

2023 Proceedings of the National Association of Insurance Commissioners

**2023 Summer National Meeting
August 12–16, 2023**

**Held at the
Hyatt Regency Seattle, Hyatt at Olive 8
& Seattle Convention Center Summit Building
Seattle, Washington**

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting

Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information

Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation

Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal

Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation

Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities

NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies

Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

Statistical Reports

Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products

Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis

Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers

Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

**CERTIFICATE OF INCORPORATION OF
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
a Nonstock Corporation**

I. Name

The name of the Corporation is: **National Association of Insurance Commissioners (NAIC)**.

II. Duration

The period of duration of the NAIC is perpetual.

III. Registered Office and Agent

The NAIC's Registered Office in the State of Delaware is to be located at: 1209 Orange St., in the City of Wilmington, Zip Code 19801. The registered agent in charge thereof is The Corporation Trust Company.

IV. Authority to Issue Stock

The NAIC shall have no authority to issue capital stock.

V. Incorporators

The name and address of the incorporator are as follows:

Catherine J. Weatherford
National Association of Insurance Commissioners
120 W. 12th St., Suite 1100
Kansas City, MO 64106

VI. Purpose

The NAIC is organized exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), including without limitation, to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:

- (a) Protect the public interest, promote competitive markets and facilitate the fair and equitable treatment of insurance consumers.
- (b) Promote, in the public interest, the reliability, solvency and financial solidity of insurance institutions.
- (c) Support and improve state regulation of insurance.

VII. Restrictions

- A. No substantial part of the activities of the Corporation shall be the carrying of propaganda, or otherwise attempting to influence legislation except as otherwise permitted by Section 501(h) of the Code and in any corresponding laws of the State of Delaware, and the Corporation shall not participate in or intervene

in including the publishing or distribution of statements concerning any political campaign on behalf of or in opposition to any candidate for public office.

- B. For any period for which the Corporation may be considered a private foundation, as defined in Section 509(a), the Corporation shall be subject to the following restrictions and prohibitions:
1. The Corporation shall not engage in any act of self-dealing as defined in section 4941(d) of the Code.
 2. The Corporations shall make distributions for each taxable year at such time and in such manner so as not to become subject to the tax on undistributed income imposed by section 4942 of the Code.
 3. The Corporation shall not retain any excess business holdings as defined in section 4943(c) of the Code.
 4. The Corporation shall not make any investments in such manner as to subject it to tax under section 4944 of the Code.
 5. The Corporation shall not make any taxable expenditures as defined in section 4945(d) of the Code.

VIII. Membership

The NAIC shall have one class of members consisting of the Commissioners, Directors, Superintendents, or other officials who by law are charged with the principal responsibility of supervising the business of insurance within each State, territory, or insular possession of the United States. Members only shall be eligible to hold office in and serve on the Executive Committee, Committees and Subcommittees of the NAIC. However, a member may be represented on a Committee or Subcommittee by the member's duly authorized representative as defined in the Bylaws. Only one official from each State, territory or insular possession shall be a member and each member shall be limited to one vote. Any insurance supervisory official of a foreign government or any subdivision thereof, which has been diplomatically recognized by the United States government, may attend and participate in all meetings of this Congress but shall not be a member and shall not have the power to vote.

IX. Activities

The NAIC is a nonprofit charitable and educational organization and no part of the net earnings or property for the corporation will inure to the benefit of, or be distributable to its members, directors, officers or other private individuals, except that the NAIC shall be authorized and empowered to pay reasonable compensation for services rendered by employees and contractors, and to make payments and distributions in furtherance of the purposes set forth in Article VI hereof.

X. Powers

The NAIC shall have all of the powers conferred by the Delaware General Corporation Law for non-profit corporations, except that, any other provision of the Certificate to the contrary notwithstanding, the NAIC shall neither have nor exercise any power, nor carry on any other activities not permitted: (a) by a corporation exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); or (b) by a corporation contributions to which are deductible under Section 170(c)(2) of the Internal Revenue Code of 1986, as amended, (or the corresponding provision of any future United States Internal Revenue law).

XI. Immunity

All officers and members of the Executive Committee shall be immune from personal liability for any civil damages arising from acts performed in their official capacity, and shall not be compensated for their services as an officer or member of the Executive Committee on a salary or a prorated equivalent basis. The immunity shall extend to such actions for which the member of the Executive Committee or officer would not otherwise be liable, but for the Executive Committee member's or officer's affiliation with the NAIC. This immunity shall not apply to intentional conduct, wanton or willful conduct or gross negligence. Nothing herein shall be construed to create or abolish an immunity in favor of the NAIC itself. Nothing herein shall be construed to abolish any immunities held by the state officials pursuant to their individual state's law.

XII. Exculpation and Indemnification

A member of the Executive Committee shall not be liable to the NAIC or its members for monetary damages for breach of fiduciary duty as a member of the Executive Committee, provided that this provision shall not eliminate or limit the liability of a member of the Executive Committee for any breach of the duty of loyalty to the NAIC or its members, for acts or omissions not in good faith, or which involve intentional misconduct or a knowing violation of law, or for any transaction from which the member of the Executive Committee involved derived an improper personal benefit. Any amendment, modification or repeal of the foregoing sentence shall not adversely affect any right or protection of a member of the Executive Committee of the Corporation hereunder in respect of any act or omission occurring prior to the time of such amendment, modification, or repeal. If the Delaware General Corporation Law hereafter is amended to authorize the further elimination or limitation of the liability of the members of the Executive Committee, then the liability of a member of the Executive Committee, in addition to the limitation provided herein, shall be limited to the fullest extent permitted by the amended Delaware General Corporation Law.

The NAIC shall indemnify to the full extent authorized or permitted by the laws of the State of Delaware, as now in effect or as hereafter amended, any person made or threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative, including an action by or in the right of the NAIC) by reason of the fact that the person is or was a member of the Executive Committee, officer, member, committee member, employee or agent of the NAIC or serves any other enterprise as such at the request of the NAIC.

The foregoing right of indemnification shall not be deemed exclusive of any other rights to which such person may be entitled apart from this Article XII. The foregoing right of indemnification shall continue as to a person who has ceased to be a member of the Executive Committee, officer, member, committee member, employee or agent and shall inure to the benefit of the heirs, the executors and administrators of such a person.

XIII. Dissolution

In the event of the dissolution of the NAIC, the Executive Committee shall, after paying or making provision for the payment of all of the liabilities of the NAIC, dispose of all the assets of the NAIC equitably to any state government which is represented as a member of the NAIC at the time of dissolution, provided that the assets are distributed upon the condition that they be used primarily and effectively to implement the public purpose of the NAIC, or to one or more such organizations organized and operated exclusively for religious, charitable, education, scientific, or literary purposes or similar purposes as shall at the time qualify: (a) as an exempt organization under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); and (b) as an organization contributions to which are deductible under Section 170(c) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), as the Executive Committee shall determine.

XIV. Bylaws

The Bylaws of the NAIC may prescribe the powers and duties of the several officers, members of the Executive Committee and members and such rules as may be necessary for the work of the NAIC provided they are in conformity with the Certificate of Incorporation.

XV. Amendments

This Certificate of Incorporation may be altered or amended at any meeting of the full membership (Plenary Session) of the NAIC by an affirmative vote of two-thirds of the members qualified to vote, or their authorized representatives, provided that previous notice of the proposed amendment has been mailed to all members by direction of the Executive Committee at least thirty (30) days prior to the meeting.

IN WITNESS WHEREOF, this Certificate of Incorporation has been signed this 4th day of October 1999.

Catherine J. Weatherford, Incorporator

ADOPTED 1999, Proc. Third Quarter

Adopted October 1999
Amended November 2002
Amended June 2003
Amended March 2004
Amended December 2004
Amended March 2009
Amended September 2009
Amended October 2011
Amended December 2015
Amended December 2021

Bylaws of the NAIC, a Delaware Non-Profit Corporation

**BYLAWS OF THE
 NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS**

ARTICLE I

Name, Organization and Location

The name of this corporation is **NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS** (NAIC). The NAIC is organized under the General Corporation Law of the State of Delaware. The NAIC may have one (1) or more office locations within or without the State of Delaware as the Executive Committee may from time to time determine.

ARTICLE II

Membership

The Membership of the NAIC shall be comprised of those persons designated as members in the Certificate of Incorporation. Each member of the NAIC shall have the power to vote and otherwise participate in the affairs of the NAIC as set forth herein or as required by applicable law. This power may be exercised through a duly authorized representative who shall be a person officially affiliated with the member's department and who is wholly or principally employed by said department.

The organization may charge members an annual assessment, the amount of which shall be determined by the Executive Committee. Members failing to pay all NAIC assessments on a timely basis shall be placed in an inactive status. Members in an inactive status shall not have any voting rights and shall be denied membership on NAIC committees and task forces, access to mailings and services of the NAIC Offices, as well as access to zone examination processes and other benefits of membership in the NAIC.

The NAIC's receipt of full payment from the inactive member of all current and past due assessments shall serve to immediately remove them from inactive status.

The Membership of the NAIC shall be subject to a conflict of interest policy and disclosure form as adopted by the members.

The Executive Committee is empowered to reinstate, in part or in whole, an inactive member's participation on the committees and task forces, access to mailings and services of the NAIC Offices and satellite offices, as well as access to zone examination processes, and other benefits of membership in the NAIC upon good cause shown as determined by the Executive Committee.

ARTICLE III

Officers

The officers of the NAIC shall be a President, a President-Elect, a Vice President, and a Secretary-Treasurer. Annual officer elections shall be held at the last regular National Meeting of each calendar year or at such other plenary session as agreed to by the members. The voting membership, by secret ballot, shall elect officers as provided in these Bylaws. Officers' terms shall be for one year, beginning on January 1 following their election. The officers shall hold office until their death, resignation, removal or the election and qualification of their successors, whichever occurs first. Any Officer may resign at any time by giving notice thereof in writing to the President of the NAIC. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

If an interim vacancy occurs in the office of President, the President-Elect shall cease to hold his or her office effective immediately and shall assume the office of President. If an interim vacancy occurs in any one or more of the other officer positions, an interim election shall be held to fill the vacancy. No member may hold any office for more than two consecutive years. Notwithstanding the foregoing, at no time shall more than two officer positions be filled by members of the same Zone during the same term. Any officer may be removed from office by the affirmative vote of two-thirds (2/3) of the members, but only after a resolution for removal is adopted by two-thirds (2/3) of the Executive Committee whenever, in their judgment, the best interests of the NAIC would be served thereby.

The President shall serve as Chairman of the Executive Committee and shall preside at all special and regular meetings of the members. The President shall serve as the leader of the organization and its principal spokesperson. The President shall work closely with the Executive Committee to establish and achieve the strategic, business and operational goals of the organization; ensure appropriate policies and procedures for the organization are implemented and followed; and protect the integrity as well as the resources of the organization. After a member completes his or her term or terms as President, he or she shall not be able to hold another officer position for a period of twelve (12) months from the date such member completes his or her term or terms as President, which shall be referred to as a "waiting period"; provided however, the Executive Committee may waive the twelve month waiting period if warranted by exigent circumstances.

The President-Elect shall serve as Vice-Chairman of the Executive Committee. In the absence of the President at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, the President-Elect shall preside over such meeting to the extent of the President's absence. The President-Elect shall perform such other duties and tasks as may be assigned by the President. Where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President's term of office.

The Vice President, in the absence of the President and President-Elect at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, shall preside over such meeting to the extent of the President's and the President-Elect's absence; and shall perform such other duties as may be assigned by the President or President-Elect, or in the absence thereof, by the Executive Committee.

The Secretary-Treasurer shall assist the President and, as applicable, the President-Elect or the Vice President in the conduct of meetings of the Executive Committee and members. For member meetings, the Secretary-Treasurer shall call the roll of the membership and certify the presence of a quorum and shall receive, validate and maintain all proxies for elections held at member meetings. The Secretary-Treasurer shall also recommend to the Executive Committee such policies and procedures to maintain the history and continuity of the NAIC. The

Secretary-Treasurer shall also assist the President and President-Elect in all matters relating to the budget, accounting, expenditure and revenue practices of the NAIC; including, but not limited to reviewing the financial information of the organization and consulting with NAIC management, independent auditors, and other necessary parties regarding the financial operations and condition of the organization.

ARTICLE IV

Executive Committee

The business and affairs of the NAIC shall be managed by and under the direction of the Executive Committee. The Executive Committee shall be made up entirely of members of the NAIC. The Executive Committee shall consist of the following members: the officers of the NAIC; the most recent past president; the twelve (12) members of the zones as provided for in Article V of these Bylaws. The members of the Executive Committee shall be subject to a conflict of interest policy as adopted by the members. Any Executive Committee member may resign at any time by giving notice thereof in writing to the members of the NAIC. Resignation as an Executive Committee member also operates as resignation as a Zone officer. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

1. The Executive Committee shall have the authority and responsibility to:
 - (a) manage the affairs of the NAIC in a manner consistent with the Certificate of Incorporation and Bylaws.
 - (b) make recommendations to achieve the goals of the NAIC based upon either its own initiative or the recommendations of the Standing Committees or Subcommittees reporting to it, for consideration and action by the members at any NAIC Plenary Session.
 - (c) create and terminate one or more Task Forces reporting to it to the extent needed and appropriate.
 - (d) establish and allocate, from time to time, functions and responsibilities to be performed by each Zone.
 - (e) to the extent needed and appropriate, oversee NAIC Offices to assist the NAIC and the individual members in achieving the goals of the NAIC.
 - (f) submit to the NAIC at each National Meeting, during which a Plenary Session is held, its report and recommendations concerning the reports of the Standing Committees. All Standing Committee reports shall be included as part of the Executive Committee report.
 - (g) plan, implement and coordinate communications and activities with other state, federal and local government organizations in order to advance the goals of the NAIC and promote understanding of state insurance regulation.
2. Duties and Operations of the Executive Committee.
 - (a) The Executive Committee shall hold at least two (2) regular meetings annually at a designated time and place. Special meetings may be held when called by the President, or by at least three (3) members of the Executive Committee in writing. In any case, the Executive Committee shall meet at least once per calendar month. At least five (5) days notice shall be given of all regular and special meetings. Meetings

may be held in person or by means of conference telephone or other communication equipment by means of which all persons participating in the meeting can hear each other, and such participation in a meeting shall constitute presence in person at such meeting in accordance with applicable laws. The presiding member of the Executive Committee shall only cast his or her vote in order to break a tie vote. In addition, the Executive Committee may act by written consent as provided by law.

- (b) The Executive Committee may, with the concurrence of two-thirds of the members of the Executive Committee, establish rules for its conduct that shall not conflict with the Certificate of Incorporation and Bylaws. Such rules may be changed only by a concurrence of two-thirds of the members of the Executive Committee after twenty-four (24) hours notice to all members of the Executive Committee.
- (c) Any action required or permitted to be taken at any meeting of the Executive Committee or any committee thereof may be taken without a meeting if all members of the Executive Committee or such committee, as the case may be, consent thereto in writing in accordance with applicable law.
- (d) The Executive Committee shall cause to be kept minutes of its meeting and have information of any action of a general character taken by it published to members qualified to vote.

(e) NAIC OFFICES

- (i) The Executive Committee shall oversee an Executive Office and a Central Office with management and staff personnel and appropriate resources for performance of duties and assigned responsibilities. Additional satellite offices may be established as needed. The Executive Committee shall have the authority to select, employ and terminate a Chief Executive Officer who shall not be a member of the NAIC and who shall have the primary responsibility for the internal management and functioning of the NAIC Offices within the direction of the Executive Committee, as well as other duties assigned by the Executive Committee through execution of an Employment Agreement or other authorization. The Chief Executive Officer appointed by the Executive Committee pursuant to this section shall not be considered an officer for purposes of Article III hereof and shall not be a member of the Executive Committee. The Executive Committee, through the Internal Administration (EX1) Subcommittee, shall provide oversight and direction to the Chief Executive Officer regarding Office operations.
- (ii) Consistent with the purposes of the NAIC, the role of the NAIC Offices is to: (1) provide services to the NAIC through support to the NAIC Committees, Subcommittees, Task Forces or otherwise; (2) provide services to individual State insurance departments; and (3) develop recommendations for consideration as to NAIC policy and administrative decisions of the NAIC.
- (iii) In performing its role, subject to the oversight and direction specified in (paragraph i) the NAIC Offices may engage in a variety of functions including but not limited to the following: research; analysis; information gathering and dissemination; library services; data collection; data base building and maintenance; report generation and dissemination; government liaison; non-regulatory liaison; securities valuation; administration; litigation; legislative and regulatory drafting; and educational development.
- (iv) The Chief Executive Officer shall prepare an annual budget, related to the priorities of the NAIC, for the NAIC Offices to be submitted through the EX1 Subcommittee to the Executive Committee, which shall make its recommendations to the members of the NAIC for action at the next Plenary Session of the NAIC.

3. Internal Administration (EX1) Subcommittee

The Internal Administration (EX1) Subcommittee shall be a Subcommittee reporting to the Executive Committee. Appointments of the Chair and Vice Chair of the Executive Subcommittee and members other than those specifically designated herein shall be made by the President and President-Elect.

This Subcommittee shall be comprised of the President, President-Elect, Vice President, the Secretary-Treasurer, the most recent past President, and three (3) other members of the Executive Committee. The presiding member of the Subcommittee shall only cast his or her vote in order to break a tie vote.

The Internal Administration (EX1) Subcommittee shall:

- (a) Exercise such powers and authority as may be delegated to it by the Executive Committee.
- (b) Generally oversee the NAIC Offices including, without limitation: (i) periodically monitor operations of the NAIC Offices, (ii) review and revise the budget of the NAIC, hold an annual hearing to receive public comments on the budget of the NAIC, and submit the revised budget to the Executive Committee, (iii) approve emergency expenditures which vary from the adopted budget and promptly certify its action in writing to the Executive Committee, (iv) evaluate the Chief Executive Officer and make appropriate recommendations to the Executive Committee, (v) assist the Chief Executive Officer in resolving competing demands for NAIC resources, (vi) review compensation of all senior management and (vii) quarterly prepare a report containing the current budget and expenditures which the Secretary-Treasurer shall present to the Executive Committee.

4. Audit Committee

The Executive Committee shall appoint an Audit Committee made up of at least four (4) members of the NAIC, including at least one member from each zone, in addition to the NAIC Secretary-Treasurer. The NAIC Secretary-Treasurer shall chair the Audit Committee. The Audit Committee shall report to the Executive Committee without any NAIC employees being present. The Audit Committee shall be directly responsible for the appointment, compensation, and oversight of the independent certified public accountant employed to conduct the audit. The Audit Committee shall also have the power, to the extent permitted by law, to: (i) initiate or review the results of an audit or investigation into the business affairs of the NAIC; (ii) review the NAIC's financial accounts and reports; (iii) conduct pre-audit and post-audit reviews with NAIC staff, members and independent auditors; and (iv) exercise such other powers and authority as delegated to it by the Executive Committee.

ARTICLE V

Zones

To accomplish the purposes of the NAIC in a timely and efficient manner, the United States, its territories and insular possessions shall be divided into four Zones. Each Zone shall consist of a group of at least eight States, located in the same geographical area, with each State being contiguous to at least one other State in the group so far as practicable, plus any territory or insular possession that may be deemed expedient, all as determined by majority of the Executive Committee. Members of each Zone shall annually elect a Chairman, a Vice Chairman and a Secretary from among themselves prior to or during the last regular National Meeting of each calendar year or at such time as agreed to by the Zone members. The Chairman, Vice Chairman and Secretary of each Zone shall be members of the Executive Committee with terms of office corresponding to that of the officers. Each Zone shall perform such functions as are designated by the Executive Committee of the

NAIC or by the members of the NAIC as a whole or by the members of the Zone. Each Zone may hold Zone Meetings for such purposes as may be deemed appropriate by members of the Zone.

ARTICLE VI

Standing Committees and Task Forces

1. General

The Standing Committees shall not be subcommittees of the Executive Committee and shall have no power or authority for the management of the business and affairs of the NAIC. Each Standing Committee shall be composed of not more than 15 members, including a Chair and one or more Vice Chairs, appointed by the President and President-Elect, and such appointments shall remain effective until the succeeding President and President-Elect appoint members for the following year. Standing Committees shall meet at least twice a year at National Meetings and may meet more often at the call of the Chair as required to complete its assignments from the Executive Committee in a timely manner.

The Executive Committee shall make all assignments of subject matter to the Standing Committees and shall require coordination between Committees and Task Forces of the subject matter if more than one Committee or Task Force is affected. The format of the Committee reports shall be prescribed by the Executive Committee. All appointments or elections of members of the NAIC to any office or Committee of the NAIC shall be deemed the appointment or election of a particular member and shall not automatically pass to a successor in office.

2. Specific Duties

The Standing Committees of the NAIC, their duties and responsibilities shall be as follows:

- (a) Life Insurance and Annuities (A) Committee: This Standing Committee shall consider issues relating to life insurance and annuities.
- (b) Health Insurance and Managed Care (B) Committee: This Standing Committee shall consider issues relating to health and accident insurance and managed care.
- (c) Property and Casualty Insurance (C) Committee: This Standing Committee shall consider issues relating to personal and commercial lines of property and casualty insurance, worker's compensation insurance, statistical information, surplus lines, and casualty actuarial matters.
- (d) Market Regulation and Consumer Affairs (D) Committee: This Standing Committee shall consider issues involving market conduct in the insurance industry; competition in insurance markets; the qualifications and conduct of agents and brokers; market conduct examination practices; the control and management of insurance institutions; consumer services of State insurance departments; and consumer participation in NAIC activities.
- (e) Financial Condition (E) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to accounting practices and procedures; blanks; valuation of securities; the Insurance Regulatory Information System (IRIS), as it relates to solvency and profitability; the call, monitoring and concluding report of Zone Examinations; and financial examinations and examiner training.
- (f) Financial Regulation Standards and Accreditation (F) Committee: This Standing Committee shall consider

both administrative and substantive issues as they relate to administration and enforcement of the NAIC Accreditation Program, including without limitation, consideration of standards and revisions of standards for accreditation, interpretation of standards, evaluation and interpretation of states' laws and regulations, and departments' practices, procedures and organizations as they relate to compliance with standards, examination of members for compliance with standards, development and oversight of procedures for examination of members for compliance with standards, qualification and selection of individuals to perform the examination of members for compliance with standards, and decisions regarding whether to accredit members.

(g) International Insurance Relations (G) Committee. This Standing Committee shall have the responsibility for issues relating to international insurance.

(h) Innovation, Cybersecurity and Technology (H) Committee. This Standing Committee shall consider issues related to cybersecurity, innovation, data security and privacy, and emerging technology issues.

3. Task Forces

The Executive Committee, its Subcommittee and the Standing Committees may establish one or more Task Forces, subject to approval of the Executive Committee. The parent Committee or Subcommittee, subject to approval of the Executive Committee, may vote to discontinue a Task Force once its charge has been completed.

Vacancies in the positions of Chair or Vice Chair of any Task Force shall be filled by the parent Committee or Subcommittee from within or outside the present Task Force membership; provided, however, that the chief insurance regulatory official of the state of the former Chair or Vice Chair shall become a member of the Task Force. A vacancy in the position of member shall be filled by the chief insurance regulatory official of the vacating member's state.

If an existing Task Force is dealing with insurance issues that require continuing study, the Executive Committee may adopt the recommendation of the parent Committee or Subcommittee that the Task Force be designated a Standing Task Force. A Standing Task Force shall continue in effect until terminated by the Executive Committee.

ARTICLE VII

Meetings of the Membership

1. Regular Meetings

The NAIC shall hold at least two (2) regular meetings of the members ("National Meetings") each calendar year. Notice, stating the place, day and hour and any special purposes of the National Meeting, shall be delivered by the Executive Committee not less than ten (10) calendar days nor more than sixty (60) calendar days before the date on which the National Meeting is to be held, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

2. Special Meetings

Special meetings of the members may be called by any five (5) members of the Executive Committee by giving all members notice of such meeting at least ten (10) but not more than sixty (60) days prior thereto, or by any twenty (20) members of the NAIC by giving all members notice of such meeting at least thirty (30) but not more than sixty (60) days prior thereto. Notice of the special meeting shall state the place, day and hour of the

special meeting and the purpose or purposes for which the special meeting is called, and shall be delivered by the persons calling the meeting within the applicable time period set forth herein, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

3. Waiver of Notice; Postponement

Member meetings may be held without notice if all members entitled to notice are present (except when members entitled to notice attend the meeting for the express purpose of objecting, at the beginning of the meeting, because the meeting is allegedly not lawfully called or convened), or if notice is waived by those not present. Any previously scheduled meeting of the members may be postponed by the Executive Committee (or members calling a special meeting, as the case may be) upon notice to members, in person or writing, given at least two (2) days prior to the date previously scheduled for such meeting.

4. Quorum

Except as otherwise provided by law or by the Certificate of Incorporation, the presence, by person or proxy, of a majority of the members shall constitute a quorum at a member meeting, a meeting of a Standing Committee, Task Force or a working group. The chairman of the meeting may adjourn the meeting from time to time, whether or not there is such a quorum. The members present at a duly called member meeting at which a quorum is present may continue to transact business until adjournment, notwithstanding the withdrawal of enough members to leave less than a quorum.

5. Any meeting of the NAIC may be held in executive session as defined in the NAIC policy on open meetings. Any member may attend and participate in any meeting of the NAIC or any meeting of a Standing Committee or Task Force whether or not such member has the right to vote. All National Meetings shall provide for a Plenary Session of the NAIC as a whole in order to consider and take action upon the matters submitted to the NAIC.

ARTICLE VIII

Elections

1. The election of officers of the NAIC shall be scheduled for the plenary session of the last National Meeting of the calendar year or at such other plenary session as agreed to by the members.
2. At the beginning of such Plenary Session, the Secretary-Treasurer shall ascertain and announce the presence of a quorum.
3. Upon the determination of a quorum, the chair shall briefly review the provisions of the Certificate of Incorporation and Bylaws in regard to voting.
4. The President shall ask for and announce all proxies. Proxies shall be held by the Secretary-Treasurer or a designee throughout the election session. Proxies shall be valid, subject to their term, until superseded by the member and shall be governed by ARTICLE IX of the Bylaws.
5. Every individual voting by proxy must meet the requirements of Article II of the Bylaws of the NAIC which requires that such a person be "...officially affiliated with the member's (the member delegating authority to vote) department, and is wholly or principally employed by said department."
6. Prior to opening the nominations for office, the Chair shall appoint three (3) members of the NAIC to act as

voting inspectors. The voting inspectors shall distribute, collect, count and/or verify ballots, and report their findings to the Secretary-Treasurer. If a voting inspector is nominated for an office and does not withdraw as a candidate, he or she shall not be a voting inspector for the election of the office to which he or she is nominated and the chair shall appoint another voting inspector in his or her place.

7. The Chair shall announce the opening of nominations for offices in the following order:
 - (a) President. Provided, however, where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President's term of office. In those cases where the President runs for re-election or where a vacancy exists because the President-Elect fails or is otherwise unable to assume the Presidency, this office will be subject to an election.
 - (b) President-Elect.
 - (c) Vice President.
 - (d) Secretary-Treasurer.
8. Only members or duly authorized proxyholders may make nominations.
9. One nominating speech, not to exceed three (3) minutes in duration, shall be allowed for each nominee.
10. After nominations are closed for each office, each nominee must indicate whether he or she accepts the nomination and, if he or she accepts, shall be permitted to address the membership for a period of up to seven (7) minutes. Such addresses shall be given in the order by which the nominations were made.
11. The votes of members, in person or by proxy, constituting a majority of the quorum present at the meeting shall be necessary for election to such office. If no candidate receives a majority, the two candidates with the most votes will participate in a run-off election. The candidate with the most votes in the run-off election shall win such election.
12. Voting need not be by written ballot, unless otherwise required by these Bylaws, the Certificate of Incorporation, or applicable law.

ARTICLE IX

Proxies; Waiver of Notice

Where the delegation of power to vote or participate in the membership of the NAIC is required by ARTICLE II of these Bylaws to be in writing, such delegation must be effected by proxy. All proxies must be dated, give specific authority to a named individual who meets the requirements of ARTICLE II for duly authorized representatives, and meet any other applicable legal requirement. Documents such as electronic transmission, telegrams, mailgrams, etc. are acceptable as proxies if they otherwise meet the requirements contained herein and applicable law. Proxies should be maintained by NAIC Central Office staff. Notwithstanding the foregoing, a member may not vote by proxy in a meeting of the Executive Committee, Financial Regulation Standards and Accreditation (F) Committee in a vote concerning a state-specific item, Government Relations Leadership Council, or International Insurance Relations Leadership Group, or any respective subcommittees.

Whenever any notice is required to be given to any member (for a meeting of members or the Executive Committee) under the provisions of the Certificate of Incorporation, these Bylaws or applicable law, a written

waiver, signed by the person entitled to notice, or a waiver by electronic transmission by person entitled to notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice. Neither the business to be transacted at, nor the purpose of, any annual or special meeting of the members or any committee, subcommittee or task force need be specified in any waiver of notice of such meeting.

Unless otherwise restricted by the Certificate of Incorporation or these Bylaws, Members may participate in a meeting by means of conference telephone or by any means by which all persons participating in the meeting are able to communicate with one another, and such participation shall constitute presence in person at the meeting.

Any notice required under these Bylaws may be provided by mail, facsimile, or electronic transmission.

ARTICLE X

Procedures: Books and Records

The Executive Committee shall adopt policies and procedures for the conduct of meetings. In the event such policies and procedures conflict with the NAIC's Certificate of Incorporation or Bylaws, the Certificate of Incorporation and Bylaws shall govern.

The books and records of the NAIC may be kept outside the State of Delaware at such place or places as may from time to time be designated by the Internal Administration Subcommittee (EX1) of the Executive Committee.

ARTICLE XI

Amendments

These Bylaws may be altered or repealed and new Bylaws may be adopted at any regular or special meeting of the members by an affirmative vote, in person or by proxy, of a majority of the members entitled to vote at such meeting; provided, however, that any proposed alteration (except to correct typographical or grammatical errors or article, section or paragraph cross- references caused by other alterations, repeals, or adoptions) or repeal of, or the adoption of any Bylaw inconsistent with, Article II [Membership], Article VII, Paragraph 2 [Special Meetings of Members] and Paragraph 4 [Quorum], Article VIII [Elections], or this Article XI [Amendments] of these Bylaws (the "Supermajority Bylaws") by the members shall require the affirmative vote, in person or by proxy, of at least two-thirds (2/3) of the members entitled to vote at such meeting and provided, further, that in the case of any such member action at a special meeting of members, notice of the proposed alteration, repeal or adoption of the new Bylaw or Bylaws must be contained in the notice of such special meeting. Corrections for typographical or grammatical errors or to article, section or paragraph cross- references caused by other alterations, repeals or adoption, shall only be made if approved by the affirmative vote of at least two-thirds (2/3) of the Executive Committee.

Amended December 2021, see Proc., Spring 2022

NAIC Policy Statement on Open Meetings
Revised: April 1, 2014

The NAIC is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. NAIC members are the elected and appointed state government officials who, along with their departments and staff, regulate the conduct of insurance companies and agents in their respective state or territory. The NAIC is committed to conducting its business openly. This policy statement applies to meetings of NAIC committees, subcommittees, task forces and working groups. It does not apply to Roundtable discussions, zone meetings, commissioners' conferences, and other like meetings of the members. Applicable meetings will be open unless the discussion or action contemplated will include:

1. Potential or pending litigation or administrative proceedings which may involve the NAIC, any NAIC member, or their staffs, in any capacity involving their official or prescribed duties, requests for briefs of amicus curiae, or legal advice.
2. Pending investigations which may involve either the NAIC or any member in any capacity.
3. Specific companies, entities or individuals, including, but not limited to, collaborative financial and market conduct examinations and analysis.
4. Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder.
5. Voting on the election of officers of the NAIC.
6. Consultations with NAIC staff members related to NAIC technical guidance, including, but not limited to, Annual and Quarterly Statement Blanks and Instructions, the Accounting Practices and Procedures Manual, and similar materials.
7. Consideration of individual state insurance department's compliance with NAIC financial regulation standards by the Financial Regulation Standards and Accreditation (F) Committee or any subgroup appointed thereunder.
8. Consideration of strategic planning issues relating to federal legislative and regulatory matters or international regulatory matters.
9. Any other subject required to be kept confidential under any Memorandum of Understanding or other agreement, state or federal law or under any judicial or administrative order.

Because not all situations requiring a regulator to regulator discussion can be anticipated at the time a meeting is scheduled, a meeting convened in open session can move into regulator to regulator session on motion by the chair or other member approved by a majority of the members present. Public notice will be provided of all applicable meetings. The reason for holding a meeting in regulator only session will be announced when the meeting notice is published, at the beginning of any regulator only session, and when an open meeting goes into regulator only session.

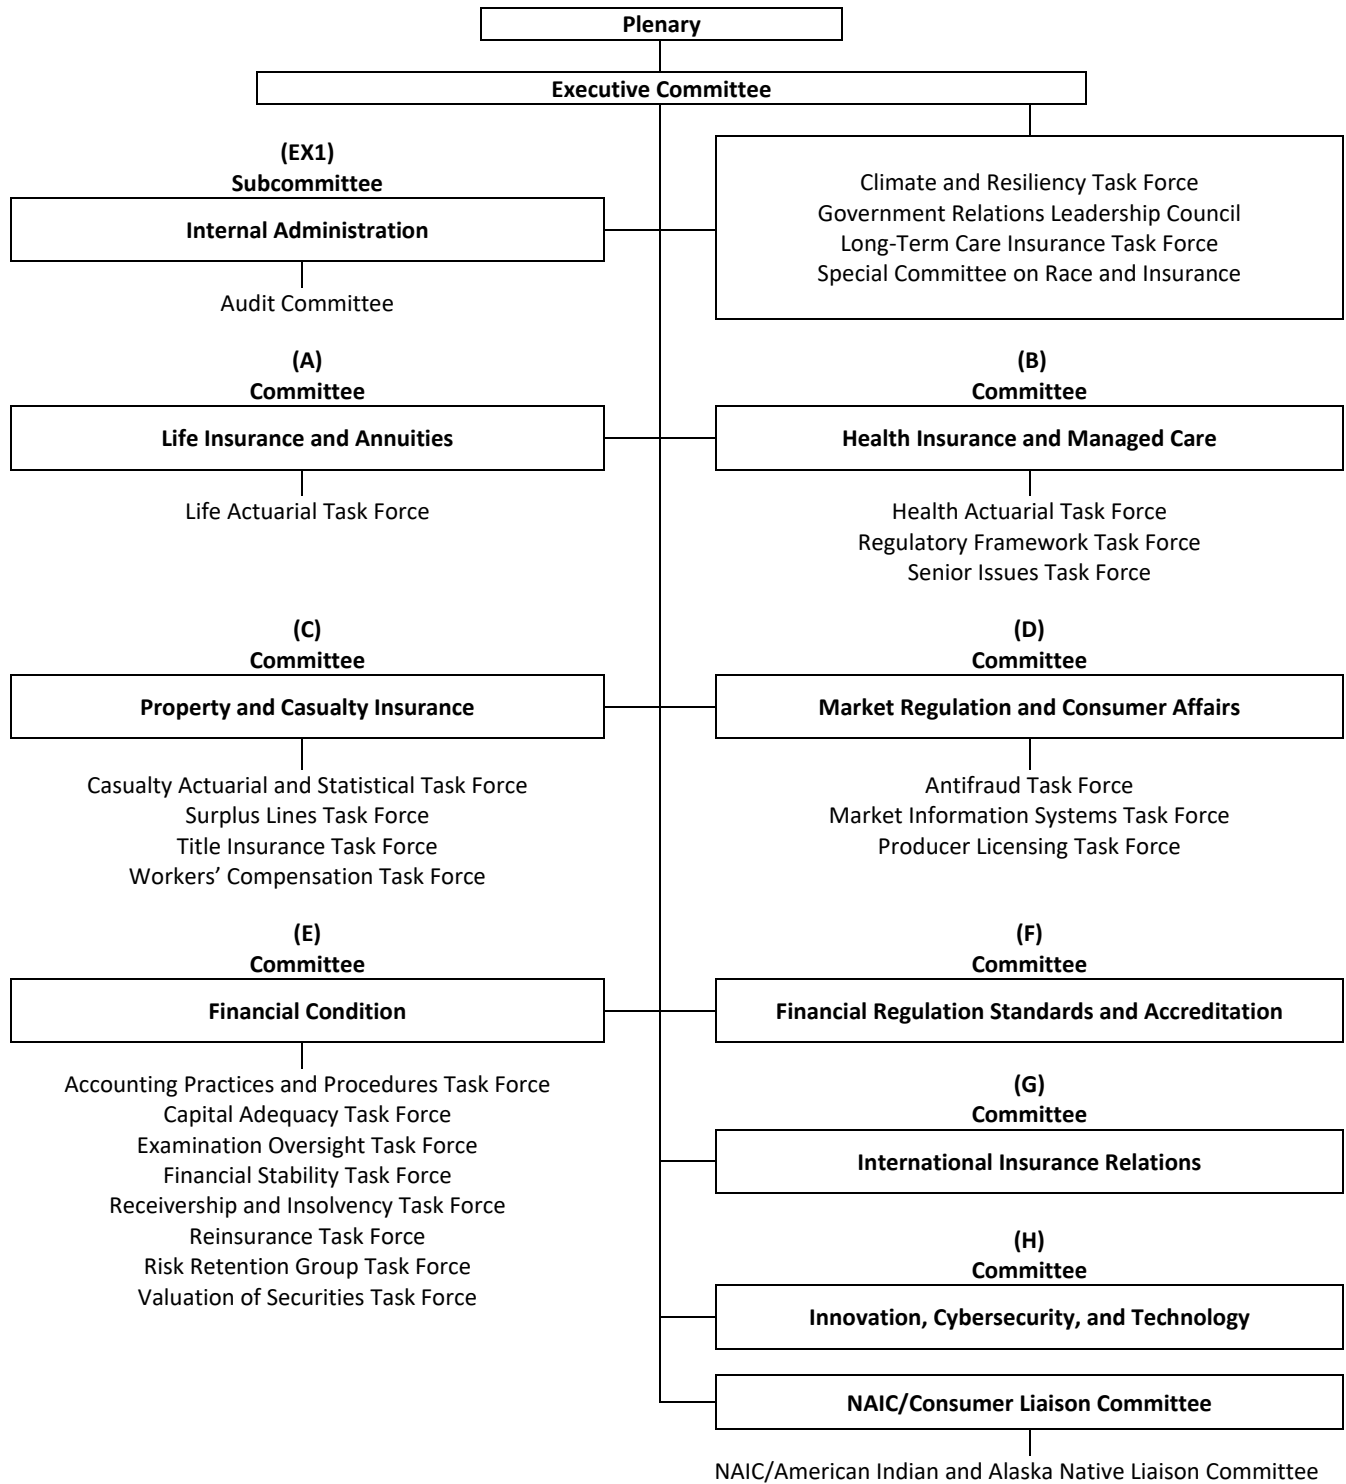

This revised policy statement shall take effect upon adoption by the membership.

[NOTE: (Effective Jan. 1, 1996, conference call meetings are included in the application of the policy statement, by action of the NAIC on June 4, 1995). This policy statement was originally adopted by the NAIC membership during the 1994 Fall National Meeting in Minneapolis, Minnesota, Sept. 18–20, 1994.]

Revisions Adopted by the NAIC Membership, April 1, 2014

1. Sept. 23, 1886: John K. Tarbox (MA) was elected President for the 1887 Convention; Samuel H. Cross (RI) was elected Vice-President; and Robert B. Brinkerhoff (Ohio chief clerk) was elected Secretary. Commissioner Tarbox died May 28, 1887. Auditor Cross was out of office effective June 1, 1887. Mr. Brinkerhoff was out of office effective June 3, 1887. Oliver Pillsbury (NH) was chosen to preside over the 1887 Convention. It is unknown who acted as Vice-President. Jacob A. McEwen (Ohio chief clerk) was chosen to act as Secretary.
2. Aug. 21, 1890: Charles B. Allan (Nebraska deputy auditor) was elected Secretary for the 1891 Convention; however, he resigned before the Convention assembled. Sept. 30, 1891: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1891 Convention.

3. Sept. 18, 1895: William M. Hahn (OH) was elected President for the 1896 Convention and James R. Waddill (MO) was elected Vice-President; however, Superintendent Hahn was out of office effective June 3, 1886. Sept. 22, 1896: Superintendent Waddill was elected President for the 1896 Convention and Stephen W. Carr (ME) was chosen to act as Vice-President.
4. Sept. 23, 1896: James R. Waddill (MO) was elected President for the 1897 Convention and Stephen W. Carr (ME) was elected Vice-President; however, Mr. Waddill was out of office effective March 1, 1897. Sept. 7, 1897: Commissioner Carr was elected President for the 1897 Convention. It is unknown who acted as Vice-President.
5. Sept. 23, 1896: Frederick L. 'Fred' Cutting (MA) was elected Secretary for the 1897 Convention; however, he was out of office on the date of the Convention. Sept. 7, 1897: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1897 Convention.
6. Sept. 7, 1897: Frederick L. 'Fred' Cutting (MA) was elected Secretary for the 1898 Convention; however, he declined the offer. Sept. 13, 1898: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1898 Convention.
7. Sept. 15, 1898: Elmer H. Dearth (MN) was elected President for the 1899 Convention; however, he was out of office at the date of the Convention. Sept. 5, 1899: Edward T. Orear (MO) was elected President for the 1899 Convention.
8. Sept. 20, 1900: John A. O'Shaughnessy (MN) was elected President for the 1901 Convention; however, he was out of office at the date of the Convention. September 1901: William H. Hart (IN) was elected President for the 1901 Convention.
9. Sept. 29, 1910: Theodore H. Macdonald (CT) was elected Vice-President for the 1911 Convention; however, he was out of office at the date of the Convention. It is unknown who acted as Vice-President.
10. Aug. 25, 1911: Harry R. Cunningham (MT) was elected Secretary for the 1912 Convention; however, he resigned before the Convention assembled. March 1912: Fitz Hugh McMaster (SC) was elected Secretary for the 1912 Convention.
11. Aug. 1, 1913: Willard Done (UT) was elected First Vice-President for the 1914 Convention; however, he resigned before the Convention assembled. It is unknown who acted as First Vice-President.
12. Aug. 31, 1917: Emory H. English (IA) was elected President for the 1918 Convention; Robert J. Merrill (NH) was elected First Vice-President; and Michael J. Cleary (WI) was elected Second Vice-President. November 1917: Mr. Merrill resigned as First Vice-President. Dec. 6, 1917: Mr. Cleary was elected First Vice-President for the 1918 Convention and Walter K. Chorn (MO) was elected Second Vice-President. Jan. 1, 1918: Mr. English resigned as President and Mr. Cleary was elected President for the 1918 Convention by the Executive (EX) Committee. It is unknown who acted as First Vice-President.
13. Aug. 31, 1917: Fitz Hugh McMaster (SC) was elected Secretary for the 1918 Convention; however, he resigned before the Convention assembled. Dec. 6, 1917: Joseph L. Button (VA) was elected Secretary for the 1918 Convention.
14. Sept. 12, 1919: John B. Sanborn (MN) was elected Second Vice-President for the 1920 Convention; however, he resigned before the Convention assembled. June 1920: Alfred L. Harty (MO) was chosen to act as Second Vice-President for the 1920 Convention.
15. Sept. 3, 1920: Frank H. Ellsworth (MI) was elected President for the 1921 Convention; Alfred L. Harty (MO) was elected First Vice-President; and Thomas B. Donaldson (PA) was elected Second Vice-President. Commissioner Ellsworth resigned effective April 30, 1921, as NAIC President and Michigan Insurance Commissioner. June 27, 1921: Superintendent Harty was elected President for the 1921 Convention by the Executive (EX) Committee; Commissioner Donaldson was elected First Vice-President; and Platt Whitman (WI) was elected Second Vice-President.
16. Sept. 8, 1922: Platt Whitman (WI) was elected President for the 1923 Convention; Herbert O. Fishback (WA) was elected First Vice-President; and John C. Luning (FL) was elected Second Vice-President. July 1, 1923: Commissioner Whitman resigned as President; Commissioner Fishback was elected President for the 1923 Convention by the Executive (EX) Committee; and Mr. Luning was elected First Vice-President by the Executive (EX) Committee. It is unknown who acted as Second Vice-President.
17. Sept. 18, 1925: William R. C. Kendrick (IA) was elected President for the 1926 Convention. January 1926: Commissioner Kendrick resigned as NAIC President and Harry L. Conn (OH) was elected President for the 1926 Convention. Commissioner Kendrick remained as Iowa Insurance Commissioner until March 1, 1926.
18. Nov. 19, 1926: Harry L. Conn (OH) was elected President for the 1927 Convention and Albert S. Caldwell (TN) was elected First Vice-President. April 15, 1927: Superintendent Conn resigned as NAIC President and Ohio Insurance Superintendent. May 3, 1927: Commissioner Caldwell was elected President for the 1927 Convention and James A. Beha (NY) was elected First Vice-President.
19. Sept. 26, 1928: Charles R. Detrick (CA) was elected President for the 1929 Convention; James A. Beha (NY) was elected First Vice-President; and Howard P. Dunham (CT) was elected Second Vice-President. Jan. 1, 1929: Superintendent Beha resigned as NAIC First Vice-President and New York Insurance Superintendent. Commissioner Dunham was elected First Vice-President for the 1929 Convention. April 24, 1929: Commissioner Detrick resigned as NAIC President and California Insurance Commissioner. Commissioner Dunham was elected President for the 1929 Convention; Clarence C. Wysong (IN) was elected First Vice-President; and Jess G. Read (OK) was elected Second Vice-President.

20. Sept. 19, 1929: Joseph L. Button (VA) was elected Secretary for the 1930 Convention; however, he resigned effective Oct. 15, 1929, as NAIC Secretary and Virginia Commissioner of Insurance and Banking. Dec. 10, 1929: Albert S. Caldwell (TN) was elected Secretary for the 1930 Convention.
21. Sept. 9, 1930: Clarence C. Wysong (IN) was elected President for the 1931 Convention; Jess G. Read (OK) was elected First Vice-President; and Clare A. Lee (OR) was elected Second Vice-President. January 1931: Commissioner Wysong resigned effective Jan. 1, 1931, as NAIC President and Indiana Insurance Commissioner; Commissioner Lee was no longer serving as Second Vice-President; and Commissioner Read was elected President by the Executive (EX) Committee for the 1931 Convention. June 17, 1931: Charles D. Livingston (MI) was elected First Vice-President by the Executive (EX) Committee for the 1931 Convention and William A. Tarver (TX) was elected Second Vice-President by the Executive (EX) Committee.
22. Oct. 20, 1932: William A. Tarver (TX) was elected President for the 1933 Convention; Garfield W. Brown (MN) was elected First Vice-President; and Daniel C. 'Dan' Boney (NC) was elected Second Vice-President. Commissioner Tarver resigned effective Feb. 10, 1933, as NAIC President and Texas Life Insurance Commissioner. Commissioner Brown was elected President for the 1933 Convention; Commissioner Boney was chosen to act as First Vice-President and George S. Van Schaick (NY) was chosen to act as Second Vice-President.
23. July 1935: It is unclear why no one acted as First Vice-President or Second Vice-President for the 1935 Convention.
24. June 23, 1939: J. Balch Moor (DC) was elected Vice-President; however, he died July 22, 1939, before the 1940 Convention assembled. John C. Blackall (CT) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
25. June 6, 1945: Edward L. Scheufler (MO) was elected Vice-President for the 1946 Convention; however, he resigned effective Oct. 15, 1945, as NAIC Vice-President and Missouri Insurance Superintendent. Dec. 3, 1945: Robert E. Dineen (NY) was elected Vice-President by the Executive (EX) Committee for the 1946 Convention.
26. June 11, 1946: Jess G. Read (OK) was elected Secretary for the 1947 Convention; however, he died July 20, 1946. Sept. 4, 1946: Nellis P. Parkinson (IL) was elected Secretary by the Executive (EX) Committee to fill the unexpired term.
27. June 1953: George B. Butler (TX) was elected Vice-President; however, he died Sept. 28, 1953. It is unknown who acted as Vice-President for the November 1953 Convention. Nov. 30, 1953: Donald Knowlton (NH) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
28. May 1956: George A. Bowles (VA) was elected Secretary; however, he died June 1, 1956. Paul A. Hammel (NV) was elected Secretary to fill the unexpired term.
29. June 1958: Arch E. Northington (TN) was elected President; however, he resigned effective Dec. 23, 1958, as NAIC President and Tennessee Insurance Commissioner. January 1959: Paul A. Hammel (NV) was elected President and Sam N. Beery (CO) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
30. June 1962: Joseph S. Gerber (IL) was elected Vice-President; however, he resigned effective Jan. 29, 1963, as NAIC Vice-President and Illinois Insurance Director. The office of Vice-President was vacant for the June 1963 Convention.
31. June 1968: Charles R. Howell (NJ) was elected President; however, he resigned effective Feb. 28, 1969, as NAIC President and New Jersey Commissioner of Banking and Insurance. Ned Price (TX) was elected by the Executive (EX) Committee to fill the unexpired term.
32. June 1970: Richard E. 'Dick' Stewart (NY) was elected President; however, he resigned as NAIC President effective Dec. 17, 1970, and as New York Insurance Superintendent effective Dec. 31, 1970. Dec. 17, 1970: Lorne R. Worthington (IA) was elected by Plenary to fill the unexpired term.
33. A constitutional amendment moved NAIC officer elections from June to December (commencing December 1974), President Johnnie L. Caldwell (GA) served a six-month term.
34. Kenneth E. 'Ken' DeShetler (OH) was elected President; however, he resigned effective Jan. 13, 1975, as NAIC President and Ohio Insurance Director. William H. Huff, III (IA) was elected by the Executive (EX) Committee to fill the unexpired term.
35. H. Peter 'Pete' Hudson (IN) was elected President; however, he resigned as NAIC President and Indiana Insurance Commissioner effective Nov. 15, 1979. It is unknown who presided over the December 1979 Convention.
36. John W. Lindsay resigned effective Sept. 3, 1981, as NAIC Vice-President and South Carolina Insurance Commissioner. Johnnie L. Caldwell (GA) was elected by the Executive (EX) Committee to fill the unexpired term.
37. David J. Lyons resigned effective June 17, 1994, as NAIC Vice President but remained as Iowa Insurance Commissioner until July 31, 1994. A special interim Plenary election was held June 12, 1994: Arkansas Insurance Commissioner Lee Douglass was elected Vice President to serve June 17, 1994, to Dec. 31, 1994.

38. September 2001: NAIC members unanimously agreed that the 2001 Fall National Meeting should be canceled in the wake of the tragic events that occurred Sept. 11, 2001. The meeting had been scheduled for Sept. 22–25, 2001, at the Marriott and Westin Copley Place hotels in Boston, Massachusetts.
39. Ernst N. ‘Ernie’ Csiszar resigned effective Aug. 18, 2004, as NAIC President and South Carolina Director of Insurance. Approximately two weeks later, James A. ‘Jim’ Poolman resigned as NAIC Vice President but remained as North Dakota Insurance Commissioner. A special interim Plenary election was held Sept. 13, 2004, during the Fall National Meeting in Anchorage, Alaska: Pennsylvania Insurance Commissioner M. Diane Koken was elected President; Oregon Insurance Administrator Joel S. Ario was elected Vice President; and Maine Insurance Superintendent Alessandro A. ‘Al’ Iuppa was elected Secretary-Treasurer to serve from Sept. 13, 2004, to Dec. 31, 2004.
40. December 2004: NAIC members voted at its 2004 Winter National Meeting to adopt amendments to the NAIC Bylaws, which included the creation of a President-Elect position as an NAIC officer.
41. September 2005: NAIC members agreed to cancel the 2005 Fall National Meeting due to the devastation caused by Hurricane Katrina on Aug. 29, 2005. The meeting had been scheduled for Sept. 10–13, 2005, at the Sheraton hotel in New Orleans, Louisiana.
42. Eric P. Serna resigned effective June 14, 2006, as NAIC Secretary-Treasurer and New Mexico Superintendent of Insurance. A special Plenary interim election was held during the 2006 Summer National Meeting: New Hampshire Insurance Commissioner Roger A. Sevigny was elected Secretary-Treasurer to serve from June 14, 2006, to Dec. 31, 2006.
43. Michael T. McRaith resigned effective May 31, 2011, as NAIC Secretary-Treasurer and Illinois Director of Insurance. A special Plenary interim election was held via conference call May 16, 2011: North Dakota Insurance Commissioner Adam Hamm was elected Secretary-Treasurer to serve from May 31, 2011, to Dec. 31, 2011.
44. Aug. 25, 2011: NAIC members agreed to cancel its 2011 Summer National Meeting so members could assist consumers in disaster situations caused by Hurricane Irene. The meeting had been scheduled for Aug. 29–Sept. 1, 2011, at the Marriott Philadelphia Downtown in Philadelphia, Pennsylvania.
45. Michael F. ‘Mike’ Consedine resigned effective Jan. 20, 2015, as NAIC President-Elect and Pennsylvania Insurance Commissioner. A special Plenary interim election was held via conference call Feb. 8, 2015: Missouri Insurance Director John M. Huff was elected President-Elect to serve from Feb. 8, 2015, to Dec. 31, 2015.
46. Sharon P. Clark resigned effective Jan. 11, 2016, as NAIC President-Elect and Kentucky Insurance Commissioner. A special Plenary interim election was held in Bonita Springs, Florida, on Feb. 7, 2016: Wisconsin Insurance Commissioner Theodore K. ‘Ted’ Nickel was elected President-Elect; Tennessee Insurance Commissioner Julie Mix McPeak was elected Vice President; and Maine Insurance Superintendent Eric A. Cioppa was elected Secretary-Treasurer to serve from Feb. 7, 2016, to Dec. 31, 2017.
47. David C. Mattax, NAIC Secretary-Treasurer and Texas Insurance Commissioner, died in office April 13, 2017. A special Plenary interim election was held via conference call on May 12, 2017: South Carolina Insurance Director Raymond G. Farmer was elected Secretary-Treasurer to serve from May 12, 2017, to Dec. 31, 2017.
48. Gordon I. Ito resigned effective Dec. 31, 2018, as NAIC Vice President and Hawaii Insurance Commissioner. A special Plenary interim election was held in La Quinta, California, on Feb. 4, 2019: Florida Insurance Commissioner David Altmaier was elected Vice President to serve from Feb. 4, 2019, to Dec. 31, 2019.
49. March 11, 2020: Due to concerns about the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Spring National Meeting in a virtual format. However, on March 23, 2020, the NAIC officers decided to suspend holding any further sessions of the virtual Spring National Meeting to allow NAIC members and staff more time to focus on the health emergency. The meeting had been scheduled for March 21–24, 2020, at the Phoenix Convention Center and the Sheraton Grand and Hyatt Regency hotels in Phoenix, Arizona.
50. June 10, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Summer National Meeting in a virtual format. The meeting had been scheduled for Aug. 8–11, 2020, at the Minneapolis Convention Center and the Hilton and Hyatt Regency hotels in Minneapolis, Minnesota.
51. Sept. 21, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Fall National Meeting in a virtual format. The meeting had been scheduled for Nov. 14–17, 2020, at the JW Marriott hotel in Indianapolis, Indiana.
52. Feb. 24, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Spring National Meeting in a virtual format. The meeting had been scheduled for April 10–13, 2021, at the Gaylord Texan Hotel and Convention Center in Grapevine, Texas.

53. June 1, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Summer National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.
54. Oct. 27, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Fall National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.

*NAIC 2023 Summer National Meeting
Seattle, WA*

OPENING SESSION
August 13, 2023

CALL TO ORDER

Chlora Lindley-Myers, NAIC President

Welcome! The 238th session of the National Association of Insurance Commissioners will now come to order. Good afternoon. I am Chlora Lindley-Myers, the NAIC President and Director of the Missouri Department of Commerce and Insurance. It is my pleasure to open the 2023 NAIC Summer National Meeting.

INTRODUCTION OF HEAD TABLE

Chlora Lindley-Myers, NAIC President

At this time, I will recognize the members of our head table. Please hold your applause until all members are introduced.

Honorable Mike Kreidler, Meeting Host and Commissioner of the Washington Department of Insurance
Honorable Dean L. Cameron, NAIC Immediate Past President and Idaho Insurance Director
Andrew J. Beal, NAIC Acting Chief Executive Officer (CEO), Chief Operating Officer (COO), and Chief Legal Officer (CLO)

Honorable Andrew N. Mais, NAIC President-Elect and Connecticut Insurance Commissioner
Honorable Jon Godfread, NAIC Vice President and North Dakota Insurance Commissioner
Honorable Scott A. White, NAIC Secretary-Treasurer and Virginia Insurance Commissioner
Honorable James J. Donelon, NAIC Past President and Louisiana Insurance Commissioner

Please welcome the members of our NAIC Spring National Meeting head table.

INTRODUCTION OF NEW MEMBERS

Chlora Lindley-Myers, NAIC President

I would also like to recognize our newest Members in this short video. [New Member video plays.]

INTRODUCTION OF SPECIAL GUESTS

Chlora Lindley-Myers, NAIC President

We are pleased to welcome our special guests—federal officials, state officials, and international regulators—to our Summer National Meeting. Here to welcome us to the Emerald City is Washington state’s Insurance Commissioner, Mike Kreidler. Before he comes to the podium, I want to share a few words about Commissioner Kreidler and the impact he has made here in Washington and at the NAIC.

Commissioner Kreidler is the longest-serving elected Commissioner of insurance in the history of the U.S. First elected in 2000, he was re-elected to a sixth term in 2020. His career accomplishments have included serving as a lieutenant colonel in the U.S. Army and as a practicing doctor of optometry; serving 16 years in the Washington State Legislature; and serving as the regional director for the U.S. Department of Health and Human Services (HHS). Since 2007, Commissioner Kreidler has been among the Members chairing the NAIC’s Climate and Resiliency (EX) Task Force. This year, he is also the co-vice chair of the Health Insurance and Managed Care (B) Committee, and he serves on several NAIC executive leadership committees.

Among his many career highlights as a long-serving regulator is his work to pass the strongest law in the country protecting consumers against the practice of surprise medical billing. This accomplishment, as well as many others, is a testament to how much he values his work as a regulator. Thank you for your hard work, Commissioner Kreidler.

HOST COMMISSIONER REMARKS*Commissioner Mike Kreidler*

Thank you, Madam President. Welcome to Washington state! It's an honor to have you all here. I hope you have a chance to experience some of the beauty that makes our part of the world so unique. From several points in Seattle, you can see Mount Rainier and both the Olympic and North Cascades National Parks. In the Evergreen State, we value our expansive nature. It's why we're so invested in protecting our planet. We have a dynamic economy with some of the most recognizable institutions on earth, including Microsoft, Amazon, T-Mobile, REI, Costco, Boeing, and Starbucks. We're also home to the Bill & Melinda Gates Foundation and one of the country's top research institutions, the University of Washington. Another company familiar to all of you, the actuarial and consulting firm Milliman, was founded here in 1947.

We're tied to the rest of the world through our culture and history. Jimi Hendrix, Kurt Cobain, Bruce Lee, and now Brandi Carlile are local icons, and we've got several renowned museums showing off our history and contributions to technology. As you uncover the history and culture of this region, I invite you all to reflect that we're inhabiting land that was once home to people for thousands of years before European settlers came here a mere 160 years ago. You can learn about these cultures at the newly refurbished Burke Museum of Natural History and Culture on the University of Washington campus. If you have time, visit Pike Place Market, just a few blocks away, or take a boat tour or a float plane ride, or go to the top of the Space Needle, which was built for the 1962 World's Fair. It's all a short walk from here. Once again, welcome, and I hope you enjoy your stay.

PRESIDENTIAL ADDRESS*Chlora Lindley-Myers, NAIC President*

Greetings, and welcome to the 2023 National Association of Insurance Commissioners (NAIC) Summer National Meeting. It is great to see all of you! And thank you to those of you attending the meeting virtually. I am pleased to share that we have more than 2,500 registrants. Nearly 1,500 are here in person, which adds to the countless people who have or will visit Seattle this summer. In fact, according to a recent report, Seattle is this year's No. 2 summer travel destination in the U.S. This is based on an estimated 1.6 million flights booked between Memorial Day and Labor Day for visits of up to a week or more.

The growing interest in experiencing the sights and sounds of Seattle is clearly thriving, and from the looks of this room full of regulators, industry partners, and guests, it is apparent to me that interest in insurance is also thriving. I am loving the momentum. This week marks my third trip to the Emerald City this year. Each time I visit, I fall more in love with Seattle. No matter how many times I have been here, I learn something new. For instance, as Washington Commissioner Mike Kreidler mentioned, Boeing and Starbucks were founded here in Seattle, but I did not know that the iconic Stanley insulated drinking cup was designed and tested right here too. And like the Stanley Cup in hockey, I am told that these are hard to come by! I want to thank Commissioner Kreidler for hosting us, and I look forward to the days ahead. I have known Commissioner Kreidler for many years, and if there is one thing I know about him, he is an insurance consumer champion. Thank you, Commissioner Kreidler, for all the work you do on behalf of the state of Washington and the NAIC.

We are pleased to have strong participation from our international colleagues and partners at our national meeting, representing both long-standing relationships and new ones, such as Commissioner Nakama Sana from the Federated States of Micronesia, who joins us here today. Likewise, I want to recognize NAIC COO and Acting CEO Andy Beal. In April, Andy took on extensive duties as the Acting CEO—again. I commend his dedication and his stalwart leadership as we initiate our search to fill the NAIC CEO position. On behalf of the officers and Members, Andy, thank you and the NAIC staff for continuing to keep things going, moving ahead, and helping us meet our goals.

A strong work ethic does not go unnoticed. In a rapidly evolving industry like insurance, we see firsthand how our hard work plays out in the lives of everyday people. As insurance regulators, we have the consumers top of mind in all that we do, and that is especially true today, as this complex industry continues to evolve. We are always “at attention” because we owe it to the consumers we serve.

I want to take a moment to recognize a few regulators for their commitment to serving consumers and the industry. First, I recently learned that Lenita Blasingame passed away on July 4. Lenita joined the Arkansas Insurance Department in 1965. For 50 years, she supported the insurance sector by sharing her knowledge and charismatic personality with all who knew her. Lenita’s accomplishments included being the first person inducted into the Arkansas Insurance Hall of Fame. She retired seven years ago as the Chief Deputy Commissioner of the Arkansas Insurance Department. Her memory and reputation for her hard work lives on. Many say that being around her at an insurance event was like being next to a rock star. I know she did an excellent job preparing Russ Galbraith to step into the Deputy Commissioner role. Thank you, Russ, for all that you do! Lenita will be greatly missed, and our deepest sympathies are with her family, friends, and colleagues at the Arkansas Insurance Department. Let us take a moment to recognize Lenita.

Next, Don Beatty, Deputy Commissioner of the Virginia Bureau of Insurance’s Policy, Compliance, and Administration Division, is attending his last NAIC national meeting. As Don prepares to retire, Commissioner Scott A. White and his team will have a huge void to fill. Don has the distinction of being a 2022 Robert Dineen Award winner. As a member of the Virginia Bureau of Insurance, Don was part of a small group of dedicated regulators who drafted the bylaws of the Interstate Insurance Product Regulation Commission (Compact), as well as the Compact’s 14 rules or operating procedures. Among his many other roles at the Compact, Don served as chair of the Rulemaking and Regulatory Counsel Committees. At the NAIC, Don most recently chaired the Pet Insurance (C) Working Group and the Health Maintenance Organization (HMO) Issues (B) Subgroup to the conclusion of their charges. Don, please stand. I want to thank you for your commitment over the past 23 years to the Commonwealth of Virginia, your work with the NAIC, and your role with the Insurance Compact. We wish you well as you celebrate your retirement.

It is customary during the Summer National Meeting to do a mid-year pulse check. Since we last met at the Spring National Meeting in Louisville, KY, regulators have collaborated on issues that have placed us in positions to pause, assess, and take action. In late July, I participated in a satellite media tour with TV and radio stations across the country to address questions about consumers’ challenges with insurance. The reporters asked me about the availability and affordability of insurance, especially as some insurance companies paused writing new business in specific markets. This is a real, top-of-mind concern among consumers and regulators today. With news reports of severe weather events like extreme heat waves, wildfires, hailstorms, tornadoes, and, yes, the fires on Maui, reporters asked what steps consumers can take to mitigate the risks to their properties in the face of natural disasters. Our thoughts are with my friend and colleague, Gordon I. Ito, Commissioner of Hawaii, as he faces this deadly catastrophe and its aftermath. The reporters also wanted to know how consumers could protect themselves from scams and make sure that they have the right amount of insurance. Educating consumers on how to better engage with the insurance industry is central to our role as regulators and a key pillar of the NAIC’s *State Connected* strategic plan.

The satellite media tour reached more than 18 million viewers nationwide. I hope I was able to help them better understand why insurance is so important and empower them to reach out to their insurance agent or state department of insurance (DOI) with questions. The more consumers know about insurance coverage, the better prepared they will be able to make informed choices for themselves and their families.

Since the NAIC’s founding in 1871, insurance company solvency and consumer protection have been the core of who we are and what we do. As part of our state-based system of insurance regulation in the U.S., the NAIC provides expertise, data, and analysis for insurance regulators to help them effectively regulate the industry, as

well as protect consumers. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer reviews, and coordinate regulatory oversight. NAIC staff support these efforts and represent the collective views of state regulators domestically and internationally.

Although state regulators represent different geographical regions and have diverse perspectives, we do have common goals. These goals include planning for the best scenario but also preparing for the worst. We collaborate often and study industry trends and best practices so we can effectively address issues that affect the industry. Our departments undergo a comprehensive, independent review every five years to ensure we meet financial solvency oversight standards. The NAIC Accreditation Program was established to develop and maintain standards to promote effective insurance company financial solvency regulation. This year, Missouri, New Hampshire, South Dakota, and Texas underwent their independent reviews, and I am delighted to share that these four states have met the NAIC's Accreditation Program requirements and will have their accreditation status continued for another five years.

Beyond the important work of our committees at the NAIC, we also partner with like-minded organizations to achieve our objectives. This spring, we signed a memorandum of understanding with the Insurance Institute for Business and Home Safety (IBHS) to provide state insurance regulators access to IBHS member-only content and additional opportunities to collaborate on select topics concerning disaster preparedness. We have been building on our partnership with IBHS since 2018. Having access to exclusive research, training, and resources will help us better inform policymakers, state lawmakers, and consumers on ways to fortify properties to mitigate the effects of severe weather.

We realize that climate risks are real for every jurisdiction, whether it is inland or coastal, in a colder climate or a warmer climate, or more rural or more urban. State insurance regulators are seeing the economic impacts of severe weather firsthand. That is a reality. We have been grappling with the issue of climate risk and resiliency for more than a decade. Through the NAIC's Climate and Resiliency (EX) Task Force and related efforts, the NAIC has been a first-mover in assessing climate risk and resiliency as it relates to insurer solvency and in pre-disaster mitigation to offset the risks from natural perils. We are encouraged by the progress we have made, along with the other focus areas we have identified as priorities for this year, including:

- Data/artificial intelligence (AI), cybersecurity, and innovation
- Insurer financial oversight and transparency
- Long-term care insurance (LTCI)
- Marketing of insurance products
- Race and insurance/protection gaps and financial inclusion

We will continue to show leadership in all of our committees—yes, even in the committees where we have been hashing out issues since 2018. Yet, those who are participating feel we are rushing our work. Very few would label five years as a rush, but we will continue to reach out, and we will execute. It is clear that our plates are full. However, I am certain we have the right committee leaders and strong NAIC staff support in place to meet our 2023 objectives. As you attend this week's meeting sessions, I hope you agree.

ADJOURNMENT

Chlora Lindley-Myers, NAIC President

Again, it is my honor to welcome you to the NAIC Summer National Meeting. On behalf of my fellow Commissioners and the NAIC staff, thank you for joining us, and we hope you have a wonderful meeting experience.

The opening session of the 238th NAIC national meeting is now adjourned.

Draft: 9/18/2023

**Synopsis of the NAIC Committee, Subcommittee, and Task Force Meetings
2023 Summer National Meeting
August 12–16, 2023**

TO: Members of the NAIC and Interested Parties

FROM: The Staff of the NAIC

Committee Action

NAIC staff have reviewed the committee, subcommittee, and task force reports and highlighted the actions taken by the committee groups during the 2023 Summer National Meeting. The purpose of this report is to provide NAIC Members, state insurance regulators, and interested parties with a summary of these meeting reports.

EXECUTIVE (EX) COMMITTEE AND PLENARY (Joint Session)

Aug. 16, 2023

1. Received the Aug. 14 report of the Executive (EX) Committee. See the Committee listing for details.
2. Adopted by consent the committee, subcommittee, and task force minutes of the Spring National Meeting.
3. Received the report of the Life Insurance Annuities (A) Committee. See the Committee listing for details.
4. Received the report of the Health Insurance and Managed Care (B) Committee. See the Committee listing for details.
5. Received the report of the Property and Casualty Insurance (C) Committee. See the Committee listing for details.
6. Received the report of the Market Regulation and Consumer Affairs (D) Committee. See the Committee listing for details.
7. Received the report of the Financial Condition (E) Committee. See the Committee listing for details.
8. Received the report of the Financial Regulation Standards and Accreditation (F) Committee. See the Committee listing for details.
9. Received the report of the International Insurance Relations (G) Committee. See the Committee listing for details.
10. Received the report of the Innovation, Cybersecurity, and Technology (H) Committee. See the Committee listing for details.
11. Adopted amendments to the 2024 *Valuation Manual*.
12. Adopted revisions to the *Nonadmitted Insurance Model Act* (#870).
13. Adopted the *Understanding the Market for Cannabis Insurance: 2023 Update* white paper.
14. Adopted life risk-based capital (RBC) proposal 2023-09-IRE (Residuals Factor) and proposal 2023-10-IRE (Residual Sensitivity Test Factor for Residuals).
15. Adopted revisions to the *Mortgage Guaranty Insurance Model Act* (#630).
16. Received a status report on states' implementation of NAIC-adopted model laws and regulations.

EXECUTIVE (EX) COMMITTEE

Aug. 14, 2023

1. Adopted the report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee, which met Aug. 13 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance). During this meeting, the Committee and Subcommittee took the following action:

- A. Adopted its July 11, March 25, and March 22 minutes. During these meetings, the Committee and Subcommittee took the following action:
 - i. Approved the termination of the defined benefit pension plan.
 - ii. Approved the fiscal for an additional full-time employee in Financial Regulatory Services (FRS).
 - iii. Approved a second round of grant funding from the Robert Wood Johnson Foundation (RWJF).
 - iv. Approved changing the dates of the 2024 Summer National Meeting in Chicago, IL.
 - v. Received a May year-to-date (YTD) financial update and an overview of the preliminary 2024 budget.
 - vi. Approved the release of a request for proposal (RFP) to hire an executive search firm.
 - vii. Received an update on the *State Connected* strategic plan.
 - viii. Approved the Succession Planning and Organization Design fiscal.
 - B. Adopted the Executive Committee's May 23 and March 31 minutes. During these meetings, the Committee met in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, and took the following action:
 - i. Approved Commissioner Scott A. White (VA) to serve on the International Association of Insurance Supervisors (IAIS) Executive Committee.
 - ii. Approved the 2027 national meeting locations:
 - a. Spring National Meeting: Kansas City, MO.
 - b. Summer National Meeting: New York City, NY.
 - c. Fall National Meeting: Nashville, TN.
 - C. Adopted the report of the Audit Committee, which met Aug. 3 and May 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings). During these meetings, the Committee took the following action:
 - i. Received the June 30 financial update.
 - ii. Received an overview of proposed 2024 revenues.
 - iii. Reappointed RubinBrown as the financial audit firm to conduct the 2023 audit.
 - iv. Affirmed the 2024 Audit Committee charter.
 - v. Discussed Grant and Zone financials, including the following potential changes:
 - a. Allowing a one-time allocation of up to \$75,000 from technical training funds to general use.
 - b. Allowing allocations from general funds to the New Avenues to Insurance Careers (N.A.I.C.) Foundation, pending funds balance.
 - vi. Received an update on the Enterprise Resource Planning (ERP) project.
 - vii. Received an update on the 2024 budget calendar.
 - viii. Received the 2022/2023 Service Organization Control (SOC) 1 and SOC 2 audit reports.
 - ix. Received a status report on the 2023 operating reserve analysis.
 - D. Adopted the report of the Internal Administration (EX1) Subcommittee, which met June 6. During this meeting, the Subcommittee took the following action:
 - i. Received the March 31 Long-Term Investment Portfolio report.
 - ii. Received the March 31 Defined Benefit Portfolio report.
 - E. Heard a cybersecurity report.
 - F. Received the report of the Acting Chief Executive Officer (CEO).
2. Adopted the report of the Executive (EX) Committee, which met May 23 and March 31. During these meetings, the Committee took the following action:
 - A. Appointed Commissioner White to serve on the IAIS Executive Committee.
 - B. Approved the 2027 national meeting site locations: Spring National Meeting, Kansas City, MO; Summer National Meeting, New York, NY; and Fall National Meeting, Nashville, TN.
 3. Adopted the report of the Climate and Resiliency (EX) Task Force. See the Task Force listing for details.

4. Adopted the report of the Government Relations (EX) Leadership Council. See the Leadership Council listing for details.
5. Adopted the report of the Long-Term Care Insurance (EX) Task Force. See the Task Force listing for details.
6. Adopted the report of the Special (EX) Committee on Race and Insurance. See the Special Committee listing for details.
7. Received a status report on the implementation of the *State Connected* strategic plan.
8. Received a status report on model law development efforts for amendments to: 1) the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) the *Property and Casualty Insurance Guaranty Association Model Act* (#540); 3) the *Mortgage Guaranty Insurance Model Act* (#630); 4) the *Nonadmitted Insurance Model Act* (#870); 5) the *Unfair Trade Practices Act* (#880); and 5) the new *Insurance Consumer Privacy Protection Model Law* (#674).
9. Received a status report from the National Insurance Producer Registry (NIPR).
10. Received a status report from the Interstate Insurance Product Regulation Commission (Compact).

Climate and Resiliency (EX) Task Force

Aug. 15, 2023

1. Adopted its Spring National Meeting minutes.
2. Heard a presentation from Arizona State University's Julie Ann Wrigley Global Futures Laboratory about its work on the rise in global temperature and its effects on rising sea levels and other catastrophic perils.
3. Heard a presentation from Ceres about a study on inclusive insurance and on a review of climate risk disclosures.
4. Heard a presentation from the California Department of Insurance (DOI) on atmospheric river storms in Western states.
5. Received an update from its Solvency Workstream, which has been focused on the evaluation and development of a U.S. regulatory approach to climate scenario analysis.

Government Relations (EX) Leadership Council

The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting.

Long-Term Care Insurance (EX) Task Force

Aug. 9, 2023 (in lieu of the Summer National Meeting)

1. During this e-vote, the Task Force adopted its Spring National Meeting minutes, including revisions from Michigan and Minnesota.

Special (EX) Committee on Race and Insurance

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Heard an update from America's Health Insurance Plans (AHIP) on health equity.
3. Received an update on the Member Diversity Leadership Forum, highlighting the state insurance regulator diversity training coursework.
4. Received a status report from the Property/Casualty (P/C) Workstream, the Life Workstream, and the Health Workstream.

INTERNAL ADMINISTRATION (EX1) SUBCOMMITTEE

See the Executive (EX) Committee listing for details.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

Aug. 15, 2023

1. Adopted its July 19 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted revisions to the *Valuation Manual*.
 - C. Adopted revised charges for the Life Actuarial (A) Task Force.
2. Reported that the Accelerated Underwriting (A) Working Group and the Annuity Suitability (A) Working Group have not met since the Spring National Meeting.
3. Adopted the report of the Life Actuarial (A) Task Force. See the Task Force listing for details.
4. Heard a presentation from Noble Consulting Services on risks facing the life and annuity industry.
5. Heard a presentation from the United States Automobile Association (USAA) on the unique life insurance needs of the military.
6. Received an update on the Life Workstream of the Special (EX) Committee on Race and Insurance.

