, as well as the combined audited statutory financial statements of the intercompany pool even though the assets remain in the pool.
- The transfer of assets at fair value in an intercompany pooling modification can also result in inconsistent accounting for intercompany transactions, as some gains would be deferred while other gains will be realized at the parent level, depending on the ownership structure of the entities in the intercompany pool.

SSAP No. 63

SSAP No. 63 has limited accounting guidance related to intercompany pooling agreements and instead primarily provides a discussion of what an intercompany pooling agreement is and contains a reference to INT 03-02 in paragraph 5. We believe that a more effective approach to addressing the concerns over moving invested assets at book value in a modification of an intercompany agreement would be to incorporate portions of INT 03-02 into SSAP No. 63, require that insurers settle the movement of assets and liabilities on a net basis (i.e., the net of pool assets less pool liabilities) to minimize the movement of assets, require disclosure if assets with fair values that differ from cost or amortized cost are transferred as part of the modification, and include a cross reference in SSAP No. 25 to the updated guidance in SSAP No. 63 for transfers of assets associated with a modification of an intercompany pooling agreement. This approach would also provide guidance on such modification where none would exist in the absence of INT 03-02. Please see recommended changes to SSAP No. 63 in the attached.

Since the guidance regarding the transfers of assets associated with modifications of intercompany agreements would be located in SSAP No. 63, we recommend that SSAP No. 25 include a new paragraph 4 to direct the reader to the guidance in SSAP No. 63 as follows:

4. If a company transfers assets or liabilities to effectuate a modification to an existing intercompany pooling arrangement, the transaction, including the transfer of assets, shall be accounted for in accordance with the guidance in SSAP No. 63 – *Underwriting Pools*.

Ref #2023-01: Review Annual Statement Instructions for Accounting Guidance

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, with a request for regulator and industry viewpoints on situations in which guidance in the annual statement instructions should be captured within a SSAP.

Interested parties are aware of Annual Statement guidance on IMR /AVR and Schedule F penalties that should be considered for inclusion in SSAP's as well as the guidance related to intercompany pooling arrangements discussed above. If additional items come to our attention, we will inform the Working Group.

Ref #2023-02: SSAP No. 43R – CLO Financial Modeling

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 43R to incorporate changes to add CLOs to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.

Interested parties have no comments on this item.

Ref #2023-05: *ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848*

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed temporary (optional) expedient and exception interpretative guidance,

to revise the expiration date of the guidance in *INT 20-01: 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* to be December 31, 2024, as reflected in INT 20-01.

Interested parties support the extension of the expiration date of *INT 20-01* to December 31, 2024.

Ref #2023-06: Additional Updates on ASU 2021-10, Government Assistance

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 24 to specify rejection of *ASU 2021-10, Government Assistance* but that the statutory guidance does incorporate general disclosures regarding government assistance for all entity types.

Interested parties agree with the proposed revisions to SSAP No. 24, as exposed in Ref 2023-06, subject to the following comments.

Interested parties noted that the Working Group's discussion of Ref #2023-06 in the Spring 2023 Working Group meeting agenda, indicated that use of a grant or contribution model was not intended to be permitted when accounting for government assistance under statutory accounting principles. The discussion did not indicate what accounting model should be applied. Interested parties are not aware of specific statutory guidance addressing the accounting for government assistance transactions, and believe, in the absence of specific guidance, companies may look to industry practice and other nonauthoritative GAAP guidance, which supports the use of a grant or contribution model, to determine appropriate statutory accounting treatment. Additionally, interested parties believe the disclosure requirements in SSAP No. 24 provide sufficient detail to allow a user of the financial statements to adequately understand the impact of any government assistance received by an insurer on its results regardless of the accounting model used to recognize and measure the assistance. Given these considerations and the relative infrequent occurrence of such items, interested parties suggest that the Working Group clarify that the intent of the exposed revisions in Ref #2023-06 are to require disclosure of unusual or infrequent government assistance transactions regardless of how such transactions are accounted for, and are not intended to prohibit entities from accounting for government assistance transactions through the use of a grant or contribution model.

Ref #2023-07: ASU 2019-08, Codification Improvements to Topic 718 and Topic 606

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 95, SSAP No. 104R, and SSAP No. 47 to adopt, with modification, *ASU 2019-08 Compensation—Stock Compensation (Topic 718)* and

Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer, as illustrated in the exposure draft.

Interested parties have no comments on this item.

Ref #2023-08: ASU 2019-07, Codification Updates to SEC Sections

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to Appendix D to reject *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates* as not applicable to statutory accounting.

Statement of Statutory Accounting Principles No. 63

Underwriting Pools

STATUS

Type of Issue	Common Area
Issued	Initial Draft
Effective Date	January 1, 2001
Affects	No other pronouncements
Affected by	No other pronouncements
Interpreted by	INT 03-02
Relevant Appendix A Guidance	None

STATUS	1
SCOPE OF STATEMENT	1
SUMMARY CONCLUSION	1
Disclosures	3
Effective Date and Transition.....	4
REFERENCES	4
Relevant Issue Papers	4

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for underwriting pools and associations.

SUMMARY CONCLUSION

2. Underwriting pools and associations can be categorized as follows: (a) involuntary, (b) voluntary, and (c) intercompany.
3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

SSAP No. 63

Statement of Statutory Accounting Principles

4. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

5. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.^(INT 03-02)

6. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity's obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

7.8. Insurance groups that utilize intercompany pooling arrangements often modify these arrangements from time to time for various business reasons. These business reasons commonly include mergers, acquisitions, dispositions, or a restructuring of the group's legal entity structure. In order to effectuate a relatively simple modification, such as changing pooling participation percentages without changing the pool participants, companies often simply amend the existing pooling agreement. Alternatively, in order to effectuate a more complex modification, such as changing (by adding or removing) the number of pool participants, a company may commute the existing pooling agreement and execute a new pooling agreement(s). In conjunction with executing the appropriate intercompany pooling agreements, a transfer of assets and liabilities amongst the impacted affiliates may also be required in order implement the new pooling agreement(s). The following subparagraphs provide guidance specific to modifications of intercompany pooling arrangements and shall not be applied to an analogous transaction or event.

- a) The appropriate valuation basis to be used for assets and liabilities that are transferred among affiliates in conjunction with the execution of a new intercompany pooling agreement(s) that serves to substantively modify an existing intercompany pooling arrangement is statutory book value for assets and statutory value for liabilities.
- b) The net amount of the assets and liabilities being moved among entities as a result of a modification to an intercompany pooling shall be used to settle the intercompany payable/receivable (i.e., the assets that are transferred in conjunction with the modification) to minimize the amount of assets transferred in the modification.

Underwriting Pools**SSAP No. 63**

~~8.9.~~ Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

~~9.10.~~ Underwriting results relating to intercompany pools shall be accounted for and reported as described in paragraph 8. While it is acceptable that intercompany pooling transactions be settled through intercompany arrangements and accounts, intercompany pooling transactions shall be reported on a gross basis in the appropriate reinsurance accounts consistent with other direct, assumed and ceded business.

~~10.11.~~ Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool's underwriting results. Receivables and payables related to underwriting results shall be accounted for in accordance with the guidance in paragraphs 6-8. If it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in SSAP No. 5R shall be followed.

Disclosures

~~11.12.~~ If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

- a. A description of the basic terms of the arrangement and the related accounting;
- b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;
- c. Description of the lines and types of business subject to the pooling agreement;
- d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;
- e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;
- f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;
- g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Aging of Ceded Reinsurance (Schedule F, Part 3) and the write-off of uncollectible reinsurance;

SSAP No. 63**Statement of Statutory Accounting Principles**

- h. Amounts due to/from the lead entity and all affiliated entities participating in the intercompany pool as of the balance sheet date.
- i. For modifications to an existing intercompany pooling arrangement that involve the transfer of assets with fair values that differ from cost or amortized cost, the statement value and fair value of assets received or transferred by the reporting entity.

~~12.~~13. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

~~13.~~14. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Bruggeman:

Re: Exposure Reference No. 2022-11 – Collateral for Loans

Security Benefit Life Insurance Company would like to thank the Statutory Accounting Principles Working Group (“SAPWG”) for the opportunity to provide comments for consideration on Reference No. 2022-11—Collateral for Loans (the “Exposure”)¹, which proposes revisions to Statements of Statutory Accounting principles (“SSAP”) No. 21R, *Other Admitted Assets* (“SSAP No. 21R”) as follows:

1. A joint venture, partnership, or limited liability company (“JV/LP/LLC”) or a subsidiary controlled or affiliated entity (“SCA”) that is pledged as collateral to support an outstanding collateral loan balance must each be audited annually to qualify as an admitted investment.
2. The audited net equity of a pledged JV/LP/LLC and/or SCA is the basis of measurement for comparison to an outstanding collateral loan balance. Any portion of the outstanding balance of a collateral loan that is greater than the audited net equity of a pledged JV/LP/LLC and/or SCA must be non-admitted.

Firstly, consistent with the separate and broader Interested Party comment letter dated February 10, 2023, we do not believe an audit is necessary. In addition, we believe considering book value as a measure of the adequacy of collateralization, or ability for a borrower to repay a collateral loan is not supportable. Book value of equity is not acknowledged to reflect the value of what an asset would be bought or sold for (*i.e.*, the ultimate source of repayment for the collateral loan). The concept of fair value (*vs.* book value) exists precisely to represent the price that would be received for the sale of an asset in an orderly transaction between market participants at the measurement date. This variance between book value and fair value is observed in markets every day, where trading and transaction prices vary significantly from the proportionate book value of equity (hence the concept of “price-to-book multiples”). Book value can be lower than or higher than fair value. Notably, for example, insurers often trade on public markets for less than one times price-to-book value ratio (*i.e.*, book value is greater than fair value).

Using the book value of equity in lieu of fair value when assessing collateralization for the admissibility of collateral loans will all but guarantee the carrying value of the collateral will differ from what it could ultimately be sold for to repay the collateral loan. This will create volatility for insurance companies and may lead borrowers to begin to manage to a metric in the short term that does not ultimately provide the highest proceeds to repay the collateral loan.

Please consider the following example: a borrower borrows \$100 on a collateral loan to make a \$100 equity investment in an equipment leasing business. The \$100 investment equates to 20% of the company upon investment, which implies that the total business is worth \$500. The total book value of the business is \$250 (equipment leasing businesses, for example, typically trade around 2x price/ book value). This means that, immediately upon making the \$100 investment, the borrower’s stake would be considered to have a collateral value of only \$50 (*i.e.*, 20% of the \$250 book value), resulting in an immediate loss of \$50 of collateral value. Further, this differs from the statutory accounting that would apply if the insurer had made the investment directly on its balance sheet (equity-method accounting). In accordance with SSAP No. 48, the insurer would record the initial investment in an investee at cost plus subsequent capital contributions to the investee. The carrying amount of the investment would then subsequently be adjusted for the amortization difference (difference between the cost and underlying GAAP equity) over a period of time as well as for the insurer’s pro-rata share of GAAP-basis earnings or losses and distributions of the investee. Therefore, under SSAP No. 48, the investment is worth its investment at cost (*i.e.*, \$100) on day one and subsequently amortized to the GAAP equity value of the investee over the period that the investing entity benefits economically rather than at a point in time as would occur under the proposed revisions in SSAP No. 21R.