Life Actuarial (A) Task Force

Aug. 11–12, 2023

1. Adopted its July 20, June 15, June 1, May 18, May 11, May 4, April 27, April 20, and April 13 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Exposed the recommendation on *Valuation Manual* (VM)-20, Requirements for Principle-Based Reserves for Life Products; historical mortality improvement (HMI); and future mortality improvement (FMI) rates for a 30-day public comment period that ended Aug. 23.
 - C. Adopted amended charges to remove the Index-Linked Variable Annuity (A) Subgroup and add the Generator of Economic Scenarios (GOES) (E/A) Subgroup.
 - D. Responded to a referral from the Statutory Accounting Principles (E) Working Group on negative interest maintenance reserves (IMRs).
 - E. Exposed a template with additional disclosures related to company IMRs for a 44-day public comment period that ended July 28.
 - F. Adopted amendment proposal form (APF) 2023-07, which removes the Company-Specific Market Path (CSMP) method from VM-21, Requirements for Principle-Based Reserves for Variable Annuities. The Task Force had previously exposed APF 2023-07 for a 21-day public comment period that ended May 24.
 - G. Adopted APF 2023-05, which revises hedge modeling in VM-21 to address index credit hedging. The Task Force had previously re-exposed APF 2023-05 for a 16-day public comment period that ended May 26.
 - H. Exposed APF 2023-08, which clarifies the treatment of negative IMR, for a 45-day public comment period.
 - I. Discussed the GOES field test results in joint session with the Life Risk-Based Capital (E) Working Group.
 - J. Adopted APF 2021-08, which removes the one-year lag in mortality experience reporting in VM-51, Experience Reporting Formats. The Task Force had previously re-exposed APF 2021-08 for a 10-day public comment period that ended May 8.
 - K. Discussed the Valuation of Securities (E) Task Force referral regarding bond risk measures.
 - L. Discussed the Valuation of Securities (E) Task Force referral regarding structured equity and funds.
 - M. Adopted APF 2023-04, which clarifies company mortality experience disclosures in VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation.
 - N. Exposed APF 2023-06, which would add a cash surrender value floor to the VM-20 stochastic reserve calculation and change the VM-20 net premium reserve calculation for universal life with secondary guarantee products, for a 21-day public comment period that ended May 10.
 - O. Reported on the Standard Project Amount (SPA) Drafting Group, which met April 6 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC's

Policy Statement on Open Meetings, to share the results of a confidential survey sent to companies requesting data related to the SPA.

2. Adopted the reports of the Longevity Risk (E/A) Subgroup, the Variable Annuities Capital and Reserve (E/A) Subgroup, the Indexed Universal Life (IUL) Illustration (A) Subgroup, and the Experience Reporting (A) Subgroup, which have not met this year.
3. Adopted the report of the Valuation Manual (VM)-22 (A) Subgroup, which met July 26, June 13, May 24, May 10, April 26, April 19, and April 12 minutes. During these meetings, the Subgroup took the following action:
 - A. Exposed the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, standard projection amount (SPA) draft, for a 90-day public comment period ending Oct. 24.
 - B. Discussed comments received on the VM-22 draft.
4. Heard a presentation on findings from state insurance regulator reviews of company filings for *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).
5. Heard a presentation from the Society of Actuaries (SOA) on the VM-20 HMI and FMI factors.
6. Exposed APF 2023-09, which adds guidance on the application of HMI and FMI factors in VM-20, for a 45-day public comment period ending Sept. 27.
7. Heard a presentation from the American Academy of Actuaries (Academy) on interest rate acceptance criteria for the GOES.
8. Received an update on the GOES field test C-3 Phase I results.
9. Heard an update from the Interstate Insurance Product Regulation Commission (Compact) on its activities.
10. Heard an update from the Academy on pre-tax versus post-tax IMRs.
11. Heard an update from the SOA on research and education.
12. Heard an update from the Academy's Council on Professionalism and Education (COPE).
13. Heard an update from the Academy's Life Practice Council on its activities.
14. Exposed the Generally Recognized Expense Table (GRET) presentation and recommendation for a 30-day public comment period ending Sept. 12.
15. Discussed IMR guidance, APF 2023-08, and the IMR template.

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its June 29 minutes. During this meeting, the Committee took the following action:
 - A. Heard presentations on the Maryland, Michigan, and Nebraska state appeal programs.
 - B. Received an update on the Consumer Information (B) Subgroup's work to educate consumers on their claim appeal rights.
3. Adopted the report of the Health Actuarial (B) Task Force. See the Task Force listing for details.
4. Adopted the report of the Regulatory Framework (B) Task Force. See the Task Force listing for details.
5. Adopted the report of the Senior Issues (B) Task Force. See the Task Force listing for details.
6. Adopted the report of the Consumer Information (B) Subgroup, which met May 25. During this meeting, the Subgroup took the following action:
 - A. Adopted its April 25 minutes. During this e-vote, the Subgroup took the following action:
 - i. Adopted the document titled *Resuming Medicaid Redeterminations: State Insurance Regulator Guide* as a resource for state insurance regulators.
 - B. Adopted its April 17 minutes, which included the following action:
 - i. Adopted its March 2 minutes. During this meeting, the Subgroup took the following action:
 - a. Discussed ideas for future work, including developing a resource document on using social media, developing a guide to forming partnerships with other agencies, creating alternate versions of existing documents, and developing an education piece for consumers who may lose Medicaid.

- ii. Discussed a regulator guide on Medicaid redeterminations.
- C. Discussed other potential Subgroup work related to educating consumers on their claim appeal rights.
- 7. Adopted the report of the Health Innovations (B) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Heard presentations from Texas, West Virginia, and America’s Health Insurance Plans (AHIP) on prior authorization and gold card programs.
 - C. Heard a presentation from ArrayRx on multistate prescription drug purchasing.
 - D. Heard a presentation from Pharmaceutical Research and Manufacturers of America (PhRMA) on health equity and diversity in clinical trials.
- 8. Referred two issues to the Health Actuarial (B) Task Force:
 - A. Reach out to the federal Centers for Medicare & Medicaid Services (CMS) about state insurance regulators’ concerns with how the risk adjustment formula affects the current or prospective financial solvency position of new health insurers entering the health insurance marketplace.
 - B. Review how possible changes to the cost-sharing subsidy could affect plan options and costs to consumers.
- 9. Received an update on the work of the Market Regulation and Consumer Affairs (D) Committee that was of interest to the Committee. Specifically, the Committee received an update on the work of the Improper Marketing of Health Insurance (D) Working Group to amend the *Unfair Trade Practices Act* (#880) to address regulatory and enforcement issues with health insurance lead generators.
- 10. Received an update on the Consumer Information (B) Subgroup’s work to educate consumers on their claim appeal rights.
- 11. Heard a panel discussion on preventive services from a consumer-focused perspective. The panelists discussed: the federal Affordable Care Act’s (ACA’s) preventive service requirements and the recent court case, *Braidwood v. Becerra*, challenging those requirements; the health equity implications of increasing access to preventive services; how, despite the ACA preventive care requirements for coverage and no cost-sharing for such services, compliance with such requirements has been a challenge for certain preventive services, particularly with respect to HIV preventive care services, including prescription drugs needed to manage the virus; and the findings from the NAIC consumer representatives preventive care report and their recommendations for state insurance regulators to address the issues in the report’s findings. These issues include using data calls and market conduct examinations to assess compliance, ensuring continued preventive protections with state legislative and regulatory action, establishing uniform billing and coding standards, and holding plans accountable for educating consumers and providers on preventive services requirements.
- 12. Heard a status update on the Medicaid redetermination process following the end of the COVID-19 public health emergency (PHE). The update discussed key findings from the first batch of Medicaid redeterminations data the CMS reported last month in accordance with the federal Consolidated Appropriations Act, 2023 (CAA, 2023). The update also provided updated state renewal timelines; discussed new state flexibilities the U.S. Department of Health and Human Services (HHS) recently announced to help keep Americans covered as states resume Medicaid and Children’s Health Insurance Program (CHIP) renewals; and provided information on federal, state, and health industry resources for consumers and employers to assist them with transitioning through the renewal process and maintaining coverage.
- 13. Received an update on the work of the Special (EX) Committee on Race and Insurance Health Workstream. The Workstream is continuing its meetings on health equity issues. It recently had a meeting focusing on preventative care and lowering barriers to such care, particularly with respect to chronic disease care. The Workstream has planned upcoming meetings on the evolution of ACA Section 1332 waivers and state reinsurance programs, as well as reducing disparities in mental health services. The Workstream is also

piloting a new collaboration space on the NAIC Connect platform to allow Workstream members and other NAIC members to discuss issues related to health equity and other related topics.

Health Actuarial (B) Task Force

Aug. 12, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Long-Term Care Actuarial (B) Working Group, which met Aug. 12 and took the following action:
 - A. Adopted its July 19, June 7, and May 1 minutes. During these meetings, the Working Group took the following action:
 - i. Discussed comments received on a request for comments on various long-term care insurance (LTCI) rate increase review methodologies.
 - ii. Exposed three multistate actuarial (MSA) approaches for a 30-day public comment period that ended July 10.
 - iii. Exposed the draft principles document for a public comment period that ended June 2.
 - B. Discussed drafting changes to VM-25, Health Insurance Reserves Minimum Reserve Requirements, of the *Valuation Manual* to add tables from the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute’s final *Long-Term Care Insurance Mortality and Lapse Study*.
 - C. Discussed a referral from the Health Risk-Based Capital (E) Working Group regarding *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51).
 - D. Heard a presentation from FTI Consulting on public/private long-term care (LTC) funding solutions.
 - E. Heard an update on a single LTCI multistate rate review approach.
3. Heard an update on SOA Research Institute activities.
4. Heard a presentation on SOA education redesign.
5. Heard an update from the Academy Health Practice Council.
6. Heard an update on Academy professionalism.
7. Discussed an inadequate risk adjustment issue.

Regulatory Framework (B) Task Force

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Accident and Sickness Insurance Minimum Standards (B) Subgroup, which met Aug. 7, July 24, July 10, June 29, May 15, April 24, April 17, and March 27. During these meetings, the Subgroup took the following action:
 - A. Completed its discussions of the comments received on Section 8—Supplementary and Short-Term Health Minimum Standards for Benefits of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171), specifically Section 8A—General Rules.
 - B. Completed its discussions of the remainder of Section 8, including revisiting the proposed new subsection on short-term, limited-duration (STLD) plans and the discussion of the Feb. 24 comments received on that section, and Section 7—Prohibited Policy Provisions.
 - C. Discussed the comments received on Section 9—Required Disclosure Revisions of Model #171, including how the recently proposed federal rules on consumer disclosures for STLD plans and hospital indemnity and other fixed indemnity plans could affect proposed revisions to the section.
 - D. Discussed its upcoming work to continue its discussions of the Model #171 revisions and complete those revisions by the end of the year.
3. Adopted the report of the Employee Retirement Income Security Act (ERISA) (B) Working Group, which met Aug. 13 and took the following action:

- A. Heard an update from the U.S. Department of Labor (DOL) on two Notices of Proposed Rulemaking (NPRMs):
 - i. The parity NPRM proposes amendments to regulations implementing the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) and new regulations implementing the non-quantitative treatment limitation (NQTL) comparative analyses requirements under the MHPAEA, as amended by the federal Consolidated Appropriations Act, 2021 (CAA, 2021).
 - ii. The STLD/fixed indemnity NPRM proposes rules to amend the definition of short-term, limited-duration insurance (STLDI), which is excluded from the definition of individual health insurance coverage under the federal Public Health Service Act and sets forth proposed amendments to the requirements for hospital indemnity or other fixed indemnity insurance to be considered an excepted benefit in the group and individual health insurance markets. The proposed rule also includes a comment solicitation on level-funded arrangements.
- B. Received an update on the revisions to the NAIC chart on multiple employer welfare arrangements (MEWAs)/multiple employer trusts (METs) and association plans. The chart will be circulated to the states to be updated.
- C. Adjourned in regulator-to-regulator session, pursuant to paragraph 2 (pending investigations), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.
4. Adopted the report of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, which plans to meet Aug. 14 to: 1) hear presentations from the Council of Autism Service Providers (CASP) and the Autism Legal Research Center on treatment standards for autism; and 2) adjourn in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to continue work on its goals. The Working Group also met March 23. During this meeting, the Working Group took the following action:
 - A. Heard a discussion of the *Wit v. United Behavioral Health* case, a potential landmark case setting a precedent for how care will be covered for individuals seeking treatment for mental health and addiction.
5. Adopted the report of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its July 27 minutes. During this meeting, the Subgroup took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its April 17 minutes. During this meeting, the Subgroup took the following action:
 - i. Exposed the pharmacy benefit manager (PBM) white paper for a 45-day public comment period that ended June 1.
 - C. Adopted the PBM white paper and forwarded it to the Task Force for its consideration.
7. Heard a panel presentation from representatives of the Leukemia & Lymphoma Society (LLS), the American Medical Association (AMA), and the Washington Office of the Insurance Commissioner on prior authorization. During the presentation, the panelists discussed patient and consumer experiences with prior authorization and how prior authorization requirements can create a barrier to care and be burdensome to physician practices. The panelists discussed opportunities and solutions for state insurance regulators to reform the prior authorization process and provided examples of how certain states, including Washington, are acting on those solutions to reform the prior authorization process. The panelists also discussed federal actions complementing state actions to reform the prior authorization process.

Senior Issues (B) Task Force

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its April 14 minutes. During this e-vote, the Task Force took the following action:
 - A. Adopted a letter to Congress and a letter to the U.S. Department of Labor (DOL) regarding the conflict between Medicare and the federal Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA)

rules that has led to confusion about which system and set of rules govern eligibility for coverage, as well as how the responsibility for the payment of health care benefits for eligible individuals is determined.

3. Heard a presentation from the federal Centers for Medicare & Medicaid Services (CMS) on its new Medicare Advantage marketing rules and regulations.
4. Heard a presentation from eHealth on lead generators.
5. Heard a presentation from New Mexico Oncology Hematology Consultants (NMOHC) on concerns about adverse risk selection in Medicare Advantage plans.
6. Heard an update on the status of Minnesota's "Own Your Future" initiative and Washington's WA Cares Fund.
7. Received a request to open the *Coordination of Benefits Model Regulation* (#120) and make the necessary correction to alleviate the COBRA/Medicare conflict.

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

Aug. 15, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Casualty Actuarial and Statistical (C) Task Force. See the Task Force listing for details.
3. Adopted the report of the Surplus Lines (C) Task Force. See the Task Force listing for details.
4. Adopted the report of the Title Insurance (C) Task Force. See the Task Force listing for details.
5. Adopted the report of the Workers' Compensation (C) Task Force. See the Task Force listing for details.
6. Adopted the report of the Cannabis Insurance (C) Working Group, which met July 18 in lieu of the Summer National Meeting. During this meeting, the Working Group took the following action:
 - A. Adopted its June 20 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its April 11 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted its 2022 Fall National Meeting minutes.
 - b. Exposed the *Understanding the Market for Cannabis Insurance 2.0* white paper for a 45-day public comment period that ended May 26.
 - c. Discussed the Working Group's work plan.
 - ii. Received an update on the exposed *Understanding the Market for Cannabis Insurance 2.0* white paper.
 - iii. Heard a presentation from the National Association of Mutual Insurance Companies (NAMIC) on the impact of cannabis on the personal lines.
 - iv. Heard a presentation from Wilson Elser on the unique risks of social consumption lounges.
 - B. Adopted the *Understanding the Market for Cannabis Insurance 2.0* white paper.
 - C. Heard a panel discussion on the uncertainties in the treatment of hemp and cannabis.
7. Adopted the report of the Catastrophe Insurance (C) Working Group, which met Aug. 13 in joint session with the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Received an update on the progress of the Catastrophe Modeling Primer. The drafting group formed by the Working Group has been meeting monthly to continue drafting the primer. Several sections have been drafted since the Spring National Meeting. The drafting group hopes to complete the drafting before the Fall National Meeting.
 - C. Heard from Alabama, Louisiana, and Minnesota about their mitigation programs. Alabama started Safe Home Alabama in 2016. Since Safe Home Alabama's inception, Alabama has worked with Louisiana and Minnesota to help them start their own programs. Louisiana and Minnesota used many of the elements of Alabama's program. These programs provide a tremendous amount of health and safety benefits.
 - D. Heard a presentation from the Federal Alliance for Safe Homes (FLASH) on its resilience playbook and state insurance regulator resource guide. The playbook provides resources available to states for mitigation grant programs.

- E. Heard from State Farm about the need to create an efficient process of providing information on behalf of their insureds that can be shared with FEMA to help them obtain federal loans and grants. Suggestions were discussed regarding the use of a uniform process, as the current process leaves consumers with little or no disaster support for weeks following a catastrophic event. NAIC staff will reach out to FEMA following the Summer National Meeting.
 - F. Heard a presentation from the Center for Insurance Policy and Research (CIPR) Center of Excellence (COE) regarding its available programs. The COE is working with partners to provide documents that are beneficial to state insurance regulators, such as catastrophe modeling documentation.
 - G. Heard a recap of the FEMA Region 1 event held in Maynard, MA, May 21–22. The Working Group heard about the various ways in which it could collaborate with FEMA, as well as understanding FEMA’s role. The Region 1 attendees had the following takeaways: 1) there is a need for improvement in consumer education; 2) a need to continue to work with FEMA on messaging; 3) a need for strengthening relationships with agents through education; 4) a need for discussing adjuster access to disasters; and 5) a need to know whom to contact from FEMA following a declared disaster.
8. Adopted the report of the Terrorism Insurance Implementation (C) Working Group, which has not met this year.
 9. Adopted the report of the Transparency and Readability of Consumer Information (C) Working Group, which has not met since March 15.
 10. Adopted the *Understanding the Market for Cannabis Insurance: 2023 Update* white paper, which is an update to a 2019 white paper concerning regulatory issues related to insuring cannabis.
 11. Heard a presentation from the Consumer Federation of America (CFA) on telematics and the need for regulatory guidance regarding transparency, actuarial support for variables, limits on data collection and use, privacy standards, and testing for bias.
 12. Heard a presentation from a consumer representative on the problem of homeowners being underinsured and their recommendation that insurers quote premiums using an algorithm’s estimated reconstruction costs along with one reflecting the reconstruction cost corrected for the error rate.
 13. Discussed public school insurance, including high losses and rising rates. The Committee will discuss the issue in more detail during a future meeting.
 14. Announced that a state insurance regulator drafting group is working to develop a data call to collect property insurance data to meet the Committee’s charge to better understand property insurance markets and the insurance protection gap.

Casualty Actuarial and Statistical (C) Task Force

Aug. 12, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its June 13 and May 2 minutes. During these meetings, the Task Force took the following action:
 - A. Discussed the monitoring of other NAIC committee groups.
 - B. Discussed the reviews of future actuarial papers.
 - C. Discussed the Director and Officer (D&O) Insurance Coverage Supplement and the Cyber Insurance Supplement.
 - D. Discussed loss cost multiplier (LCM) form implementation.
 - E. Received a report on the Center for Insurance Policy and Research’s (CIPR’s) Center of Excellence (COE) regarding catastrophes.
3. Adopted the report of the Actuarial Opinion (C) Working Group, including its Aug. 2, July 12, and May 25 minutes. The Working Group also met June 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the 2022 Statement of Actuarial Opinion (SAO). During these meetings, the Working Group took the following action:

- A. Exposed the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2023* for a 30-day public comment period ending Sept. 1.
 - B. Adopted a Financial Analysis (E) Working Group referral on predictive analytics in reserving.
 - C. Discussed actuarial opinion instructions. Working Group members were asked to submit any proposed instruction changes.
4. Adopted the report of the Statistical Data (C) Working Group, including its July 18 minutes. During this e-vote, the Working Group took the following action:
 - A. Adopted the *Auto Database Report Supplement for Average Premium Data* (Auto Supplement).
 5. Voted to submit its written comments to the Actuarial Standards Board (ASB) of the American Academy of Actuaries (Academy) on the proposed enterprise risk management (ERM) Actuarial Standard of Practice (ASOP).
 6. Discussed its work plan regarding the D&O Insurance Coverage Supplement and the Cyber Insurance Supplement.
 7. Received a report on the Capital Adequacy (E) Task Force’s Risk Evaluation Ad Hoc Group.
 8. Heard a presentation from the Academy on its *Approaches to Identify and/or Mitigate Bias in Property and Casualty Insurance* white paper.
 9. Heard from the ASB, the Actuarial Board for Counseling and Discipline (ABCD), the Academy, the Casualty Actuarial Society (CAS), and the Society of Actuaries (SOA) on their activity and research reports.
 10. Heard a report from the SOA on exam changes.

Surplus Lines (C) Task Force

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Surplus Lines (C) Working Group, which met May 22 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to approve three insurers for admittance to the NAIC *Quarterly Listing of Alien Insurers*.
3. Adopted its 2024 proposed charges. Minimal amendments to the charges were proposed to provide additional clarification.
4. Received a summary of 2022 U.S. and alien surplus lines financial results.

Title Insurance (C) Task Force

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Received an update on the administration of the *Survey of State Insurance Laws Regarding Title Data and Title Matters*. Microsoft Forms will be used for the survey, which is anticipated to be administered shortly following the Summer National Meeting.
3. Received an update on the compilation of consumer complaint data related to the title industry.
4. Heard a presentation from Stewart Title on issues with Non-Title Recorded Agreements for Personal Services (NTRAPS).
5. Heard a presentation from CertifID on current fraud trends in the title space. The U.S. Secret Service recently issued a notice of a rise in vacant lot fraud.

Workers’ Compensation (C) Task Force

July 20, 2023 (in lieu of the Summer National Meeting)

1. Adopted its Spring National Meeting Minutes.

2. Heard a presentation from Lewis & Ellis on workers' compensation rating. The presentation included how ratemaking is done in the workers' compensation line of business. Information was also presented on the use of predictive modeling and the current status of how predictive modeling is used in workers' compensation.

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

Aug. 15, 2023

1. Adopted its July 27 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted the pet insurance Market Conduct Annual Statement (MCAS) data call and definitions.
 - C. Adopted a new charge for the Producer Licensing (D) Task Force to review and amend, as needed, the *Public Adjuster Licensing Model Act (#228)* to enhance consumer protections in the property/casualty (P/C) claims process.
 - D. Adopted the *Continuing Education Recommended Guidelines for Instructor Approval*.
 - E. Received the Voluntary Market Regulation Certification Program.
2. Adopted revisions to the collaboration actions chapter of the *Market Regulation Handbook*. The focus of these revisions is to provide greater transparency to states about the Multistate Settlement Agreement process.
3. Adopted the Voluntary Market Regulation Certification Program. The revisions are a result of a pilot program involving 18 states. The mission of the Market Regulation Certification Program is to establish and maintain minimum standards that promote sound practices relating to the market conduct examination, market analysis, and related continuum activity functions performed for insurance consumer protection.
4. Adopted the report of the Antifraud (D) Task Force. See the Task Force listing for details.
5. Adopted the report of the Market Information Systems (D) Task Force. See the Task Force listing for details.
6. Adopted the report of the Market Analysis Procedures (D) Working Group, which met July 17 in lieu of the Summer National Meeting. During this meeting, the Working Group took the following action:
 - A. Adopted its June 12 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its May 8 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted its April 10 minutes. During this meeting, the Working Group took the following action:
 - 1) Adopted its Aug. 22, 2022, minutes.
 - 2) Discussed its charges and goals for 2023.
 - 3) Discussed the proposed other health MCAS ratios.
 - b. Discussed the Market Information Systems (MIS) data.
 - c. Discussed the proposed other health insurance MCAS ratios.
 - ii. Discussed the MIS data.
 - iii. Discussed proposed other health insurance MCAS ratios.
 - iv. Discussed the inclusion of fraternal insurance companies in the MCAS.
 - B. Adopted the other health insurance MCAS ratios.
 - C. Discussed sponsoring "lunch and learn" trainings for all market analysts on a regular schedule.
 - D. Discussed the inclusion of fraternal insurance companies in the MCAS.
7. Adopted the report of the Market Conduct Annual Statement Blanks (D) Working Group, which met July 19 in lieu of the Summer National Meeting. During this meeting, the Working Group took the following action:
 - A. Adopted its June 22 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its May 30 and May 22 minutes. During these meetings, the Working Group took the following action:
 - a. Adopted its April 6 minutes. During this meeting, the Working Group took the following action:
 - 1) Discussed the MCAS participation requirements.
 - 2) Received a pet subject matter expert (SME) group update.
 - 3) Reviewed the other health data element.
 - 4) Received an update on MCAS filings.

- b. Adopted revisions to the pet MCAS data call and definitions.
 - c. Discussed MCAS directions for determining when a claim is closed on the personal property and homeowners lines of business.
 - d. Discussed the pet insurance MCAS data call and definitions.
 - ii. Discussed MCAS directions for determining when a claim is closed on the private passenger auto (PPA) and homeowners lines of business.
 - iii. Discussed the MCAS data element revision process timeline.
 - B. Discussed the reporting of closed claims for the PPA and homeowners lines of business.
 - C. Discussed the MCAS data element revision process timeline.
 - D. Discussed the filing deadlines for the other health and short-term, limited-duration (STLD) lines of business.
8. Adopted the report of the Market Conduct Examination Guidelines (D) Working Group, which met July 18. During this meeting, the Working Group took the following action:
- A. Adopted its March 28 minutes. During this meeting, the Working Group took the following action:
 - i. Discussed its 2023 charges.
 - ii. Discussed carry-over items from 2022.
 - B. Discussed revisions to the June 6 draft of Chapter 23—Conducting the Life and Annuity Examination of the *Market Regulation Handbook* (Handbook).
 - C. Adopted the June 6 draft of Chapter 4—Collaborative Actions of the Handbook.
9. Adopted the report of the Market Regulation Certification (D) Working Group, which met June 6. During this meeting, the Working Group took the following action:
- A. Adopted its May 9 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Reviewed the pilot program’s suggested revisions to the Market Regulation Certification Program.
 - B. Reviewed the pilot program’s suggested revisions to the Market Regulation Certification Program.
10. Adopted the report of the Speed to Market (D) Working Group, which met July 25. During this meeting, the Working Group took the following action:
- A. Adopted its Nov. 10, 2022, minutes.
 - B. Discussed suggestions received for the Life, Health, and Annuities Product Coding Matrix (PCM) and the uniform transmittal document (UTD).
 - C. Heard a report from the Interstate Insurance Product Regulation Commission (Compact).
 - D. Received a report on the System for Electronic Rates & Forms Filing (SERFF) modernization project.
11. Heard an update on international issues from NAIC international policy support staff. This presentation covered the activities of the International Association of Insurance Supervisors’ (IAIS’) Market Conduct Working Group, which include a paper on the use of conduct indicators in insurance supervision and a diversity, equity, and inclusion (DE&I) project.
12. Heard a presentation from Missouri on the use of data visualization for market analysis, which included information on data needs, how to pick the right visualization, best practices for data visualization, and specific examples of market analysis.

Antifraud (D) Task Force

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Discussed its 2023 charges. The Task Force reviewed its current charges in preparation for 2024. Its charges will be open for comment through Sept. 22. The Task Force will review the comments received and meet in October to consider adoption of its 2024 proposed charges.
3. Heard a presentation from the United Brotherhood of Carpenters and Joiners of America (UBC) on workers’ compensation premium fraud. The Task Force discussed the importance of workers’ compensation insurance

fraud related to the construction industry. The Task Force advised that it would add this as an agenda topic to discuss further during its regulator-to-regulator discussions.

4. Adopted the report of the Improper Marketing of Health Insurance (D) Working Group. The Working Group reported that it:
 - A. Plans to meet Aug. 14 to:
 - i. Consider adoption of draft amendments to the *Unfair Trade Practices Act* (#880). Revisions include the deletion of the definition of records from Section 2: Definitions and the lead generator devices language concerning “accident and sickness/Medicare supplement” to be replaced with “what is or what purports to be a health insurance product or service.”
 - ii. Hear a presentation from Georgetown University on a research study concerning open enrollment.
 - B. Met July 27 to discuss the newly revised draft amendments to Model #880.
5. Received the report of the Antifraud Technology (D) Working Group. The Working Group chair has been working with NAIC staff on the redesign of the NAIC’s Online Fraud Reporting System (OFRS). The Working Group will continue to meet to discuss necessary enhancements to the OFRS to include fields provided from the National Insurance Crime Bureau (NICB) data.
6. Heard a presentation from Coalition Against Insurance Fraud (CAIF) on a research study on who commits insurance fraud and why. The study showed how different generations view insurance fraud.
7. Heard reports from the CAIF and the NICB on antifraud activity.

Market Information Systems (D) Task Force

July 31, 2023 (in lieu of the Summer National Meeting)

1. Discussed its 2023 charges and goals.
2. Adopted the report of the Market Information Systems Research and Development (D) Working Group, which met May 22 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to review its goals for 2023.
3. Discussed its 2023 charges and goals.
4. Adopted the report of the Market Information Systems Research and Development (D) Working Group, which met May 22 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to review its goals for 2023.
5. Received a status report from the Market Analysis Procedures (D) Working Group.
6. Received an update on Market Information Systems (MIS) projects and Uniform System Enhancement Request (USER) forms.

Producer Licensing (D) Task Force

May 31, 2023 (in lieu of the Summer National Meeting)

1. Adopted its 2022 Fall National Meeting minutes.
2. Discussed the template for the 1033 process.
3. Adopted a new public adjuster licensing charge.
4. Adopted the *Continuing Education Recommended Guidelines for Instructor Approval*.
5. Adopted the report of the Uniform Education (D) Working Group, which met May 18 and took the following action:
 - A. Discussed its 2023 charges.
 - B. Discussed exam pass rates.

- C. Discussed the *Continuing Education Recommended Guidelines for Instructor Approval*.
 - D. Discussed producers declining continuing education (CE) credit.
 - E. Discussed accommodations for individuals with disabilities or medical waivers specific to CE credit.
6. Adopted the report of the Adjuster Licensing (D) Working Group, which met March 29 and took the following action:
- A. Discussed its 2023 charges.
 - B. Discussed a question concerning public adjusters and the creation of a Public Adjusters (D) Working Group.
7. Received a report from the National Insurance Producer Registry (NIPR) Board of Directors.

FINANCIAL CONDITION (E) COMMITTEE

Aug. 15, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its July 19 minutes. During this meeting, the Committee took the following action:
 - A. Adopted life risk-based capital (RBC) proposals 2023-09-IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals).
 - B. Adopted the *Mortgage Guaranty Insurance Model Act* (#630).
 - C. Appointed a new group titled the Generator of Economic Scenarios (GOES) (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group and adopted new charges as follows:
 - i. Monitor that the economic scenario governance framework is being appropriately followed by all relevant stakeholders involved in scenario delivery.
 - ii. Review material generator of economic scenario (GOES) updates, either driven by periodic model maintenance or changes to the economic environment, and provide recommendations.
 - iii. Regularly review key economic conditions and metrics to evaluate the need for off-cycle or significant GOES updates and maintain a public timeline for GOES updates.
 - iv. Support the implementation of a GOES for use in statutory reserve and capital calculations.
 - v. Develop and maintain acceptance criteria that reflect history as well as plausibly more extreme scenarios.
3. Adopted the report of the Accounting Practices and Procedures (E) Task Force. See the Task Force listing for details.
4. Adopted the report of the Capital Adequacy (E) Task Force. See the Task Force listing for details.
5. Adopted the report of the Examination Oversight (E) Task Force. See the Task Force listing for details.
6. Adopted the report of the Financial Stability (E) Task Force. See the Task Force listing for details.
7. Adopted the report of the Receivership and Insolvency (E) Task Force. See the Task Force listing for details.
8. Adopted the report of the Reinsurance (E) Task Force. See the Task Force listing for details.
9. Adopted the report of the Valuation of Securities (E) Task Force. See the Task Force listing for details.
10. Adopted the report of the Group Capital Calculation (E) Working Group, which met July 27 and June 13. During these meetings, the Working Group took the following action:
 - A. Exposed the group capital calculation (GCC) scalar methodology proposal for a 30-day public comment period that ended July 13.
 - i. Discussed the comment letters received from the American Council of Life Insurers (ACLI) and from UnitedHealth Group (UHG) on the GCC scalar methodology proposal.
 - ii. Discussed the scalar methodology proposal.
 - iii. Adopted the scalar methodology proposal for life insurance companies.
11. Adopted the report of the Mortgage Guaranty Insurance (E) Working Group, which met July 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted amendments to Model #630.

12. Adopted the report of the Restructuring Mechanisms (E) Working Group, which met May 4 and took the following action:
 - A. Adopted its April 4 minutes. During this meeting, the Working Group took the following action:
 - i. Noted that the Restructuring Mechanisms (E) Subgroup was merged into the Working Group during the Spring National Meeting.
 - ii. Exposed redline versions for a public comment period that ended April 26.
 - iii. Received an update on RBC runoff referrals.
 - iv. Continued discussion of the review of previously submitted comments, including those on “no worse” language, due process, and pro forma financial statements.
 - B. Received and considered comments on exposed draft best practices guidance and new language to address previous comments.
13. Adopted the report of the Risk-Focused Surveillance (E) Working Group, which met Aug. 14. During this meeting, the Working Group took the following action:
 - A. Discussed proposed changes to the NAIC’s *Financial Analysis Handbook* and *Financial Condition Examiners Handbook* to provide additional guidance for state insurance regulators in reviewing service agreements put in place between insurers and their affiliates. As a result of the discussions held, the Working Group agreed to adjust its proposed guidance on cost-plus reimbursement contracts. The Working Group also agreed to refer the updated guidance to the Financial Analysis Solvency Tools (E) Working Group and the Financial Condition Examiners (E) Handbook Technical Group for consideration of adoption.
 - B. Discussed the next steps to be taken to address a 2022 referral received from the Macroprudential (E) Working Group on affiliated investment management agreements and capital maintenance agreements. Risk and Regulatory Consulting (RRC) provided a presentation on key considerations in the state insurance regulator review of affiliated investment management agreements. The Working Group agreed to form a drafting group to develop guidance for NAIC handbooks in this area.
 - C. Discussed the status of an all-state survey to collect data on financial analyst and examiner compensation for the purposes of adjusting the salary ranges included in the NAIC handbooks.
 - D. Received a report on 2023 peer review training sessions, which included one financial analysis session, one financial examination session, and one Own Risk and Solvency Assessment (ORSA)-focused session.
14. Reported that the Financial Analysis (E) Working Group met Aug. 12, July 20, June 21, June 14, May 25, and May 24 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results.
15. Reported that the Valuation Analysis (E) Working Group met Aug. 12, July 20, and May 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.
16. Reported that the National Treatment and Coordination (E) Working Group met Aug. 2, July 26, and June 15 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance), to continue work on its goals.
17. Adopted the macroprudential reinsurance worksheet.
18. Adopted *Interpretation (INT) 23-01T: Net Negative (Disallowed) IMR*.
19. Heard a presentation from the Office of the Superintendent of Financial Institutions (OSFI) on the use of artificial intelligence (AI).
20. Exposed the *Framework for Regulation of Insurer Investments* for a 45-day public comment period ending Oct. 2.

Accounting Practices and Procedures (E) Task Force

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its 2024 proposed charges, which remain unchanged from its 2023 charges.

3. Adopted the report of the Statutory Accounting Principles (E) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its July 5, June 28, May 16, April 12, and April 10 minutes. During these meetings, the Working Group took the following action:
 - i. Re-exposed a revised *Interpretation (INT) 23-01: Net Negative (Disallowed) Interest Maintenance Reserve* for a public comment period that ended July 21. The INT had previously been exposed April 10 for a public comment period that ended May 5.
 - ii. Reviewed comments received on exposed items.
 - iii. Exposed its maintenance agenda for a public comment period that ended June 30.
 - iv. Discussed a referral from the Valuation of Securities (E) Task Force on the acquisition of commercially available data and deemed a response was not necessary.
 - v. Discussed a referral from the Life Actuarial (A) Task Force on negative interest maintenance reserve (IMR).
 - vi. Exposed *INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act – Corporate Alternative Minimum Tax* for a public comment period that ended May 5.
 - C. Adopted the following clarifications to statutory accounting guidance:
 - i. *Statement of Statutory Accounting Principles (SSAP) No. 5R—Liabilities, Contingencies, and Impairments of Assets and Issue Paper No. 168—Updates to the Definition of a Liability*: Adopted revisions to the definition of a liability under statutory accounting. (Ref #2022-01)
 - ii. *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*: Adopted revisions to SSAP No. 24 to reject *Accounting Standards Update (ASU) 2021-10, Government Assistance*, and the incorporation of disclosures regarding government assistance. (Ref #2023-06)
 - iii. *SSAP No. 26R—Bonds, SSAP No. 21R—Other Admitted Assets, SSAP No. 43R—Loan-Backed and Structured Securities*, and other affected SSAPs: Refined guidance for the principles-based bond project. (Note that SSAP No. 26R and SSAP No. 43R have updated titles effective Jan. 1, 2025.) (Ref #2019-21)
 - iv. *SSAP No. 34—Investment Income Due and Accrued*: Adopted revisions to clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure for SSAP No. 34 and annual statement instruction purposes. (Ref #2023-13)
 - v. *SSAP No. 43R—Loan-Backed and Structured Securities*: Adopted revisions to incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities. (Ref #2023-02)
 - vi. *SSAP No. 95—Nonmonetary Transactions and SSAP No. 104R—Share-Based Payments*: Adopted, with modification, *ASU 2019-08, Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*. The revisions add guidance to include share-based consideration payable to customers. (Ref #2023-07)
 - vii. *Interpretation (INT) 20-01: ASU 2020-04 and 2021-01 – Reference Rate Reform*: Adopted proposal to revise the expiration date of INT 20-01 to Dec. 31, 2024. (Ref #2023-05)
 - viii. INT 23-01: Adopted with three editorial revisions. This INT provides optional, limited-time guidance, which allows the admittance of net negative (disallowed) IMR up to 10% of adjusted capital and surplus. As detailed within the INT, it will be effective until Dec. 31, 2025, and automatically nullified on Jan. 1, 2026, but the effective date can be adjusted (e.g., nullified earlier or extended). In addition, the Working Group directed the formation of an ad hoc subgroup to work on a long-term solution. Upon adoption of the INT, NAIC staff will provide the Blanks (E) Working Group with a disclosure memorandum for posting on its website for year-end 2023. Additionally, a blanks proposal will be

- sponsored to incorporate the disclosures and attestation requirements into the notes and general interrogatories for year-end 2024. (Ref #2022-19)
- ix. *Appendix D—Nonapplicable GAAP Pronouncements*: The following U.S. generally accepted accounting principles (GAAP) standards were rejected as they are not applicable to statutory accounting:
 - a. *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*. (Ref #2023-08)
 - b. *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)*. (Ref #2023-09)
 - c. *ASU 2022-05, Transition for Sold Contracts*. (Ref #2023-10)
 - D. Exposed the following statutory accounting principle (SAP) concepts and clarifications to statutory accounting guidance until Sept. 29, except for INT 23-02T, INT 23-03T, Ref #2022-11, and Ref #2023-12, which have a comment deadline of Sept. 12:
 - i. *SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments*: Exposed revisions to further restrict the investments that are permitted for cash equivalent or short-term investment reporting. These revisions are proposed to ensure that certain investment types are captured on designated Schedule BA reporting lines and to eliminate the potential to design investments to specifically qualify for short-term reporting. (Ref #2023-17)
 - ii. *SSAP No. 5R, SSAP No. 92—Postretirement Benefits Other Than Pensions, SSAP No. 102—Pensions, and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*: Exposed revisions to adopt with modification certain aspects of *ASU 2016-19—Technical Corrections and Improvements*. Revisions also propose amending SSAP No. 92 guidance on insurance contracts to use the same terminology used in SSAP No. 102. (Ref #2023-18)
 - iii. *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*: Exposed the overall concept for a long-term project to capture accounting guidance for asset valuation reserve (AVR) and IMR in SSAP No. 7. (Ref #2023-14)
 - iv. *SSAP No. 20—Nonadmitted Assets and SSAP No. 21R—Other Admitted Assets*: Re-exposed the revisions that clarify that pledged collateral must qualify as an admitted invested asset for a collateral loan to be admitted. The revisions require audits and the use of net equity value for valuation assessments when the pledged collateral is in the form of partnerships, limited liability companies (LLCs), or joint ventures. (Ref #2022-11)
 - v. *SSAP No. 21R and Bond Issue Paper*: Exposed a revised SSAP No. 21R and Bond Issue Paper to provide guidance for the accounting for debt securities that do not qualify as bonds, as well as proposed measurement guidance for residuals. (Ref #2019-21)
 - vi. *SSAP No. 43R*: Exposed updated proposal to reflect revisions from the interim discussions and coordination on revisions to clarify the scope and reporting for investment structures that represent residual interests within SAPs. (Ref #2023-12)
 - vii. *SSAP No. 48—Joint Ventures, Partnerships, and Limited Liability Companies*: Exposure requests industry and regulator comment on a proposal to further define and provide examples for the investments captured as non-registered private funds, joint ventures, partnerships or limited liability companies, or residual interests and reported based on the underlying characteristics of assets. (Ref #2023-16)
 - viii. *SSAP No. 54R—Individual and Group Accident and Health Contracts*: Exposed clarifying revisions and an illustration to clarify that gross premium valuation (under A-010) and cash-flow testing (under *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* [AG 51]) are both required if indicated. (Ref #2023-22)

- ix. SSAP No. 92 and SSAP No. 102: Exposed revisions to SSAP No. 92 and SSAP No. 102 to remove the transition guidance that was included in the initial adoption of SSAP No. 92 and SSAP No. 102, as it is past the 10-year effective period for that transition. (Ref #2023-21)
 - x. *SSAP No. 93—Low-Income Housing Tax Credit Property Investments* and *SSAP No. 94R—Transferable and Non-Transferable State Tax Credits*: Exposed interested party comments on revisions to SSAP No. 93 and SSAP No. 94R, as well as updates made in response to the comments received. (Ref #2022-14)
 - xi. *INT 03-02: Modification to an Existing Intercompany Pooling Arrangement*: Exposed the intent to nullify INT 03-02, as it is inconsistent with *SSAP No. 25—Affiliates and Other Related Parties*. (Ref #2022-12)
 - xii. *INT 23-02: Third Quarter 2023 Inflation Reduction Act – Corporate Alternative Minimum Tax*: Exposed a proposed INT, which recommends that for third-quarter 2023, reporting entities should disclose whatever information is available regarding their applicable reporting entity status. (INT 23-02)
 - xiii. *INT 23-03: Corporate Alternative Minimum Tax Guidance*: Exposed the INT, which provides guidance effective beginning year-end 2023 reporting of the corporate alternative minimum tax, which applies *SSAP No. 101—Income Taxes* with modification and provides disclosures. The exposed INT 23-03 includes that paragraph 11c of SSAP No. 101 should be followed. (Ref #2023-04)
 - xiv. *IMR/AVR Specific Allocations*: Exposed revisions to the *Annual Statement Instructions* to remove the guidance that permits the specific allocation of non-interest-related losses to IMR. (Ref #2023-15)
 - xv. *Appendix D—Nonapplicable GAAP Pronouncements*: The following U.S. GAAP standards were exposed with revisions to reject, as they are not applicable to statutory accounting:
 - a. *ASU 2018-09—Codification Improvements* (Ref #2023-19)
 - b. *ASU 2020-10—Codification Improvements* (Ref #2023-20)
- E. Directed NAIC staff on the following items:
- i. *Review Annual Statement Instructions for Accounting Guidance*: To proceed with a broad project to review the annual statement instructions and ensure accounting guidance is included within the SSAPs. (Ref #2023-01)
 - ii. *Schedule BA Reporting*: To sponsor a blanks proposal to revise Schedule BA: Other Long-Term Assets in accordance with the bond project for debt securities that do not qualify as bonds, with formal notice to the Valuation of Securities (E) Task Force and the Capital Adequacy (E) Task Force on the proposal to allow life reporting entities the ability to use existing Schedule BA reporting provisions for Securities Valuation Office (SVO)-assigned designations in determining risk-based capital (RBC) for debt securities that do not qualify as bonds. (Ref #2019-21)
- F. Received an update on U.S. GAAP exposures, noting that pending items will be addressed during the normal maintenance process.
4. Adopted the report of the Blanks (E) Working Group, which met July 27. During this meeting, the Working Group took the following action:
- A. Adopted its May 31 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its March 7 minutes.
 - ii. Adopted the following proposals:
 - a. 2022-17BWG Modified: Add a new disclosure paragraph for Note 8—Derivative Instruments and Illustration. The new disclosure is to be data captured. Add electronic-only columns related to derivatives with excluded components to Schedule DB, Part A and Part B for both Section 1 and Section 2. Add new code column instructions for Schedule DB, Part A and B (SAPWG 2021-20).
 - b. 2023-01BWG Modified: Remove pet insurance from the inland marine line of business and add a new line of business to the Appendix—property/casualty (P/C) lines of business. Add a pet insurance line within the existing P/C blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. Add new Schedule P Parts 1 through 4, specific to pet insurance.

- c. 2023-02BWG Modified: Add an exhibit to identify premiums that are reportable for Market Conduct Annual Statement (MCAS) purposes.
- d. 2023-03BWG: Remove life crosschecks for columns 2, 6, and 10 on the Accident and Health Policy Experience Exhibit (AHPEE).
- e. 2023-04BWG Modified: Add instructions for the appointed actuary and qualified actuary contacts to the Jurat electronic-only section.
- f. 2023-08BWG: Add clarifying language for mutual insurance companies on Schedule Y, Part 3.
- g. 2023-10BWG Modified: Update the three primary issue periods on Long-Term Care Experience Reporting Form 2.
- h. 2023-11BWG Modified: Add additional instructions and illustration to be data captured for Note 7—Investment Income in the Notes to the Financial Statement to disclose more information on interest.
- i. Adopted its editorial listing.
- iii. Deferred three proposals:
 - a. 2023-05BWG: Changes to the cybersecurity supplement.
 - b. 2023-07BWG: Delete the legal entity identifier (LEI) column for the select investment schedules.
 - c. 2023-09BWG: Add a new financial statement Note 37—Life Insurance Net Amount at Risk by Product Characteristics.
- iv. Adopted its editorial listing.
- B. Deferred the following proposals for an additional comment period:
 - i. 2023-05BWG Modified: Changes to the cybersecurity supplement to remove the reference to identity theft insurance from the General Instructions; remove the interrogatory questions from Part 1 that pertain to identity theft insurance; and remove the column for identity theft insurance from Parts 2 and 3. Remove claims-made and occurrence breakdowns, as well as first-party and third-party breakdowns, from data collection, and remove the question in the interrogatories regarding tail policies.
 - ii. 2023-07BWG: Update the code column and delete the LEI column for the following investment schedules: Schedules A, B, BA, D Part 2, D Part 6, and E Part 1.
 - iii. 2023-09BWG: Add a new financial statement Note 37—Life Insurance Net Amount at Risk by Product Characteristics to the life and accident and health/fraternal (H/F) blank for the updates to the life C-2 mortality risk charges for life RBC.
- C. Re-exposed the following proposal for a 75-day public comment period ending Oct. 12:
 - i. 2023-06BWG: Split the Schedule D, Part 1 into two sections: one for issuer credit obligations and the other for asset-backed securities (ABS). Update the other parts of the annual statement that reference the bond lines of business.
- D. Adopted its editorial listing.

Capital Adequacy (E) Task Force

Aug. 14, 2023

1. Adopted its June 30 and April 28 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted proposal 2023-02-P-MOD (Underwriting Risk Line 1 Factors).
 - C. Adopted proposals 2023-09-IRE (Residual Factor for Life) and 2023-10-IRE (Residual Sensitivity Test Factor for Life).
 - D. Adopted the Generator of Economic Scenarios (GOES) (E/A) Subgroup charges.
 - E. Adopted proposal 2022-09-CA-MOD (Revised Affiliated Investments Structure and Instructions).
 - F. Adopted proposal 2022-16-CA (Underwriting Risk Factors – Investment Income Adjustment).

- G. Adopted proposal 2023-01-CA (Stop Loss Premiums).
 - H. Adopted proposal 2023-02-P (Underwriting Risk Line 1 Factors).
 - I. Adopted proposal 2023-03-IRE (Revised Residual Structure for Life).
 - J. Adopted proposal 2023-04-IRE (Residual Sensitivity Test for Life).
 - K. Adopted proposal 2023-05-L (Remove Dual Trend Test).
 - L. Adopted proposal 2023-06-L (C-2 Mortality Risk Structure Changes).
 - M. Adopted proposal 2023-07-L (CM6 & CM7 Mortgages Structures Changes).
 - N. Exposed proposal 2022-16-CA (Underwriting Risk Factors Investment Income Adjustment) for a 30-day public comment period that ended May 27.
 - O. Exposed proposal 2023-01-CA (Stop Loss Premiums) for a 30-day public comment period that ended May 27.
 - P. Discussed the current turmoil in the banking sector.
 - Q. Discussed a referral from the Valuation of Securities (E) Task Force and the Risk-Based Capital Investment Risk and Evaluation (E) Working Group regarding additional market and analytical information for bond investments.
 - R. Received an update from its Risk Evaluation Ad Hoc Group.
2. Adopted the report of the Health Risk-Based Capital (E) Working Group, which met July 25. During this meeting, the Working Group took the following action:
- A. Adopted its May 17 and April 17 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Referred proposal 2023-01-CA (Stop Loss Premiums) to the Capital Adequacy (E) Task Force for exposure.
 - iii. Received an update from the American Academy of Actuaries (Academy) on the health care receivables and H2-underwriting risk review projects.
 - iv. Discussed pandemic risk.
 - v. Exposed the proposal on the health test language for a 45-day public comment period that ended June 30.
 - B. Adopted its 2023 health risk-based capital (RBC) newsletter.
 - C. Adopted its 2022 health RBC statistics report.
 - D. Exposed proposal 2023-11-H (XR014 Fee-for-Service & Other Risk Revenue-Medicare & Medicaid) for a 30-day public comment period that ended Aug. 24.
 - E. Referred the health test proposal to the Blanks (E) Working Group.
 - F. Received an update from the Academy on the health care receivable and H2-underwriting risk review projects.
 - G. Adopted its updated working agenda.
 - H. Received an update on the Excessive Growth Charge Ad Hoc Group.
 - I. Discussed a way forward on evaluating pandemic risk in the health RBC formula.
3. Adopted the report of the Risk-Based Capital Investment Risk and Evaluation (E) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
- A. Adopted its June 14, May 17, April 20, and Spring National Meeting minutes, which included the following action:
 - i. Discussed comments received on proposed structural and factor changes for residual tranches.
 - ii. Adopted structural changes and factors for the base factor and a sensitivity test for residual tranches.
 - B. Received updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group.
 - C. Heard a presentation from the Academy on principles for structured securities RBC.

4. Adopted the report of the Life Risk-Based Capital (E) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its June 22 and April 14 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted the proposed charges of the Generator of Economic Scenarios (GOES) (E/A) Subgroup.
 - ii. Discussed proposal 2023-08-L (Custody Control Accounts).
 - iii. Discussed its working agenda.
 - iv. Adopted proposal 2023-05-L (Remove Dual Trend Test).
 - v. Adopted proposal 2023-06-L (C-2 Mortality Structure and Instruction Changes).
 - vi. Adopted proposal 2023-07-L (CM6 & CM7 Mortgage Structure Change).
 - vii. Exposed proposal 2023-08-L (Comfort Trusts) for a 45-day public comment period.
 - C. Adopted the 2023 life RBC newsletter.
 - D. Adopted the 2022 life RBC statistics.
 - E. Adopted its working agenda.
 - F. Heard a presentation from the American Council of Life Insurers (ACLI) on a proposal for repurchase agreements and exposed it for a 45-day public comment period.
 - G. Discussed C-2 mortality risk.
5. Adopted the report of the Property and Casualty Risk-Based Capital (E) Working Group, which met July 27 in lieu of the Summer National Meeting. During this meeting, the Working Group took the following action:
 - A. Adopted its June 16 and April 24 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Adopted proposal 2023-02-P (UW Risk Line 1 Factors).
 - iii. Adopted proposal 2023-02-P-MOD (UW Risk Line 1 Factors Modification), which updated the health/fraternal (H/F), workers' compensation (WC), and commercial multiple peril (CMP) reserve factors due to an incorrect calculation.
 - iv. Forwarded the referral regarding the deferral of adoption of blanks proposal 2023-01BWG to the Blanks (E) Working Group.
 - v. Discussed annual statement blanks proposal 2022-15BWG.
 - vi. Heard updates on current property/casualty (P/C) RBC projects from the Academy.
 - vii. Discussed the possibility of reviewing and analyzing the P/C RBC charges that have not been reviewed since developed.
 - B. Adopted the report of the Catastrophe Risk (E) Subgroup, which met July 18 in lieu of the Summer National Meeting. During this meeting, the Subgroup took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Discussed its working agenda.
 - iii. Received an update from its Catastrophe Model Technical Review Ad Hoc Group.
 - iv. Discussed wildfire peril impact analysis.
 - v. Heard a presentation from Verisk on a severe convective storms model update and technical review.
 - vi. Discussed the flood insurance market.
 - C. Adopted the 2023 P/C RBC newsletter.
 - D. Discussed the 2022 P/C RBC statistics report.
 - E. Discussed its working agenda.
 - F. Discussed the possibility of reviewing and analyzing the P/C RBC charges that have not been reviewed since developed.
 - G. Heard an update from the Academy on current P/C RBC projects.
6. Adopted its working agenda.

7. Exposed its 2024 proposed charges for a 30-day public comment period ending Sept. 13.
8. Exposed its revised procedures document for a 30-day public comment period ending Sept. 13.
9. Received an update from its Risk Evaluation Ad Hoc Group.
10. Discussed the implications of the recent market turmoil and its impact on insurer investments.

Examination Oversight (E) Task Force

July 24, 2023 (in lieu of the Summer National Meeting)

1. Adopted its 2022 Fall National Meeting minutes.
2. Adopted the report of the Financial Analysis Solvency Tools (E) Working Group, which met July 12 and June 1 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During its July 12 meeting, the Working Group took the following action:
 - A. Adopted revisions to the *Insurer Profile Summary Sharing Best Practices Guide*.
3. Adopted the report of the Financial Examiners Coordination (E) Working Group, which met April 17 and March 22 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.
4. Adopted the report of the Electronic Workpaper (E) Working Group, which has not met this year but provided a brief update regarding the TeamMate+ transition.
5. Adopted the report of the Financial Examiners Handbook (E) Technical Group, which met June 20. During this meeting, the Technical Group took the following action:
 - A. Exposed revisions to Exhibit G—Consideration of Fraud for a 30-day public comment period that ended July 20.
 - B. Exposed revisions to add a reference to a template for a memorandum of understanding into Sections 1–3 of the *Financial Condition Examiners Handbook* (Handbook) for a 30-day public comment period that ended July 20.
 - C. Received a referral from the Financial Analysis (E) Working Group that suggests considering additional guidance that would encourage examiners to review strategic/operational risks faced by health insurers during an on-site examination.
 - D. Received an update on the Climate and Resiliency (EX) Task Force referral and proposed revisions. Working revisions include the following Handbook sections: Investments; Reinsurance (Assuming and Ceding); Underwriting Repositories; Exhibit A (Planning Procedures); Exhibit B (Planning Questionnaire); Exhibit I (Planning Memo); Exhibit V (Prospective Risks), Exhibit Y (Interview Questions); and Exhibit DD (Critical Risk Categories).
6. Adopted the report of the Information Technology (IT) Examination (E) Working Group, which met April 11. During this meeting, the Working Group took the following action:
 - A. Discussed a referral from the Cybersecurity (H) Working Group asking the IT Examination (E) Working Group to consider making cybersecurity a higher priority in the examination process.

Financial Stability (E) Task Force

Aug. 13, 2023 (joint session with the Macroprudential (E) Working Group)

1. Adopted its Spring National Meeting minutes.
2. Adopted its June 20 minutes. During this meeting, the Task Force took the following action:
 - A. Adopted the reinsurance worksheet.
3. Heard an update on Financial Stability Oversight Council (FSOC) developments.
4. Received a Macroprudential (E) Working Group update and a Valuation Analysis (E) Working Group update.

5. Heard an international update, which included an update on the International Association of Insurance Supervisors (IAIS) Global Monitoring Exercise (GME). The GME includes the individual insurers monitoring exercise and the sector-wide monitoring exercise with three more additional topics of interest: credit risk; interest rate risk; and structural changes in life insurance, including reinsurance.

Receivership and Insolvency (E) Task Force

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Receivership Financial Analysis (E) Working Group. The Working Group will meet Aug. 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership and related topics.
3. Adopted the report of the Receivership Law (E) Working Group, which met July 24. During this meeting, the Working Group took the following action:
 - A. Adopted its May 23 minutes. During this meeting, the Working Group took the following action:
 - i. Exposed proposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act* (#540) for restructuring mechanisms and cybersecurity insurance for a 30-day public comment period that ended June 23.
 - B. Adopted proposed amendments to Model #540.
 - C. Heard a presentation from Arcina Risk Group on an extension of file retention of closed receivership estate records.
4. Exposed proposed amendments to Model #540 for restructuring mechanisms and cybersecurity insurance for a 30-day public comment period ending Sept. 14.
5. Exposed a template for describing the U.S. receivership regime for a 30-day public comment period ending Sept. 14. The template is intended for lead state insurance departments to provide consistency in discussions with international regulators and aid in developing resolution plans for internationally active insurance groups (IAIGs).
6. Heard an update on international resolution activities.
7. Discussed Part A financial regulation and accreditation standards and previous review work performed by the Task Force on standards for receivership and insurance guaranty association laws.
8. Heard an update on a proposed receivership tabletop session. The NAIC will review the availability of space and time at the Fall National Meeting.

Reinsurance (E) Task Force

July 24, 2023 (in lieu of the Summer National Meeting)

1. Adopted its Spring National Meeting minutes.
2. Adopted its 2024 proposed charges, which include minor revisions from 2023 to reflect the current duties of the Task Force and the Reinsurance Financial Analysis (E) Working Group.
3. Adopted the report of the Reinsurance Financial Analysis (E) Working Group, which met July 19 and May 2 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to approve several certified and reciprocal jurisdiction reinsurers for passporting.
4. Received a status report on the reinsurance activities of the Mutual Recognition of Jurisdictions (E) Working Group.
5. Discussed ongoing projects at the NAIC that affect reinsurance.
6. Received a status report on states' implementation of the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787).

Risk Retention Group (E) Task Force

The Risk Retention Group (E) Task Force did not meet at the Summer National Meeting.

Valuation of Securities (E) Task Force

Aug. 14, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its July 13 and May 15 minutes. During these meetings, the Task Force took the following action:
 - A. Adopted a *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) amendment to clarify the meaning of repurchase agreements in the derivatives transaction definition for funds in Part Three of the P&P Manual. The Task Force had previously exposed the amendment for a 45-day public comment period that ended June 30.
 - B. Received comments on a P&P Manual amendment to update the definition of an NAIC designation. The Task Force had previously exposed the amendment for a 45-day public comment period that ended June 30.
 - C. Received a staff report on updates on the proposed collateralized loan obligation (CLO) modeling methodology and CLO Ad Hoc Working Group.
 - D. Exposed a proposed P&P Manual amendment authorizing the procedures for the Securities Valuation Office's (SVO's) discretion over NAIC designations assigned through the filing exemption (FE) process for a 60-day public comment period that ended July 14.
 - E. Discussed a proposal for consideration by the Executive (EX) Committee to change how SVO fees are determined.
3. Adopted its 2024 proposed charges, which remain unchanged from its 2023 charges.
4. Received a report on the projects of the Statutory Accounting Principles (E) Working Group.
5. Received and discussed comments on the proposed P&P Manual amendment to update the definition of an NAIC designation.
6. Received and discussed comments on the proposed P&P Manual amendment authorizing the procedures for the SVO's discretion over NAIC designations assigned through the FE process.
7. Received a status report on the proposed CLO modeling methodology and CLO Ad Hoc Working Group.
8. Received final questions to be answered by credit rating providers (CRPs).
9. Discussed the Fitch Ratings downgrade of its U.S. government credit rating.

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Reported that it met Aug. 12 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee took the following action:
 - A. Discussed state-specific accreditation issues.
 - B. Voted to award continued accreditation to the insurance departments of Missouri, New Hampshire, South Dakota, and Texas.
3. Adopted the 2020 revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) as significant elements of Part A accreditation standards. The revisions are recommended for all states effective Jan. 1, 2026, and they implement a group capital calculation (GCC) for the purpose of group solvency supervision and a liquidity stress test (LST) for macroprudential surveillance. The revisions include provisions allowing the commissioner to grant exemptions to GCC for groups meeting standards set forth in 21A and 21B of Model #450 without the requirement to file at least once. This exemption applies primarily to risk retention

groups (RRGs).

4. Adopted its 2024 proposed charges, which remain unchanged from its 2023 charges.

INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted its April 13 minutes. During this meeting, the Committee took the following action:
 - A. Discussed NAIC comments on the International Association of Insurance Supervisors (IAIS) public consultation on the issues paper on the roles and functioning of policyholder protection schemes (PPSs).
3. Heard an update from a representative at the government of Canada's Office of the Superintendent of Financial Institutions (OSFI) on international insurance developments and activities in Canada.
4. Heard an update on recent activities and priorities of the IAIS, including: 1) a review of the June 2023 Global Seminar and recent committee meetings; 2) the upcoming comparability assessment process for the aggregation method (AM) and the release for feedback of a U.S.-produced document describing the Provisional AM for use in the comparability assessment; and 3) continuing work at various IAIS forums and steering groups.
5. Heard an update on international activities, including: 1) workstreams of the European Union (EU)-U.S. Insurance Dialogue Project and its recent public stakeholder session in June 2023; 2) recent meetings, events, and speaking engagements with international insurance regulators; 3) recent meetings of the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee; and 4) recent bilateral meetings.

INNOVATION, CYBERSECURITY, AND TECHNOLOGY (H) COMMITTEE

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Big Data and Artificial Intelligence (H) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Received updates on the home artificial intelligence (AI)/machine learning (ML) public report and the life AI/ML survey. The survey was conducted under the market examination authorities of 10 requesting states (Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, Vermont, and Wisconsin) and was completed by insurers who write home insurance in one of the 10 participating states and have at least \$50 million in national homeowners insurance premium for 2020. Out of 194 companies completing the survey, 136 companies currently use, plan to use, or plan to explore using AI/ML as defined for this survey. This equates to approximately 70% of reporting companies. For comparison, approximately 88% of the companies responding to the private passenger auto (PPA) survey reported they currently use, plan to use, or plan to explore using AI/ML. Among insurer operations areas, companies reported varying levels of AI/ML use, from 14% in the loss prevention area to 54% in claims operations. From maximum to minimum use, the percentage of companies using AI/ML by insurer function were: claims, 54%; underwriting and marketing, both at 47%; fraud detection, 42%; rating, 35%; and loss prevention, 14%. The two most popular reasons reported for not using, not planning to use, and not exploring the use of AI/ML were "no compelling business reason" and "waiting for regulatory guidance."
 - C. Heard a presentation from Deloitte on generative AI, which addressed how generative AI currently works, the emerging capabilities of generative AI, how to measure and mitigate AI risk, insurance industry examples of the benefits of AI, and common AI terms and definitions.

3. Adopted the report of the Cybersecurity (H) Working Group, which reported that its drafting group of state insurance regulators has been meeting to develop a Cybersecurity Event Response Plan (CERP).
4. Adopted the report of the E-Commerce (H) Working Group, which reported that its chairs have met several times to discuss the Working Group's next steps and to give NAIC staff guidance on drafting a framework that would serve as a guide for states looking to modernize their regulatory requirements.
5. Adopted the report of the Innovation in Technology and Regulation (H) Working Group, which met April 27. During this meeting, the Working Group took the following action:
 - A. Discussed an overview of its 2023 work plan.
 - B. Discussed the development of a SupTech Forum.
 - C. Discussed the development of an Insurtech Forum program to be held at the 2023 NAIC Insurance Summit.
 - D. Heard a presentation from Aite-Novarica Group on ChatGPT.
6. Adopted the report of the Privacy Protections (H) Working Group, which met Aug. 13. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its July 25, June 5–6, May 16, May 2, and April 18 minutes, which included the following action:
 - i. Discussed comments received and collaborated on workable language regarding the following seven topics:
 - a. Third-party service providers, including the definition of third-party service providers, third-party service providers not related to an insurance transaction but that have access to consumers' personal information, and contracts with third-party service providers.
 - b. Definitions of insurance transactions and additional permitted transactions.
 - c. Marketing, including marketing insurance products to consumers using consumers' personal information, marketing other products to consumers using consumers' personal information, and affiliate marketing.
 - d. Joint marketing agreements (JMAs), JMAs with affiliates, and JMAs with non-affiliated third parties.
 - e. Opt-in versus opt-out consent to marketing and the difference between marketing insurance and non-insurance products.
 - f. Contents necessary to have in a notice of consumer privacy practices.
 - g. The frequency and methodology of delivery for a notice of consumer privacy protections.
 - ii. Discussed draft *Insurance Consumer Privacy Protection Model Law* (#674) language.
 - iii. Exposed Version 1.2 of the new Model #674 on July 11 because it was based on changes that were discussed at an interim meeting, with a public comment period that ended July 28. The drafting group continued its meetings with industry trade companies privately to discuss current consumer data practices on Aug. 9, Aug. 3, Aug. 2, and July 28.
 - iv. Notified interested parties that so many comment letters have been received since the interim meeting that the Working Group has been unable to post them all prior to the Summer National Meeting. The Working Group will continue posting comments to the website after the national meeting. Due to the sheer volume of comments and the number of one-on-one calls requested, the Working Group has determined that more time is needed to engage the public and continue drafting Model #674.
 - v. Discussed comments received and engaged the public to continue drafting Model #674.
 - vi. Discussed key topics noted in the comments received and an extension of time to develop the new Model #674 due to the volume of comments received on the July 11 Version 1.2 draft.
 - C. Received an update from NAIC staff on state privacy legislation and federal privacy activity.
 - D. Discussed an extension to develop the new Model #674.
 - E. Discussed the sections on marketing, consumer notices, and opt-out/opt-in in the draft of Version 1.2 of Model #674.

7. Received initial public comments on the *NAIC Model Bulletin: Use of Algorithms, Predictive Models, and Artificial Intelligence Systems by Insurers*. Comments were provided by 10 speakers, which included trade group representatives and consumer representatives. Initial observations were offered on the model bulletin's language on third-party oversight, definitions, and principles-based approach to setting governance expectations.

NAIC/CONSUMER LIAISON COMMITTEE

Aug. 12, 2023

1. Adopted its Spring National Meeting minutes.
2. Received a report on the Consumer Board of Trustees meeting.
3. Heard a presentation from the Center for Economic Justice (CEJ) on "A Meaningful Framework for the Supervision of Insurers' Use of Big Data and Artificial Intelligence."
4. Heard a presentation from United Policyholders (UP) and the Automotive Education & Policy Institute (AEPI) on the appraisal process for automotive and property damage claims.
5. Heard a presentation from the Disability Rights Education & Defense Fund (DREDF), the Whitman-Walker Institute, and the Leukemia & Lymphoma Society (LLS) on federal health updates.
6. Heard a presentation from Consumers' Checkbook, Georgians for a Healthy Future (GHF), and the United States of Care on preventative health services.
7. Heard a presentation from the American Kidney Fund (AKF) and the HIV+Hepatitis Policy Institute on health care appeals and denials.

NAIC/AMERICAN INDIAN AND ALASKA NATIVE LIAISON COMMITTEE

Aug. 13, 2023

1. Adopted its Spring National Meeting minutes.
2. Heard an update from Lehotsky Keller Cohn LLP on the *McGirt v. Oklahoma* U.S. Supreme Court case.
3. Heard a presentation from Health Care Service Corporation (HCSC) on the effect of risk adjustment treatment of tribal enrollees under the federal Affordable Care Act (ACA).
4. Heard an update from Alaska on the risk adjustment treatment of Alaska Native enrollees under the ACA.
5. Considered drafting a letter to the federal Centers for Medicare & Medicaid Services (CMS) regarding Native American issues under the ACA.

EXECUTIVE (EX) COMMITTEE AND PLENARY

Executive (EX) Committee and Plenary Aug. 16, 2023, Minutes	3-2
Adopted the Amendments to the 2024 <i>Valuation Manual</i> (Attachment One)	3-11
Adopted Revisions to the <i>Nonadmitted Insurance Model Act</i> (#870) (Attachment Two).....	3-13
Adopted the <i>Regulatory Guide: Understanding the Market for Cannabis Insurance:</i> <i>2023 Update</i> (Attachment Three)	3-46
Adopted Life Risk-Based Capital (RBC) Proposals 2023-09 IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals) (Attachment Four)	3-92
Adopted Revisions to the <i>Mortgage Guaranty Insurance Model Act</i> (#630) (Attachment Five)	3-96
Report on the States' Implementation of NAIC-Adopted Model Laws and Regulations (Attachment Six)	3-116

Draft: 8/29/23

Executive (EX) Committee and Plenary
Seattle, Washington
August 16, 2023

The Executive (EX) Committee and Plenary met in Seattle, WA, Aug. 16, 2023. The following Committee and Plenary members participated: Chlora Lindley-Myers, Chair (MO); Andrew N. Mais, Vice Chair (CT); Jon Godfread, Vice President (ND); Scott A. White, Secretary-Treasurer, represented by Don Beatty (VA); Dean L. Cameron, Most Recent Past President (ID); Lori K. Wing-Heier (AK); Mark Fowler (AL); Alan McClain represented by Russ Galbraith (AR); Peni Itula Sapini Teo (AS); Barbara D. Richardson (AZ); Ricardo Lara represented by Lucy Wang (CA); Michael Conway represented by Peg Brown (CO); Karima M. Woods represented by Sharon Shipp (DC); Trinidad Navarro (DE); John F. King represented by Martin Sullivan (GA); Doug Ommen (IA); Dana Popish Severinghaus represented by Bruce Sartain (IL); Amy L. Beard represented by Victoria Hastings (IN); Vicki Schmidt represented by Justin McFarland (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott represented by Sandra Darby (ME); Anita G. Fox (MI); Grace Arnold (MN); Troy Downing (MT); Mike Causey represented by (NC); Eric Dunning (NE); D.J. Bettencourt (NH); Justin Zimmerman (NJ); Alice T. Kane (NM); Scott Kipper (NV); Adrienne A. Harris represented by John Finston (NY); Judith L. French represented by Matt Peters (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise (SC); Larry D. Deiter (SD); Carter Lawrence (TN); Cassie Brown (TX); Jon Pike (UT); Tregenza A. Roach (VI); Kevin Gaffney (VT); Mike Kreidler (WA); Allan L. McVey represented by Melinda Kiss (WV); Nathan Houdek represented by Timothy Cornelius (WI); and Jeff Rude (WY).

1. Received the Report of the Executive (EX) Committee

Director Lindley-Myers reported that the Executive (EX) Committee met Aug. 14. During this meeting, it adopted the Aug. 13 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

The Committee also adopted its May 23 and March 31 minutes, which included the following action: 1) approved Commissioner White to serve on the International Association of Insurance Supervisors (IAIS) Executive Committee; and 2) approved the 2027 national meeting locations: Spring National Meeting, Kansas City, MO; Summer National Meeting, New York, NY; and Fall National Meeting, Nashville, TN.

The Committee adopted the reports of its task forces: 1) the Climate and Resiliency (EX) Task Force; 2) the Government Relations (EX) Leadership Council; 3) the Long-Term Care Insurance (EX) Task Force; and 4) the Special (EX) Committee on Race and Insurance.

The Committee received a status report on the *State Connected* strategic plan.

The Committee received a status report on model law development efforts for amendments to: 1) the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) the *Property and Casualty Insurance Guaranty Association Model Act* (#540); 3) the *Mortgage Guaranty Insurance Model Act* (#630); 4) the *Nonadmitted Insurance Model Act* (#870); 5) the *Unfair Trade Practices Act* (#880); and 5) the new *Insurance Consumer Privacy Protection Model Law* (#674).

The Committee heard reports from the National Insurance Producer Registry (NIPR) and the Interstate Insurance Product Regulation Commission (Compact).

2. Adopted by Consent the Committee, Subcommittee, and Task Force Minutes of the Spring National Meeting

Commissioner Godfreed made a motion, seconded by Commissioner Mais, to adopt by consent the committee, subcommittee, and task force minutes of the Spring National Meeting. The motion passed unanimously.

3. Received the Report of the Life Insurance and Annuities (A) Committee

Commissioner Lawrence reported that the Life Insurance and Annuities (A) Committee met Aug. 15. During this meeting, the Committee adopted its July 19 minutes, which included the following action: 1) adopted its Spring National Meeting minutes; 2) adopted 2024 *Valuation Manual* amendments; and 3) adopted revised Life Actuarial (A) Task Force charges.

The Committee adopted the report of the Life Actuarial (A) Task Force.

The Committee also: 1) heard a presentation from Noble Consulting Services Inc. on risks facing the life and annuity industry; 2) heard a presentation from the United States Automobile Association (USAA) on the unique life insurance needs of the military; and 3) heard an update on the Life Workstream of the Special (EX) Committee on Race and Insurance.

4. Adopted the Amendments to the 2024 *Valuation Manual*

Commissioner Lawrence reported that the *Valuation Manual* includes 12 amendments adopted by the Life Insurance and Annuities (A) Committee during its July 19 meeting.

The majority of the amendments add additional reporting disclosures, clarify requirements, or correct typos in the *Valuation Manual*. However, some of the amendments were substantive, including: 1) reducing the reporting lag for the VM-51, Experience Reporting Formats Table of Contents, mortality experience data collection to allow for more timely creation of mortality tables; 2) allowing alternative hedge treatment for variable annuities with index credit hedging programs; and 3) reducing the governance requirements for variable annuity products not subject to complex modeling.

Commissioner Lawrence made a motion, seconded by Commissioner Donelon, to adopt the amendments to the 2024 *Valuation Manual* (Attachment One).

The motion was adopted by 50 jurisdictions, representing 89.48% of the applicable premiums written.

Director Lindley-Myers confirmed that the vote satisfied the requirements to amend the *Valuation Manual*. The motion passed.

5. Received the Report of the Health Insurance and Managed Care (B) Committee

Director Fox reported that the Health Insurance and Managed Care (B) Committee met Aug. 14. During this meeting, the Committee adopted its June 29 and Spring National Meeting minutes.

During its June 29 meeting, the Committee took the following action: 1) heard presentations on Maryland, Michigan, and Nebraska state appeal programs; and 2) received an update on the Consumer Information (B) Subgroup’s work to educate consumers on their claim appeal rights.

The Committee adopted its subgroup, working group, and task force reports and their interim meeting minutes.

The Committee heard an update on the work of the Improper Marketing of Health Insurance (D) Working Group to amend the *Unfair Trade Practices Act* (#880) to address regulatory and enforcement issues with health insurance lead generators.

The Committee received an update on the Consumer Information (B) Working Group’s work to educate consumers on their claim appeal rights.

The Committee also heard from panelists Anna Schwamlein Howard (American Cancer Society Cancer Action Network—ACS CAN), Carl Schmid (HIV+Hepatitis Policy Institute), and Amy Killelea (Killelea Consulting) on preventive services from a consumer-focused perspective.

The Committee heard a status update on the Medicaid redetermination process following the end of the COVID-19 public health emergency (PHE). The update included key findings from the first batch of Medicaid redeterminations data reported by the federal Centers for Medicare & Medicaid Services (CMS) in accordance with the federal Consolidated Appropriations Act, 2023.

The Committee received an update on the work of the Special (EX) Committee on Race and Insurance Health Workstream. The Workstream is continuing its meetings on health equity issues. It recently had a meeting focused on lowering barriers to preventive care, particularly with respect to chronic disease.

The Workstream has planned upcoming meetings on the evolution of federal Affordable Care Act (ACA) Section 1332 waivers and state reinsurance programs, as well as reducing disparities in mental health services.

The Workstream is also piloting a new collaboration space on the NAIC Connect platform to allow Workstream members and other NAIC members to discuss issues related to health equity and other topics.

6. Received the Report of the Property and Casualty Insurance (C) Committee

Director Deiter reported that the Property and Casualty Insurance (C) Committee met Aug. 15. During this meeting, the Committee adopted its Spring National Meeting minutes.

The Committee adopted the reports of its task forces and working groups: 1) the Casualty Actuarial and Statistical (C) Task Force; 2) the Surplus Lines (C) Task Force; 3) the Title Insurance (C) Task Force; 4) the Workers’ Compensation (C) Task Force; 5) the Cannabis Insurance (C) Working Group; 6) the Catastrophe Insurance (C) Working Group; 7) the Terrorism Insurance Implementation (C) Working Group; and 8) the Transparency and Readability of Consumer Information (C) Working Group.

The Committee adopted a white paper entitled *Regulatory Guide: Understanding the Market for Cannabis Insurance: 2023 Update*, which is an update to a 2019 white paper concerning regulatory issues related to insuring cannabis.

The Committee heard a presentation from the Consumer Federation of America (CFA) on telematics and the need for regulatory guidance regarding transparency, actuarial support for variables, limits on data collection and use, privacy standards, and testing for bias.

The Committee also heard a presentation from a consumer representative on the issue of underinsured homeowners and a recommendation that insurers provide one quote for premiums using an algorithm's estimated reconstruction costs and another quote reflecting the reconstruction cost corrected for the error rate.

The Committee discussed public school insurance, including high losses and rising rates. The Committee will discuss the issue in more detail during a future meeting.

Finally, the Committee reported that in order to meet its charge to assist state insurance regulators in better assessing their markets by developing property market data intelligence, it plans to issue a data call to collect granular data from insurers that will allow state insurance regulators to study coverage issues.

7. Adopted Revisions to the *Nonadmitted Insurance Model Act (#870)*

Director Deiter reported that the Surplus Lines (C) Task Force was charged with amending and modernizing the *Nonadmitted Insurance Model Act (#870)* to conform to the federal Nonadmitted and Reinsurance Reform Act of 2010, which is part of the federal Dodd-Frank Wall Street Reform Act of 2010 (Dodd-Frank Act).

Some of the more significant amendments deal with the integration of the "home state" method of tax allocation and the new "Domestic Surplus Lines Insurer" status. The revisions to Model #870 provide the necessary alignment with federal legislation.

The Surplus Lines (C) Task Force adopted its revisions to Model #870 on March 21. The Property and Casualty (C) Committee adopted the amendments on March 24.

Director Deiter made a motion, seconded by Commissioner Donelon, to adopt the revisions to Model #870 (Attachment Two). The motion passed. New York abstained.

8. Adopted the *Regulatory Guide: Understanding the Market for Cannabis Insurance: 2023 Update*

Director Deiter reported that the Cannabis Insurance (C) Working Group published a white paper, *Regulatory Guide: Understanding the Market for Cannabis Insurance*, in 2019. At that time, the cannabis industry was in its infancy, and there were many insurance gaps for cannabis-related businesses.

Since 2019, the cannabis industry has become more sophisticated. It has also continued to expand rapidly, driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. The state of cannabis regulation, particularly at the state and local levels, has evolved significantly since the white paper was adopted. For these reasons, the white paper needed to be updated.

The Working Group was officially tasked with providing an updated white paper in 2022. Since then, it has explored emerging issues, primarily in the commercial cannabis space, through presentations, panel discussions, and hearings held during open meetings.

The Working Group designated a drafting group to develop the white paper after it reviewed and approved an outline in an open meeting. The drafting group held bi-weekly drafting sessions until completion.

The white paper avoids advocacy-oriented discussion and focuses on issues affecting the affordability and availability of insurance for cannabis-related risks in states that have legalized its use. The white paper finds that although capacity has improved since the first white paper's publishing, most of the commercial insurance for cannabis-related businesses is still found in the nonadmitted market. This affects smaller industry players most as the nonadmitted market does not offer the "off-the-shelf" insurance solutions typically available in the admitted market.

The Working Group adopted the *Regulatory Guide: Understanding the Market for Cannabis Insurance: 2023 Update* during an open meeting July 18. The adoption followed an extensive public comment period.

Director Deiter made a motion, seconded by Commissioner Conway, to adopt the *Regulatory Guide: Understanding the Market for Cannabis Insurance: 2023 Update* (Attachment Three). The motion passed. Idaho, Indiana, Louisiana, Nebraska, and New York abstained.

9. Received the Report of the Market Regulation and Consumer Affairs (D) Committee

Commissioner Pike reported that the Market Regulation and Consumer Affairs (D) Committee met Aug. 15. During this meeting, the Committee adopted its July 27 minutes, which included the following action: 1) adopted a new Pet Insurance Market Conduct Annual Statement (MCAS) data call and definitions; 2) adopted a new charge for the Producer Licensing (D) Task Force to review and amend, as needed, the *Public Adjuster Licensing Model Act* (#228) to enhance consumer protections in the property and casualty (P/C) claims process; and 3) adopted the "Continuing Education Recommended Guidelines for Instructor Approval."

The Committee adopted revisions to the collaboration actions chapter of the *Market Regulation Handbook*. The focus of these revisions is to provide greater transparency to states about the Multistate Settlement Agreement process.

The Committee adopted revisions to the Voluntary Market Regulation Certification Program. The revisions are a result of a pilot program involving 18 states.

The mission of the Voluntary Market Regulation Certification Program is to establish and maintain minimum standards that promote sound practices relating to market conduct examination, market analysis, and related continuum activity functions performed for insurance consumer protection.

Commissioner Pike also reported that the Improper Marketing of Health Insurance (D) Working Group adopted revisions to the *Unfair Trade Practices Model Act* (#880) on Aug. 14. The goal of the revisions is to expand Model #880 to provide greater authority for state insurance departments to regulate lead generators. The Antifraud (D) Task Force and Committee will consider the adoption of Model #880 prior to the Fall National Meeting.

The Committee adopted the reports of its task forces and working groups: 1) the Antifraud (D) Task Force; 2) the Market Information Systems (D) Task Force; 3) the Producer Licensing (D) Task Force; 4) the Advisory Organization (D) Working Group; 5) the Market Analysis Procedures (D) Working Group; 6) the Market Conduct Annual Statement Blanks (D) Working Group; 7) the Market Conduct Examination Guidelines (D) Working Group; 8) the Market Regulation Certification (D) Working Group; and 9) the Speed to Market (D) Working Group.

The Committee heard an update on international issues from NAIC international policy support staff. The presentation covered the activities of the IAIS' Market Conduct Working Group, which included a paper on the use of conduct indicators in insurance supervision and a diversity, equity, and inclusion (DE&I) project.

The Committee heard a presentation from Missouri on the use of data visualization for market analysis, which included information on data needs, how to pick the right visualization, best practices for data visualization, and specific examples of market analysis.

10. Received the Report of the Financial Condition (E) Committee

Superintendent Dwyer reported that the Financial Condition (E) Committee met Aug. 15. During this meeting, the Committee adopted its July 19 and Spring National Meeting minutes. During its July 19 meeting, the Committee took the following action: 1) adopted life risk-based capital (RBC) proposal 2023-09-IRE (Residuals Factor) and proposal 2023-10-IRE (Residual Sensitivity Test Factor for Residuals); 2) adopted amendments to the *Mortgage Guaranty Insurance Model Act* (#630); 3) adopted a new group, the Generator of Economic Scenarios (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group, with the following charges: a) monitor the economic scenario governance to ensure the framework is being appropriately followed by all relevant stakeholders involved in scenario delivery; b) review material economic scenario generator updates, either driven by periodic model maintenance or changes to the economic environment and provide recommendations; c) regularly review key economic conditions and metrics to evaluate the need for off-cycle or significant economic scenario generator updates and maintain a public timeline for economic scenario generator updates; d) support the implementation of an economic scenario generator for use in statutory reserve and capital calculations; and e) develop and maintain acceptance criteria that reflect history as well as more extreme scenarios.

The Committee also: 1) adopted the Macroprudential Reinsurance Worksheet; and 2) adopted *Interpretation (INT) 23-01: Net Negative (Disallowed) Interest Maintenance Reserve (IMR)*.

The Committee adopted the reports of its task forces and working groups: 1) the Accounting Practices and Procedures (E) Task Force; 2) the Capital Adequacy (E) Task Force; 3) the Examination Oversight (E) Task Force; 4) the Financial Stability (E) Task Force; 5) the Receivership and Insolvency (E) Task Force; 6) the Reinsurance (E) Task Force; 7) the Valuation of Securities (E) Task Force; 8) the Group Capital Calculation (E) Working Group; 9) the Mortgage Guaranty Insurance (E) Working Group; 10) the Restructuring Mechanisms (E) Working Group; and 11) the Risk-Focused Surveillance (E) Working Group.

The Committee also: 1) received a presentation regarding the use of artificial intelligence (AI) by Canadian insurance regulators; and 2) discussed a framework for insurer investment regulation.

Note: Items adopted within the Financial Condition (E) Committee's task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee's technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to NAIC Members shortly after completion of the national meeting, and the Members will have 10 days to comment with respect to those items. If no objections are received with respect to a particular item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

11. Adopted Life RBC Proposals 2023-09-IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals)

Superintendent Dwyer reported that the core of the life RBC proposals 2023-09-IRE and 2023-10-IRE is the RBC treatment of residual investments in a structured security, which means these are the last tranche of many others in a structured security.

Generally, when assets of a pool of such securities do not perform, the residual security holder absorbs these losses first. Thus, there is the potential need for more capital to be held.

With that as a backdrop, the 2023 factor for these securities will be 30%, with a factor of 45% for 2024 unless data can be presented to show that a different factor (either higher or lower) is more appropriate.

Additionally, this adds a sensitivity test set at 15% for year-end 2023 that allows the regulator to see the RBC impact as if a full 45% had been used instead. Consequently, there is a sensitivity test of 0% for 2024.

Both proposals were unanimously adopted by the Working Group, the Task Force, and the Committee.

Superintendent Dwyer made a motion, seconded by Commissioner Ommen, to adopt life RBC Proposals 2023-09-IRE (Residuals Factor) and 2023-10-IRE (Residual Sensitivity Test Factor for Residuals) (Attachment Four). The motion passed. New York abstained.

12. Adopted Revisions to the *Mortgage Guaranty Insurance Model Act* (#630)

Superintendent Dwyer reported that amendments to the *Mortgage Guaranty Insurance Model Act* (#630) were initiated in 2013 to address some of the concerns that arose during the great financial crisis in mortgage insurance in 2008.

Early on, the development of a capital model to accompany Model #630 was the focus of the Financial Condition (E) Committee. At that time, the Mortgage Guaranty Insurance (E) Working Group used two different consulting firms over several years to attempt to build a capital model. However, this approach was met with several challenges.

As a result, the capital work was paused in 2022, and the focus shifted to improving financial reporting in the annual statement (which is now effective) and finalizing the amendments to Model #630, including revisions to the reserve requirements and contingency reserves, as well as waivers with respect to in-force insurance.

During the past year and a half, the drafting group met 12 times, and Model #630 was exposed for public comment Oct. 7, 2022; Feb. 27, 2023; and May 11, 2023. Comments from both industry and consumers were considered.

Superintendent Dwyer made a motion, seconded by Commissioner Ommen, to adopt the revisions to Model #630 (Attachment Five). The motion passed. New York abstained.

13. Received the Report of the Financial Regulation Standards and Accreditation (F) Committee

Director Wing-Heier reported that the Financial Regulation Standards and Accreditation (F) Committee met Aug. 12 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open

Meetings, and: 1) discussed state-specific accreditation issues; and 2) voted to award continued accreditation to the insurance departments of Missouri, New Hampshire, South Dakota, and Texas.

The Committee met Aug. 13. During this meeting, the Committee adopted its Spring National Meeting minutes.

The Committee adopted the 2020 revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) as significant elements of Part A accreditation standards. The revisions implement a group capital calculation (GCC) for the purpose of group solvency supervision and a liquidity stress test (LST) for macroprudential surveillance.

The amendments also include provisions allowing the commissioner to grant exemptions to GCC for groups meeting standards set forth in Sections 21A and 21B of Model #450 without the requirement to file at least once. This exemption applies primarily to risk retention groups (RRGs). States should adopt the amendments by the effective date, Jan. 1, 2026, in order to comply with the accreditation standard.

The Committee adopted its 2024 proposed charges, which remain unchanged from its 2023 charges.

14. Received the Report of the International Insurance Relations (G) Committee

Commissioner Anderson reported that the International Insurance Relations (G) Committee met Aug. 13. During this meeting, the Committee adopted its April 13 and Spring National Meeting minutes, which included a discussion on NAIC comments on the IAIS public consultation on the *Issues Paper on the Roles and Functioning of Policyholder Protection Schemes* (PPSs).

The Committee heard an update on international insurance developments and activities in Canada from Jacqueline Friedland (Government of Canada's Office of the Superintendent of Financial Institutions—OSFI).

The Committee also heard an update on recent activities and priorities of the IAIS, including: 1) review of the June 2023 Global Seminar and recent committee meetings; 2) the upcoming comparability assessment process for the aggregation method (AM) and the release for feedback of a U.S.-produced document describing the Provisional AM for use in the comparability assessment; and 3) continuing work at various IAIS forums and steering groups.

The Committee heard an update on international activities, including: 1) workstreams of the European Union (EU)-U.S. Insurance Dialogue Project and its recent public stakeholder session in June 2023; 2) recent meetings, events, and speaking engagements with international insurance regulators; 3) recent meetings of the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee; and 4) recent bilateral meetings.

15. Received the Report of the Innovation, Cybersecurity, and Technology (H) Committee

Commissioner Birrane reported that the Innovation, Cybersecurity, and Technology (H) Committee met Aug. 13. During this meeting, the Committee adopted its Spring National Meeting minutes.

The Committee adopted the reports of its working groups. The report from the Privacy Protections (H) Working Group included a status report on the continued work on the NAIC's *Insurance Consumer Privacy Protections Model Law* (#674). The Working Group is in the process of drafting the next version of Model #674. Once the draft is complete and released for exposure, the Working Group will request an extension to continue its work on Model #674.

The Committee received initial public comments on the NAIC's *Model Bulletin: Use of Algorithms, Predictive Models, and Artificial Intelligence Systems by Insurers*. Comments were provided by 10 speakers, which included trade groups and consumer representatives. Initial observations were offered on the model bulletin's language on third-party oversight, definitions, and principles-based approach to setting governance expectations.

16. Received a Report on the States' Implementation of NAIC-Adopted Model Laws and Regulations

Director Lindley-Myers referred attendees to the written report for updates on the states' implementation of NAIC-adopted model laws and regulations (Attachment Six).

17. Discussed Other Matters

Commissioner Downing made a motion, seconded by Commissioner Fowler, to distribute the environmental, social, and governance (ESG) for the insurance industry statement to the Membership. The motion passed. Connecticut opposed, and New York abstained.

Having no further business, the Executive (EX) Committee and Plenary adjourned.

Adopted by the Life Insurance and Annuities (A) Committee July 19, 2023

Adopted by the Executive (EX) Committee and Plenary, Aug. 16, 2023

Amendments for the 2024 Valuation Manual

LATF VM Amendment	Valuation Manual Reference	Valuation Manual Amendment Proposal Descriptions	LATF Adoption Date	Page Number
2022-06	VM-31 Section 3.D.5	This amendment adds in a VM-31 requirement to disclose the inflation assumption for Life PBR.	10/6/22	3
2022-07	VM-20 Section 3.C.1.g, VM-20 Section 6.B.5.d.	This amendment clarifies the intent and calculation of the mortality adjustments to the CSO table when anticipated mortality exceeds the prescribed CSO table. The current wording of Section 3.C.1.g has led to confusion by many and a lack of consistent interpretations.	1/26/23	6
2022-08	VM-21 Section 3.E, VM-31 Section 2.A, VM-G Section 1 and Section 4.A.3.	Clarify requirements on groups of contracts that use the Alternative Method/AG33 in VM-21 and are not subject to a principles-based valuation. Such contracts should not be subject to VM-G but still require a sub-report under VM-31.	1/26/23	12
2022-09	VM-21 and VM-31	This amendment includes a series of reporting requirement enhancements related to VM-21 and fixes some errors in the VM language.	3/2/23	16
2022-10	VM-20 Section 2.A.2, Section 3.B.5, and Section 3.B.6	The purpose of this amendment is to add language to address the possibility of policies in the ULSG Reserving Category having a non-material secondary guarantee, and thus becoming excluded from both DR and SR calculations if they pass both the DET and the SET.	2/23/23	22
2023-02	VM-21 4.D.1.a	This amendment adds disclosure requirements in VM-31 and clarifies language in the Annual Statement Instructions related to reporting in the VM-20 Reserves Supplement.	2/23/23	25
2023-03	VM-20 Section 7.E.2 and Guidance Note below, VM-21 Section 4.D.4.c, VM-20 Section 7.K.3, VM-31 Section 3.D.6.f, VM-20 Section 9.A.4	This amendment would do the following: <ul style="list-style-type: none"> • Add a consideration on the assumed cost of borrowing in VM-20 and VM-21, • Clarification of VM-20 hedge modeling, and • Add additional considerations for risk factors other than interest and equities that are stochastically modeled. 	3/21/23	29
2023-01	VM-21 4.D.1.a	The purpose of this amendment is to make the explanation of the starting asset amount consistent in VM-21 section 4.D.1.a.	3/21/23	34
2023-04	VM-31 Section 3.D.3.1.iv	Clarifies requirements where regulators were seeing an issue with PBR Actuarial Reports and inadequate support showing compliance with the requirement that “the company experience mortality rates shall not be lower than the mortality rates the company expects to emerge”.	4/20/23	36
2021-08	VM-51 Section 2.D.	Revisions to VM-51 to allow for the data experience reporting observation calendar year to be one year prior to the reporting calendar year.	5/11/23	39
2023-05	VM-01, VM-21 Section 4.A.4, VM-21 Section 9, VM-21 Section 9.C.2, VM-31 Section 3.F.8.d	Since the reforms of VM-21 and C3P2, ILVA products have experienced major market growth. Several carriers, with the agreement of regulators and auditors, have interpreted the current VM-21 guidance as permitting the effects of index credit hedging to be reflected in product cash flows instead of within the “best efforts” and “adjusted” scenarios. This amendment clarifies those requirements.	6/1/23	42
2023-07	VM-21 Section 6.A.1	The standard projection amount drafting group found that there is very little use of the Company-Specific Market Path (CSMP) method for the VM-21 standard projection amount. Therefore, we recommend removing this method from VM-21 starting in 2025, which gives time to transition for the few companies that currently employ the CSMP method.	6/1/23	49

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Surplus Lines (C) Task Force

2. NAIC staff support contact information:

Andy Daleo, Senior Financial Analysis Manager (adaleo@naic.org)

Dan Schelp, Chief Counsel, Regulatory Affairs (dschelp@naic.org)

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

Nonadmitted Insurance Model Act (#870) – See Attached

On August 5, 2020, the Surplus Lines (C) Task Force discussed revisions to Model #870, and directed NAIC staff to form an informal Drafting Group composed of regulators from Louisiana, Oklahoma and Washington to produce a summary document that outlines the significant updates to modernize Model #870 and present a recommendation to the Task Force at a future national meeting. The attached Model #870 contains the Drafting Group's recommendations with respect to modification of Model #870 to both bring it into compliance with the *Nonadmitted and Reinsurance Reform Act (NRRA)* as well as other amendments to modernize the model.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why

The *Nonadmitted Insurance Model Act (#870)* has been adopted in 31 states, with other states adopting older versions of the NAIC model, statutes or regulations addressing the same subject matter, or other administrative guidance such as bulletins and notices. Every state, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands have surplus lines guidance in place.

The NRRA was adopted July 21, 2011, and is contained within the *Dodd-Frank Wall Street Reform and Consumer Protection Act (Act)*. The NRRA requirements and the mandate of the federal Act create uniformity for the collection of surplus lines tax payments through the implementation of the "Home State" requirement. All states comply with the NRRA's home state tax approach.

Model 870 was not modified because of the implementation of the NRRRA. However, on October 11, 2011, a *Nonadmitted Insurance Reform Sample Bulletin* (copy attached) was adopted by Executive/Plenary and subsequently distributed to the state insurance departments. It is important to provide guidance for uniformity among the states in order to ensure compliance with the NRRRA.

- b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: Due to the previous adoption of the *Nonadmitted Insurance Reform Sample Bulletin* by the NAIC, there is already uniformity of intent with respect to key areas addressed by the NRRRA. The Surplus Lines (C) Task Force should be able to leverage that agreement to quickly and efficiently finish revisions to Model #870.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: Surplus Lines is an important industry in every state and U.S. Territory, and it is important to provide uniform guidance to the NAIC members to ensure compliance with the federal NRRRA.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: Model #870 is not an accreditation requirement, but as previously stated it is important to provide uniform guidance to the states to ensure compliance with the NRRRA.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

Yes, the proposed revisions to Model #870 are in direct response to the federal NRRRA, which would preempt inconsistent state law.

Draft 3/1/23

Adopted by the Property and Casualty Insurance (C) Committee—3/24/23

NONADMITTED INSURANCE MODEL ACT

Table of Contents

Section 1.	Short Title
Section 2.	Purpose—Necessity for Regulation
Section 3.	Definitions
Section 4.	Placement of Insurance Business
Section 5.	Surplus Lines Insurance
Section 6.	Insurance Independently Procured—Duty to Report and Pay Tax
Section 7.	Penalties
Section 8.	Violations
Section 9.	Service of Process
Section 10.	Legal or Administrative Procedures
Section 11.	Enforcement
Section 12.	Suits by Nonadmitted Insurers
Section 13.	Severability/Parity of Provisions
Section 14.	Effective Date

Section 1. Short Title

This Act shall be known and may be cited as “The Nonadmitted Insurance Act.”

Section 2. Purpose—Necessity for Regulation

This Act shall be liberally construed and applied to promote its underlying purposes which include:

- A. Protecting persons seeking insurance in this state;
- B. Permitting surplus lines insurance to be placed with reputable and financially sound nonadmitted insurers and exported from this state pursuant to this Act;
- C. Establishing a system of regulation which will permit orderly access to surplus lines insurance in this state and encourage admitted insurers to provide new and innovative types of insurance available to consumers in this state;
- D. Providing a system through which persons may purchase insurance other than surplus lines insurance, from nonadmitted insurers pursuant to this Act;
- E. Protecting revenues of this state; and
- F. Providing a system pursuant to this Act which subjects nonadmitted insurance activities in this state to the jurisdiction of the insurance commissioner and state and federal courts in suits by or on behalf of the state.

Section 3. Definitions

As used in this Act:

- A. “Admitted insurer” means an insurer licensed to ~~do engage in an~~ [the business of insurance-business](#) in this state.
- B. [“Affiliate” means, with respect to an insured, any entity that controls, is controlled by, or is under common control with the insured.](#)

C. ~~“Affiliated group” means any group of entities that are all affiliated. “Capital,” as used in the financial requirements of Section 5, means funds paid in for stock or other evidence of ownership.~~

~~DC.~~ “Commissioner” means the insurance commissioner of [insert name of state], or the commissioner’s deputies or staff, or the ~~c~~Commissioner, ~~d~~Director or ~~s~~Superintendent of insurance in any other state.

Drafting Note: Insert the title of the chief insurance regulatory official wherever the term “commissioner” appears.

E. ~~“Control” means with respect to an insured:~~

~~(1) A person, either directly or indirectly, or acting through one or more other persons, owns, controls, or has the power to vote 25 percent or more of any class of voting securities of the other entity; or~~

~~(2) The entity controls in any manner the election of a majority of the directors or trustees of the other entity.~~

F. ~~[OPTIONAL: “Domestic surplus lines insurer” means a surplus lines insurer domiciled in this state, that which may write insurance in this state on as if it were a surplus lines insurer basis domiciled in another state.]~~

G. “Eligible surplus lines insurer” means a nonadmitted insurer with which a surplus lines licensee may place surplus lines insurance pursuant to Section 5 of this Act.

H. ~~“Exempt commercial purchaser” means any person purchasing commercial insurance that, at the time of placement, meets the following requirements:~~

~~(1) ~~n~~Has paid aggregate nationwide commercial property and casualty insurance premiums in excess of \$100,000 in the immediately preceding 12 months; and-~~

~~(2) (a) The person ~~m~~Meets at least one~~l~~ of the following criteria:~~

~~(i) The person ~~P~~possesses a net worth in excess of \$20,000,000;:-~~

~~(ii) The person ~~G~~generates annual revenues in excess of \$50,000,000;:-~~

~~(iii) The person ~~E~~employs more than 500 full-time or full-time equivalent employees per individual insured or is a member of an affiliated group employing more than 1,000 employees in the aggregate;:-~~

~~(iv) The person ~~I~~is a not-for-profit organization or public entity generating annual budgeted expenditures of at least \$30,000,000; or-~~

~~(v) The person ~~i~~is a municipality with a population in excess of 50,000 persons.~~

~~(b) Effective on July 21, 2010, every five years and each fifth January 1 occurring thereafter on January 1, the amounts in Subsections Items (i), (ii), and (iv) of Subparagraph Section 3H(32)(a) of this Paragraph shall be adjusted to reflect the percentage change for such five- year period in the Consumer Price Index for All Urban Consumers published by the Bureau of Labor Statistics of the Department of Labor.~~

Drafting Note: ~~This~~ definition of “Exempt commercial purchaser” follows the language of the federal Nonadmitted and Reinsurance Reform Act (NRRA). ~~Some states have chosen not to adopt the inflation adjustment. The NRRA uses the term “municipality,” which some states may find limiting. States may choose to use terminology consistent with state law to expand this provision to include counties and other public entities.~~

~~EI.~~ “Export” means to place surplus lines insurance with a nonadmitted insurer.

~~F. “Foreign decree” means any decree or order in equity of a court located in any United States jurisdiction, including a federal court of the United States, against any person engaging in the transaction of insurance in this state.~~

J. ~~“Home state,” means with respect to an insured, means:~~

~~(1) The state in which an insured maintains its principal place of business or, in the case of a natural person, the person’s principal place of residence;~~

~~(2) If 100 percent of the insured risk is located out of the state referred to in ~~subParagraph (1)~~Section 3J(1), the state to which the greatest percentage of the insured’s taxable premium for that insurance contract is allocated; ~~or~~~~

~~(3) If the insured is an affiliated group with more than one member listed as a named insured on a single nonadmitted insurance contract, the home state is the home state of the member of the affiliated group that has the largest percentage of premium attributed to it under the insurance contract; ~~or~~~~

~~(4) [Option 1] In the case of an unaffiliated group policy:~~

~~(a) If a group policyholder pays 100% of the premium from its own funds, then the home state is determined according to paragraphs (1) and (2).~~

~~(b) If a group policyholder does not pay 100% of the premium from its own funds, then the home state is determined according to paragraphs (1) and (2) for each member of the group.~~

~~[Option 2] In the case of an unaffiliated group policy, the home state shall be the home state of the group policyholder as determined by the application of paragraphs (1) and (2).~~

Drafting Note:

Comment: The NRRRA definition of “home state” includes ~~Subsections Paragraphs (1), (2), and (3) of Section 3J.~~ The NRRRA definition does not expressly cover unaffiliated groups. States have taken different approaches to the taxation of unaffiliated group policies. Some states tax based on the “home state” of the group policyholder. Other states tax based on the “home state” of the group member or certificate holder under the unaffiliated group policy. Some states assess tax on the “home state” of the person that pays the premium. Not all states have an express provision to address unaffiliated group policies. ~~The Drafting Group could not arrive at language to address each possibility and opted to omit it from the Model. such as risk purchasing groups model language contains two options for addition of that are expressly covering unaffiliated group treating the members of such a group as individual insureds for purposes of placement and taxation.~~

~~K. “Insurer” means any person, corporation, association, partnership, reciprocal exchange, interinsurer, Lloyds insurer, insurance exchange syndicate, fraternal benefit society, and any other legal entity engaged in the business of insurance.~~

~~H. “Kind of insurance” means one of the types of insurance required to be reported in the annual statement which must be filed with the commissioner by admitted insurers.~~

~~K. “Nonadmitted insurance” means any insurance written on properties, risks or exposures, located or to be performed in this state, by an insurer not licensed to engage in the ~~transaction~~ business of insurance in this state [or a domestic surplus lines insurer].~~

~~LI. “Nonadmitted insurer” means an insurer not licensed to ~~do an~~engage in the ~~transaction~~ business of insurance ~~business~~ in this state but does not include a risk retention group pursuant to the federal Liability Risk Retention Act of 1986.~~

~~MI. “Person” means any natural person or ~~other-business~~ entity, including, but not limited to, individuals, partnerships, associations, trusts or corporations.”~~

~~N. “Premium” means any payment made as consideration for an insurance contract.~~

~~N.O.~~ “Principal place of business” means:

- (1) The state where a person maintains its headquarters and where the person’s high-level officers direct, control, and coordinate ~~the~~ business activities; or
- (2) If the person’s high-level officers direct, control, and coordinate the business activities in more than one state, or if the person’s principal place of business is located outside any state, then it is the state to which the greatest percentage of the person’s taxable premium for that insurance contract is allocated.

~~P.O.~~ “Principal residence” means:

- (1) The state where the person resides for the greatest number of days during a calendar year; or
- (2) If the person’s principal residence is located outside any state, the state to which the greatest percentage of the person’s taxable premium for that insurance contract is allocated.

~~“State” includes any state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Northern Mariana Islands, the Virgin Islands, and American Samoa.~~ K. “Policy” or “contract” means any contract of insurance, including but not limited to annuities, indemnity, medical or hospital service, workers’ compensation, fidelity or suretyship.

~~L. “Reciprocal state” means a state that has enacted provisions substantially similar to:~~

- (1) ~~Sections 5F, 5I(5), 5Q(10), 5R(4) and Section 6; and~~
- (2) ~~The allocation schedule and reporting form contained in [cite the regulation on surplus lines taxation].~~

~~M. “Surplus,” as used in the financial requirements of Section 5, means funds over and above liabilities and capital of the company for the protection of policyholders.~~

~~Q.R.N. “Surplus lines insurance” means any property and casualty insurance in this state on properties, risks or exposures, located or to be performed in this state, permitted to be placed through a surplus lines licensee with an nonadmitted insurer eligible surplus lines insurer to accept such insurance, pursuant to Section 5 of this Act.~~

~~Drafting Note: If a state chooses to adopt the alternative Section 5B, this definition of “surplus lines insurance” should be consistent with the acceptable coverage listed in Section 5B. States may choose to extend the definition of “surplus lines insurance” beyond property/casualty insurance.~~ NAIC.

~~R.S. “Surplus lines insurer” means a nonadmitted [or domestic surplus lines] insurer that is eligible to accept the placement of surplus lines insurance pursuant to Section 5 of this Act.~~

~~STO. “Surplus lines licensee” means any person individual, firm or corporation licensed under Section 5 of this Act to place surplus lines insurance on properties, risks or exposures located or to be performed in this state with an nonadmitted insurers eligible surplus lines insurer to accept such insurance.~~

~~TU. “Taxable premium” means any premium less return premium that is not otherwise exempt from tax pursuant to this Act. [OPTIONAL:] Premium on property risk or exposure that is properly allocated to federal or international waters or is under the jurisdiction of a foreign government is not taxable in this state.]~~

~~UVS. “Transaction of insurance”~~

- (+) (1) For purposes of this Act, any of the following acts in this state effected by mail or otherwise by a nonadmitted insurer or by any person acting with the actual or apparent authority of the insurer, on behalf of the insurer, is deemed to constitute the transaction of an insurance business in or from this state:

- (a) The making of or proposing to make, as an insurer, an insurance contract;
 - (b) The making of or proposing to make, as guarantor or surety, any contract of guaranty or suretyship as a vocation and not merely incidental to any other legitimate business or activity of the guarantor or surety;
 - (c) The taking or receiving of an application for insurance;
 - (d) The receiving or collection of any premium, commission, membership fees, assessments, dues or other consideration for insurance or any part thereof;
 - (e) The issuance or delivery in this state of contracts of insurance to residents of this state or to persons authorized to do business in this state;
 - (f) The solicitation, negotiation, procurement or effectuation of insurance or renewals thereof;
 - (g) The dissemination of information as to coverage or rates, or forwarding of applications, or delivery of policies or contracts, or inspection of risks, the fixing of rates or investigation or adjustment of claims or losses or the transaction of matters subsequent to effectuation of the contract and arising out of it, or any other manner of representing or assisting a person or insurer in the transaction of risks with respect to properties, risks or exposures located or to be performed in this state;
 - (h) The transaction of any kind of insurance business specifically recognized as transacting an insurance business within the meaning of the statutes relating to insurance;
 - (i) The offering of insurance or the transacting of insurance business; or
 - (j) Offering an agreement or contract which purports to alter, amend or void coverage of an insurance contract.
- (2) The provisions of this subsection shall not operate to prohibit employees, officers, directors or partners of a commercial insured from acting in the capacity of an insurance manager or buyer in placing insurance on behalf of the employer, provided that the person's compensation is not based on buying insurance.
- (3) The venue of an act committed by mail is ~~at the~~ point location where the matter transmitted by mail is delivered or issued for delivery or takes effect.

Drafting Note: States may need to alter this subsection to reflect their decision as to whether they intend to permit citizens to directly purchase coverage within the state from a nonadmitted insurer, or if self-procurement of coverage will be permitted only when it occurs outside the state. States electing to allow direct procurement will need to insert an appropriate exemption in Section 4A of this Act. Additionally, states should consider whether the preceding definition of “transaction of insurance” is consistent with other statutory definitions of this phrase in the state. Finally, states may want to consider whether group insurance purchases or the maintenance of insurance books and records in this state should fall within the scope of the definition of “transaction of insurance.”

~~Q.~~ —“Type of insurance” means coverage afforded under the particular policy that is being placed.

~~V.F.~~ “Wet marine and transportation insurance” means:

- (1) Insurance upon vessels, crafts, hulls and other interests in them or with relation to them;
- (2) Insurance of marine builder's risks, marine war risks and contracts of marine protection and indemnity insurance;

~~(1)(3)~~ Insurance of freight and disbursements pertaining to a subject of insurance within the scope of this subsection; and

~~(2)~~

(4) Insurance of personal property and interests therein, in the course of exportation from or importation into any country, or in the course of transportation coastwise or on inland waters, including transportation by land, water or air from point of origin to final destination, in connection with any and all risks or perils of navigation, transit or transportation, and while being prepared for and while awaiting shipment, and during any incidental delays, transshipment, or reshipment; provided, however, that insurance of personal property and interests therein shall not be considered wet marine and transportation insurance if the property has:

- (a) Been transported solely by land; or
- (b) Reached its final destination as specified in the bill of lading or other shipping document; or
- (c) The insured no longer has an insurable interest in the property.

Comment: The language added in 1994 to the end of the definition of “wet marine and transportation insurance” {Subparagraphs 4(a), 4(b), and 4(c)} is intended to clarify the scope of the definition, which ultimately affects the exemption of certain risks from this Act. The 1994 amendments address current regulatory concerns and concerns raised by those who drafted the 1983 amendments to the Model Surplus Lines Law. The 1983 drafters wrote: “Several [drafters] felt the term ‘storage’ should not appear in... [the wet marine definition] to ensure that warehousemen and other types of insurance covering risks of storage are not interpreted to be within the purview of this definition. The term ‘delays’ is sufficiently broad to cover temporary storage while in the course of transit.”

Drafting Note: In addition to the definitions provided in this section, individual states may wish to consider adopting definitions for “agent,” “broker” or “producer” in a manner consistent with its other laws. Additionally, states may want to cross-reference the definition of “insurance” as it appears elsewhere in the state insurance code. The definition of insurance should reach illegal unauthorized activities.

Section 4. Placement of Insurance Business

- A. An insurer shall not engage in the transaction of insurance unless authorized by a license in force pursuant to the laws of this state, or exempted by this Act or ~~otherwise exempted by~~ the insurance laws of this state.
- B. A person shall not ~~directly or indirectly~~ engage in a transaction of insurance ~~with or on behalf of or shall in this state directly or indirectly act as agent for, or otherwise represent or aid on behalf of another, a nonadmitted insurer in this state, in the solicitation, negotiation, procurement or effectuation of insurance, or renewals thereof, or forwarding of applications, or delivery of policies or contracts or inspection of risks, or fixing of rates, or investigation or adjustment of claims or losses, or collection or forwarding of premiums, or in any other manner represent or assist the insurer in the transaction of insurance.~~
- C. A person who represents or aids a nonadmitted insurer in violation of this section shall be subject to the penalties set forth in Section 7 of this Act. No insurance contract entered into in violation of this section shall preclude the insured from enforcing his rights under the contract in accordance with the terms and provisions of the contract of insurance and the laws of this state, to the same degree those rights would have been enforceable had the contract been lawfully procured.
- D. If the nonadmitted insurer fails to pay a claim or loss within the provisions of the insurance contract and the laws of this state, a person who assisted or in any manner aided directly or indirectly in the procurement of the insurance contract, shall be liable to the insured for the full amount under the provisions of the insurance contract.

- E. Section 4B or 4D shall not apply to a person in regard to an insured who independently procures insurance as provided under Section 6. This section shall not apply to a person, properly licensed as an agent or broker in this state who, for a fee and pursuant to a written agreement, is engaged solely to offer to the insured advice, counsel or opinion, or service with respect to the benefits, advantages or disadvantages promised under any proposed or in-force policy of insurance if the person does not, directly or indirectly, participate in the solicitation, negotiation or procurement of insurance on behalf of the insured.

Drafting Note: If a state collects tax on unlicensed transactions which violate this Act, it may consider imposing liability for payment of those taxes on persons who violate this Act by assisting in the procurement of nonadmitted insurance.

Drafting Note: Some states permit other licensed professionals to engage in these activities as provided in their insurance statutes or other state statutes. Those states may want to amend Section 4E to include those professionals, to the extent they act within the scope of their licenses.

- F. This section shall not apply to a person acting in material compliance with the insurance laws of this state in the placement of the types of insurance identified in Paragraphs (1), (2), (3) and (4) below:
- (1) Surplus lines insurance as provided in Section 5. For the purposes of this subsection, a licensee shall be deemed to be in material compliance with the insurance laws of this state, unless the licensee committed a violation of Section 5 that proximately caused loss to the insured;
 - (2) Transactions for which a certificate of authority to do business is not required of an insurer under the insurance laws of this state;

~~**Drafting Note:** A number of states exempt from licensing and premium taxation nonprofit educational insurers insuring only nonprofit educational institutions and their employees. Some states require certificates of authority while others require licensing, and the appropriate language should be used in Paragraph (2) above. Additionally, some states may want to consider adding language to establish an option of allowing persons to file for an exemption with the Department of Insurance.~~

- (3) Reinsurance provided that, unless the commissioner waives the requirements of this subsection:
 - (a) The assuming insurer is authorized to ~~do engage in the business of an~~ insurance or reinsurance ~~business by in~~ its domiciliary jurisdiction and is authorized to write the type of reinsurance in its domiciliary jurisdiction; and
 - (b) The assuming insurer satisfies all legal requirements for such reinsurance in the state of domicile of the ceding insurer;
- (4) The property and operation of railroads or aircraft engaged in interstate or foreign commerce, wet marine and transportation insurance;
- (5) Transactions subsequent to issuance of a policy not covering properties, risks or exposures located, or to be performed in this state at the time of issuance, and lawfully solicited, written or delivered outside this state.

Drafting Note: States may also wish to consider exempting from Section 4A of this Act self-procured insurance or industrial insurance purchased by a sophisticated buyer who does not necessarily require the same regulatory protections as an average insurance buyer. Additionally, some states allow other insurance transactions with nonadmitted insurers. Examples include certain aviation and railroad risks. Other states may want to narrow the scope of the exemptions above or reserve the right to approve exemptions on a case-by-case basis.

Section 5. Surplus Lines Insurance

- A. Surplus lines insurance may be placed by a surplus lines licensee if:

- (1) Each insurer is ~~an~~-eligible to write surplus lines insurance~~insurer~~; and
- (2) Each insurer is authorized to write the type of insurance in its domiciliary jurisdiction; and
- (3) Other than for exempt commercial purchasers, ~~t~~The full amount or type of insurance cannot be obtained from insurers who are admitted to ~~do~~engage in the business of insurance in this state. The full amount or type of insurance may be procured from eligible surplus lines insurers, provided that a diligent search is made among the insurers who are admitted to transact and are actually writing the particular type of insurance in this state if any are writing it; and
- (4) All other requirements of this Act are met.

Drafting Note: ~~States may prefer to reference “kind of insurance” rather than “type of insurance” in Section 5A(3). The term utilized should be defined within the Act.~~ The diligent search requirement of Section 5A(3) must be satisfied in accordance with the statutes and regulations of the governing state. ~~Such Diligent search~~ statutes and regulations ~~might~~ vary from state to state in terms of the number of declinations required and the person designated to conduct the search. ~~Several states permit surplus lines placement without a diligent search for or without regard to the availability of admitted coverage. States may want to consider changing diligent search requirements in light of electronic transactions.~~ Section 5A(3) does not prohibit a regulatory system in which a surplus lines licensee may place with an eligible nonadmitted insurer any coverage listed on a current “~~E~~export ~~L~~ist” maintained by the commissioner. The ~~e~~Export list would identify types of insurance for which no admitted market exists. The commissioner may waive the diligent search requirement for any such type of insurance.

Drafting Note: Utilizing the “full amount” standard in Section 5A(3) of this Act may have certain market implications. An alternative to this approach would be to require that whatever part of the coverage is attainable through the admitted market be placed in the admitted market and only the excess part of the coverage may be exported.

- B. Subject to Section 5A(3) of this Act, a surplus lines licensee may place any coverage with an ~~an~~ nonadmitted eligible surplus lines insurer-eligible to accept the insurance, unless specifically prohibited by the laws of this state.

[Alternative Subsection B]

- ~~[C~~B. Subject to Section 5A(3) of this Act, a surplus lines licensee may place only the following types of coverage with an ~~an~~ nonadmitted eligible surplus lines insurer-eligible to accept insurance: (list acceptable coverage).]

Drafting Note: The two statutory alternatives described in Section 5B represent different regulatory approaches to defining those coverages which may be placed in the nonadmitted market and they would impact the admitted market in different manners.

- C. A surplus lines licensee shall not place ~~surplus lines insurance coverage with a nonadmitted insurer~~, unless, at the time of placement, the surplus lines licensee has determined that the ~~nonadmitted insurer~~ is eligible to write surplus lines insurance under one of the following subsections:

~~(1) Has established satisfactory evidence of good repute and financial integrity; and~~

~~(2) Qualifies is eligible to write surplus lines insurance under one of the following subparagraphs:~~

1. **Drafting Note:** Current numbering is retained in this Model to remain consistent with the reference within the NRRA.

2. Is eligible to write surplus lines insurance under one of the following subsections:

(a) For a nonadmitted insurer domiciled in another United States jurisdiction, the insurer shall have both of the following:

(i) ~~is~~ The authority to write the type of insurance in its domiciliary jurisdiction; and

~~(ii)~~ (iii) Has eCapital and surplus or its equivalent under the laws of its domiciliary jurisdiction ~~which~~that equals the greater of:

~~(I)~~ (i) ~~(A)~~ (1) The minimum capital and surplus requirements under the law of this -state; or

~~(B)~~ (B) \$15,000,000;

Drafting Note: ~~States that have not previously increased capital and surplus requirements may wish to consider implementation of the capital and surplus requirements in this subparagraph in a series of phases over a period of up to three (3) years. In some circumstances, implementation of a \$15,000,000 capital and surplus requirement may represent a dramatic increase over existing requirements. States may wish to allow insurers which are eligible under existing law some period of time to increase their capital and surplus to meet the new standards. Current numbering is retained in this Model to remain consistent with the reference within the NRRA.~~

~~(ii)~~ (i) The requirements of Subparagraph ~~(a)~~(i) may be satisfied by an insurer's possessing less than the minimum capital and surplus upon an affirmative finding of acceptability by the commissioner. The finding shall be based upon such factors as quality of management, capital and surplus of any parent company, company underwriting profit and investment income trends, market availability and company record and reputation within the industry. In no event shall the commissioner make an affirmative finding of acceptability when the nonadmitted insurer's capital and surplus is less than \$4,500,000; or

~~a.~~ a. ~~For a nonadmitted insurer domiciled outside the United States, the insurer shall be listed on the Quarterly Listing of Alien Insurers maintained by the International Insurers Department of the National Association of Insurance Commissioners (NAIC); [or]~~

~~(b)~~

~~(c)~~ (c) ~~For an insurer domiciled in this state, the insurer is a domestic surplus lines insurer.]~~

~~(b)~~ (b) ~~In the case of an insurance exchange created by the laws of a state other than this state:~~

~~(i)~~ (i) ~~The syndicates of the exchange shall maintain under terms acceptable to the commissioner capital and surplus, or its equivalent under the laws of its domiciliary jurisdiction, of not less than \$75,000,000 in the aggregate; and~~

~~(ii)~~ (ii) ~~The exchange shall maintain under terms acceptable to the commissioner not less than fifty percent (50%) of the policyholder surplus of each syndicate in a custodial account accessible to the exchange or its domiciliary commissioner in the event of insolvency or impairment of the individual syndicate; and~~

~~(iii)~~ (iii) ~~In addition, each individual syndicate to be eligible to accept surplus lines insurance placements from this state shall meet either of the following requirements:~~

~~(I)~~ (I) ~~For insurance exchanges which maintain funds in an amount of not less than \$15,000,000 for the protection of all exchange policyholders, the syndicate shall maintain under terms acceptable to the commissioner minimum capital and surplus, or its equivalent under the laws of the domiciliary jurisdiction, of not less than \$5,000,000; or~~

~~(II)~~ (II) ~~For insurance exchanges which do not maintain funds in an amount of not less than \$15,000,000 for the protection of all exchange~~

~~policyholders, the syndicate shall maintain under terms acceptable to the commissioner minimum capital and surplus, or its equivalent under the laws of its domiciliary jurisdiction, of not less than the minimum capital and surplus requirements under the laws of its domiciliary jurisdiction or \$15,000,000, whichever is greater; or~~

Drafting Note: Some states may want to cross reference statutory provisions in their own states which provide a grandfather clause for syndicates established with a lower capital and surplus requirement.

- ~~(c) In the case of a Lloyd's plan or other similar group of insurers, which consists of unincorporated individual insurers, or a combination of both unincorporated and incorporated insurers:~~
- ~~(i) The plan or group maintains a trust fund that shall consist of a trustee account representing the group's liabilities attributable to business written in the United States; and~~
 - ~~(ii) In addition, the group shall establish and maintain in trust a surplus in the amount of \$100,000,000; which shall be available for the benefit of United States surplus lines policyholders of any member of the group.~~
 - ~~(iii) The incorporated members of the group shall not be engaged in any business other than underwriting as a member of the group and shall be subject to the same level of solvency regulation and control by the group's domiciliary regulator as are the unincorporated members.~~
 - ~~(iv) The trust funds shall be maintained in an irrevocable trust account in the United States in a qualified financial institution, consisting of cash, securities, letters of credit or investments of substantially the same character and quality as those which are eligible investments for the capital and statutory reserves of admitted insurers to write like kinds of insurance in this state and, in addition, the trust required by item (ii) of this paragraph shall satisfy the requirements of the Standard Trust Agreement required for listing with the National Association of Insurance Commissioners (NAIC) International Insurers Department; or~~
- ~~(d) In the case of a group of incorporated insurers under common administration, which has continuously transacted an insurance business outside the United States for at least three (3) years immediately prior to this time, and which submits to this state's authority to examine its books and records and bears the expense of the examination:~~
- ~~(i) The group shall maintain an aggregate policyholders' surplus of \$10,000,000,000; and~~
 - ~~(ii) The group shall maintain in trust a surplus in the amount of \$100,000,000; which shall be available for the benefit of United States surplus lines policyholders of any member of the group; and~~
 - ~~(iii) Each insurer shall individually maintain capital and surplus of not less than \$25,000,000 per company.~~
 - ~~(iv) The trust funds shall satisfy the requirements of the Standard Trust Agreement requirement for listing with the NAIC International Insurers Department, and shall be maintained in an irrevocable trust account in the United States in a qualified financial institution, and shall consist of cash, securities, letters of credit or investments of substantially the same character and quality as those which are eligible investments for the capital and statutory reserves of admitted insurers to write like kinds of insurance in this state.~~

- ~~(v) — Additionally, each member of the group shall make available to the commissioner an annual certification of the member’s solvency by the member’s domiciliary regulator and its independent public accountant; or~~
- ~~(e) — Except for an exchange or plan complying with Subparagraph (b), (c) or (d), an insurer not domiciled in one of the United States or its territories shall satisfy the capital and surplus requirements of Subsection C(2)(a) of this section and shall have in force a trust fund of not less than the greater of:

 - ~~(i) — \$5,400,000; or~~
 - ~~(ii) — Thirty percent (30%) of the United States surplus lines gross liabilities, excluding aviation, wet marine and transportation insurance liabilities, not to exceed \$60,000,000, to be determined annually on the basis of accounting practices and procedures substantially equivalent to those promulgated by this state, as of December 31 next preceding the date of determination, where:

 - ~~(I) — The liabilities are maintained in an irrevocable trust account in the United States in a qualified financial institution, on behalf of U.S. policyholders consisting of cash, securities, letters of credit or other investments of substantially the same character and quality as those which are eligible investments pursuant to [cite insurance investment law] for the capital and statutory reserves of admitted insurers to write like kinds of insurance in this state. The trust fund, which shall be included in any calculation of capital and surplus or its equivalent, shall satisfy the requirements of the Standard Trust Agreement required for listing with the NAIC International Insurers Department; and~~
 - ~~(II) — The insurer may request approval from the commissioner to use the trust fund to pay valid surplus lines claims; provided, however, that the balance of the trust fund is never less than the greater of \$5,400,000 or thirty percent (30%) of the insurer’s current gross U.S. surplus lines liabilities, excluding aviation, wet marine and transportation insurance liabilities; and~~
 - ~~(III) — In calculating the trust fund amount required by this subsection, credit shall be given for surplus lines deposits separately required and maintained for a particular state or U.S. territory, not to exceed the amount of the insurer’s loss and loss adjustment reserves in the particular state or territory;~~~~~~

Drafting Note: The commissioner may wish to establish the authority to set a higher level on a case-by-case basis.

- ~~(f) — An insurer or group of insurers meeting the requirements to do a surplus lines business in this state at the effective date of this law shall have two (2) years from the date of enactment to meet the requirements of Subparagraph (c), as follows:~~

Year Following Enactment	Trust Fund Requirement
1	15% of U.S. surplus lines liabilities, excluding aviation, wet marine and transportation insurance, with a maximum of \$30,000,000

2

~~30% of U.S. surplus lines liabilities, excluding aviation, wet marine and transportation insurance, with a maximum of \$60,000,000.~~

- ~~(g) — The commissioner shall have the authority to adjust, in response to inflation, the trust fund amounts required by Subparagraph (e).~~
- ~~(3) — In addition to all of the other requirements of this subsection, an insurer not domiciled in the United States or its territories shall be listed by the NAIC International Insurers Department. The commissioner may waive the requirement in Paragraph (3) or the requirements of Section 5C(2)(e)(ii) may be satisfied by an insurer's possessing less than the trust fund amount specified in Section 5C(2)(e)(ii) upon an affirmative finding of acceptability by the commissioner if the commissioner is satisfied that the placement of insurance with the insurer is necessary and will not be detrimental to the public and the policyholder. In determining whether business may be placed with the insurer, the commissioner may consider such factors as:~~
- ~~(a) — The interests of the public and policyholders;~~
- ~~(b) — The length of time the insurer has been authorized in its domiciliary jurisdiction and elsewhere;~~
- ~~(c) — Unavailability of particular coverages from authorized insurers or unauthorized insurers meeting the requirements of this section;~~
- ~~(d) — The size of the company as measured by its assets, capital and surplus, reserves, premium writings, insurance in force or other appropriate criteria;~~
- ~~(e) — The kinds of business the company writes, its net exposure and the extent to which the company's business is diversified among several lines of insurance and geographic locations; and~~
- ~~(f) — The past and projected trend in the size of the company's capital and surplus considering such factors as premium growth, operating history, loss and expense ratios, or other appropriate criteria; and~~
- ~~(4) — Has caused to be provided to the commissioner a copy of its current annual statement certified by the insurer and an actuarial opinion as to the adequacy of, and methodology used to determine, the insurer's loss reserves. The statement shall be provided at the same time it is provided to the insurer's domicile, but in no event more than eight (8) months after the close of the period reported upon, and shall be certified as a true and correct copy by an accounting or auditing firm licensed in the jurisdiction of the insurer's domicile and certified by a senior officer of the nonadmitted insurer as a true and correct copy of the statement filed with the regulatory authority in the domicile of the nonadmitted insurer. In the case of an insurance exchange qualifying under Paragraph (2)(b) of this subsection, the statement may be an aggregate combined statement of all underwriting syndicates operating during the period reported; and~~

Drafting Note: The following paragraph is for use by those states which desire to adopt a "white list" for determining the eligibility of nonadmitted insurers to write surplus lines insurance.

- ~~(5) — In addition to meeting the requirements in Paragraphs (1) to (4) of this subsection an insurer shall be an eligible surplus lines insurer if it appears on the most recent list of eligible surplus lines insurers published by the commissioner from time to time but at least semiannually. Nothing in this paragraph shall require the commissioner to place or maintain the name of any nonadmitted insurer on the list of eligible surplus lines insurers.~~
- ~~(6) — Notwithstanding Section 5A, only that portion of any risk eligible for export for which the full amount of coverage is not procurable from listed eligible surplus lines insurers may be placed with any other nonadmitted insurer which does not appear on the list of eligible surplus lines insurers published by the commissioner pursuant to Paragraph (5) of this subsection but nonetheless meets the requirements set forth in Sections 5C(1) and 5C(2) and any regulations of the commissioner. The surplus lines licensee seeking to provide coverage through an unlisted nonadmitted insurer shall make a filing specifying the amounts and~~

~~percentages of each risk to be placed, and naming the nonadmitted insurers with which placement is intended. Within [insert number] days after placing the coverage, the surplus lines licensee shall also send written notice to the insured or the producing broker that the insurance, or a portion thereof, has been placed with the nonadmitted insurer.~~

- D. ~~The placement of surplus lines insurance shall be subject to the statutory and regulatory requirements solely of the insured's home state.~~

Drafting Note: Section 522(d) of the federal Nonadmitted and Reinsurance Reform Act provides a workers' compensation exception to home state authority; specifically, that this section may not be construed to preempt any State law, rule, or regulation that restricts the placement of workers' compensation insurance or excess insurance for self-funded workers' compensation plans with a nonadmitted insurer. In addition, Section 527(9) of the NRRRA provides that the term "nonadmitted insurance" means any property and casualty insurance permitted to be placed directly or through a surplus lines broker with a nonadmitted insurer eligible to accept such insurance and is not applicable to accident and health insurance. States may consider whether to add language making these exceptions explicit when codifying Section 5D into state law.

- ~~E.D.~~ Insurance procured under this section shall be valid and enforceable as to all parties.

~~E.E.~~ Withdrawal of Eligibility as a Surplus Lines Insurer

F.

If at any time the commissioner has reason to believe that a surplus lines insurer is no longer eligible under Section 5C,[‡]

- ~~(1) — Is in unsound financial condition or has acted in an untrustworthy manner;~~
- ~~(2) — No longer meets standards set forth in Section 5C of this Act;~~
- ~~(3) — Has willfully violated the laws of this state; or~~
- ~~(4) — Does not conduct a proper claims practice.~~

~~The~~the commissioner may, after notice and an opportunity for a hearing, declare it ineligible. The commissioner shall promptly ~~mail~~publish notice of all such declarations in a timely manner reasonably calculated to reach to each surplus lines licensee or surplus lines advisory organization, for distribution to all surplus lines licensees.

Drafting Note: Individual states should consider whether such declarations of ineligibility are appropriate in view of the state's other due process and administrative procedure requirements. Eligibility criteria are independent of other considerations such as compliance with other laws, for example, 18 USC 1033, relating to felons participating in the insurance business.

~~G.F.~~ Surplus Lines Tax

- ~~(1)~~ (1) — In addition to the full amount of gross premiums charged by the insurer for the insurance, every person licensed pursuant to Section 5H of this Act shall collect and pay to the commissioner a sum equal to [insert number] percent of the gross premiums charged, less any return premiums, for surplus lines insurance provided by the licensee pursuant to the license. Where the insurance covers properties, risks or exposures located or to be performed both in and out of this state, the sum payable shall be ~~computed on that portion of the gross premiums allocated to this state pursuant to Paragraph (4) of this subsection less the amount of gross premiums allocated to this state and returned to the insured~~paid entirely to the hHome sState of the insured. The tax on any portion of the premium unearned at termination of insurance having been credited by the state to the licensee shall be returned to the policyholder directly by the surplus lines licensee or through the producing broker, if any. The surplus lines licensee is prohibited from rebating, for any reason, any part of the tax.
- ~~(2)~~ At the time of filing the [insert monthly, quarterly, annual] report as set forth in Subsection ~~S.R~~ of

this section, each surplus lines licensee shall pay the premium tax due for the policies written during the period covered by the report.

- ~~(3) ————— If a surplus lines policy procured through a surplus lines licensee covers properties, risks or exposures only partially located or to be performed in this state, the tax due shall be computed on the portions of the premiums which are attributable to the properties, risks or exposures located or to be performed in this state. In determining the amount of premiums taxable in this state, all premiums written, procured or received in this state shall be considered written on properties, risks or exposures located or to be performed in this state, except premiums which are properly allocated or apportioned and reported as taxable premiums of a reciprocal state. In no event shall the tax payable to this state be less than the tax due pursuant to Paragraph (4) of this subsection; provided, however, in the event that the amount of tax due under this provision is less than \$50 in any jurisdiction, it shall be payable in the jurisdiction in which the affidavit required in Subsection K of this section is filed. The commissioner shall, at least annually furnish to the commissioner of a reciprocal state, as defined in Section 3L, a copy of all filings reporting an allocation of taxes as required by this subsection.~~
- ~~(4) ————— In determining the amount of gross premiums taxable in this state for a placement of surplus lines insurance covering properties, risks or exposures only partially located or to be performed in this state, the tax due shall be computed on the portions of the premiums which are attributable to properties, risks or exposures located or to be performed in this state and which relates to the kinds of insurance being placed as determined by reference to an allocation schedule duly promulgated in a regulation by the commissioner.~~
- ~~(a) ————— If a policy covers more than one classification:~~
- ~~(i) ————— For any portion of the coverage identified by a classification on the Allocation Schedule, the tax shall be computed by using the Allocation Schedule for the corresponding portion of the premium;~~
- ~~(ii) ————— For any portion of the coverage not identified by a classification on the Allocation Schedule, the tax shall be computed by using an alternative equitable method of allocation for the property or risk;~~
- ~~(iii) ————— For any portion of the coverage where the premium is indivisible, the tax shall be computed by using the method of allocation which pertains to the classification describing the predominant coverage.~~
- ~~(b) ————— If the information provided by the surplus lines licensee is insufficient to substantiate the method of allocation used by the surplus lines licensee, or if the commissioner determines that the licensee's method is incorrect, the commissioner shall determine the equitable and appropriate amount of tax due to this state as follows:~~
- ~~(i) ————— By use of the Allocation Schedule where the risk is appropriately identified in the schedule;~~
- ~~(ii) ————— Where the Allocation Schedule does not identify a classification appropriate to the coverage, the commissioner may give significant weight to documented evidence of the underwriting bases and other criteria used by the insurer. The commissioner may also consider other available information to the extent sufficient and relevant, including the percentage of the insured's physical assets in this state, the percentage of the insured's sales in this state, the percentage of income or resources derived from this state, and the amount of premium tax paid to another jurisdiction for the policy.~~

Drafting Note: Subparagraph (b) above may be included in the Act or in a separate regulation at the option of the

~~state. It is highly recommended that the model Allocation Schedule and reporting form be adopted by regulation in conjunction with the adoption of the above language. In order for the model law to work effectively, the allocation schedules used by the states should be as uniform as possible.~~

HG. Collection of Tax

If the tax owed by a surplus lines licensee under this section has been collected and is not paid within the time prescribed, the same shall be recoverable in a suit brought by the commissioner against the surplus lines licensee and the surety on the bond filed under Subsection HI of this section. The commissioner may charge interest at the rate of [insert number] percent per year for the unpaid tax.

IH. Surplus Lines Licenses

- (1) A person shall not procure a contract of surplus lines insurance with a ~~nonadmitted~~ surplus lines insurer unless the person possesses a current surplus lines insurance producer license issued by the commissioner.
- (2) The commissioner may issue a resident surplus lines license to a qualified holder of ~~a current underlying~~ property and casualty ~~agent's or broker's or general agent's~~ licenses, but only when the ~~broker or agent~~ producer has:
 - (a) Remitted the \$[insert amount] annual fee to the commissioner;
 - (b) Submitted a completed license application on a form supplied by the commissioner;
 - ~~(c) Passed a qualifying examination approved by the commissioner, except that all holders of a license prior to the effective date of this Act shall be deemed to have passed such an examination;~~
 - ~~(c)~~ In the case of a resident agent, filed with the commissioner, and continues to maintain during the term of the license, in force and unimpaired, a bond or errors and omissions (E&O) policy in favor of this state in the penal sum of \$[insert amount] aggregate liability, with corporate sureties approved by the commissioner. The bond or E&O policy shall be conditioned that the surplus lines licensee will conduct business in accordance with the provisions of this Act and will promptly remit the taxes as provided by law. No bond or E&O policy shall be terminated unless at least thirty (30) days prior written notice is given to the licensee and commissioner;

Drafting note: Under Public Law No. 106-102 (the “Gramm-Leach-Bliley Act”), it is believed that a requirement for a nonresident agent to file a bond may contravene the reciprocity provisions. The requirement for a resident agent to file a bond would not, seemingly, contravene these provisions, and there may be methodologies whereby such resident bonds could become reciprocal between states. Some states have expressed concern that their bonding requirements constitute important consumer protections, and that elimination of these simply to comply with Gramm-Leach-Bliley may result in unintended consequences, and a lack of ~~control~~ over possibly unscrupulous nonresident agents.

- ~~(de)~~ If a resident, established and continues to maintain an office in this state, ~~and~~
- ~~(f) Designated the commissioner as agent for service of process, thereby designating the commissioner to be the licensee's true and lawful attorney upon whom may be served all lawful process in a proceeding instituted by or on behalf of an insured or beneficiary arising out of any contract of insurance, and shall signify its agreement that such service of process is of the same legal force and validity as personal service of process in this state upon the licensee.~~
- (3) A nonresident person shall receive a nonresident surplus lines license if:

- (a) The person is currently licensed as a surplus lines licensee and in good standing in his or her home state;
- (b) The person has submitted the proper request for licensure and has paid the fees required by [insert appropriate reference to state law or regulation];
- (c) The person has submitted or transmitted to the insurance commissioner the application for licensure that the person submitted to his or her home state, or in lieu of the same, a completed Uniform Application; and
- (d) The person's home state awards nonresident surplus lines licenses to residents of this state on the same basis.

Drafting Note: In accordance with Public Law No. 106-102 (the "Gramm-Leach-Bliley Act") states should not require any additional attachments to the Uniform Application or impose any other conditions on applicants that exceed the information requested within the Uniform Application.

- (4) The insurance commissioner may verify the person's licensing status through the Producer Database maintained by the ~~NAICational Association of Insurance Commissioners~~, its affiliates or subsidiaries.
- (5) A nonresident surplus lines licensee who moves from one state to another state or a resident surplus lines licensee who moves from this state to another state shall file a change of address and provide certification from the new resident state within thirty (30) days of the change of legal residence. No fee or license application is required.
- (6) The insurance commissioner shall waive any requirements for a nonresident surplus lines license applicant with a valid license from his or her home state, except the requirements imposed by this subsection, if the applicant's home state awards nonresident surplus lines licenses to residents of this state on the same basis.
- ~~(7)~~ Each surplus lines license shall expire on [insert date] of each year, and an application for renewal shall be filed before [insert date] of each year upon payment of the annual fee and compliance with other provisions of this section. A surplus lines licensee who fails to apply for renewal of the license before [insert date] shall pay a penalty of \$[insert amount] and be subject to penalties provided by law before the license will be renewed.

Drafting Note: States may wish to reference their specific licensing statutes in this section.

Drafting Note: Some states allow surplus lines licensees to hold binding authorities on behalf of ~~eligible~~ surplus lines insurers. States which allow such binding authorities might want to establish minimum standards for the related agreements. In addition, states might want to consider requiring surplus lines licensees with such binding authorities to submit the related agreements to state regulators for review and approval.

J. Suspension, Revocation or Nonrenewal of Surplus Lines Licensee's License

The commissioner may suspend, revoke or refuse to renew the license of a surplus lines licensee after notice and an opportunity for a hearing as provided under the applicable provision of this state's laws ~~for upon one or more of the following grounds:~~

- ~~(1) — Removal of the resident surplus lines licensee's office from this state;~~
- ~~(2) — Removal of the resident surplus lines licensee's office accounts and records from this state during the period during which the accounts and records are required to be maintained under Subsection Q of this section;~~
- ~~(3) — Closing of the surplus lines licensee's office for a period of more than thirty (30) business days;~~

~~unless permission is granted by the commissioner;~~

~~(4) Failure to make and file required reports;~~

~~(5) Failure to transmit required tax on surplus lines premiums to this state or a reciprocal state to which a tax is owing;~~

~~(6) Failure to maintain required bond;~~

~~(17) Violation of any provision of this Act; or~~

~~(28) For any cause for which an insurance license could be denied, revoked, suspended or renewal refused under Sections [insert applicable citation].~~

~~K.J.~~ Actions Against Eligible Surplus Lines Insurers Transacting Surplus Lines Business

- (1) An eligible surplus lines insurer may be sued upon a cause of action arising in this state under a surplus lines insurance contract made by it or evidence of insurance issued or delivered by the surplus lines licensee. A policy issued by the eligible surplus lines insurer shall contain a provision stating the substance of this section and designating the person to whom the commissioner shall mail process.
- (2) The remedies provided in this section are in addition to any other methods provided by law for service of process upon insurers.

~~L.K.~~ Duty to File Evidence of Insurance and Affidavits

Within [insert number] days after the placing of any surplus lines insurance, each producing broker shall execute and each surplus lines licensee shall execute where appropriate, and file a written report regarding the insurance which shall be kept confidential by the commissioner, including the following:

- (1) The name and address of the insured;
- (2) The identity of the insurer or insurers;
- (3) A description of the subject and location of the risk;
- (4) The amount of premium charged for the insurance;
- (5) Such other pertinent information as the commissioner may reasonably require; and
- (6) An affidavit on a standardized form promulgated by the commissioner as to the diligent efforts to place the coverage with admitted insurers and the results of that effort ~~or the insured is an exempt commercial purchaser~~. The affidavit shall be open to public inspection. The affidavit shall affirm that the insured was expressly advised in writing prior to placement of the insurance that:
 - (a) The surplus lines insurer with whom the insurance was to be placed is not licensed in this state and is not subject to its supervision; and
 - (b) In the event of the insolvency of the surplus lines insurer, losses will not be paid by the state insurance guaranty fund.

Drafting Note: Surplus lines licensees will frequently communicate with the insured through a producing broker rather than communicate with the insured directly. In preparing affidavit forms, states may wish to recognize that, as a result of communications passing through the producing broker, the surplus lines licensee may not be in a position to affirm, based upon personal knowledge, that the insured received from the producing broker the written information required by this subsection.

ML. Surplus Lines Advisory Organizations

- (1) There is hereby created a nonprofit association to be known as the [insert name]. All surplus lines licensees shall be deemed to be members of the association. The association shall perform its functions under the plan of operation established pursuant to Paragraph (3) of this subsection and must exercise its powers through a board of directors established under Paragraph (2) of this subsection. The association shall be supervised by the commissioner. The association shall be authorized and have the duty to:

Drafting Note: The preceding paragraph provides that all surplus lines licensees are “deemed” to be members of the association. Some states, however, may choose not to establish a surplus lines advisory organization; in those states Subsection M would not be necessary.

- (a) Receive, record, and subject to Subparagraph (b) of this paragraph, stamp all surplus lines insurance documents which surplus lines brokers are required to file with the association pursuant to the plan of operation;

Drafting Note: Subparagraph (a) of this paragraph authorizes the association to receive, record and stamp all surplus lines documents which must be submitted to the association pursuant to the plan of operation. Documents to be submitted to the association for stamping are likely to vary by state.

- (b) Refuse to stamp submitted insurance documents, if the association determines that a nonadmitted insurer does not meet minimum state financial standards of eligibility, or the commissioner orders the association not to stamp insurance documents pursuant to Paragraph (9) of this subsection. The association shall notify the commissioner and provide an explanation for any refusal to stamp submitted insurance documents other than a refusal based upon the order of the commissioner;
- (c) Prepare and deliver annually to each licensee and to the commissioner a report regarding surplus lines business. The report shall include a delineation of the classes of business procured during the preceding calendar year, in the form the board of directors prescribes;
- (d) Encourage compliance by its members with the surplus lines law of this state and the rules and regulations of the commissioner relative to surplus lines insurance;
- (e) Communicate with organizations of agents, brokers and admitted insurers with respect to the proper use of the surplus lines market;
- (f) Employ and retain persons as necessary to carry out the duties of the association;
- (g) Borrow money as necessary to effect the purposes of the association;
- (h) Enter contracts as necessary to effect the purposes of the association; and
- (i) Provide such other services to its members as are incidental or related to the purposes of the association.
- (2) The association shall function through a board of directors elected by the association members, and officers who shall be elected by the board of directors.
- (a) The board of directors of the association shall consist of not less than five (5) nor more than nine (9) persons serving terms as established in the plan of operation. The plan of operation shall provide for the election of a board of directors by the members of the association from its membership. The plan of operation shall fix the manner of voting and may weigh each member’s vote to reflect the annual surplus lines insurance premium written by the member.

- (b) The board of directors shall elect officers as provided for in the plan of operation.
- (3) The association shall establish a plan of operation. The plan of operation shall provide for the formation, operation and governance of the association. The plan and any amendments shall be effective upon approval by the commissioner, which shall not be unreasonably withheld or delayed. All association members shall comply with the plan of operation or any amendments to it. Failure to comply with the plan of operation or any amendments shall constitute a violation of the insurance law and the commissioner may issue an order requiring discontinuance of the violation.
- (4) The association shall file with the commissioner:
- (a) A copy of its plan of operation and any amendments to it;
 - (b) A current list of its members revised at least annually;
 - (c) The name and address of a resident of this state upon whom notices or orders of the commissioner or processes issued at the direction of the commissioner may be served; and
 - (d) An agreement that the commissioner may examine the association in accordance with the provisions of Paragraph (5) of this subsection.
- (5) The commissioner shall, at least once in [insert number] years, make or cause to be made an examination of the association. The reasonable cost of an examination shall be paid by the association upon presentation to it by the commissioner of a detailed account of each cost. The officers, managers, agents, and employees of the association may be examined at any time, under oath, and shall exhibit all books, records, accounts, documents or agreements governing its method of operation. The commissioner shall furnish a copy of the examination report to the association and shall notify the association that it may request a hearing within thirty (30) days on the report or on any facts or recommendations contained in it. If the commissioner finds the association to be in violation of this section, the commissioner may issue an order requiring the discontinuance of the violation. A director may be removed from the association's board of directors by the commissioner for cause, stated in writing, after an opportunity has been given to the director to be heard.
- (6) There shall be no liability on the part of and no causes of action of any nature shall arise against the association, its directors, officers, agents or employees for any action taken or omitted by them in the performance of their powers and duties under this section, absent gross negligence or willful misconduct.
- (7) Within [insert number] days after a surplus lines policy is procured, a licensee shall submit to the association for recording and stamping all documents which surplus lines brokers are required to file with the association. Every insurance document submitted to the association pursuant to this subsection shall set forth:
- (a) The name and address of the insured;
 - (b) The gross premium charged;
 - (c) The name of the nonadmitted insurer; and
 - (d) The class of insurance procured.

Drafting Note: The appropriate time limits for submitting documents required for stamping will vary by state.

- (8) It shall be unlawful for an insurance agent, broker or surplus lines broker to deliver in this state any insurance document which surplus lines brokers are required to file with the association unless the

insurance document is stamped by the association or is exempt from such requirements. However, a licensee's failure to comply with the requirements of this subsection shall not affect the validity of the coverage.

- (9) The services performed by the association shall be funded by a stamping fee assessed for each premium-bearing document submitted to the association. The stamping fee shall be established by the board of directors of the association from time to time. The stamping fee shall be paid by the insured.
- (10) The commissioner may declare a nonadmitted insurer ineligible and order the association not to stamp insurance documents issued by the nonadmitted insurer and issue any other appropriate order.

NM. Evidence of the Insurance and Subsequent Changes to the Insurance

- (1) Upon placing surplus lines insurance, the surplus lines licensee shall promptly deliver to the insured or the producing broker the policy, or if the policy is not then available, a certificate as described in Paragraph (4) of this subsection, cover note, binder or other evidence of insurance. The certificate described in Paragraph (4) of this subsection, cover note, binder or other evidence of insurance shall be executed by the surplus lines licensee and shall show the description and location of the subject of the insurance, coverages including any material limitations other than those in standard forms, a general description of the coverages of the insurance, the premium and rate charged and taxes to be collected from the insured, and the name and address of the insured and surplus lines insurer or insurers and proportion of the entire risk assumed by each, and the name of the surplus lines licensee and the licensee's license number.
- (2) A surplus lines licensee shall not issue or deliver any evidence of insurance or purport to insure or represent that insurance will be or has been written by any ~~eligible~~ surplus lines insurer, or a nonadmitted insurer ~~pursuant to Section 5C(4)~~, unless the licensee has authority from the insurer to cause the risk to be insured or has received information from the insurer in the regular course of business that the insurance has been granted.
- (3) If, after delivery of any evidence of insurance, there is any change in the identity of the insurers, or the proportion of the risk assumed by any insurer, or any other material change in coverage as stated in the surplus lines licensee's original evidence of insurance, or in any other material as to the insurance coverage so evidenced, the surplus lines licensee shall promptly issue and deliver to the insured or the original producing broker an appropriate substitute for, or endorsement of the original document, accurately showing the current status of the coverage and the insurers responsible for the coverage.
- (4) As soon as reasonably possible after the placement of the insurance, the surplus lines licensee shall deliver a copy of the policy or, if not available, a certificate of insurance to the insured or producing broker to replace any evidence of insurance previously issued. Each certificate or policy of insurance shall contain or have attached a complete record of all policy insuring agreements, conditions, exclusions, clauses, endorsements or any other material facts that would regularly be included in the policy.
- ~~(5) A surplus lines licensee who fails to comply with the requirements of this subsection shall be subject to the penalties provided in this Act.~~
- ~~(56)~~ The surplus lines licensee shall give the following consumer notice to every person, ~~other than exempt commercial purchasers,~~ applying for insurance with a nonadmitted insurer. The notice shall be printed in 16-point type on a separate document affixed to the application. The applicant shall sign and date a copy of the notice to acknowledge receiving it. The surplus lines licensee shall maintain the signed notice in its file for a period of five (5) years from expiration of the policy. The surplus lines licensee shall tender a copy of the signed notice to the insured at the time of delivery of each policy the licensee transacts with a nonadmitted insurer. The copy shall be a separate document

affixed to the policy.

~~“Notice: 1. A “nonadmitted” or “surplus lines insurer that is not licensed in this state is issuing the insurance policy that you have applied to purchase. These companies are called “nonadmitted” or “surplus lines” insurers. 2. The insurer is not subject to the financial solvency regulation and enforcement that applies to licensed insurers in this state. 3. These insurers generally do not participate in insurance guaranty funds created by state law. These guaranty funds will not pay your claims or protect your assets if the insurer becomes insolvent and is unable to make payments as promised. 4. Some states maintain lists of approved or eligible surplus lines insurers and surplus lines brokers may use only insurers on the lists. Some states issue orders that particular surplus lines insurers can not be used. 5. For additional information about the above matters and about the insurer, you should ask questions of your insurance agent, broker or surplus lines broker. You may also contact your insurance department consumer help line.”~~

Drafting Note: This notice is intended to inform personal lines customers and smaller commercial risks of the nature of the coverage they are purchasing. A state may wish to add language to this statute providing that this notice need not be given to commercial risks meeting defined criteria for size and insurance expertise.

ON. Licensee’s Duty to Notify Insured

- (1) No contract of insurance placed by a surplus lines licensee under this Act shall be binding upon the insured and no premium charged shall be due and payable until the surplus lines licensee or the producing broker ~~shall have~~has notified the insured in writing, in a form acceptable to the commissioner, a copy of which shall be maintained by the licensee or the producing broker with the records of the contract and available for possible examination, that:
 - (a) The insurer [other than a domestic surplus lines insurer] with which the licensee places the insurance is not licensed by this state and is not subject to its supervision; and
 - (b) In the event of the insolvency of the surplus lines insurer, losses will not be paid by the state insurance guaranty fund.
- (2) Nothing herein contained shall nullify any agreement by any insurer to provide insurance.

Drafting Note: To ensure the meaningfulness of the notice required by this subsection, the commissioner might want to establish criteria related to readability, type face~~font~~, and type~~size~~ of the notice.

PO. Effect of Payment to Surplus Lines Licensee

A payment of premium to a surplus lines licensee acting for a person other than itself in procuring, continuing or renewing any policy of insurance procured under this section shall be deemed to be payment to the insurer, whatever conditions or stipulations may be inserted in the policy or contract notwithstanding.

QP. Surplus Lines Licensees May Accept Business from Other Producers

A surplus lines licensee may originate surplus lines insurance or accept such insurance from any other producing broker duly licensed as to the kinds of insurance involved, and the surplus lines licensee may compensate the producing broker for the business.

RQ. Records of Surplus Lines Licensee

- (1) Each surplus lines licensee shall keep ~~in this state~~ a full and true record of each surplus lines insurance contract placed by or through the licensee, including a copy of the policy, certificate, cover note or other evidence of insurance showing each of the following items applicable:
 - (~~a~~) Amount of the insurance, risks and perils insured;

- (2b) Brief description of the property insured and its location;
 - (3c) Gross premium charged;
 - (4d) Any return premium paid;
 - (5e) Rate of premium charged upon the several items of property;
 - (6f) Effective date and terms of the contract;
 - (7g) Name and address of the insured;
 - (8h) Name and address of the insurer;
 - (9i) Amount of tax and other sums to be collected from the insured;
 - ~~(10) Allocation of taxes by state as referred to in Subsection F of this section;~~ and
 - (11j) Identity of the producing broker, any confirming correspondence from the insurer or its representative, and the application.
- (2) The record of each contract shall be kept open at all reasonable times to examination by the commissioner without notice for a period not less than five (5) years following termination of the contract. In lieu of maintaining offices in this state, each nonresident surplus lines licensee shall make available to the commissioner any and all records that the commissioner deems necessary for examination.

Drafting Note: States may wish to extend the five-year period prescribed for open access to insurance records because of the long-term nature of this business.