We request consideration for the likely adverse effects to decision-making this exposed revision may cause, in addition to the operational disruptiveness of immediate adoption, as discussed further in this document.

Secondly, we believe the Exposure proposes substantive changes, not clarifications, and as a result, the process for a substantive change is not being followed. The Exposure will impose undue costs and efforts if adopted, as it substantively causes a change

¹ Dated March 22, 2023.

to the application of SSAP No. 48, *Joint Ventures, Partnerships and Limited Liability Companies* (“SSAP No. 48”) and SSAP No. 97, *Investments in Subsidiary, Controlled and Affiliated Entities* (“SSAP No. 97”). The Accounting Practices and Procedures Manual provides that “[n]onsubstantive revisions are characterized as language clarifications which do not modify the original intent of a SSAP . . .” Utilization of fair value equity of pledged JV/LP/LLC and/or SCA investments has long been utilized as required by SSAP No. 21R and subject to both independent audits and state insurance department examinations, without this practice being raised as an issue nor requiring adjustments to financial statements. Accordingly, the Exposure modifies the original intent of SSAP Nos. 21R, 48 and 97.²

The accelerated approach here is not supported by the analytical rigor that the SAPWG typically applies and denies affected parties the due process otherwise required when substantive changes are made. Should the Exposure be adopted with the proposed revisions to SSAP No. 21R to require audited net equity of pledged JV/LP/LLC and/or SCA investments, it would similarly be a material modification to an acceptable and supportable industry practice. It would also require insurers to disclose a change in accounting policy, which is further evidence that this is a substantive change. Furthermore, we would have to incur considerable cost and effort along with our borrowers (assuming that borrowers are willing to cooperate and, given that loan documentation was drafted prior to the changes being proposed here, there can be no assurance of such cooperation) to accurately determine the collateral value by applying the guidance prescribed in SSAP No. 48 with no assurance that we would be successful given the ability of borrowers to obtain the required information from their investees. Without the additional time typically afforded for a substantive modification, we find ourselves unable to consider effective alternative solutions in a timely manner and unable perform a full risk assessment of adoption impacts for both intended and potentially unintended consequences.

As a standard setting body (not a regulatory body), the NAIC has an obligation to adhere to proper processes and to base decisions on empirical data rather than hypotheses. Providing more process, rather than less, is critically important because decisions that the NAIC make can adversely affect competition in the industry; failing to do so can result in its decisions impermissibly choosing winners and losers in the marketplace. The Company believes that there have been other occasions where a proposed revision has been classified as “non-substantive” or a “SAP clarification,” despite the fact that the revisions have modified the intent of applicable SSAPs and thereby caused material changes in acceptable accounting practices.³

* * * * *

We appreciate your attention to the issues raised in this letter and would be pleased to discuss our questions and comments with the SAPWG or its staff at your convenience.

Kind Regards,

Tai D. Giang
Director, Accounting Policy
Security Benefit Life Insurance Company

² The same can be said of the Exposure’s requirement to perform audits of JV/LP/LLC and/or SCAs pledged in support of collateral loans. For years insurers have secured collateral loans with these types of interests and have been subject to both independent audit and state insurance department examinations without this practice being raised as an issue nor requiring adjustments to financial statements. We therefore believe requiring audits is a substantive change to SSAP No. 21R.

³ See, e.g., Exposure Ref No. 2019-24—Levelized and Persistency Commissions and Exposure Ref Nos. 2021-21—Related Party Reporting and 2022-15—Affiliate Reporting Clarification.

August 7, 2023

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Bruggeman:

Re: Exposure Reference No. 2022-11 – Collateral for Loans

Security Benefit Life Insurance Company (“Security Benefit”, “our”, “we”) extends its appreciation to the Statutory Accounting Principles Working Group (“SAPWG”) for the opportunity to submit a new comment letter on Exposure Reference No. 2022-11—*Collateral for Loans* (the “Exposure”). After further consideration of the Exposure, we agree that clarification of the guidance in SSAP No. 21R is necessary, and we support the clarification that collateral pledged to secure a collateral loan must qualify as an admitted asset for the collateral loan itself to qualify as an admitted asset. Therefore, we also support the specific clarification that when the collateral pledged to secure a collateral loan would be in the scope of SSAP No. 48 or SSAP No. 97 if held directly by the reporting entity, audited financial statements are required for the collateral (and thus the collateral loan) to qualify as an admitted asset. However, we respectfully request that the SAPWG reconsider the proposed guidance that, if adopted, would require reporting entities to use the proportionate audited equity valuation (“book value”) when testing the sufficiency of the collateral (“collateral test”) for collateral loans secured by collateral that would be in the scope of SSAP No. 48 or SSAP No. 97 if held directly by the reporting entity. More specifically, we ask the SAPWG to revise the Exposure to allow reporting entities to make an accounting policy election, applied consistently and across all applicable collateral loans, to use either fair value or book value when performing the collateral test. Below is Security Benefit’s proposed revision to the Exposure (underlined, italicized and in green font, the underlined red text is the SAPWG’s currently exposed changes).

- b. Nonadmitted Asset – In Accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments which would otherwise be admitted shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset. For qualifying investments which are pledged as collateral that would be in the scope of SSAP No. 48 or SSAP No. 97 if held directly by the reporting entity, such as joint ventures, partnerships and limited liability companies and investments that would qualify as SCAs if held directly, reporting entities shall elect to use either fair value or the proportionate audited equity valuation of the pledged investment for the comparison for the adequacy of pledged collateral. This election shall be considered an accounting policy election subject to the guidance in SSAP No. 3—Accounting Changes and Corrections of Errors and is required to be applied consistently to all such pledged investments. If the collateral loan exceeds the elected valuation basis of these pledged investments, then the excess shall be nonadmitted.

Security Benefit understands that SAPWG’s proposed change to the valuation basis used for the collateral test may have emanated from industry concerns over the need to obtain both audited financial statements and fair value measurements of these pledged investments. We believe our proposed revisions to the Exposure would simultaneously address those industry concerns and prevent unintended consequences, namely that reporting entities that have historically relied on the use of fair value as the basis for the collateral test may suddenly be required to nonadmit portions of their collateral loans. Furthermore, we believe that fair value continues to be the most appropriate measure of the sufficiency of collateral as fair value is the most representative measure of the value of assets that would be available to support policyholder liabilities in the event a reporting entity forecloses on the pledged collateral. Finally, allowing reporting entities to elect to continue to use fair value for the collateral test will retain a level of consistency with collateral loans secured by other forms of qualifying investments, and also, across other types of instruments where the sufficiency of collateral is based on fair value (i.e., repurchase agreements, securities lending agreements, derivatives, etc.).

Security Benefit also understands that state regulators may have concerns about the uncertainty inherent in fair value measurements, particularly Level 2 and Level 3 measurements, due to the use of unobservable inputs and/or assumptions, and these concerns may have also contributed to the desire to use the book value of these pledged investments for the collateral test. While we agree that Level 2 and Level 3 fair value measurements may have a greater level of uncertainty, Security Benefit obtains independent valuations, and independent reviews of our internal valuations, from reputable third-party valuation experts for these pledged investments, and in all cases, these valuations are subject to independent audit. It is our understanding that this is common industry practice, which we believe should sufficiently alleviate the regulatory concern. Additionally, we would like to note that the use of book value may not, and in many cases will not, reduce the reliance on Level 2 and Level 3 measurements when reporting entities perform the collateral test. Specifically, we expect that most of these pledged investments are considered

investment companies that recognize and measure all assets at fair value on their financial statements where many, and in some cases all, of those assets are valued using Level 2 and Level 3 fair value measurements.

In summary, Security Benefit supports the proposed clarifications to SSAP No. 21R; however, we believe the proposed change to the valuation basis for the collateral test represents a substantive change that could materially and adversely impact reporting entities that have historically underwritten collateral loans based on the fair value of the pledged collateral. We believe fair value remains the best and most appropriate measure of the sufficiency of collateral pledged to secure collateral loans. As a result, we respectfully request that the SAPWG revise the Exposure to allow reporting entities to continue to use fair value based on an accounting policy election.

RE: Interested Parties Comments on Exposures with Public Comment Period ending June 30

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the items exposed for comment by the Statutory Accounting Working Group (the Working Group) on May 16th with the public comment period ending June 30th.

Ref #2022-14: New Market Tax Credits

Interested Parties appreciate the opportunity to comment on the substantive revisions exposed by the Working Group to SSAP No. 93 - *Low Income Housing Tax Credit Property Investments* and SSAP No. 94 *Transferable and Non-Transferable State Tax Credits*. As stated in our prior comment letter on this topic, interested parties agree with having uniformity in accounting and reporting for equity and debt investments for which the return is earned primarily through tax credits. Interested parties also agree that the proportional amortization method is an appropriate method to use for any type of investment (debt or equity) where the return is primarily earned through tax credits. We have a few comments on the exposure to make sure the guidance is clear and insurers know how to apply it.

SSAP No. 93

- 1) Paragraph 2 and 3– Paragraph 2 includes the criteria for investments in tax credit structures to apply the proportional amortization method. If an investment does not meet the criteria, then paragraph 3 states that the investment should follow the applicable statutory accounting statement. For equity investments, that means that SSAP No. 48 should be followed, which would require the use of equity method of accounting. For bonds in tax credit structures that

do not meet the definition, interested parties believe that the bond needs to be analyzed under the new proposed principles-based bond definition to determine if bond reporting or other-invested asset reporting is required. Interested parties recommend clarifying this in the standard if that is the case.

- 2) Paragraph 14 (a) –This paragraph states that tax credits under the SSAP No. 93 accounting guidance are to be recorded and assessed for admittance in accordance with SSAP No. 94. Interested parties found this confusing and subject to many different interpretations. There is a key difference between SSAP No. 93 and SSAP No. 94 tax credits in that SSAP No. 93 tax credits are only earned as part of the return on the investment so the only asset recorded on the insurer’s books is related to the investment itself. The tax credits are only recorded upon becoming available for use on a reporting entity’s tax return. Therefore, there is no tax credit to non-admit per se. In the rare case that the tax credit cannot be utilized in the year that it is allowed to be utilized due to the insurer not having enough income from operations in the case of federal tax credits or premium income in the case of state programs, the insurer would record a Deferred Tax Asset (DTA). Any DTA set up would be subject to the admissibility requirements under SSAP No. 101 - *Income Taxes*. For these reasons, interested parties recommend that paragraph 14 (a) be removed.
- 3) Paragraph 18 (a) and (b) and (c) - These paragraphs are intended to address admissibility considerations. Paragraph (c) states that if the tax credits cannot be utilized in the next three years, they will be non-admitted, while paragraphs (a) and (b) are intended to address instances when the credits cannot be utilized by the insurer, but the insurer has the ability to sell them to third parties or get a refund for the credits. We understand from discussions with the Working Group that the intent of this guidance is for an insurer to first start with the assessment in (c) to determine if it will be able to utilize the tax credits in the next three years. If not, then the insurer can consider whether the tax credits can be sold or whether the insurer can be reimbursed for the credits if unable to utilize them. Under the former, the insurer can admit the credits up to their fair value as the insurer would recover the fair value in a sale. Under the latter, the insurer can admit up to the amount of the expected refund.