SR. Reports—Summary of Exported Business

On or before the end of the month following each [insert month, quarter, year], each surplus lines licensee shall file with the commissioner, on forms prescribed by the commissioner, a verified report in duplicate of all surplus lines insurance transacted during the preceding period, showing:

- (1) Aggregate gross premiums written;
- (2) Aggregate return premiums;
- (3) Amount of aggregate tax remitted to this state; and
- (4) Amount of aggregate tax due or remitted to each other state for which an allocation is made pursuant to Subsection ~~GF~~ of this section.

Drafting Note: States desiring to have taxes remitted annually may call for more frequent detailed listing of business.

T. [OPTIONAL: Domestic Surplus Lines Insurers]

- (1) The commissioner may designate a domestic insurer as a domestic surplus lines insurer upon its application, which shall include, as a minimum, an authorizing resolution of the board of directors and evidence to the commissioner's satisfaction that the insurer has capital and surplus of not less than fifteen million dollars.
- (2) A domestic surplus lines insurer:

- (a) ~~(a)~~ Shall be limited in its authority in this state to providing surplus lines insurance.
- (b) May be authorized to write any type of property and casualty [or accident and health] insurance in this state that may be placed with a surplus lines insurer pursuant to this Subpart.
- (c) Be subject to the legal and regulatory requirements applicable to domestic insurers, except for theas following:
- (i) Premium taxes, fees, and assessments applicable to admitted insurance;
- (ii) ~~Regulation of rates and forms requiring the filing of rates and forms for approval;~~
- (iii) ~~Assessment or coverage by insurance guaranty funds.]~~

Section 6. Insurance Independently Procured—Duty to Report and Pay Tax

- A. Each insured whose home state is in this state, who procures or continues or renews insurance with a nonadmitted insurer ~~on properties, risks or exposures located or to be performed in whole or in part in this state~~, other than insurance procured through a surplus lines licensee, shall, within [insert number] days after the date the insurance was so procured, continued or renewed, file a written report with the commissioner, upon forms prescribed by the commissioner, showing the name and address of the insured or insureds, name and address of the insurer, the subject of the insurance, a general description of the coverage, the amount of premium currently charged, and additional pertinent information reasonably requested by the commissioner.
- ~~For the purposes of this subsection, properties, risks or exposures only partially located or to be performed in this state, which are covered under a multistate policy placed by a surplus lines licensee in another state, shall be deemed to be insurance independently procured unless the insurer is an admitted insurer.~~

Drafting Note: Subsection A may need to be revised in those states exempting from taxation insurance procured by nonprofit educational institutions and their employers, from nonprofit educational insurers.

- B. ~~Gross~~ Premiums charged for the insurance, less any return premiums, is subject to a tax at the rate of [insert number] percent. At the time of filing the report required in Subsection A of this section, the insured whose home state is this state shall pay the tax on all taxable pPremium to the commissioner, who shall transmit the same for distribution as provided in this Act.

Drafting Note: Existing state laws and procedures may require that the tax report be forwarded to another state agency, such as the Department of the Treasury, rather than to the commissioner. In addition, some states may require the tax to be paid on a periodic basis (e.g., annually) rather than at the time of the filing required by Subsection A. Subsections A and B may need to be revised in these states.

- ~~C. If an independently procured policy covers properties, risks or exposures only partially located or to be performed in this state, the tax payable shall be computed on the portion of the premium properly attributable to the properties, risks or exposures located or to be performed in this state, as set forth in Sections 5F(3) and 5F(4) of this Act.~~
- ~~C~~D. Delinquent taxes hereunder shall bear interest at the rate of [insert number] percent per year.
- ~~D~~E. This section does not abrogate or modify; and shall not be construed or deemed to abrogate or modify any other provision of this Act.

Section 7. Penalties

- A. A person who in this state represents or aids a nonadmitted insurer in violation of this Act may be found guilty of a criminal act and subject to a fine not in excess of \$[insert amount].

Drafting Note: Some states might want to specify “misdemeanor” or “felony” rather than “criminal act” in Section 7A.

- B. In addition to any other penalty provided herein or otherwise provided by law, including any suspension, revocation or refusal to renew a license, any person, firm, association or corporation violating any provision of this Act shall be liable to a civil penalty not exceeding \$[insert amount] for the first offense, and not exceeding \$[insert amount] for each succeeding offense.
- C. The above penalties are not exclusive remedies. Penalties may also be assessed under [insert citation to trade practices and fraud statute] of the insurance code of this state.

Section 8. Violations

Whenever there is evidence satisfactory to the commissioner ~~believes, from evidence satisfactory to him or her,~~ that a person is violating or about to violate the provisions of this Act, the commissioner may cause a complaint to be filed in the [insert appropriate court] Court for restitution and to enjoin and restrain the person from continuing the violation or engaging in or doing any act in furtherance thereof. The court shall have jurisdiction of the proceeding and shall have the power to make and enter an order of judgment awarding such preliminary or final injunctive relief and restitution as in its judgment is proper.

Section 9. Service of Process

- A. Any act of transacting insurance by an unauthorized person or a nonadmitted insurer is equivalent to and shall constitute an irrevocable appointment by the unauthorized person or insurer, binding upon it, its executor or administrator, or successor in interest of the [insert title of appropriate state official] or his or her successor in office, to be the true and lawful attorney of the unauthorized person or insurer upon whom may be served all lawful process in any action, suit or proceeding in any court by the commissioner or by the state and upon whom may be served any notice, order, pleading or process in any proceeding before the commissioner and which arises out of transacting insurance in this state by the unauthorized person or insurer. Any act of transacting insurance in this state by a nonadmitted insurer shall signify its acceptance of its agreement that any lawful process in such court action, suit or proceeding and any notice, order, pleading or process in such administrative proceeding before the commissioner so served shall be of the same legal force and validity as personal service of process in this state upon the unauthorized person or insurer.
- B. Service of process in the action shall be made by delivering to and leaving with the [insert title of appropriate state official], or some person in apparent charge of the office, two (2) copies thereof and by payment to the [insert title of appropriate state official] of the fee prescribed by law. Service upon the [insert title of appropriate state official] as attorney shall be service upon the principal.

Drafting Note: Existing state laws and procedures may require that service of process be made upon either the commissioner or another state official.

- C. The [insert title of appropriate state official] shall forward by certified mail one of the copies of the process or notice, order, pleading or process in proceedings before the commissioner to the defendant in the court proceeding or to whom the notice, order, pleading or process in the administrative proceeding is addressed or directed at its last known principal place of business and shall keep a record of all process so served on the commissioner which shall show the day and hour of service. Service is sufficient, provided:
 - (1) Notice of service and a copy of the court process or the notice, order, pleading or process in the administrative proceeding are sent within ten (10) days by certified mail by the plaintiff or the plaintiff’s attorney in the court proceeding or by the commissioner in the administrative proceeding to the defendant in the court proceeding or to whom the notice, order, pleading or process in the administrative proceeding is addressed or directed at the last known principal place of business of the defendant in the court or administrative proceeding; and
 - (2) The defendant’s receipt or receipts issued by the post office with which the letter is registered, showing the name of the sender of the letter and the name and address of the person or insurer to

whom the letter is addressed, and an affidavit of the plaintiff or the plaintiff's attorney in a court proceeding or of the commissioner in an administrative proceeding, showing compliance are filed with the clerk of the court in which the action, suit or proceeding is pending or with the commissioner in administrative proceedings, on or before the date the defendant in the court or administrative proceeding is required to appear or respond, or within such further time as the court or commissioner may allow.

- D. A plaintiff shall not be entitled to a judgment or a determination by default in any court or administrative proceeding in which court process or notice, order, pleading or process in proceedings before the commissioner is served under this section until the expiration of forty-five (45) days from the date of filing of the affidavit of compliance.
- E. Nothing in this section shall limit or affect the right to serve any process, notice, order or demand upon any person or insurer in any other manner now or hereafter permitted by law.
- F. Each nonadmitted insurer assuming insurance in this state, or relative to property, risks or exposures located or to be performed in this state, shall be deemed to have subjected itself to this Act.
- G. ~~Notwithstanding~~Notwithstanding conditions or stipulations in the policy or contract, a nonadmitted insurer may be sued upon any cause of action arising in this state, or relative to property, risks or exposures located or to be performed in this state, under any insurance contract made by it.
- H. ~~Notwithstanding~~Except with regard to exempt commercial purchasers, independently procured insurance, [aviation], and wet marine and transportation insurance, conditions or stipulations in the policy or contract ~~notwithstanding,~~ a nonadmitted insurer subject to arbitration or other alternative dispute resolution mechanism ~~arising in this state or relative to property, risks or exposures located or to be performed in this state under an insurance contract made by it~~ shall conduct the arbitration or other alternative dispute resolution mechanism ~~in this state in the home state of the insured.~~

Drafting Note: Provisions of a state's constitution, statutes, regulations, and public policy may necessitate amendment of the prior ~~sub~~Section 9H. States should consider adoption or modification of priorSection 9H in light of their own laws on arbitration or other alternative dispute resolution in insurance and commercial transactions. States should cross-reference their state insurance code to verify the inclusion of "Aviation" within this provision.

- I. A policy or contract issued by the nonadmitted insurer or one which is otherwise valid and contains a condition or provision not in compliance with the requirements of this Act is not thereby rendered invalid but shall be construed and applied in accordance with the conditions and provisions which would have applied had the policy or contract been issued or delivered in full compliance with this Act.

Section 10. Legal or Administrative Procedures

- A. Before any nonadmitted insurer files or causes to be filed any pleading in any court action, suit or proceeding or in any notice, order, pleading or process in an administrative proceeding before the commissioner instituted against the person or insurer, by services made as provided in this Act, the insurer shall either:
 - (1) Deposit with the clerk of the court in which the action, suit or proceeding is pending, or with the Commissioner of Insurance in administrative proceedings before the commissioner, cash or securities, or file with the clerk or commissioner a bond with good and sufficient sureties, to be approved by the clerk or commissioner in an amount to be fixed by the court or commissioner sufficient to secure the payment of any final judgment which may be rendered in the action or administrative proceeding; or
 - (2) Procure a certificate of authority to transact the business of insurance in this state. In considering the application of an insurer for a certificate of authority, for the purposes of this paragraph the commissioner need not assert the provisions of [insert sections of insurance laws relating to retaliation] against the insurer with respect to its application if the commissioner determines that the

company would otherwise comply with the requirements for a certificate of authority.

- B. The Commissioner of Insurance, in any administrative proceeding in which service is made as provided in this Act, may in the commissioner's discretion, order such postponement as may be necessary to afford the defendant reasonable opportunity to comply with the provisions of Subsection A of this section and to defend the action.
- C. Nothing in Subsection A of this section shall be construed to prevent a nonadmitted insurer from filing a motion to quash a writ or to set aside service thereof made in the manner provided in this Act, on the ground that the nonadmitted insurer has not done any of the acts enumerated in the pleadings.
- D. Nothing in Subsection A of this section shall apply to placements of insurance which were lawful in the home state of the insured in which the placement took place and which were not unlawful placements under the laws of this state. Without limiting the generality of the foregoing, nothing in Subsection A shall apply to a placement made pursuant to Section 5 of this Act.

Section 11. Enforcement

- A. The commissioner shall have the authority to proceed in the courts of this state or any other United States jurisdiction to enforce an order or decision in any court proceeding or in any administrative proceeding before the commissioner of Insurance.

~~A. Filing and Status of Foreign Decrees~~

~~A copy of a foreign decree authenticated in accordance with the statutes of this state may be filed in the office of the clerk of any [insert proper court] Court of this state. The clerk, upon verifying with the commissioner that the decree or order qualifies as a "foreign decree" shall treat the foreign decree in the same manner as a decree of a [insert proper court] Court of this state. A foreign decree so filed has the same effect and shall be deemed a decree of a [insert proper court] Court of this state, and is subject to the same procedures, defenses and proceedings for reopening, vacating or staying as a decree of a [insert proper court] Court of this state and may be enforced or satisfied in like manner.~~

~~B. Notice of Filing~~

- ~~(1) At the time of the filing of the foreign decree, the plaintiff shall make and file with the clerk of the court an affidavit setting forth the name and last known post office address of the defendant.~~
- ~~(2) Promptly upon the filing of the foreign decree and the affidavit, the clerk shall mail notice of the filing of the foreign decree to the defendant at the address given and to the commissioner of this state and shall make a note of the mailing in the docket. In addition, the plaintiff may mail a notice of the filing of the foreign decree to the defendant and to the commissioner of this state and may file proof of mailing with the clerk. Lack of mailing notice of filing by the clerk shall not affect the enforcement proceedings if proof of mailing by the plaintiff has been filed.~~
- ~~(3) No execution or other process for enforcement of a foreign decree filed hereunder shall issue until thirty (30) days after the date the decree is filed.~~

~~**Drafting Note:** This section presumes that the commissioner has authority to proceed without the cooperation of the state's attorney general. Governing state laws might require that a person other than the commissioner or the attorney general serve as the plaintiff. The title of that person shall be substituted for "commissioner" or "plaintiff" in Section 11 whenever required by state law.~~

~~C. Stay of the Foreign Decree~~

- ~~(1) If the defendant shows the [insert proper court] Court that an appeal from the foreign decree is pending or will be taken, or that a stay of execution has been granted, the court shall stay enforcement of the foreign decree until the appeal is concluded, the time for appeal expires, or the stay of execution expires or is vacated, upon proof that the defendant has furnished the security for~~

~~the satisfaction of the decree required by the state in which it was rendered.~~

~~(2) — If the defendant shows the [insert proper court] Court any ground upon which enforcement of a decree of any [insert proper court] Court of this state would be stayed, the court shall stay enforcement of the foreign decree for an appropriate period, upon requiring the same security for satisfaction of the decree which is required in this state.~~

~~B.~~ ~~D.~~ — It shall be the policy of this state that the insurance commissioner shall cooperate with regulatory officials in other United States jurisdictions to the greatest degree reasonably practicable in enforcing lawfully issued orders of such other officials subject to public policy and the insurance laws of the state. Without limiting the generality of the foregoing, the commissioner may enforce an order lawfully issued by other officials provided the order does not violate the laws or public policy of this state.

Section 12. Suits by Nonadmitted Insurers

A nonadmitted insurer may not commence or maintain an action ~~at~~ in law or in equity, including arbitration or any other dispute resolution mechanism, in this state to enforce any right arising out of any insurance transaction except with respect to:

- A. Claims under policies lawfully placed pursuant to the law of the home state of the insured~~written in this state;~~
- B. Liquidation of assets and liabilities of the insurer (other than collection of new premium), resulting from its former authorized operations in this state;
- C. Transactions subsequent to issuance of a policy not covering domestic risks at the time of issuance, and lawfully procured under the laws of the jurisdiction where the transaction took place;
- D. Surplus lines insurance placed by a licensee under authority of Section 5 of this Act;
- E. Reinsurance placed under the authority of [insert citations of state's reinsurance intermediary act and other reinsurance laws];
- F. The continuation and servicing of life insurance, health insurance policies or annuity contracts remaining in force as to residents of this state where the formerly authorized insurer has withdrawn from the state and is not transacting new insurance in the state;
- G. Servicing of policies written by an admitted insurer in a state to which the insured has moved but in which the company does not have a certificate of authority until the term expires;
- H. Claims under policies covering wet marine and transportation insurance;
- I. Placements of insurance which were lawful in the jurisdiction in which the transaction took place and which were not unlawful placements under the laws of this state.

Drafting Note: Provisions of a state's constitution, statutes, regulations, and public policy may necessitate amendment of the opening paragraph of this section.

Section 13. ~~Separability Severability Clause of Provisions~~

If any provisions of this Act, or the application of the provision to any person or circumstance, shall be held invalid, the remainder of the Act and the application of the provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

Section 14. Effective Date

This Act shall take effect [insert appropriate date].

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

1994 Proc. 3rd Quarter 14, 16-17, 24, 28-46 (adopted).
 1996 Proc. 3rd Quarter 9, 42, 1110, 1168, 1169-1173, 1189-1190 (amended).
 1997 Proc. 4th Quarter 25, 27-28, 1004, 1029 (amended).
 1999 Proc. 3rd Quarter 25, 26, 1080, 1135, 1151-1153 (amended).
 2002 Proc. 2nd Quarter 14, 250-251, 344, 347, 349-350 (amended).

This model draws from and replaces three earlier NAIC models:

Model Surplus Lines Law

1983 Proc. I 6, 36, 834, 900, 913-922 (adopted).
 1985 Proc. II 11, 24, 702, 722, 723-724 (amended).
 1986 Proc. I 9-10, 24, 799, 813, 814-821 (amended).
 1990 Proc. I 6, 30, 840-841, 897-898, 900-901 (amended).
 1991 Proc. I 9, 18, 908, 949, 950, 952-961 (amended and reprinted).

Unauthorized Insurers Model Act

1969 Proc. I 168, 218, 222-227, 271 (adopted).
 1978 Proc. I 13, 15, 348, 350 (amended).
 1990 Proc. II 7, 13-14, 159-160, 187-191 (amended and reprinted).

Model Nonadmitted Insurance Act

1983 Proc. I 6, 36, 834, 899-900, 923-926 (adopted).

PROJECT HISTORY

NONADMITTED INSURANCE MODEL ACT (#870)

1. Description of the Project, Issues Addressed, etc.

The 2023 revisions to the NAIC *Nonadmitted Insurance Model Act* (#870) are intended to conform Model #870 to the federal Nonadmitted and Reinsurance Reform Act of 2010 (NRRRA), which was part of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). The current Model #870 was adopted in 1994 to combine three NAIC models that date as far back as 1969: 1) the Unauthorized Insurers Model Act; 2) the Model Surplus Lines Law; and 3) the Model Nonadmitted Insurance Act. Since the adoption of Model #870 on Sept. 18, 1994, the NAIC has amended it on the following dates: 1) Dec. 16, 1996; 2) March 18, 1998; 3) Dec. 6, 1999; and 4) Sept. 10, 2002. The 2002 modifications resulted from the passage of the federal Gramm-Leach-Bliley Act (GLBA) by the U.S. Congress (Congress). Currently, 31 states have adopted Model #870.

The most recent activity regarding Model #870 is related to the NRRRA. Model #870 was not modified as a result of the implementation of the NRRRA. On Oct. 11, 2011, the *Nonadmitted Insurance Reform Sample Bulletin* (Bulletin), which was distributed to the state insurance departments, was adopted by the Executive (EX) Committee and Plenary. The Bulletin outlined federally mandated regulatory changes that affect the placement of nonadmitted insurance. Specifically, the Bulletin addressed the scope of the NRRRA, the application of “Home State” for the purposes of jurisdictional authority and paying premium tax, licensure requirements for brokers, diligent search requirements, and eligibility requirements for nonadmitted insurers.

During the implementation of the NRRRA, the Surplus Lines (C) Task Force and NAIC staff were working on state tax allocation proposals. The leading proposals were the Surplus Lines Insurance Multistate Compliance Compact (SLIMPACT), which predated the NRRRA, and the Nonadmitted Insurance Multistate Agreement (NIMA), which was developed by the Task Force in response to the NRRRA. The SLIMPACT failed to obtain the 10 states needed to become operative. The NIMA clearinghouse operated for only a few years before the NIMA was dissolved in 2016. With the focus on achieving a system of tax allocation before the NRRRA deadline in July 2012, the decision was made to draft the Bulletin rather than amend Model #870.

During the 2020 Summer National Meeting of the Task Force, the chair directed staff to develop a drafting group to produce a summary document that outlined significant updates needed to modernize Model #870 and present a recommendation to the Task Force at a future national meeting. The drafting group consisted of Tom Travis (LA), Jeff Baughman (WA), Eli Snowbarger (OK), Andy Daleo (NAIC), and Dan Schelp (NAIC). The drafting group met Sept. 30 and Oct. 27, 2020. As a result of those meetings, the drafting group outlined numerous proposed revisions to Model #870.

During the 2020 Fall National Meeting, the Task Force adopted the Request for NAIC Model Law Development. During the 2021 Spring National Meeting, the Executive (EX) Committee approved the Request for NAIC Model Law Development.

2. Name of Group Responsible for Drafting the Model and States Participating

The Surplus Lines (C) Task Force and the drafting group consisting of Louisiana, Chair; Colorado; Illinois; Texas; and Washington.

3. Project Authorized by What Charge and Date First Given to the Group

The charges of the Surplus Lines (C) Task Force state, “Develop or amend relevant NAIC model laws, regulations, and/or guidelines.” Also, as described in charge #1, the Request for NAIC Model Law Development was approved by the Executive (EX) Committee during the 2021 Spring National Meeting.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated

During the 2021 Summer National Meeting, the Surplus Lines (C) Task Force formally developed the Model #870 Drafting Group that consisted of Travis, chair; Rolf Kaumann (CO); Marcy Savage (IL); Jamie Walker (TX); and Jeff Baughman (WA).

The Drafting Group began its work on Model #870 on Aug. 19, 2021. During that call the Drafting Group discussed the overall approach to updating the model, initial comments received, and a timeline.

5. A General Description of the Due Process (e.g., exposure periods; public hearings; or any other means by which widespread input from industry, consumers, and legislators was solicited)

The Drafting Group met Aug. 19, 2021, for a regulator-only planning session. Following the initial meeting, the Drafting Group met in open session Sept. 28, Oct. 20, Nov. 4, and Dec. 1, 2021. During these sessions, interested state insurance regulators and parties submitted comment letters to the Drafting Group. The Drafting Group held regulator-only discussion and planning calls on Jan. 10, March 15, and May 3, 2022. During a Surplus Lines (C) Task Force call on May 23, 2022, Model #870 was exposed for a 60-day public comment period. Comments were received from the American Property Casualty Insurance Association (APCIA), CRC Group: Wholesale and Specialty Insurance; Lloyd's of London; McDermott Will & Emery; the National Risk Retention Association (NRRRA); Surplus Line Association of Illinois (SLAI); the Council of Insurance Agents & Brokers (CIAB); and the Wholesale & Specialty Insurance Association (WSIA). The Drafting Group held a regulator-only discussion and planning call on Aug. 3, 2022 and the Task Force held a call on Oct. 17 to discuss the comments received and on Oct. 27, 2022 it exposed Model #870 for a 30-day public comment period. Comments were received from the Maine Bureau of Insurance; the APCIA; Lloyd's of London; and the WSIA. During the Fall National Meeting, the Task Force heard a summary of the comments received. The Drafting Group held a regulator-only discussion and planning call on Jan. 18, 2023 to discuss comments received and on Jan. 23 exposed a new draft of Model #870 for a 14-day public comment period. Comments were received from the California Department of Insurance; the APCIA; the CIAB; Lloyd's of London; McDermott Will & Emery; and the WSIA. On Feb. 10 the drafting group held a regulatory-only discussion and planning call and integrated edits into Model #870.

6. A Discussion of the Significant Issues (e.g., items of some controversy raised during the due process and the group's response)

The most significant issue raised was related to the methodology of determining the "Home State" for unaffiliated groups as outlined within Section 2 of the model. Following comments from various interested parties and discussion among Drafting Group members, an agreed-upon revision resulted in clarification via a drafting note.

7. List the Key Provisions of the Model (e.g., sections considered most essential to state adoption)

Section 5C(2)(b) – Non-U.S. Insurers

- For a Nonadmitted Insurer domiciled outside the U.S., the insurer shall be listed on the *Quarterly Listing of Alien Insurers* maintained by the International Insurers Department (IID) of the NAIC.

Section 5G – Surplus Lines Tax

- In addition to the full amount of gross Premium charged by the insurer for the insurance, every Person licensed pursuant to Section 5J of this Act shall collect and pay to the commissioner a sum equal to [insert number] percent of the gross Premium charged, less any return Premium, for Surplus Lines Insurance provided by the licensee pursuant to the license. Where the insurance covers properties, risks or exposures located or to be performed both in and out of this state, the sum payable shall be paid entirely to the Home State of the insured. The tax on any portion of the Premium unearned at the termination of insurance having been credited by the state to the licensee shall be returned to the policyholder directly by the Surplus Lines Licensee or through the producing broker, if any. The Surplus Lines Licensee is prohibited from rebating, for any reason, any part of the tax.

Section 5T – Domestic Surplus Lines Insurer

- The commissioner may designate a domestic insurer as a domestic Surplus Lines Insurer upon its application, which shall include, as a minimum, an authorizing resolution of the board of directors and evidence to the commissioner's satisfaction that the insurer has capital and surplus of not less than \$15 million. (Although this was added to the model as optional, it remains an important part of the model.).

8. Any Other Important Information (e.g., amending an accreditation standard)

There were no discussions held regarding making Model #870 an accreditation standard.

Adopted by the Cannabis Insurance (C) Working Group—July 18, 2023
Adopted by the Property and Casualty Insurance (C) Committee, Aug. 15, 2023
Adopted by the Executive (EX) Committee and Plenary, Aug. 16, 2023

REGULATORY GUIDE
UNDERSTANDING THE MARKET FOR CANNABIS INSURANCE: 2023 UPDATE

I. INTRODUCTION

The cannabis industry continues to evolve and expand both in structure and in the number of states with legalized cannabis. The National Association of Insurance Commissioners (NAIC) Cannabis Insurance (C) Working Group's original white paper adopted in 2019, *Regulatory Guide Understanding the Market for Cannabis Insurance*, found there are substantial gaps in insurance coverage for the cannabis industry. While gaps remain, much has transpired since the writing of the original white paper. This white paper seeks to provide an update on activities and trends since the adoption of the previous white paper.

The original white paper focused on the cannabis industry's architecture, insurance needs and gaps, and insurance regulator best practices to encourage insurers to enter the market. The cannabis industry has become more sophisticated since the original white paper was published in 2019. It has also continued to rapidly expand. The maturation and expansion of the cannabis market are driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. It is in these areas where insurance gaps most persist. As such, this white paper will include discussion on emerging insurance issues in these areas of the cannabis industry.

Additionally, the current state of cannabis regulation in the United States (U.S.) will be explored. States and U.S. jurisdictions continue to legalize cannabis, but it remains federally illegal under the Controlled Substances Act (CSA). This tension between federal and state law creates uncertainty about the insurability of cannabis and how policy language will be applied to coverages. Municipal bans on cannabis in states where cannabis has been legalized further complicate this issue. For these reasons, insurers remain reluctant to enter the cannabis space. Although capacity has improved since the first white paper's publishing, most of the commercial insurance for cannabis-related businesses is still found in the excess and surplus lines (also known as the non-admitted) market. Potential paths forward to these issues, including best regulatory practices and addressing the needs of states regulating insurance and cannabis operators under state law.

This white paper will outline the complexities of the cannabis industry, explaining the different designs of cannabis businesses, jurisdictional variations, current insurance types and offerings, potential future insurance products, differences presented by insuring hemp versus cannabis, and the importance of developing consistent regulatory practices for state cannabis insurance regulators. It will also cover cannabis history and terminology, cannabis policy trends at the state and national levels, current landscapes of cannabis regulation, licensing and education, cannabis business operating structures, and cannabis industry insurance market considerations. It will

conclude with a brief discussion on the future state of cannabis insurance, including possible next steps for all affected parties.

The need for accessible, affordable, and adequate insurance for the cannabis industry will only continue to increase. Therefore, it will be vitally important for state insurance regulators to fully comprehend and carefully consider the needs and risks of this industry. Regulators can play an important role in encouraging insurance participation in the new cannabis-related industry, which can help all affected parties achieve risk mitigation with proper financial management. This will lead to increases in consumer protections, as well as better functioning cannabis and insurance markets.

II. UNDERSTANDING CANNABIS CONCEPTS AND TERMS

Cannabis, also known as marijuana, is an annual herbaceous plant in the Cannabis genus under the Cannabaceae family.¹ Cannabis has been referred to as consisting of three species of plants: cannabis ruderalis, cannabis sativa, and cannabis indica. The properties of the plant depend on and are determined by the type of cannabis being produced. Each plant type differs in size, shape, and production yield. Many plants utilized in modern-day cannabis industries are hybrid species that have been selected for certain plant traits.²

Cannabis ruderalis has a naturally high composition of Cannabidiol (CBD), an anti-inflammatory non-psychoactive component, and low concentrations of delta-9 Tetrahydrocannabinol (THC) (the psychoactive substance associated with cannabis).³ This type of plant tends to be short and stalky and has the ability to begin the flowering cycle automatically at a certain point in the plant's lifespan, regardless of lighting.⁴ Cannabis ruderalis produces smaller yields when comparing it to the indica or sativa variants.⁵

⁴ *Id.*

⁵ *Id.*

Cannabis sativa grows taller and more highly branched than the other two species.⁶ Cannabis sativa also grows narrow leaves and tends to produce higher yields than cannabis ruderalis.⁷ Additionally, it can produce high levels of THC composition.

Cannabis indica grows with short and dense branch structures.⁸ Cannabis indica generally has the shortest flowering period of the species.⁹ Cannabis indica also produces higher yields than cannabis ruderalis and can produce high levels of THC.¹⁰

Historically, the terms indica and sativa were introduced in the 18th Century to define different species of cannabis.¹¹ Sativa was used to describe cannabis hemp plants, which were cultivated for plant fibers and seeds.¹² Indica was used to describe intoxicating cannabis, which was harvested for seeds and hashish.¹³ The terms have been adapted to modern-day usage by allowing sativa to refer to cannabis with energizing properties and indica to be synonymous with cannabis that relaxes the consumer.

Recently, scientists have discovered that the effects of a cannabis plant on a consumer result from cannabinoids and terpenes. Cannabinoids are various naturally occurring, biologically active chemical constituents of cannabis, including some that possess psychoactive properties.¹⁴ Examples of cannabinoids include delta-9 THC, a chemical psychoactive component of cannabis, and CBD, a non-psychoactive and anti-inflammatory chemical component. THC is one of many chemical compounds found in the resin secreted by the glands of the cannabis plant. THC can stimulate cells in the brain to release dopamine, creating euphoria.¹⁵ CBD is non-impairing and non-euphoric, meaning it does not cause impairment or intoxication to the consumer.¹⁶

Cannabis also contains terpenes, which are aromatic chemical compounds produced and commonly found in plants. Each cannabis plant has a different terpene profile, and the profile of each plant can cause varied effects on the consumer.¹⁷

Usable cannabis and hemp are derived from the same species of plant. However, hemp is defined as cannabis that has a THC concentration of no greater than .3% total, as measured in dry weight.¹⁸ Hemp is cultivated for use in the production of a various assortment of products, including foods and beverages, personal care products, nutritional supplements, fabrics and textiles, paper, construction materials, and other manufactured and industrial goods.¹⁹

Cannabis is produced in several different forms: seeds, clones, plant tissue, plants, harvested materials (i.e., leaves, flowers, stalks, stems, pollen, and concentrates), and consumer products (consumable flowers, concentrates (i.e., hash, kief, waxes, oils, and vapor), topical goods, and infused consumables). The main categories of consumer cannabis products include flowers; concentrates; and infused goods.²⁰

- Cannabis Flower – THC in cannabis plants is produced by resinous glands that tend to concentrate in the plant’s flowers or buds.²¹ Cannabis farmers harvest the flower from the plant (removing bulky leaves and stems with less THC concentration) and dry the plant material of any moisture so it is prepared for consumption. Generally, cannabis flower is often smoked in pipes or hand-rolled cigarettes called joints, pre-rolled joints, or pre-rolls. Cannabis flowers can also be smoked in a cigar or combined with tobacco and smoked as a cigarette.²²
- Cannabis Concentrates – Cannabis can be harvested and processed through methods that produce cannabis concentrates. These products have been grown, harvested, and processed in a way to maximize cannabinoid, THC, and terpene content. Cannabis concentrates can take the form of hash, kief, waxes, or oils. The cannabis in these products has been concentrated through different scientific extraction and processing methods, including but not limited to: screens, sifts, bags, mechanical separation,

²² *Id.*

chemical extractions, distillation, and pressurized heat applications. These methods employ different scientific strategies to extract, at highly concentrated ratios, THC from the cannabis plant. The final product of these extraction processes can result in a range of forms, from a dry and granular pollen powder similar to hash or kief to a sticky, resinous wax material, which can resemble plant sap, and is known as cannabis wax (i.e., budders, shatters, crumbles, sugars, distillates, or oils). These forms vary in properties, such as viscosity and density, and are named accordingly. For example, a cannabis concentrate wax marketed as a budder is likely to have the same consistency as household butter, being pliable and not too rigid. However, a cannabis concentrate wax marketed as shatter would have extremely rigid properties, and the wax could break into pieces or shatter if pulled or bent.²³

- **Infused Goods** – Cannabis can also be processed into topical products and infused consumables. Topical products are those that are placed directly on the consumer’s skin. Infused consumables include beverages, edibles, and suppository products that have been infused with cannabis, including cannabinoids such as THC or CBD. Topical products are not associated with impairment or intoxication to the consumer. However, infused consumable products will lead to intoxication or impairment of the consumer, as these products contain cannabis concentrates, including THC and CBD. Examples of infused consumable products include cannabis beverages and edibles.²⁴

III. THE EXPANSION OF STATES LEGALIZING CANNABIS

A. Medical-Use and Recreational-Use Legalization in States

California was the first state in the United States (U.S.) to legalize cannabis for medical use.²⁵ In 1996, California passed Proposition 215, allowing for the sale and medical use of cannabis for patients with AIDS, cancer, and other serious, painful diseases. Currently, as of February 3, 2022, 37 states, the District of Columbia (D.C), and three territories allow for the medical use of

cannabis.²⁶ In 2021, 25 years after California first authorized medical cannabis, the majority of states in the U.S. now allow the use of cannabis for medical purposes.

Colorado was the first state in the U.S. to legalize cannabis for recreational purposes in 2012.²⁷ Washington also passed marijuana reform legislation shortly after Colorado, in 2012, legalizing the recreational use of cannabis.²⁸ As of November 9, 2022, 21 states, two territories, and D.C. have enacted legislation to regulate cannabis for nonmedical or recreational use.²⁹ According to 2020 U.S. Census Bureau apportionment numbers, more than 145 million Americans now live in a state that has legalized cannabis.³⁰

The path toward legalization is not necessarily straight, nor is it quick. The following are examples of this experience.

Today, cannabis laws in Alaska allow adult use. The state first legalized medical marijuana in 1998, though for many years, there was no way for patients to legally purchase it.³¹ Alaska was the second state in the U.S. to decriminalize possession of up to one ounce and the third to legalize recreational marijuana.³² Residents over 21 years old with a valid state ID can legally grow up to six plants at home and purchase up to one ounce of marijuana or 7 grams of concentrates from regulated dispensaries.³³ Only cash is accepted.³⁴

Some states did not see cannabis legalized overnight. For example, Oregon’s Measure 80 (Oregon Cannabis Tax Act Initiative) in 2012 did not receive enough “yes” votes.³⁵ Measure 80 would have permitted cannabis to be sold at state-licensed stores and would have permitted adults to purchase cannabis at such stores without a license. Oregon did not legalize such recreational cannabis use until July 2016.³⁶ This is a consistent experience among the states where there is a majority support for legalization, but it may take multiple attempts.

The nature of cannabis being regulated on a state-by-state basis permits state systems on cannabis regulation to differ quite drastically. The below map outlines the different states and their varied approaches to cannabis regulation:

* National Conference of State Legislatures: State Cannabis Laws – Map of State Regulated Cannabis Programs (November 2022 - <https://www.ncsl.org/research/health/state-medical-marijuana-laws.aspx>)

B. Public Opinion Supports Legality Expansion

As discussed in the previous white paper, the majority of Americans now support legalized cannabis.³⁷ In fact, public support for legalizing cannabis is increasingly favorable. Over 90% of

U.S. adults in 2021 believe cannabis should be legal for either medical or recreational purposes.³⁸ Here, 60% support the legalization of cannabis for medical and recreational use, and 31% support the legalization of cannabis for medical use only.³⁹ Public opinion on cannabis and cannabis legalization have changed significantly since President Richard Nixon signed the Controlled Substances Act (CSA) of 1970 into law. Once associated with the war on drugs, cannabis now presents business opportunities, with the state-legal cannabis markets expected to reach over \$40 billion in the U.S. by 2026.⁴⁰

Public opinions and perspectives on cannabis are shifting to a level of lower scrutiny than experienced under the previous zero-tolerance approach adopted by the federal government and individual states. For example, U.S. Congress has considered replacing the statutory term of reference from marijuana or marihuana to cannabis.⁴¹ The changing of terms from marijuana to cannabis is being pursued in part because there are potentially negative connotations associated with the history and origin of the term marihuana.⁴² States have also sought similar legislation for the switching of statutory references from marijuana to cannabis.⁴³ The increasing legislative reformation of cannabis at the federal and state levels, as well as less scrutiny from the public, combine to show that cannabis is likely trending toward regulation versus outright prohibition.

IV. FEDERAL LEGISLATION ACTIVITY INTENSIFIES

Conflicting individual state and federal laws on cannabis have largely discouraged insurers from participating in coverage of the market. To illustrate this conundrum, cannabis is an illegal substance under the Classified Substances Act (CSA).⁴⁴ The CSA classifies cannabis as a Schedule I drug that has no currently accepted medical use in the U.S.⁴⁵ A 2018 Farm Bill provision removed hemp from the list of Schedule I controlled substances.⁴⁶ Therefore, the U.S. Drug Enforcement Administration (DEA) will not consider hemp-derived cannabinoids as a controlled substance that

is subject to the CSA. However, cannabis and CBD (irrespective of being sourced from cannabis or hemp) are subject to Federal Drug Administration (FDA) approval under the federal Food, Drug, and Cosmetic Act (FD&C Act).⁴⁷ The FDA has not yet approved a cannabis drug for medical use or treatment. The FDA has approved CBD medicines for the treatment of epilepsy. Federal law currently prohibits CBD from being added to any food or drink product. On July 22, 2019, the FDA issued formal letters making the determination that certain CBD products were sold in violation of the FD&C Act.⁴⁸ Despite this prohibition, products containing CBD are generally widely available in the retail marketplace in formulations ranging from nutritional supplements to cosmetics and for both human and veterinary use.

Companies functioning within state-legal cannabis industries generally experience banking restrictions due to federal regulations.⁴⁹ This causes many cannabis businesses and cannabis-related businesses (CRBs) to function on a cash-only basis. Current estimates show that approximately 70% of CRBs operate solely as a cash-only business and have no formal relationship with a bank.⁵⁰ This causes CRBs to possess and process large amounts of money in cash form, which can create a higher risk of theft and additional liabilities.⁵¹ More on this and the federal authorities limiting the abilities of cannabis businesses to engage in financial transactions can be found in the NAIC's White Paper on *Understanding the Market for Cannabis Insurance (2019)*.

There is an ongoing concern about entities supporting cannabis businesses being charged with violation of the federal Racketeer Influenced and Corrupt Organizations (RICO) Act. In addition, the federal Internal Revenue Code 280E prevents cannabis businesses from taking advantage of tax deductions for actual economic expenses incurred in the ordinary course of business. This can prevent cannabis businesses from taking deductions related to insurance and premiums or costs, such as for workers' compensation and health insurance.

Recently, the federal government has been considering cannabis reform legislation at a record-setting pace. During the 117th Congress (in 2021 – 2022), at least five different pieces of national

⁵¹ *Id.*

cannabis reform legislation were introduced.⁵² Each bill took a different approach to altering the federal government's position on cannabis. The bills include the federal Safe and Fair Enforcement (SAFE) Banking Act, the Clarifying Law Around Insurance of Marijuana (CLAIM) Act, the Marijuana Opportunity Reinvestment and Expungement (MORE) Act of 2021, the Cannabis Administration and Opportunity (CAOA) Act, and the States Reform Act of 2021.

The CLAIM Act would provide a safe harbor from penalties or other adverse agency action for insurance companies that provide services to cannabis-related legitimate businesses in jurisdictions where such activity is legal. The U.S. Government Accountability Office (GAO) must report on barriers to marketplace entry for minority-owned and women-owned cannabis-related businesses.⁵³

The NAIC submitted a letter in support of the CLAIM Act on June 17, 2021. The letter acknowledged the bill would provide a safe harbor from violations of federal law for those engaged in the business of insurance participating in cannabis industry activity that is permissible under state law. By removing barriers, the CLAIM Act would permit insurers to provide insurance coverage options for these commercial policyholders.⁵⁴

The SAFE Banking Act would remove constraints on depository institutions to provide banking services to a legitimate cannabis-related business. Under the SAFE Banking Act, proceeds would not be considered unlawful activity and not run afoul of anti-money laundering laws. Under this act, depository institutions would not be at risk of forfeiting financial assets for providing a loan or other financial services to a legitimate cannabis-related business. The NAIC also submitted a letter in support of the SAFE Banking Act on June 17, 2021.

The MORE Act would decriminalize cannabis. Specifically, it removes cannabis from the list of scheduled substances under the CSA and eliminates criminal penalties for an individual who manufactures, distributes, or possesses cannabis. The States Reform Act of 2021 would remove the legal obstacles preventing U.S. cannabis companies from accessing the financial system and allow for interstate commerce of cannabis. The bill also requests the release and expungement of people convicted of nonviolent cannabis-only crimes.⁵⁵

On July 21, 2022, Senate Majority Leader Chuck Schumer introduced the CAO Act.⁵⁶ The CAO Act attempts to accomplish significant reformation of federal cannabis policy, allowing states to lead on cannabis regulation and establishing a federal regulatory paradigm similar to that of alcohol and tobacco.⁵⁷ The CAO would expunge federal cannabis-related records and create funding for law enforcement departments to fight illegal cannabis cultivation.⁵⁸

On October 6, 2022, President Biden asked the Secretary of Health and Human Services and the Attorney General to review how marijuana is categorized under federal law.⁵⁹ President Biden also signed the Medical Marijuana and Cannabidiol Research Expansion Act (Statute at Large 136 Stat. 4178 - Public Law No. 117-215) in December 2022. This new law is anticipated to increase access to the scientific study of cannabis by streamlining the government issuance of permits to scientists who want to study the substance and expediting applications for cannabis producers (including universities) that grow the substance for research purposes.⁶⁰ None of these laws were passed in the previous Congress, but it is anticipated that discussion will continue on these issues.

V. CANNABIS BUSINESS REGULATORY, LICENSING, AND EDUCATION LANDSCAPE

A. States Legalize Cannabis Around the Cole Memorandum

Colorado and Washington were the first states to legalize cannabis for recreational use in 2012. At that time, 19 states had already legalized cannabis for medical use. To address the growing legalization of cannabis use by the states, the federal Department of Justice (DOJ) issued the Cole Memorandum in 2013. The Cole Memorandum provided states with the federal position on the enforcement of marijuana under the Classified Substances Act (CSA). Specifically, it provided that the federal government would not prioritize enforcement or interference with state implementation of regulated cannabis programs if states upheld the Department of Justice's (DOJ's) and federal government's priorities.⁶¹ These priorities included:

⁵⁶ Natalie Fertig, Politico: Schumer's Legal Weed Bill is Finally Here, (July 21, 2022) – <https://www.politico.com/news/2022/07/21/schumer-legal-weed-bill-00047058>

⁵⁹ The White House: Briefing Room Website – Statement from President Biden on Marijuana Reform, (October 6, 2022) – <https://www.whitehouse.gov/briefing-room/statements-releases/2022/10/06/statement-from-president-biden-on-marijuana-reform/>

⁶⁰ Meredith Wadman, Science Insider: New U.S. Law Promises to Light Up Marijuana Research, (December 2, 2022) – <https://www.science.org/content/article/new-u-s-law-promises-light-marijuana-research>

⁶¹ *Id.*

- Preventing the distribution of marijuana to minors;
- Preventing revenue from the sale of marijuana from going to criminal enterprises, gangs, and cartels;
- Preventing the diversion of marijuana from states where it is legal under state law in some form to other states;
- Preventing state-authorized marijuana activity from being used as a cover or pretext for the trafficking of other illegal drugs or other illegal activity;
- Preventing violence and the use of firearms in the cultivation and distribution of marijuana;
- Preventing drugged driving and the exacerbation of other adverse public health consequences associated with marijuana use;
- Preventing the growing of marijuana on public lands and the attendant public safety and environmental dangers posed by marijuana production on public lands; and
- Preventing marijuana possession or use on federal property.

Many states that voted to legalize the sale and use of cannabis designed their regulated cannabis systems to carefully consider the DOJ and federal government priorities outlined in the Cole Memorandum. Each state took an individualized approach to implementing cannabis regulation. This has led to individual cannabis industries across the country that operate under separate and distinct authorities for their jurisdictions. The differences in state cannabis regulations are evident in the varied cannabis business licensing programs, regulation authorities, consumer experiences, and associated practices for CRBs. For example, Colorado has implemented a regulatory system where cannabis businesses can vertically integrate their businesses, including agriculture, retail sales, and manufacturing. Washington has implemented a prohibition on vertical integration, requiring licensed cannabis businesses to operate in their licensed business classification, such as a cannabis retailer, cannabis producer, or cannabis processor.

The Cole Memorandum was rescinded by the federal government in 2018.⁶² This created a gray area for states with legal cannabis operations. The United States Attorney General issued new guidance in 2018 under Attorney General Jefferson B. Sessions. The new guidance directed U.S. state attorneys to use their discretion, as well as well-established principles that govern all federal prosecutions, in cannabis enforcement.⁶³ The current administration has expressed views to return to a Cole-like environment but has not taken an official position.

⁶³ *Id.*

B. The Role of CANNRA

States have been striving to work toward best policies and practices in the cannabis and insurance industries by working through the Cannabis Regulators Association (CANNRA). CANNRA is a national not-for-profit organization of cannabis regulators that provides policymakers and regulatory agencies with the resources to make informed decisions when considering whether and how to legalize and regulate cannabis.⁶⁴ It is a support association for regulatory agencies, not a cannabis advocacy group. As such, it takes no formal position for or against cannabis legalization but rather seeks to provide government jurisdictions with unbiased information to help make informed decisions when considering whether or how to legalize or expand regulated cannabis.⁶⁵ Membership in CANNRA is limited to regulators and representatives from relevant government offices.⁶⁶ CANNRA is funded by member agencies and does not receive funding from industry or advocacy groups.⁶⁷

CANNRA strives to create and promote harmony and, where possible, standardization across jurisdictions that legalize and regulate cannabis.⁶⁸ CANNRA helps interested parties find objective data and evidence-based approaches to policymaking and implementation.⁶⁹ CANNRA also works to ensure federal officials benefit from the vast experiences of states across the nation so that any changes to federal law adequately address states' needs and priorities.⁷⁰

C. Cannabis Impairment and Insurance Considerations

Insurers rely on data to help them understand the risks they indemnify. However, there is still much to know about impairment and cannabis use. Cannabis shares the Schedule I classification along with some of the most serious drugs, including heroin, LSD, and meth. As such, cannabis used for studies must come from federally approved facilities. Historically, the University of Mississippi was recognized as the only institution federally approved to cultivate cannabis for research, with the license awarded in 1968.⁷¹ The cannabis that is produced in this facility does

⁷¹ Omar Sacirbey, MJ Biz Daily: DEA close to allowing companies to grow cannabis for scientific research (December 17, 2021) – <https://mjbizdaily.com/dea-preparing-to-ok-companies-to-grow-cannabis-for-scientific-research/#:~:text=Currently%2C%20the%20University%20of%20Mississippi,awarded%20its%20license%20in%201968.>

not resemble the cannabis in modern-day retailers. In fact, the cannabis produced in the federally approved facilities does not mimic the appearance nor potency of state-regulated cannabis.⁷²

Recently, the federal government, through the Drug Enforcement Administration (DEA), approved registrations for two other companies to produce cannabis for research purposes.⁷³ This is a historic development for the research of cannabis and allows the DEA to oversee the production of research-grade cannabis at a level not previously achieved by the University of Mississippi.⁷⁴ The two companies include Groff North America Hemplex and the Biopharmaceutical Research Company, which began harvesting their first crops by January 2022.⁷⁵

The limitations on human studies, with limited accessibility to cannabis that resembles that same substance in state-legal medical and retail markets, create substantial complications to the scientific research of cannabis, including long-term studies on the effects or dangers of impairment and usage. Thus, they provide limited information from which to develop policy or make informed decisions.

Testing for cannabis impairment is difficult due to the limits of drug testing technology, as well as the lack of a recognized limit to determine impairment. For example, the nationally recognized level of impairment for alcohol is set at .08 g/mL of blood alcohol concentration, which is well-founded in scientific research. However, there is no similar national standard set for driving under the influence of cannabis. Cannabis may not affect all people consistently. Cannabis may remain in a person's body for weeks after consumption, and may still appear in drug tests, even though it may no longer be causing impairment to the consumer. As a practical matter, because of these problems, drivers may be tested for high blood alcohol concentrations but may not be tested for other impairing substances.

The states of Illinois, Montana, Nevada, Ohio, and Washington have all adopted specific per se limits for THC present in a driver's body, with ranges between two nanograms and five nanograms per milliliter of blood.⁷⁶ These authorities provide that when a person has reached or

⁷² Christopher Ingraham and Tauhid Chappell, The Washington Post: Government marijuana looks nothing like the real stuff. See for yourself. (March 13, 2017) – <https://www.washingtonpost.com/news/wonk/wp/2017/03/13/government-marijuana-looks-nothing-like-the-real-stuff-see-for-yourself/>

⁷⁵ *Id.*

⁷⁶ National Conference of State Legislatures (NCSL): Drugged Driving | Marijuana-Impaired Driving (September 23, 2021) – <https://www.ncsl.org/research/transportation/drugged-driving-overview.aspx>

exceeded the legal threshold, that person is considered impaired under law. The state of Colorado has a reasonable inference law that outlines that in instances where THC is identified in a driver's blood, at quantities of 5ng/ml or more, it is assumed that the driver was under the influence.⁷⁷ The reasonable inference laws are different from the per se laws, as they allow drivers who are charged to raise an affirmative defense showing that despite having tested at or above the legal limit, they were not actually impaired. There are also 12 states that have zero-tolerance laws for THC, including Arizona, Delaware, Georgia, Indiana, Iowa, Michigan, Oklahoma, Pennsylvania, Rhode Island, South Dakota, Utah, and Wisconsin.⁷⁸

Complicating this issue is the lack of technologies, scientific methodologies, or accepted best practices in discovering or determining cannabis impairment. New technologies are being developed and generally involve biological screening or field sobriety tests. Here, examples of technologies used to detect cannabis impairment include saliva, urine, and blood testing machines. A few states, including Alabama and Michigan, have adopted active oral fluid roadside tests for drivers suspected to be impaired by cannabis use, among other drugs, which could negatively impact their driving.⁷⁹ Law enforcement officers in most states also generally possess discretion to determine whether an individual is impaired and presents a risk to themselves or others, whether using cannabis or other impairing substances in public, the workplace, or in driving situations. Many law enforcement agencies employ Drug Recognition Experts (DREs), who rely on professional experience and training to discover and determine whether an individual is impaired by cannabis usage. The use of new technology, scientific methodology, and best practices among law enforcement agencies will be critical in mitigating the risks of cannabis impairment in our workplaces and on our roadways.

1. Cannabis Driving Impairment – Cannabis DUI

Preventing cannabis users from driving while impaired was a top priority enumerated in the Cole Memorandum and an issue that each state with a regulated cannabis industry has considered. Cannabis is the second leading substance present in cases of driving under the influence, trailed only by alcohol.⁸⁰ Scientists and law enforcement are still seeking a reliable DUI test to identify impairment from cannabis use. While there are blood tests that can detect some of cannabis's components, such as THC, there is no scientifically accepted standardized method of testing or

⁸⁰ National Institute on Drug Abuse: Drugged Driving DrugFacts (September 13, 2022) – <https://nida.nih.gov/publications/drugfacts/drugged-driving>

determining the level of impairment from a cannabis user's blood or breath. Law enforcement officers may also have the discretion of completing a field sobriety test with any person they suspect is driving under the influence.

The National Association of Mutual Insurance Companies (NAMIC) analyzed this issue in 2021 with its research on the *Cannabis Conundrum: The Intersection of Property/Casualty Insurance and Cannabis-Impaired Driving*.⁸¹ NAMIC's research revealed that the states that have legalized cannabis for medical and recreational use will only continue to grow as ballot initiatives and legislation are codified. This places a focus on scientific research, funding, and technology development that will assist all parties in better understanding and ability to mitigate risks that cannabis-impaired driving may present. Educational campaigns to educate drivers of all ages and backgrounds on the potential risks associated with cannabis consumption will be needed.

Some studies, including studies associated with NAMIC and the American Property Casualty Insurance Association (APCIA), show a direct relation between cannabis regulation and increased auto accidents, as well as an associated increase in auto insurance premiums.^{82,83} Other studies focus on data that shows an increase in cannabis DUIs and related car accidents, whether related to recreational or medical cannabis legalization.^{84,85} Multiple insurance periodicals have recorded similar increases in car insurance claims and accident rates after states have regulated cannabis.^{86,87} Obviously, increased accident rates and claims have an effect on premiums; however, at this point, research is inconclusive on whether the relationship is a correlation or a direct causation.

Education for those outside of the cannabis industry can be conducted through public service announcements, government-sponsored education efforts, informative websites, and news media. For example, the U.S. Department of Transportation (DOT), the National Highway Traffic Safety Administration (NHTSA), and the Ad Council have recently started a campaign

2. Cannabis Workplace Impairment

Currently, two out of three Americans live in a state that has approved the sale and use of recreational cannabis.⁸⁹ Cannabis can appear in drug tests and remain in a consumer for 30 days or longer.⁹⁰ Therefore, cannabis users could lawfully consume the substance during their off-work hours but still be affected by cannabis or THC in their systems during work. Employers must assess if their staff present a risk of liability to themselves or others. Problems include issues with pre-employment drug testing, determining employee impairment, establishing reasonable accommodations, and maintaining medical privacy.

It should be noted that there is little data on the impact of legal market cannabis consumption on everyday life. There is a huge range of products available on the legal market that have never touched a research lab. Cannabis consists of a few primary cannabinoids and hundreds of minor cannabinoids and terpenes, and many are still being discovered. There is also a huge variation in potency across strains. Different products have different levels of major and minor cannabinoids, and each looks distinct. For these reasons, the study of cannabis is unlike the study of other drugs, where one is pretty much focused on a dose-dependent effect of a single pharmacological agent.⁹¹

Overlapping authorities and developments in case law on the topic have revealed that employers lack consistent and developed guidelines for cannabis drug testing in the workplace. Case law in several states, including California, Oregon, and Washington, has established that a private employer can terminate an employee for failing a company's drug test, even if that employee is authorized under state law to use cannabis as a medicine.⁹² Multiple states, including Arizona, Arkansas, Connecticut, Delaware, Maine, Minnesota, Oklahoma, Pennsylvania, Rhode Island, and

West Virginia, prohibit employers from refusing to employ an applicant or terminate an existing employee based only on a positive drug test for cannabis.⁹³

Recently, some employers in the private sector have been reducing the scrutiny placed on cannabis use and impairment in the workplace. In September 2021, Amazon made the corporate decision to no longer deny employment, or terminate employees, due to failed drug tests due to cannabis use.⁹⁴ Amazon even emphasized that the company would reinstate employment eligibility for previous applicants and staff who were terminated or deferred during random or pre-employment cannabis screenings.⁹⁵ However, this policy has exceptions, where employees involved in transportation may be required to prove they have not used and will not be impaired by cannabis.⁹⁶ The shift from a zero-tolerance policy on drug testing for cannabis use to one of acceptance is further evidenced by the developments in professional sports industries. Four of the biggest professional sports in America, including the NBA, NHL, MLB, and NFL, have all relaxed their drug testing policies as it pertains to cannabis.⁹⁷

3. Other Cannabis Impairment Considerations

Cannabis businesses are attempting to capitalize on the trend of increased usage by bringing ingenuity to their products and services.⁹⁸ While many consumers historically smoked the substance in private settings, there are now other innovative forms of cannabis in the regulated markets which allow consumers to eat or vaporize the substance discreetly in public environments.⁹⁹ These trends of increased exposure, additional usage, as well as ingenuity in the cannabis industry, combine to create complications with regulating and insuring the risks of cannabis impairment.

Prior to legalization, cannabis users would need to consume their cannabis products in private locations, out of view from the public and law enforcement. Cannabis users employed these strategies to secretly consume the illegal cannabis products for effect while also avoiding the risk of penalties from law enforcement. However, with the legalization of cannabis came the ability for consumers to use cannabis in different forms and settings. For example, a current medical

cannabis patient in Las Vegas can lawfully use a cannabis vaporizer at a cannabis consumption lounge to administer their prescribed medications.¹⁰⁰

Cannabis legalization and ingenuity possess potential to increase the frequency, exposure, and risks of cannabis impairment. Cannabis is now offered in newer and varied mediums, such as beverages and edibles, and can be created with concentrated forms of cannabis that are much more potent. Cannabis consumers run the risk of being uninformed on if the product has been scientifically researched or studied for long-term side effects and what level of impairment it is likely to produce.

The risks posed by cannabis impairment must be carefully considered in the underwriting process to ensure adequate coverage and appropriate premiums. Risk selection and risk classification play important roles in insurance underwriting systems. The current state of cannabis research may not provide the insurance industry with a sufficient understanding of cannabis impairment and how it can impact underwriting. An incomplete understanding of the increased risks associated with cannabis impairment could lead to circumstances of underinsured policyholders or a lack of sustainable insurer solvency.

D. Cannabis Education Landscape

Education could help address complications and gaps experienced in the cannabis and insurance industries caused by the recent and rapid rate of state regulation. Those needing to maintain currency include cannabis business owners, employees and licensees, regulators, and the insurance industry, such as insurers, claims adjusters, agents, and producers. Many involved in the cannabis industry and businesses would be better able to mitigate their risks with insurance by keeping current on applicable authorities and their requirements.

Regulators and other interested parties should enhance their knowledge by understanding industry trends, such as current and future state cannabis or insurance market conditions. For example, pre-license training for insurance producers does not touch on the topic of cannabis, but the insurance producers may be engaged in providing coverage to the cannabis industry. A producer of insurance should be well educated about the industry they provide coverage for in order to ensure the procured policy is appropriate, adequate, and lawful. Additionally, claims adjusters may need specialized training on cannabis-related claims.

E. Vaping Regulations and Their Impact on Cannabis

As cannabis is legalized and regulated in different states across the country, ingenuity in cannabis products and technologies continues to create complications for regulators, insurers, businesses, and consumer populations alike. An example of this is the increased use of and access to cannabis vaping or vaporization products.

Vaping technology was developed to provide a noncombustible nicotine delivery system to help cigarette and tobacco smokers. Vaping devices heat liquid into an aerosol that can be inhaled. This method of vaporization has now been adapted for cannabis use and is the method often used to consume cannabis products. Studies have shown that cannabis users believe vaping the substance is less harmful to their health than the consumption alternative of combustible smoking methods.¹⁰¹ This theory is based on the reduction of ingesting harmful contaminants present in cannabis smoke, which are less present in cannabis vapors.¹⁰² The significant increase in vaping has raised concern about the health and safety of this practice. Of particular concern is the increase in vaping among teenagers.

A large illicit cannabis market continues to exist without concern for product safety and exacerbates issues of product liability coverage. Illicit products containing substances not allowed in a regulated market are part of the challenge. Current scientific research provides inadequate information to understand the effects of acute and long-term inhalation of aerosols emitted by vaping devices. A lack of studies on the substance itself or the consumption methodologies means the consequences of vaping cannabis are largely unknown. While many choose to vape, believing it is a safer method of consumption, studies are needed to determine whether vaporizing cannabis truly offers a safer experience for the consumer.

Millions of Americans have consumed cannabis from vaporization devices over the past decade, and the possibly dangerous effects are now being observed.¹⁰³ In 2019, the U.S. experienced an outbreak of e-cigarette, or vaping, product use-associated lung injuries (EVALI).¹⁰⁴ The Centers for Disease Control and Prevention (CDC) established a link between EVALI and cannabis users, where a substance called Vitamin E Acetate was added to cannabis vaporization products, which

¹⁰⁴ *Id.*

105

can interfere with normal lung functioning. Since this outbreak was the result of an additive, it does not speak to the impact of vaping itself but does speak to the need for regulation.

Governments in jurisdictions with regulated cannabis industries took alternative approaches to respond to the outbreak of EVALI cases in cannabis consumers. Washington and Oregon enacted emergency bans on cannabis vaping product additives, whereas Massachusetts temporarily stopped the sale of all vaping products.¹⁰⁶ While many jurisdictions were concerned about EVALI's association with consumers who vaporized cannabis, some states were confident in the safety of products being produced within their regulated systems. For example, Pennsylvania released a position in response to the EVALI outbreak, explaining that none of the EVALI cases experienced in the state were connected to the state's medical cannabis program.¹⁰⁷

F. Licensing Takes a Focus on Social and Economic Equality

The prohibition of cannabis in America has disproportionately and adversely impacted people of color.¹⁰⁸ Studies have shown that "... on average Black people are almost 4 times more likely to be arrested for pot than white people."¹⁰⁹ This racial disparity in law enforcement is present in all areas of the country, regardless of the demographics of the jurisdiction.¹¹⁰

State-legal cannabis industries are now estimated to be worth over \$18 billion and provide for hundreds of thousands of full-time jobs.¹¹¹ However, minority populations that were most adversely impacted by the war on drugs and the prohibition of cannabis are being excluded from

the industry. In 2021, African Americans represented roughly 13% of the U.S. population, yet only 1.2% to 1.7% were business owners in the cannabis industry.¹¹²

States legalizing cannabis have recently taken efforts to resolve the racial disparity in cannabis business ownership by employing social and economic equity provisions into their laws. Social and economic equity in cannabis licensing can vary by jurisdiction, but includes reducing barriers, improving access, and assisting cannabis business license applicants who are from certain communities that have been adversely and disproportionately impacted by cannabis prohibition. These groups can include but are not limited to women-owned businesses, minority-owned businesses, distressed farmers, and service-disabled veterans. The intended goal of social and economic equity provisions in cannabis business authorities is to achieve participation in the legalized industry for those who were most negatively affected by the war on drugs.

States that have experienced cannabis reform legislation, either recreationally or medically, have taken different approaches to implementing social and economic equity provisions in their regulated cannabis markets. For example, Michigan, in processing recreational cannabis business licenses, will reduce licensing fees for prospective business owners living in cities where residents were disproportionately impacted by the war on drugs.¹¹³ California offers a statewide program for recreational cannabis to assist local governments with equity provisions in providing loans, grants, and technical assistance to cannabis entrepreneurs and employers.¹¹⁴ It is too early to know the effect on the insurance market for cannabis businesses of these regulatory policies. However, there are efforts to address social and economic equity concerns in insurance generally.

VI. CANNABIS OPERATING AND ORGANIZATIONAL STRUCTURES EVOLVE

The industry's growing legitimization has intensified merger and acquisition activity to gain market share. The year 2021 is generally acknowledged in both the financial and cannabis

¹¹² *Id.*

¹¹³ MJBizDaily: MI Marijuana rules changes include new licenses, lower fees, social equity (September 1, 2021) – <https://mjbizdaily.com/michigan-marijuana-rules-changes-include-new-licenses-lower-fees-social-equity/>

industry press as one of overall sales growth marked by rising incidence of consolidation.¹¹⁵ The significant amount of consolidation in the industry continues to produce frequent ownership changes and business structure modifications.¹¹⁶ There are varying aspects through which this cannabis market evolution can be viewed, and each has implications for insurance coverage availability. As noted in his article “The Year of Cannabis Industry Consolidation,”¹¹⁷ Robert Hoban writes: “There are loosely four common phases of an industry’s life cycle –introduction, growth, maturity, and decline. The cannabis industry is not yet mature across the board but is largely stuck in the growth phase. The step between the later stages of the growth phase and the beginning of maturity comes down to one word: *consolidation*. That is the mantra for 2021.”

There are some indications that more vertically integrated—or common ownership along the supply chain—is occurring. It is viewed that larger-scale cultivation operations permit greater consistency in raw material availability. Some of this can be demonstrated by the increasing prevalence of indoor or greenhouse cultivation, which permits a more controlled growing environment and avoids some of the risks associated with traditional outdoor grow operations (e.g., use of clones rather than seed; environmental controls for light, heat, water, pest control; multiple harvests per year in a smaller footprint; more accessible warehousing/storage for processing; etc.). Such physical consolidation is much more friendly to vertical integration of ownership. This integration also permits more risk management along with scale to support the acquisition of insurance coverage. Greater scale and integration of cannabis businesses also allow the purchase of more comprehensive coverage through the excess and surplus lines market. The downside is that there are indications that the reinsurance market to cover such risks continues to be constrained, resulting in policy limits that may not reflect the scale or potential risk of the business.

Larger, and more vertically integrated, cannabis businesses are able to seek out and negotiate more comprehensive insurance packages and can pay higher premiums for tailored coverage. In contrast, cottage industry players (e.g., independent retailers) tend to look for more “off-the-

shelf” insurance solutions, as would typically be available in the admitted market (but appears to be not widely available). Some admitted insurance coverage is available for discrete types of insurance. A good example is workers’ compensation insurance, which is widely available for employers in the cannabis industry—but such niches are limited.

Another aspect of this consolidation is changes in the ownership and sophistication of the industry. In 2019, the Colorado legislature changed state law to allow people who live outside Colorado to own cannabis businesses in the state, and it permitted publicly traded companies and private capital funds to invest in Colorado cannabis businesses.¹¹⁸ This “opening” of the market for cannabis businesses was ostensibly premised on increased access to capital for cannabis businesses, but it also fueled merger and acquisitions (M&A) activity with concomitant insurance aspects. In particular, the availability of directors’ and officers’ liability coverage is often cited as a challenge for cannabis businesses.

VII. CANNABIS INSURANCE NEEDS AND COVERAGE AVAILABILITY

A. Admitted vs. Excess and Surplus Lines Market

While there are a few states with admitted carriers, most of the cannabis industry is purchasing insurance through the excess and surplus lines market. Some admitted carriers, mostly in specific lines, such as required workers’ compensation, will write coverage for cannabis businesses. However, for more comprehensive or package coverage, the substantial majority is written through excess and surplus carriers, which are generally exempt from state regulation, and in many to most cases, state laws. One result of this is that it is challenging, if not virtually impossible, for state regulators to assess the size and extent of insurance coverage, in both availability and affordability, along with coverage for cannabis businesses. Some admitted carriers do write coverage primarily in their domiciliary state or immediate region, or for a specific component of the marketplace (e.g., retail dispensaries) for general liability.

What state insurance regulators do know is that there is a burgeoning market for cannabis coverage in the excess and surplus lines and managing general agent/underwriter program arena. There are also a few other structures to provide coverages, such as captives and risk

¹¹⁸ Tommy Wood, [Boulder, CO] Daily Camera: Robust sales, expanding legalization lead to increased mergers, acquisitions in Boulder County cannabis industry (Sept. 5, 2021) – <https://www.dailycamera.com/2021/09/05/robust-sales-expanding-legalization-lead-to-increased-mergers-acquisitions-in-boulder-county-cannabis-industry/>

retention groups (RRGs) being explored.¹¹⁹ Estimates range from a handful to in excess of 30 insurers and managing general agents/underwriters are providing services in this area.¹²⁰ Nonetheless, a Google search of commercial insurance for cannabis business will yield several references to entities, primarily surplus lines brokers or managing general agents/underwriters, which “specialize” in writing coverage for cannabis businesses or have an insurance “program” for cannabis businesses. Review of some of these indicates the majority are surplus lines brokers who are providing excess and surplus lines coverage.

As more insurance companies feel comfortable writing insurance in this industry, it is anticipated the market will move from excess and surplus lines to the admitted market, similar to other products in the past.¹²¹ At one point, there were insurance companies that did not want anyone to know they were providing coverage for these exposures, and now they are openly providing this coverage.¹²² However, there is a chance that not all segments of the cannabis industry will move from the excess and surplus lines to the admitted market. We may see certain segments, like retail or dispensary, moving to the admitted market because the risks associated with those are less than with other segment areas.¹²³

B. Insurance Needs and Considerations from Seed-To-Market

Though most coverage is in the excess and surplus lines market, access to commercial insurance for cannabis businesses varies significantly by the market segment of the seed-to-sale continuum. For some market segments, there are an increasing number of options in areas such as general commercial liability or basic property coverage. In many cases, businesses in the cannabis space

¹¹⁹ According to IRMI.com an MGA is Managing General Agent (MGA) — a specialized type of insurance agent/broker that, unlike traditional agents/brokers, is vested with underwriting authority from an insurer. Accordingly, MGAs perform certain functions ordinarily handled only by insurers, such as binding coverage, underwriting and pricing, appointing retail agents within a particular area, and settling claims. Typically, MGAs are involved with unusual lines of coverage, such as professional liability and surplus lines of insurance, in which specialized expertise is required to underwrite the policies. However, MGAs also write some personal lines business, especially in geographically isolated Areas (e.g., western Oklahoma, North Dakota) where there are accessibility concerns. MGAs benefit insurers because the expertise they possess is not always available within the insurer's home or regional offices and would be more expensive to develop on an in-house basis. –

¹²³ *Id.*

are facing more expensive coverage than other similar businesses. While they can get some insurance, a common complaint is that the limits available are constrained, e.g., \$1 million per occurrence, \$2 million aggregate capped. A further challenge is the anticipated explosive business growth for established cannabis businesses year over year.¹²⁴

What follows is some discussion about the various cannabis business market segments, particular insurance needs and availability, and some of the particular risk considerations that make availability and affordability challenging.

1. Cultivation

Coverage for cannabis has several aspects. First, hemp was included as a “legal” crop in the 2018 Farm Bill.¹²⁵ As it currently stands, federal multi-peril crop insurance is available in certain states and communities with conditions. The cultivator must: 1) be licensed and meet all requirements of state, tribal, and federal authorities, 2) have at least one year of history producing the crop, and 3) have a contract for the purchase of the hemp crop at the policy inception.¹²⁶ Hemp has the additional risk of becoming “hot hemp” due to environmental causes (THC above the 0.3 compliance level). Additionally, hemp does not qualify for replant payments or prevented plant payments.¹²⁷

Second, for hemp that does not qualify and cannabis cultivation, the insurance coverage availability is much less clear. There appears to be a small market for private crop insurance, though reports are that it is prohibitively expensive until more data and experience is available to support underwriting. An option that is emerging is parametric coverage for outdoor cannabis crops with triggers including: recorded rainfall over a specified time, wind, early freeze, hail, and drought.¹²⁸

¹²⁸ Evan Stait, Cannabis Industry Journal: Why You Should Consider Parametric Insurance to Protect Your Outdoor Cannabis Crop, (Sept. 22, 2020) – <https://cannabisindustryjournal.com/column/why-you-should-consider-parametric-insurance-to-protect-your-outdoor-cannabis-crop/>

More broadly, a primary differentiator amongst cannabis cultivators is whether the grow is outdoor or indoor (greenhouse). The two methods have significantly different risk profiles, leading to differing accessibility and affordability. Outdoor cultivation brings not only the traditional multi-peril concerns of crop insurance for destructive weather (hail, frost, damaging wind), disease, drought, fire, flooding, and insect damage.¹²⁹ The more controlled environment of an indoor grow protects from some of the environmental risks but presents its own array of challenges, including electrical, plumbing, security, and contaminants, including but not limited to mold, mildew, and pesticides. Anecdotally, coverage is more available for indoor cannabis cultivation, though it is undeterminable whether this is because the grow environment can be more easily managed, or whether the scale of a greenhouse grow permits several “crops” per year with increased proceeds.

2. Processing and Manufacturing

Cannabis products are available in a rising number of derivations. Cannabis is commercially available in flower (similar to loose tobacco), pre-rolled joints, vapes, dabable concentrates (highly concentrated extracts aka wax, shatter, or other appellations), edibles (including gummies, chocolates, taffy, beverages, and more), tinctures, topical applications, and more. Usage and the reasons for usage likewise can vary greatly by product format. According to IRI, a data analytics firm focused on consumer-packaged goods (CPGs), 43% of adults in fully legal states are cannabis consumers. Of those, 72% consume inhalable products, and 62% of those inhalable users are consuming cannabis at least once daily. Topical cannabis is more associated with pain relief, as the top reported relief communicated by consumers of those products. Better sleep is the top reported relief communicated for consumers of edibles. Users of CBD cite a myriad of health-related reasons for their use, the top four being pain relief, better sleep, and management of anxiety and stress.¹³⁰

As the number and variety of products/uses grows, so do the processing and manufacturing systems to produce a retail product. Traditional cannabis consumption relies on “flower” or “bud,” which is ground and then packed into a pipe or rolled. To achieve this basic formulation, the cannabis plant must be harvested, dried, sorted, trimmed to remove the flower from leaves and stalks, and then cured. Obviously, premises for drying, sorting, trimming, and curing are required, and some portions of these processes may be supported by mechanization. Under the Colorado cannabis regulatory structure, the premises used must be licensed as a “Regulated

¹²⁹ Insurance Information Institute (III): Understanding Crop Insurance (accessed February 21, 2023) – <https://www.iii.org/article/understanding-crop-insurance>

¹³⁰ Jessica Lukas, BDSA, and Larry Levin, IRI, Blog on BDSA and IRI: The Rise of Legal Cannabis as a Consumer Packaged Good, (September 30, 2021) – <https://www.iriworldwide.com/en-us/insights/blog/rise-of-cannabis-as-a-consumer-packaged-good>

Marijuana Business Operation,” which carries extensive rules about possession and access to the premises, security and lock standards, signage, floor plans, shared facilities (medical and adult use), waste disposal, inventory tracking, health and safety measures, audits, and prohibited chemicals and practices.¹³¹

Insurance for cannabis manufacturing premises is reportedly becoming more widely available, but pricing can be more expensive than for other sectors. The extensive regulation of the premises must be balanced against the enhanced risks, including potentially high-value raw materials, inventory in-process, risks of fire, theft, contamination, etc., and the potential of mishandling waste in violation of state law. Against this higher base level of premises, coverage can be increased risks from processing to make cannabis derivative products such as edibles, topicals, and dabs. For many of these derivative products, the raw material (including cannabis or the <.3% THC hemp) must be processed using solvents, pressure, heat, distillation/crystallization, or combinations thereof. Each adds an aspect of risk that should be considered and accounted for in the underwriting process.

3. Testing

State-mandated testing schemes are substantial and detailed to ascertain if the regulated cannabis (as either raw material or finished product) is: 1) contaminated or mislabeled, 2) is in violation of any product safety, health or sanitary statute, rule, or regulation, or 3) whether the results of a test raise questions requiring further investigation. The most significant area of liability will be professional liability if someone suffers legal injury due to a negligently erroneous test result. As an erroneous test could require the destruction of an entire crop or product run, the economic injury is obvious. From a consumer perspective, a test result indicating safety when a product is contaminated or varies from potency standards could lead to substantial recovery for personal injury. Consequently, professional liability or errors and omissions coverage is an important part of a testing facility’s portfolio.¹³²

4. Distribution

There are effectively two levels of distribution concern. One is raw material transport between cultivator and manufacturer/processor (and testing labs), and the other is consumer delivery. However, at the base, in Colorado, both levels rely on a comprehensive seed-to-sale tracking

¹³¹ Code of Colorado Regulations, Department of Revenue, Marijuana Enforcement Division, 1 CCR 212-3, Part 3 - Regulated Marijuana Business Operations

¹³² See subsequent section under Products Liability for further discussion of aspects of liability for a defective product.

system, which can be used to provide manifests documenting the transport of cannabis products throughout the state. In Colorado, this requirement is stated in statute as:

“To ensure that no marijuana grown or processed by a retail marijuana establishment is sold or otherwise transferred except by a retail marijuana store or as authorized by law, the state licensing authority shall develop and maintain a seed-to-sale tracking system that tracks retail marijuana from either seed or immature plant stage until the marijuana or retail marijuana product is sold to a customer at a retail marijuana store[.] . . .”¹³³

The seed-to-sale tracking system in Colorado is based on a Radio Frequency Identification (RFID) tag, which is affixed to a plant and, with aggregation of the information on it, follows the plant through cultivation, harvest, manufacturing, and distribution. For licensed operators who are transporting legal product, this permits explicit manifests that can be reconciled with the cargo between cultivator and manufacturer/processor. Both medical and retail cannabis in Colorado require a transporter’s license, which is obtained from the state’s regulatory authority, the Marijuana Enforcement Division of the Colorado Department of Revenue.

Insurance concerns of transporters include cargo coverage for an often high-value commodity that can be subject to theft/hijacking and spoilage. As described in a Reuters article, “Low coverage limits on cargo insurance, for example, can force companies to split shipments up, said Gene Brown, an insurance agent in Carmel, California, who specializes in cannabis coverage.”¹³⁴ Similarly, the cash-based current consumer economics of the industry has substantial security needs and a high risk of theft.

Recently, delivery to consumers through purchase on an app has been authorized in Colorado and has generated significant interest. This interest was likely accelerated by the expansion of other delivery services, such as Uber Eats, and similar services during the COVID-19 pandemic. This direct-to-consumer delivery has similar liability concerns as other delivery services (e.g., damage to third-party vehicles and parties, and the potential for theft, misdirection, or deception).

5. Retailers

When someone says, “legal cannabis,” the mental picture most people have is of a local dispensary in a state where it is legalized. Certainly, for most people a dispensary or store is how

¹³³ §44-12-202(1), Colo. Rev. Stat. - Powers and duties of state licensing authority - rules. § (1). Note: an almost identical provision is located in Colorado’s medical marijuana code.