Similar to our comments under #1 above, it is not clear to us what exactly we are non-admitting. As explained above, the only item that gets recorded on the balance sheet as an actual asset is the investment itself. The cost of the investment is amortized in proportion to the tax credits earned every year regardless of whether the credits are utilized or not. Admissibility requirements are already addressed for the investment itself in the proposal (i.e., the tax opinion and audited financial statements). As the tax credits are allocated to the insurer, they either reduce federal income taxes, or state/premium taxes. If the tax credits cannot be utilized in a given year, a DTA would be established. Any admissibility rules on the DTA itself are already addressed in SSAP No. 101 - *Income Taxes*.

If the DTA admissibility is what is being addressed in paragraph 18, interested parties recommend that be clarified. We understand that this may have been one of the reasons why the SSAP No. 93 proposal references SSAP No. 94. As stated above, to avoid any confusion regarding the accounting for the tax credits earned in a SSAP No. 93 investment, we suggest including all guidance in SSAP 93 (i.e., no reference to SSAP 94) regarding the credits

earned in a SSAP No. 93 investment. Interested parties also have the following suggested edits to make the admissibility rules on the tax credits themselves clear.

~~Paragraph 18 – If tax credits allocated to the reporting entity cannot be utilized in the year they have been allocated to the entity, a deferred tax asset (DTA) would be established. Under those circumstances, the reporting entity would follow the requirements under SSAP No. 101 *Income Taxes* regarding admissibility rules on DTAs. A reporting entity is required to assess the realization of tax credits against tax liability for both the tax year in which the credit can be initially utilized as well as in accordance with carry-forward and/or carryback periods to determine the extent the investments can be admitted:~~

- ~~a. Tax credit investments which allocate tax credits which are transferable in accordance with permitted IRS or state tax provisions are admitted up to the lesser of the proportional amortized cost, or fair value of the tax credits.~~
- ~~b. Tax credit investments which allocate tax credits eligible for direct payment are admitted up to the lesser of the proportional amortized cost, or the estimated proceeds.~~
- ~~e. For all other tax credits, if a reporting entity does not expect to fully utilize investment tax credits in the upcoming tax year or for a carryback year, the reporting entity shall perform an assessment to determine the extent it will be able to utilize the tax credits over the life of the investment. If assessment projections identify that the tax credits from investments in tax credit programs will exceed what can be utilized under IRS or state tax provisions (current and other applicable tax periods), the reporting entity shall nonadmit investments as necessary so that investments in scope of this statement (in aggregate) are only admitted to the extent tax credits are expected to be utilized. Additionally]. In making this assessment, the reporting entity is not permitted to assume increased operations (e.g., expanded product sales) beyond actual experience to conclude that additional federal or state tax liability will exist that would allow additional utilization of tax credits. A reporting entity can subsequently admit a previously nonadmitted tax credit investment, based on subsequent assessments in which the reporting entity determines that they will be able to utilize the tax credits.~~

- 4) Paragraph 34 - The SSAP No. 93 exposure states that reporting entities shall prospectively modify the recognition, accounting and reporting of tax credit investment structures to follow the guidance under SSAP No. 3. We believe this means that on day of adoption, the SSAP No. 93 investment's book value is the starting value of the investment and the prospective method will be applied using that book value and amortizing the book value at the date of adoption based on the future tax credits to be earned. If that is the case, some clarification on the application of the prospective method would be helpful. Those companies that are US GAAP reporters are to apply the FASB ASU on a retrospective basis and thus there will continue to be differences between US GAAP and Statutory proportional method results for already existing tax credit investments. We believe further clarification of how the prospective method is to be applied for Statutory reporting should be clarified to avoid inconsistent interpretation of the intent.

SSAP No. 94

- 1) Paragraph 1 – This paragraph explains the scope of the types of tax credits that fall within the SSAP No. 94 guidance. Interested parties believe that the key difference between SSAP No. 93 and SSAP No. 94 is that SSAP No. 93 relates to tax credits that are earned as a result of being an investor (i.e., an equity investor) in the entity earning the credits and SSAP No. 94 relates to tax credit certificates that are purchased outright without being an investor in the entity. To make sure that is clear, interested parties propose the following changes to paragraph 1

Paragraph 1 – This statement establishes statutory accounting principles for state and federal tax credits certificates that are purchased by the reporting entity without being an investor in the entity from which the tax credit certificates were purchased. ~~that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts)~~

- 2) Paragraph 2 - The last sentence in this paragraph states that the tax credits received from SSAP No. 93 tax credit investments are within the scope of SSAP No. 94. For the reasons stated above in the SSAP No. 93 section of this comment letter, we do not think that SSAP No. 94 and SSAP No. 93 should be linked. As stated above, there are two very different assets that are recorded upon purchasing an investment under SSAP No. 93 versus SSAP No. 94. The only similarity in accounting for the tax credits relates to instances when the credits earned under a SSAP No. 93 investment cannot be utilized in the current year. Under that scenario, a DTA would be recorded, which would be subject to the admissibility rules under SSAP No. 101. For that reason, interested parties recommend removing the last sentence in paragraph 2 as suggested below.

Paragraph 2 - Investments in tax credits as discussed in SSAP No. 93R - *Investments in Tax Credit Structures*, which involve investments in projects or programs that generate general business federal tax credits or state tax credits, are not within the scope of this statement. ~~However, the tax credits received from tax credit investments are within the scope of this statement.~~

- 3) Paragraph 9 - This paragraph states that federal and state tax credits that can be utilized in the year allocated or purchased shall be reported in the income statement as an offset to federal taxes in accordance with SSAP No. 101 or state premium tax, respectively. Interested parties note that most tax certificates reduce a reporting entity's tax liability and do not directly impact the income statement at the time they are used. In addition, interested parties believe that upon purchase, the tax credits should be reported as an other-than-invested asset since the asset represents a right to receive future benefits. As the tax credits become available for use, a reduction to the insurer's income tax payable or premium/state taxes payable should take place. Based on that, we propose the following changes:

Paragraph 9 – Tax credits shall be recognized in the period that they are purchased or allocated to the reporting entity for tax purposes:

- a. ~~Federal and state tax credits are recorded as other-than-invested assets upon purchase. As the tax credits are redeemed, the carrying value of the tax credits is reduced dollar for dollar by the amount of tax credits applied toward the reporting entity's federal or state/premium tax liability, as applicable. that can be utilized in the year allocated or purchased shall be reported in the income statement as an offset to federal taxes in accordance with SSAP No. 101 *Income Taxes*. Federal tax credits that cannot be utilized in the year allocated or purchased and are carried forward to a future tax year shall be reported net of deferred tax asset (DTA) in accordance with SSAP No. 101.~~
- b. ~~Federal and State tax credits that can be utilized in the year allocated or purchased shall be reported in the income statement as an offset to state premium tax or state income tax, whichever is applicable, in the tax reporting year in which the credit is utilized. State tax credits that cannot be utilized in the year they are available for use allocated or purchased and are carried forward to a future tax year shall be reported as a deferred tax asset (DTA). gross of any related state tax liabilities and reported in the category of other than invested assets (not reported net).~~

We have updated the illustration that was included in Exhibit B below to reflect this as well.

- 7) Paragraph 7 - The accounting for purchased tax credits under the SSAP No. 94 exposure is different from the current guidance in that the credits will be recorded at face value instead of at cost. Interested parties do not have an issue with this accounting treatment per se, but we would like to point out that this is not consistent with the accounting treatment for other types of assets that are purchased at a premium or discount such as bonds and mortgage loans.
- 8) Exhibit B – Accounting for Non-Transferable Tax Credits

Interested parties recommend some edits to the illustration under Exhibit B to reflect the changes described in item 2) above. In addition, the edits below include other edits that we believe are necessary to show the appropriate flow of transactions and to add clarity to the accounting for federal tax credit certificates. These are our suggestions:

On 7/1/X1 LJW Insurance Company purchased non-transferable federal tax credits for a cost of \$100,000. The federal tax credits are redeemable for \$110,000 and expire on, April 1, 20x2. LJW expects to utilize the tax credits before expiration in the amount of \$110,000. The credits are earned pro-rata every quarter from acquisition date to expiration date. Therefore, the credits earned quarterly are about \$36,666. The illustration below assumes that LJW Insurance Company's quarterly income tax liability equals the amount of credits that were purchased.

7/1/x1	Federal tax credits	110,000	
	Deferred gains on acquired tax credits		10,000
	Cash		100,000
	<i>To record the purchase of the tax credits</i>		

9/30/x1	Income Premium tax expense Income Premium taxes payable to <i>To record quarterly income tax liability.</i>	36,666 36,666	36,666
10/1/x1	Income taxes payable Federal tax credits <i>To record the use of tax credits in the quarter</i>	36,666 36,666	36,666
12/31/x1	Income tax expense Income taxes payable <i>To record quarterly income tax liability</i>	36,666 36,666	36,666
1/1/x2	Income taxes payable Federal tax credits <i>To record the use of tax credits in the quarter</i>	36,666 36,666	36,666
3/31/x2	Income tax expense Income taxes payable <i>To record quarterly income tax liability</i>	36,666 36,666	36,666
4/1/x2	Income taxes payable Deferred gains on acquired tax credits Other Income Federal tax credits <i>To record the use of income tax credits in excess of cost and recognize a gain on premium tax credits in other income.</i>	36,666 10,000 36,666	10,000 36,666

4/1/x2

Ref #2019-21e - Principles-Based Bond Definition: Schedule BA

Interested parties have the following observations and suggestions to the proposed changes to the categories within Schedule BA (*Other Invested Assets*):

- Ensure that all reporting categories reflect the related SSAP within the instructions.
- Recommend exposing changes to the columns.

- For investments tagged as ‘Debt Securities That Do Not Quality as Bonds’ that are transferred from Schedule D, interested parties recommend that the investment will retain its’ NAIC Designation and its’ FE/ PLR status at the time of transfer.
- We believe the instructions for Tax Credit Investments (e.g., Guaranteed Low Income Housing Tax Credit Investments) are stale as the sentence ‘*There must be an all-inclusive guarantee from a CRP-rated entity that guarantees the yield on the investment*’ is no longer valid.
- The various types of Tax Credit Investments (e.g., Low Income Housing; New Market; Renewable Energy) have different risks and should be evaluated accordingly and be reported according to their risks. Recommend a referral to the RBC Investment Risk & Evaluation Working Group to evaluate the various risk categories such that changes could be implemented for Annual 2025 reporting.
- Based on Ref #2022-14 (*Tax Credits*), interested parties will provide additional comments when this item is adopted by the Statutory Accounting Principles Working Group (SAPWG).
- Based on Ref #2023-12 (*SSAP No. 48 - Residuals*), interested parties will provide comments when this item is adopted by SAPWG.
- Please refer to the attached markup version of the exposure as there are several editorial revisions that we are suggesting that clarify the descriptions within the categories and language within the instructions.

Interested parties have attached a markup version of the exposure with our detailed suggested changes.

Ref #2023-13: PIK Interest Disclosure Clarification

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34 and the Annual Statement Instructions to clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure. These SSAP No. 34 revisions, when adopted, will also result in editorial changes to the annual statement instructions.

Interested parties have no comment on this item.