¹³⁴ Alwyn Scott, Reuters: U.S. cannabis insurers get ready to roll as federal legalization nears (August 19, 2021) – <https://www.reuters.com/article/us-usa-insurance-cannabis-focus-idCAKBN2FK1AO>

they experience the industry. As storefronts, retailers have many of the same business insurance needs as other commercial establishments (e.g., premises/property and general liability coverage, inventory, employee benefits and employment practices liability insurance, business income/interruption, umbrella, commercial auto, and cybersecurity). Generally, insurance coverage is increasingly becoming available for these risks, albeit often at higher rates than for other types of retailers.

Primary among the risks is those of theft – both cash and product. In 2020, one of Colorado’s largest cannabis retailers, with 21 locations, reported 15 burglary attempts in 90 days.¹³⁵ Because most cannabis outlets deal almost exclusively in cash, there is ample opportunity for burglaries and robberies. Also, because the product for sale is high value itself, criminals do not go for just the cash. It is common for retailers to have substantially increased security, including around-the-clock guards, video screening, and extensive training and monitoring of their staff, to mitigate their enhanced risk.¹³⁶

In addition to the risk of damage to premises from break-ins for theft, personal injury to employees, customers, and bystanders is also a concern. As noted previously, workers’ compensation coverage is more available for cannabis retailers since it is a state-mandated coverage. However, questions of consistent occupational subclassification and experience rating may develop and have premium impacts.¹³⁷ In Colorado, complaints or concerns are not generally received about employee benefit coverages (primarily health). This is likely due to the federal Affordable Care Act (ACA) and the expansion of guaranteed availability to the individual health insurance market. On the employment practices liability aspect, there are anecdotal reports of challenges in finding coverage. At this time, additional information is needed to ascertain whether there is out-of-the-ordinary employment practices liability that is not mitigated by state regulatory schemes. This includes requiring criminal background checks and licensure of all persons employed in a business that possesses, cultivates, dispenses, transfers, transports, offers to sell, manufactures, or tests regulated cannabis.

6. Products Liability

One of the thorniest insurance issues for cannabis businesses is that of products liability coverage. As products liability claims may be made against any, and potentially all, entities in the supply chain from retailer or distributor, manufacturer, tester, or cultivator. The costs of defense

¹³⁵ Thomas Mitchell, Westword: Colorado’s Largest Dispensary Chain: Fifteen Burglary Attempts in Ninety Days Last Year (October 28, 2021) – <https://www.westword.com/marijuana/colorado-livwell-burglary-cash-cannabis-banking-12660338>

¹³⁶ *Id.*

¹³⁷ Insurance Information Institute: Spotlight on: marijuana and employment (November 24, 2020) For discussion of other aspects of marijuana in the broader employment context – <https://www.iii.org/article/spotlight-on-marijuana-and-employment>

in a products liability action alone make this coverage “in demand.” Moreover, the breadth of circumstances that can lead to a products liability claim raises legitimate concerns for all parts of the industry. By way of refresher, there are three basic theories of product liability: 1) design defect, which could include pesticide, mold, or biological contamination; 2) manufacturing defect, which can include contamination introduced during processing, or by faulty testing and results; and 3) warning/instruction defect, including product labeling violations or omissions, advertising misrepresentation, and packaging defects (i.e., child-resistant packages). It is easy to imagine the potential liability concerns of an industry involving an intoxicant that, until relatively recently, was comprehensively banned throughout the United States.

Reliance on a standard policy for products liability coverage for CRBs may not provide the full protection a business would anticipate. Most standard policies contain broad exclusions for Schedule 1 federally prohibited substances or criminal/fraudulent or dishonest acts or claims arising from violation of statute, code, rule, regulation, procedure, or guidance. Most standard policies do not include products completed, operations, and health hazard exclusions for cannabis businesses. Coverage for defense costs in a products liability action against a cannabis business is particularly key. The experience in the vaping crisis, referred to as “Vape-Gate,” is instructive. While it was ultimately found that most of the vaping injuries involved illicit or black market vape products, the potential for substantial and broad liability led to tighter risk management in the cannabis supply chain, including identification of unapproved or potentially dangerous additives resulting in adulterated products.¹³⁸ It is recommended that cannabis businesses specifically discuss with their insurer about coverage for products liability to ensure they understand the coverage provided and any limitations on it.

VIII. MARKET CONSIDERATIONS FOR COMMERCIAL CANNABIS INSURANCE

As noted above, the availability of insurance coverage for cannabis businesses is overwhelmingly found in the excess and surplus lines market at present. In part, this is due to the evolving nature of the commercial cannabis industry, and the lack of generally agreed upon data, measurement, and experience to support insurance underwriting. It is anticipated that just as the cannabis commercial industry evolves, so will the associated commercial insurance options in the admitted market. This evolution is anticipated and may be driven by how the cannabis business market

¹³⁸ Steve Hallo, National Underwriter Property and Casualty 360 Market Insights: Vape Gate and today’s cannabis product liability market (December 16, 2020) – <https://www.propertycasualty360.com/2020/12/16/vape-gate-and-todays-cannabis-product-liability-market/>

develops (e.g., vertical integration and consolidation versus continuation of niche commercial entities in the cannabis supply and distribution market).

A. Cannabis as a Client (and Consumer Beliefs)

As more states legalize cannabis for either recreational use or medical use, more insurance companies may enter the market to write cannabis businesses. The cannabis industry is a new aspect for insurance companies. Thus, they will need to understand the risks and exposures, as well as the needs of cannabis businesses as clients.¹³⁹

It is also important for producers to be educated on the cannabis market to serve this demographic. For example, it would be beneficial for a producer to be educated on the risks and exposures at each segment from seed to sale so that they can explain to their client what would be best suited for their needs. They may also help explain the differences between legal requirements and best practices. A cannabis business may not purchase coverage because it is not legally required; however, it may be a good business practice.

The cannabis business as a client has a similar learning curve. The cannabis business owner must have done their due diligence to obtain a license, be educated on cannabis products and processes, and know the applicable laws surrounding cannabis. However, a cannabis business as an insurance client may need some help with insurance terms and coverage options as they may not know what options are suitable for their needs.¹⁴⁰ Vocabulary from region to region or state to state also differs. This can be challenging for an insurance company when trying to explain coverage options to a cannabis business as a client.

Misconceptions also play a part when cannabis businesses seek insurance. When cannabis businesses first opened (around 1996 in California) there was fear that due to the federal illegality, they could be subject to criminal charges at any moment.¹⁴¹ There are concerns from the cannabis industry that the information provided to insurers can be accessed by the federal

¹³⁹ Jason Howard, CRC Group Wholesale & Specialty: Understanding the Issues Around Insuring Cannabis-Related Businesses (accessed February 21, 2023) – [Understanding the Issues Around Insuring Cannabis-Related Businesses - News - Tools & Intel | CRC Group](https://www.crcgroup.com/Tools-Intel/post/understanding-the-issues-around-insuring-cannabis-related-businesses) – <https://www.crcgroup.com/Tools-Intel/post/understanding-the-issues-around-insuring-cannabis-related-businesses>

government.¹⁴² Some businesses in the industry may believe that insurance is not worth the cost or that coverage is not available.¹⁴³ Such misconceptions fuel belief that coverage is not available but, more recently, the concerns have been about the cost and limitations of coverage. Among the inherent limitations of excess and surplus lines are the higher costs of coverage and restrictions on the coverage beyond cannabis licensure requirements.

B. The Role of Data

Cannabis businesses are just like any other business; however, they continue to pay several times more than what other industries pay for insurance.¹⁴⁴ For example, a small mercantile general liability policy might run about \$1,000, but for a cannabis business, that policy could run about \$10,000 without products liability.¹⁴⁵ A directors and officers policy (D&O) for \$1 million in coverage could cost a cannabis business well into the six-figure range.¹⁴⁶ The difference in pricing may largely be due to the federal versus state treatment and the concomitant risks involved with cannabis businesses.¹⁴⁷ One major issue that persists for cannabis businesses and insurance is the lack of consistent and verifiable market data across market segments to inform of potential risks.¹⁴⁸ Insurers know very little about the losses and expenses associated with this industry, and therefore, it is difficult to price. An insurer can acquire information from their potential customer, but there is not a public source of comparative data that insurers can use to evaluate risks.¹⁴⁹

The lack of data relating to losses and expenses is a major issue, but data from similarly situated businesses can be used to assist in the underwriting process. When looking at dispensaries, an insurer can look at a pharmacy for medical use cannabis and liquor stores or vape shops for recreational use of cannabis to learn about underwriting a cannabis business. Similarly, cannabis processors and growers can look to processors from other similarly situated industries. Cannabis businesses need insurance at every point from seed to sell. Although data is lacking, there is

¹⁴⁶ *Id.*

¹⁴⁷ *Id.*

¹⁴⁸ *Id.*

¹⁴⁹ *Id.*

information available to begin the underwriting process and to get a sense of what is needed by a cannabis-related business.

Insurers can also consider various factors during underwriting depending on the type of cannabis business. For processors, the results from a third-party inspection, the type of security system, and whether they are wired to outside monitoring stations, fire suppression systems, and the sufficiency of the electrical system with proper wattage and circuits all could be factors in the underwriting process. For retailers, the type of safe storing cash or product can also be considered when in the underwriting process, as there may be a regulatory requirement that a safe has to be so heavy as to not be easily moved, or the insurer may impose one. Overall, the insurer may want to know more about the owner/operator of the cannabis-related business. For instance, it may want to know if they are a member of a trade association or what education and training they have, and what they require of their staff. All this information can play a role in the risk involved with the cannabis-related business. What insurers would like to see is the risk be reduced. For example, the risk to insure someone who just decided to open a shop would be much higher than a person who took the time to get trained and educated in cannabis.

C. Developing Commercial Policy Forms

Most insurance policies, particularly those in the admitted market, are standardized. Advisory organizations help develop these forms that are used by property and casualty companies. The standardization of forms ensures: 1) the legal requirements from each state are taken into consideration; 2) premium rates are based on actuarial studies of insurable risks; and 3) case law is taken into consideration to prevent ambiguities in contract terms. Additionally, standardized forms using familiar terms and vocabulary may reduce the potential for disparate interpretations. Prior to legalization, insurance policies would typically exclude cannabis-related activities from a policy due to the illegality of the product as a federally listed Schedule 1 substance.¹⁵⁰ As states implement new cannabis laws, insurers will need to modify their contract forms to achieve compliance. Striving for consistent terminology and language is part of the normal work of advisory organizations.

¹⁵⁰ Heather Howell Wright, National Underwriter Property and Casualty 360: ISO Revises Policy Forms to Address Cannabis (November 1, 2019) – [ISO revises policy forms to address cannabis | PropertyCasualty360](https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/) – <https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/>

1. Insurance Services Office (ISO)

ISO is an insurance advisory organization that shares actuarial information with its customers, including insurance companies, actuaries, agents and brokers, and government entities.¹⁵¹ ISO gathers large amounts of loss data from various insurance companies to develop advisory prospective loss costs. Licensing carriers may use these loss costs to develop their ultimate insurance rates.¹⁵² ISO also creates insurance policy forms and endorsements often viewed by many as an industry standard.¹⁵³ ISO-created policy forms and endorsements often include policy language that has been tested in the courts, providing licensing carriers with potentially less volatility in interpretation than if an insurer creates its own form.¹⁵⁴

ISO insurance programs are available to provide insurance coverage to or exclude coverage with respect to cannabis-related businesses and exposures through policy endorsements.¹⁵⁵ An insurance endorsement can be used at policy inception or after a policy is issued to add, delete, exclude, or otherwise alter coverage.¹⁵⁶

Previously, neither the ISO Commercial General Liability (CGL), Commercial Property (Property), nor Commercial Auto (CA) forms expressly addressed cannabis. However, ISO developed several endorsements to specifically address the cannabis exposure in these and other insurance programs. The related endorsements can enhance an insurer's flexibility to tailor their product by expressly addressing coverage with respect to cannabis-related exposures.

If an insurance carrier prefers to avoid providing coverage with respect to cannabis-related exposures in any of the related insurance programs, ISO makes available several exclusionary endorsements to exclude coverage. However, if there is interest in providing coverage for a cannabis-related exposure, ISO has made available several endorsements for that purpose.

ISO's CGL and Property programs include options for the carrier to extend certain coverage with respect to the cannabis exposure. Carriers also have the option to extend limited coverage with respect to only the hemp exposure using a cannabis exclusion with an exception applying to

¹⁵¹ Marianne Bonner, The Balance: Insurance Services Office (ISO) (May 16, 2019) – [What Is the Insurance Services Office \(ISO\)? – thebalancesmb.com](https://thebalancesmb.com/insurance-services-office-iso/)

¹⁵² *Id.*

¹⁵⁵ Heather Howell Wright, National Underwriter Property and Casualty 360: ISO Revises Policy Forms to Address Cannabis (November 1, 2019) – [ISO revises policy forms to address cannabis | PropertyCasualty360 – https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/](https://www.propertycasualty360.com/2019/11/01/insurance-services-organization-revises-policy-forms-to-address-cannabis/)

¹⁵⁶ Mila Araujo, The Balance: What Is an Insurance Endorsement (May 4, 2022) – [What Is an Insurance Endorsement? – thebalance.com](https://thebalance.com/insurance-endorsement/)

hemp. Additionally, the CGL program includes options for insurance carriers to exclude liability for specifically listed products.

Within the commercial general liability program, ISO developed liability coverage endorsements with an aggregate limit for cannabis, a cannabis exclusion with a hemp exception aggregate limit, and a cannabis liability exclusion with designated product or work exception subject to an aggregate limit.¹⁵⁷

Lastly, ISO developed the defense within limits endorsement specific to products liability coverage that allows the carrier to limit the cost of defense related to products covered by the coverage form. Similar options are available for ISO's Businessowners, Commercial Flood, and Commercial Inland Marine programs.

2. American Association of Insurance Services (AAIS)

AAIS, a not-for-profit advisory organization governed by its member insurance companies, provides insurance forms, rules, and loss costs to the property casualty insurance industry.¹⁵⁸ AAIS provides policy forms and manuals in commercial lines, inland marine, farm and agriculture business lines, as well as personal lines to more than 700 insurance carriers.¹⁵⁹ As a licensed statistical agent in 51 jurisdictions, AAIS collects data that helps members meet regulatory statistical reporting responsibilities, which also supports loss cost development and ratemaking activities.¹⁶⁰

AAIS' cannabis business owners' policy (CannaBOP) product was developed at the request of the California Department of Insurance (DOI) to strengthen carrier participation for coverage of commercial cannabis operations. The CannaBOP is a package policy that provides property and liability coverages for qualifying cannabis dispensaries, storage, distributors, processors, manufacturers, and private cannabis testing facilities and laboratories.¹⁶¹ Rather than providing coverage to legal cannabis businesses through an endorsement, AAIS advocates for cannabis-specific product development and cannabis-specific programs.¹⁶² The CannaBOP program also

includes the rules, loss costs, and a suite of optional endorsements to be used by an insurance company.¹⁶³ The program also offers technology support so that CannaBOP can be quickly distributed and AAIS dedicated personnel keeping a keen eye on the “legs & regs” to help carriers remain compliant within this space.¹⁶⁴

3. Filing Process and Adoption of ISO and AAIS Forms

AAIS and ISO are advisory organizations that submit advisory loss costs, rules, and forms to the respective regulating agency for review and approval. These advisory organizations have member or subscriber requirements to use their approved forms, rules, rates, or loss costs. Loss costs are the data on claims that have been paid out.

In some states, advisory organizations file on behalf of insurers that have given them authorization, and other states may have varying filing requirements, as in the case of California. In the absence of a filing made on behalf of an insurer, the insurance company submits a separate filing to adopt the product or endorsement before it can use what has been created by the advisory organization. For example, in California, insurer XYZ wanted to start writing a Cannabis Business Owners policy. As a member of an advisory organization, XYZ could use the advisory organization’s forms and data for what coverages to offer, forms to use, rules to apply, and rates (loss costs multiplied by a loss cost multiplier to account for the insurer expenses) to use. Insurer XYZ would submit a prior approval new program filing with the California DOI to adopt the portions of the advisory organization material they wanted to use. The filing would then be reviewed and approved before insurer XYZ could start writing cannabis business owners’ risks using the advisory organization’s filing as a foundation. So, two separate filing approvals are needed: first, the approval of the filing containing the advisory organization product; and then, after the advisory organization’s product is approved, the insurance company(s) filings requesting adoption of the already approved advisory organization’s product.

ISO’s Cannabis Endorsements were approved for use in a majority of the states in September 2019.¹⁶⁵ According to AAIS, CannaBOP was first filed and approved in California in 2018.¹⁶⁶ Since then, CannaBOP has been approved in Colorado, Nevada, Illinois, Michigan, and Washington.¹⁶⁷ In March 2021, CannaBOP was adopted by Golden Bear in Arizona.¹⁶⁸

¹⁶⁸ *Id.*

IX. RESPONDING TO EMERGING TRENDS

Emerging trends in the cannabis industry provide opportunities for next steps in policy, regulation, and insurance. Cannabis product innovation is expanding past edibles to infuse cannabis into beverages, baking staples, crafts, and luxury products. New formulas and strengths are also being introduced with these new products. Innovation brings both new insurance needs and risks. For instance, states issued recalls in 2022 for cannabis edibles for mislabeling and contamination, resulting in litigation.¹⁶⁹

Growing demand for ancillary services and infrastructure in the cannabis space will also likely impact cannabis-related insurance. Ancillary services include those that complement the cannabis industry and are often non-plant touching. This includes marketing, transportation and delivery, financing, breathalyzers, product packaging, accountants, landlords, staffing firms, nutrient suppliers, and equipment companies.

Insurance regulators should also be informed of the emergence of on-site social consumption lounges. A few states have started issuing licenses for these establishments. On-site social cannabis lounge sites may operate similarly to bars, where consumers would gather to socially consume cannabis at a place of business. These businesses will face liability and insurance issues akin to businesses serving alcohol, like bars, breweries, and wineries.

X. CONCLUSIONS

A major aspect of obtaining insurance coverage for cannabis-related businesses is the complexity of limitations to interstate commerce hampering multi-state expansion. The current cannabis marketplaces are contained in individualized state jurisdictions without competition from other state marketplaces.¹⁷⁰ There have been state legislative authorizations in California (2022) and Oregon (2019) to create legal cannabis interstate commerce through trade pacts with other states. However, these laws require Congressional authorization or a memorandum from the DOJ allowing for interstate transfers of cannabis products. Federal legislation was introduced in 2021 with the States Reform Act (SRA). The SRA would decriminalize cannabis at the federal level while deferring to state powers over prohibition and commercial regulation.

¹⁶⁹ Jay Viridi, Cannabis Industry Journal: Challenges Abound for Cannabis Industry Growth in 2023 (November 30, 2022) – https://cannabisindustryjournal.com/feature_article/challenges-abound-for-cannabis-industry-growth-in-2023/

¹⁷⁰ Tommy Tobin and Andrew Kline, Yale Law & Policy Review: A sleeping Giant: How the Dormant Commerce Clause Looms Over the Cannabis Marketplace (January 3, 2022) – https://ylpr.yale.edu/inter_alia/sleeping-giant-how-dormant-commerce-clause-looms-over-cannabis-marketplace

Insurers are likely to continue to be cautious about entering the cannabis space in the absence of federal safe harbor provisions, legalization, decriminalization, or rescheduling. The federal prohibition has the effect of inhibiting access to vital ancillary services, such as banking with financial institutions and mitigating risk through insurance. States may look to add safe harbor laws into their authorities to ensure vital ancillary businesses can legally service the cannabis industry within state laws. The goal of safe harbor authorities is to seek and grant protections from liabilities or penalties, so long as certain conditions are met. For example, California recently passed a bill that states an individual or firm providing insurance or related services to a state legal cannabis business does not commit a crime under California law solely for providing that insurance or related service.¹⁷¹ The NAIC has supported federal legislation to provide a safe harbor for financial institutions and insurers serving cannabis-related businesses operating in states that have legalized cannabis.

Currently, most commercial insurance coverage for cannabis-related businesses is in the excess and surplus market. There is, however, growing interest among admitted carriers in entering this area. Among the potential structures to facilitate cannabis-related business coverage are: the use of state-based commercial insurance programs, risk retention groups (RRGs), captives, and joint underwriting associations (JUAs). States may want to look at their state laws to identify and remediate any restrictions in use of such programs for cannabis-related businesses.

Fair Access to Insurance Requirements (FAIR) plan programs afford opportunities for difficult risks to be underwritten by certain insurers when other insurance is not feasible. Sometimes known as insurers of last resort, the availability of these plans varies by jurisdiction. While commonly limited to personal lines, some states include commercial coverage. Generally, these programs help to provide insurance for those unable to acquire it from the admitted or excess and surplus insurance markets. FAIR plans are shared market plans, where several insurance companies provide coverage for the property, limiting the amount of risk that any one company assumes.

Risk retention groups and captive insurers also provide additional options for cannabis-related business insurance coverage. Governed by state law, there are many nuances that a state must consider. For example, Washington identified 17 businesses using captive insurance but not

¹⁷¹ Assembly Member Cooley, AB 2568 (Chapter 393, Statutes of 2022).

paying premium taxes to the state the captive was operating in. This was due to legal framework for captive registration and taxation had not yet been established.¹⁷²

Joint underwriting associations (JUAs) could be created to alleviate the lack of availability and affordability for state mandated cannabis-related commercial insurance coverage. A joint underwriting association is a nonprofit risk-pooling association established by a state legislature in response to availability crises in respect to certain kinds of insurance coverage. For example, a number of states have established JUAs to provide medical malpractice insurance for physicians who are unable to obtain affordably priced insurance coverage in the standard marketplace.

Addressing black-market cannabis operations could also help support capacity for cannabis-related commercial insurance. Black-market operations can take the form of illegal grows, unlicensed production and processing facilities, and criminal retailers. Black-market operations compete with the regulated markets and remove revenue that would be taxed and generated with the legal retailers. Black-market products are also not subject to any regulations for advertising, marketing, retail sales, or consumer safety. This creates risk that can spill over into the state-legal cannabis market. For example, during Vape Gate, insurers increased pricing and added product liability exclusions for unapproved additives. Many of the vape issues were found to be due to black market products. However, insurers' apprehension on writing vape-related risks lingered for a few years following the event.¹⁷³

Some states are already taking steps to address black market operations. For example, Oregon and Washington each involve their law enforcement agencies in a collaborative effort with their cannabis regulatory bodies to seek and enforce against illegal cannabis operations. Oregon even coordinates its enforcement efforts in collaboration with California agencies in these efforts. Colorado coordinates between law enforcement and the cannabis regulatory agencies. In Washington, state tax revenue generated at regulated cannabis retailers is also distributed to local law enforcement agencies, which can help fund their enforcement efforts against black-market operations. The cannabis and insurance industries, as well as consumers, benefit from these enforcement activities, as well as the removal of the unregulated black-market.

As the number of states legalizing cannabis continues to grow, so will the need for cannabis-related commercial insurance. Insurance regulators must stay current with the rapidly changing landscape. There has been a rapid introduction of new cannabis products whose product liability

¹⁷² Joel S. Chansky, FCAS, MAAA Craig R. Brophy, FCAS, MAAA David R. Kennerud, FCAS, MAAA Joseph T. Holahan, JD, Milliman Report: Captive Insurance Study (January 18, 2021) – <https://www.insurance.wa.gov/sites/default/files/documents/captive-insurance-study.pdf>

¹⁷³ Steve Hallo, Market Insights: Vape Gate and today's cannabis product liability market (December 16, 2020) – <https://www.propertycasualty360.com/2020/12/16/vape-gate-and-todays-cannabis-product-liability-market/>

needs and risks are still unknown. The insurance needs of ancillary businesses will also need to be understood. Finally, insurance regulators will need to access the capacity for new business models, such as on-site consumption lounges, to find insurance coverage and address associated educational needs.

PROJECT HISTORY**REGULATORY GUIDE TO UNDERSTANDING THE MARKET FOR CANNABIS INSURANCE: 2023 UPDATE
WHITE PAPER****1. Description of the Project, Issues Addressed, etc.**

The *Regulatory Guide to Understanding the Market for Cannabis Insurance: 2023 Update* white paper explores emerging insurance issues in the cannabis industry and the current state of cannabis regulation in the United States (U.S.).

2. Name of Group Responsible for Drafting the Model and States Participating

The Cannabis Insurance (C) Working Group drafted the white paper. The following states are on the Working Group: California, Colorado, Alaska, Arkansas, Delaware, District of Columbia, Illinois, New Mexico, Mississippi, Oklahoma, Oregon, Pennsylvania, Puerto Rico, Rhode Island, Nevada, Vermont, New Jersey, and Washington.

3. Project Authorized by What Charge and Date First Given to the Group

The white paper was authorized through the Property and Casualty (C) Insurance Committee's addition of a charge to the Cannabis Insurance Working Group's 2022 charges. Specifically, the charge asked the Working Group to use information gained through exploring potential sources of constraint to coverage limits and availability of cannabis insurance products in the P/C insurance lines to develop an updated white paper.

An updated white paper was needed because the cannabis industry has become more sophisticated since the original white paper was published in 2019. It has also continued to rapidly expand, driving new product development, infrastructure changes, and the need for businesses to provide ancillary services. The state of cannabis regulation, specifically at the state and local levels, has also evolved significantly since the last white paper.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated

The Cannabis Insurance (C) Working Group designated a drafting group to develop the white paper after it reviewed and approved an outline. The drafting group met in drafting sessions approximately bi-weekly until completion. Drafting group member states included California, Colorado, Illinois, Oregon, Vermont, and Washington. The Insurance Services Office (ISO) and American Association of Insurance Services (AAIS) contributed educational materials and revisions to the sections of the white paper that discuss their products and services. The Working Group was presented with updates on the working drafts so they could provide feedback.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The white paper was exposed on April 11, 2023, for a 45-day public comment period ending May 26, 2023. Notification of the exposure was redistributed on June 6, 2023, to include the Property and Casualty Insurance (C) Committee's distribution list and the comment period was extended to July 7.

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group's response)

The white paper focuses on issues impacting affordability and availability of insurance for cannabis-related risks in states that have legalized its use. It avoids advocacy-oriented discussion. As such, no controversy occurred during its drafting or exposure period.

7. List the key provisions of the model (sections considered most essential to state adoption)

While this is a white paper, not a model, state insurance regulators will find the Conclusions section helpful in understanding the unique activities states are taking or contemplating to address the need for cannabis-related insurance.

8. Any Other Important Information (e.g., amending an accreditation standard)

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

This proposal applies a .45 base RBC factor in the life RBC formula for residual tranches.

Additional Staff Comments:

DF – The Working Group adopted a factor of .30 for yearend 2023 to be replaced by .45 beginning with yearend 2024 with consideration of positive or negative adjustment based on additional information.

EY- The Task Force adopted this proposal and 2023-10-IRE together during June 30 meeting.

**** This section must be completed on all forms.**

DESCRIPTION/REASON OR JUSTIFICATION OF CHANGE(S)

The adoption by the Working Group of proposal 2023-04-IRE provides the structure for this sensitivity test. This proposal is to address the factor to be applied in that test.

Additional Staff Comments:

DF – The Working Group adopted a factor of .15 for yearend 2023.
EY- The Task Force adopted this proposal and 2023-09-IRE together during June 30 meeting.

REQUEST FOR MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Mortgage Guaranty Insurance Working Group

2. NAIC staff support contact information:

Dan Daveline, (816)783-8134, ddaveline@naic.org
Andy Daleo, (816)783-8141, adaleo@naic.org

3. Please provide a description and proposed title of the new model law. If an existing law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

Mortgage Guaranty Insurance Model Act (#630)

Amendments will be made to the following sections, but not limited to:

- Section 3 - Capital Requirements – Paid-in Capital
- Section 5 - Geographic Concentration
- Section 7 - Investment Limitations
- Section 8 - Reinsurance and the Use of Captive Reinsurance
- Section 12 - Modifications to Risk-to-Capital and Minimum Policyholders Position
- Section 16 - Contingency Reserves

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why

Due to the recent mortgage crisis spanning globally, the Working Group desires to proceed with the development of a Model. While there could be modest variations, substantial agreement is desirable.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. **What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?**

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: May require an extension to 18 months total, due to possible need for outside expertise.

6. **What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?**

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

7. **What is the likelihood that state legislature will adopt the model law in a uniform manner within three years of adoption by the NAIC?**

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: Primarily the key regulating mortgage guaranty states or the 15 states that are currently regulating mortgage guaranty insurers will adopt this Model or something substantially similar. It less likely for a state that does not have a domiciled mortgage guaranty insurer to adopt this Model.

8. **Is this model law referenced in the Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?**

No

9. **Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.**

Not in response to Federal law, but it could be impacted by by Federal laws or GSE guidelines currently being developed.

Draft: 5/11/23

Adopted by Mortgage Guaranty Insurance (E) Working Group—7/13/23

Adopted by Financial Condition (E) Committee—7/19/23

MORTGAGE GUARANTY INSURANCE MODEL ACT

Section 1. Title

This Act may be cited as the Mortgage Guaranty Insurance Act.

Section 2. Definitions

The definitions set forth in this Act shall govern the construction of the terms used in this Act but shall not affect any other provisions of the code.

~~A.~~ A. "Authorized ~~real estate security,~~ for the purpose of this Act, Real Estate Security" means ~~an:~~

- (1) An amortized note, bond or other ~~evidence~~ instrument of indebtedness, except for reverse mortgage loans made pursuant to [insert citation of state law that authorizes reverse mortgages] of the real property law, evidencing a loan, not exceeding ~~ninety five~~ one hundred three percent (~~95~~103%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument that constitutes, or is equivalent to, a first lien or ~~charge on real estate~~ junior lien or charge on real estate, with any percentage in excess of one hundred percent (100%) being used to finance the fees and closing costs on such indebtedness; provided:

~~(a) (1) The real estate loan secured in this manner is one of a type that a bank, savings and loan association, or an insurance company creditor, which is supervised and regulated by a department of this any state or territory of the U.S. or an agency of the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate;~~

~~(2b) The improvement on loan is to finance the acquisition, initial construction or refinancing of real estate that is a:~~

~~(i) Residential building designed for occupancy by not more than four families, a one-family residential condominium or unit in a planned unit development, or any other one-family residential unit as to which title may be conveyed freely; or~~

~~(ii) Mixed-use building with only one non-residential use and one one-family dwelling unit; or~~

~~(iii) Building or buildings designed for occupancy as specified by Subsections A(1) and A(2) of this section; and by five (5) or more families or designed to be occupied for industrial or commercial purposes.~~

~~(3c) The lien on the real estate may be subject to and subordinate to the following:~~

~~(a) The lien of any public bond, assessment or tax, when no installment, call or payment of or under the bond, assessment or tax is delinquent; and~~

~~(b) Outstanding mineral, oil, water or timber other liens, leases, rights, rights of way, easements or rights of way of support, sewer rights, building restrictions or other restrictions or, easements, covenants, conditions or regulations of use, or outstanding leases upon the real property under which rents or profits are reserved to the owner thereof that do not impair the use of the real estate for its intended purpose.~~

~~(2) Notwithstanding the foregoing, a loan referenced in Section 2A(1) of this Act may exceed 103% of the fair market value of the real estate in the event that the mortgage guaranty insurance company has approved for loss mitigation purposes a request to refinance a loan that constitutes an existing risk in force for the company.~~

~~(3) An amortized note, bond or other instrument of indebtedness evidencing a loan secured by an ownership interest in, and a proprietary lease from, a corporation or partnership formed for the purpose of the cooperative ownership of real estate and at the time the loan does not exceed one hundred three percent (103%) of the fair market value of the ownership interest and proprietary lease, if the loan is one of a type that meets the requirements of Section 2A(1)(a), unless the context clearly requires otherwise, any reference to a mortgagor shall include an owner of such an ownership interest as described in this paragraph and any reference to a lien or mortgage shall include the security interest held by a lender in such an ownership interest.~~

~~B. "Bulk Mortgage Guaranty Insurance" means mortgage guaranty insurance that provides coverage under a single transaction on each mortgage loan included in a defined portfolio of loans that have already been originated.~~

~~C. "Certificate of Insurance" means a document issued by a mortgage guaranty insurance company to the initial insured to evidence that it has insured a particular authorized real estate security under a master policy, identifying the terms, conditions and representations, in addition to those contained in the master policy and endorsements, applicable to such coverage.~~

~~D. "Commissioner" means [insert the title of the principal insurance supervisory official] of this state, or the [insert the title of the principal insurance supervisory official]'s deputies or assistants, or any employee of~~

~~the [insert name of the principal insurance regulatory agency] of this state acting in the [insert the title of the principal insurance supervisory official]'s name and by the [insert the title of the principal insurance supervisory official]'s delegated authority. "Commissioner." The term "commissioner" shall mean the insurance commissioner, the commissioner's deputies, or the Insurance Department, as appropriate.~~

Drafting Note: Insert the title of the chief insurance regulatory official wherever the word "commissioner" appears.

E.

~~B.~~ "Contingency reserve" "Contingency Reserve" means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.

~~C.~~ "Mortgage guaranty insurance" is F. "Domiciliary Commissioner" means the principal insurance supervisory official of the jurisdiction in which a mortgage guaranty insurance company is domiciled, ~~or that principal insurance supervisory official's deputies or assistants, or any employee of the regulatory agency of which that principal insurance supervisory official is the head acting in that principal insurance supervisory official's name and by that principal insurance supervisory official's delegated authority.~~

G. "Effective Guaranty" refers to the assumed backing of existing or future holders of securities by virtue of their issuer's conservatorship or perceived access to credit from the U.S. Treasury, as opposed to the direct full faith and credit guarantee provided by the U.S. government.

H. "Loss" refers to losses and loss adjustment expenses.

I. "Master Policy" means a document issued by a mortgage guaranty insurance company that establishes the terms and conditions of mortgage guaranty insurance coverage provided thereunder, including any endorsements thereto.

J. "Mortgage Guaranty +

~~(1)~~ Insurance" is insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any ~~note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on the real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families;~~ authorized real estate security.

~~(2)~~ Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, providing the improvement on the real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes; and

~~(3)~~ Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, provided the improvement on the real estate is a building or buildings designed to be occupied for industrial or commercial purposes.

K. "Mortgage Guaranty Quality Assurance Program" means an early detection warning system for potential underwriting compliance issues which could potentially impact solvency or operational risk within a mortgage guaranty insurance company.

L. "NAIC" means the National Association of Insurance Commissioners.

M. "Pool Mortgage Guaranty Insurance" means mortgage guaranty insurance that provides coverage under a single transaction or a defined series of transactions on a defined portfolio of loans for losses up to an aggregate limit.

- N. “Right of Rescission” represents a remedy available to a mortgage guaranty insurance company to void a certificate and restore parties to their original position, based on inaccurate, incomplete or misleading information provided to, or information omitted or concealed from, the mortgage guaranty insurance company in connection with the insurance application, resulting in an insured loan that did not meet the mortgage guaranty insurance company’s eligibility requirements in effect on the date of submission of the insurance application.
- O. “Risk in Force” means the mortgage guaranty insurance coverage percentage applied to the unpaid principal balance.

Section 3. Insurer’s Authority to Transact Business

A company may not transact the business of mortgage guaranty insurance until it has obtained a certificate of authority from the commissioner.

Section 4. Mortgage Guaranty Insurance as Monoline

A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.

Section 5. Risk Concentration

A mortgage guaranty insurance company shall not expose itself to any loss on any one authorized real estate security risk in an amount exceeding ten percent (10%) of its surplus to policyholders. Any risk or portion of risk which has been reinsured shall be deducted in determining the limitation of risk.

Section 6. Capital and Surplus

- A. **Initial and Minimum Capital and Surplus Requirements.** A mortgage guaranty insurance company shall not transact the business of mortgage guaranty insurance unless, if a stock insurance company, it has paid-in capital of at least \$~~10~~10,000,000 and paid-in surplus of at least \$~~15~~15,000,000, or if a mutual insurance company, a minimum initial surplus of \$~~225~~225,000,000. A stock insurance company or a mutual insurance company shall at all times thereafter maintain a minimum policyholders’ surplus of at least \$~~1,500~~20,000,000.

Section 4. Insurer’s Authority to Transact Business

~~No mortgage guaranty insurance company may issue policies until it has obtained from the commissioner of insurance a certificate setting forth that fact and authorizing it to issue policies.~~

- B. **Section 5. Minimum Capital Requirements Applicability.** A mortgage guaranty insurance company formed prior to the passage of this Act may maintain the amount of capital and surplus or minimum policyholders’ surplus previously required by statute or administrative order for a period not to exceed twelve months following the effective date of the adoption of this Act.
- C. **Minimum Capital Requirements Adjustments.** The domiciliary commissioner may by order reduce the minimum amount of capital and surplus or minimum policyholders’ surplus required under Section 6A under the following circumstances:
- (1) For an affiliated reinsurer that is a mortgage guaranty insurance company and that is or will be engaged solely in the assumption of risks from affiliated mortgage guaranty insurance companies, provided that the affiliated reinsurer is in run-off and, in the domiciliary commissioner’s opinion,

the business plan and other relevant circumstances of the affiliated reinsurer justify the proposed reduction in requirements.

(2) For mortgage guaranty insurance companies that are in run-off and not writing new business that is justified in a business plan, in the domiciliary commissioner's opinion.

Section 7. Geographic Concentration

- A. A mortgage guaranty insurance company shall not insure loans secured by a single risk in excess of ten percent (10%) of the company's aggregate capital, surplus and contingency reserve.
- B. No mortgage guaranty insurance company shall have more than twenty percent (20%) of its total insurance in force in any one Standard Metropolitan Statistical Area (SMSA), as defined by the ~~United States~~U.S. Department of Commerce.
- C. The provisions of this section shall not apply to a mortgage guaranty insurance company until it has possessed a certificate of authority in this state for three (3) years.

Section 68. Advertising

No mortgage guaranty insurance company or an agent or representative of a mortgage guaranty insurance company shall prepare or distribute or assist in preparing or distributing any ~~brochure, pamphlet, report or any form of~~ advertising media or communication to the effect that the real estate investments of any financial institution are "insured investments," unless the ~~brochure, pamphlet, report or~~ advertising media or communication clearly states that the loans are insured by mortgage guaranty insurance companies possessing a certificate of authority to transact mortgage guaranty insurance in this state or are insured by an agency of the federal government, ~~as the case may be.~~

Section 79. Investment Limitation

~~A mortgage guaranty insurance company shall not invest~~Investments in notes or other evidences of indebtedness secured by a mortgage or other liens upon residential real property ~~shall not be allowed as assets in any determination of the financial condition of a mortgage guaranty insurer.~~ This section shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of ~~the~~ good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired. This section shall not apply to investments backed by the full faith and credit of the U.S. Government or investments with the effective guaranty of the U.S. Government. This section shall not apply to investments held by a mortgage guaranty insurance company prior to the passage of this Act.

Section 8. ~~Coverage Limitation~~10. Reserve Requirements

- A. Unearned premium Reserves, Loss Reserves, and Premium Deficiency Reserves. Financial reporting will be prepared in accordance with the Accounting Practices and Procedures Manual and Annual Financial Statement Instructions of the NAIC.
- B. Contingency Reserve. Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:
 - (1) The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.
 - (2) Except as provided within this Act, a mortgage guaranty insurance company's contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, to provide for reserve buildup. The portion of the contingency reserve established and maintained

for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.

(3) Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:

(a) Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or

(b) Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts which are in excess of the requirements of Section 15 as required in [insert section of the mortgage guaranty Insurance model law requiring minimum policyholder's position] as filed with the most recently filed annual statement.

(i) The mortgage guaranty insurance company's domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a segregated account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.

C. **Miscellaneous.** Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.

Section 11. Reinsurance

A. **Prohibition of Captive Reinsurance.** A mortgage guaranty insurance company shall not enter into captive reinsurance arrangements which involve the direct or indirect ceding of any portion of its insurance risks or obligations to a reinsurer owned or controlled by an insured; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity owned or controlled by an insured or an insured's officer, director or employee or any member of their immediate family that has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing.

B. **Reinsurance Cessions.** A mortgage guaranty insurer may, by written contract, reinsure any insurance that it transacts, except that no mortgage guaranty insurer may enter into reinsurance arrangements designed to circumvent the compensating control provisions of Section 17 or the contingency reserve requirement of Section 10. The unearned premium reserve and the loss reserves required by Section 10 shall be established and maintained by the direct insurer or by the assuming reinsurer so that the aggregate reserves shall be equal to or greater than the reserves required by direct writer. The cession shall be accounted for as provided in the accounting practices and procedures prescribed or permitted by the applicable Accounting Practices and Procedures Manual of the NAIC.

Section 12. Sound Underwriting Practices

A. **Underwriting Review and Approval Required.** All certificates of mortgage guaranty insurance, excluding policies of reinsurance, shall be written based on an assessment of evidence that prudent underwriting standards have been met by the originator of the mortgage. Delegated underwriting decisions shall be reviewed based on a reasonable method of sampling of post-closing loan documentation to ensure compliance with the mortgage guaranty insurance company's underwriting standards.

B. **Quality Control Reviews.** Quality control reviews for bulk mortgage guaranty insurance and pool mortgage guaranty insurance shall be based on a reasonable method of sampling of post-closing loan documentation

for delegated underwriting decisions to ensure compliance with the representations and warranties of the creditors or creditors originating the loans and with the mortgage guaranty insurance company's underwriting standards.

C. **Minimum Underwriting Standards.** Mortgage guaranty insurance companies shall establish formal underwriting standards which set forth the basis for concluding that prudent underwriting standards have been met.

D. **Underwriting Review and Approval.** A mortgage guaranty insurance company's underwriting standards shall be:

(1) A mortgage guaranty insurance company shall limit its coverage net of reinsurance ceded to a reinsurer in which the company has no interest to a maximum of twenty five percent (25%) of the entire indebtedness to the insured or in lieu thereof, a mortgage guaranty insurance company may elect to pay the entire indebtedness to the insured and acquire title to the authorized real estate security.

Section 9.—Reviewed and approved by executive management, including, but not limited to the highest-ranking executive officer and financial officer; and

(2) Communicated across the organization to promote consistent business practices with respect to underwriting.

E. **Notification of Changes in Underwriting Standards.** On or before March 1 of each year, a mortgage guaranty insurance company shall file with the domiciliary commissioner changes to its underwriting standards and an analysis of the changes implemented during the course of the immediately preceding year. The annual summary of material underwriting standards changes should include any change associated with loan to value ratios, debt to income ratios, borrower credit standing or maximum loan amount which has resulted in a material impact on net premium written of +/- 5% from prior year to date.

Nondiscrimination. In extending or issuing mortgage guaranty insurance, a mortgage guaranty insurance company

A. A mortgage guaranty insurance company that anywhere transacts any class of insurance other than mortgage guaranty insurance is not eligible for the issuance of a certificate of authority to transact mortgage guaranty insurance in this state nor for the renewal thereof.

B. A mortgage guaranty insurance that anywhere transacts the classes of insurance defined in Section 2A(2) or 2A(3) is not eligible for a certificate of authority to transact in this state the class of mortgage guaranty insurance defined in Section 2A(1). However, a mortgage guarantee insurance company that transacts a class of insurance defined in Section 2A may write up to five percent (5%) of its insurance in force on residential property designed for occupancy by five (5) or more families.

Section 10.—**Underwriting Discrimination**

A. Nothing in this chapter shall be construed as limiting the right of a mortgage guaranty insurance company to impose reasonable requirements upon the lender with regard to the terms of a note or bond or other evidence of indebtedness secured by a mortgage or deed of trust, such as requiring a stipulated down payment by the borrower may not =

~~B.~~ No mortgage guaranty insurance company may discriminate in the issuance or extension of mortgage guaranty insurance on the on the basis of the applicant's sex, marital status, race, color, creed or national origin, national origin, disability, or age or solely on the basis of the geographic location of the property to be insured unless the discrimination related to geographic location is for a business purpose that is not a mere pretext for unfair discrimination; or the refusal, cancellation, or limitation of the insurance is required by law or regulatory mandate.

C. ~~No policy~~**Drafting Note:** States and jurisdictions should consult their constitution or comparable governance documents and applicable civil rights legislation to determine if broader protections against unacceptable forms of discrimination should be included in Section 12F.

Section 13. ~~mortgage guaranty insurance~~**Quality Assurance**

A. **Quality Assurance Program.** A mortgage guaranty insurance company shall establish a formal internal mortgage guaranty quality assurance program, which provides an early detection warning system as it relates to potential underwriting compliance issues which could potentially impact solvency or operational risk. This mortgage guaranty quality assurance program shall provide for the documentation, monitoring, evaluation and reporting on the integrity of the ongoing loan origination process based on indicators of potential underwriting inadequacies or non-compliance. This shall include, but not limited to:

- (1) **Segregation of Duties.** Administration of the quality assurance program shall be delegated to designated risk management, quality assurance or internal audit personnel, who are technically trained and independent from underwriting activities that they audit.
- (2) **Senior Management Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to an enterprise risk management committee or other equivalent senior management level oversight body.
- (3) **Board of Director Oversight.** Quality assurance personnel shall provide periodic quality assurance reports to the board of directors or a designated committee of directors established to facilitate board of director oversight.
- (4) **Policy and Procedures Documentation.** Mortgage guaranty quality assurance program, excluding policies and procedures of reinsurance, shall be formally established and documented to define scope, roles and responsibilities.
- (5) **Underwriting Risk Review.** Quality assurance review shall include an examination of underwriting risks including classification of risk and compliance with risk tolerance levels.
- (6) **Lender Performance Reviews.** Quality assurance monitoring provisions shall include an assessment of lender performance.
- (7) **Underwriting Performance Reviews.** Quality assurance monitoring provisions shall assess compliance with underwriting standard.
- (8) **Problem Loan Trend Reviews.** Quality assurance monitoring provisions shall assess prospective risks associated with timely loan payment including delinquency, default inventory, foreclosure and persistency trends.
- (9) **Underwriting System Change Oversight.** Underwriting system program changes shall be monitored to ensure the integrity of underwriting and pricing programs, which impact automated underwriting system decision making.
- (10) **Pricing and Performance Oversight.** Pricing controls shall be monitored to ensure that business segment pricing supports applicable performance goals.

(11) Internal Audit Validation. Periodic internal audits shall be conducted to validate compliance with the mortgage guaranty quality assurance program.

B. Regulator Access and Review of Quality Assurance Program. The commissioner shall be provided access to an insurer's mortgage guaranty quality assurance program for review at any reasonable and thorough examination of the evidence supporting credit worthiness of the borrower and the appraisal report reflecting market evaluation of the property and has determined that prudent underwriting standards have been met time upon request and during any financial regulatory examination. Nothing herein shall be construed to limit a regulator's right to access any and all of the records of an insurer in an examination or as otherwise necessary to meet regulatory responsibilities.

Section ~~14~~14. Policy Forms and Premium Rates Filed

A. Policy Forms. All ~~policy forms and~~ endorsements, ~~and modifications (excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance)~~ shall be filed with and be subject to the approval of the commissioner. With respect to owner-occupied, single-family dwellings, ~~the mortgage guaranty insurance policy shall provide that or a mixed-use building described in Section 2A(1)(b), which is owner-occupied at the time of loan origination and for at least 50% of the days within the twelve (12) consecutive months prior to borrower default,~~ the borrower shall not be liable to the insurance company for any deficiency arising from a foreclosure sale.

B. ~~In addition, each mortgage guaranty insurance~~ Premium Rates. Each mortgage guaranty insurance company ~~(excluding bulk mortgage guaranty insurance and pool mortgage guaranty insurance)~~ shall file with the ~~department~~ commissioner the rate to be charged ~~and the premium~~ including all modifications ~~of rates and premiums to be paid by the policyholder.~~

C. Premium Charges. Every mortgage guaranty insurance company shall ~~adopt, print and~~ make available a ~~schedule of to insureds the~~ premium charges for mortgage guaranty insurance policies. ~~Premium charges made in conformity via a company website or an integration with the provisions of this Act shall not be deemed to be interest or other charges under any other provision of law limiting interest or other charges in connection with mortgage loans. a third-party system.~~ The ~~schedule~~ premium rate provided shall show the entire amount of premium charge for ~~each~~ the type of mortgage guaranty insurance policy to be issued by the insurance company.

Drafting Note: Open rating states may delete a portion or all of ~~this provision~~ Section 14 and insert their own rating law.

Section ~~12.~~ ~~Outstanding Total Liability~~ 15. Risk in Force and Waivers

A. ~~A mortgage guaranty insurance~~ Risk in Force. A mortgage guaranty insurance company shall not at any time have outstanding a ~~total liability~~ risk in force, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding twenty-five (25) times its capital, surplus and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total ~~liability~~ risk in force exceeding twenty-five (25) times its capital, surplus and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total ~~liability~~ risk in force no longer exceeds twenty-five (25) times its capital, surplus and contingency reserve. Total ~~outstanding liability~~ risk in force shall be calculated on a ~~consolidated~~ an individual entity basis ~~for all mortgage guarantee insurance companies.~~

B. Waiver. The commissioner may waive the requirement found in Section 15A at the written request of a mortgage guaranty insurer upon a finding that ~~are part of a holding company system~~ the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of Section 15A and shall, at a minimum, address the factors specified in Section 15C.

C. **Waiver Criteria.** In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, all of the following factors, among others, may be considered:

- (1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.
- (2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.
- (3) The nature and extent of the mortgage guaranty insurer's reinsurance program.

The quality, diversification, and liquidity of the

- (4) mortgage guaranty insurer's assets and its investment portfolio.
- (5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.
- (6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.
- (7) The adequacy of the mortgage guaranty insurer's reserves.
- (8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.
- (9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.
- (10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.
- (11) The capital contributions which have been infused or are available for future infusion into the mortgage guaranty insurer.
- (12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including, but not limited to, the quality and type of the risks included in the aggregate insured risk.

D. **Authority to Retain Experts.** The commissioner may retain accountants, actuaries, or other experts to assist in the review of the mortgage guaranty insurer's request submitted pursuant to Section 15B. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.

E. **Specified Duration.** Any waiver shall be:

- (1) For a specified period of time not to exceed two years; and
- (2) Subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by Section 15A.

Section 16. **Conflict of Interest**

A mortgage guaranty insurer may underwrite mortgage guaranty insurance on mortgages originated by the holding company

system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate only if the insurance is underwritten on the same basis, for the same consideration and subject to the same insurability requirements as insurance provided to nonaffiliated lenders. Mortgage guaranty insurance underwritten on mortgages originated by the holding company system or affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly by the holding company system or affiliate shall be limited to 50% of the insurer's direct premium written in any calendar year, or such higher percentage established in writing for the insurer in the domiciliary commissioner's discretion, based on the domiciliary commissioner's determination that a higher percentage is not likely to adversely affect the financial condition of the insurer.

Section 17. Compensating Balances Prohibited

Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section. Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.

Section 18. Limitations on Rebates, Commissions, Charges and Contractual Preferences

- A. ~~insurance~~ **Inducements.** A mortgage guaranty insurance company shall not pay or cause to be paid either directly or indirectly, to any owner, purchaser, lessor, lessee, mortgagee or prospective mortgagee of the real property that secures the authorized real estate security or that is the fee of an insured lease, or any interest therein, or to any person who is acting as an agent, representative, attorney or employee of such owner, purchaser, ~~lessor, lessee~~ or mortgagee, any commission, or any part of its premium charges or any other consideration as an inducement for or as compensation on any mortgage guaranty insurance business.
- B. Compensation for Placement.** In connection with the placement of any mortgage guaranty insurance, a mortgage guaranty insurance company shall not cause or permit the conveyance of anything of value, including but not limited to any commission, fee, premium adjustment, remuneration or other form of compensation of any kind whatsoever to be paid to, or received by an insured lender or lessor; any subsidiary or affiliate of an insured; an officer, director or employee of an insured or any member of their immediate family; a corporation, partnership, trust, trade association in which an insured is a member, or other entity in which an insured or an officer, director or employee or any member of their immediate family has a financial interest; or any designee, trustee, nominee or other agent or representative of any of the foregoing, except for the value of the insurance itself or claim payments thereon as provided by contract or settlement.
- C. ~~No mortgage guaranty insurance~~ **Rebates.** A mortgage guaranty insurance company shall not make a rebate of any portion of the premium charge, as shown by the schedule required by Section ~~14C. No mortgage guaranty insurance~~ 14C. No mortgage guaranty insurance company shall not quote any rate or premium charge to a person that is different than that currently available to others for the same type of coverage. The amount by which a premium charge is less than that called for by the current schedule of premium charges is an unlawful rebate.
- D. Undue Contractual Preferences.**
- (1) Any contract, letter agreement, or other arrangement used to clarify any terms, conditions, or interpretations of a master policy or certificate shall be documented in writing.
 - (2) Any contractual or letter agreements used to modify or clarify general business practices and administrative, underwriting, claim submission or other information exchange processes shall not contain provisions which override or significantly undermine the intent of key provisions of the

mortgage guaranty insurance model act, including mortgage insurer discretion, rights and responsibilities related to:

(a) Underwriting standards.

(b) Quality assurance.

(c) Rescission.

- E. **Sanctions.** The commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company, or in his or her discretion, issue a cease and desist order to a mortgage guaranty insurance company that pays a commission, rebate, or makes any unlawful rebate conveyance of value under this section in willful violation of the provisions of this Act. In the event of the issuance of a cease and desist order, the commissioner may, after notice and hearing, suspend or revoke the certificate of authority of a mortgage guaranty insurance company that does not comply with the terms thereof.

Section 14. — **Compensating Balances Prohibited**

- F. ~~Except for commercial checking accounts and normal deposits in support of an active bank line of credit, a mortgage guaranty insurance company, holding company or any affiliate thereof is prohibited from maintaining funds on deposit with the lender for which the mortgage guaranty insurance company has insured loans. Any deposit account bearing interest at rates less than what is currently being paid other depositors on similar deposits or any deposit in excess of amounts insured by an agency of the federal government shall be presumed to be an account in violation of this section.~~ **Educational Efforts and Promotional Materials Permitted.** A mortgage guaranty insurance company may engage in any educational effort with borrowers, members of the general public, and officers, directors, employees, contractors and agents of insured lenders that may reasonably be expected to reduce its risk of Loss or promote its operational efficiency and may distribute promotional materials of minor value.

Section 19. — **Rescission**

All mortgage guaranty insurance company master policies shall include a detailed description of provisions governing rescissions, re-pricing, and cancellations, which specify the insurer's and insured's rights, obligations and eligibility terms under which those actions may occur to ensure transparency.

Section 20. — **Records Retention**

- A. **Record Files.** A licensed mortgage guaranty insurance company shall maintain its records in a manner which allows the commissioner to readily ascertain the insurer's compliance with state insurance laws and rules during an examination including, but not limited to, records regarding the insurer's management, operations, policy issuance and servicing, marketing, underwriting, rating and claims practices.

B. ~~Furthermore, a mortgage guaranty insurance company shall not use compensating balances, special deposit accounts or engage in any practice that unduly delays its receipt of monies due or that involves the use of its financial resources for the benefit of any owner, mortgagee of the real property or any interest therein or any person who is acting as agent, representative, attorney or employee of the owner, purchaser or mortgagee as a means of circumventing any part of this section.~~

- Section 15. — **Retention Period.** Policy and claim records shall be retained for the period during which the certificate or claim is active plus five (5) years, unless otherwise specified by the insurance commissioner. Recordkeeping requirements shall relate to:

- (1) Records to clearly document the application, underwriting, and issuance of each master policy and certificate of insurance; and
- (2) Claim records to clearly document the inception, handling, and disposition.

C. **Record Format.** Any record required to be maintained by a mortgage insurer may be created and stored in the form of paper, photograph, magnetic, mechanical or electronic medium.

D. **Record Maintenance.** Record maintenance under this Act shall comply with the following requirements:

- (1) Insurer maintenance responsibilities shall provide for record storage in a location that will allow the records to be reasonably produced for examination within the time period required.
- (2) Third-Party maintenance related responsibilities shall be set forth in a written agreement, a copy of which shall be maintained by the insurer and available for purposes of examination.

Conflict of Interest

~~A. If a member of a holding company system, a mortgage guaranty insurance company licensed to transact business in this state shall not, as a condition of its certificate of authority, knowingly underwrite mortgage guaranty insurance on mortgages originated by the holding company system or an affiliate or on mortgages originated by any mortgage lender to which credit is extended, directly or indirectly, by the holding company system or an affiliate.~~

~~A. B. A mortgage guaranty insurance company, the holding company system of which it is a part, or any affiliate shall not as a condition of the mortgage guaranty insurance company's certificate of authority, pay any commissions, remuneration, rebates or engage in activities proscribed in Sections 13 and 14.~~

~~Section 16. Reserves~~

~~A. Unearned Premium Reserves~~

~~A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve as set forth by regulation adopted by the commissioner of insurance.~~

~~B. Loss Reserve~~

~~A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves that accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:~~

- ~~(1) Insured loans that have resulted in the conveyance of property that remains unsold;~~
- ~~(2) Insured loans in the process of foreclosure;~~
- ~~(3) Insured loans in default for four (4) months or for any lesser period that is defined as default for such purposes in the policy provisions; and~~
- ~~(4) Insured leases in default for four (4) months or for any lesser period that is defined as default for such purposes in policy provisions.~~

~~C. Contingency Reserve~~

~~Each mortgage guaranty insurance company shall establish a contingency reserve out of net premium remaining (gross premiums less premiums returned to policyholders net of reinsurance) after establishment of the unearned premium reserve. The mortgage guaranty insurance company shall contribute to the contingency reserve an amount equal to fifty percent (50%) of the remaining unearned premiums. Contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months, except that withdrawals may be made by the company in any year in which the actual incurred losses exceed thirty five percent (35%) of the corresponding earned premiums, and no releases shall be made without prior approval by the commissioner of insurance of the insurance company's state of domicile.~~

~~If the coverage provided in this Act exceeds the limitations set forth herein, the commissioner of insurance shall establish a rate formula factor that will produce a contingency reserve adequate for the added risk assumed. The face amount of an insured mortgage shall be computed before any reduction by the mortgage guaranty insurance company's election to limit its coverage to a portion of the entire indebtedness.~~

~~D. Reinsurance~~

~~Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company that is properly licensed to provide reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Act in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Act.~~

~~E. Miscellaneous~~

- ~~(1) Whenever the laws of any other jurisdiction in which a mortgage guaranty insurance company subject to the requirement of this Act is also licensed to transact mortgage guaranty insurance require a larger unearned premium reserve or contingency reserve in the aggregate than that set forth herein, the establishment of the larger unearned premium reserve or contingency reserve in the aggregate shall be deemed to be in compliance with this Act.~~
- ~~(2) Unearned premium reserves and contingency reserves shall be computed and maintained on risks insured after the effective date of this Act as required by Subsections A and C. Unearned premium reserves and contingency reserves on risks insured before the effective date of this Act may be computed and maintained as required previously.~~

Section ~~1721~~. Regulations

The commissioner shall have the authority to promulgate rules and regulations deemed necessary to effectively implement the requirements of this Act.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

1976 Proc. II 15, 17, 647, 686, 747-753 (adopted).

PROJECT HISTORY – 2023**MORTGAGE GUARANTY INSURANCE MODEL ACT (#630)****1. Description of the Project, Issues Addressed, etc.**

The current NAIC *Mortgage Guaranty Insurance Model Act* (#630) was first adopted in 1976 and amended in 1979. Model #630 was created to provide effective regulation and supervision of mortgage guaranty insurers. Model #630 defines mortgage guaranty insurance as insurance against financial loss by reason of nonpayment of principal, interest, or other sums agreed to be paid on any note secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate. Mortgage guaranty insurance may also cover against financial loss by reason of nonpayment of rent under the terms of a written lease. As of April 2012, eight states had adopted the most recent version of the model in a substantially similar manner. An additional 12 states have adopted an older version of the model, legislation, or regulation derived from other sources such as bulletins and administrative rulings.

The Mortgage Guaranty Insurance (E) Working Group was formed in November 2012. By early 2013, the Working Group developed a list of potential regulatory changes to Model #630 to address changes in mortgage lending and mortgage finance since the model's original approval in the 1970s and to respond to the lessons learned during the 2008 national recession and housing market downturn. As a result, a Request for NAIC Model Law Development was made and approved by the Executive (EX) Committee at the 2013 Summer National Meeting.

Development of the modernized model has a long history dating back to the fall of 2012. At that time, development of a capital model to accompany Model #630 was the key focus of attention. During 2013, mortgage guaranty insurers engaged Oliver Wyman to begin working on a Mortgage Guaranty Capital Model. Over the next several years, the Mortgage Guaranty Capital Model was developed. It was determined in December 2016 that a secondary contractor would need to be hired to further assess the reliability of the Mortgage Guaranty Capital Model. In September 2017, Milliman began its work to review and validate the Mortgage Guaranty Capital Model.

In March 2018, Milliman provided its assessment of the capital model to the Working Group. It indicated that inconsistencies and errors were found in the data preparation steps used to: 1) estimate the capital model coefficients and the application of the same capital model coefficients; and 2) forecast future loan performance. Milliman stated that these inconsistencies and errors were material to the capital model and would need to be addressed before the Mortgage Guaranty Capital Model could be implemented.

As a result, Milliman continued its work on the Mortgage Guaranty Capital Model, and in December 2019, it was exposed for public comment. The comments regarding the exposure were expected to be discussed during the 2020 Spring National Meeting. However, due to the COVID-19 pandemic, this meeting was cancelled. The Working Group also began working on an annual statement exhibit to begin collecting data for the capital model. In April 2021, the Mortgage Guaranty Insurance (E) Working Group referred the exhibit proposal to the Blanks (E) Working Group. The exhibit was finalized and implemented into the blank effective year-end 2021. In May 2022, the Mortgage Guaranty Insurance (E) Working Group decided to pause the development of the capital model and continue collecting data for further analysis in the future. As a result, the Working Group focused on finalizing the model.

2. Name of Group Responsible for Drafting the Model and States Participating

The Mortgage Guaranty Insurance (E) Working Group comprised the drafting Group and consisted of the following states during 2023: North Carolina (chair); Arizona; California; Florida, Missouri, New York, Pennsylvania; Texas; and Wisconsin.

3. Project Authorized by What Charge and Date First Given to the Group

The Executive (EX) Committee approved the Request for NAIC Model Law Development during the 2013 Summer National Meeting. Throughout the course of model development, the Financial Condition (E) Committee chair approved extensions due to extenuating circumstances.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated.

The Working Group formed a drafting group, which consisted of: Jackie Obusek (NC–Chair); Kurt Regner (AZ); Monica Macaluso (CA); Robert Ballard (FL); John Rehagen (MO); Margot Small (NY); Melissa Greiner (PA); Amy Garcia (TX); and Amy Malm (WI). Following the lengthy hiatus from the development of the model, due to work being completed on the Mortgage Guaranty Capital Model, the drafting group began finalization of model in May 2022 without consideration of the capital model. During its May meeting, the drafting group discussed the overall approach to finalizing the model and a rather aggressive timeline for completion.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

The Working Group met in open session on Oct. 6 and Dec. 13, 2022, and March 22, 2023. During these sessions, interested regulators and parties submitted comment letters to the Working Group. The drafting group held nine regulator-only discussion and planning calls between May 2022 and March 2023. The Working Group exposed the model for public comment on Oct. 7, 2022, and again on Feb. 27, 2023, and May 11, 2023. Comments were received from: the California Department of Insurance (DOI); the Center for Economic Justice (CEJ); and the Mortgage Guaranty Consortium (Arch Mortgage Insurance Company, Enact Mortgage Insurance Corporation, Essent Guaranty Inc., Mortgage Guaranty Insurance Corporation, National Mortgage Insurance Corporation, and Radian Guaranty Inc).

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group’s response)

Section 10, Reserve Requirements – Contingency Reserve

The most significant issue raised during development was related to the recording of the contingency reserves when reinsurance is used. The specific provision is: “The Mortgage Guaranty Insurance company shall make an annual contribution to the Contingency Reserve which in the aggregate shall be equal to fifty percent (50%) of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.” The mortgage insurers indicated that many reinsurers do not complete a statutory financial statement and would not have the ability to record the contingency reserve. The drafting group members discussed the topic and agreed to leave the provision as stated.

Section 21, No Private Right of Action Provision

The mortgage guaranty insurers proposed the following provision for inclusion in the model: “No Private Right of Action. Nothing in this Act is intended to, or does, create a private right of action based upon compliance or noncompliance with any of the Act’s provisions. Authority to enforce compliance with this Act is vested exclusively in the Commissioner.” Following discussion by the drafting group, the provision was added to the model and included in the Feb. 27, 2023, exposure. The drafting group received several comments on the provision. Following discussion, Section 21 was removed from the model.

7. List the Key Provisions of the Model (sections considered most essential to state adoption)

Section 10. Reserve Requirements

- A. **Unearned Premium Reserves, Loss Reserves, and Premium Deficiency Reserves.** Financial reporting will be prepared in accordance with the *Accounting Practices and Procedures Manual* (AP&P Manual) and Annual Financial Statement Instructions of the NAIC.
- B. **Contingency Reserve.** Each mortgage guaranty insurance company shall establish a contingency reserve subject to the following provisions:
 - (1) The mortgage guaranty insurance company shall make an annual contribution to the contingency reserve, which, in the aggregate, shall be equal to 50% of the direct earned premiums reported in the annual statement or net earned premiums reported if the reinsurer maintains the contingency reserve.

- (2) Except as provided within this act, a mortgage guaranty insurance company's contributions to the contingency reserve made during each calendar year shall be maintained for a period of 120 months to provide for reserve buildup. The portion of the contingency reserve established and maintained for more than 120 months shall be released and shall no longer constitute part of the contingency reserve.
- (3) Withdrawals may be made from the contingency reserve on a first-in, first-out basis or such other basis, with the prior written approval of the domiciliary commissioner, based on the amount by which:
- (a) Incurred losses and loss adjustment expenses exceed 35% of the direct earned premium in any year. Provisional withdrawals may be made from the contingency reserve on a quarterly basis in an amount not to exceed 75% of the withdrawal as adjusted for the quarterly nature of the withdrawal; or
- (b) Upon the approval of the domiciliary commissioner and 30-day prior notification to non-domiciliary commissioners, a mortgage guaranty insurer may withdraw from the contingency reserve any amounts that are in excess of the requirements of Section 15 as required in (insert section of the mortgage guaranty insurance model law requiring minimum policyholder's position) as filed with the most recently filed annual statement.
- (i) The mortgage guaranty insurance company's domiciliary commissioner may consider loss developments and trends in reviewing a request for withdrawal. If any portion of the contingency reserve for which withdrawal is requested is maintained by a reinsurer or in a segregated account or trust of a reinsurer, the domiciliary commissioner may also consider the financial condition of the reinsurer.
- C. **Miscellaneous.** Unearned premium reserves and contingency reserves on risks insured before the effective date of this act may be computed and maintained as required previously.

Section 15. Risk in Force and Waivers

- A. **Risk in Force.** A mortgage guaranty insurance company shall not at any time have outstanding risk in force, net of reinsurance, under its aggregate mortgage guaranty insurance policies exceeding 25 times its capital, surplus, and contingency reserve. In the event that any mortgage guaranty insurance company has outstanding total risk in force exceeding 25 times its capital, surplus, and contingency reserve, it shall cease transacting new mortgage guaranty business until such time as its total risk in force no longer exceeds 25 times its capital, surplus, and contingency reserve. Total risk in force shall be calculated on an individual entity basis.
- B. **Waiver.** The commissioner may waive the requirement found in subsection (a) of this section at the written request of a mortgage guaranty insurer upon a finding that the mortgage guaranty insurer's policyholders position is reasonable in relationship to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs. The request must be made in writing at least 90 days in advance of the date that the mortgage guaranty insurer expects to exceed the requirement of subsection (a) of this section and shall, at a minimum, address the factors specified in subsection (j) of this section.
- C. **Waiver Criteria.** In determining whether a mortgage guaranty insurer's policyholders position is reasonable in relation to the mortgage guaranty insurer's aggregate insured risk in force and adequate to its financial needs, all of the following factors, among others, may be considered:
- (1) The size of the mortgage guaranty insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force, and other appropriate criteria.
- (2) The extent to which the mortgage guaranty insurer's business is diversified across time, geography, credit quality, origination, and distribution channels.

- (3) The nature and extent of the mortgage guaranty insurer's reinsurance program.
- (4) The quality, diversification, and liquidity of the mortgage guaranty insurer's assets and its investment portfolio.
- (5) The historical and forecasted trend in the size of the mortgage guaranty insurer's policyholders position.
- (6) The policyholders position maintained by other comparable mortgage guaranty insurers in relation to the nature of their respective insured risks.
- (7) The adequacy of the mortgage guaranty insurer's reserves.
- (8) The quality and liquidity of investments in affiliates. The commissioner may treat any such investment as a nonadmitted asset for purposes of determining the adequacy of surplus as regards policyholders.
- (9) The quality of the mortgage guaranty insurer's earnings and the extent to which the reported earnings of the mortgage guaranty insurer include extraordinary items.
- (10) An independent actuary's opinion as to the reasonableness and adequacy of the mortgage guaranty insurer's historical and projected policyholders position.
- (11) The capital contributions that have been infused or are available for future infusion into the mortgage guaranty insurer.
- (12) The historical and projected trends in the components of the mortgage guaranty insurer's aggregate insured risk, including the quality and type of the risks included in the aggregate insured risk.

D. Authority to Retain Experts. The commissioner may retain accountants, actuaries, or other experts to assist the commissioner in the review of the mortgage guaranty insurer's request submitted pursuant to subsection (i) of this section. The mortgage guaranty insurer shall bear the commissioner's cost of retaining those persons.

E. Specified Duration. Any waiver shall be (i) for a specified period of time not to exceed two years and (ii) subject to any terms and conditions that the commissioner shall deem best suited to restoring the mortgage guaranty insurer's minimum policyholders position required by subsection (a) of this section.

8. Any Other Important Information (e.g., amending an accreditation standard)

None. It is not an accreditation standard, and the Working Group is not making a recommendation that it be considered as an accreditation standard.

State Implementation Reporting of NAIC-Adopted Model Laws and Regulations

Executive (EX) Committee

- Amendments to the ***Unfair Trade Practices Act (#880)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. Fourteen jurisdictions have adopted revisions to this model.

Life Insurance and Annuities (A) Committee

- Amendments to the ***Annuity Disclosure Model Regulation (#245)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Summer National Meeting. Four jurisdictions have adopted revisions to this model.
- Amendments to the ***Standard Nonforfeiture Law for Individual Deferred Annuities (#805)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Twenty-four jurisdictions have adopted revisions to this model.

Health Insurance and Managed Care (B) Committee

- Amendments to the ***Health Maintenance Organization Model Act (#430)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. One jurisdiction has adopted revisions to this model.
- Amendments to the ***Insurance Holding Company System Regulatory Act (#440)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Twenty-six jurisdictions have adopted revisions to this model.
- Amendments to the ***Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)***—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Thirteen jurisdictions have adopted revisions to this model.

Property and Casualty Insurance (C) Committee

- Adoption of the ***Real Property Lender-Placed Insurance Model Act (#631)***—This model was adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. One jurisdiction has adopted this model.
- Adoption of the ***Pet Insurance Model Act (#633)***—This model was adopted by the Executive (EX) Committee and Plenary at the 2022 Summer National Meeting. Three jurisdictions have adopted this model.

Draft: 8/28/23

Executive (EX) Committee
Seattle, Washington
August 14, 2023

The Executive (EX) Committee met in Seattle, WA, Aug. 14, 2023. The following Committee members participated: Chlora Lindley-Myers, Chair (MO); Andrew N. Mais, Vice Chair (CT); Jon Godfread, Vice President (ND); Scott A. White, Secretary-Treasurer (VA); Dean L. Cameron, Most Recent Past President (ID); Lori K. Wing-Heier (AK); Michael Conway (CO); Trinidad Navarro (DE); Doug Ommen (IA); Sharon P. Clark (KY); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Andrew R. Stolfi (OR); Carter Lawrence (TN); and Kevin Gaffney (VT).

1. Adopted the Aug. 13 Report of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee

Director Lindley-Myers reported that the Executive (EX) Committee and Internal Administration (EX1) Subcommittee met Aug. 13, 2023, in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings.

During this meeting, the Committee and Subcommittee adopted its July 11, March 25, and March 22 minutes, which included the following action: 1) approved the termination of the defined benefit pension plan; 2) approved the fiscal for an additional full-time employee in Regulatory Services; 3) approved a second round of grant funding from the Robert Wood Johnson Foundation (RWJF); 4) approved changing the dates of the 2024 Summer National Meeting in Chicago, IL; 5) received a May year-to-date (YTD) financial update and overview of the preliminary 2024 budget; 6) approved the release of a request for proposal (RFP) to hire an executive search firm; 7) heard an update on the *State Connected* strategic plan; and 8) approved the Succession Planning and Organization Design fiscal.

The Committee and Subcommittee adopted the Executive (EX) Committee's May 23 and March 31 minutes, which included the following action: 1) approved Commissioner White to serve on the International Association of Insurance Supervisors (IAIS) Executive Committee; and 2) approved the following 2027 National Meeting locations: a) the 2027 Spring National Meeting will be in Kansas City, MO; b) the 2027 Summer National Meeting will be in New York City, NY; and c) the 2027 Fall National Meeting will be in Nashville, TN.

The Committee and Subcommittee adopted the report of the Audit Committee, including its Aug. 3 and May 24 minutes. During these meetings, the Committee took the following action: 1) received the June 30 financial update; 2) heard an overview of proposed 2024 revenues; 3) reappointed RubinBrown as the financial audit firm to conduct the 2023 audit; 4) affirmed the 2024 Audit Committee charter; 5) discussed Grant and Zone financials, including the following potential changes: a) allowing a one-time allocation of up to \$75,000 from technical training funds to general use; and b) allowing allocations from general funds to the New Avenues to Insurance Careers (N.A.I.C.) Foundation, pending funds balance; 6) heard an update on the Enterprise Resource Planning (ERP) project; 7) heard an update on the 2024 budget calendar; 8) received the 2022/2023 Service Organization Control (SOC) 1 and SOC 2 Audit reports; and 9) heard a presentation on the 2023 operating reserve analysis.

The Committee and Subcommittee adopted the report of the Internal Administration (EX1) Subcommittee, including its June 6 minutes. During this meeting, the Subcommittee took the following action: 1) received the March 31 Long-Term Investment Portfolio report; and 2) received the March 31 Defined Benefit Portfolio report.

The Committee and Subcommittee also: 1) heard a Cybersecurity report; and 2) heard the Acting Chief Executive Officer (CEO) report.

Director Wing-Heier made a motion, seconded by Commissioner Godfread, to adopt the Aug. 13 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee. The motion passed unanimously.

2. Adopted its May 23 and March 31 Interim Meeting Report

Commissioner Godfread made a motion, seconded by Commissioner Mais, to adopt the Executive (EX) Committee's May 23 and March 31 interim meeting report (Attachment One). The motion passed unanimously.

3. Adopted the Reports of its Task Forces

Director Wing-Heier made a motion, seconded by Director Fox, to adopt the reports of the: 1) Climate and Resiliency (EX) Task Force; 2) Government Relations (EX) Leadership Council; 3) Long-Term Care Insurance (EX) Task Force; and 4) Special (EX) Committee on Race and Insurance (Attachment Two). The motion passed unanimously.

4. Received a Status Report on the Implementation of *State Connected*

Director Lindley-Myers provided an update on *State Connected* implementation efforts. The NAIC unveiled its strategic plan, *State Connected*, during the Spring National Meeting. The strategic focus areas are Member Connectivity; Training, Expertise, and Technology; Data and Analytics; Consumer Education, Outreach, and Advocacy; Committee Governance and Management; and NAIC Operations. The NAIC management team is diligently working on plans for implementation, including budget and resource issues. The Executive (EX) Committee will meet to discuss implementation plans in the coming months.

5. Received a Report on Model Law Development Efforts

Director Lindley-Myers presented a written report on the progress of ongoing model law development efforts (Attachment Three).

6. Heard a Report from the NIPR Board of Directors

Director Deiter reported that the National Insurance Producer Registry (NIPR) Board of Directors met Aug. 12 to discuss strategic planning for 2024 through 2026. The final strategic plan is expected to be adopted at the end of the year.

NIPR's revenues through the end of June remain strong. Total revenues are \$1.9 million, 5.7% above budget through June and 10% above the prior year. Most credentialing and reporting products exceeded budget. On a YTD basis, net assets have increased by \$6.9 million, which is \$5.1 million above budget.

NIPR is continuing to work with New York and Washington to implement those states on all remaining NIPR major products. Once complete, all states will be fully utilizing NIPR for major lines, products, and services.

NIPR continues to implement the Contact Change Request (CCR) application for business entities. The CCR allows business entities the ability to change their contact information easily through *NIPR.com*. The CCR for Business Entities is available in 34 states. NIPR will continue expanding its services to allow electronic solutions for states and industry to process additional licensee updates, including name changes and designated responsible licensed

producer (DRLP) changes. NIPR is now offering electronic “Name Change” for the following states: Connecticut, Missouri, North Dakota, Rhode Island, and Vermont. During the first week of August, NIPR released Connecticut as the pilot state for the DRLP changes.