Ref #2023-12: Residuals in SSAP No. 48 Investments

The Working Group moved this agenda item to the active listing, categorized as an SAP clarification, and exposed revisions to SSAP No. 48 which clarify that investments structures captured in scope of SSAP No. 48 that represent residual interests or that predominantly hold residual interests, shall be reported on the dedicated residual reporting line on Schedule BA. Corresponding edits to ensure consistent language in SSAP No. 43R and revisions to the Schedule BA Annual Statement Instructions were also exposed.

Interested parties have received comments from NAIC staff that we are currently reviewing and will submit a separate comment letter at a later date.

**Bond Definition
Proposed Reporting Lines – Schedule BA
2023 Spring NM Exposure**

This document proposes annual statement reporting line and descriptions for suggested reporting lines for investments reported as other invested assets on Schedule BA. The main focus is to categorize debt securities that do not qualify as bonds under SSAP No. 26—Bonds or SSAP No. 43R—Asset-Backed Securities and are captured in scope of SSAP No. 21R—Other *Invested Admitted Assets*. As detailed within, other revisions have also been proposed to update the schedule.

Comments are requested on all aspects of this document – including whether reporting lines should be added or deleted as well as the suggested instructions to clarify what should be captured in each location.

SCHEDULE BA – PARTS 1, 2 AND 3

OTHER LONG-TERM INVESTED ASSETS – GENERAL INSTRUCTIONS

Include only those classes of invested assets not clearly or normally includable in any other invested asset schedule, or that have been specifically identified for reporting on Schedule BA: Other Invested Assets. ~~Such assets should include any assets previously written off for book purposes, but which still have a market or investment value. Give a detailed description of each investment and the underlying security. If an asset is to be recorded in Schedule BA that is normally reported in one of the other invested asset schedules, make full disclosure in the Name or Description column of the reason for recording such an asset in Schedule BA.~~

For accounting guidance related to foreign currency transactions and translations, refer to SSAP No. 23—Foreign Currency Transactions and Translations.

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

<u>Group or Category</u>	<u>Line Number</u>

The following listing is intended to give examples of investments to be included in each category; however, the list should not be considered all-inclusive, ~~and it should not be implied that any invested asset currently being reported in Schedules A, B or D is to be reclassified to Schedule BA:~~

Oil and Gas Production

~~Include: Offshore oil and gas leases.~~

Transportation Equipment

~~Include: Aircraft owned under leveraged lease agreements.
Motor Vehicle Trust Certificates.~~

Mineral Rights

~~Include: Investments in extractive materials.

Timber Deeds.~~

Debt Securities That Do Not Qualify as Bonds

Include: Debt securities captured in SSAP No. 21R—Other Admitted Assets. This is specific to securities, as that term is defined in SSAP No. 26—Bonds, whereby there is a fixed schedule for one or more future payments (referred to as debt securities), but for which the security does not qualify for bond reporting under SSAP No. 26R as an issuer credit obligation or an asset-backed security.

Investments that have been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the Purposes and Procedures Manual of the NAIC Investment Analysis Office shall be reported on Lines ~~0799999~~TBD and ~~0899999~~TBD.

Investments that have not been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the Purposes and Procedures Manual of the NAIC Investment Analysis Office for this category. Designations received from an SEC NRSRO are permitted to be reported but are not required. Report these investments on Lines ~~0999999~~ TBD, ~~1099999~~ TBD, ~~1199999~~ TBD, ~~1299999~~ TBD, ~~1399999~~ TBD and ~~1499999~~ TBD.

Exclude: Any investment that does not qualify as a security. This term is defined in SSAP No. 26R – Bonds.

Any investment that is not captured as a debt security that does not qualify as a bond pursuant to SSAP No. 21R—Other Admitted Assets.

Non-Registered Private Funds with Underlying Assets Having Characteristics of a Bond, Mortgage Loan or Other Fixed Income Instrument

Include: ~~Fixed income instruments that are not corporate or governmental unit obligations (Schedule D) or secured by real property (Schedule B).~~

~~Any investments deemed by the reporting entity to possess the underlying characteristics of a bond or other fixed income instrument that has been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for this category. Report these investments on ~~Lines 0799999 and 0899999.~~~~

~~Any investments deemed by the reporting entity to possess the underlying characteristics of a bond or other fixed income investment that has not been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for this category. Report these investments on ~~Lines 0999999, 1099999, 1199999, 1299999, 1399999 and 1499999.~~~~

Equity interests in Joint Ventures (Including Non-Registered Private Funds), Partnerships or Limited Liability Company Companies or Non-Registered Private Funds ~~Interests with Underlying Assets Having the Characteristics:~~**Fixed Income Instruments**

Include: ~~Equity interests in Joint joint ventures (including non-registered private funds), partnerships, or limited liability companies or non-registered private funds investments that are engaged in bond or preferred stock fixed income strategies. Leveraged Buy-out Fund.~~

~~A fund investing in the “Z” strip of Collateralized Mortgage Obligations.~~

~~Investments on the NAIC List of Schedule BA Non-Registered Private Funds with Underlying Assets Having Characteristics of Bonds or Preferred Stock Any investments deemed by the reporting entity to possess the underlying characteristics of fixed income instruments that has been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for this category. Report these investments on Lines ~~TBD 1599999 and TBD 1699999.~~~~

~~Any investments deemed by the reporting entity to possess the underlying characteristics of fixed income instruments Investments that have not been assigned an NAIC designation by the Securities Valuation Office (SVO) pursuant to the policies in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for this category. Designations received from an SEC NRSRO are permitted to be reported but are not required. Report these investments on Lines ~~1799999-TBD and TBD 1899999.~~~~

Common Stocks

Include: Venture Capital Funds ~~or other underlying equity investments.~~

Real Estate

Include: Real estate development interest. Reporting should be consistent with the detailed property analysis appropriate for the corresponding risk-based capital factor for this investment category. If the requisite details are not available for reporting, report under “Other” subcategory.

Mortgage Loans

Include: Mortgage obligations. Reporting should be consistent with the detailed property analysis appropriate for the corresponding risk-based capital factor for this

investment category. If the requisite details are not available for reporting, report under “Other” subcategory.

Other

Include: Limited partnership interests in oil and gas production.

Forest product partnerships.

Investments within the Joint Venture and Partnership Interests category that do not qualify for inclusion in the “Fixed Income Instruments,” “Common Stocks,” “Real Estate” or “Mortgage Loans” subcategories.

~~Reporting should be consistent with the corresponding risk-based capital factor for this investment category (i.e., Other Long-Term Assets).~~

Surplus ~~Debentures, etc.~~ Notes

Include: That portion of any subordinated indebtedness, surplus debenture, surplus note, debenture note, premium income note, bond, or other contingent evidence of indebtedness that is reported in the surplus of the issuer.

Capital Notes

Include: The portion of any capital note that is reported on the line for capital notes of the issuing insurance reporting entity.

Collateral Loans

Include: ~~Refer to SSAP No. 21R—Other Admitted Assets for a definition of collateral loans. Loans meeting the SSAP No. 21R—Other Admitted Assets definition of collateral loans that are backed by any form of collateral, regardless of if the collateral is sufficient to fully cover the loan, shall be captured in this category. Guidance in SSAP No. 21R shall be followed to determine nonadmittance.~~
Refer to SSAP No. 21R—Other Admitted Assets for a definition of collateral loans.

In the description column, the name of the actual borrower and state if the borrower is a parent, subsidiary, affiliate, officer or director. Also include the type of collateral held.

Non-collateral Loans

Include: ~~For purposes of this section, n~~Non-collateral loans are considered the unpaid portion of loans previously made to another organization or individual in which the reporting entity has a right to receive money for the loan, but for which the reporting entity has not obtained collateral to secure the loan.

Non-collateral loans shall not include those instruments that meet the definition of a bond, per SSAP No. 26R—Bonds, a mortgage loan per SSAP No. 37—Mortgage Loans, ~~loan-backed or structured~~asset-backed securities per SSAP No. 43R—Loan-Backed and Structured Securities, or a policy or contract loan per SSAP No. 49—Policy Loans, or a collateral loan in SSAP No. 21, Other Admitted Assets.

Non-collateral loans are nonadmitted unless they are to related parties and meet the criteria in SSAP No. 25—Affiliates and Other Related Parties. SSAP No. 20

[Nonadmitted Assets and SSAP No. 25 should be referred to for accounting guidance for Non-collateral loans](#)

In the description column, provide the name of the actual borrower. For affiliated entities, state if the borrower is a parent, subsidiary, affiliate, officer or director. ~~Refer to SSAP No. 20 Nonadmitted Assets and SSAP No. 25 Affiliates and Other Related Parties for accounting guidance.~~

Capital Notes

~~Include: The portion of any capital note that is reported on the line for capital notes of the issuing insurance reporting entity.~~

Low Income Housing Tax Credit

[Note: These instructions will be updated in accordance with the SAPWG tax credit agenda item.](#)

- Include:
- All Low Income Housing Tax Credit Investments (LIHTC or affordable housing) that are in the form of a Limited Partnership or a Limited Liability Company including those investments that have the following risk mitigation factors:
- A. Guaranteed Low Income Housing Tax Credit Investments. There must be an all-inclusive guarantee from a CRP-rated entity that guarantees the yield on the investment.
 - B. Non-guaranteed Low Income Housing Tax Credit Investments.
 - I. A level of leverage below 50%. For a LIHTC Fund, the level of leverage is measured at the fund level.
 - II. There is a Tax Credit Guarantee Agreement from General Partner or managing member. This agreement requires the General Partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For a LIHTC Fund, a Tax Credit Guarantee is required from the developers of the lower tier LIHTC properties to the upper tier partnership and all other LIHTC investments.
 - III. There are sufficient operating reserves, capital replacement reserves and/or operating deficit guarantees present to mitigate foreseeable foreclosure risk at the time of the investment.

Non-qualifying LIHTCs should be reported in the “All Other” category

[\[placeholder for changes resulting from SAPWG 2022-14 \(New Market Tax Credits\)\]](#)

Working Capital Finance Investment

- Include:
- Investments in an interest in a Confirmed Supplier Receivables (CSR) under a Working Capital Finance Program (WCFP) that is designated by the SVO as meeting the criteria specified in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* for an NAIC “1” or “2.”

Working Capital Finance Program (WCFP)

Open account program under which an Investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A WCFP is created for the benefit of a commercial investment grade obligor and its suppliers of goods or services and facilitated by a financial intermediary.

Confirmed Supplier Receivables (CSR)

A first priority perfected security interest claim or right to payment of a monetary obligation from the Obligor arising from the sale of goods or services from the Supplier to the Obligor the payment of which the Obligor has confirmed by representing and warranting that it will not protest, delay, or deny, nor offer nor assert any defenses against, payment to the supplier or any party taking claim or right to payment from the supplier.

See *SSAP No. 105R—Working Capital Finance Investments* for accounting guidance.

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn't be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests captures securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – ~~Loan-Backed and Structured Securities~~ Asset-Backed Securities*, that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See *SSAP No. 43R* for accounting guidance.

[\[placeholder for changes resulting from SAPWG 2023-12 \(SSAP No. 48 – Residuals\)\]](#)

Fixed Income Instruments

Include: -Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 1 – Long-Term Bonds*

Common Stocks

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 2 – Section 2 – Common Stocks*

Preferred Stocks

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 2 – Section 1 – Preferred Stocks*

Real Estate

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule A – Real Estate Owned*

Mortgage Loans

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule B – Mortgage Loans*

Other

Include: Items that do not qualify for inclusion in the above subcategories.

Any Other Class of Assets

Include: Investments that do not fit into one of the other categories. An example of items that may be included are reverse mortgages.

All structured settlement income streams acquired as investments where the reporting entity acquires the legal right to receive payments. (Valuation and admittance provisions are detailed in *SSAP No. 21R—Other Admitted Assets*.)

[This category shall also include oil and gas leases, aircraft owned under leveraged lease arrangements, investments in extractive materials and timber deeds that are not owned within a partnership, LLC or joint venture structure.](#)

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Interested Parties Comments on Ref #2023-12, Residuals in SSAP No. 48 Investments

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the following item that was exposed for comment by the Statutory Accounting Working Group (the Working Group).

Ref # 2023-12: Residuals in SSAP No. 48 Investments

This agenda item proposes revisions to clarify the scope and reporting for investment structures that represent residual interests or a residual security tranche (collectively referred to as residuals) within statutory accounting principles regardless of the legal form of the residual (e.g., debt, stock, LP/LLC equity ownership, etc.) It proposes guidance to clarify the reporting of in-substance residuals regardless of the structure of the investment vehicle.

Interested parties has been working with NAIC staff to clarify the definition in order to facilitate consistent interpretation by the industry and auditors, to avoid unintended consequences of certain equity investments being scoped into the definition of a residual when they were not intended to be in scope. We appreciate NAIC staff working with us on these clarifications and look forward to reviewing the next exposure. In addition to the redrafted exposure draft, we offer the following comments.

In reviewing the exposure, we understand that the residual definition is related to investment structures that issue debt securities created for the primary purpose of raising debt capital backed by collateral assets (ABS issuers as defined in paragraph 8 of the current bond exposure in SSAP Nos. 26R). As a result, interested parties do not believe the intent was to include the following types of investment structures:

- Private Funds (e.g., equity, debt, hedge)- that issued debt for liquidity / operating purposes rather than to raise capital backed by a discrete pool of collateral assets.
- Real Estate Funds (including REITs and JVs) (i.e., considered Issuer Credit Obligations, or “ICOs”, in the proposed bond standard)
- Non-US registered Funds (i.e., considered ICOs in the proposed bond standard)
- Other ICOs in the proposed bond definition, such as 40 Act Funds, Business Development Company, Operating Entities, and Holding Companies supported by operating companies.

The exposure currently addresses changes to SSAP No. 48 - Joint Ventures, Partnerships and Limited liability Companies, but we also believe the definition is relevant to SSAP Nos. 26R, 43R, and 21R and should be included in those other SSAPs. Also, consideration should be given to whether the definition should also be added to SSAPs where residuals may currently be in scope, such as SSAP No. 30R (e.g., from securitizations in legal form of a corporation).

Upon adoption of the Form A, interested parties believe the guidance would be effective immediately. Interested parties will need time to consider the guidance, develop accounting policies, and identify the residuals under the new definition. As a result, we recommend an effective date of six months after the adoption by Executive (Ex) Committee.

* * * *

Please feel free to contact either one of us with any questions you may have.

Sincerely,

D. Keith Bell

Rose Albrizio

**Statutory Accounting Principles (E) Working Group
 Maintenance Agenda Submission Form
 Form A**

Issue: SSAP No. 43R – CLO Financial Modeling

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item proposes revisions to *SSAP No. 43R—Loan-Backed and Structured Securities* to incorporate edits to reflect changes adopted by the Valuation of Securities (E) Task Force on Feb. 21, 2023, to include collateralized loan obligations (CLOs) in the SVO financial modeling process.

This agenda item has been drafted to ensure the financial modeling guidance summarized in *SSAP No. 43R—Loan-Backed and Structured Securities* reflects the practices as directed by the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)*. (Note, while the *Accounting Practices and Procedures Manual* is higher than the P&P manual in the statutory hierarchy, the primary source of authoritative guidance for financial modeling is the P&P manual. Only a general description of the modeling process is included in SSAP No. 43R). The methodology to model CLOs is still being developed, but guidance that permits the SVO to model CLOs has been adopted and should be followed once CLOs begin to be financially modeled.

Existing Authoritative Literature:

SSAP No. 43R—Loan-Backed and Structured Securities

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

- a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled non-legacy security, meaning one which closed after December 31, 2012, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled legacy securities is as follows:
 - i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the **initial** NAIC designation.

- ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.
 - iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).
- b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

- a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.
- b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.
- c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.
- d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

SSAP No. 43R - EXHIBIT A – Question and Answer Implementation Guide Index to Questions

Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.

8	Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?
9	The NAIC Designation process for LBSS may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?
10	For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

8. Question – Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the “final” NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. Question – The NAIC Designation process for LBSS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

9.1 In accordance with *INT 06-07: Definition of Phrase “Other Than Temporary,”* reporting entities are expected to “consider all available evidence” at their disposal, including the information that can be derived from the NAIC designation.

10. Question - For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The following edits have previously been reflected in the financial modeling guidance:

- Agenda Item 2018-19: To be consistent with the prior SVO P&P Manual revisions, eliminated the multi-step designation guidance for modified filing exempt (MFE) securities. The elimination of MFE was effective March 31, 2019, with early application permitted for year-end 2018. With the elimination of

MFE, for securities that are filing exempt, the NAIC designation reported will correspond to the Credit Rating Provider (CRP) rating without adjustment based on carrying value.

- Agenda Item 2018-03: Clarified that securities acquired in lots shall not be reported with weighted average designations. With the adopted guidance, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. With the elimination of MFE, the instances of different designations by lot are not expected to be prevalent, but could still occur with the financial modeling process for residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS).
- Agenda Item 2020-21: Edits incorporated adopted guidance to the P&P manual detailing the use and mapping of NAIC designations to NAIC designation categories. Reporting entities were to then utilize the new NAIC designation categories for accounting and reporting purposes.
- Agenda Item 2021-23: Adopted changes to summarize the financial modeling guidance in SSAP No. 43R. This guidance continues to refer users to the detailed financial modeling guidance in the P&P Manual.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): Not Applicable

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 43R—Loan-backed and Structured Securities* to incorporate changes to add CLOs to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities. These revisions reflect the guidance adopted for the P&P Manual in February 2023.

Proposed Revisions to SSAP No. 43R—Loan-Backed and Structured Securities

Designation Guidance

27. For [Residential Mortgage-Backed Securities \(RMBS\)](#), [Commercial Mortgage-Backed Securities \(CMBS\)](#) and [Collateralized Loan Obligations \(CLOs\)](#), ~~RMBS/CMBS~~ securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:
- a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled [RMBS/CMBS](#) legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled [RMBS/CMBS](#) non-legacy security, meaning one which closed after December 31, 2012, [or modeled CLO](#) the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those [RMBS/CMBS](#) legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in

determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled [RMBS/CMBS](#) legacy securities is as follows:

- i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the initial NAIC designation.
 - ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.
 - iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).
- b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

- a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.
- b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

- c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.
- d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate).

Staff Review Completed by: Julie Gann, NAIC Staff – February 2023

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 43R to incorporate changes to add CLOs to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 43R which incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.

**Statutory Accounting Principles (E) Working Group
 Maintenance Agenda Submission Form
 Form A**

Issue: ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

The Financial Accounting Standards Board (FASB) issued *ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848* to extend the sunset date of the reference rate reform guidance that was included in *ASU 2020-04, Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and *ASU 2021-01, Reference Rate Reform (Topic 848), Scope*.

As background, reference rate reform refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it would no longer require banks to continue rate submissions after 2021 – thus, likely sunsetting both the use and publication of LIBOR. An important item to note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform. For simplicity, LIBOR will be the sole IBOR referenced throughout this agenda item.

With a significant number of financial contracts referencing LIBOR, its discontinuance will require organizations to reevaluate and modify any contract which does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.

To address ASU 2020-04 the Working Group issued *INT 20-01: Reference Rate Reform*, and this interpretation was then revised to incorporate guidance from ASU 2021-01. This agenda item intends to again revise INT 20-01 to include the revised sunset date of December 31, 2024.

Existing Authoritative Literature:

The Working Group adopted INT 20-01 to address ASU 2020-04, and further revised that interpretation to address ASU 2021-01. The modifications in ASU 2020-04 address hedge accounting and the allowance for a reporting entity to change the reference rate and other critical terms related to reference rate reform without having to dedesignate the hedging relationship. Alternative benchmark interest rates were previously addressed in agenda item 2018-46 – Benchmark Interest Rate.

ASU 2021-01 increased the scope of the optional, expedient accounting guidance for derivative instruments in ASU 2020-04 which would primarily affect *SSAP No. 86—Derivatives*. While detailed in the original agenda item (Ref

#2020-12), additional SSAPs impacted by ASU 2020-04 were *SSAP No. 15—Debt and Holding Company Obligations* and *SSAP No. 22R—Leases*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The Working Group has taken several actions related to reference rate reform; each are summarized below.

1. Agenda item 2018-46 – Benchmark Interest Rate, incorporated revisions to SSAP No. 86, adding the Securities Industry and Financial Markets (SIFMA) Municipal Swap Rate and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap (OIS) Rate as acceptable benchmark interest rates for hedge accounting. Prior to this change, only LIBOR and the Fed Funds Effective Swap Rate (also referred to as the Overnight Index Swap Rate) were considered acceptable benchmark interest rates.
2. Agenda item 2020-12 reviews ASU 2020-04, the foundation of which this agenda item and related ASU (2021-01) are based. Agenda item 2020-12 resulted in the Working Group adopting INT 20-01.
3. *INT 20-01: ASU 2020-04 - Reference Rate Reform*, adopted by the Working Group in April 2020, broadly adopted ASU 2020-04 for statutory accounting stating that for statutory accounting:
 - For all contracts within scope of ASU 2020-04, modifications due to reference rate reform are afforded an optional expedient to be accounted for as a continuation of the existing contract.
 - Debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as *SSAP No. 15—Debt and Holding Company Obligations* states such liabilities should only be derecognized if extinguished.
 - Lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under *SSAP No. 22R—Leases*.
 - For derivative transactions within scope of ASU 2020-04, a change to the critical terms of the hedging relationship (due to reference rate reform), shall be afforded similar treatment in that the hedging relationship can continue the original hedge accounting rather than dedesignate the hedging relationship.
4. *INT 20-09: Basis Swaps as a Result of the LIBOR Transition*, adopted by the Working Group in July 2020, provided statutory accounting and reporting guidance for basis swaps issued by CCPs. This INT designated that basis swaps, issued by CCPs, in response to reference rate reform (i.e., the discounting transition), shall be classified as a derivative used for hedging. This categorization allowed for the basis swap derivatives to be admitted under SSAP No. 86. Additionally, the INT directed that basis swap derivatives shall not be reported as “effective” unless the instrument qualifies, with the required documentation, as highly effective under SSAP No. 86.
5. Agenda item 2021-09 further revised INT 20-01 and increased the scope of the optional, expedient accounting guidance for derivative instruments in ASU 2020-04.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as SAP clarification and expose temporary (optional) expedient and exception interpretative guidance, to revise the expiration date of the guidance in *INT 20-01: ASU 2020-04 & 2021-01 - Reference Rate Reform* to be December 31, 2024.