Due to the volume of NIPR transactions and expected increases once New York and Washington are complete, the NIPR Board recently approved adding additional team members to NIPR’s customer service center. These NIPR team members provide a valuable service to state insurance regulators by answering producer licensing-related questions for all states and territories, helping to reduce the administrative burden on individual state insurance departments.

7. Heard a Report from the Compact

Commissioner Birrane reported that the Interstate Insurance Product Regulation Commission (Compact) will meet Aug. 15. During this meeting, the Compact will welcome Commissioner Godfreed and North Dakota as the newest member of the Compact. Gov. Doug Burgum (R-ND) signed U.S. Senate Bill 2172 on April 6, and the law took effect Aug. 1. North Dakota brings the membership in the Compact up to 47, which includes Washington, DC and Puerto Rico.

The Compact will receive a briefing on *Actuarial Guideline LIV—Nonforfeiture Requirements for Index-Linked Variable Annuity Products* (AG 54), which puts parameters around certain values in index-linked variable annuities (ILVAs). ILVAs have only been in the marketplace since 2010 and do not cleanly fit as a variable or non-variable annuity under the statutory framework. AG 54 attempts to address the calculation of the interim value when a withdrawal, surrender, or death occurs. A subgroup of the Compact’s Product Standards Committee is working on new uniform standards for ILVAs. Applying AG 54 is likely to be a public policy issue for members.

The Compact will discuss planning and releasing an Accomplishments Report of its current strategic plan. It will also get consensus on whether to continue with the three existing strategic priorities: 1) the Uniform Standards States Support and Companies Willingly Use; 2) the Nationally Recognized Regulatory Review Process; and 3) the resource for Compacting States, Regulated Entities, and Consumers.

The Compact will hear reports from its committees, including the Adjunct Services Committee. The Committee is chaired by Commissioner Barbara D. Richardson (AZ) and vice chaired by Commissioner Michael Humphreys (PA). The goal of the Committee is to take feedback from Compact Roundtables and consider proposals for what Compact 2.0 should look like in terms of providing adjunct services to members.

The Compact conducted three Roundtables in 2023, including the most recent one on May 17 in Washington, DC. Discussion at the Roundtables included a variety of topics ranging from speeding up the standards development process to positioning the Compact to provide advisory services. A Compact Roundtable will be held in Omaha, NE, Oct. 25, immediately following InsurTech on the Silicon Prairie.

The Compact will receive two recommendations for public rulemaking: 1) Uniform Standards for a new product line—group whole life insurance for employer groups; and 2) an amendment to the Rulemaking Rule to address incorporation by reference, especially when the incorporated material is amended, so there is a period for input before the amendment becomes effective.

The Compact will recognize Don Beatty (VA), who will retire Dec. 1. Mr. Beatty is the most recent recipient of the Dineen Award, and he has given his time and expertise to building the foundations of the Compact, as well as supporting its ongoing development.

The Compact is in a healthy cash position of just under \$1.5 million. Through the end of June, the Compact is within 3% of budgeted revenues, with actual revenues being a little over \$2.4 million. Expenses are well managed and under budget by 10%, with the actual being \$1.45 million.

The Compact is seeing strong annual registration revenue, which means more companies than anticipated are using the Compact platform as of the end of June. So far this year, the Compact has collected and remitted more than \$1.4 million in state filing fees to its members.

The Compact has made another payment to the NAIC in the amount of \$275,000 in service of the debt to the NAIC for its line of credit during the Compact's early years. To date, the Compact has made four annual payments totaling \$1.1 million dollars, and it has six annual payments remaining.

Having no further business, the Executive (EX) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Committees

Virtual Meetings

EXECUTIVE (EX) COMMITTEE

May 23, 2023 / March 31, 2023

Summary Report

The Executive (EX) Committee met May 23 and March 31, 2023, in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee:

1. Appointed Commissioner Scott A. White (VA) to serve on the International Association of Insurance Supervisors (IAIS) Executive Committee.
2. Approved the 2027 national meeting site locations: Spring National Meeting, Kansas City, MO; Summer National Meeting, New York, NY; and Fall National Meeting, Nashville, TN.

Draft: 8/10/23

REPORT OF THE EXECUTIVE (EX) COMMITTEE TASK FORCES

Climate and Resiliency (EX) Task Force—The Climate and Resiliency (EX) Task Force will meet Aug. 15 and anticipates the following action: 1) adopting its Spring National Meeting minutes; 2) hearing an update from the Solvency Workstream; 3) hearing a presentation from the Bermuda Institute for Ocean Sciences (BIOS) on rising sea levels; 4) hearing from Ceres on inclusive insurance; 5) hearing from Munich Re on coral reef insurance; and 6) hearing from California on atmospheric rivers.

Government Relations (EX) Leadership Council—The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting. The Leadership Council meets weekly in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss federal legislative and regulatory developments affecting insurance regulation.

Long-Term Care Insurance (EX) Task Force—The Long-Term Care Insurance (EX) Task Force conducted an e-vote that concluded Aug. 9, in lieu of the Summer National Meeting, and took the following action: 1) adopted its Spring National Meeting minutes. The Task Force also met May 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

Special (EX) Committee on Race and Insurance—The Special (EX) Committee on Race and Insurance will meet Aug. 14 and anticipates the following action: 1) adopting its Spring National Meeting minutes; 2) hearing an update on health equity; 3) hearing an update on the Member Diversity Leadership Forum; and 4) receiving a status report from its workstreams. At the end of last year, the Special Committee voted to disband Workstream One and Workstream Two (focused on diversity within the insurance industry, the insurance regulatory community, and the NAIC) and rename its remaining workstreams by product line—property/casualty (P/C), life, and health.

- **Property/Casualty (P/C) Workstream**—The P/C Workstream of the Special Committee has been looking at potential bias in marketing, access to insurance, underwriting, rating, and claims handling. The Workstream recently met with industry representatives to focus on underwriting and rating, having previously met to focus on marketing issues. These discussions help to inform the workstream as it looks at potential algorithmic bias and explores industry best practices.
- **Life Workstream**—The Life Workstream of the Special Committee met July 20 to discuss its next steps. The Workstream plans to continue its focus on “marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays” by developing a resource guide for regulators. The guide is intended to be a resource for information helpful to all insurance departments looking to take action to improve access and understanding in underserved communities. The Workstream plans to work in cooperation with the NAIC Diversity, Equity, and Inclusion (DE&I) Division and the State Diversity Leaders. A list of questions was distributed during the State Diversity Leaders Forum on July 24 to start to catalog state activity. The Workstream also plans to hear additional presentations. There are stakeholders interested in sharing resources and information for possible inclusion in the resource guide. The Workstream anticipates hearing a presentation from Colorado, as well as hearing presentations from consumer representatives and industry stakeholders that expressed an interest in presenting.

- **Health Workstream**—The Health Workstream of the Special Committee met in regulator-to-regulator session after the Spring National Meeting to consider its activities and initiatives for 2023. During that meeting, the Workstream decided to hold at least three meetings to continue its education on benefit design relating to preventive care and mental health coverage (beyond pure parity). The Health Workstream also plans to meet about the evolution of the federal Affordable Care Act (ACA) Section 1332 waivers. Additionally, it is considering additional meetings to hear about innovative programs and initiatives that states are doing that are designed to promote health equity. The Workstream is also working to finalize a collaborative space on NAIC Connect to provide a platform in which Workstream members can share with other NAIC members the information it has captured during its meetings on removing barriers to health insurance for historically disadvantaged communities. The thought is that the Workstream’s NAIC Connect page would be a living resource for the NAIC membership, and the Workstream can continue to build content and other tools for the states on this site. In addition, the Workstream hopes that this site could also serve as a platform for discussion and conversations related to health equity and other related topics.

Draft: 8/9/23

Model Law Development Report

Amendments to the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)*—Amendments to Model #171 are required for consistency with the federal Affordable Care Act (ACA) and the revisions to its companion model act, the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170)*. The Accident and Sickness Insurance Minimum Standards (B) Subgroup completed the revisions to Model #170 in late 2018, which the Executive (EX) Committee and Plenary adopted in February 2019. Therefore, they did not require approval of a Request for NAIC Model Law Development by the Executive (EX) Committee.

Soon after completing its work on Model #170, the Subgroup began considering revisions to Model #171. The Subgroup met every two weeks until it lost one of its co-chairs in December 2019. After a long hiatus since late 2019 because of the loss of a co-chair and the COVID-19 pandemic, as well as other resource issues, the Subgroup resumed its meetings in June 2021. The Subgroup has been meeting on a regular basis to discuss the comments received on Model #171. During the last few months of 2022, the Subgroup’s discussions focused on Section 8—Supplementary and Short-Term Health Minimum Standards for Benefits. This section establishes minimum standards for benefits for the products subject to the model, including accident-only coverage, hospital indemnity or other fixed indemnity coverage, and disability income protection coverage. The revisions also include a new section establishing minimum benefits for short-term, limited-duration (STLD) plans. The Subgroup completed its discussions of Section 8 in December 2022, including developing a new subsection establishing minimum benefit standards for STLD plans.

The Subgroup resumed its meetings in February 2023 and plans to continue meeting on a regular basis to continue its discussions and plans to work on the following Model #171 sections in this order: 1) the remainder of Section 8, including revisiting the proposed new subsection on STLD plans to discuss the Feb. 24 comments received on that section; 2) Section 7—Prohibited Policy Provisions; 3) revisit Section 5—Definitions and Section 6—Policy Definitions to reconcile any inconsistencies that may have arisen after the Subgroup’s review of the substantive provisions of Model #171; and 4) Section 9—Required Disclosure Provisions. The Subgroup is completing work on Section 9—Required Disclosure Provisions. The Subgroup hopes to finish its work to develop an initial draft of comments on Model #171 for public comment by the end of the year.

Amendments to the *Property and Casualty Insurance Guaranty Association Model Act (#540)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #540 during the 2022 Summer National Meeting. The amendments will address the continuity of guaranty fund coverage when a policy is transferred from one insurer to another. The Executive (EX) Committee also approved a Request for NAIC Model Law Development for additional amendments to Model #540 during the 2023 Spring National Meeting. The amendments will address guaranty association coverage of cybersecurity insurance. The Receivership Law (E) Working Group adopted draft revisions on July 24 that address both requests. On Aug. 14, the Receivership and Insolvency (E) Task Force exposed the draft revisions and a few edits subsequent to the Working Group’s adoption for a 30-day public comment period ending Sept. 14.

Amendments to the *Mortgage Guaranty Insurance Model Act (#630)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #630 during the 2013 Summer National Meeting. The Mortgage Guaranty Insurance (E) Working Group has developed proposed changes to the model, which the Financial Condition (E) Committee adopted on July 19, 2023. The full membership will consider adoption of the revised model during the Summer National Meeting.

Amendments to the *Nonadmitted Insurance Model Act (#870)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #870 during the 2021 Spring National Meeting. The amendments will modernize the model and bring it into alignment with the federal Nonadmitted and Reinsurance Reform Act (NRRRA). The Surplus Lines (C) Task Force met May 23, 2022, to discuss amendments to Model #870 and expose Model #870 for a 60-day public comment period ending July 21, 2022. It met Oct. 17, 2022, to hear a summary of comments received on the draft exposure and actions taken by the drafting group to address the comments. The Task Force exposed Model #870 for a 30-day public comment period ending Nov. 17, 2022. It discussed the comments received on the draft exposure during an open meeting on Dec. 12, 2022. On Jan. 23, 2023, the Task Force exposed a draft of Model #870 for a 14-day public comment period. The Task Force and the Property and Casualty Insurance (C) Committee adopted Model #870 during the Spring National Meeting. The Executive (EX) Committee and Plenary will consider adoption of the model during the Summer National Meeting.

Amendments to the *Unfair Trade Practices Act (#880)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #880 during the 2023 Spring National Meeting. The amendments will address the use of lead generators for sales of health insurance products and identify models and guidelines that need to be updated or developed to address current marketplace activities. The Improper Marketing of Health Insurance (D) Working Group distributed the initial draft on Aug. 31, 2022, for a public comment period ending Sept. 30, 2022. The Working Group met Nov. 3, 2022, to hear a summary of comments received on the draft exposure and actions taken by the Working Group to address the comments. The Working Group exposed revised amendments to Model #880 for a public comment period ending Nov. 18, 2022. The Working Group discussed the draft exposure and comments received during an open meeting on Dec. 3, 2022, during the Fall National Meeting. The Working group extended the review period for draft amendments to Model #880.

The Working Group met March 23, 2023, during the Spring National Meeting to hear a summary of comments on the draft exposure and actions the Working Group took to address the comments. The Working Group created a subject matter expert (SME) group to meet and finalize the draft amendments to Model #880. On July 10, the Working Group distributed the revised draft amendments for a public comment period ending July 21. The Working Group met July 27 to hear a summary of comments received on the draft exposure and action the Working Group took to address comments. The Working Group distributed revised amendments on Aug. 9, to be discussed at the Summer National Meeting for consideration of adoption.

New Model: *Insurance Consumer Privacy Protection Model Law*—During the 2022 Summer National Meeting, the Executive (EX) Committee approved a Request for NAIC Model Law Development for a new model that would replace existing models in order to enhance consumer protections and corresponding obligations of entities licensed by insurance departments to reflect the extensive innovations that have been made in communications and technology. The Privacy Protections (H) Working Group approved this request on Aug. 2. The drafting group met in regulator-to-regulator session Aug. 31, Sept. 15, Sept. 29, Oct. 4, Oct. 13, Dec. 1, and Dec. 5. The drafting group also met with companies privately to discuss current consumer data practices on Nov. 17, Nov. 29, Nov. 30, Dec. 5, Dec. 6, and Dec. 8. The Working Group met in open session Dec. 12 to hear presentations from an industry and a consumer perspective on general market practices regarding the use of personal information during the insurance process followed by an open discussion of these insights.

The Working Group exposed its initial draft of the new model (Model #674) Feb. 1, 2023, for a 60-day public comment period ending April 3. The drafting group met in regulator-to-regulator session Jan. 23 and March 15. The drafting group continued its meetings with companies privately to discuss current consumer data practices

on Feb. 16, March 1, March 2, March 7, March 8, March 9, March 14, April 5, April 12, and April 13. The Working Group discussed comments received and engaged with the public to continue to revise the privacy model law's language at the Spring National Meeting; during open Working Group meetings April 18, May 2, and May 16; and during the in-person, two-day interim meeting in Kansas City, MO, June 5–6.

The Working Group exposed the second draft of the new model (Model #674, version 1.2) July 11 for a public comment period ending July 28 because the new version was based on changes that were discussed at the interim meeting. The drafting group met in regulator-to-regulator session June 22, June 23, June 26, June 29, June 30, July 7, July 10, and July 20. The drafting group continued its meetings with companies privately to discuss current consumer data practices on July 28 with additional meetings scheduled for Aug. 2, Aug. 7, and Aug. 9. The Working Group met in open session July 25 to discuss comments received and to engage with the public to continue to revise the privacy model law's language. It will also meet in regulator-to-regulator and open sessions at the Summer National Meeting to discuss key topics noted in the comments received and to discuss an extension to continue to engage with interested parties in improving the model law's language, as appropriate to the model law's purpose.

CLIMATE AND RESILIENCY (EX) TASK FORCE

Climate and Resiliency (EX) Task Force Aug. 15, 2023, Minutes..... 4-13

Climate and Resiliency (EX) Task Force
Seattle, Washington
August 15, 2023

The Climate and Resiliency (EX) Task Force met Aug. 15, 2023. The following Task Force members participated: Lori K. Wing-Heier, Co-Chair (AK); Ricardo Lara, Co-Chair (CA), James J. Donelon, Co-Vice Chair (LA); Mike Kreidler, Co-Vice Chair (WA); Mark Fowler (AL); Alan McClain (AR); Barbara D. Richardson (AZ); Michael Conway represented by Peg Brown (CO); Andrew N. Mais (CT); Karima M. Woods (DC); Trinidad Navarro represented by Stephen C. Taylor and Susan Jennette (DE); Michael Yaworsky represented by Virginia Christy (FL); Gordon I. Ito represented by Jerry Bump (HI); Doug Ommen (IA); Dana Popish Severinghaus (IL); Amy L. Beard represented by Patrick O'Connor (IN); Sharon P. Clark (KY); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox represented by Steve Mayhew (MI); Grace Arnold represented by Peter Brickwedde (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Mike Chaney (MS); Troy Downing (MT); Mike Causey represented by Angela Hatchell (NC); Jon Godfread (ND); Eric Dunning (NE); D.J. Bettencourt represented by Christian Citarella (NH); Alice T. Kane represented by Leatrice Geckler (NM); Scott Kipper represented by Nick Stosic (NV); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Tom Botsko (OH); Andrew R. Stolfi represented by TK Keen (OR); Elizabeth Kelleher Dwyer (RI); Michael Wise represented by Will Davis (SC); Tregenza A. Roach (VI); Kevin Gaffney (VT); Nathan Houdek (WI); and Jeff Rude (WY). Also participating were: Michael Peterson (CA); and Wanchin Chou (CT).

1. Adopted its Spring National Meeting Minutes

The Task Force also met Aug. 2 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to preview the NAIC Climate Risk Dashboard.

Commissioner Kreidler made a motion, seconded by Commissioner Clark, to adopt the Task Force's March 24 minutes (see *NAIC Proceedings – Spring 2023, Climate and Resiliency (EX) Task Force*). The motion passed unanimously.

2. Heard a Presentation from the ASU Global Futures Laboratory on Global Temperature Rise

Commissioner Lara said sea level rise is an issue that presents insurance challenges, most notably when intense coastal storms are combined with high tides and storm surge. He said that leads to additional consequences for residential and commercial insurance markets.

Peter Schlosser (Arizona State University—ASU) said society has reached a new geological age in which humankind has touched every part of the planet, and this is highlighted through climate effects because they are visible to us. He said more extreme events are occurring at a higher frequency, and the challenge facing society is the short amount of time there is to respond.

Schlosser said while use of renewable energy is increasing, it cannot make up for the amount of energy from coal, oil, and gas that is being consumed. He said scientific data shows carbon emissions and an increased carbon dioxide concentration are heating the atmosphere. He said there is a global demand for more energy, but society is not at a point where it is using the kind of energy that does not lead to global warming. Schlosser said during the last decade, the warmest eight years on the planet were recorded.

Schlosser said extreme weather events, including wildfires, drought, and flooding, will continue to increase in frequency.

Schlosser said the melting of ice sheets in the Arctic and Antarctic regions has increased. He said the main contributor to sea level rise is the increase in melt days that cover large areas of Greenland and Antarctica. He said projections show a rise in sea level of 1 to 3 meters by the end of the current century. He said this would affect the seaports that ship 90% of globally exchanged goods.

Schlosser said the goal to cut emissions in half by 2030 is falling behind and that more carbon dioxide would have to be taken out of the atmosphere to make up for the lack of emissions reduction. He said the U.S. Department of Energy has made available \$3.5 billion to advance technology that can remove carbon from the atmosphere.

Schlosser said the work of the Global Futures Laboratory at ASU includes monitoring the health of critical ecosystems, such as coral reefs; innovating ethical energy system transformation; providing advanced decision support; and engaging stakeholder dialogues to support areas under pressure from climate risks. He said the decisions made in the next 10 years will likely shape the climate and how society is able to deal with it for the upcoming century.

Commissioner Lara said the Task Force will be hearing a presentation on parametric insurance products related to coral reefs.

Chou asked if nuclear fusion has been considered a solution for moving away from fossil fuels. Schlosser said nuclear energy, which is mainly based on nuclear fission instead of fusion, will not play a dominant role in solving the problem. He said smaller reactors conducting nuclear fission still involve the problem of nuclear waste.

Commissioner Kreidler asked if there is any message that could assist state insurance regulators in playing a more active role with insurance companies in recognizing the volatility of climate risks. Schlosser said the data over the last 10 years would show the evolution of the indicators of extreme events, such as wildfires and drought. He said this data would give enough information to conclude that now is the time to look at what role insurance can play in climate solutions. He said it is known that some areas prone to catastrophic events should not be rebuilt, and other areas should look at increasing resilience measures.

Commissioner Lara asked what happens to the Pacific Islands if sea level rise continues at the projected rate. Schlosser said coast lines are already eroding, and some islands will be completely underwater within a few decades. He said the 1.5-degree Celsius target set at the 2011 United Nations (UN) Climate Change Conference (COP17) would have allowed a good fraction of the islands to survive with adaptation.

3. Heard a Presentation from Ceres on an Inclusive Insurance Study and a Climate Risk Disclosure Study

Commissioner Lara said for communities faced with climate risk, insurance is critical to their overall resilience, yet increasing climate risks are causing challenges for insurance affordability and availability. He said pre-disaster mitigation is going to help communities avoid impacts and access insurance, and new approaches are needed so that some communities are not left behind.

Steven M. Rothstein (Ceres) said disaster insurance is critical for recovery. He said too many people are underinsured for disasters, are unable to afford coverage, or are unable to find coverage that meets their needs. He said there are new policies, regulatory changes, and innovative insurance products that can improve inclusivity in disaster insurance.

Rothstein said through conversations with state insurance regulators, insurers, and community groups, Ceres found five principles of inclusive insurance: 1) affordable; 2) accessible; 3) transparent and understandable; 4) people-centered; and 5) just.

Rothstein said its *Inclusive Insurance for Climate-Related Disasters* report included 14 recommendations for actions under federal and state policy, regulatory reform, local government programs, and private sector offerings. He said one example of this work is the roof fortifying programs being offered in several states. He said one way to fill the gaps in insurance inclusivity is with new products like microinsurance and parametric insurance.

Rothstein said Ceres and the California Department of Insurance (DOI) recently completed an analysis of the Task Force on Climate-Related Financial Disclosures (TCFD) reports. He said this analysis did not suggest that all insurers should answer the questions presented in the TCFD the same way, but they looked at the amount of information provided by the companies for each of the 11 recommendations. He said they used a machine learning (ML) analysis and rules-based text mining to review 480 unique TCFD reports. He said based on their review, 95% of reports provided information on risk management and strategy, and 39% of reports provided information on metrics and targets. He said 78% of reports provided information on six or more of the TCFD recommendations.

Rothstein said the completed analysis report includes a deeper analysis of 15 companies, reviewed against 200 TCFD-aligned data points to assess decision utility.

Rothstein said Ceres has released a report on an analysis of more than 400 insurance companies' investment portfolios. He said the 2019 data was provided by the California DOI. He said the analysis looked at both property/casualty (P/C) and life insurance companies, and reviewed how much companies invested in electric utilities, fossil fuels, and green bonds, among other categories.

Commissioner Downing asked if any research has been done on the risks of certain vulnerable communities if the transition away from fossil fuels is done too quickly. Rothstein said some of that research is available in the *Inclusive Insurance for Climate-Related Disasters* report. He said these economic problems are affecting communities of color disproportionately, and these problems are not specific to just coastal regions. Commissioner Roach said it is important to think about the theoretical questions of how ceasing the use of fossil fuels could have economic impacts on certain communities, but the climate data shows there are areas, particularly island communities, that will completely cease to exist due to the realities of climate impacts.

4. Heard a Presentation on Atmospheric River Storms

Director Wing-Heier said the Task Force continues its yearlong emphasis on the peril of flooding. She said the Task Force heard from two Canadian organizations at the Spring National Meeting, and the NAIC has maintained an emphasis on flood insurance data collection. She said there are certain types of storms where the impact is high rainfall in a specific location, causing substantial damage. She said many western states have areas that are not adjacent to large rivers but still have major flood events, and that is due to atmospheric rivers. She said the impacts seen in Alaska can be particularly damaging if an atmospheric river occurs on snow and ice. She said as state insurance regulators determine how to better mitigate the damage at the state and local level and how to advocate for federal risk mitigation, they need to understand what makes these storms different and so damaging.

Peterson said when looking at mitigating flood risk in individual communities, there is research that shows how specific types of flood events are going to cause an impact. He said all jurisdictions face flood risk and have had issues with flood insurance uptake, and more that is known about a specific flood event will help inform the advice for mitigation efforts.

Peterson said the first documented use of the term “atmospheric river” was in 1994, but data from the National Oceanic and Atmospheric Administration (NOAA) shows that there were major flooding events in the past that were caused by atmospheric rivers.

Peterson said atmospheric rivers tend to affect western states, although they do occur in the Northeast states but are less common. He said atmospheric rivers are long, narrow streams of water vapor that originate in the tropics. He said these storms will drop a month’s worth of precipitation in just a couple of days. He said California gets 50% of its water supply from atmospheric rivers, but they also account for 90% of flooding events.

Peterson said in Alaska, winds, flooding, and landslides from an atmospheric river caused an estimated \$29 million in damage to public infrastructure in 2020, not including private property losses. He said this year in California, an atmospheric river caused an estimated \$5 billion to \$7 billion in economic losses, with less than one-third of those losses being insured. He said in western states, 85% of flood losses are due to atmospheric rivers, and 95% of flood losses in coastal areas are due to atmospheric rivers. Peterson said these areas are also affected by storm surge. He said climate change is predicted to increase the temperature of these storms, which will increase intensity.

Peterson said scientists and policymakers are beginning to build a vocabulary around high-intensity rainfall. He said there is a proposed ranking system for severity of atmospheric river storms. He said in ranking zones 1, 2, and 3, atmospheric rivers are primarily beneficial to areas in need of the water supply. He said zones 4 and 5 are more hazardous and produce significant damage. He said this ranking system will help advise the type of mitigation needed for these storms.

Peterson said western states are at a high risk for intense atmospheric rivers and low insurance uptake, creating a protection gap challenge. He said these storms are a growing source of insured and uninsured losses. He said although these storms are specialized to certain areas of the country, they will have very high severity of losses. He said there is an opportunity for better risk communication and risk mitigation to reduce future losses.

5. Received an Update from its Solvency Workstream

Commissioner Birrane said at the 2022 Summer National Meeting, the Task Force accepted the recommendations of the Solvency Workstream to make referrals to three Financial Condition (E) Committee working groups to strengthen the oversight of the climate change impact on the financial condition of U.S. insurers. She said those referrals were made to the Financial Examiners Handbook (E) Technical Group, the Financial Analysis Solvency Tools (E) Working Group, and the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup. She said the Financial Examiners Handbook (E) Technical Group and the Financial Analysis Solvency Tools (E) Working Group have taken up those referrals, and each group is meeting in August to consider detailed guidance that NAIC staff have drafted to address those referrals. She said both groups expect to finalize their guidance by the end of 2023 for inclusion in the year-end 2023 handbooks. She said the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup has not yet taken up the referral and is waiting for the completion of the *Financial Examiners Handbook* and the *Financial Analysis Handbook* work. She said the Workstream has been focused on the evaluation and development of a U.S. regulatory approach to climate scenario analysis. She said the Workstream has been meeting in regulator-only session to do a deeper dive into the approaches and is working with NAIC staff to consider what methods will provide valuable information to state insurance regulators. She said the Workstream has reached directional consensus and is now working to build out a draft referral that is expected to be exposed for a public comment period in September.

Having no further business, the Climate and Resiliency (EX) Task Force adjourned.

GOVERNMENT RELATIONS (EX) LEADERSHIP COUNCIL

The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting.

LONG-TERM CARE INSURANCE (EX) TASK FORCE

Long-Term Care Insurance (EX) Task Force Aug. 9, 2023, Minutes..... 4-19
Revised March 13, 2023, Minutes (Attachment One) 4-20

Draft: 8/10/23

Long-Term Care Insurance (EX) Task Force
E-Vote *(in lieu of meeting at the 2023 Summer National meeting)*
August 9, 2023

The Long-Term Care Insurance (EX) Task Force conducted an e-vote that concluded Aug. 9, 2023. The following Task Force members participated: Michael Conway, Chair, (CO); Andrew R. Stolfi, Vice Chair, (OR); Lori K. Wing-Heier represented by Sarah Bailey (AK); Mark Fowler (AL); Alan McClain (AR); Barbara D. Richardson represented by Erin Klug (AZ); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Sally Frechette (DE); Michael Yaworsky represented by Christina Huff (FL); Dean L. Cameron (ID); Vicki Schmidt represented by Mandy Roe (KS); Sharon P. Clark (KY); Jim J. Donelon (LA); Kathleen A. Birrane represented by Brad Boban (MD); Timothy N. Schott (ME); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers (MO); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Ted Hamby (NC); Eric Dunning (NE); D.J. Bettencourt represented by Jennifer Li (NH); Alice Kane (NM); Scott Kipper (NV); Judith L. French represented by Laura Miller (OH); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Cassie Brown represented by R. Michael Markham (TX); Scott A. White represented by Doug Stolte (VA); Kevin Gaffney represented by Anna Van Fleet (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Allan L. McVey (WV).

1. Adopted its Spring National Meeting Minutes

The Task Force conducted an e-vote to consider adoption of its Spring National Meeting minutes, including edits from Michigan and Minnesota (Attachment One). The motion passed with a majority of the members voting in favor.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/EX CMTE/LTCITF/2023 Summer NM/minutes/LTCI(EX)TaskForce_080923_Minutes.docx

Draft: 8/9/23

Long-Term Care Insurance (EX) Task Force
Virtual Meeting (*in lieu of meeting at the 2023 Spring National Meeting*)
March 13, 2023

The Long-Term Care Insurance (EX) Task Force met March 13, 2023. The following Task Force members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair, represented by TK Keen (OR); Lori K. Wing-Heier represented by Sarah Bailey (AK); Mark Fowler (AL); Alan McClain represented by Jimmy Harris (AR); Barbara D. Richardson represented by Erin Klug (AZ); Ricardo Lara represented by Tyler McKinney (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro (DE); Michael Yaworsky represented by Lilyan Zhang (FL); Gordon I. Ito (HI); Doug Ommen represented by Klete Geren (IA); Dean L. Cameron (ID); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon represented by Tom Travis (LA); Gary D. Anderson represented by Rachel M. Davison (MA); Timothy N. Schott (ME); Anita G. Fox represented by ~~Karen Dennis Rachel Davison~~ (MI); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning (NE); Jennifer Catechis represented by Anna Krylova (NM); Scott Kipper (NV); Judith L. French (OH); Michael Humphreys (PA); Elizabeth Kelleher Dwyer represented by Megan Mihara (RI); Larry D. Deiter (SD); Cassie Brown represented by R. Michael Markham (TX); Kevin Gaffney (VT); Scott A. White (VA); Mike Kreidler (WA); Nathan Houdek represented by Diane Dambach (WI); Allan L. McVey (WV); and Jeff Rude (WY).

1. Adopted its 2022 Fall National Meeting Minutes

Keen made a motion, seconded by Commissioner Clark, to adopt the Task Force's Nov. 30, 2022, minutes (*see NAIC Proceedings – Fall 2022, Long-Term Care Insurance (EX) Task Force*). The motion passed unanimously.

2. Heard a Report on Industry Trends and Other Updates

Andersen said coordinated efforts between states have resulted in the completion of targeted reviews of year ending 2021 reserve adequacy filings. Review of the 2022 annual filings will begin soon. The following are key industry trends that have been seen and that will be monitored going forward:

- Cost-of-care inflation trends lead to more maximum daily benefit being used than originally expected. There is consensus among companies selling long-term care insurance (LTCI) that home care costs have increased over the past five to six years. There will likely be long-term impacts from this issue.
- There was a shift in situs of care from facilities to home care. Varying reports indicate the reversal of that trend back to facilities.
- Home care daily costs are starting to catch up with the cost of facility care.
- There is an increase in ~~incidents~~incidence and the length of claims. COVID-19 had caused lower ~~incidents~~incidence and shorter claims. So far, the impact of COVID-19 is short-term. COVID-19 is not seen as having a long-term impact on the finances of the blocks of business.
- Pre-claim wellness initiatives have had some impact on claims. Wellness initiatives may involve being proactive or preventing falls, providing early cognitive tests, and providing care for the family caregiver. It is still uncertain if the investments in these wellness initiatives will be more than offset by cost reductions.
- Improvements in technology and medical and drug advancements have potential impacts on claim costs.

Andersen said the Long-Term Care Actuarial (B) Working Group met Feb. 17 and exposed: 1) the information checklist submitted with rate increase filings; and 2) the actuarial methodologies used to review older blocks of

business. Comments on both exposures are due April 24. If any changes are made to the checklist or the methodologies, similar changes will be proposed to the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework). Review of the checklist is likely to be completed in 2023. Review of the methodologies will likely conclude in 2024.

3. Adopted Proposed Edits to the Checklist for Premium Increase Communications

Commissioner Conway said proposed edits to the *Checklist for Premium Increase Communications* were exposed for a 30-day public comment period ending Feb. 3. Five comment letters were received. A drafting group of consumer representatives and regulators from California, Pennsylvania, Vermont, and Virginia reviewed the comments and recommended a few edits in response to the comments.

Jane Koenigsman (NAIC) summarized the comments and the drafting group's responses (Attachment One). Comments were received from Wayne Enstice (University of Cincinnati), Patrick Cantilo (Cantilo & Bennett), Robert Wake (ME), Jan Andrews (NC), and Molly Nollette (WA).

Koenigsman said the comments from Enstice did not appear to be related to consumer communication but rather the review of rate increases and reduced benefit options (RBOs). She said the drafting group recommended referring those comments to the Long-Term Care Actuarial (B) Working Group.

Commissioner Kreidler made a motion, seconded by Superintendent Schott, to refer the comments received from Enstice to the Long-Term Care Actuarial (B) Working Group. The motion passed unanimously.

Koenigsman said the drafting group proposed additional edits to address certain comments, including duplicative checklist items, the use of references to "example" RBOs in the revisions, rate guarantees, default options, and other clarifying changes.

Hamby made a motion, seconded by Commissioner Kreidler, to adopt the revised *Checklist for Premium Increase Communications* (Attachment Two). The motion passed unanimously.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.

SPECIAL (EX) COMMITTEE ON RACE AND INSURANCE

Special (EX) Committee on Race and Insurance Aug. 14, 2023, Minutes 4-23

Draft: 8/29/23

Special (EX) Committee on Race and Insurance
Seattle, Washington
August 14, 2023

The Special (EX) Committee on Race and Insurance met in Seattle, WA, Aug. 14, 2023. The following Special Committee members participated: Andrew N. Mais, Co-Chair (CT); Chlora Lindley-Myers, Co-Chair (MO); Jon Godfread, Co-Vice Chair (ND); Scott A. White, Co-Vice Chair (VA); Lori K. Wing-Heier (AK); Mark Fowler (AL); Alan McClain (AR); Michael Conway (CO); Michael Yaworsky (FL); Doug Ommen (IA); Dean L. Cameron (ID); Dana Popish Severinghaus (IL); Amy L. Beard (IN); Sharon P. Clark (KY); James J. Donelon (LA); Judith L. French (OH); Glen Mulready (OK); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox (MI); Grace Arnold (MN); Troy Downing (MT); Mike Causey (NC); Eric Dunning (NE); Scott Kipper (NV); Andrew R. Stolfi (OR); Michael Humphreys (PA); Alexander S. Adams Vega (PR); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Jon Pike (UT); Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Jeff Rude (WY).

1. Adopted its Spring National Meeting Minutes

Commissioner Pike made a motion, seconded by Director Cameron, to adopt the Special Committee's March 23 minutes (*see NAIC Proceedings – Spring 2023, Special (EX) Committee on Race and Insurance*). The motion passed unanimously.

2. Heard an Update from AHIP on Health Equity

Dr. LaShawn McIver (America's Health Insurance Plans—AHIP) noted, as the Chief Health Equity Officer, she will lead AHIP's health equity initiatives, setting and driving strategies to improve health equity for underrepresented and medically underserved communities. She will also provide strategic leadership to drive an overall industry-wide health equity strategic road map for AHIP as a member-driven organization.

Commissioner Mais asked Dr. McIver what she anticipates will be her greatest opportunities and greatest challenge to advance health equity in this new role.

Dr. McIver responded that she anticipates coming from the federal Centers for Medicare & Medicaid Services (CMS) during a historic time shaping the future of a more equitable health care system to an organization that represents the other important part of the health care system, which is the private insurers and how they are helping to drive equity, there is opportunity to build a bridge across the entire health care system working towards a healthier nation through a more equitable quality health care system. In terms of challenges, there are differences in understanding what this means and what will be needed to get there as a collective, and understanding where, as a member-driven organization, AHIP members are and how they can coalesce around key priorities to help shift the health care system towards greater equity. Dr. McIver also noted that no one entity can do this work alone and that true health equity can only be achieved when working together. She said she looks forward to working with the NAIC to continue this important work.

Dr. McIver asked that as AHIP incorporates this new level of strategic leadership to advance health equity in the health care ecosystem, whether there is current work the NAIC would like to share.

Commissioner Arnold reported the Health Workstream has been focusing on preventive care and mental health care. The Workstream has discussed mental health care in particular from a parity perspective, but not from a disparity perspective. Anything AHIP can add to the conversation about what plans are doing to address those issues will be of value to the NAIC Membership.

Commissioner Birrane reported that the Special Committee is tracking artificial intelligence (AI) usage by health insurers and for a variety of purposes. One of the areas where health insurers in particular, along with health providers, look at demographic information and use AI for that purpose is to address health equity. Commissioner Birrane noted she would be interested in Dr. McIver's views of the right balance of what kind of information is sought and what kind of AI applications used to gather data and information are useful to get equitable outcomes.

Director Cameron asked how the NAIC can help support AHIP's efforts to promote greater equity in the health care system.

Dr. McIver responded that the NAIC has done incredible work. She said she believes that to develop the best solution, it is helpful to understand what is working from the NAIC perspective, where there are areas for improvement through the lens of equity, and what are the greatest opportunities for this collective to achieve all of those.

Director Cameron said he would have liked to have made more progress during his time as NAIC President with financial literacy and increasing consumer knowledge of the importance and benefits of having insurance coverage. He asked Dr. McIver if there is a way AHIP can help foster that discussion.

Dr. McIver said health and financial literacy are important parts of helping individuals understand health care coverage and navigate the health care system. She directed NAIC Members to a readily available tool that exists within the CMS Office of Minority Health (OMH) called From Coverage to Care, which is a suite of resources available on the internet allowing an individual to navigate the health care system.

3. Received an Update on the Member Diversity Leadership Forum

Chandara Phanachone (CA) provided an update on the Member Diversity Leadership Forum, highlighting the regulator diversity training coursework that has been launched titled Foundations of Diversity, Equity & Inclusion for Regulators. She said the coursework is designed to develop a common foundation for understanding the purpose and value of diversity, equity, and inclusion (DE&I). The coursework consists of three sections 1) understanding DE&I; 2) cultural proficiency: understanding, awareness, and competency; and 3) DE&I in the workplace. :

Gary Jones (PA) stated since its rollout in February 2023, 678 regulators have taken the Foundations of Diversity, Equity & Inclusion for Regulators course and the course rating, as of August 2023, is 4.2 out of 5.0. He said the purpose of this coursework is to come together and understand each other to make the community and workplace better.

Evelyn Boswell (NAIC) noted Ms. Phanachone and Mr. Jones are currently leading the Member Diversity Leadership Forum. Ms. Boswell said the Forum will continue hosting book clubs, attending recruiting fairs, and promoting regulator coursework. She said she is looking to connect department recruiters to Morgan State University, a historically Black college and university (HBCU), to assist insurance departments in finding actuarial science interns.

Director Cameron asked for a Foundation update. Kay Noonan (NAIC) said the Foundation is finalizing the arrangements for the first planned internship and scholarship program.

4. Received a Status Report on the Property/Casualty (P/C) Workstream

Commissioner Gaffney reported that the Property/Casualty (P/C) Workstream continues to focus on engaging with the Collaboration Forum activities related to algorithmic bias. He said the work is best conducted in a collaborative manner, not only through the Collaboration Forum but with the Life Workstream and Health Workstream, as well as the Big Data and Artificial Intelligence (H) Working Group.

Commissioner Gaffney said the Workstream is building on this fundamental work by looking at potential bias in marketing, access to insurance, underwriting, rating, and claims handling, including fraud detection. The Workstream is looking at the product life cycle, starting with marketing and access and moving to underwriting and rating. The Workstream has met with several insurers to focus on marketing and advertising activities. Commissioner Gaffney said that more recently, the Workstream has met with insurers to discuss underwriting and rating. These discussions help to inform the Workstream's work looking at potential algorithmic bias and exploring industry best practices. The Workstream will continue to investigate additional areas of the product life cycle, likely at the Fall National Meeting.

Commissioner Gaffney concluded by saying the Workstream is also looking at recent studies and reports concerning the possibility of unfair bias within underwriting and rating in ongoing research and conversations with additional parties.

5. Received a Status Report on the Life Workstream

Director French reported that the Life Workstream met July 20 to discuss next steps as the Workstream continues to focus on marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays.

Director French said the Workstream is moving forward with the development of a "resource guide" to be developed in cooperation with the NAIC DE&I Division and State Diversity Leaders. The Workstream envisions developing a resource guide that includes information helpful to state insurance departments looking to take action to improve access and understanding in underserved communities. As a first step, a list of questions was distributed during the State Diversity Leaders Forum on July 24 to catalog state activity. Director French noted the Workstream plans to hold additional meetings, first hearing from Colorado in October and, during the same meeting, a presentation from another state.

Director French concluded by sharing about the Workstream's July 20 meeting, during which it heard from stakeholders interested in sharing resources and information for possible inclusion in the resource guide. She said the Workstream anticipates holding an additional meeting to hear from consumer representatives and industry stakeholders who expressed an interest in also sharing resources and information.

6. Received a Status Report on the Health Workstream

Commissioner Arnold reported that the Workstream met at the Spring National Meeting in regulator-to-regulator session to consider its activities and meetings for 2023. During that meeting, the Workstream decided to: 1) continue its education on benefit design relating to preventative care and mental health coverage and disparities; 2) explore the evolution of the federal Affordable Care Act (ACA) Section 1332 waivers and the innovative uses of them that can be implemented to lower uninsured rates and reduce disparities in states; and 3) continue to provide a forum for sharing innovative programs and initiatives that states and companies are doing to promote health equity.

Commissioner Arnold said during the Workstream's July 24 meeting, it heard presentations focusing on preventative care and lowering barriers to such care, particularly with respect to chronic diseases. The presentations discussed the impact of lowering barriers to care that will increase health equity and reduce disparities. The Workstream is planning to hold a follow-up meeting on this topic in October or early November.

The Workstream plans to meet in late September or early October to hear presentations from a variety of stakeholders, including industry and consumers, on initiatives and programs to reduce mental health disparities.

Commissioner Birrane reported that the Workstream also is scheduled to meet Sept. 19 to hear presentations on the evolution of Section 1332 waivers and other market reforms aimed at lowering state uninsured rates. Additionally, the discussion will explore success in states that have amended their benchmark plans and other market reforms in states to make health insurance more accessible.

Commissioner Arnold noted that the Workstream is also working to create a collaborative workspace on the NAIC Connect platform to provide a forum for Workstream members to share with each other and other NAIC members the information the Workstream has captured during its past and future meetings on removing barriers to health insurance for historically disadvantaged communities. Due to the hard work of the NAIC Member Services & Engagement Division, the Workstream's NAIC Connect platform page is scheduled to go live within the next few weeks as part of the initial pilot rollout, along with the Innovation, Cybersecurity, and Technology (H) Committee. The Workstream plans to meet Sept. 21 to walk members through the features and content on the page.

Having no further business, the Special (EX) Committee on Race and Insurance adjourned.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

Life Insurance and Annuities (A) Committee Aug. 15, 2023, Minutes 5-2
Life Insurance and Annuities (A) Committee July 19, 2023, Minutes (Attachment One)..... 5-8

Draft: 8/29/23

Life Insurance and Annuities (A) Committee
Seattle, Washington
August 15, 2023

The Life Insurance and Annuities (A) Committee met in Seattle, WA, Aug. 15, 2023. The following Committee members participated: Judith L. French, Chair (OH); Carter Lawrence, Vice Chair, represented by Bill Huddleston and Toby Compton (TN); Mark Fowler (AL); Barbara D. Richardson (AZ); Philip Barlow (DC); Doug Ommen (IA); Justin McFarland (KS); James J. Donelon (LA); Eric Dunning (NE); Justin Zimmerman (NJ); Scott Kipper (NV); Adrienne A. Harris represented by John Finston (NY); Glen Mulready (OK); Scott A. White represented by Craig Chupp (VA); and Nathan Houdek (WI). Also participating were: Cynthia Amann (MO); Mike Chaney (MS); and Rachel Hemphill (TX).

1. Adopted its July 19 Minutes

Director French said the Committee met July 19. During this meeting, the Committee took the following action: 1) adopted its Spring National Meeting minutes; 2) adopted revisions to the *Valuation Manual*; and 3) adopted revised charges for the Life Actuarial (A) Task Force.

Commissioner Mulready made a motion, seconded by Huddleston, to adopt the Committee's July 19 minutes. (Attachment One). The motion passed unanimously.

2. Adopted the Report of the Life Actuarial (A) Task Force

Director French explained that the Accelerated Underwriting (A) Working Group has not met since the Spring National Meeting. She said a draft guidance document was exposed for public comment at the beginning of the year; however, to avoid potential conflicts and the duplication of efforts, the Working Group is on hold pending the completion of work underway under the Innovation, Cybersecurity, and Technology (H) Committee.

Director French said the Annuity Suitability (A) Working Group also has not met since the Spring National Meeting. She explained that the Working Group has plans to meet after the Summer National Meeting to continue its discussion of potential questions to add to the current frequently asked questions (FAQ) document related to the safe harbor/comparable standards provision in the revised *Suitability in Annuity Transactions Model Regulation* (#275). She said the Working Group did not meet while additional information was being gathered on how stakeholders are implementing the safe harbor/comparable standards provision to determine what additional questions should be added to the FAQ document.

Hemphill said the Life Actuarial (A) Task Force met Aug. 11–12, 2023. She said the Task Force received a presentation on state insurance regulator reviews of company filings for *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53). She said the Valuation Analysis (E) Working Group is performing reviews of AG 53 filings and coordinating with domestic regulators where outliers are identified. She said the Task Force will continue to coordinate with the Working Group to support the effectiveness of AG 53.

Hemphill said the Task Force exposed an amendment proposal form (APF) to allow for the listing of specific considerations (e.g., COVID-19) that companies must reflect in the companies' historical mortality improvement (HMI) rates. She said this change will promote greater consistency in how HMI rates are developed and thus allow greater flexibility for the Society of Actuaries (SOA) in the development of the future mortality improvement (FMI) rates.

Hemphill said the Task Force continued discussion on the work to develop a replacement generator of economic scenarios (GOES), including hearing an update from the American Academy of Actuaries (Academy) on interest rate acceptance criteria and a presentation by NAIC staff on additional quantitative results from the Economic Scenario Generator Field Test. She said the Task Force discussed a focus on increasing efficiency as it moves forward, including relying on model office testing whenever possible, which is more timely and flexible than full field testing. She said the Task Force continues to be actively engaged with industry on this technical topic.

Hemphill said the Task Force received an update from the SOA on a planned educational redesign that seeks to increase international relevancy and add flexibility for candidates. She said several state insurance regulators expressed serious concern with one aspect of the planned redesign. The SOA described a plan to remove U.S. regulatory material from the required materials and move it to an optional regulatory certificate. Hemphill said the Task Force expressed that an understanding of U.S. laws and regulatory materials should be required for all actuaries practicing in the U.S., not just appointed actuaries. She said if the SOA were to remove this material, it is likely that the Fellow of the Society of Actuaries (FSA) designation would no longer be adequate for actuaries to be qualified to practice in the U.S. without first completing a supplemental regulatory course. She said the SOA was open to feedback, and the Task Force will be sending a written response reiterating these concerns and will continue engaging with the SOA.

Chupp made a motion, seconded by Acting Commissioner Zimmerman, to adopt the report of the Life Actuarial (A) Task Force. The motion passed unanimously.

3. Heard a Presentation on Risks Facing the Life Insurance and Annuities Industry

Steve Hazelbaker (Noble Consulting Services Inc.) gave a presentation on the risks and challenges facing the life and annuities industry. He said he would discuss some of the recognized risks to the industry, including: 1) the risks posed by InsurTech; 2) federal and international regulatory developments; 3) private equity (PE) firm relationships with insurers; and 4) inflation.

Hazelbaker said InsurTech offers a lot of opportunities, but it presents risks and challenges. He said InsurTech may affect company distribution, internal processes, company strategies, and maybe even the group organization structure. He said the use of artificial intelligence (AI) and its governance also presents potential risks and challenges with respect to data security and unintended consequences.

Hazelbaker said federal and international regulatory developments may affect life and annuity insurers, as well as PE firm relationships with insurers, particularly as money managers for annuity carriers, or their involvement with ownership interests.

Hazelbaker said another risk factor that affects life and annuity carriers is inflation. He said growth in the annuity market is a particular concern. He discussed two factors contributing to annuity growth: 1) pension risk transfers; and 2) multi-year guaranteed annuities (MYGAs). He said pension buyouts are happening more frequently, and people turn to life and annuity carriers because they understand the mortality and liquidity risks that are involved with pensions. Annuities are also able to match asset and liability durations. He said about 20 companies currently dominate the market in this area, but sales were up 42% in 2022. He said MYGA sales also contributed to growth in annuities. He said sales of MYGAs doubled in 2022. Not only is there market risk in meeting the guarantees associated with MYGAs, but they also present liquidity risk, particularly at the end of the guaranteed terms.

Hazelbaker said annuity growth continued in the first quarter of 2023, largely fueled by the increase in interest rates. A lot of people in the 55–70 age group that are typically interested in buying annuities, as well as equity volatility, contributed to annuity growth. Equity volatility also contributed to annuity growth; i.e., the value of existing bond holdings at lower interest rates declines as interest rates rise. Hazelbaker said disintermediation risk

may come into play in the fixed annuity market when there are higher than expected surrenders and withdrawals from people seeking to get out of lower interest rate investments and buy higher yield investments. He said that introduces liquidity risk and market risk, and it emphasizes the importance of asset adequacy testing (AAT) by actuaries.

Hazelbaker discussed insurance investments. He said inflation and interest rate hikes can stress the banking sector, which indirectly affects life and annuity carriers. He said it may lead to the deterioration of corporate credit quality, which can lead to investment defaults. He said that can indirectly have an impact on equity valuations. He said people may be altering their investment strategies, which could lead to investments that are less liquid, more complex, have greater market volatility, have greater cash flow variability, and may involve affiliated investments to a greater extent. He said regulating investments is not getting any easier, and investments seem to evolve to meet guidelines but may be carrying more risks associated with those investments. He said some companies may be involved in selecting certain investments because of risk-based capital (RBC) arbitrage. He said the NAIC Capital Markets Bureau (CMB) recently put out a special report that addressed the impact of rising interest rates on U.S. insurer investments. He said there are several positive implications, like supporting investment income and benefitting life and annuity insurers' spread business. He said there also may be less pressure to invest in riskier assets to get the kind of yields that companies are seeking. He said life and annuity companies can also reinvest proceeds of maturing investments into investments that provide greater yields. He said the negative implications are that a company may have realized or unrealized losses due to the decline in the market value of fixed maturity investments. He also said existing mortgage loans at lesser rates could decline in market value, resulting in higher loan-to-value ratios.

Hazelbaker listed some additional risks and challenges to the industry that he puts on his personal list. He said he considers commercial real estate in the list of risk considerations that affect life and annuity insurers. He said the Mackenzie Consulting Group recently came out with a study indicating that commercial real estate may lose \$800 billion in value by 2030 based on a study involving nine major cities. He said reinsurance is complicated, but state insurance regulators need to be aware of the ceding and assuming activities of insurers and the related implications of inter-company reinsurance on life and annuity carriers. He said the retention of talent and intellectual capital is an ongoing challenge that successful companies will have to continue to meet. He said he also includes climate and other environmental factors on his list of challenges. He said climate and other environmental factors may affect the investments of life and annuity carriers, like fossil fuel holdings, mortgage loans depending on the location of the properties, and even the effect of mortality from a long-term perspective.

4. Heard a Presentation on the Unique Life Insurance Needs of the Military

Shawn Loftus (United Services Automobile Association—USAA) gave a presentation on the unique life insurance needs of the military and veterans. He said the USAA is focused on meeting the unique needs of this population. The USAA was founded in 1922 by 25 army officers. They decided to pool their money together to insure each other's vehicles because they were not able to get auto insurance. More than 100 years later, the USAA has grown to be a fully integrated financial services company. The USAA life insurance company was founded in 1963, and the Federal Savings Bank opened in 1983. Loftus said there are 37,000 employees across the U.S. and three overseas locations. He said the USAA is proud to provide exceptions, products, and services to the military community, including active duty service members, veterans, and their families.

Loftus explained that the military is a diverse community with unique needs. He said they are highly mobile. He said they move around frequently and can be deployed with very little notice, so accessibility and speed are important to them. He said they are also price-conscious. He said affordability is important, especially for enlisted members with limited discretionary income. He said they have dangerous and stressful jobs. He said they need products, services, and advice tailored to their needs, and they deserve the very best service levels. He said to serve these unique needs, the USAA has developed products and services tailored to fit the military community.

For example, the USAA offers no charge riders to currently serving military members to address severe injuries and military separation. Loftus said USAA partners with other carriers to offer products customized to the veteran community. He said the underwriting programs and guidelines are tailored to the unique jobs and needs of the military. He said they offer advice for unique circumstances like deployment. He said a deployment call can take a couple of hours, and members are walked through a lengthy checklist to help them get their accounts in order before they leave. He said the USAA survivor relations team is a specially trained group that compassionately helps surviving family members settle all their accounts across life insurance, property/casualty (P/C) insurance, and banking when there is a loss of a loved one. He said too often, the cause of the loss is suicide.

Loftus said mental health and suicide prevention are top issues of concern for the USAA. He said since the start of this century, more than 120,000 veterans have died by suicide. He said the veteran suicide rate is currently 1.5 times that of the general population. In June, the USAA announced the launch of a national campaign and coalition to address this national crisis. It is called “Face the Fight.” He said “Face the Fight” is a coalition of foundations, nonprofits, and veteran-focused organizations that have joined together to raise awareness and support for veteran suicide prevention. He said the aspiration is to cut the suicide rate in half by 2030. He said the mission of the initiative is to: 1) break the stigma of seeking help; 2) increase the conversation about the problem; and 3) complement the efforts of the U.S. Department of Veterans Affairs (VA), the U.S. Department of Defense, and many others to stop veteran suicide. More information can be found at facethefight.org or by emailing USAA@ElizabethDoleFoundation.org.

Loftus said the USAA recognizes that there is no simple solution to this complex problem. He said there are many organizations and public agencies that are leading impactful efforts to help decrease veteran suicide, and “Face the Fight” wants to add its support and amplify what others are already doing. He said as part of “Face the Fight,” individuals and groups of people are being asked to stand together and be a supportive network to our veterans. He said veteran suicide is not inevitable. When people face this fight together, there is hope. Loftus said veterans have long served this country with great dignity, honor, and duty, and it is our collective responsibility to help protect, support, and honor those who dedicated their lives to protect us. In response to a question by Director Richardson, Loftus further discussed the relationship between mental illness and suicide and how quickly suicidal ideations can occur. Commissioner Chaney mentioned that during the COVID-19 crisis, the Mississippi Insurance Department issued a telemedicine bulletin allowing access to mental health services remotely that saved over 50 suicide lives.

5. Heard an Update on the Life Workstream of the Special (EX) Committee on Race and Insurance

Director French said the Life Workstream of the Special (EX) Committee on Race and Insurance met July 20. She said the Workstream discussed its next steps as it continues to focus on its charge to consider “marketing, distribution and access to life insurance products in minority communities, including the role that financial literacy plays.” She said the Workstream is planning to move ahead and create a “resource guide” to be developed in cooperation with the NAIC Diversity, Equity, and Inclusion (DE&I) Division and the State Diversity Leaders.

Director French explained that the Workstream envisions developing a guide that includes information helpful to all insurance departments looking to take action to improve access and understanding in underserved communities. She said a list of questions was distributed during the State Diversity Leaders Forum on July 24 to start to catalog state activity.

Director French said the Workstream also plans to hold meetings to hear some additional presentations. She said the Workstream plans to hear a presentation from Colorado, as well as a presentation from another state on a call in early October.

Director French said several stakeholders expressed an interest in sharing resources and information for possible inclusion in the resource guide. The Workstream anticipates holding an additional call to hear from consumer representatives and industry stakeholders that expressed an interest in sharing.

Brenda J. Cude (University of Georgia) offered her assistance on the resource guide. Jennifer Cook (NAIC) said she would be working on the resource guide and reach out to Dr. Cude.

6. Discussed Other Matters

Director French said Tennessee organized the presentations for this meeting, and she welcomes other states similarly organizing future presentations to bring information to the Life Insurance and Annuities (A) Committee. Also, if there are other groups out there with information to share, she said they should reach out to Cook.

Birny Birnbaum (Center for Economic Justice—CEJ) expressed several concerns with the work of the Committee. He said he was unclear as to why the work of the Accelerated Underwriting (A) Working Group has been put on hold. He said efforts to address accelerated underwriting have been underway at the NAIC for seven years. He said it is unclear what efforts at the Innovation, Cybersecurity, and Technology (H) Committee are needed for the Working Group to offer guidance on (e.g., the use of consumer credit information and biometrics, both of which have been shown to be problematic). He said the NAIC had a session two years ago on bias in facial recognition.

Birnbaum asked whether there was a time frame for the receipt of the guidance from the Innovation, Cybersecurity, and Technology (H) Committee such that the Working Group can continue its work. He said the draft governance model that was developed by the Committee does not overlap with the specific consumer protection risks and regulatory guidance associated with accelerated underwriting.

Birnbaum said the NAIC completed the AI Principles three years ago. He said the AI Principles were intended to guide the work of NAIC committees and working groups regarding specific applications of AI, such as accelerated underwriting. He said instead of using that guidance, all the AI work of NAIC committees and working groups has gone to the Innovation, Cybersecurity, and Technology (H) Committee, where the issue appears to disappear.

Peter Kochenburger (Southern University School of Law) expressed his support for the concerns raised by Birnbaum regarding waiting until the Innovation, Cybersecurity, and Technology (H) Committee finishes its work on the bulletin. He said waiting for another high-level document that will not advance the discussion of the tougher issues facing accelerated underwriting simply delays for another year the substantive guidance and consumer protections that were promised in the AI Principles adopted three years ago. He said it seems like an unnecessary delay.

Commissioner Houdek provided an update about the work of the Accelerated Underwriting (A) Working Group and coordination with the Innovation, Cybersecurity, and Technology (H) Committee. He explained that the Committee is working on a model governance bulletin that has a broader scope than the accelerated underwriting guidance document, and it makes sense to pause the work of the Working Group until after the bulletin is completed to ensure the work products are aligned. He said once the bulletin is adopted, the Working Group will assess next steps and determine whether any adjustments are needed to the accelerated underwriting regulatory guidance document in light of the model governance bulletin.

Amann explained that the work of the Working Group began many years ago and started with the development of an informational paper, but the technology advanced ahead of the Working Group. She explained that the educational paper developed by the Working Group was a precursor to best practices or a model, and now that there are other groups like the Innovation, Cybersecurity, and Technology (H) Committee focusing on issues such

as AI, machine learning (ML), and other issues that affect the conclusions the Working Group may come to, there needs to be coordination.

Birnbaum expressed concern about the lack of progress by the Annuity Suitability (A) Working Group on the FAQ document addressing the safe harbor/comparable standards provision in the revised Model #275. He said the question of how to interpret and enforce the safe harbor provision has been a contentious question for a while. He said the Market Conduct Examination Guidelines (D) Working Group has been attempting to develop exam guidance related to the updated Model #275, but that effort has been stymied by the lack of clarity regarding the safe harbor provision from the Annuity Suitability (A) Working Group.

Commissioner Ommen provided an update about the progress of the Annuity Suitability Working Group. He explained that Model #275 has been adopted in over 40 states, and while he cannot speak to all the states, in Iowa they are undertaking reviews of the implementation by insurance companies, paying close attention to the use of the safe harbor principles. He said he appreciated Birnbaum's interest in more public discussion about the application of the safe harbor, and he anticipates that states will at some point have best practices with respect to the safe harbor to ensure that there is consistency and uniformity in the marketplace.

Birnbaum reiterated his longstanding concerns regarding illustrations. He said the Life Actuarial (A) Task Force proposed and the Life Insurance and Annuities (A) Committee adopted AG 49-B as a short-term fix to deceptive indexed universal life (IUL) illustrations. He said the Task Force and the Committee acknowledged that illustrations suffered from other problems. He said the illustration model was developed and adopted before indexed products appeared in the marketplace. He asked why there has not been any activity on life insurance and annuity illustrations.

Birnbaum asked why the Life Workstream of the Special (EX) Committee on Race and Insurance is focusing on financial literacy. He said he did not understand how financial literacy addresses the availability and affordability of life insurance in underserved communities or the design of products that address the needs of underserved communities. He said the focus on financial literacy suggests that the problem is with buyers and not sellers.

Director French explained that the Life Workstream of the Special Committee had a number of charges, but it had been and continues to be focused on its charge to consider "marketing, distribution and access to life insurance products in minority communities, including the role that financial literacy plays."

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.

SharePoint/NAIC Support Staff Hub/A Cmte/2023 Summer/A_mtgmin final_rev

Draft: 7/20/23

Life Insurance and Annuities (A) Committee
Virtual Meeting
July 19, 2023

The Life Insurance and Annuities (A) Committee met July 19, 2023. The following Committee members participated: Judith L. French, Chair (OH); Carter Lawrence, Vice Chair (TN); Barbara D. Richardson (AZ); Karima M. Woods represented by Phillip Barlow (DC); Doug Ommen (IA); Vicki Schmidt (KS); James J. Donelon (LA); Eric Dunning (NE); Justin Zimmerman (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Scott A. White represented by Craig Chupp (VA) and Nathan Houdek (WI). Also participating was: Rachel Hemphill (TX).

1. Adopted its Spring National Meeting Minutes

Commissioner Lawrence made a motion, seconded by Commissioner Ommen, to adopt the Committee's March 23 minutes (*see NAIC Proceedings – Spring 2023, Life Insurance and Annuities (A) Committee*). The motion passed unanimously.

2. Adopted 2024 Valuation Manual Amendments

Hemphill said the Life Actuarial (A) Task Force adopted 12 amendment proposal forms (APFs) to be effective for the 2024 *Valuation Manual*. She said the APFs fall into three categories: 1) APFs primarily adding documentation in reporting (2022-06, 2022-09, 2023-02, and 2023-04); 2) APFs primarily clarifying requirements or correcting typos (2022-07, 2022-10, 2023-01, and 2023-03); and 3) APFs making more substantive changes to requirements (2021-08, 2022-08, 2023-05, and 2023-07). Hemphill summarized the substance of this third category of APFs.

Hemphill said that APF 2021-08 reduces the reporting lag for VM-51, Experience Reporting Formats, from two years to one year to gather more timely industry mortality data and thus allow more timely creation of mortality tables. She said that APF 2022-08 makes variable annuities that are exempt from complex modeling have reduced VM-G, Appendix G – Corporate Governance Guidance for Principle-Based Reserves, governance requirements, analogous to the treatment already in place for life principle-based reserving. She said APF 2023-05 allows alternate hedge modeling and hedge error reflection for variable annuities indexed credit hedging programs, reflecting the distinct nature of these hedging programs. She said APF 2023-07 removes one of two methods available to companies for calculating part of VM-21, Requirements for Principle-Based Reserves for Variable Annuities, reserve requirements, effective in 2025, due to this method being rarely used. She said only two companies are affected by this change. One company is immediately able to use the more common method, and the other will be able to use the other method by 2025 and is directly working with its domestic regulator to effectuate the change.

Director Richardson made a motion, seconded by Commissioner Lawrence, to adopt the 2024 *Valuation Manual* amendments. (*see NAIC Proceedings – Summer 2023, Plenary, Attachment ?*). The motion passed unanimously.

3. Adopted Amended Life Actuarial (A) Task Force Charges.

Hemphill explained that on June 15, the Life Actuarial (A) Task Force voted to adopt its updated charges, which include: 1) the removal of the Indexed-Linked Variable Annuities (ILVA) Subgroup. Hemphill said the Subgroup completed its charges when the Task Force adopted Actuarial Guideline LIV—Nonforfeiture Requirements for Index-Linked Variable Annuity Products (AG 54); and 2) the addition of the Generator of Economic Scenarios (E/A)

Subgroup and its charges. Hemphill explained that state insurance regulators and interested parties agreed that a formal subgroup was needed to have a robust and proactive approach to future economic scenario generator (ESG) maintenance and updates, including to: a) oversee the ESG governance framework; b) review material generator updates; c) monitor economic conditions for any signal that there is a need for additional generator updates; d) support generator implementation; and e) maintain generator acceptance criteria. Mike Yanacheak (IA) and Pete Weber (OH) have agreed to serve as Subgroup chair and vice chair, respectively.

Carmello made a motion, seconded by Director Dunning, to adopt the amended Life Actuarial (A) Task Force charges. The motion passed unanimously.

4. Discussed Other Matters

Jennifer Cook (NAIC) said that the agenda for the Special (EX) Committee on Race and Insurance Life workstream meeting on July 20 has changed. The Colorado presentation has been postponed to a future meeting. The workstream will still meet to discuss its next steps.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.

Life Actuarial (A) Task Force
Seattle, Washington
August 11–12, 2023

The Life Actuarial (A) Task Force met in Seattle, WA, Aug. 11–12, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang and Bruce Sartain (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); D.J. Bettencourt represented by Jennifer Li (NH); Justin Zimmerman represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Amanda Fenwick and Michael Cebula (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); Jon Pike represented by Tomasz Serbinowski (UT); and Allan L. McVey represented by Tim Sigman (WV).

1. Adopted its July 20, June 15, June 1, May 18, May 11, May 4, April 27, April 20, and April 13 Minutes and the Reports of the Experience Reporting (A) Subgroup, the IUL Illustration (A) Subgroup, the Longevity Risk (E/A) Subgroup, and the Variable Annuities Capital and Reserve (E/A) Subgroup

The Task Force met July 20, June 15, June 1, May 18, May 11, May 4, April 27, April 20, and April 13. During these meetings, the Task Force took the following action: 1) adopted its Spring National Meeting minutes; 2) exposed the recommendation on Valuation Manual (VM)-20, Requirements for Principle-Based Reserves for Life Products, historical mortality improvement (HMI) and future mortality improvement (FMI) rates; 3) adopted amended charges to remove the Index-Linked Variable Annuity (A) Subgroup and add the Generator of Economic Scenarios (GOES) (E/A) Subgroup; 4) responded to a referral from the Statutory Accounting Principles (E) Working Group (SAPWG) regarding negative interest maintenance reserves (IMRs); 5) exposed a template with additional disclosures related to company IMR; 6) adopted amendment proposal form (APF) 2023-07, which removes the company-specific market path (CSMP) method from VM-21, Requirements for Principle-Based Reserves for Variable Annuities; 7) adopted APF 2023-05, which revises hedge modeling in VM-21 to address index credit hedging; 8) exposed APF 2023-08, which clarifies the treatment of negative IMR; 9) discussed the GOES field test results in joint session with the Life Risk-Based Capital (E) Working Group; 10) adopted APF 2021-08, which removes the one-year lag in mortality experience reporting in VM-51, Experience Reporting Formats; 11) responded to a referral from the Valuation of Securities (E) Task Force regarding bond risk measures; 12) adopted APF 2023-04, which clarifies company mortality experience disclosures in VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation; and 13) exposed APF 2023-06, which would add a cash surrender value floor to the VM-20 stochastic reserve calculation and change the VM-20 net premium reserve calculation for universal life with secondary guarantees (ULSG) products.

The Task Force reviewed the reports of the Experience Reporting (A) Subgroup, the Indexed Universal Life (IUL) Illustration (A) Subgroup, the Longevity Risk (E/A) Subgroup, and the Variable Annuities Capital and Reserve (E/A) Subgroup.

Chupp made a motion, seconded by Yanacheak, to adopt the Task Force's July 20 (Attachment One), June 15 (Attachment Two), June 1 (Attachment Three), May 18 (Attachment Four), May 11 (Attachment Five), May 4 (Attachment Six), April 27 (Attachment Seven), April 20 (Attachment Eight), and April 13 minutes (Attachment Nine) and the reports of the Experience Reporting (A) Subgroup (Attachment Ten), the IUL Illustration (A)

Subgroup (Attachment Eleven), the Longevity Risk (E/A) Subgroup (Attachment Twelve), and Variable Annuities Capital and Reserve (E/A) Subgroup (Attachment Thirteen). The motion passed unanimously.

2. Adopted the Report of the VM-22 (A) Subgroup

Slutsker delivered the report of the VM-22 (A) Subgroup.

Slutsker made a motion, seconded by Chupp, to adopt the report of the VM-22 (A) Subgroup (Attachment Fourteen), including its July 26 (Attachment Fifteen), June 13 (Attachment Sixteen), May 24 (Attachment Seventeen), May 10 (Attachment Eighteen), April 26 (Attachment Nineteen), April 19 (Attachment Twenty), and April 12 (Attachment Twenty-One) minutes. The motion passed unanimously.

3. Heard a Presentation on Findings from State Insurance Regulator Reviews of AG 53 Company Filings

Andersen walked through a presentation (Attachment Twenty-Two) on findings from the state insurance regulator reviews of company filings for *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53). Regarding the 7% net yield threshold, Sartain asked how materiality was brought into the analysis. Andersen said a chart later in the presentation plotted the net yield assumptions of companies compared to their percentage allocation of high-net-yielding assets, and a greater focus was placed on the companies with higher net yields and high-yielding asset allocations. On slide 12 of the presentation, Hemphill asked for clarification on what the corridor lines on the scatterplot illustrated. Andersen replied that companies above the top line are a definite concern, those inside the corridor are a moderate concern, and companies below the corridor either have very low exposure or relatively low net yield assumptions and would not be a concern for this analysis.

Muldoon asked why the 7% net yield threshold was used for all assets, and he suggested varying the threshold by asset class. Andersen responded that the current analysis does not recognize a risk-adjusted variance between asset classes, and the approach aligned with language in VM-21. Eom said he wants clarification on the range of the asset allocations for companies reporting extreme net yields. Andersen replied that state insurance regulators did not receive that information, but it would be included in a proposed guidance document that could be used for second-year AG 53 reports. Serbinowski inquired as to how the asset allocations of companies may change in later durations of their cash flow testing models. Again, Andersen noted that they did not have this information, but it was being considered to be requested in the proposed guidance document.

Leonard Mangini (Mangini Actuarial and Risk Advisory LLC) proposed that a cap on the net asset earned rate (NAER) could be implemented in asset adequacy testing (AAT) in a similar fashion to VM-21, and also noted that Canada had instituted a similar requirement. Andersen noted that although that option was not currently being considered by the Task Force, it could be a possible consideration in the future. Regarding difficult-to-value and/or illiquid assets, Serbinowski asked how state insurance regulators could be comfortable with high net yields for these assets. Andersen noted that this issue was contemplated in the language of AG 53, and it is acceptable for companies to: 1) add more complexity to their modeling to properly quantify the risks associated with these assets; or 2) add additional conservatism. However, Andersen noted that it was not appropriate for companies to simply exclude these assets from their analysis due to the challenges of valuing them.

4. Heard a Presentation on the VM-20 HMI and FMI Factors

Marianne Purushotham (Society of Actuaries—SOA) walked through a presentation (Attachment Twenty-Three) on the American Academy of Actuaries (Academy) Mortality Improvements Life Working Group (MILWG) 2023 recommendation for VM-20 HMI and FMI rates. Hemphill asked whether mortality deterioration due to the opioid epidemic was being graded off in later durations as the rates transitioned into the long-term FMI

assumption. Purushotham confirmed that some of the effects of the opioid epidemic were being graded off consistent with the U.S. Social Security Administration (SSA) intermediate mortality projection data, but the SSA was including more of this data in its projections over time. Slutsker asked how frequently the long-term rate was updated. Purushotham said the long-term rate is reset whenever the scale resets. Brian Bayerle (American Council of Life Insurers—ACLI) asked how more mortality experience from insured lives would be incorporated into the analysis in future years, along with the timing. Purushotham replied that work had been done on comparing the life insurance experience data that the NAIC has collected to the different deciles of the general population data ahead of coming up with a recommendation potentially for discussions in 2024 and implementation in 2025.

Scott O’Neal (NAIC) then went over a presentation (Attachment Twenty-Four) that highlighted the NAIC’s plan to perform a model office analysis of the impact of the new set of HMI and FMI rates. Bayerle asked whether the NAIC had the capability to change the weighting of the population in the model office to be more representative of industry life insurance populations. O’Neal said the model office population could be modified, but the plan for this year was to illustrate the impacts separately for 30- and 50-year-olds from the current model population.

5. Exposed APF 2023-09

Hemphill discussed APF 2023-09, which adds guidance on the application of HMI and FMI factors in VM-20. Bayerle asked how the reflection of mortality improvement considerations “identified by the SOA” would work in practice and whether that language needed to be included in the *Valuation Manual*. Hemphill suggested striking the “identified by the SOA” language from APF 2023-09, along with an additional editorial change for the exposed version.

Chupp made a motion, seconded by Reedy, to expose APF 2023-09 (Attachment Twenty-Five) with the edits described above for a 45-day public comment period ending Sept. 27. The motion passed unanimously.

6. Heard a Presentation from the Academy on Interest Rate Acceptance Criteria for the GOES

Jason Kehrberg (American Academy of Actuaries—Academy) and Link Richardson (Academy) went over a presentation (Attachment Twenty-Six) on the interest rate acceptance criteria for the GOES. After Kehrberg noted that the interest rate level criteria for the 30th and 70th percentiles had been removed, Hemphill noted concern that a large portion of scenarios included in the determination of the conditional tail expectancy (CTE)-70 reserve calculation would not be included in the criteria. Kehrberg replied that with any additional criteria that are added, there is a balancing act between meeting the additional criteria and the other criteria that have been prioritized. Weber asked how the buffers that are included in the acceptance criteria were developed. Kehrberg noted that the setting of the buffers was an iterative approach that utilized testing using a reference model and expert judgment.

O’Neal stated that recent United States Treasury (UST) rate experience had included large inversions for a prolonged period, and he asked how this recent experience would look compared to the acceptance criteria. Kehrberg replied that the Academy could take a look at the question and consider whether to add the most recent experience to the acceptance criteria to see how much the criteria would change. Yanacheak noted that the frequency of worse-than-history events was based on judgment, but he asked why historical data could not also be utilized. He further stated that perhaps different periods of time could be looked at, and a frequency of breakout events could be determined. Kehrberg noted that a lack of data could be a problem, as history is just a single scenario, and up to 10,000 scenarios would be produced from the GOES. However, Kehrberg noted that it is something that could be looked at and added to the analysis. After Kehrberg introduced the “sojourn” acceptance criteria where UST rates would need to stay within a corridor for a predefined period of time, Yanacheak questioned whether the currently proposed model would be able to meet this acceptance criteria and how it would fit with the state insurance regulator geometric average-based low-for-long acceptance criteria.

Kehrberg replied that the sojourn acceptance criteria were not intended to replace the geometric average-based low-for-long acceptance criteria but instead were meant to be complementary and capture product-specific risks that may not be addressed by the geometric average-based low-for-long criteria.

7. Heard a Presentation on the GOES Field Test C-3 Phase I Results

O’Neal went over a presentation (Attachment Twenty-Seven) of the GOES Field Test C3 Phase I results. Slutsker asked if O’Neal incorporated the factor-based floor into his analysis. O’Neal responded that he did make some limited comparisons of the floor, but more work would be needed to understand the model-based results’ relationship to the floor. However, he stated that comparing the range of factors from the factor-based calculation to the average factor from the model-based calculation for each of the baseline and field test runs, it looked like many participants would likely hold the factor-based floor.

Slutsker observed that for the baseline field test run, approximately half of the participants did not hold a positive capital requirement using their cash flow models for C3 Phase I, and he asked O’Neal if he found that to be surprising. O’Neal stated that he did find it surprising, and although additional analysis could be performed, it seemed that there were limited situations where the model-based calculation would dominate over the factor-based calculation. Hemphill said although the comparison to the factor-based floor would be interesting, the fact that some of the model-based calculations were coming in so low needs to be looked into further. Reedy asked whether with more volatile scenario sets and the limited number of scenarios currently used in C3 Phase I, more period-to-period variation in results would be expected. Hemphill responded that the smaller subsets could have had a material effect on the results and muddied the potential impact of the different field test scenario sets. Richardson noted that during an analysis they also looked at the impact of the present value of ending surplus to understand the impact of different scenario sets, and the results could be masked when just looking at a present value of accumulated deficiencies.

8. Heard an Update from the Compact

Katie Campbell (Interstate Insurance Product Regulation Commission—Compact) delivered an update on the activities of the Compact. Serbinowski noted the work that the Compact is doing to develop filing standards for ILVA products and encouraged state insurance regulators to: 1) get involved in the activities of the Product Standards Committee; and 2) try and understand why a company would file a product with their state instead of the Compact. Serbinowski concluded his comments by stating that the Compact does a tremendous job at reviewing product filings.