The proposed modifications to INT 20-01 temporarily override SSAP No. 15, SSAP No. 22R and SSAP No. 86 guidance, therefore the policy statement in Appendix F requires 2/3rd (two-thirds) of the Working Group members to be present and voting and a supermajority of the Working Group members present to vote in support of the interpretation before it can be finalized.

Staff Review Completed by: Jake Stultz—February 2023

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed temporary (optional) expedient and exception interpretative guidance, to revise the expiration date of the guidance in *INT 20-01: 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* to be December 31, 2024, as reflected in INT 20-01.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as reflected in *INT 20-01: ASUs 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* which revises expiration date of the interpretation to December 31, 2024.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-01: *ASUs 2020-04, ~~& 2021-01~~ & 2022-06 – Reference Rate Reform*

INT 20-01 Dates Discussed

March 26, 2020; April 15, 2020; March 15, 2021, May 20, 2021, [March 22, 2023](#), [August 13, 2023](#)

INT 20-01 References

Current:

SSAP No. 15—*Debt and Holding Company Obligations*

SSAP No. 22R—*Leases*

SSAP No. 86—*Derivatives*

This INT applies to all SSAPs with contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

INT 20-01 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of *ASU 2020-04, Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting*, ~~and ASU 2021-01, Reference Rate Reform (Topic 848)~~, and ASU 2022-06, Reference Rate Reform (Topic 848) for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued ~~both~~ ASU 2020-04, ~~and~~ ASU 2021-01 and ASU 2022-06 to provide optional, transitional and expedient guidance as a result of reference rate reform.
2. “Reference rate reform” typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it will no longer require banks to continue LIBOR submissions after 2021 – likely sunseting both the use and publication of LIBOR. An important note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform.
3. With a significant number of financial contracts solely referencing IBORs, their discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.
4. The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-wide initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB

determined that the traditional financial reporting requirements of discontinuing such contracts and treating the modified contract as an entirely new contract or hedging relationship would 1) not provide decision-useful information to financial statement users and 2) require a reporting entity to incur significant costs in the financial statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

5. Guidance in ASU 2020-04 allows a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or dedesignation if certain criteria are met.

6. Guidance in ASU 2021-01 expanded the scope of ASU 2020-04 by permitting the optional, transitional, expedient guidance to also include derivative contracts that undergo a similar transition but do not specifically reference a rate that is expected to be discontinued. While these contract modifications do not reference LIBOR (or another reference rate expected to be discontinued), the changes are the direct result of reference rate reform and were deemed to be eligible for similar exception treatment. ASU 2021-01 allows for modifications in interest rates indexes used for margining, discounting or contract price alignment, as a result of reference rate reform initiatives (commonly referred to as a “discounting transition”) to be accounted for as a continuation of the existing contract and hedge accounting. [On August 13, 2023, the Working Group added the guidance in ASU 2022-06 which only acts to defer the sunset date of Topic 848 from December 31, 2022, to December 31, 2024, after which entities will no longer be permitted to apply the relief from the prior ASUs.](#)

7. The optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04, ~~and~~ ASU 2021-01 [and ASU 2022-04](#) are applicable for all entities. However, they are only effective as of March 12, 2020 through December 31, ~~2022~~ [2024](#). This is because the amendments are intended to provide relief related to the accounting requirements in generally accepted accounting principles (GAAP) due to the effects of the market-wide transition away from IBORs. The relief provided by the amendments is temporary in its application in alignment with the expected market transition period. However, the FASB will monitor the market-wide IBOR transition to determine whether future developments warrant any changes, including changes to the end date of the application of the amendments in this ASU. If such an update occurs, the Working Group may also consider similar action. It is not expected that the Working Group will take action prior to or in the absence of a FASB amendment.

8. The accounting issues are:

- a. Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?
- b. Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?
- c. Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?
- d. Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?
- e. Issue 5: Should the optional, expedient and exception guidance in ASU 2021-01 apply to derivative transactions addressed in SSAP No. 86?

INT 20-01 Discussion

9. For Issue 1, the Working Group came to the consensus that ASU 2020-04 shall be adopted, to include the same scope of applicable contracts or transactions for statutory accounting with the only modification related to a concept not utilized by statutory accounting, as noted below. The Working Group agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:

- a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.
 - i. All contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.
- b. Allows hedging relationships to continue without dedesignation upon a change in certain critical terms.
- c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.
- d. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.
- e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.
- f. The only SAP modification to this ASU is related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

10. For Issue 2, the Working Group came to the consensus that debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized if extinguished. A reference rate modification should not generally require de-recognition and re-recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to the consensus that should an eligible contract be affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

11. For Issue 3, the Working Group came to the consensus that lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease. These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to a consensus that if an eligible lease affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

12. For Issue 4, the Working Group came to the consensus that ASU 2020-04 shall be applied to derivative transactions as the following considerations provided in the ASU are appropriate for statutory accounting:

- a. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than dedesignate the hedging relationship.

- b. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.
- c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.
- d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.

13. For Issue 5, the Working Group came to a consensus on May 20, 2021, that ASU 2021-01 shall be applied to derivative transactions for statutory accounting. Accordingly, derivative instruments that are modified to change the reference rate used for margining, discounting, or contract price alignment that is a result of reference rate reform (regardless of whether the reference rate that is expected to be discontinued) are eligible for the exception guidance afforded in ASU 2020-04 in that such a modification is not considered a change in the critical terms that would require dedesignation of the hedging relationship. In addition, for all derivatives (those qualifying for hedge accounting, those that do not qualify for hedge accounting and replication (synthetic asset) transactions (RSAT)), a reporting entity may account for and report modifications (that are within the scope of INT 20-01) as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract and its replacement with a new reference rate reform contract. This includes in-scope modifications of centrally cleared swap contracts whether they are automatically transitioned at a cessation date or voluntarily executed prior to cessation.

14. Additionally, for GAAP purposes, if an entity has not adopted the amendments in *ASU 2017-12, Derivatives and Hedging*, it is precluded from being able to utilize certain expedients for hedge accounting. For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 2017-12, while the remainder of the items are pending statutory accounting review. The Working Group concluded that all allowed expedient methods are permitted as elections for all reporting entities under statutory accounting. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.

INT 20-01 Status

15. ~~No further~~ Further discussion is planned.

**Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A**

Issue: ASU 2019-08, Codification Improvements to Topic 718 and Topic 606

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In November 2019, FASB issued *ASU 2019-08 Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*, which includes amendments to Topics 718 and 606. The changes to Topic 718 include share-based payment transactions for acquiring goods and services from nonemployees and in doing so superseded guidance in Subtopic 505-50, *Equity—Equity-Based Payments to Non-Employees*. The changes to Topic 606 expand the scope of the codification to include share-based payment awards granted to a customer in conjunction with selling goods or services.

The amendments in ASU 2019-08 require that an entity measure and classify share-based payment awards granted to a customer by applying the guidance in Topic 718. The amount recorded as a reduction of the transaction price is required to be measured on the basis of the grant-date fair value of the share-based payment award in accordance with Topic 718. The grant date is the date at which a grantor (supplier) and a grantee (customer) reach a mutual understanding of the key terms and conditions of a share-based payment award. The classification and subsequent measurement of the award are subject to the guidance in Topic 718 unless the share-based payment award is subsequently modified and the grantee is no longer a customer.

For statutory accounting assessments, prior U.S. GAAP guidance related to share-based payments has been predominantly adopted with modification in *SSAP No. 104R—Share-Based Payments*. Statutory accounting modifications to the U.S. GAAP guidance have mostly pertained to statutory terms and concepts. (For example, statutory reporting lines, nonadmittance of prepaid assets, etc.)

Existing Authoritative Literature:

Stock Compensation is covered by *SSAP No. 104R—Share-Based Payments* and *SSAP No. 95—Nonmonetary Transactions*.

The ASUs related to ASC Topic 606 have been rejected in *SSAP No. 47—Uninsured Plans*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Agenda item 2018-35 adopted with modification *ASU 2018-07, Improvements to Nonemployee Share-Based Payment Accounting* and incorporated the U.S. GAAP amendments from that project into SAP.

Agenda items 2016-19 and 2017-37 address the main ASUs related to *ASC Topic 606* and there have been several other agenda items for minor updates to revenue recognition guidance, all of which have been rejected in *SSAP No. 47*.

Per the comment letter received on June 9, 2023, interested parties had no comments on Agenda item 2023-07.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
None.

Staff Recommendation:

Staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to adopt with modification *ASU 2019-08 Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer* for statutory accounting. These revisions would add language to include share-based consideration payable to customers under SSAP No. 104R guidance in the same manner as U.S. GAAP. With the revisions proposed to SSAP No. 104R, revisions are also proposed to *SSAP No. 95—Nonmonetary Transactions* to update previously adopted U.S. GAAP guidance. In addition, proposed revisions to *SSAP No. 47—Uninsured Plans*, reject Topic 606 guidance in ASU 2019-08. The proposed revisions to SSAP No. 95, SSAP No. 104R, and *SSAP No. 47—Uninsured Plans*, are illustrated in the Form A.

Proposed Revisions to SSAP No. 95—Nonmonetary Transactions

Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or Services and Cash (in combination or individually), or a ~~Combination of Goods or Services and Cash~~ as Consideration Payable to a Customer

17. The guidance in paragraph 18 addresses a convertible instrument that is issued or granted to a nonemployee in exchange for goods or services or a combination of goods or services and cash or consideration payable to a customer. The convertible instrument contains a nondetachable conversion option that permits the holder to convert the instrument into the issuer's stock.

19. To determine the fair value of a convertible instrument granted as part of a share-based payment transaction to a nonemployee in exchange for goods or services or as consideration payable to a customer that is equity in form or, if debt in form, that can be converted into equity instruments of the issuer, the entity shall first apply SSAP No. 104R.

Proposed Revisions to SSAP No. 104R—Share-Based Payments

SUMMARY OF ISSUE

2. The objective of accounting for transactions under share-based payment arrangements is to recognize in the financial statements the goods or services received in exchange for equity instruments granted or liabilities incurred and the related cost to the entity as those goods or services are received. This statement uses the terms “compensation” and “payment” in their broadest senses to refer to the consideration paid for goods, ~~or~~ services, or the consideration paid to a customer.

Scope and Scope Exceptions

4. This statement applies to all share-based payment transactions in which a grantor acquires goods or services to be used or consumed in the grantor’s own operations or provides consideration payable to a

[customer](#) by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee or nonemployee that meet either of the following conditions:

- a. The amounts are based, at least in part, on the price of the entity's shares or other equity instruments.
 - b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.
5. Share-based payments awarded to a grantee by a related party or other holder of an economic interest in the entity as compensation for goods or services provided to the reporting entity are share-based payment transactions to be accounted for under this statement unless the transfer is clearly for a purpose other than compensation for goods or services to the reporting entity. The substance of such a transaction is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to the grantee in exchange for services rendered or goods received. An example of a situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the grantee that is unrelated to goods or services to be used or consumed in a grantor's own operations.
6. The guidance in this statement does not apply to:
- a. Equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in SSAP No. 12—Employee Stock Ownership Plans.
 - b. Transactions involving equity instruments granted to a lender or investor that provides financing to the issuer.
 - c. Transactions involving equity instruments granted in conjunction with selling goods or services to customers as part of a contract (for example, sales incentives). If consideration payable to a customer is payment for a distinct good or service from the customer, then the entity shall account for the purchase of the good or service in the same way it accounts for other purchases from suppliers. Therefore, share-based payment awards granted to a customer for a distinct good or service to be used or consumed in the grantor's own operations are accounted for under this statement.