9. Heard an Update from the Academy on Pre-Tax Versus Post-Tax IMR

Linda Lankowski (Academy) from the Academy’s Life Valuation Committee noted that she would be discussing considerations around using pre-tax versus post-tax IMR in reserve calculations and presenting with Sheldon Summers (Academy), Dave Neve (Academy), Bruce Friedland (Academy), and Maambo Mujala (Academy). Lankowski stated that the committee has recently published a paper called “Pre-Tax vs. Post-Tax Interest Maintenance Reserves in Stochastic Principle-Based Reserves.” She added that in 2021, a comment letter on the VM-22 draft noted that pre-tax IMR in the reserve calculation could mean that reserves posted to the balance sheet might not be sufficient. After discussion of the comment letter at the VM-22 (A) Subgroup, Lankowski said the Academy Life Valuation Committee was asked to investigate.

Friedland provided background on the IMR, noting that formulaic reserves were in place when the IMR was adopted. He stated that the aim of the IMR was to keep consistency between the assets and liabilities when assets are sold in dynamic interest rate environments. Without IMR, he stated that there is a potential inconsistency in which the asset side of the balance sheet would be unlocked, but the liability side would not. He stated that as a

result, the IMR was introduced to set aside gains and losses arising from asset sales and prevent them from having an immediate impact. He noted, however, that principle-based reserves (PBR) are different from formulaic reserves in that they are effectively unlocked and reset on each valuation date.

Mujala outlined three options for the treatment of IMR in reserving: 1) allocating pre-tax IMR; 2) allocating post-tax IMR; and 3) no IMR used in the determination of reserves. She spoke in favor of allocating pre-tax IMR, noting that using pre-tax IMR in the determination of the reserves allows for a neutral balance sheet impact. Lankowski noted that some view allocating post-tax IMR as more appropriate on a theoretical basis and as more tax efficient. Finally, she noted that some support the removal of IMR from the determination of the reserve, as the deterministic and stochastic reserve calculations are based on future cash flows, which are not affected by IMR. However, she noted that the removal of IMR may be inappropriate for products that use formulaic reserves.

Neve summarized the discussion by noting that there is no recommendation from the Academy on any approach, as there is no perfect answer from an actuarial perspective. He additionally stated that IMR is not expected to be material; although, dropping the IMR completely from the PBR calculation may be material for some companies. However, he stated that this materiality issue probably needs more research and discussion for VM-21.

10. Heard an Update from the SOA on Research and Education

Cindy MacDonald (SOA) delivered a presentation (Attachment Twenty-Eight) on the SOA's research initiatives. Regarding the SOA's lapse study for fixed annuities, Tsang asked if the study included partial withdrawals in addition to full surrenders. MacDonald noted that the study only currently includes full surrenders, to which Tsang responded that he would also like to receive information on partial withdrawals from the study. She also asked state insurance regulators if they would be willing to help solicit participants for experience studies for areas where state insurance regulators want to see more data, and Hemphill and other state insurance regulators noted a willingness to do so.

Stuart Klugman (SOA) then provided a presentation (Attachment Twenty-Nine) on the SOA's planned changes to the SOA's Fellowship Pathway. Hemphill noted several concerns she had with the proposed changes to the Fellowship Pathway, including: 1) more actuaries than just the appointed actuary are involved in the work that supports the actuarial opinion and memorandum, and all of those actuaries need regulatory information; 2) the removal of the regulatory content could cause an actuary not to meet the U.S. Qualification Standards; and 3) a lack of regulatory knowledge could reduce compliance with statutory regulations. Andersen, Reedy, Yanacheak, and Cebula all noted support for Hemphill's comments. Hemphill noted that as a next step, a letter would be drafted noting the concerns with the proposed changes to the Fellowship Pathway for consideration by the Task Force.

11. Heard an Update from the Academy Council on Professionalism and Education

Ken Kent (Academy) introduced Laura Hanson (Actuarial Standards Board—ASB) and Shawna Ackerman (Actuarial Board for Counseling and Discipline—ABCD), who would be jointly delivering the Academy Council on Professionalism and Education's update. Hanson discussed Actuarial Standards of Practice (ASOPs) 24, 40, and 46–47, which are currently exposed to public comment. She additionally noted that ASOPs 7, 12, and 41 are expected to be exposed for comments in the next three to six months, and ASOP 10 and 57 have recently been adopted.

Ackerman said the ABCD received about 100 requests for guidance over the past year. About 20 of those requests, she noted, were in the life practice area.

12. Heard an Update from the Academy Life Practice Council

Slutsker and Amanda Barry-Moilanen (Academy) delivered a presentation (Attachment Thirty) on the activities of the Academy Life Practice Council.

13. Exposed the GRET

MacDonald walked through a presentation on the 2023 Generally Recognized Expense Table (GRET) recommendation. Chou asked why the direct market and niche marketing expense trends were so different compared to the prior year. MacDonald noted that volatility in the companies participating in the GRET from year to year could cause opposing changes in the trend rather than any underlying expense relationship.

Slutsker made a motion, seconded by Yanacheak, to expose the GRET presentation and recommendation (Attachments Thirty-One and Thirty-Two, respectively) for a 30-day public comment period ending Sept. 12. The motion passed unanimously.

14. Discussed IMR Guidance, APF 2023-08, and the IMR Template

Hemphill led the discussion on IMR guidance (Attachment Thirty-Three), APF 2023-08 (Attachment Thirty-Four), and the IMR template (Attachment Thirty-Five). Bayerle spoke to the ACLI's comment letters (Attachments Thirty-Six and Thirty-Seven), noting concerns including that: 1) the timing of the request for the template could come before it would be able to be reviewed by an external auditor; and 2) some of the items addressed by APF 2023-08, the IMR guidance, and the IMR template would need to be updated depending on the action of the SAPWG. Hemphill responded that she expected that the delivery of the IMR template would be consistent with the April 1 date for PBR actuarial reports and the timing for the asset adequacy memoranda, and she also noted that the Task Force expected to update APF 2023-08, the IMR guidance, and the IMR template to be consistent with the action the Working Group takes on IMR.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Life Actuarial (A) Task Force
Virtual Meeting
July 20, 2023

The Life Actuarial (A) Task Force met July 20, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill; Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Marti Hooper (ME); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); D.J. Bettencourt represented by Jennifer Li (NH); Justin Zimmerman represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); and Michael Humphreys represented by Steve Boston (PA).

1. Adopted its Spring National Meeting Minutes

Hemphill noted that the Task Force would be considering whether to adopt its Spring National Meeting minutes. Chupp noted two error corrections to the table of contents in the Spring National Meeting minutes packet.

Yanacheak made a motion, seconded by Chupp, to adopt the Task Force's March 20–21 minutes with the error corrections mentioned by Chupp (*see NAIC Proceedings – Spring 2023, Life Actuarial (A) Task Force*). The motion passed unanimously.

2. Exposed the 2023 VM-20 HMI and FMI Recommendation

Marianne Purushotham (Society of Actuaries—SOA) walked through a presentation on the Mortality Improvements Life Working Group (MILWG) 2023 recommendation (Attachment One-A) for the VM-20, Requirements for Principle-Based Reserves for Life Products, historical mortality improvement (HMI) and future mortality improvement (FMI) rates. Chou asked why there was a big difference in the youngest attained ages between the smoothed and unsmoothed rates. Purushotham said that there was a lack of data at those ages and that she would provide additional information on the proportion of data at those ages. Chou then asked about the variation in the COVID-19 shock impact between the attained ages in the FMI rates. Purushotham noted that the data the SOA used to determine the impact showed a lot of variation by age. Chupp asked why the 2026 projection year FMI rate was not zero across all ages, given the earlier description of the methodology. Purushotham stated that she would follow up on that question.

Chupp made a motion, seconded by Chou, to expose the 2023 VM-20 HMI and FMI recommendation for a 30-day public comment period ending Aug 23, 2023. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Life Actuarial Task Force (LATF)—7/20/23

DB1

2023 Plan

Presented at 2023 NAIC Spring Meeting

- Revisit historical HMI methodology in light of recent and expected experience - completed DB0
- Revisit smoothing approach for HMI and FMI—completed
- Approach to COVID-19 impact for 2023—FMI (future mortality improvement) and HMI (historical mortality improvement)—completed
- Insured vs. general population HMI and FMI recommendations (begin work in 2023)
- Revisit FMI margin structure
- Review recommendation for MI with 2008 VBT Limited Underwriting (LU) table

2

© 2023 Society of Actuaries. All rights reserved.
May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Agenda

- Provide an update on work completed:
 - ▣ Revisit historical HMI methodology in light of recent and expected
 - ▣ Revisit smoothing approach for HMI and FMI
 - ▣ Approach to COVID-19 impact for 2023—FMI (future mortality improvement) and HMI (historical mortality improvement)
- Present recommendation for 2023 HMI and FMI scales
- Provide an update on next steps for remaining 2023 work plan

3

May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

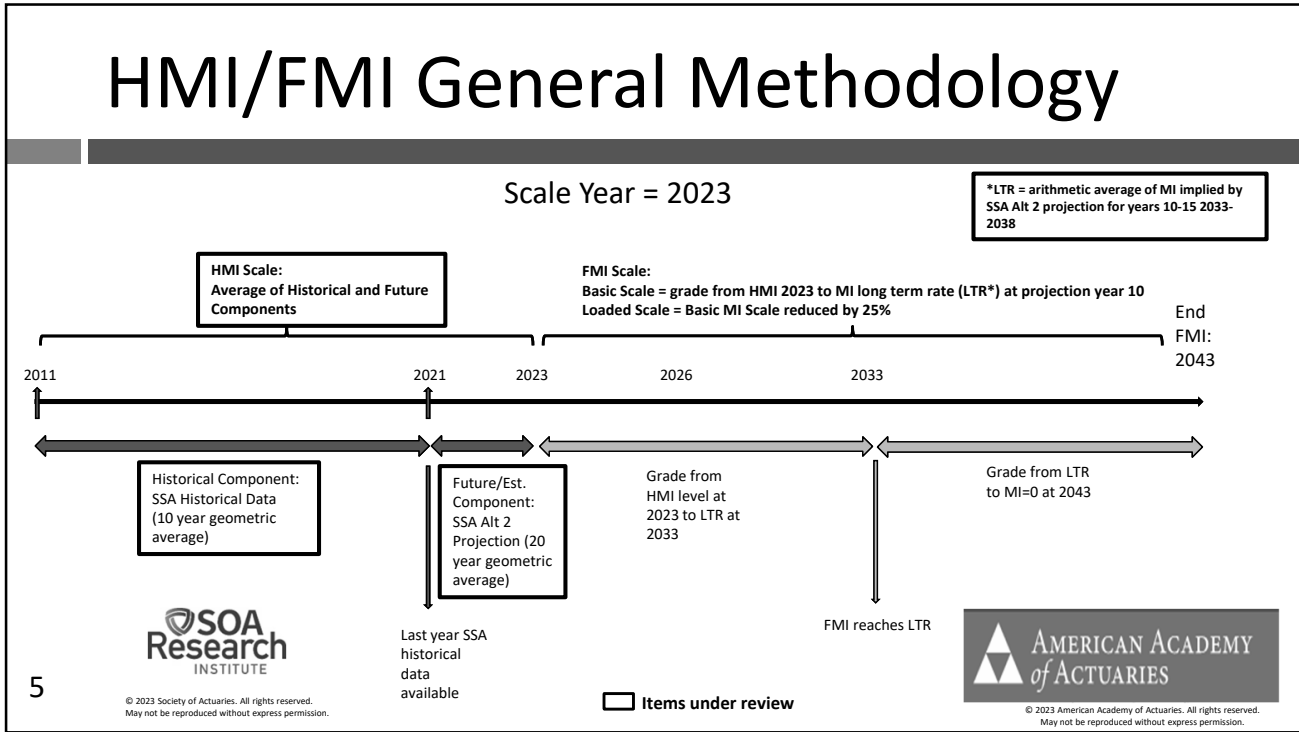

Revisit HMI Methodology

© 2023 Society of Actuaries. All rights reserved.
May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

- # HMI Methodology Review Items
1. **Historical averaging period (10 years)**
 - ▣ Mortality improvement between 2011-2021 (last year through which SSA historical data has been compiled and published)
 2. **Future averaging period (20 years)**
 - ▣ From last year of historical data available
 3. **Averaging method**
 - ▣ Calculation of historical and future averages
 - ▣ Weighting of historical and future
- SOA Research INSTITUTE
- AMERICAN ACADEMY of ACTUARIES
- 6

- © 2023 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

HMI Methodology Review Items Recommendation: Historical Averaging Period (currently 10 years)

Recommendation: remain at 10 years

- Recent experience (2011-2021)
- Reduces year-to-year potential volatility of shorter periods but experience is relevant

7

© 2023 Society of Actuaries. All rights reserved.
May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

HMI Methodology Review Items Recommendation: Future Averaging Period (currently 20 years)

Recommendation: remain at 20 years

- Smooths out potential SSA Alt 2 early projection year bumps

8

© 2023 Society of Actuaries. All rights reserved.
May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

HMI Methodology Review Items Recommendation: Averaging Method

Averaging method: currently use geometric average over historical and future periods

Recommendation: continue to use geometric approach for 2023

Consider moving to arithmetic average rather than geometric for both historical and future components (will re-examine for 2024 scale work)

- ❑ Relies less on only the beginning and ending year experience
- ❑ Not much difference between arithmetic and geometric average results for years since we implemented the annual life MI scale updates
- ❑ Consistent with the FMI LTR determination

May not be reproduced without express permission.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Review Smoothing Approach

	Current Method	Recommendation
1. Ages 0-15 (juvenile)	Use adult average (18-84) x 1.5	Use 0-20 average
2. Ages 16-20	Linear interpolation from juvenile rate to adult rate at age 21	Use 0-20 average
3. Ages 21-84	Use Adult Average 18-84	Break into more detailed age groups: 0-20 25-40 45-60 65-85 Linear interpolation between groups.
4. Ages 85-94	Linear interpolation from adult rate to .0025 per year ultimate level at age 95	Linear interpolation from 65-85 average to .001 per year ultimate level at age 95 (use .001 due to COVID considerations)
5. Ages 95 and later	Use constant .0025 (used .001 for 2022 due to COVID impact considerations)	Use constant .001 due to COVID considerations

COVID-19 Impact

COVID-19 DJNO impact considerations

- Ensuring COVID-19 impact is considered
- Some companies with high credibility will use their best estimate mortality (including implied historical improvement) for long periods before grading to industry
 - Creates potential disconnect between HMI and the recommended industry FMI scale

Recommendation: COVID impact will be included in the first few years of the FMI scale for 2023 (similar to approach for 2022 scale work)

Update on Next Steps for 2023

- ▣ Insured vs. general population HMI and FMI recommendations (work continues)
- ▣ Revisit FMI margin structure
- ▣ Review recommendation for MI with 2008 VBT Limited Underwriting (LU) table
 - Keep the HMI and FMI scales at 0 MI for all ages
 - Look at additional data sources to support this

Life Actuarial (A) Task Force
Virtual Meeting
June 15, 2023

The Life Actuarial (A) Task Force met June 15, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Marti Hooper (ME); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Adopted its Amended Charges

Hemphill walked through the Task Force's amended charges, noting that the changes reflect the removal of the Index-Linked Variable Annuity (A) Subgroup and the addition of the Generator of Economic Scenarios (GOES) (E/A) Subgroup.

Leung made a motion, seconded by Slutsker, to adopt the amended charges (Attachment Two-A), noting that the charges of the ILVA (A) Subgroup had been met and that the GOES (E/A) Subgroup would have Mike Yanacheak (IA) as Chair and Weber as Vice-Chair. The motion passed unanimously.

2. Considered its Response to the Statutory Accounting Principles (E) Working Group Referral on Negative IMR

Hemphill walked through a written response (Attachment Two-B) to the Statutory Accounting Principles (E) Working Group referral on negative interest maintenance reserve (IMR). Carmello suggested that the impetus for the request from the Working Group to build an IMR reporting template was that the template could then be used to justify admitting negative IMR. Hemphill responded that the Task Force's response would indicate that asset adequacy testing (AAT), given the lack of prescription, was not an effective guardrail to justify admitting negative IMR. Carmello further inquired if part of the functionality of the template would track whether the proceeds from the sales of bonds that drove negative IMR balances were used to reinvest in new bonds. Hemphill noted that the next agenda item would be to discuss the potential exposure of the IMR template and that the purpose of the template was to contain additional disclosures that would allow a reviewing actuary to understand how negative IMR is being handled, regardless of whether the Working Group decides to allow negative IMR to be admitted.

Hearing no objection from Task Force members, Hemphill said that the written response would be referred to the Working Group.

3. Exposed the IMR Template

Hemphill discussed the IMR template (Attachment Two-C) that would be a component of the Task Force's work product related to the negative IMR referral from the Working Group. Leung asked if the template would apply to both companies that have negative total IMR balances and those that have positive overall IMR balances. Hemphill noted that: 1) the focus would be on companies that have total company negative IMR balances but could also be useful for companies with positive total company IMR balances; and 2) initially, the template would be optional

and filled out at the request of regulators. Leung then noted some editorial and error corrections to the template, which Hemphill agreed to change. Brian Bayerle (American Council of Life Insurers—ACLI) requested that the length of the exposure period be the maximum number of days that would still allow for discussion at the Summer National Meeting.

Chupp made a motion, seconded by Leung, to expose the IMR template with the editorial and error corrections that were discussed for a 44-day public comment period ending July 28. The motion passed unanimously.

Having no further business, the Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/LATF Calls/06 15/June 15 Minutes.docx

Draft: 5/23/23

Adopted by the Life Actuarial (A) Task Force, TBD

2023 Proposed Charges

LIFE ACTUARIAL (A) TASK FORCE

The mission of the Life Actuarial (A) Task Force is to identify, investigate, and develop solutions to actuarial problems in the life insurance industry.

Ongoing Support of NAIC Programs, Products, or Services

1. The **Life Actuarial (A) Task Force** will:

- A. Work to keep reserve, reporting, and other actuarial-related requirements current. This includes principle-based reserving (PBR) and other requirements in the *Valuation Manual*, actuarial guidelines, and recommendations for appropriate actuarial reporting in blanks. Respond to charges from the Life Insurance and Annuities (A) Committee and referrals from other groups or committees, as appropriate.
- B. Report progress on all work to the Life Insurance and Annuities (A) Committee and provide updates to the Financial Condition (E) Committee on matters related to life insurance company solvency. This work includes the following:
 - i. Work with the American Academy of Actuaries (Academy) and the Society of Actuaries (SOA) to develop new mortality tables for valuation and minimum nonforfeiture requirements, as appropriate, for life insurance and annuities.
 - ii. Provide recommendations for guidance and requirements for accelerated underwriting (AU) and other emerging underwriting practices, as needed.
 - iii. Evaluate and provide recommendations regarding the VM-21, Requirements for Principle-Based Reserves for Variable Annuities/*Actuarial Guideline XLIII—CARVM for Variable Annuities* (AG 43) standard projection amount (SPA), which may include continuing as a required floor or providing as disclosure. This evaluation is to be completed prior to year-end 2023.
 - iv. Work with the SOA on the annual development of the Generally Recognized Expense Table (GRET) factors.
 - v. Provide recommendations and changes, as appropriate, to other reserve and nonforfeiture requirements to address issues, and provide actuarial assistance and commentary to other NAIC committees relative to their work on actuarial matters.
 - vi. Work with the selected vendor to develop and implement the new economic scenario generator (ESG) for use in regulatory reserve and capital calculations.
 - vii. Monitor international developments regarding life and health insurance reserving, capital, and related topics. Compare and benchmark these with PBR requirements.

2. The **Experience Reporting (A) Subgroup** will:

- A. Continue the development of the experience reporting requirements within the *Valuation Manual*. Provide input, as appropriate, for the process regarding the experience reporting agent, data collection, and subsequent analysis and use of experience submitted.

LIFE ACTUARIAL (A) TASK FORCE (continued)

3. The **Generator of Economic Scenarios (GOES) (E/A) Subgroup** of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force will:

- A. Monitor that the economic scenario governance framework is being appropriately followed by all relevant stakeholders involved in scenario delivery.
- B. Review material economic scenario generator updates, either driven by periodic model maintenance or changes to the economic environment and provide recommendations.
- C. Regularly review key economic conditions and metrics to evaluate the need for off-cycle or significant economic scenario generator updates and maintain a public timeline for economic scenario generator updates.
- D. Support the implementation of an economic scenario generator for use in statutory reserve and capital calculations.
- E. Develop and maintain acceptance criteria that reflect history as well as plausibly more extreme scenarios.

~~3.4.~~ The **Indexed Universal Life (IUL) Illustration (A) Subgroup** will:

- A. Consider changes to *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020* (AG 49-A), as needed. Provide recommendations for the consideration of changes to the *Life Insurance Illustrations Model Regulation* (#582) to the Task Force, as needed.

~~4.~~ The **Index Linked Variable Annuity (A) Subgroup** will:

- A. ~~Provide recommendations and changes, as appropriate, to nonforfeiture, or interim, value requirements related to index-linked variable annuities (ILVAs).~~

5. The **Longevity Risk (E/A) Subgroup** of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group will:

- A. Provide recommendations for recognizing longevity risk in statutory reserves and/or risk-based capital (RBC), as appropriate.

6. The **Variable Annuities Capital and Reserve (E/A) Subgroup** of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force will:

- A. Monitor the impact of the changes to the variable annuities (VA) reserve framework and RBC calculation and determine if additional revisions need to be made.
- B. Develop and recommend appropriate changes, including those to improve accuracy and clarity of VA capital and reserve requirements.

7. The **Valuation Manual (VM)-22 (A) Subgroup** will:

- A. Recommend requirements, as appropriate, for non-variable (fixed) annuities in the accumulation and payout phases for consideration by the Task Force. Continue working with the Academy on a PBR methodology for non-variable annuities.

[SharePoint/NAIC Support Staff Hub/Committee Charges/2023/01_Draft Charges](#)

MEMORANDUM

TO: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
Kevin Clark, Vice-Chair of the Statutory Accounting Principles (E) Working Group

FROM: Rachel Hemphill, Chair, Life Actuarial (A) Task Force
Craig Chupp, Vice-Chair, Life Actuarial (A) Task Force

RE: Life Actuarial (A) Task Force Response on Negative IMR

DATE: June 15, 2023

Background

On March 27, 2023 a memorandum from the Statutory Accounting Principles (E) Working Group (SAPWG) was received by the Life Actuarial (A) Task Force (LATF) with a referral for consideration of the Asset Adequacy Testing (AAT) implications of negative IMR. Specifically, the Working Group recommended a referral to the Task Force to consider the following:

1. Development of a template summarizing how IMR (positive and negative) is reflected within AAT.
2. Consideration of the actual amount of negative IMR that is to be used in AAT, noting that as negative IMR is included, there is a greater potential for an AAT liability.
3. Better consideration and documentation of cash flows within AAT, as well as any liquidity stress test considerations.
4. Ensuring that excessive withdrawal considerations are consistent with actual data. (Insurers selling bonds because of excess withdrawals should not use the IMR process.)
5. Ensuring that any guardrails for assumptions in AAT are reasonable and consistent with other financial statement / reserving assumptions.

Recommendation

On its April 27th call, LATF discussed the referral from SAPWG. LATF agreed on the following actions:

Develop IMR Template

LATF is drafting a template with additional disclosures on the reflection of IMR in Principle-Based Reserving (PBR) and AAT. We have requested input from the American Academy of Actuaries and the American Council of Life Insurers on a

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509	p 202 471 3990	f 816 460 7493
Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197	p 816 842 3600	f 816 783 8175
New York One New York Plaza, Suite 4210, New York, NY 20004	p 212 398 9000	f 212 382 4207

www.naic.org

potential template. The template's disclosures would aim to support verification of the requirements SAPWG is considering for potential admittance of negative IMR, including confirming:

1. That IMR is appropriately allocated for PBR and AAT,
2. That any negative IMR amounts reflected in starting assets do not generate income and so increase reserves in PBR and/or decrease reserve sufficiency in AAT,
3. That admitted negative IMR does not reflect bonds sold due to historical or anticipated future excess withdrawals, and
4. That admitted negative IMR only reflects bonds sold and replaced with similar bonds.

For items three and four above, we note that while LATF can request verification and justification from companies, this may be difficult for companies to demonstrate. For item three, we can require additional disclosures including actual to expected experience for withdrawals. For item four, it is not yet clear what verification companies could provide.

This template would be optional but recommended starting with 2023 reporting and could be required starting in 2025. Individual regulators could request this information during reviews if warranted before 2025.

Issue Guidance on Consistency

LATF is drafting guidance for year-end 2023 and 2024, consistent with the guidance LATF issued for year-end 2022 but updated for SAPWG's potential admittance of some portion of aggregate negative IMR. That is, LATF continues to affirm that a principle-based, reasonable, and appropriate allocation of IMR for PBR and AAT would be consistent with handling of the IMR asset for statutory reporting. LATF will also consider an Amendment Proposal Form to make changes directly in the Valuation Manual to clarify the treatment of negative IMR starting with the 2025 Valuation Manual. This work continues to address the concern raised that there would be a "double hit" if negative IMR were not admitted while being required to be reflected in PBR and/or AAT.

Recommendation to SAPWG Regarding AAT

LATF recommends to SAPWG that any decision to admit or not admit aggregate negative IMR should not rely on AAT at this time. We wish to clarify that AAT is not formulaic, is heavily judgment-based, and generally does not contain prescriptive guardrails on that judgment, such as the reinvestment guardrail and other guardrails that apply in PBR. In response to specific concerns around a lack of consistency in AAT asset assumptions, Actuarial Guideline (AG) 53 was developed to provide regulators with additional disclosures, but again does not contain guardrails. AG 53 review work is currently under way. Moreover, this is not the only area where concerns could arise regarding the reliability of specific AAT results. We do not believe it would be appropriate to admit negative IMR if doing so was depending on AAT as the sole or primary safeguard for any related solvency concerns.

AAT IMR Flag: Ok

Admitted negative (disallowed) IMR should not reflect asset sales due to excess withdrawals, either historical excess withdrawals or anticipated future excess withdrawals (where the company anticipates future withdrawals that are "excess" as defined by IMR instructions - above 150% of the prior two years). First, discuss and support with Actual to Expected analysis the level of historical excess withdrawals and anticipated future excess withdrawals. This discussion may be supplemented by other analysis and A/E's, such as for lapse data. Second, please confirm and support that any admitted net negative IMR is not due to asset sales related to excess withdrawals. Note that if the company cannot provide strong support, then the Admitted Negative (disallowed) IMR shall be 0.

(Enter summary here, and attach additional documentation as necessary.)

Admitted negative (disallowed) IMR is limited to IMR generated from losses incurred from the sale of bonds, or other qualifying fixed income investments, that were reported at amortized cost prior to the sale, and for which the proceeds of the sale were immediately used to acquire bonds, or other qualifying fixed income investments, that will be reported at amortized cost. Please confirm and support that any admitted net negative IMR is generated by losses that satisfy that requirement. Note that if the company cannot provide strong support, then the Admitted Negative (disallowed) IMR shall be 0.

(Enter summary here, and attach additional documentation as necessary.)

Draft: 6/28/23

Life Actuarial (A) Task Force
Virtual Meeting
June 1, 2023

The Life Actuarial (A) Task Force met June 1, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill; Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil and Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT); Allan L. McVey represented by Tim Sigman (WV).

1. Adopted APF 2023-05

Chupp walked through a series of editorial changes that had been made to amendment proposal form (APF) 2023-05 in response to his comment letter (Attachment A). Hemphill noted that the Task Force still needed to decide on the final minimum index credit hedging error. Brian Bayerle (American Council of Life Insurers – ACLI) noted a preference for a 1% minimum hedging error, further stating that a higher minimum error could penalize companies with a very tight hedging strategy. Weber stated that from his experience reviewing Ohio domiciled companies, he has seen hedging errors very close to zero, making the 1% minimum hedging error a reasonable guardrail. Reedy noted a preference for a 2% minimum guardrail and noted it could be revisited at a later date if warranted. Given the disagreement, Hemphill asked Jennifer Frasier (NAIC) to conduct a straw poll. Frasier conducted the poll, then noted that there was a fairly even mix between members supporting a one percent guardrail and members supporting a two percent guardrail.

Weber made a motion, seconded by Tsang, to adopt APF 2023-05 (Attachment B) with a minimum index credit hedging error of 1.5%. The motion passed unanimously.

2. Adopted 2023-07

Bayerle spoke the ACLI's comment letter (Attachment C) regarding APF 2023-07, noting that the ACLI requests that regulators work closely with any companies that would be impacted by the removal of the Company-Specific Market Path (CSMP) method from VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Hemphill noted that the CSMP method was very infrequently used and that outreach to the affected companies had already begun.

Slutsker made a motion, seconded by Reedy, to adopt APF 2023-07 (Attachment D). During discussion of the motion, Reedy asked to make an editorial adjustment to make the effective date "on or after" January 1st rather than simply "after". Slutsker agreed to modify the motion for the editorial adjustment suggested by Reedy. The motion passed unanimously.

3. Exposed IMR Guidance and APF 2023-08

Hemphill said given that the Statutory Accounting Principles (E) Working Group is considering admitting some portion of negative interest maintenance reserves (IMRs), the Task Force would consider issuing additional temporary guidance effective starting year-end 2023 to ensure that the NAIC's reserve and capital standards are consistent with the IMR accounting treatment. Hemphill also noted that APF 2023-08 had been developed to clarify the IMR treatment consistent with the guidance but could only be effective for the 2025 Valuation Manual at the earliest. Bayerle requested a 45-day exposure period for the IMR guidance and APF 2023-08.

Leung made a motion, seconded by Chou, to expose the IMR Guidance (Attachment Three-E) and APF 2023-08 (Attachment Three-F) for 45-day public comment period. The motion passed unanimously.

4. Heard Update on VM-20 HMI and FMI Rate Development

Marianne Purushotham (Society of Actuaries – SOA) noted that she intended to present a recommended set of historical and future mortality improvement (HMI and FMI) rates for use in VM-20, Requirements for Principle-Based Reserves for Life Products at the June 29th meeting of the Task Force. Purushotham noted that given the continued impacts of the COVID-19 virus and the VM-20 requirements related to HMI and FMI, the group would recommend continuing with the approach that was used last year where the mortality deterioration resulting from COVID-19 would be included in the FMI rates in the initial projection years. Hemphill noted that the Task Force would consider amendments to the Valuation Manual in the future to allow for potential methodology improvements, but that the approach Purushotham laid out made sense. As no Task Force members objected to the approach, Purushotham said that her group would move forward with developing the recommendation.

5. Heard Update on IMR Template Development

Hemphill noted that a template to gather additional information on how companies report IMR was being developed to help address concerns with total company negative IMR balances. Hemphill further stated that the template had been shared with the American Academy of Actuaries (Academy) to receive feedback and would be exposed on an upcoming call.

Having no other business, the Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/LATF Calls/06 01/June 01 Minutes.docx

Date: May 15, 2023

Virginia is submitting comments regarding the following exposure:

APF 2023-05 (Index Credit Hedging)

Comments:

1. The language should be consistent with the new definition of “index crediting strategies”. The phrase “indexed interest strategies” is used in two places (VM-21 Section 4.A.4.b.i and VM-31 Section 3.F.8.d.x) and should be replaced with “index crediting strategies”.
2. The capitalization should be consistent with VM-01, in that defined terms are not capitalized unless they are proper nouns. Therefore, the three defined terms should not be capitalized in VM-01 or anywhere else in the document.

Thank you for your consideration of these comments.

 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Brian Bayerle, ACLI

Title of the Issue:

Revise hedge modeling language to address index credit hedging.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-01, VM-21 Section 4.A.4, VM-21 Section 6.B.3, VM-21 Section 9, VM-21 Section 9.C.2, VM-21 Section 9.E.7, VM-31 Section 3.F.8.d

Formatted: Highlight

January 1, 2023 NAIC Valuation Manual, APF 2020-12

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Index credit hedging is fundamentally different than the dynamic GMxB hedging which formed the conceptual underpinnings for VM-21. For example, the relatively fixed parameters of traditional GMxBs drive the hedging approach. In contrast, indexed products (including RILAs) have flexible crediting parameters which are continually reset based on hedge availability and costs, as well as current market conditions. In short, GMxB contract features drive hedging, while index product hedging drives contract features.

Since the reforms of VM-21 and C3P2, ILVA products have experienced major market growth. Several carriers, with the agreement of regulators and auditors, have interpreted the current VM-21 guidance as permitting the effects of index credit hedging to be reflected in product cash flows instead of within the “best efforts” and “adjusted” scenarios. Both regulators and industry would benefit from the codification of this approach within VM-21.

ACLI’s proposal borrows heavily from the Academy’s draft VM-22. The “error” for index credit hedging is describes as a percentage reduction to hedge payoffs. The percentage reduction must be supported by relevant, credible, and documented experience. A minimum of [1%/2%] is proposed as a regulatory guardrail.

The ACLI proposal would subject index credit hedging to the “clearly defined” documentation requirements of VM-21. Substantively, the change would (a) include index credit hedge purchases with the VM-21 “adjusted” run, and (b) permit index credit hedging to reflect a different, and potentially lower, level of ineffectiveness.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23, 5/15/23, 6/1/23	SO		
Notes: APF 2023-05			

ACLI supports aligning the index credit hedging guidance between VM-21 and VM-22. We started with draft VM-22 verbiage in creating this APF. In a few areas, our members have suggested technical improvements to the draft VM-22 definitions. It may be appropriate to carry these over to VM-22.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-01

The term “iIndex cCredit hHedge mMargin” means a margin capturing the risk of inefficiencies in the company’s hedging program supporting index credits. This includes basis risk, persistency risk, and the risk associated with modeling decisions and simplifications. It also includes any uncertainty of costs associated with managing the hedging program and changes due to investment and management decisions.

The term “iIndex cCredit” means any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy or contract values that is directly linked to one or more indices. Amounts credited to the policy or contract resulting from a floor on an index account are included. An iIndex cCredit may be positive or negative.

The term “iIndex cCrediting sStrategies” means the strategies defined in a contract to determine index credits for a contract. For example, this may refer to underlying index, index parameters, date, timing, performance triggers, and other elements of the crediting method.

VM-21 Section 4.A.4

4. Modeling of Hedges

- a. For a company that does not have a future hedging strategy supporting the contracts:
 - i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.
 - ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
- b. For a company with one or more future hedging strategies supporting the contracts:
 - i. For a future hedging strategy with hedge payoffs that solely offset ~~interest-index~~ credits associated with ~~indexed interest strategies~~index crediting strategies (~~indexed interest~~ credits):
 - a) In modeling cash flows, the company shall include the cash flows from future hedge purchases or any rebalancing of existing hedge assets that are intended solely to offset ~~interest-index~~ credits to contract holders.
 - b) Existing hedging instruments that are currently held by the company for offsetting the ~~indexed~~ credits in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
 - c) An iIndex cCredit hHedge mMargin for these hedge instruments shall be reflected in both the “best efforts” and the “adjusted” runs, as applicable, by reducing index ~~interest credit~~ hedge payoffs by a margin multiple that shall be justified by sufficient and credible company experience and account for model error. It shall be no less than ~~[1%/2%]~~1.5% multiplicatively of the portion of the ~~interest-index~~ credited that is hedged. In the absence of sufficient and credible company experience, a margin of at least 20% shall be assumed. There is no cap on the index credit hedge margin if company experience indicates actual error is greater than ~~these minimums~~[20%].

Formatted: Highlight

Commented [A1]: Replace with "these minimums" as rereading this applies to either 2% or 20% scenarios. Not strictly needed if we are trying to be minimal with edits.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23, 5/15/23, 6/1/23	SO		
Notes: APF 2023-05			

- ii. For a company with one or more future hedging strategies supporting the contracts that do not solely offset indexed interest credits, the detailed requirements for the modeling of the hedges are defined in Section 9. The following requirements do not supersede the detailed requirements.
- a) The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
 - b) The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values: first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and only future hedge purchases associated solely with indexed interest credits. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor determined following the guidance of Section 9.C.4.
 - c) The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.
 - d) The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.
- iii. If a company has a more comprehensive hedge strategy combining index credits with guaranteed benefit and/or other risks (e.g., full fair value or economic hedging), no portion of this hedge strategy is eligible for the treatment described in section 4.A.4.b.ian appropriate and documented bifurcation method should be used in the application of sections 4.A.4.b.i and 4.A.4.b.ii above for the hedge modeling and justification. Such bifurcation methods may quantify the specific risk exposure attributable to index credit liabilities versus other liabilities such as guaranteed living benefits, and apply such for the basis for allocation.

Commented [A2]: Until industry can provide quantitative evidence on historical hedging errors as a percent of interest credited, suggest no allowing bifurcation.

VM-21 Section 6.B.3 Footnote

¹ Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts that does not solely offset index credits as discussed in Section 4.A.4.a.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23, 5/15/23, 6/1/23	SO		
Notes: APF 2023-05			

VM-21 Section 9

Section 9: Modeling Hedges under a Future Non-Index Credit Hedging Strategy

A. Initial Considerations

1. ~~This section applies to modeling of hedges other than situations where the company only hedges index credits. If the company clearly separates index credit hedging from other hedging, then this section only applies to the other hedging if the index hedging follows the requirements in Section 4.A.4.b.i. If the company does not clearly separate index credit hedging from other hedging, then this section is applicable for modeling of all hedges.~~

Commented [A3]: Delete

2. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.

(Subsequent sections to be renumbered)

VM-21 Section 9.C.2

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts except hedge purchases solely related to strategies to hedge index credits, therefore following the requirements of Section 4.A.4.a and 4.A.4.b.i.

However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments, except hedging instruments solely related to strategies to hedge index credits, that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

- a) Include the asset cash flows from any contractual payments and maturity values in the projection model.
- b) No hedge positions, in which case, the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

VM-21 Section 9.E.7

7. The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor or Index Credit Hedge Margin determined for the projection.

Commented [A4]: Expanding provision for index credit hedging, noting that the index credit adjustment is described as the Index Credit Hedge Margin, not the error factor.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23, 5/15/23, 6/1/23	SO		
Notes: APF 2023-05			

VM-31 Section 3.F.8.d.x (new subsection)

- x. Justification for the margin for any future hedging strategy that offsets ~~interest index credits~~ associated with ~~indexed interest strategies~~ index crediting strategies (indexed interest credits), including relevant experience, other relevant analysis, and an assessment of potential model error

Commented [A5]: Modify to "index credits" to be consistent throughout the draft and the additional definition.
- xi. ~~Ten~~ years of historical experience on hedge gains/losses as a percent of index credited for hedge programs supporting index credits.

Commented [A6]: VM-31 requirement for historical experience to support error factor.
- xii. ~~If there is less than five years of historical experience of this hedging program or a hedging program on similar products, an explanation of how the company considered increases in the error factor to account for limited historical experience.~~

Commented [A7]: Explanation for how margin was increased if there was less than 5 years of experience.
- ~~x. The method used to bifurcate comprehensive hedge strategies (i.e., strategies combining index credits, guaranteed benefit, and other risks (e.g., full fair value or economic hedging), per section 4.A.4.b.iii.~~

Commented [A8]: Only include if bifurcation is allowed

Chair, NAIC Life Actuarial (A) Task Force (LATF)

Re: APF 2023-07 (CSMP Removal)

Dear Chair Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on APF 2023-07 on the removal of the Company-Specific Market Path (CSMP) approach for calculating standard projection amount in VM-21.

This APF may have a significant impact on the companies considering or using the CSMP methodology. To mitigate any problems that may arise, we ask that regulators work directly with the impacted companies throughout this process and give them adequate time to make the necessary changes to their systems and processes.

Thank you very much for your consideration of our comments and we are looking forward to continued engagement with regulators on this topic.

Sincerely,

A handwritten signature in dark ink, appearing to read 'B Bayerle', written in a cursive style.

A handwritten signature in dark ink, appearing to read 'Colin Masterson', written in a cursive style.

cc: Scott O'Neal, NAIC

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

California Office of Principles-Based Reserving and Minnesota Department of Commerce

Title of the Issue:

Company-Specific Market Path (CSMP) Removal

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 6.A.1

January 1, 2024 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

The standard projection amount drafting group found that there is very little use of the CSMP method for the VM-21 standard projection amount. Therefore, we recommend removing this method from VM-21 starting in 2025, which gives time to transition to the CTEPA method for the few companies that currently employ the CSMP method.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-21 Section 6: Requirements for the Additional Standard Projection Amount

A. Overview

1. Determining the Additional Standard Projection Amount

- a. For valuation dates before January 1, 2025, the additional standard projection amount shall be the larger of zero and an amount determined in aggregate for all contracts falling under the scope of these requirements, excluding those contracts to which the Alternative Methodology is applied, by calculating the Prescribed Projections Amount by one of two methods, the Company-Specific Market Path (CSMP) method or the CTE with Prescribed Assumptions (CTEPA) method. The company shall assess the impact of aggregation on the additional standard projection amount.
- ~~a.~~ b. For valuation dates on or after January 1, 2025, the additional standard projection amount shall be the larger of zero and an amount determined in aggregate for all contracts falling under the scope of these requirements, excluding those contracts to which the Alternative Methodology is applied, by calculating the Prescribed Projections Amount by the CTEPA method. The company shall assess the impact of aggregation on the additional standard projection amount.
- ~~b.~~ c. The additional standard projection amount shall be calculated based on the scenario reserves, as discussed in Section 4.B, with certain prescribed assumptions replacing the company prudent estimate assumptions. As is the case in the projection of a scenario in the calculation of the SR, the scenario reserves used to calculate the additional standard projection amount are based on an analysis of asset and liability cash flows produced along certain equity and interest rate scenario paths.

RE: Guidance on Allocating Negative IMR (PIMR) In VM-20, VM-21, and VM-30

Executive Summary

While the potential admittance of some portion of negative Interest Maintenance Reserve (IMR) is being considered by the Statutory Accounting Practices (E) Working Group (SAPWG), continued guidance on the proper practice for allocating IMR for principles-based reserving (PBR) and asset adequacy testing purposes may be helpful for companies in the near term.

Background

LATF issued guidance on November 17, 2022 (Attachment A) on allocating negative IMR (PIMR) in VM-20, VM-30, VM-31. Since then, SAPWG has continued to discuss the potential admittance of some portion of negative IMR. In light of these ongoing discussions, continued guidance is needed to ensure consistent treatment for negative IMR in PBR and asset adequacy testing. Due to the timing of Valuation Manual updates, the earliest that such guidance can practically be added to the Valuation Manual is for year-end 2025. Therefore, LATF is issuing additional guidance for 2023 and 2024.

Recommendation

In order to assist state regulators and companies in achieving uniform outcomes for year-end 2023 and 2024, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, “appropriate”, and “reasonable”. Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the non-admitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, any portion of negative IMR that is an admitted asset, should be allocated for purposes of VM-20, VM-21, and VM-30, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset.

This recommended guidance is for year-end 2023 and 2024, to address the current uncertainty and concerns with the “double-counting” of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. This guidance is expected to be incorporated in the 2025 Valuation Manual.

Attachment A

November 17, 2022

To: Members of the Life Actuarial (A) Task Force

From: NAIC Staff

RE: Guidance on Allocating Negative IMR (PIMR) In VM-20, VM-21, and VM-30

Executive Summary

With the rapidly rising interest rate environment, companies selling fixed income assets for a loss are seeing their Interest Maintenance Reserve (IMR) balances decrease or even become negative. Current statutory accounting treatment makes negative IMR a non-admitted asset. While a longer-term evaluation of IMR is being considered by the Statutory Accounting Practices (E) Working Group (SAPWG), additional guidance on the proper practice for allocating IMR for Asset Adequacy Testing and Principle-based Reserving purposes may be helpful for companies in the near term.

Background

The letter to SAPWG from the American Council of Life Insurers (ACLI) (Attachment 1) notes that "...with the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR can result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency)." There are several sections of the Valuation Manual and RBC instructions where IMR is referenced in the letter. Some of these references contemplate allocating negative IMR (or pre-tax IMR (PIMR), as applicable) at the level of business that is being analyzed/reserved for. However, these references do not detail what to do when the total company IMR balance is negative – and therefore a non-admitted asset under current statutory guidance.

Other references do provide additional insight as to the allocation of IMR when the total company balance is negative/disallowable. VM-20 Section 7.D.7.b notes that "...the company shall use a reasonable approach to allocate any portion of the total company balance that is disallowable under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)." Question 22 of the AAA's Asset Adequacy Practice Note (Attachment 2) states that "... a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis." However, Question 22 also notes a 2012 survey data that showed varying practices across companies, including some companies that allocated negative IMR.

Recommendation

In order to assist state regulators and companies in achieving uniform outcomes for year-end 2022, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, "appropriate", and "reasonable". Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the non-admitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, if a company was granted a permitted practice to admit negative IMR as an asset, the company should allocate the formerly non-admitted portion of negative IMR, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset. This recommended guidance is for year-end 2022, to address the current uncertainty and concerns with the "double-counting" of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. Refinement of this guidance may be considered beyond year-end 2022.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Bruggeman:

Re: Proposal for the NAIC to Fulfill the Original Intent of the Interest Maintenance Reserve

The American Council of Life Insurers (ACLI) would like to request urgent action on an issue that was never fully resolved by the NAIC and has become a pressing matter for the industry due to the rapid rise in interest rates—the allowance of a net negative Interest Maintenance Reserve (IMR) balance.

The ACLI proposes the allowance of a negative IMR balance in statutory accounting. Negative IMR balances are expected to become more prevalent in a higher interest rate environment and their continued disallowance will only serve to project misleading optics on insurers' financial strength (e.g. inappropriate perception of decreased financial strength through lower surplus and risk-based capital even though higher rates are favorable to an insurer's financial health) while creating uneconomic incentives for asset-liability management (e.g. discourage prudent investment transactions that are necessary to avoid mismatches between assets and liabilities just to avoid negative IMR).

ACLI believes the necessary changes can be implemented quickly and with minimal changes to the annual statement reporting instructions.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

accli.com

The remainder of this letter expands upon these points.

Historical Context and Background

The IMR, first effective in statutory accounting in 1992, requires that a realized fixed income gain or loss, attributable to changes in interest rates (but not gains or losses that are credit related), be amortized into income over the remaining term to maturity of the fixed income investments (and related hedging programs) sold rather than being reflected in income immediately.

Since statutory accounting practices for life insurance companies are the primary determinant of obtaining an accurate picture for assessing solvency, it was imperative that the accounting practices be consistent for assets, liabilities, and income and that they be reported on a financially consistent basis. If assets and liabilities were not reported on a financially consistent basis, then the financial statements would not be useful in determining an accurate assessment of solvency or whether there were sufficient assets to pay contractual obligations when they become due.

Amortized cost valuation of fixed income investments reflects the outlook at the time of purchase and amortization reflects the yields available at time of purchase. Policy reserve liabilities are established at the same time, and the interest rate assumptions are consistent with the yields at that time. But if fixed income investments are sold, with the proceeds reinvested in new fixed income investments, a new amortization schedule is established which may be based on an entirely different yield environment, which may be inconsistent with the reserve liabilities when they were established.

IMR was created to prevent the timing of the realization of gains or losses on fixed income investments, related to interest rates changes, to affect the immediate financial performance of the insurance company. This recognized that the gains and losses were transitory without any true economic substance since the proceeds would be reinvested at offsetting lower or higher interest rates.

For example, without the IMR, if a company sold all bonds in a declining interest environment (e.g., from 4% to 2%), and reinvested in new bonds, surplus would increase through significant realized gains. The increased surplus would inappropriately reflect increased financial strength that is illusory, due to a now lower yielding portfolio, as there would be no change to the income needed to support the liabilities.

Likewise, if a company sold all bonds in an increasing interest rate environment (e.g., from 2% to 4%), and reinvested in new bonds, surplus would decrease through significant realized losses. The decreased surplus would inappropriately reflect decreased financial strength that is similarly illusory due to the reinvestment at higher yields relative to when the bonds were originally purchased.

A net negative IMR is currently disallowed in statutory accounting. This handling is contrary to its original intent which recognized that interest related gains and losses are both transitory without any true economic substance since the proceeds would be reinvested at offsetting lower or higher interest rates, respectively. See attachment I to this letter that illustrates the financially consistent

treatment of assets, liabilities, and income and how IMR is needed to achieve that objective for both realized gains and losses.

That IMR should conceptually apply to both realized gains and losses was recognized by the NAIC during and after IMR development. The below is a quote from a 2002 report by the NAIC AVR/IMR Working Group to the E-Committee:

*“The basic rationale for the IMR would conclude that neither a maximum nor a minimum is appropriate. If the liability values are based on the assumption that the assets were purchased at about the same time as the liabilities were established, then there should be no bounds to the reserve which corrects for departures from that assumption; **if a company has to set up a large reserve because of trading gains, it is in no worse position that if it had held the original assets. As for negative values of the IMR, the same rationale applies. However, the concept of a negative reserve in the aggregate has not been adopted.**”*

While realized losses can offset realized gains in IMR, the IMR instructions require the disallowance of a net negative IMR balance (e.g., as noted in the last sentence of the aforementioned quote). See attachment II to this letter, which includes the pertinent IMR instructions where negative IMR balances are currently disallowed and in need of amendment.

When IMR was originally developed, it was intended to achieve its purpose in both a declining and rising interest rate environment. The originally adopted disallowed status of a negative IMR was expected to be addressed in subsequent years. However, over time with the persistent declining interest rates, the issue lost urgency since a negative IMR would not have been a significant issue for any company. The NAIC AVR/IMR Working Group ultimately disbanded without ever addressing this longstanding item on their agenda.

With a rising interest rate environment, it is important that the allowance of a negative IMR be addressed to fulfill its original purpose. In general, rising interest rates are favorable to the financial health of the insurance industry as well as for policyowners.

Without a change, the rising interest rate environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital and worse, create incentives for insurance companies to take action, or not take actions, to prevent uneconomic surplus impacts where the actions (or lack thereof) themselves may be economically detrimental.

Symmetrical treatment of a negative IMR (i.e., the allowance of a negative IMR balance) would appropriately not change surplus as a sale and reinvestment would not affect the underlying insurance company liquidity, solvency, or claims paying ability, just like with a positive IMR. See attachment III to this letter that illustrates that the sale of a fixed income investment, and reinvestment in a new fixed income investment, has no bearing on a life insurance company's liquidity, solvency, or claims paying ability.

As it was initially recognized by the NAIC that IMR should apply to both gains and losses, adequate safeguards were already built into the IMR instructions for asset adequacy, risk-based capital, and troubled companies.

Negative IMR – Reserve Adequacy and Risk-Based Capital

When IMR was developed, it was anticipated that a negative IMR balance would be reflected in asset adequacy analysis. This inclusion ensures that the assets, with the appropriate allocation from the IMR (whether negative or positive), would be adequate to fund future benefit obligations and related expenses of the company.

From the standpoint of reserve adequacy, the inclusion of a negative IMR balance appropriately reduces the investment income in asset adequacy testing. Without the inclusion of negative IMR, reserve inadequacies would potentially not be recognized.

Further, with the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR can result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency). The Actuarial Opinion that covers asset adequacy analysis requires the appropriate assessment of negative IMR in its analysis.

If a negative IMR balance is used in the asset adequacy analysis, its allowance is appropriate. Likewise, if only a portion of a company's negative IMR balance is reflected in the asset adequacy analysis, only the allowance for that portion of the negative IMR balance reflected is appropriate. If a negative IMR balance is disallowed, it would be inappropriate to include in asset adequacy analysis. It is imperative there is symmetry between both reserving and accounting considerations, and there is already precedent in the asset adequacy analyses for inclusion of IMR.

Below are the current references to IMR in the valuation manual and risk-based capital calculations.

Regulation	Use	IMR references
Actuarial Opinion and Memorandum Regulation (VM-30)	Asset adequacy analysis for annual reserve opinion	An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis.
Life principle-based reserves (VM-20)	Calculation of deterministic reserve	Calculate the deterministic reserve equal to the actuarial present value of benefits, expenses, and related amounts less the actuarial present value of premiums and related amounts, less the positive or negative pre-tax IMR balance at the valuation date allocated to the group of one or more policies being modeled
Life principle-based reserves (VM-20)	Calculation of stochastic reserve	Add the CTE amount (D) plus any additional amount (E) less the positive or negative pre-tax IMR balance allocated to the group of one or more policies being modeled
Variable annuities principle-based reserves (VM-21)	Reserving for variable annuities	The IMR shall be handled consistently with the treatment in the company's cash-flow testing, and the amounts should be adjusted to a pre-tax basis.
C3 Phase 1 (Interest rate risk capital)	RBC for fixed annuities and single premium life	IMR assets should be used for C3 modeling.

Additional IMR Safeguards

The IMR instructions do provide additional safeguards in situations where it would be appropriate to recognize interest-rate related gains and losses immediately rather than be included in the IMR.

They were established to prevent situations where the liability the IMR supports, no longer exists. Examples noted in the annual statement instructions include:

- Major book-value withdrawals or increases in policy loans occurring at a time of elevated interest rates.
- Major book value withdrawals resulting from a “run on the bank” due to adverse publicity.

As a result, the IMR instructions include an IMR Exclusion whereby all gains or losses which arise from the sale of investments related to “Excess Withdrawal Activity” are to be excluded from IMR and reflected in net income. In short, Excess Withdrawal Activity is defined as 150% of the product of the lower of the withdrawal rate in the preceding or in the next preceding year calendar year times the withdrawal reserves at the beginning of the year.

Summary

With a rising interest rate environment, it is important that the allowance of a negative IMR be addressed to fulfill its original purpose. In general, rising interest rates are favorable to the financial health of the insurance industry as well as for policyowners. Without a change, the rising interest rate environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital.

The inability to recognize negative IMR could also impact the rating agency view of the industry, or worse, incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. Furthermore, there are adequate safeguards in place to ensure that allowing a negative IMR does not cause any unrecognized reserve or capital inadequacies or any overstatement of claims paying ability.

Current statutory accounting guidance creates two equally objectionable alternatives for insurers and their policyowners. Following the current statutory guidance will improperly reflect financial strength through understating surplus, so additional surplus may need to be retained. Alternatively, one could take steps to manage the current situation by limiting trading of fixed income investments and related hedging programs, which would diminish significant economic value for policyowners, as well as create a mismatch between assets and liabilities.

Both scenarios encourage short-term non-economic activity not in the best long-term interest of the insurance company’s financial health or its policyowners. For insurers with diminishing IMR balances due to the rapid increase in interest rates, this dilemma is either here or fast approaching and can only be resolved now with certainty of the appropriate treatment of IMR by the NAIC.

The ACLI looks forward to urgently working with the NAIC toward fulfilling the original intent of IMR. It is imperative that insurers receive relief for year-end 2022.

If you have any questions regarding this letter, please do not hesitate to contact us.

Sincerely,

Attachment I

Simplified Example – Need for Reporting Assets, Liabilities, and Income on a Consistent Basis:

- This example shows the appropriate interrelationship of IMR on assets, reserve liabilities, and income.
- Assume a bond is held with the following characteristics:
 - Par Value: \$1,000
 - Coupon: 3%
 - Term-to-maturity: 10 years
- Assume the bond is then sold at “time zero” and the proceeds are immediately reinvested in a bond with the same characteristics (e.g., term-to maturity, credit quality, coupon equivalent to market rate, etc.).
- Assume a simplified example with no existing IMR balance, where the bond supports a fixed insurance liability with the same duration as the original bond, as well as a present value of \$1,000.

Table 1: Market Interest Rate Scenario			
	Same	Lower	Higher
Market interest rate	3%	2%	4%
Bond’s market value	\$1,000	\$1,090	\$919
Realized gain/(loss) if sold	\$0	\$90	(\$81)*

Realized gain/(loss) deferred to balance sheet IMR and amortized into income over remaining life of bond sold (i.e., 10 years).

Table 2: Statutory Investment Income			
IMR amortization	\$0	\$9	(\$8)
Interest income on new bond	\$30	\$21	\$38
Total annual stat income	\$30	\$30	\$30

On average, future income is approximately the same in each interest rate scenario as the IMR gets reduced through amortization to income.

Table 3: Statutory Balance Sheet			
Balance Sheet Bonds	\$1,000	\$1,090	\$919
IMR	\$0	(\$90)	\$0*
Stat assets net of IMR	\$1,000	\$1,000	\$919*
Reserves	\$1,000	\$1,000	\$1,000
Surplus	\$0	\$0	(\$81)*

Even though the sale of the bond (and subsequent reinvestment) is non-economic, and the same income is being produced to support the liability, a negative surplus position makes it appear there is now a deficiency. Allowing the negative IMR appropriately would show no surplus impact, as is shown when a gain occurs, as there is no change in reported reserve liabilities. Appropriately consistent financial results require the allowance of negative IMR

***The negative IMR balance is currently disallowed and directly reduces surplus. This treatment is not supported by theoretical rationale and gives a distorted view of solvency.**

Attachment II

Pertinent Annual Statement Instructions

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned “Interest Maintenance Reserve” on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the “Change in Disallowed Interest Maintenance Reserve” in the write -in line, in the Surplus Account on Page 4 of the Separate Accounts Statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (see rule a)
Negative	Negative	Negative (see rule b)
Positive	Negative	Positive (see rule c)
Positive	Negative	Negative (see rule d)
Negative	Positive	Positive (see rule e)
Negative	Positive	Negative (see rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

Attachment III

IMR Illustration – Liquidity, Solvency and Claims Paying Ability

Essentially, a negative IMR balance from an individual trade represents the present value of the future positive interest rate differential, from the new investment compared to the old investment, that puts one in the same economic position, when compared to before the trade, including total liquid assets available to pay claims.

This phenomenon can be illustrated in the following table where a 10-year bond is sold, one year after purchase, and immediately reinvested in another 10-year bond with equivalent credit quality in an interest rate environment where market interest rates increased from 2% to 4% in the intervening year.

	Coupon Rate of Bond	Market Interest Rate @ Purchase	Par Value of Bond	Fair Value @ Purchase	Fair Value @ Time of Sale	Loss on Sale	Claims Paying Liquidity
Old Bond	2%	2%	100	100	85.13	14.87	85.13
New Bond	4%	4%	85.13	85.13	85.13	N/A	85.13

The short-term acceleration of negative IMR to surplus (e.g., its disallowance) is strictly a timing issue and not a true loss of financial strength or claims paying liquidity, but it does present a temporary and inappropriate optics issue in surplus/financial strength until the IMR is fully amortized.

This phenomenon can further be illustrated by comparing two separate hypothetical companies. Assume Company A and B both have the exact same balance sheets. Then assume Company A keeps the old bond and Company B affects the trade mentioned above.

With the disallowance of a negative IMR balance, Company B now has a balance sheet that shows a relative decline of financial strength of \$14.87. This weakened balance sheet contrasts with both the principle behind the development of IMR, the relative actual economic financial strength, and claims paying ability of the two entities.

There is no difference in balance sheet economics of the two entities. The negative IMR balance for Company B essentially represents the difference between cost and fair value of the investment sold, that is already embedded on Company A's balance sheet based on the existing interest rate environment. The negative IMR balance should be recognized as there is no change in economics pre and post trade (or in this instance between Company A and Company B) which is consistent with the overall principle behind IMR.

Attachment 2

Some actuaries test the option risk in assets (e.g., calls) by assuming an immediate drop in the discount rate used in the GPV. The drop test is often set as severe as needed to represent a drop in earned rate that would occur if all options were exercised.

Q22. The AOMR states that the interest maintenance reserve (IMR) should be used in asset adequacy analysis. Why?

The IMR is part of the total reported statutory reserves. The IMR typically defers recognition of the portion of realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are amortized into investment income over the expected remaining life of the investments sold, rather than being recognized immediately. This amortization is after tax.

The purpose of the IMR usually is to maintain the original matching between assets and liabilities that might be weakened by the sale of an asset. Originally, it was anticipated that the IMR would be allowed to become negative, as long as the asset adequacy analysis showed that the total statutory reserves, including the negative IMR, were sufficient to cover the liabilities. However, a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis.

In the 2012 survey of appointed actuaries, more than 80 percent of the respondents indicated they include the IMR in their testing. Some actuaries use a starting IMR of zero if IMR is negative. Other actuaries use negative IMR to adjust starting assets and therefore model future lower asset yields than if zero IMR were assumed. Half of the respondents who indicated they used IMR in testing also indicated they lower assets by the absolute value of a negative IMR balance; the other half indicated they use a value of zero for the starting IMR if it is negative at the beginning of the projection period. There is no prohibition regarding the use of negative IMR within asset adequacy analysis. So, a number of actuaries allow the IMR to fall below zero within the testing period. About 60 percent of actuaries responding to the survey indicated they do not have to deal with a negative IMR.

Q23. How does the actuary determine which portion of the IMR can be used to support certain products? How is the portion of the IMR used?

If the actuary allocates the assets and IMR by line, then one possible approach is line of business-level inclusion of starting assets in the amount of the unamortized portion of the IMR relating to those assets that were owned by the line prior to being sold. Another possible approach is the allocation of company-level IMR proportionately to starting assets. An advantage of this second approach is that it is generally simpler, while a disadvantage is that longer liabilities probably have longer assets, which usually produce higher capital gains when sold, after a given drop in interest rates, than shorter assets do,

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Rachel Hemphill, FSA, FCAS, MAAA, Ph.D.

Title of the Issue:

Clarifying guidance for allocation of negative IMR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM- 20 Section 7.D.7, VM-30 Section 3.B.5

January 1, 2023 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Clarify allocation of negative IMR for VM-20 and VM-30; in particular, non-admitted IMR is excluded. Note that VM-21 Section 4.A.7 currently requires a treatment consistent with VM-30, and so additional guidance is not needed for VM-21.

* This form is not intended for minor corrections, such as formatting, grammar, cross–references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

Dates: Received	Reviewed by Staff	Distributed	Considered
<u>05/22/23</u>	<u>SO</u>		
Notes: <u>APF 2023-08</u>			

VM-20 7.D.7

7. Under Section 7.D.1, any PIMR balance allocated to the group of one or more policies being modeled at the projection start date is included when determining the amount of starting assets and is then subtracted out, under Section 4 and Section 5, as the final step in calculating the modeled reserves. The determination of the PIMR allocation is subject to the following:

- a. The amount of PIMR allocable to each model segment is the approximate statutory interest maintenance reserve liability that would have developed for the model segment, assuming applicable capital gains taxes are excluded. The allocable PIMR may be either positive or negative.
- b. In performing the allocation to each model segment, ~~the company shall use a reasonable approach to allocate any portion of the total company IMR balance that is disallowable-not admitted under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)-~~shall first be removed. The company shall use a reasonable approach to allocate the total company balance, after removing any non-admitted portion thereof, between PBR and non-PBR business and then allocate the PBR portion among model segments in an equitable fashion.
- c. The company may use a simplified approach to allocate the PIMR, if the impact of the PIMR on the minimum reserve is minimal.

VM-30 Section 3.B.5

5. An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis. In performing the allocation, any portion of the total company IMR balance that is not admitted under statutory accounting procedures shall first be removed. Analysis of risks regarding asset default may include an appropriate allocation of assets supporting the asset valuation reserve; these AVR assets may not be applied for any other risks with respect to reserve adequacy. Analysis of these and other risks may include assets supporting other mandatory or voluntary reserves available to the extent not used for risk analysis and reserve support.

Draft: 7/3/23

Life Actuarial (A) Task Force
and the Life Risk-Based Capital (E) Working Group
May 18, 2023

The Life Actuarial (A) Task Force met May 18, 2023, in joint session with the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT). The following Working Group members participated: Philip Barlow, Chair (DC); Sanjeev Chaudhuri (AL); Thomas Reedy (CA); Wanchin Chou (CT); Dalora Schafer (FL); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed VM-20, Requirements for Principle-Based Reserves for Life Products, GOES Field Test Results

Hemphill said that Scott O'Neal (NAIC) would present results from the generator of economic scenarios (GOES) field test. O'Neal walked through the presentation of results (Attachment Four-A). Mark Tenney (Mathematical Finance Company) asked whether the universal life with secondary guarantee (ULSG) model office results that Matt Kauffman (Moody's Analytics) presented showing approximately a doubling of reserves were consistent with the GOES field test participant results. O'Neal replied that although the average results of the participants were much less significant than the increases shown in the model office testing, there were some participants with ULSG products that did experience reserve increases in line with those shown in the model office testing.

Having no further business, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group adjourned.

NAIC Economic Scenario Generator Field Test: VM-20 Quantitative Results

Scott O'Neal FSA, MAAA

May 18, 2023

Agenda

1. Background and Purpose
2. Limitations
3. Field Test Run Descriptions
4. Field Test Participation
5. High-Level Observations
6. Quantitative Results
 - A. DR/SR Baseline Comparisons
 - B. DR/SR Valuation Date Comparisons
 - C. VM-20 Minimum Reserve Impact
7. Next Steps

Appendix 1: SERT Scenario Overview
Appendix 2: Treasury and Equity Scenario Overview

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

2

Background and Purpose

- The purpose of this presentation is to summarize quantitative information from the VM-20 field test participants to:
 - Understand the impact on reserves and capital,
 - Review the range of results across field test participants,
 - Compare the stability of results over time, and
 - Inform regulator decision-making on model and calibration choices.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

3

Limitations

- The NAIC took steps to review the quantitative results for reasonableness, including reviewing qualitative survey responses, sending questions to participants, and asking participants to confirm that the NAIC compilations matched their intended result submission. However, the accuracy and reliability of the results are ultimately dependent on the quality of participant submissions.
- The field test analytics (average reserves, range of impacts, etc.) can be strongly dependent on a subset of the participants. Results shown today for the different field test runs will include varying numbers of participants corresponding to the levels of participation for that run. The lack of participation in some of the runs will limit their applicability to the overall industry.
- A number of comparisons between company-provided field test or baseline runs are made in the presentation. These comparisons are limited to the participation of whichever run had the least participation. For example, as Baseline 2 (as of 12/31/19 + 200 BP) had significantly lower participation than run 2A, many of the 2A results will not be included in the baseline comparison.
- Only three of the 15 companies made changes to their models to account for different features of the field test scenario sets (e.g. negative interest rates). Therefore, field test results may not be fully representative of company results post-implementation of the new GOES.
- Some companies mentioned that they would assess the need for changes to their assumptions prior to implementation of the new GOES but had not done so for the field test.
- Some of the field test SERT scenario sets contained errors, including the deterministic reserve (DR) scenario #12. Therefore, deterministic results cannot be shared for field test runs 5A, 5B, and 6.
- The VM-20 portion of the qualitative survey did not ask companies to specifically comment on the drivers of their results as was done for VM-21/C3 Phase II. Most companies did not comment on the drivers of their results.
- Variable and indexed products are included in the GOES field test VM-20 results, but isolating the specific impacts is challenging as some participants included those products with others in the same reserving category in one model (e.g. a model containing VULSG with ULSG). Further, we do not have data on the participants' separate account fund mapping.

Field Test Run Descriptions

Note: **Bold** = Required Run

Run #	Description	Purpose of Run
Baseline #1	Scenario set(s) the company used for 12/31/21 statutory reporting	Baseline used as comparative basis for 12/31/21 runs
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with a 12/31/19 yield curve modified using a 200 BP increase across all maturities	Baseline used as comparative basis for 12/31/19 + 200 BP runs
Test #1a	GEMS Baseline Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	Tests Conning Treasury model w/ GFF and Baseline Equity at YE 2021
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	Tests Alternative Treasury model with shadow floor and Baseline Equity at YE 2021
Test #2a	Same as Test #1a, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities. All other initial market conditions are unchanged. The Equity model parameters would be adjusted from #1a so that the year 30 median Large Cap Equity gross wealth factors remain consistent with #1a.	Stresses the starting Treasury rates using the same calibration as 1a to evaluate whether the model produces appropriate results in different economic environments
Test #2b	Same as Test #2a, but with the Alternative Treasury model calibration with shadow floor instead of the Conning Treasury model calibration with generalized fractional floor	Same as 2a, but designed to stress the 1b calibration

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

5

Field Test Run Descriptions

Note: **Bold** = Required Run

Run #	Description	Purpose of Run
Test #3	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Baseline Equity model corresponding to a 12/31/19 yield curve with a 200 BP increase across all maturities	Attribution analysis that will illustrate how much of the difference between runs #1a and #2a is driven by the equity model vs the Treasury and Corporate models
Test #4	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	Same as #3, but with respect to runs #1b and #2b.
Test #5a	Same as #1a, but with Conning's original Equity model calibration that had significantly lower Gross Wealth Factor's (GWFs) than the AIRG Equity Model.	Tests Conning Treasury model w/ GFF and original equity model as of year-end 2021.
Test #5b	Same as #5a but using a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities. The parameters of Conning's original Equity model are used without any adjustment.	Stresses the starting Treasury rates to understand the full impact of equity-Treasury linkage in Conning's original equity model
Test #6	Same as #1a, but with the ACLI's GEMS® Equity Calibration	Tests the ACLI's GEMS® Equity Calibration that assumes a constant mean equity return independent of rates and increases alignment with AIRG equity model GWFs

6

Field Test Participation

- The chart below shows the number of legal entities that submitted VM-20 results for the field test by reserving category and reserve component.
- Many companies submitted multiple products, and some submitted multiple model segments for a given reserving category. Other companies aggregated products with distinct risks (e.g. Variable Universal Life with Secondary Guarantee, vanilla Universal Life with Secondary Guarantee) into a single model segment (e.g. ULSG). Ranges of results shown in the presentation are reflective of a legal entity view, rather than a model segment view.
- There are two basic types of comparisons of the field test results in this presentation; 1) comparisons of field test runs to their respective baseline run, and 2) comparisons of field test runs across the two tested valuation dates. These comparisons are limited by the run with the least participation (e.g. comparisons to the baseline for the 12/31/19 + 200 BP valuation date are limited to Baseline 2 participation).

Participation by Legal Entity

VM-20 Reserving Category	SR/DR	Baseline 1*	Baseline 2	1A*	1B*	2A*	2B*	5A*	5B*	6
Term	DR	11	<5	11	10	9	9	10	10	<5

7

High-Level Observations

- When directly comparing baseline DR to field test DR results or baseline SR to field test SR results, there was a wide range of impacts across participating legal entities. Some legal entities saw large increases to their modeled reserves, and others experienced decreases. The range of results was in some cases greater when looking at a model segment level, with some model segments exhibiting much larger increases than were seen at a legal entity level. The range of modeled results by legal entity, however, was much smaller than it was for the VM-21/C3 Phase II GOES field test.
- While the range of modeled results was wide, the average increase to VM-20 minimum reserves by legal entity was muted given the domination of the NPR for many participants, even with large increases to modeled reserves. As VM-20 only became mandatory in 2020, the dominance of the NPR could be related to how recently the business was issued and may not be reflective of a mature block.
- Valuation date comparisons across baseline and field test runs were challenging given the limited participation in Baseline 2. For the DR considering all reserve categories combined, the field test runs were not, on average, more variable across valuation dates compared to the baseline runs. For SR, there was not enough participation in Baseline 2 to compare the change in valuation date results for field test runs to the baseline runs. However, for both DR and SR, the average change across valuation dates and the range of results were significantly smaller in magnitude than the results shown for VM-21.

Baseline Reserve Comparisons: Term Reserving Category

NATIONAL ASSOCIATION OF INSURANCE
 COMMISSIONERS

9

Change in Deterministic Reserve by Legal Entity

Field Test	1A	1B
Average % Increase	29%	19%
# of Participants	11	10

Percentage Increase: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- Limited participation and SERT scenario errors did not allow for public sharing of DR baseline comparisons for 2A, 2B, 5A, 5B, and 6.
- Approximately half of the participant's Baseline 1 Term deterministic reserves were negative. Comparisons between relatively small negative values, or values that change signs between field test runs require adjustments to the standard (B-A)/A formula that typically is used for percentage change. The formula that was used was as follows: **Absolute Value** [(B-A)/A] * IF(B<A, -1, 1)
- The 1A (Conning Treasury and Baseline Equity scenario set as of 12/31/21) average DR increase of 29% was significantly larger than the 19% average DR increase seen in 1B (Alternative Treasury with Baseline Equity parameters).
- Field test participants saw more variation in the field test 1A reserve impacts, with a higher maximum (105%) and lower minimum (-96%) than what was seen in 1B.
- For both 1A and 1B,
 - the maximum end of the range was from a positive baseline reserve increasing, and
 - The minimum end of the range was from a negative baseline reserve becoming more negative.

10

Baseline Reserve Comparisons: ULSG Reserving Category

NATIONAL ASSOCIATION OF INSURANCE
 COMMISSIONERS

11

ULSG Reserve Category: Deterministic Reserve (DR) Change from Baseline by Legal Entity

Field Test	1A	1B
Average % Increase	2%	6%
# of Participants	11	11

Percentage Increase: Range and Percentile Statistics

- Limited participation and SERT scenario errors did not allow for public sharing of DR baseline comparisons for 2A, 2B, 5A, 5B, and 6.
- The 1A (Conning Treasury and Baseline Equity scenario set as of 12/31/21) average DR increase of 2% was relatively smaller than the 6% average DR increase seen in 1B (Alternative Treasury with Baseline Equity parameters). A partial explanation for the higher average DR in 1B could be related to lower S&P 500 equity gross wealth factors (GWFs) present in 1B in later years of the projection compared to 1A.
- Field test participants saw more variation in the field test 1A results, with a higher maximum (47%) and lower minimum (-6%) than in 1B.
- Model segment level results fell within the legal entity level ranges for all but one of the participants.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

12

Change in Stochastic Reserve by Legal Entity

Field Test	1A	1B	5A
Average % Increase	19%	11%	21%
# of Participants	9	8	7

Percentage Increase: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- Limited participation did not allow for public sharing of SR baseline comparisons for 2A, 2B, 5B, and 6.
- The 1A (Conning Treasury and Baseline Equity scenario set as of 12/31/21) average SR increase of 19% was significantly larger than the 11% average SR increase seen in 1B (Alternative Treasury with Baseline Equity parameters).
- Field test 5A (Conning Treasury and original Conning Equity calibration with lower equity GWFs) saw the highest average stochastic reserve increase. The treasury scenarios in 5A were the same as 1A, but the lower equity GWFs present in 5A resulted in larger reserve increases for indexed and variable life products in 5A compared to 1A.
- There was a higher maximum reserve increase in the field test 1A results compared to 1B, and 5A.
- When looking at the range of results at the individual model segment level, there were a number of reserve increases that were greater than those shown in the chart on the left. A company with one of these large model segment impacts noted that the increases would put their reserves higher than AXXX reserves.

13

Baseline Reserve Comparisons: Combined Reserving Categories

NATIONAL ASSOCIATION OF INSURANCE
 COMMISSIONERS

14

Combined Reserve Categories: Deterministic Reserve Change from Baseline by Legal Entity

Field Test	1A	1B	2A	2B
Average % Increase	3%	7%	8%	2%
# of Participants	15	14	6	6

Percentage Increase: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- The results shown on this page are reflective of the aggregated Term, ULSG, and Other (as applicable) model segment results by legal entity. Combining reserve categories increases the number of participants, allowing 2A and 2B results to be shared.
- Limited participation and SERT scenario errors did not allow for public sharing of DR baseline comparisons for 5A, 5B, and 6.
- ULSG represented over 97% of the Baseline 1 deterministic reserves in the combined category, and just over half of the model segments.
- The 1A (Conning Treasury and Baseline Equity scenario set as of 12/31/21) average DR increase of 3% was smaller than the 7% average DR increase for 1B (Alternative Treasury with Baseline Equity parameters). However, the relationship flipped for the 12/31/19 + 200BP field test runs shown, with a larger average DR increase of 8% for 2A compared to a smaller increase of 2% for 2B (both compared to Baseline 2).

15

Valuation Date Reserve Comparisons: Combined Reserving Categories

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

16

Change in Deterministic Reserve by Legal Entity

Field Test	B2 vs B1	2A vs 1A	2B vs 1B
Average % Increase	-29%	-22%	-28%
# of Participants	6	14	14

Percentage Decrease: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- Limited participation and SERT scenario errors did not allow for public sharing of DR valuation date comparisons for 5B vs 5A
- Across the baseline and field test runs, reserves significantly decreased in the 12/31/19 + 200 BP (higher starting interest rate level) runs compared to the 12/31/21 (lower starting interest rate) runs.
- The average percentage decrease was similar across the field test runs, although the comparison to the Baseline runs was challenging given the limited participation.
- The range of results was highest for the 2A vs 1A comparison. The largest decreases were driven by comparisons where the term DR was negative in both the 1A and 2A runs.

17

Change in Stochastic Reserve by Legal Entity

Field Test	2A vs 1A	2B vs 1B	5B vs 5A
Average % Increase	-24%	-22%	-22%
# of Participants	11	11	8

Percentage Decrease: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- Limited participation did not allow for public sharing of SR valuation date comparisons for Baseline 2 vs. Baseline 1.
- Across the baseline and field test runs, reserves significantly decreased in the 12/31/19 + 200 BP (higher starting interest rate level) runs compared to the 12/31/21 (lower starting interest rate) runs.
- The average percentage decrease in the SR was similar across the different field test run comparisons.
- The large range of results was similar across the 2A vs 1A and 2B vs 1B comparisons, but somewhat narrower in the 5B vs 5A (same UST as 1A/2A, but Conning original equity model with equity Treasury Linkage) comparison. This result is somewhat counterintuitive, given the additional variation in the Equity GWFs between valuation dates present in the 5B vs 5A comparison. This can be partially explained by:
 - Some companies included variable, indexed, and/or “vanilla” ULSG in the same model segment making it challenging to isolate impacts,
 - Limited indexed and variable product participation, and
 - There were less participants in the 5B vs 5A comparison.