Recognition

11. This guidance does not address the period(s) or the manner (that is, capitalize versus expense) in which an entity granting the share-based payment award (the purchaser or grantor) to a nonemployee shall recognize the cost of the share-based payment award that will be issued, other than to require that a nonadmitted prepaid asset or expense be recognized (or previous recognition reversed) in the same period(s) and in the same manner as if the grantor had paid cash for the goods or services instead of paying with or using the share-based payment award.

Initial Measurement

35. An entity shall account for the compensation cost from share-based payment transactions in accordance with the fair-value-based method set forth in this statement. That is, the cost of goods obtained or services received in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred.

The cost of goods obtained or services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to goods obtained or services received is net of any amount that a grantee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if a grantee pays \$5 at the grant date for an option with a grant-date fair value of \$50, the amount attributed to goods or services provided by the grantee is \$45.

Measurement Objective – Fair Value at Grant Date

38. The measurement objective for equity instruments awarded to grantees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when grantees have delivered the good or rendered the service and satisfied any other conditions necessary to earn the right to benefit from the instruments (for example, to exercise share options). That estimate is based on the share price and other pertinent factors, such as expected volatility, at the grant date.

- a. Measurement Objective and Measurement Date for Awards Classified as Liabilities: At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to grantees as described in paragraph 38. However, the measurement date for liability instruments is the date of settlement.
- b. Intrinsic Value Option for Awards Classified as Liabilities: A reporting entity shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements (for employee and nonemployee awards) issued in exchange for goods or services at fair value or ~~to measure all such liabilities~~ at intrinsic value. However, the reporting entity shall initially and subsequently measure awards determined to be consideration payable to a customer at fair value.

52. A reporting entity may not be able to reasonably estimate the fair value of its equity share options, nonemployee awards and similar instruments because it is not practicable for the reporting entity to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options, nonemployee awards and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (~~the calculated-permitted~~ value). A reporting entity's use of ~~calculated-permitted~~ value shall be consistent between employee share-based payment transactions and nonemployee share-based payment transactions. Throughout the remainder of this statement, provisions that apply to accounting for share options, nonemployee awards and similar instruments at fair value also apply to calculated value.

Staff Note: Paragraph 98 references "permitted value in accordance with paragraph 52", but terminology was not consistent between paragraphs. NAIC staff changed "calculated value" to "permitted value" to allow for easier cross-referencing.

54. A reporting entity that elects to apply the practical expedient in paragraph 53 shall apply the practical expedient to a share option or similar award that has all of the following characteristics:

- a. The share option or similar award is granted at the money.

- b. The grantee has only a limited time to exercise the award (typically 30-90 days) if the grantee no longer provides goods ~~or~~, terminates service after vesting, or ceases to be a customer.
- c. The grantee can only exercise the award. The grantee cannot sell or hedge the award.
- d. The award does not include a market condition.

Subsequent Measurement

68. The total amount of compensation cost recognized for share-based payment awards to nonemployees shall be based on the number of instruments for which a good has been delivered or a service has been rendered. To determine the amount of compensation cost to be recognized in each period, an entity shall make an entity-wide accounting policy election for all nonemployee share-based payment awards, including share-based payment awards granted to customers, to do either of the following:

- a. Estimate the number of forfeitures expected to occur. The entity shall base initial accruals of compensation cost on the estimated number of nonemployee share-based payment awards for which a good is expected to be delivered or service is expected to be rendered. The entity shall revise that estimate if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimates shall be recognized in compensation cost in the period of the change.
- b. Recognize the effect of forfeitures in compensation cost when they occur. Previously recognized compensation cost for a nonemployee share-based payment award shall be reversed in the period that the award is forfeited.

80. A freestanding financial instrument issued to a grantee ~~in exchange for goods or services received (or to be received)~~ that is subject to initial recognition and measurement guidance within this statement shall continue to be subject to the recognition and measurement provisions of this statement throughout the life of the instrument, unless its terms are modified after a ~~nonemployee grantee~~ vests in the award and is no longer providing goods or services, a grantee vests in the award and is no longer a customer, or a grantee is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

- a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.
- b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

81. Other modifications of that instrument that take place after a ~~nonemployee grantee~~ vests in the award and is no longer providing goods or services, is no longer a customer, or ~~a grantee~~ is no longer an employee shall be subject to the modification guidance in paragraph 83. Following modification, recognition and measurement of the instrument shall be determined through reference to other applicable statutory accounting principles.

Subsequent Measurement - Awards Classified as Liabilities

97. Changes in the fair value (or intrinsic value for a reporting entity that elects that method) of a liability incurred under a share-based payment arrangement [issued in exchange for goods or services](#) that occur during the employee's requisite service period or the nonemployee's vesting period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods or services instead of paying with a nonemployee award at that date. Changes in the fair value (or intrinsic value) of a liability [issued in exchange for goods or services](#) that occur after the end of the employee's requisite service period or the nonemployee's vesting period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award [issued in exchange for goods or services](#) is settled and its fair value at the settlement date as estimated in accordance with the provisions of this statement is an adjustment of compensation cost in the period of settlement.

98. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or permitted value in accordance with paragraph 52) remeasured at each reporting date until the date of settlement. Compensation costs for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods and services instead of paying with a nonemployee award at the reporting date) in the fair value of the instrument for each reporting period. [A reporting entity shall subsequently measure awards determined to be consideration payable to a customer at fair value.](#)

Effective Date and Transition

132. Since the initial adoption of SSAP No. 104, subsequent revisions were effective as follows:

- b. [ASU 2019-08, Compensation—Stock Compensation \(Topic 718\) and Revenue from Contracts with Customers \(Topic 606\): Codification Improvements—Share-Based Consideration Payable to a Customer.](#)

New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

FASB issued *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*, which primarily effects the codifications of Financial Services—Depository and Lending (Topic 942), Financial Services—Insurance (Topic 944), and Financial Services—Investment Companies (Topic 946). The update amends and supersedes certain SEC sections in Topic 942, 944, and 946 to align codification guidance with SEC Releases No. 33-10532, 33-10231, and 33-10442. These SEC Releases amend a wide range of disclosure requirements which were determined to be redundant, duplicative, overlapping, outdated, or superseded by other relevant literature. Additionally, the SEC Releases include several miscellaneous updates and corrections intended to clarify SEC guidance.

Existing Authoritative Literature:

Historically, SEC guidance from ASUs have been rejected as not applicable for statutory accounting in Appendix D. Regardless, all ASUs are reviewed for statutory accounting purposes to determine if the guidance should be considered for statutory accounting.

Debt is covered in *SSAP No. 15—Debt and Holding Company Obligations*, surplus is covered in *SSAP No. 72—Surplus and Quasi-Reorganizations*, and consolidation guidance is discussed in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Per the comment letter received on June 9, 2023, interested parties had no comments on Agenda item 2023-08.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None.

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates* as not applicable to statutory accounting. This

item is proposed to be rejected as not applicable as ASU 2019-07 is specific to amendment of SEC paragraphs, which are not applicable for statutory accounting purposes.

New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

FASB issued *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)*, which effects the codification in Debt (Topic 470). The update amends and supersedes certain SEC sections in Topic 470 to align codification guidance with SEC Release No. 33-10762. No. 33-10762 amends the SEC financial disclosure requirements for guarantors and issuers of guaranteed securities registered or being registered, and issuers' affiliates whose securities collateralize securities registered or being registered in Regulation S-X to improve those requirements for both investors and registrants. The changes are intended to provide investors with material information given the specific facts and circumstances, make the disclosures easier to understand, and reduce the costs and burdens to registrants.

Existing Authoritative Literature:

Historically, SEC guidance from ASUs have been rejected as not applicable for statutory accounting in Appendix D. Regardless, all ASUs are reviewed for statutory accounting purposes to determine if the guidance should be considered for statutory accounting.

Debt is covered in *SSAP No. 15— Debt and Holding Company Obligations*. Basic discussion of the nature of liabilities is covered in *SSAP No. 5R— Liabilities, Contingencies and Impairments of Assets*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Per the comment letter received on June 9, 2023, interested parties had no comments on Agenda item 2023-09.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)* as not applicable to statutory accounting. This guidance is not applicable as it pertains to an exception of issuers or guarantors filing financial statements with the SEC when the issuer or guarantor is included in filed consolidated financial statements and other conditions are met.

Staff Review Completed by: William Oden – February 2023

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to Appendix D to reject *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)* as not applicable to statutory accounting.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject ASU 2020-09 as not applicable to statutory accounting.

Issue: *ASU 2022-05, Transition for Sold Contracts*

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item has been drafted to consider *ASU 2022-05, Transition for Sold Contracts* (ASU) for statutory accounting. The FASB issued the ASU in December 2022 to amend specific sections of *ASU 2018-12, Targeted Improvements for Long-Durations Contracts* (LDTI). The amendments made by the ASU are intended to reduce implementation costs and complexity associated with the adoption of LDTI for contracts that have been derecognized in accordance with the ASU before the LDTI effective date. The revisions captured in the ASU are summarized as follows:

The amendments in the ASU amend the LDTI transition guidance to allow an insurance entity to make an accounting policy election on a transaction-by-transaction basis. An insurance entity may elect to exclude contracts that meet certain criteria from applying the amendments in the LDTI. To qualify for the accounting policy election, as of the LDTI effective date both of the following conditions must be met:

- a. The insurance contracts must have been derecognized because of a sale or disposal of individual or a group of contracts or legal entities.
- b. The entity has no significant continuing involvement with the derecognized contracts.

ASU 2018-12, as amended by 2022-05, is effective for public entities for fiscal years beginning after December 15, 2022, and interim periods within those fiscal years. For nonpublic entities, the LDTI is effective for fiscal years beginning after December 15, 2024, and interim periods within fiscal years beginning after December 15, 2025. The LDTI includes different transition provisions as follows:

- For the liability for future policyholder benefits and deferred acquisition costs, insurance entities should apply the amendments to contracts in force as of the beginning of the earliest period presented on the basis of their existing carrying amounts, adjusted for the removal of any related amounts in accumulated other comprehensive income. Insurance entities are permitted to apply the amendments retrospectively (with a cumulative catch-up adjustment to the opening balance of retained earnings), using actual historical experience information as of contract inception. (Estimates of historical experience may not be substituted for actual historical experience.) If electing retrospective application, it must be applied entity-wide for the same contract issue year, and all subsequent contract issue years. (Meaning, it must be used to all products and contracts issued in the first year in which retrospective application will be applied, and all subsequent products and contracts issued in later years.)
- For market risk benefits, insurance entities should apply the amendments retrospectively as of the beginning of the earliest year presented. An insurance entity may use hindsight in instances in which assumptions in a prior period are unobservable or otherwise unavailable and cannot be

independently substantiated. The difference between fair value and the carrying value at the transition date, excluding the effect of changes in the instrument-specific credit risk, requires an adjustment to the opening balance of retained earnings.

Existing Authoritative Literature:

The key changes reflected in ASU 2018-12 revised U.S. GAAP guidance previously rejected for statutory accounting. (In a couple instances, the prior U.S. GAAP guidance was not reviewed for SAP - as the guidance was not Board Directed or was still pending SAP review.)

References from Appendix D – Cross-Reference to SAP:

U.S. GAAP	SAP Accounting Provisions
<i>FAS 60, Accounting and Reporting by Insurance Entities</i>	Rejected in SSAP No. 40R, SSAP No. 50, SSAP No. 51R, SSAP No. 52, SSAP No. 53, SSAP No. 54R, SSAP No. 57, SSAP No. 59, and SSAP No. 71
<i>FAS 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments</i>	Rejected in SSAP No. 50, SSAP No. 51R, SSAP No. 52 and SSAP No. 71
<i>FSP FAS 97-1, Situations in Which Paragraphs 17(b) and 20 of FAS 97 Permit or Require Accrual of an Unearned Revenue Liability</i>	Not Board Directed
<i>SOP 95-1, Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises</i>	Rejected in SSAP No. 51R and SSAP No. 52
<i>SOP 03-1, Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts</i>	Rejected in SSAP No. 56
<i>SOP 05-1, Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchange of Insurance Contracts</i>	Rejected in SSAP No. 71
<i>SOP 00-3, Accounting by Insurance Enterprises for Demutualizations and Formations of Mutual Insurance Holding Companies and for Certain Long-Duration Participating Contracts</i>	Pending SAP
<i>AICPA Practice Bulletin 8, Application of FAS 97 to Insurance Enterprises</i>	Rejected in SSAP No. 51R and SSAP No. 52R
<u>ASU 2018-12, Financial Services—Insurance (Topic 944): Targeted Improvements to the Accounting for Long-Duration Contracts</u>	<u>Rejected in Preamble, SSAP No. 50, SSAP No. 51R, SSAP No. 52, SSAP No. 54R, SSAP No. 55, SSAP No. 56, SSAP No. 71, and SSAP No. 86</u>

Other U.S. GAAP revised as a result of the ASU include:

- *FAS 133, Accounting for Derivative Instruments and Hedging Activities* (and related DIGs) – The framework of FAS 133 was adopted with modification in *SSAP No. 86—Derivatives*. The revisions from ASU 2018-12 indicate that contracts with market risk benefits do not need to be bifurcated as

embedded derivatives, as the guidance in ASU 2018-12 requires market risk benefits to be measured at fair value. The ASU revisions also delete or revise related implementation guidance for assessing whether embedded derivatives shall be bifurcated under U.S. GAAP. **This guidance will not impact the FAS 133 guidance adopted with modification, as SSAP No. 86 specifies that embedded derivatives shall not be separated from the derivative instrument.**

- *FAS 130, Other Comprehensive Income* – FAS 130 was rejected as not applicable under statutory accounting. The revisions from ASU 2018-12 modify FAS 130 to specify the additional components (e.g., changes in discount rate assumptions) that are recognized through OCI. These modifications will not impact the prior statutory accounting decision to reject FAS 130 for statutory accounting.

The following relevant SAP guidance is noted:

- ***SSAP No. 51—Life Contracts:*** This SSAP establishes statutory accounting principles for income recognition and policy reserves for life contracts. This SSAP identifies that policy reserves shall be established as required in *Appendix A-820, Minimum Life and Annuity Reserves* and *Appendix A-822, Asset Adequacy Analysis Requirements* or the *Valuation Manual*.
- ***SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses:*** This SSAP establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts. (It also addresses unpaid losses and LAE for property and casualty contracts.) Pursuant to the guidance in paragraph 12, for each line of business, and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses and loss/claim adjustment expenses. This guidance identifies that management shall follow the concept of conservatism when determining estimates, but there is not a specific requirement to include a provision for adverse deviation in claims. With the revisions reflected in ASU 2018-12, the U.S. GAAP guidance has been revised to specify that the assumptions used in determining a liability for future policy benefits shall not include a provision for the risk of adverse deviation. Prior to these revisions, the guidance in ASC 944-40-30-7 specifically stated that the assumptions shall include a provision for the risk of adverse deviation. (*Note, as detailed in the proposed statutory accounting modifications, reference to the old U.S. GAAP guidance for adverse deviation is included in the Preamble and is proposed to be deleted.*)
- ***SSAP No. 71—Policy Acquisition Costs and Commissions:*** This SSAP establishes statutory accounting principles for policy acquisition costs and commissions. Pursuant to SSAP No. 71, all policy acquisition costs and commissions shall be expensed when incurred. Although the ASU is streamlining the amortization of capitalized deferred acquisition costs, this revision will not impact statutory accounting. (*Note, as detailed in the proposed statutory accounting modifications, reference to the old U.S. GAAP guidance is included in the Preamble and is proposed to be modified to reflect the new guidance.*)

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Per the comment letter received on June 9, 2023, interested parties support the conclusion reached on Agenda item 2023-07.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

None

Convergence with International Financial Reporting Standards (IFRS):

In 2008, the FASB undertook an insurance contracts project jointly with the International Accounting Standards Board (IASB). In 2013, after considering comments from the exposure of a 2010 Discussion Draft and a 2013 Proposed Update, the FASB decided to separate from the IASB project, and instead focus on targeted improvements to existing U.S. GAAP concepts. The decision to focus on targeted improvements to existing U.S. GAAP guidance, with the continued limitation of the guidance to insurance companies, was strongly supported by commenters in lieu of introducing a completely new accounting model that would apply to all entities that issued “insurance contracts.”

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose proposed revisions to reject *ASU 2022-05, Transition for Sold Contracts* as not applicable for statutory accounting in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts*; *SSAP No. 51R—Life Contracts*; *SSAP No. 52—Deposit-Type Contracts*; *SSAP No. 56—Separate Accounts*; *SSAP No. 71—Policy Acquisition Costs and Commissions* and *SSAP No. 86—Derivatives*. The guidance in *ASU 2022-05* provides updated transition guidance for *ASU 2018-12*, which had previously been rejected for statutory accounting. The proposed revisions are illustrated below:

SSAP No. 50—Classifications of Insurance or Managed Care Contracts

46. This statement rejects the U.S. GAAP classifications (i.e., short-duration and long-duration) found in [ASU 2022-05 Transition for Sold Contracts](#), *ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *FASB Statement No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long Duration Participating Contracts*.

SSAP No. 51R—Life Contracts

56. This statement rejects [ASU 2022-05 Transition for Sold Contracts](#), *ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, *FASB Statement 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, *AICPA Practice Bulletin No. 8, Application of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses From the Sale of Investments*, to *Insurance Enterprises*, the *AICPA Audit and Accounting Guide—Audits of Stock Life Insurance Companies*, *AICPA Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises* relating to accounting and reporting for policy reserves for short and long duration contracts, and *FASB Interpretation No. 40, Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises*, an interpretation of *FASB Statements No. 12, 60, 97, and 113*.

SSAP No. 52—Deposit-Type Contracts

25. This statement rejects [ASU 2022-05 Transition for Sold Contracts](#), *ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, *FASB Statement 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by*

Insurance Enterprises for Certain Long-Duration Participating Contracts, AICPA Practice Bulletin No. 8, Application of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses From the Sale of Investments, to Insurance Enterprises, the AICPA Audit and Accounting Guide—Audits of Stock Life Insurance Companies, AICPA Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises relating to accounting and reporting for policy reserves for short and long duration contracts, and FASB Interpretation No. 40, Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises, an interpretation of FASB Statements No. 12, 60, 97, and 113.

SSAP No. 56—Separate Accounts

41. This statement rejects [ASU 2022-05 Transition for Sold Contracts](#), ASU 2018-12, *Targeted Improvements to the Accounting for Long-Duration Contracts*, AICPA *Statement of Position 03-1, Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts* (SOP 03-1). The disclosure elements included within this SSAP are derived from the criteria for separate account reporting under SOP 03-1; however, this SSAP does not restrict separate account reporting pursuant to the criteria established in SOP 03-1.

SSAP No. 71—Policy Acquisition Costs and Commissions

6. This statement rejects [ASU 2022-05 Transition for Sold Contracts](#), ASU 2018-12, *Targeted Improvements to the Accounting for Long-Duration Contracts*, ASU 2010-26, *Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts*, FASB *Statement No. 60, Accounting and Reporting by Insurance Enterprises*, FASB *Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *Statement of Position 05-1, Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts*.

SSAP No. 86—Derivatives

73. This statement rejects [ASU 2022-05 Transition for Sold Contracts](#), 2020-06, *Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)*, *Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity*, ASU 2020-01, *Investments—Equity Securities (Topic 321)*, *Investments—Equity Method and Joint Ventures (Topic 323)*, and *Derivatives and Hedging (Topic 815)*, *Clarifying the Interactions between Topic 321, Topic 323 and Topic 815*, ASU 2018-03, *Recognition and Measurement of Financial Assets and Financial Liabilities*, and ASU 2016-03, *Intangibles—Goodwill and Other, Business Combinations, Consolidation, Derivatives and Hedging*.

Staff Review Completed by:

William Oden, NAIC Staff – December 2022

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification to reject *ASU 2022-05, Transition for Sold Contracts* in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts*; *SSAP No. 51R—Life Contracts*; *SSAP No. 52—Deposit-Type Contracts*; *SSAP No. 56—Separate Accounts*; *SSAP No. 71—Policy Acquisition Costs and Commissions* and *SSAP No. 86—Derivatives*, which is consistent with prior agenda items related to this topic.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to reject ASU 2022-05 in SSAP Nos. 50, 51R, 52, 56, 71, and 86.

Issue: PIK Interest Disclosure Clarification

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item has been developed to further clarify, and incorporate a practical expedient, to the paid-in-kind (PIK) interest aggregate disclosure adopted in *SSAP No. 34—Investment Income Due and Accrued* for year-2023. In response to questions received on how paydowns / disposals would impact PIK interest included in the cumulative balance, it was noted that clarifying guidance would assist with consistent application. Furthermore, without clarification it was identified that companies and investment software vendors may interpret the need to detail the retrospective PIK allocations and paydowns / disposals as evidence for the resulting amount.

To eliminate the potential inconsistent application on how paydowns / disposals impact PIK interest included in cumulative principal / par balance, as well as to streamline the calculation, this agenda item proposes the following clarifications:

- Any decreasing amounts to principal balances (paydowns / disposals / sales, etc.) shall first be applied to any PIK interest included in the principal balance. For example, if original par was \$100, PIK interest received overtime was \$50 and paydowns received were \$30, the resulting PIK included in the cumulative balance would be \$20 - (\$50 less \$30). No reduction to the original principal would occur until the PIK interest had been fully eliminated from the balance. If in this scenario paydowns of \$70 had occurred, the company would report zero in the disclosure for cumulative PIK interest, as the amount received would have fully eliminated the \$50 in PIK interest.
- The determination of PIK interest in cumulative balance can be calculated through a practical expedient calculation of original par / principal value to current par / principal value, not to go less than zero. This calculation will determine the resulting balance from PIK interest over time as well as paydowns / disposals, etc. The intent of this calculation is to prevent companies and investment software vendors from creating a schedule that details PIK interest and paydowns received retroactively since the origination of the investment. The practical expedient calculation from the original to current par / principal value shall result with the same resulting PIK interest amount included in the cumulative balance without the retroactive scheduling required.