18

VM-20 Minimum Reserve Impact

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

19

Proportion of Reserve Category/Model Segments by Dominant Reserve Type

- A partial survey of 2021 PBR Actuarial Reports indicated that:
 - Of 99 companies that included Term results, 63% held NPR, 35% held the DR, and the remaining 2% had the stochastic reserve as the dominant reserve, and
 - Of 68 companies that included ULSG results, 57% held the NPR, 31% held the DR, and the remaining 12% held the SR as the dominant reserve.
- For the term reserving category, approximately half of the participants held negative deterministic reserves for their Baseline 1 submission.
- While the chart for Term 1B seems to indicate a switch from NPR to DR, the change in proportion of NPR/DR is entirely due to less participation in 1B.
- Almost half of the participant ULSG products held a net premium reserve as their minimum reserve for Baseline 1. For field tests 1A and 1B, there was a large shift to the deterministic reserve and a smaller shift to the stochastic reserve as the dominant reserve.
- Although the proportions of winning NPR, DR, and SR are the same across ULSG 1A and 1B, there was movement in the winning reserve type for some model segments between 1A and 1B.

20

Term Reserve Category: VM-20 Minimum Reserve Change from Baseline

Field Test	1A	1B
# of Participants	11	10

Average % Reserve Increase: Minimum and DR

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- The graph on the left shows average percentage increases in the VM-20 minimum reserve and DR for the Term Reserving Category.
- Despite reserve increases for many of the participants for their field test modeled reserve runs (DR), the effect on the legal entity level minimum reserve was muted due to the net premium reserve still dominating in many cases.
- Field test 1A saw a larger increase to DR than 1B, but the change to the average reported (minimum) reserve was very similar due to:
 - There were no companies that switched dominant reserves from their Baseline 1 result to either the 1A or 1B for the Term Reserving Category. For the companies where the NPR was the dominant reserve, the change in reported reserve was zero.
 - When the DR was the winning reserve, some companies had larger increases in 1A and others saw larger increases in the 1B run.
- The dominant reserve may change throughout a product’s lifecycle. PBR only became mandatory in 2020, so all of the business was recently issued. Therefore, these results may not be applicable to business that is in a more mature phase.

21

ULSG Reserve Category: VM-20 Minimum Reserve Change from Baseline

Field Test	1A	1B
# of Participants	11	11

Average % Reserve Increase: Minimum, DR, and SR

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- The graph on the left shows average percentage increases in the VM-20 minimum reserve, DR and SR for the ULSG Reserve Category.
- Despite reserve increases for many of the participants for their field test modeled reserve runs (DR and SR), the effect on the legal entity level minimum reserve was muted due to:
 - the net premium reserve still dominating in many cases, and
 - several of the largest increases to modeled reserves did not end up being the winning reserve.
- The dominant reserve may change throughout a product’s lifecycle. PBR only became mandatory in 2020, so all of the business was recently issued. Therefore, these results may not be applicable to business that is in a more mature phase.

22

Stochastic Exclusion Ratio Test (SERT) Scenario Results

NATIONAL ASSOCIATION OF INSURANCE
 COMMISSIONERS

23

Field Test SERT Results - Term

- As compared to company Baseline #1 results, less of the field test run term model segments passed the SERT, with the biggest drop-off seen for the Conning Calibration w/ GFF (1A).
- The average (non-weighted) SERT result for term model segments increased for the field test runs compared to Baseline #1. Average SERT ratios increased the most for the Conning Calibration w/ GFF (1A).
- For the term model segment, the “b” largest adjusted DR scenario was mostly consistent for a given model segment between the different field test runs. However, across model segments/legal entities, different “b” SERT scenarios were constraining.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

24

Field Test SERT Results - ULSG

- As compared to company Baseline #1 results, less of the field test run ULSG model segments passed the SERT, with the biggest drop-off seen for the Conning Calibration w/ GFF (1A).
- The average (non-weighted) SERT result for term model segments increased for the field test runs compared to Baseline #1. Average SERT ratios increased the most for the Conning Calibration w/ GFF (1A).
- The “b” scenario in the SERT calculation fluctuated between field test runs for some ULSG model segments but was stable in others

Field Test SERT Results - Other

- As compared to company Baseline #1 results, less of the field test run ULSG model segments passed the SERT, with the biggest drop-off seen for the Conning Calibration w/ GFF (1A).
- The average (non-weighted) SERT result for term model segments increased for the field test runs compared to Baseline #1. Average SERT ratios increased the most for the Conning Calibration w/ GFF (1A).
- For the Other model segment, the “b” scenario frequently changed between the baseline and field test runs. Of those that change, most switched to a pop-down UST SERT scenario. Across model segments/legal entities, different “b” SERT scenarios were constraining.

Next Steps

- The NAIC will look to present economic scenario generator field test results for the C3 Phase I in late June. Additional time for follow-up discussions may be necessary.
- Regulators will continue to work with interested parties in economic scenario generator drafting groups to continue progress on reserve/capital framework specific implementation tasks.
- The Life Actuarial (A) Task Force will engage with the American Academy of Actuaries and other interested parties to decide on stylized facts and acceptance criteria ahead of a recalibration of the economic scenario generator and a second field test.

Appendix 1: Stochastic Exclusion Test Ratio (SERT) Scenario Overview

Deterministic Reserve 12/31/21 Scenario Statistics

- SERT Scenario 12 (the DR scenario) has significantly lower UST rates for 1A/5A/6* and 1B compared to the AIRG. Lower and longer interest rates can tend to increase VM-20 reserves due to, for example, challenges with companies being able to reinvest in assets with enough yield to support minimum crediting rates and/or a lower discount rate on future claim payments.
- The deterministic reserves for variable insurance products with direct investment in equity funds and indexed products are also impacted by equity scenarios. The table below shows the Gross Wealth Factors (GWFs) for the 12/31/21 AIRG and field test runs. 1A, 1B, and 6 have similar GWFs to the AIRG, but the 5A field test run that utilized the original Conning equity calibration with the equity-Treasury linkage had significantly lower GWFs given the low starting interest rate environment.

Large Cap (S&P 500) Equity Gross Wealth Factors

	12	60	120	240	360
AIRG	1.04	1.22	1.48	2.19	4.52
1A	1.03	1.16	1.38	2.01	4.29
1B	1.04	1.19	1.40	2.00	4.04
5A	1.03	1.09	1.17	1.36	2.47
6	1.06	1.27	1.56	2.29	4.77

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

*Note: 5A and 6 have the same UST scenarios as 1A.

29

UST SERT Scenario 3 (Pop-down) at 12/31/21

- The pop-down UST scenario for field test runs 1A and 1B are significantly lower than those produced by the AIRG
- **Pop-down description:** Interest rate shocks are selected to maintain the cumulative shock at the 10% level (1.282 standard errors).

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

30

UST SERT Scenario 1 (Pop-up) at 12/31/21

- The pop-up UST scenario for field test runs 1A and 1B are significantly higher than those produced by the AIRG. However, in the pop-up scenarios, field test 1A is also materially higher than field test 1B
- **Pop-up description:** Interest rate shocks are selected to maintain the cumulative shock at the 90% level (1.282 standard errors).

Appendix 2: Treasury and Equity Scenario Overview

Field Test 1A: US Treasury Overview

- Field Test 1A (as of 12/31/21) included a recalibration of the Conning GEMS® US Treasury model that was designed to meet the regulator’s acceptance criteria related to low for long, the prevalence of high interest rates, upper and lower bounds, initial yield curve fit, and yield curve shape. The frequency and severity of negative interest rates were controlled using a generalized fractional floor.
- The 1A UST scenario set as of 12/31/21 had a much higher prevalence of low UST rates, including negative interest rates, compared to the scenarios produced by the AIRG as of 12/31/21, which is floored at 1 BP.
- The 1A UST scenario set also included greater and more frequent high UST rates, with maximum UST rates greatly exceeding that of the AIRG. While a floor was employed in all of the field test UST scenario sets, no cap was employed on how high rates could get.

33

Field Test 1A: Equity Overview

- The 1A equity scenario set used a calibration that targeted the median gross wealth factor (GWF) produced by the AIRG at the end of 30 years. This recentering of the equity return distribution with changes to the starting interest environment partially mitigates the impact of the GEMS® equity-Treasury linkage functionality.
- While the GWF’s between the AIRG and field test 1A are consistent at the 50th percentile at the end of the 30th projection year, the 1A scenario set generally has somewhat lower GWFs in the lower percentiles and earlier projection years compared to the AIRG.
- In the later durations and higher percentiles, the 1A GWFs are greater than those produced by the AIRG.

Field Test 1B: US Treasury Overview

- Field Test 1B (as of 12/31/21) included a calibration of the Conning GEMS® US Treasury model that was designed to meet regulator acceptance criteria but placed additional emphasis on maintaining realistic term premiums throughout the projection. Towards that end, there was a significantly lower frequency of inversions (e.g. ~5% of 1B scenarios had 10 year/2year UST inversions at the end of year 30 compared to ~12% seen in 1A). The average level of inversion was also significantly lower (e.g. in 1B 10 year/2 year UST inversions average ~30 BP at the end of year 30, compared to ~90 BP average inversion level for 1A).
- 1B also included lower and less frequent high interest rates than 1A, but still contained greater and more frequent high interest rates than the AIRG.
- The frequency and severity of negative interest rates were controlled using a shadow floor that preserves the arbitrage free nature of the scenarios. The 1B UST scenario set has a comparable amount of low/negative UST rates to 1A, but significantly more severe and frequent low (and negative) UST rates compared to the AIRG.

Field Test 1B: Equity Overview

- The 1B equity scenario set used the same calibration as 1A. However, due to the equity-Treasury linkage, the resulting GWFs are different. The largest differences between the 1A and 1B equity GWFs are seen at the upper percentiles at the end of the 30th projection year, with the 1B being substantially lower and more in line with the AIRG.
- The median GWF at the end of the 30th projection year for 1B (7.99) is materially lower than both 1A (8.99) and the AIRG (8.84).
- Finally, the 1st percentile GWF at the end of the 30th projection year for 1b (1.19) was consistent with those of 1A (1.17) and the AIRG (1.22).

Field Test 2A: US Treasury Overview

- Field Test 2A (as of 12/31/19 + 200 BP) used the same calibration as 1A (Conning Calibration with a Generalized Fractional Floor) but with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities.
- The higher starting interest environment leads to greater and more frequent high interest rates and less severe and less frequent low interest rates in 2A compared to 1A.
- Compared to the AIRG with a 12/31/19 + 200 BP starting interest environment, the 2A scenario set has a greater frequency and severity of high UST rates and more prevalent and severe low (and negative) UST rates.

Field Test 2A: Equity Overview

- The targets of the 2A equity scenarios is designed to align the GWF at the end of the 30th projection year (8.97) with those produced by the AIRG (8.84) no matter the starting interest rate environment. However, there is still an impact to the 2A equity scenarios due to the increased starting interest rate environment and the equity-Treasury linkage compared to the 1A equity scenarios.
- The largest differences between the 2A and 1A equity GWFs are seen at the upper percentiles at the end of the 30th projection year, for example the 99th percentile GWF for 1b is 127.28 at the end of the 30th year compared to 101.58 for the 1A scenario set.
- The same considerations apply when comparing 2A to the AIRG with a 12/31/19 + 200 BP starting interest rate environment, with the largest differences between the GWFs of 2A and the AIRG occurring in the higher percentiles and later projection years.

Field Test 5A: Treasury and Equity Overview

- The 5A scenario set uses the exact same UST scenarios as 1A.
- For the 5A equity scenario set, the Conning’s original equity model calibration is used that includes the full impact of the equity-Treasury linkage. With 5A’s lower overall UST rates, the equity GWFs at the lower percentiles are much more severe than the AIRG and other field test scenario sets. For example, the 1st percentile of equity GWFs for 5A is .39, compared to 1.22 for the AIRG and 1.19 for 1A.
- The median GWF at the end of the 30th projection year for 5A (5.88) is significantly lower than with both 1A (8.99) and the AIRG (8.84).

Field Test 6: Treasury and Equity Overview

- The field test 6 scenario set uses the exact same UST scenarios as 1A.
- The equity calibration for scenario set 6 assumes a constant mean equity return independent of rates and increases alignment with AIRG equity model GWFs.
- The median GWF at the end of the 30th projection year for 6 is 9.49, which is close but somewhat higher than the the corresponding GWFs for both 1A (8.99) and the AIRG (8.84).
- While there are differences (somewhat lower GWFs in low percentiles, lower GWFs at higher percentiles), the equity scenarios from 6 overall are more consistent with those produced by the AIRG than other field test scenario sets.

Draft: 7/3/23

Life Actuarial (A) Task Force
Virtual Meeting
May 11, 2023

The Life Actuarial (A) Task Force met May 11, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Adopted APF 2021-08

Hemphill said that the Task Force would be considering adoption of amendment proposal form (APF) 2021-08. Brian Bayerle (American Council of Life Insurers—ACLI) walked through the ACLI’s comment letter (Attachment Five-A), noting a concern with the language that could potentially not allow companies wishing to choose a claim cutoff date later than April 1. Angela McNabb (NAIC) explained that the language in APF 2021-08 would allow for companies to use a claim cutoff date later than April 1. Bayerle agreed and thanked McNabb for looking into the concern.

Weber made a motion, seconded by Leung, to adopt APF 2021-08 (Attachment Five-B). The motion passed unanimously.

2. Re-Exposed APF 2023-05

Hemphill said that APF 2023-05, which revised the modeling of hedging for index-based crediting, had been modified after the prior exposure to address comments that the Task Force received. Bayerle walked through the ACLI’s comment letters (Attachment Five-C and Attachment Five-D). Chupp noted issues with the currently proposed language in Section 4.A.4.b.iii of the APF where it could be implied that only a company with a strategy that combined index credits, guaranteed benefits, and other risks would not be eligible for the hedge treatment in Section 4.A.4.b.i, rather than the intent of a company that combined any of those elements. The Task Force discussed the issue, and Hemphill suggested replacing the language with “and/or” to imply that any combination of the previously mentioned benefits would not be eligible for the hedge treatment in 4.A.4.b.i. Chupp then pointed out an incorrect reference and another error correction in the APF language.

Maambo Mujala (American Academy of Actuaries—Academy) spoke about the Academy’s comment letter (Attachment Five-E), specifically noting that margin accounting for hedge error should only be applied to the portion of the index that is hedged given that many companies do not hedge 100% of their index-based credited interest. Bayerle noted that he supports making a language change in the re-exposure of 2023-05 to capture the comment from the Academy. Slutsker asked for an example of hedging less than 100% of the index credit. Mujala responded that companies do not typically hedge 100% of the index credit due to expected decrements.

Hemphill noted that an additional comment letter was received from Risk & Regulatory Consulting (RRC) (Attachment Five-F). The letter was generally supportive of APF 2023-05, but it had questions on the rationale behind the parameters.

Slutsker made a motion, seconded by Leung, to expose APF 2023-05 (Attachment Five-G) with the edits that Chupp and the Academy suggested for a 16-day public comment period ending May 26. The motion passed unanimously.

Having no further business, the Task Force adjourned.

Re: Re-Exposure of APF 2021-08 (VM-51 Data Call Lag Reduction)

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the re-exposure of APF 2021-08 on reducing the VM-51 Data Call Lag reduction from two years to one year. We support this update, but we have a clarifying question and a request.

The updated language for reported terminations suggests that companies can use any date so long as it is on or after 4/1/20XX+1. We wanted to confirm that the flexibility for the reporting cutoff will not generate any errors in submission or processing. Perhaps to accommodate companies that currently are comfortable with their existing processes, the language defaults to the current with the allowance for the earlier cutoff:

- i. Report terminations that were incurred in calendar year 20XX and reported before July 1, 20XX+1. **Companies may report terminations through April 1, 20XX+1, if they choose.** However, exclude rescinded policies (e.g., 10-day free look exercises) from the data submission.

Consistent with the prior occurrence in which two years of data were submitted concurrently, we request the NAIC continue to provide flexibility around the timing of individual company submissions to account for this one-time impact.

Thank you once again for consideration of our comments and we are looking forward to continued conversations with LATF on this topic.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Society of Actuaries Valuation Basic Table Team – Chair Larry Bruning

Revisions to VM-51 to allow for the data experience reporting observation calendar year to be one year prior to the reporting calendar year.
2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, ~~2021~~ 2023, version of the Valuation Manual – VM-51 Section 2.D.
3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Section 2: Statistical Plan for Mortality

D. Process for Submitting Experience Data Under This Statistical Plan

Data for this statistical plan for mortality shall be submitted on an annual basis. Each company required to submit this data shall submit the data using the Regulatory Data Collection (RDC) online software submission application developed by the Experience Reporting Agent. For each data file submitted by a company, the Experience Reporting Agent will perform reasonability and completeness checks, as defined in Section 4 of VM-50, on the data. The Experience Reporting Agent will notify the company within 30 days following the data submission of any possible errors that need to be corrected. The Experience Reporting Agent will compile and send a report listing potential errors that need correction to the company.

Data for this statistical plan for mortality will be compiled using a calendar year method. The reporting calendar year is the calendar year that the company submits the experience data. The observation calendar year is the calendar year of the experience data that is reported. The observation calendar year will be ~~two~~ one years prior to the reporting calendar year. For example, if the current calendar year is ~~2018~~ 2024 and that is the reporting calendar year, the company is to report the experience data that was in-force or issued in calendar year ~~2016~~ 2023, which is the observation calendar year. For the 2024 reporting calendar year, companies who are required to submit data for this statistical plan for mortality will be required to submit two observation calendar years of data, namely observation calendar year 2022 and observation calendar year 2023. For reporting calendar years after 2024, companies who are required to submit data for this statistical plan for mortality will be required to submit one observation calendar year of data.

Given an observation calendar year of 20XX, the calendar year method requires reporting of experience data as follows:

- i. Report policies in force during or issued during calendar year 20XX.
- ii. Report terminations that were incurred in calendar year 20XX and reported before ~~July~~ April 1, 20XX+1. Companies may report terminations reported after April 1, 20XX+1 if they choose to do so. However, exclude rescinded policies (e.g., 10-day free look exercises) from the data submission.

For any reporting calendar year, the data call will occur during the second quarter, and the data is to be submitted according to the requirements of the *Valuation Manual* in effect during that calendar year. Data submissions must be made by Sept. 30 of the reporting calendar year. Corrections of data submissions must be completed by ~~Dec. 31~~ Feb. 28 of the year following the reporting calendar year. The NAIC may extend either of these deadlines if it is deemed necessary.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

This APF is needed for the following reasons:

1. There is a need to shorten the time period between data observation and data collection to facilitate more timely analysis and reporting of mortality experience.
2. Under a Principle Based Reserving methodology, valuation basic tables should reflect recent and current mortality experience.

Re: APF 2023-05

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on APF 2023-05 (VM-21 Index Hedging) which was exposed by LATF during the Spring National Meeting in Louisville. ACLI supports the exposure with the changes proposed by LATF and the following one non-substantive change:

We observed small grammatical error in Section VM-21 4.A.4.b.ii.b and suggest striking “no” as a correction:

“...a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and only ~~no~~ future hedge purchases associated solely with indexed interest credited.”

Regarding the 1% minimum suggested in the APF, we have a few points reflecting why we believe this is more appropriate than the current 5% minimum for VA hedging:

- Index hedging is tighter than dynamic VA hedging.
- The percentage used must be supported by company experience and would be subject to ongoing regulatory scrutiny. The 1% is not a safe harbor, but rather a floor.
- The higher the percentage, the more companies doing the tightest hedging would be penalized.
- We also do not think a survey of company experience would be fruitful because it would be aggregating apples and oranges. For example, some companies may employ a static hedging strategy, while others may use a dynamic strategy, and still others may hedge only certain Greeks, e.g., delta. The assumption should be based on the company’s specific strategy, not on an aggregation of different company strategies.

Re: Regulator Edits to APF 2023-05 (Index Credit Hedging)

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments to LATF regarding APF 2023-05.

Based on informal feedback from regulators as well as additional input from ACLI members, we are submitting an updated APF and requesting re-exposure once the changes have been reviewed by LATF.

Among these changes, the APF incorporates for consideration a regulator suggestion to change the minimum Index Credit Hedge Margin from 1% to 2%. Our members have concerns about this and request that a re-exposure include both 1% and 2% as alternatives.

ACLI received other regulator suggestions to eliminate the provision that would allow for separation of strategies that combine index credit hedging and other objectives and provide additions to VM-31 documentation. We are amenable to these suggestions and have modified the APF accordingly. The APF also incorporates other regulator-suggested textual edits of a “clean up” nature.

ACLI is also proposing to add language to Section 9.E.7 to confirm that it is appropriate to use experience on similar products for purposes of the Index Credit Hedge Margin as well as the error factor.

Thank you once again for your consideration of our comments and we look forward to continued dialogue with regulators on this APF.

Re: APF 2023-05; Hedging language to address index credit hedging in VM-21

Dear Chair Hemphill,

The Variable Annuity Reserves and Capital Working Group (VARCWG) of the American Academy of Actuaries¹ (the “Academy”) appreciates the opportunity to provide comments on the proposed changes to VM-21 as outlined in APF 2023-05.

VARCWG offers the following comments and proposals:

Recommendation for a principle-based approach

First, the VARCWG wishes to reiterate what has been stated in the past, including the most recent [comment letter from the Academy’s Life Valuation Committee](#) on APF 2020-12 in reference to modeling hedges. The VARCWG believes companies should model their investment strategies as part of a principle-based reserve calculation, which includes the modeling of hedging activities with appropriate margins.

The ideal approach for index credit hedging would be to follow the VM-20 approach, where hedge cash flows are modeled consistently with how other cash flows are projected. Any “error” to hedge cash flows can be reflected in margins that are added to best estimate cash flows with the hedges reflecting the level of uncertainty in the modeled cash flows.

It should also be noted that the current VM-21 approach could result in an error/residual risk of \$0 when CTE70 (adjusted) is less than CTE70 (best efforts). This approach may not capture the underlying risk and may underestimate the level of margin that would be appropriate for statutory valuation purposes.

Proposed revisions to exposed APF

Second, the VARCWG would propose the following redline revisions to the exposed APF:

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

- *VM-01*: The term “Index Credit” means any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy or contract values that is directly linked to one or more indices. Amounts credited to the policy or contract resulting from a floor on an index account are included. An Index Credit may be positive or negative.
- *VM-21 Section 4.A.4*: An Index Credit Hedge Margin for these hedge instruments shall be reflected in both the “best efforts” and the “adjusted” runs by reducing index interest credit hedge payoffs by a margin multiple that shall be justified by sufficient and credible company experience and account for model error. It shall be no less than [1%] multiplicatively of the portion of the interest credited that is hedged. In the absence of sufficient and credible company experience, a margin of at least [20%] shall be assumed. There is no cap on the index credit hedge margin if company experience indicates actual error is greater than [20%].

The VARCWG suggests that the margin be applied only to the portion of interest credit that is hedged.

Determining the minimum index credit hedge margins

Regarding the determination of the minimum index credit hedge margins, the Academy is currently deliberating on this topic. An approach to determine the minimum hedge error is being designed for the VM-22 field test, which will be a joint effort between the Academy, NAIC, and The American Council of Life Insurers. VARCWG would propose the same approach be used for VM-21 when that approach is finalized.

Other comments for consideration

In any field test to determine level of hedge margins, the VARCWG suggests testing alternative methodologies as well, such as the VM-20 principle-based approach.

We thank you for your consideration of these comments and would be pleased to answer corresponding questions or provide additional support as needed. Should you have questions or comments in response to this letter, please contact Amanda Barry-Moilanen, life policy analyst (barrymoilanen@actuary.org).

Sincerely,

Maambo Mujala, MAAA, FSA
Chairperson, Variable Annuity Reserves and Capital Work Group
American Academy of Actuaries

CC: Scott O’ Neal, NAIC

Memo

To: Cassie Brown, Chair, Life Actuarial (A) Task Force (LATF)

From: Ben Leiser, Director, RRC

Date: April 11, 2023

Subject: RRC Comments Regarding the Proposal for Valuation Manual Revised Hedge Modeling Language in VM-21

Background

The Life Actuarial Task Force exposed for comment a proposal to revise the hedge modeling language in the Valuation Manual to address index credit hedging. RRC appreciates the opportunity to offer our comments. Should you have any questions, we would be glad to discuss our comments with you and the LATF members.

RRC Comments

We generally agree with including updated language to address index credit hedging in VM-21 in light of its use in products that have recently experienced market growth, especially given recent regulator and audit agreement as to the interpretation of the current VM-21 guidance.

While we agree with the concept of an index credit hedge margin, it is unclear as to the rationale or support for the level of the proposed minimum guardrail of 1% or the proposed level of 20% if there is no company experience to support the margin.

- a. It doesn't appear appropriate that a company could have no experience to support their index credit hedging assumptions and assume that the hedging is effective with a 20% margin. If their hedging is not well designed, the margin of 20% could be too low. We suggest that there be a requirement for a company to provide justification and support for including hedging at all. In addition, the assumed margin included in the regulation should be justified and supported.
- b. We also suggest that the guidance point to how the margin is set more generally; e.g., the less experience and the more volatility, the higher the required margin, and to include model based testing of the appropriateness of the margin, in a range of interest rate environments.

We also suggest that LATF consider whether to implement this change as a temporary measure and update accordingly when VM-22 is in place, given that the exposure is intended to align the index credit hedging guidance between VM-21 and VM-22; this would ensure that they be kept in alignment from the start and not result in different or inconsistent requirements or margin guardrails.

Thank you for the opportunity to provide comments on this important initiative. I can be reached at ben.leiser@riskreg.com/(201) 870-7713 if you or other LATF members have any questions.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Brian Bayerle, ACLI

Title of the Issue:

Revise hedge modeling language to address index credit hedging.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-01, VM-21 Section 4.A.4, VM-21 Section 6.B.3, VM-21 Section 9, VM-21 Section 9.C.2, VM-21 Section 9.E.7, VM-31 Section 3.F.8.d

Formatted: Highlight

January 1, 2023 NAIC Valuation Manual, APF 2020-12

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Index credit hedging is fundamentally different than the dynamic GMxB hedging which formed the conceptual underpinnings for VM-21. For example, the relatively fixed parameters of traditional GMxBs drive the hedging approach. In contrast, indexed products (including RILAs) have flexible crediting parameters which are continually reset based on hedge availability and costs, as well as current market conditions. In short, GMxB contract features drive hedging, while index product hedging drives contract features.

Since the reforms of VM-21 and C3P2, ILVA products have experienced major market growth. Several carriers, with the agreement of regulators and auditors, have interpreted the current VM-21 guidance as permitting the effects of index credit hedging to be reflected in product cash flows instead of within the “best efforts” and “adjusted” scenarios. Both regulators and industry would benefit from the codification of this approach within VM-21.

ACLI’s proposal borrows heavily from the Academy’s draft VM-22. The “error” for index credit hedging is describes as a percentage reduction to hedge payoffs. The percentage reduction must be supported by relevant, credible, and documented experience. A minimum of [1%/2%] is proposed as a regulatory guardrail.

The ACLI proposal would subject index credit hedging to the “clearly defined” documentation requirements of VM-21. Substantively, the change would (a) include index credit hedge purchases with the VM-21 “adjusted” run, and (b) permit index credit hedging to reflect a different, and potentially lower, level of ineffectiveness.

Notes: APF 2023-05			

ACLI supports aligning the index credit hedging guidance between VM-21 and VM-22. We started with draft VM-22 verbiage in creating this APF. In a few areas, our members have suggested technical improvements to the draft VM-22 definitions. It may be appropriate to carry these over to VM-22.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2023-05			

VM-01

The term “Index Credit Hedge Margin” means a margin capturing the risk of inefficiencies in the company’s hedging program supporting index credits. This includes basis risk, persistency risk, and the risk associated with modeling decisions and simplifications. It also includes any uncertainty of costs associated with managing the hedging program and changes due to investment and management decisions.

The term “Index Credit” means any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy or contract values that is directly linked to one or more indices. Amounts credited to the policy or contract resulting from a floor on an index account are included. An Index Credit may be positive or negative.

The term “Index Crediting Strategies” means the strategies defined in a contract to determine index credits for a contract. For example, this may refer to underlying index, index parameters, date, timing, performance triggers, and other elements of the crediting method.

VM-21 Section 4.A.4

4. Modeling of Hedges

- a. For a company that does not have a future hedging strategy supporting the contracts:
 - i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.
 - ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
- b. For a company with one or more future hedging strategies supporting the contracts:
 - i. For a future hedging strategy with hedge payoffs that solely offset ~~interest-index credits~~ associated with indexed interest strategies (~~indexed interest-credits~~):
 - a) In modeling cash flows, the company shall include the cash flows from future hedge purchases or any rebalancing of existing hedge assets that are intended solely to offset ~~interest-index credits~~ to contract holders.
 - b) Existing hedging instruments that are currently held by the company for offsetting the ~~indexed credits~~ in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
 - c) An Index Credit Hedge Margin for these hedge instruments shall be reflected in both the “best efforts” and the “adjusted” runs, as applicable, by reducing index ~~interest-credit~~ hedge payoffs by a margin multiple that shall be justified by sufficient and credible company experience and account for model error. It shall be no less than [1%/2%] multiplicatively of the portion of the ~~interest-index credited~~ that is hedged. In the absence of sufficient and credible company experience, a margin of at least 20% shall be assumed. There is no cap on the index credit hedge margin if company experience indicates actual error is greater than ~~these minimums~~[20%].

Formatted: Highlight

Commented [A1]: Replace with "these minimums" as rereading this applies to either 2% or 20% scenarios. Not strictly needed if we are trying to be minimal with edits.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23	SO		
Notes: APF 2023-05			

- ii. For a company with one or more future hedging strategies supporting the contracts that do not solely offset indexed interest credits, the detailed requirements for the modeling of the hedges are defined in Section 9. The following requirements do not supersede the detailed requirements.
- The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
 - The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 ("best efforts") representing the company's projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 ("adjusted") which shall use only hedge assets held by the company on the valuation date and only future hedge purchases associated solely with indexed interest credits. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor determined following the guidance of Section 9.C.4.
 - The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.
 - The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.
- iii. If a company has a more comprehensive hedge strategy combining index credits with guaranteed benefit and/or other risks (e.g., full fair value or economic hedging), no portion of this hedge strategy is eligible for the treatment described in section 4.A.4.b.ian appropriate and documented bifurcation method should be used in the application of sections 4.A.4.b.i and 4.A.4.b.ii above for the hedge modeling and justification. Such bifurcation methods may quantify the specific risk exposure attributable to index credit liabilities versus other liabilities such as guaranteed living benefits, and apply such for the basis for allocation.

Commented [A2]: Until industry can provide quantitative evidence on historical hedging errors as a percent of interest credited, suggest no allowing bifurcation.

VM-21 Section 6.B.3 Footnote

¹ Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts that does not solely offset index credits as discussed in Section 4.A.4.a.

VM-21 Section 9

Section 9: Modeling Hedges under a Future Non-Index Credit Hedging Strategy

A. Initial Considerations

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23	SO		
Notes: APF 2023-05			

1. ~~This section applies to modeling of hedges other than situations where the company only hedges index credits. If the company clearly separates index credit hedging from other hedging, then this section only applies to the other hedging if the index hedging follows the requirements in Section 4.A.4.b.i. If the company does not clearly separate index credit hedging from other hedging, then this section is applicable for modeling of all hedges.~~

Commented [A3]: Delete

2. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.

(Subsequent sections to be renumbered)

VM-21 Section 9.C.2

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts except hedge purchases solely related to strategies to hedge index credits, therefore following the requirements of Section 4.A.4.a and 4.A.4.b.i.

However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments, except hedging instruments solely related to strategies to hedge index credits, that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

- a) Include the asset cash flows from any contractual payments and maturity values in the projection model.
- b) No hedge positions, in which case, the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

VM-21 Section 9.E.7

7. The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor or Index Credit Hedge Margin determined for the projection.

Commented [A4]: Expanding provision for index credit hedging, noting that the index credit adjustment is described as the Index Credit Hedge Margin, not the error factor.

VM-31 Section 3.F.8.d.x (new subsection)

x. Justification for the margin for any future hedging strategy that offsets interest index credits associated with indexed interest strategies (indexed interest credits), including relevant experience, other relevant analysis, and an assessment of potential model error

Commented [A5]: Modify to "index credits" to be consistent throughout the draft and the additional definition.

Dates: Received	Reviewed by Staff	Distributed	Considered
3/7/23, 5/5/23, 5/10/23	SO		
Notes: APF 2023-05			

- xi. Ten years of historical experience on hedge gains/losses as a percent of index credited for hedge programs supporting index credits. **Commented [A6]:** VM-31 requirement for historical experience to support error factor.

- xii. If there is less than five years of historical experience of this hedging program or a hedging program on similar products, an explanation of how the company considered increases in the error factor to account for limited historical experience. **Commented [A7]:** Explanation for how margin was increased if there was less than 5 years of experience.

- x. The method used to bifurcate comprehensive hedge strategies (i.e., strategies combining index credits, guaranteed benefit, and other risks (e.g., full fair value or economic hedging), per section 4.A.4.b.iii. **Commented [A8]:** Only include if bifurcation is allowed

DRAFT

Draft: 6/26/23

Life Actuarial (A) Task Force
Virtual Meeting
May 4, 2023

The Life Actuarial (A) Task Force met May 4, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill; Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou and); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Timothy Schott represented by Marti Hooper (ME); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Considered LATF Response to VOSTF Referral – Bond Risk Measures

Hemphill walked through the proposed response (Attachment Six-A) to the Valuation of Securities (E) Task Force (VOSTF) referral related to bond risk measures. Hemphill asked if there was any objection from a Task Force member to the response to the VOSTF referral. As no Task Force members objected, Hemphill noted that the response would be sent to VOSTF.

2. Exposed APF 2023-07 – Company Specific Market Paths (CSMP) Removal

Slutsker introduced amendment proposal form (APF) 2023-07 that removes the Company-Specific Market Path (CSMP) standard projection amount method from the VM-21, Requirements for Principle-Based Reserves for Variable Annuities requirements. Slutsker noted that there has been very little usage of the CSMP method among companies and that adapting the method for the new generator of economic scenarios would require a significant effort. Slutsker said that the CSMP method would be removed starting in 2025 which would give companies ample time to prepare.

Slutsker made a motion, seconded by Chupp, to expose APF 2023-07 (Attachment Six-B) for a 21-day public comment period ending May 24. During discussion of the motion, Weber asked if there had been communication with the companies who would be affected by the removal of the CSMP method. Hemphill replied that there had been a survey conducted to determine the number of companies that use the CSMP method and that additional communication with the affected companies had taken place to allow those companies to provide feedback. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

MEMORANDUM

TO: Carrie Mears, Chair, Valuation of Securities (E) Task Force

FROM: Rachel Hemphill, Chair, Life Actuarial (A) Task Force
Craig Chupp, Vice-Chair, Life Actuarial (A) Task Force

RE: Life Actuarial (A) Task Force Response to Bond Risk Measures Referral

DATE: May 5, 2023

Background

On February 13, 2023 a memorandum from the Valuation of Securities (E) Task Force (VOSTF) was received by the Life Actuarial (A) Task Force (LATF) requesting that the Task Force consider the following items:

1. Whether the LATF was supportive of the NAIC's Securities Valuation Office (SVO) building out a new capability to calculate market and analytical information for bonds utilizing commercially available data sources and investment models,
2. Which investment analytical measures and projections would be most helpful to support the work of the LATF,
3. How the LATF would utilize the investment data and why it would be of value,
4. Whether other investment data or projection capabilities would be useful to the LATF that could be provided by commercially available data sources or investment models, and
5. Any other thoughts the LATF had on the SVO initiative.

Recommendation

At their public meeting on April 20th, 2023 the LATF developed the following responses with respect to the VOSTF referral: 1) the LATF was supportive of the SVO initiative to build out a new capability to calculate market data fields; 2) weighted-average life (WAL), option-adjusted spread (OAS), duration, and convexity are some of the most helpful measures, along with comparisons of credit rating provider ratings to SVO ratings, to support regulator review of principle-based reserves (PBR) and asset adequacy testing (AAT); 3) the investment data would be used to complement Actuarial Guideline 53 (AG 53), PBR, and AAT reporting, which is less granular than the proposed risks measures, to give regulators additional insights into the risk/reward profile of insurer assets while reducing the need for LATF stress testing, and; 4) that a description of the scenarios or situations where an asset (such as a collateralized loan obligation) could lose much of its value would assist regulators in assessing tail risk in PBR, AAT, and other reviews.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

California Office of Principles-Based Reserving and Minnesota Department of Commerce

Title of the Issue:

Company-Specific Market Path (CSMP) Removal

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 6.A.1

January 1, 2024 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

The standard projection amount drafting group found that there is very little use of the CSMP method for the VM-21 standard projection amount. Therefore, we recommend removing this method from VM-21 starting in 2025, which gives time to transition to the CTEPA method for the few companies that currently employ the CSMP method.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-21 Section 6: Requirements for the Additional Standard Projection Amount

A. Overview

1. Determining the Additional Standard Projection Amount

a. ~~For valuation dates before January 1, 2025, the additional standard projection amount shall be the larger of zero and an amount determined in aggregate for all contracts falling under the scope of these requirements, excluding those contracts to which the Alternative Methodology is applied, by calculating the Prescribed Projections Amount by one of two methods, the Company-Specific Market Path (CSMP) method or the CTE with Prescribed Assumptions (CTEPA) method. The company shall assess the impact of aggregation on the additional standard projection amount.~~

Deleted: T

b. ~~For valuation dates after January 1, 2025, the additional standard projection amount shall be the larger of zero and an amount determined in aggregate for all contracts falling under the scope of these requirements, excluding those contracts to which the Alternative Methodology is applied, by calculating the Prescribed Projections Amount by the CTEPA method. The company shall assess the impact of aggregation on the additional standard projection amount.~~

c. The additional standard projection amount shall be calculated based on the scenario reserves, as discussed in Section 4.B, with certain prescribed assumptions replacing the company prudent estimate assumptions. As is the case in the projection of a scenario in the calculation of the SR, the scenario reserves used to calculate the additional standard projection amount are based on an analysis of asset and liability cash flows produced along certain equity and interest rate scenario paths.

Draft: 6/28/23

Life Actuarial (A) Task Force
Virtual Meeting
April 27, 2023

The Life Actuarial (A) Task Force met April 27, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Eric Dunning represented by Michael Muldoon (NE); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Re-Exposed APF 2021-08

Larry Bruning (Society of Actuaries—SOA) noted that the purpose of amendment proposal form (APF) 2021-08 is to shorten the data lag period for the mortality experience data collection from two years to one year. Hemphill said that there was one comment received from the American Council of Life Insurers (ACLI) (Attachment Seven-A). Angela McNabb (NAIC) stated that in response to the comment letter, the previously exposed version of APF 2021-08 had been modified to: 1) require that companies include terminations that were reported before April 1 following the year of the data collection instead of the following July 1; and 2) allow for corrected submissions to be submitted by Feb. 28 of the year following the reporting calendar year instead of by Dec. 31 of the reporting calendar year. Brian Bayerle (ACLI) said that he thinks the changes were responsive to their comment letter.

Chupp made a motion, seconded by Andersen, to expose APF 2021-08 (Attachment Seven-B) for a 10-day public comment period ending May 8. The motion passed unanimously.

2. Consider the IMR Referral from the Statutory Accounting Practices (E) Working Group

Hemphill walked through a Statutory Accounting Practices (E) Working Group referral (Attachment Seven-C) regarding negative interest maintenance reserve (IMR) balances. Hemphill proposed that the Task Force responds to the referral by: 1) drafting a template with additional disclosures on the reflection of IMR in principle-based reserving (PBR) and asset adequacy testing (AAT), including confirming that any IMR amounts do not generate subsequent cash flows and that the IMR does not reflect excess withdrawals; 2) drafting guidance for companies for year-end 2023, consistent with year-end 2022 guidance but updated for the Working Group's potential admission of some portion of aggregate negative IMR; 3) drafting an APF for the 2025 *Valuation Manual* consistent with the guidance; and 4) recommending to the Working Group that any decision to admit or not admit aggregate negative IMR not rely on AAT at this time.

Carmello discussed the potential for a disclosure that could illustrate that the proceeds of bond sales were reinvested at higher interest rates and, therefore, more worthy of reporting an associated negative IMR asset. Robust discussion ensued, with some indicating the value of such a disclosure and others noting challenges with the approach. Hemphill noted that a Statutory Accounting Principles (E) Working Group exposure stated that any negative IMR balances that would be admitted would be limited to those where the proceeds of the sale of bonds held at amortized cost were immediately reinvested into other qualifying fixed-income assets that would also be held at amortized cost.

Hemphill asked if any Task Force members objected to moving forward with the proposed response to the Working Group referral. As none objected, Hemphill noted that work would proceed on the response to the Working Group.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Re: Re-Exposure of APF 2021-08 (VM-51 Data Call Lag Reduction)

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the re-exposure of APF 2021-08 on reducing the VM-51 Data Call Lag reduction from two years to one year. ACLI is generally supportive of this change though we have some concerns about the timing of the switch and the impact it could have on industry.

For many companies, the data needed for the data call is not finalized until sometime around mid-August. With the current timeline, this would only give companies around six weeks to generate submissions. This is a problem that could be exacerbated even further if the companies have to submit on behalf of additional legal entities and subsidiaries within their organization. The short timeline between IBNR and the submission date could also reduce the quality of data submitted by companies which is antithetical to the primary goal of the APF.

To ensure that companies are given ample time to collect and package data in a manner in line with the desires of regulators, ACLI proposes that the IBNR date be moved to March 31st instead of June 30th.

Additionally, there is an additional sentence that allows the NAIC to extend the deadline if deemed necessary. It is not clear if this applies to only the last or all the deadlines. ACLI would suggest revising this language to apply to all the deadlines.

These suggested edits are redlined in VM-51 Section 2.D (in part) from the proposed APF language:

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

Given an observation calendar year of 20XX, the calendar year method requires reporting of experience data as follows:

- i. Report policies in force during or issued during calendar year 20XX.
- ii. Report terminations that were incurred in calendar year 20XX and reported before ~~July~~ April 1, 20XX+1. However, exclude rescinded policies (e.g., 10-day free look exercises) from the data submission.

For any reporting calendar year, the data call will occur during the second quarter, and the data is to be submitted according to the requirements of the Valuation Manual in effect during that calendar year. Data submissions must be made by Sept. 30 of the reporting calendar year. Corrections of data submissions must be completed by Feb. 28 of the year following the reporting calendar year. The NAIC may extend ~~either of these~~ ~~this~~ deadlines if it is deemed necessary.

Thank you once again for consideration of our comments and we are looking forward to continued conversations with LATF on this topic.

Sincerely,

Handwritten signature of Colin Masterson in cursive script.

cc: Scott O'Neal, NAIC

4/21/23	SO		
Notes: APF 2021-08			

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

 Society of Actuaries Valuation Basic Table Team – Chair Larry Bruning

 Revisions to VM-51 to allow for the data experience reporting observation calendar year to be one year prior to the reporting calendar year.
2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

 January 1, ~~2021~~ 2023, version of the Valuation Manual – VM-51 Section 2.D.
3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Section 2: Statistical Plan for Mortality

- D. Process for Submitting Experience Data Under This Statistical Plan

 Data for this statistical plan for mortality shall be submitted on an annual basis. Each company required to submit this data shall submit the data using the Regulatory Data Collection (RDC) online software submission application developed by the Experience Reporting Agent. For each data file submitted by a company, the Experience Reporting Agent will perform reasonability and completeness checks, as defined in Section 4 of VM-50, on the data. The Experience Reporting Agent will notify the company within 30 days following the data submission of any possible errors that need to be corrected. The Experience Reporting Agent will compile and send a report listing potential errors that need correction to the company.

Data for this statistical plan for mortality will be compiled using a calendar year method. The reporting calendar year is the calendar year that the company submits the experience data. The observation calendar year is the calendar year of the experience data that is reported. The observation calendar year will be ~~two~~ one years prior to the reporting calendar year. For example, if the current calendar year is ~~2018~~ 2024 and that is the reporting calendar year, the company is to report the experience data that was in-force or issued in calendar year ~~2016~~ 2023, which is the observation calendar year. **For the 2024 reporting calendar year, companies who are required to submit data for this statistical plan for mortality will be required to submit two observation calendar years of data, namely observation calendar year 2022 and observation calendar year 2023. For reporting calendar years after 2024, companies who are required to submit data for this statistical plan for mortality will be required to submit one observation calendar year of data.**

Given an observation calendar year of 20XX, the calendar year method requires reporting of experience data as follows:

- i. Report policies in force during or issued during calendar year 20XX.
- ii. Report terminations that were incurred in calendar year 20XX and reported before ~~July~~ April 1, 20XX+1. Companies may report terminations reported after April 1, 20XX+1 if they choose to do so. However, exclude rescinded policies (e.g., 10-day free look exercises) from the data submission.

For any reporting calendar year, the data call will occur during the second quarter, and the data is to be submitted according to the requirements of the *Valuation Manual* in effect during that calendar year. Data submissions must be made by Sept. 30 of the reporting calendar year. Corrections of data submissions must be completed by ~~Dec. 31~~ Feb. 28 of the year following the reporting calendar year. The NAIC may extend either of these deadlines if it is deemed necessary.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

This APF is needed for the following reasons:

1. There is a need to shorten the time period between data observation and data collection to facilitate more timely analysis and reporting of mortality experience.
2. Under a Principle Based Reserving methodology, valuation basic tables should reflect recent and current mortality experience.

MEMORANDUM

TO: Rachel Hemphill, Chair of the Life Actuarial (A) Task Force
Craig Chupp, Vice-Chair of the Life Actuarial (A) Task Force

FROM: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
Kevin Clark, Vice-Chair of the Statutory Accounting Principles (E) Working Group

DATE: March 27, 2023

RE: SAPWG Referral for Negative Interest Maintenance Reserve (IMR)

During the 2023 Spring National Meeting, the Statutory Accounting Principles (E) Working Group held a detailed discussion on the potential to permit admittance of negative interest maintenance reserve (IMR). The Working Group discussed the potential for both a 2023 solution and a long-term solution. With this discussion, the Working Group recommended continued engagement with the Life Actuarial (E) Task Force with a referral for consideration of the Asset Adequacy Testing (AAT) implications of negative IMR.

Specifically, the Working Group recommended a referral to the Task Force to consider the following:

1. Development of a template summarizing how IMR (positive and negative) is reflected within AAT.
2. Consideration of the actual amount of negative IMR that is to be used in AAT, noting that as negative IMR is included, there is a greater potential for an AAT liability.
3. Better consideration and documentation of cash flows within AAT, as well as any liquidity stress test considerations.
4. Ensuring that excessive withdrawal considerations are consistent with actual data. (Insurers selling bonds because of excess withdrawals should not use the IMR process.)
5. Ensuring that any guardrails for assumptions in AAT are reasonable and consistent with other financial statement / reserving assumptions.

The Working Group appreciates your time and partnership in assessing the impact of negative IMR and working towards an appropriate solution for statutory accounting and overall insurer financial solvency. If you have any questions, please contact Dale Bruggeman, or Kevin Clark, SAPWG Chair and Vice Chair, with any questions.

Draft: 6/28/23

Life Actuarial (A) Task Force
Virtual Meeting
April 20, 2023

The Life Actuarial (A) Task Force met April 20, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil and Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Heir Cooper (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Disbanded the Index-Linked Variable Annuity (A) Subgroup

Hemphill thanked Weber, the members of the Index-Linked Variable Annuity (A) Subgroup, and the interested parties for working to complete the charges of the Subgroup. Weber noted that he supports disbanding the Subgroup.

Hemphill asked Task Force members if there are any objections to disbanding the Subgroup. With no objections, the Subgroup disbanded.

2. Adopted APF 2023-04

Hemphill said amendment proposal form (APF) 2023-04 clarifies the requirements for the mortality rates the company expects to emerge. She noted that no comments were received during the exposure period.

Chupp made a motion, seconded by Reedy, to adopt APF 2023-04 (Attachment Eight-A). The motion passed unanimously.

3. Exposed APF 2023-06

Hemphill noted that APF 2023-06 was taken from Sections 1 and 2 of the originally exposed version of APF 2023-03. She said APF 2023-06 addresses: 1) an inconsistency in the net premium reserve (NPR) calculation in VM-20, Requirements for Principle-Based Reserves for Life Products; and 2) adding a cash surrender value floor to the calculation of scenario reserves to be consistent with VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

On item #1, Dylan Strother (American Academy of Actuaries—Academy) walked through the Academy's comment letter (Attachment Eight-B) and noted that initial testing showed a material increase to the NPR for new business. Chupp asked how the formulae for the NPR differs from the methodology used in *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38) Section 8D. Strother noted that the calculations are not directly comparable. Colin Masterson (American Council of Life Insurers—ACLI) walked through the ACLI's comment letter (Attachment Eight-C) and noted that the ACLI supports delaying consideration on APF 2023-06 and holistically reviewing the NPR formula before making changes. Hemphill

responded that she supports taking the appropriate amount of time to consider the changes in APF 2023-06, and she requested additional analysis from the Academy.

Regarding the changes in Section 2 of APF 2023-06, Dave Neve (Academy) noted that the Academy does not support flooring the VM-20 scenario reserve at the cash surrender value due to a floor already being present in the NPR calculation, as well as the Academy's view that a floor in the scenario reserve component would distort the VM-20 stochastic reserve measure. Masterson agreed with Neve, and he noted a lack of support from the ACLI for this change. Hemphill noted concerns that without this change, the measure of tail risk could be understated in the VM-20 stochastic reserve, to which Carmello agreed.

Carmello made a motion, seconded by Weber, to expose APF 2023-06 (Attachment Eight-D) for a 21-day public comment period ending May 10. During discussion of the motion, Neve asked if it would make sense to determine the impact of these changes prior to adoption. Hemphill responded that some quantification was already provided, and interested parties were free to comment during the exposure period regarding any additional quantification that is necessary. The motion passed unanimously.

4. Discussed the VOSTF Bond Risk Measures Referral

Hemphill introduced the Bond Risk Measures referral (Attachment Eight-E) from the Valuation of Securities (E) Task Force (VOSTF) that had been exposed for comment. She proposed responding to items #1 through #4 of the referral by: 1) indicating that the Life Actuarial (A) Task Force was supportive of the Securities Valuation Office (SVO) initiative to build out a new capability to calculate market data fields; 2) noting that weighted-average life (WAL), option-adjusted spread (OAS), duration, and convexity are some of the most helpful measures, along with comparisons of credit rating provider (CPR) ratings to SVO ratings, to support state insurance regulator review of principle-based reserves (PBR) and asset adequacy testing (AAT); 3) noting that the investment data would be used to complement *Actuarial Guideline LIII—The Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53), PBR, and AAT reporting, which is less granular than the proposed risk measures, to give state insurance regulators additional insights into the risk/reward profile of insurer assets, while reducing the need for Life Actuarial (A) Task Force stress testing; and 4) stating that a description of the scenarios or situations where an asset, such as a collateralized loan obligation (CLO), could lose much of its value would assist state insurance regulators in assessing tail risk in PBR, AAT, and other reviews.

Hemphill then summarized comment letters that had been received from the Academy (Attachment Eight-F) and the ACLI (Attachment Eight-G). Craig Morrow (Academy) spoke to the Academy's comment letter, and he stated that it recommends developing a proof-of-concept initiative to identify how the additional investment information could be utilized.

Hemphill asked if any Life Actuarial (A) Task Force members object to directing NAIC staff to draft a memo to the Valuation of Securities (E) Task Force with the discussed response. No members objected, and NAIC staff were given the direction to draft the memo.

5. Discussed the Valuation of Securities (E) Task Force Structured Equity and Funds Referral

Hemphill summarized the VOSTF Structured Equity and Funds referral (Attachment Eight-H), and she noted that a comment letter (Attachment Eight-I) was received from the ACLI. Masterson said the ACLI noted some concerns to the VOSTF regarding this initiative in a separate comment letter.

Hemphill asked if any Life Actuarial (A) Task Force members object to directing NAIC staff to draft a memo to the Valuation of Securities (E) Task Force noting support of the related efforts continuing through an open process. No members objected, and NAIC staff were given the direction to draft the memo.

Having no further business, the Life Actuarial (A) Task Force adjourned.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

PBR Staff of Texas Department of Insurance

Title of the Issue:

Companies appear unclear how to support the requirement that “company experience mortality rates shall not be lower than the mortality rates the company expects to emerge” in PBR Actuarial Report under VM-31 Section 3.D.3.1.iv.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-31 Section 3.D.3.1.iv

January 1, 2023 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

We have observed a consistent issue, where there is not adequate support showing compliance with the requirement that “the company experience mortality rates shall not be lower than the mortality rates the company expects to emerge”. The most commonly provided support is a retrospective quantitative analysis (e.g., the actual to expected analysis), without any further discussion of the mortality rates that the company expects to emerge. The intention of this requirement is to discuss any forward-looking qualitative analysis, rather than just a historical quantitative analysis. The disclosure shall include, but is not limited to, the discussion of underwriting standard changes (or the lack thereof), distribution channel changes (or the lack thereof), any pandemic adjustments (or the lack thereof), and the results of ongoing experience monitoring.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

Dates: Received	Reviewed by Staff	Distributed	Considered
2/24/23	SO		
Notes: APF 2023-04			

W:\National Meetings\2010\...TF\LHA\

VM-31 Section 3.D.3.I.iv

Description and justification of the mortality rates the company actually expects to emerge, and a demonstration that the anticipated experience assumptions are no lower than the mortality rates that are actually expected to emerge. The description and demonstration should include the level of granularity at which the comparison is made (e.g., ordinary life, term only, preferred term, etc.). For the mortality rates that are actually expected to emerge, the description should include a forward-looking qualitative analysis which includes, but is not limited to, the discussion of any underwriting standard changes (or lack thereof), distribution channel changes (or lack thereof), any pandemic adjustments (or lack thereof), and the results of ongoing experience monitoring.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

Rachel Hemphill
Chair, Life Actuarial Task Force (LATF)
National Association of Insurance Commissioners (NAIC)

Re: Proposed changes to VM-20 outlined in APF 2023-03 (Part 1)

Dear Chair Hemphill,

The American Academy of Actuaries¹ Life Reserves Work Group (“LRWG”) appreciates the opportunity to comment on the proposed changes to VM-20 as outlined in APF 2023-03 (Part 1).

The proposed change to Section 3.B.5.c.ii.4 of VM-20 would apply the secondary guarantee funding ratio² (“SG funding ratio”) to the expense allowance when determining the NPR amount assuming the secondary guarantee is in effect (“SG NPR”) and may result in an increase to this reserve amount. (i.e., when the contract secondary guarantee is not fully funded)

The expense allowance is a provision to reserve³ that accounts for acquisition expenses incurred by the insurer to issue the business. The expense allowance represents the present value of an approximation of average industry acquisition expenses and provides initial surplus strain relief in the reserves. Rationale provided for applying the SG funding ratio to the expense allowance states that reserve movement should be consistent with funding levels. However, acquisition expenses paid by the issuer are not expected to change based on the level of secondary funding by the policyholder. In addition, the net single premium in the SG NPR is already adjusted by the SG funding ratio, which increases or decreases the reserve relative to funding of the secondary guarantee.

Regarding consistency between the Base NPR and the SG NPR, the proposed change would result in applying a ratio to the expense allowance in both reserve components but not a consistent result for the same set of acquisition expenses:

- Base NPR expense allowance is subject to the “Base funding ratio” which measures current account value to expected account value assuming payment of a level premium and guaranteed charges; and

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

² Ratio of actual secondary value to fully funded secondary guarantee values at time t , capped at 1

³ Expense allowance provisions are applicable for all NPR calculations, including ULSG, Term, Other Life business subject to VM-C and pre-PBR (“legacy”) reserve calculations including an unscaled expense allowance in Actuarial Guideline XXXVIII

- APF proposes the SG NPR expense allowance be adjusted by the SG funding ratio

Using a shadow account design product as an example, the SG funding ratio would be the policy's current shadow account value to a fully funded shadow account value. In early years of a shadow account SG contract, the fully funded shadow account value is significantly larger than the expected account value used in the Base funding ratio, which means the SG funding ratio will be significantly smaller than the Base funding ratio and the expense allowances between the two reserve components will be different for the same set of acquisition expenses.

The proposed change may result in expense allowances that vary based on contract funding behavior and even SG type (i.e. shadow versus cumulative premium), both have little relation to the acquisition expenses incurred by the issuer and may be unintended consequences of this proposal.

The following quantitative impacts have been estimated for universal life with secondary guarantee ("ULSG") business subject to VM-20:

- **New business:** For a newly issued block of business offering lifetime secondary guarantees the increase to reserves was estimated to be 28% at the end of the first year⁴
- **Existing business⁵:** Estimated increase to reserve for the same block of business above are 22% in year 2 reducing to 9% by year 5 as the expense allowance amortizes and the SG funding ratio grows⁴

In light of the quantitative and qualitative analysis, the LRWG recommends further review of this proposal and its industry impact.

The Life Reserves Work Group appreciates your attention to the issues raised in this letter and looks forward to discussing them further with you. Should you have any questions or comments in response to this letter, please contact Amanda Barry-Moilanen, life policy analyst (barrymoilanen@actuary.org).

Sincerely,

Dylan Strother, MAAA, FSA
Chairperson, Life Reserves Work Group

Angela McShane, MAAA, FSA
Vice Chairperson, Life Reserves Work Group

American Academy of Actuaries

⁴ Impacts stated were developed using a sample model consisting of a mix of business shadow account of varying guarantee lengths (e.g., to a defined age, lifetime) issued over the last three years. Some of the business also has shorter term specified premium policies in addition to their long-term guarantee.

⁵ This includes business issued since 1/1/2020 and for some insurers, business issued as far back as 1/1/2017

Re: APF 2023-03 Parts 1 and 2

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on Parts 1 and 2 of APF 2023-03 which was exposed during the LATF session on February 2, 2023.

Regarding Part 1, the APF suggests that the expense allowance also be multiplied by the policy's SG funding ratio. In VM-20 this ratio is $[ASG_{x+t}/FFSG_{x+t}]$. For reference, Section 3.B defines what is meant by the terms ASG_{x+t} and $FFSG_{x+t}$. For shadow account policies which are minimally funded, this ratio is naturally low, and depending on policyholder behavior, could remain low for all policy years. For specified premium policies, the ratio grows from a low ratio at the first policy year to 1.00 at the end of the secondary guarantee period. Thus, the structure of the secondary guarantee and the underlying policyholder payment behavior influences how much of the amortized expense allowance is permitted to be recognized.

The $[ASG_{x+t}/FFSG_{x+t}]$ ratio makes sense for the "NSP_{x_t}" component of the VM-20 Section 3.B.5.c formula because the ratio reflects the degree to which the policy is closing in on a "paid up" secondary guarantee provision. However, we do not see this ratio as appropriate for calibrating how much of the expense allowance is recognized. After all, the expense allowance construct is intended as a proxy for industry-level acquisition costs, and those costs do not change based on policyholder behavior, nor do they change according to the structure of the secondary guarantee provision. The concept that the expense allowance is independent of policyholder behavior would further draw into question whether the application of the ratio to the expense allowance in Section 3.B.5.d (when the secondary guarantee is not in effect) calculation is appropriate. Removing this

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

application of the ratio to the expense allowance, which we acknowledge is a deviation from CRVM, would bring both components of the NPR calculation into alignment on this concept.

As compared to company calculations to date (i.e., using VM-20's current expression of ULSG NPR) the changes proposed in APF 2023-03 Part 1 would have a significant impact on the NPR reserve calculation in early durations, with a decreasing effect over time. This is because the expense allowance deduction, when multiplied by the $[ASG_{x+t}/FFSG_{x+t}]$ ratio, would be significantly smaller in earlier durations, and as the expense allowance amortizes, the difference would get smaller over time regardless of the ratio.

It is unclear what the aggregate impact of this change would be to reserves, and a thorough analysis would require updates to valuation systems. Therefore, ACLI would recommend no change to VM-20 as proposed in Part 1 until these impacts can be determined.

Regarding Part 2, ACLI believes the requirement to floor each stochastic scenario at the cash surrender value (CSV) prior to calculating CTE70 could be problematic. For example, applying the CSV floor to each scenario would result in making the effect of the floor more difficult to predict, forecast, and manage (e.g., via hedging).

The VM-20 and VM-21 frameworks are different in several ways; for example, VM-20 has an NPR with a cash surrender value floor while VM-21 does not, and the VM-20 Deterministic Reserve also serves a different purpose than the Standard Projection Amount in VM-21. From a technical standpoint, it is not clear why additional flooring at the SR scenario level is appropriate and necessary for VM-20. Therefore, ACLI would recommend no change to VM-20 as proposed in Part 2.

Thank you once again for the consideration of our comments and we are looking forward to future discussions with regulators on this APF.

Sincerely,

cc: Scott O'Neal, NAIC

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

PBR Staff of Texas Department of Insurance

Title of the Issue:

Address several clean-up items for VM-20

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM- 20 Section 3.B.5.c.ii.4 and VM-20 Section 5.B.3

January 1, 2023 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. The formula for calculating the NPR for ULSG based on the value of the SG in VM-20 Section 3.B.5.c.ii.4 excludes the EA from the scaling of the NPR. This is inconsistent with the formula for calculating the NPR for ULSG disregarding the SG in VM-20 Section 3.B.5.d.iv. The scale is the prefunding ratio of actual SG (denoted ASG) to fully funded SG (denoted FFSG), and it makes intuitive sense that the NPR would be scaled to decrease or increase relative to the level of funding of the SG.
2. The VM-20 Section 5.B.3 stochastic reserve methodology is missing an aggregate cash surrender value (CSV) floor for scenario reserves before calculating CTE70. This allows scenario reserves that exceed the CSV to be dampened or eliminated by being averaged with scenario reserves. A CSV floor in the NPR does not address this concern, because it does not reflect the scenario reserves in the SR that exceed the CSV. In contrast, in VM-21 Section 4.B.1 scenario reserves are floored at the aggregate CSV as appropriate. Scenario reserves, as the asset requirement for specific scenarios, should be held at or above the CSV.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-20 Section 3.B.5.c.ii.4

- 4) The NPR for an insured age x at issue at time t shall be according to the formula below:

$$\frac{\text{Min} [ASG_{x+t} / FFSG_{x+t}, 1] \cdot NSP_{x+t} - E_{x+t}}{\text{Min} [ASG_{x+t} / FFSG_{x+t}, 1] \cdot (NSP_{x+t} - E_{x+t})}$$

VM-20 Section 5.B.3

3. Set the scenario reserve equal to the sum of the statement value of the starting assets across all model segments and the maximum of the amounts calculated in Subparagraph 2 above.

The scenario reserve for any given scenario shall not be less than the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

COVER LETTER

The Valuation of Securities (E) Task Force has made a referral to the Life Actuarial (A) Task Force to consider five questions regarding the potential for obtaining additional measures of company investment risk by adding additional modeling capabilities to the NAIC's Securities Valuation Office. The five questions are copied below for convenience, and also embedded in Attachment 1 along with additional background.

Please send comments to [Scott O'Neal](#).

Referral – VOSTF refers this matter to the above referenced Committees, Task Forces and Working Groups for consideration and requests a response from you by May 15th outlining:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

RE: Referral on Additional Market and Analytical Information for Bond Investments

DATE: February 13, 2023

Summary – The Investment Analysis Office (IAO) staff recommended in its Feb. 25, 2022, memorandum to the Valuation of Securities (E) Task Force (VOSTF) (attached hereto, Blanks Market Data Disclosure v2.pdf) that it would like additional market-data fields added to the annual statement instructions for bond investments. This was, in part, based upon the NAIC's adoption in 2010 of the recommendations of

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

the Rating Agency (E) Working Group (RAWG), which was formed following the Great Financial Crisis of 2007-2008 to study the NAIC's reliance on rating agencies, and the IAO staff's recent findings in its Nov. 2021 memo regarding disparities between rating agencies. RAWG recommended that: 1) regulators explore how reliance on rating agencies can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk; and 2) consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and 3) VOSTF should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending on the specific regulatory process under consideration.

The NAIC's need for alternative measures of investment risk has only increased since RAWG made its recommendations, as privately issued and rated complex structured finance transactions have become commonplace without adequate ways of identifying them. The SVO recommended the following market data fields to be added to the annual statement instructions: Market Yield, Market Price, Purchase Yield, Weighted Average Life, Spread to Average Life UST, Option Adjusted Spread, Effective Duration, Convexity and VISION Issue ID. Please refer to the attached memo for more detail on each data field.

In comments received from industry there were question as to how the SVO, VOSTF and/or other regulators who would receive the analytic data included in the proposal would utilize that information and why it is of value to them. The SVO was also asked to consider industry's recommendation that the NAIC be responsible for calculating this analytical information by utilizing commercially available data sources and investment models instead of having each individual insurance company incur the costs to implement system changes. The SVO shared their thoughts on the alternatives in the Jul. 14, 2022, memorandum to the VOSTF (attached, Blanks_Market_Data_Options_v3.pdf).

Capabilities like this within the SVO would permit it to calculate for regulators all the analytic values previously mentioned for any Schedule D investment along with additional measures such as key rate duration (a measure of interest rate sensitivity to maturity points along the yield curve), sensitivity to interest rate volatility, principal and interest cash flow projections for any security or portfolio for any given interest rate projection, loss estimates for any security for any given scenario and many others measures.

Referral – VOSTF refers this matter to the above referenced Committees, Task Forces and Working Groups for consideration and requests a response from you by May 15th outlining:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

Please contact Charles Therriault or Marc Perlman with any questions.

RE: Additional Market Data Fields for Bond Investments

DATE: February 25, 2022

The SVO proposes adding additional market-data fields for bond investments to the annual statement instructions based on 2010 adopted recommendations of the Rating Agency (E) Working Group (RAWG) and the IAO staff's findings regarding the discrepancies between ratings, presented in its Nov. 2021 memo.

The RAWG was formed after the Financial Crisis of 2008 and was charged with gathering and assessing information on:

1. *The problems inherent in reliance on ratings, including impact on the filing exempt ("FE") process and Risk-Based Capital ("RBC");*
2. *The reasons for recent rating shortcomings, including but not limited to structured security and municipal ratings;*
3. *The current and potential future impact of ratings on state insurance financial solvency regulation; and*
4. *The effect of the use of NRSRO ratings on public confidence and public perception of regulatory oversight of the quality of insurance.*

The RAWG made the following summary recommendations in their Apr. 28, 2010, report that was adopted by the Financial Condition (E) Committee (emphasis added):

1. **Regulators *explore how reliance* on ARO (Approved Ratings Organization) ratings *can be reduced* when evaluating new, structured, or alternative asset classes, particularly by **introducing additional or alternative ways to measure risk**;**
2. **Consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and**

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

3. *When considering continuing the use of ratings in insurance regulation, the **steps taken by the NRSROs in correcting the causes that led to recent rating shortfalls**, including the NRSROs' efforts in implementing the recommended structural reforms, should be taken into account.*

As the IAO staff demonstrated with the analysis in its Nov. 29, 2021, memo regarding ratings discrepancies, not all credit rating provider (CRP) ratings reflect a reasonable assessment of a security's risk, indicating that rating shortfalls persist today. The NAIC has not made additional progress in reducing reliance on CRPs and the IAO proposed several steps in its memo to accomplish that objective. As noted by the RAWG and reflected in the IAO's memo, there persists a situation where "... ratings are neither consistent nor uniform for individual securities, nor across different types and classes of securities..." However, the role of the SVO has not been expanded to include "... evaluating credit and other risks of securities."¹

One step towards introducing alternative ways to measure a security's risk would be to require insurers to report various analytical measures about each security including metrics such as its current market yield, interest rate sensitivity, spread relative to risk-free securities such as United States Treasuries and average remaining life. The more a security's market yield and spread differ from similarly rated securities, the more likely it is that the implied market-perceived risk of that security differs from the risk indicated by the credit rating assigned to it. The yield difference or spread in basis points can potentially help identify securities whose risk assessment warrants further review by the SVO, examiners or other regulatory groups, for example, a AAA rated security with a yield of 5%. Other fields that measure a security's price sensitivity to interest rate movements may also help to identify market-perceived risk inconsistent with the assigned credit rating. These additional market data fields would align with the RAWG's referral to the Task Force and SVO Initiatives (EX) Working Group, as noted in their following detailed recommendations (emphasis added):

1. *Referral to the NAIC Valuation of Securities (E) Task Force: VOS should continue to **develop independent analytical processes to assess investment risks**. These mechanisms can be tailored to address unique regulatory concerns and should be developed for **use either as supplements or alternatives to ratings**, depending on the specific regulatory process under consideration.*
2. *Referral to the NAIC Valuation of Securities (E) Task Force: ARO ratings have a role in regulation; however, since **ratings cannot be used to measure all the risks that a single investment or a mix of investments may represent in an insurer's portfolio**, NAIC policy on the use of ARO ratings should be **highly selective and incorporate both supplemental and alternative risk assessment benchmarks**.*
3. *Referral to the NAIC's SVO Initiatives (EX) Working Group: NAIC should evaluate whether to **expand the use of SVO and increase regulator reliance on the SVO for evaluating credit and other risks of securities**.*

Recommendation: The SVO recommends the following market data fields and related descriptions be added to all the annual statement instructions, through a referral to the Blanks (E) Working Group, for all bonds reported on Schedule D, Part 1 (those within scope of SSAP No. 26R – Bonds and SSAP No. 43R – Loan-Backed and Structured Securities). To allow sufficient time for insurers to update their systems, the SVO further recommends that the changes be implemented as electronic only fields effective beginning with the reporting year ending December 31, 2023.

- Market Yield – The Market Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis. Therefore, Fair

¹ Evaluating the Risks Associated with NAIC Reliance on NRSRO Credit Ratings – Final Report of the RAWG to the Financial Conditions (E) Committee, April 28, 2010

Value, which is already reported, is the present value (PV) of all expected cash flows discounted at the Market Yield.

- Market Price – The Market Price per unit of Par Value, which is already reported, is reflected in the Fair Value as of the financial statement date. The Market Price, which excludes accrued interest, when multiplied by Par Value and divided by 100 will be equal to the Fair Value.
- Purchase Yield – The Purchase Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis as of the Acquired Date. Therefore, Actual Cost is the present value (PV) of all expected cash flows discounted at the Purchase Yield as of the Acquired Date.
- Weighted Average Life – The Weighted Average Life is the average length of time that each dollar of unpaid principal remains outstanding. The time weightings used in weighted average life calculations are based on payments to the principal. The calculation is "weighted" because it considers when the payments to the principal are made—if, for example, nearly all of the principal payments are made in five years, WAL will be close to five years. Weighted average life does not consider payments to interest on the loan. This value is recalculated at each statement date for the remaining principal payments.
- Spread to Average Life UST - The spread is the difference between the interpolated U.S. Treasury bond yield that matches the reported debt security's Weighted Average Life. Spreads between interpolated U.S. Treasuries and other bond issuances are measured in basis points, with a 1% difference in yield equal to a spread of 100 basis points.
- Option Adjusted Spread - The option-adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return (typically U.S. Treasury yield), which is then adjusted to take into account an embedded option and expressed in basis points. The spread is added to the fixed-income security price to make the risk-free bond price the same as the bond. The option-adjusted spread considers historical data such as the variability of interest rates and prepayment rates. These calculations are complex since they attempt to model future changes in interest rates, prepayment behavior of mortgage borrowers, and the probability of early redemption.
- Effective Duration - This is a duration calculation for bonds that have embedded options. This measure of duration takes into account the fact that expected cash flows will fluctuate as interest rates change and is, therefore, a measure of risk given the security's Fair Value. As a formula, Effective Duration = $(P(1) - P(2)) / (2 \times P(0) \times Y)$, where $P(0)$ = the bond's Market Price per \$100 worth of par value, $P(1)$ = the price of the bond if the yield were to decrease by Y percent, $P(2)$ = the price of the bond if the yield were to increase by Y percent, and Y = the estimated change in yield used to calculate $P(1)$ and $P(2)$.
- Convexity - This is a measure of the curvature, or the degree of the curve, in the relationship between bond prices and bond yields. Convexity demonstrates how the duration of a bond changes as the interest rate changes.
- VISION ISSUE ID: The NAIC VISION system security ID reported in AVS+.

RE: Possible Options for Additional Market Data Fields for Bond Investments

DATE: July 14, 2022

Summary - The SVO proposed adding additional market-data fields for bond investments to the annual statement instructions in its memo dated Feb. 25, 2022, titled "Additional Market Data Fields for Bond Investments" that was discussed at the 2022 Spring National Meeting. The recommendation was based, in part, on 2010 adopted recommendations of the Rating Agency (E) Working Group (RAWG) and the NAIC Investment Analysis Office's (IAO) staff's findings regarding the discrepancies between ratings, presented in its Nov. 29, 2021 memo, "Rating Issues and Proposed Changes to the Filing Exemption Process." In this memo the SVO further outlines the regulatory benefits and proposes two possible approaches.

The benefits of collecting additional market-data for each insurer bond investment are several:

- Assist in SVO identification of securities with credit rating provider (CRP) ratings which may be inconsistent with a security's actual overall risk.
- Greater transparency for regulators into the risks and characteristics of insurer investments.
- Incorporation of insurer investment portfolio analysis into the examination process.
- Availability of more Level 1 and 2 Inputs which will be included in the AVS+ pricing data for all securities compared to the mostly Level 3 Inputs for only some securities today.
- Allow state insurance regulators to assess the capabilities of an insurer's investment management or risk management processes by reviewing the quality and accuracy the market data fields.
- Provide NAIC staff with the capability to run cash flow simulations on insurer investments.

Regarding the first bullet, the SVO would use this market-data information to help identify securities with credit rating provider (CRP) ratings that may be inconsistent with the security's actual overall risk. The SVO and SSG have raised concerns over the years about a number of asset classes (e.g. residential

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

mortgage backed securities (RMBS), commercial mortgage backed securities (CMBS), public and private fund investments, principal protected securities (PPS) including CLO Combo Notes, regulatory transactions, residual interests, and now collateralized loan obligations (CLO), and structure equity and funds) and specific securities in other asset classes where a rating agency rating often does not adequately reflect the investment risk for NAIC purposes. The SVO needs this analytical information so that it can identify and take potential action on investment risk assessment inaccuracies. Without this data and potentially other information in the future, coupled with some level of discretion over NAIC Designations derived from ratings, the SVO and regulators will remain in the dark about these risks. Additionally, the incentive for significant risk-based capital arbitrage utilizing CRP ratings will likely continue to increase and rating agencies will effectively remain a de-facto “super regulator” in that any investment they assign a rating to is automatically accepted by the NAIC without any regulatory discussion, analysis, oversight or consideration as to how the rating agency’s decisions align to the NAIC’s statutory framework.

Inconsistent and potentially inaccurate assessments of investment risk is a critical issue not only for the Valuation of Securities (E) Task Force but for other state insurance regulatory groups that are interested in identifying and analyzing investment risks, whether it be at the individual security, asset class, legal entity or industry level. The following are just a few groups that have active work streams involving investment risk: Life Actuarial (A) Task Force, Capital Adequacy (E) Task Force and its Working Groups, Statutory Accounting Principles (E) Working Group, Financial Stability (E) Task Force, Macroprudential (E) Working Group and Financial Analysis (E) Working Group. The proposed market data fields will benefit each of these groups in their work assessing insurer investments and portfolio risks.

The requested market data fields other than purchase yield, which should be available from any investment accounting system, are all at the security issue level (i.e. CUSIP). Any insurer system that can receive security issue level data such as a market prices, credit ratings, bond factors, cashflows, or NAIC Designations should be able to accommodate these proposed security issue-level data fields. The SVO acknowledges this change will require time for insurer system providers to accommodate these new data fields into their data structures and Schedule D reporting applications. However, these data fields are very common in the management of a bond portfolio, and it would be a significant enterprise risk deficiency if an insurer’s investment managers did not have them.

Some alternate measures of risk (e.g. Sharpe Ratio and Sortino Ratio) were mentioned during the Task Force discussion. These metrics, however, would require insurers to calculate the total return and the standard deviation of those returns for each security they own in order to produce and report these metrics which would be significantly more costly and more appropriate for assessing relative value and less applicable for assessing investment risk.

Alternatives – The SVO was asked to consider industry’s recommendation that the NAIC produce these fields. Below are our thoughts on each alternative.

- **NAIC Produced Analytics** – The SVO can take on the responsibility for producing the analytical data elements requested in this proposal. To do so it would require enhancements to the SVO’s existing systems (VISION, AVS+ and STS), and vendor pricing data, investments in new systems to provide the modeling, more staff for the incremental and on-going support of these systems and processes, new data feeds to support the modeling software, and new data bases and reporting capabilities to provide the information to regulators. Enhancements would also

need to include the ability for insurers to provide electronically to the SVO the full security structure of any security that the modeling software does not know about. We strongly believe that the benefits to be gained by state regulators, the SVO and other NAIC groups with interests in investment risk of bringing this modelling capability in-house greatly outweigh, in the long run, the initial costs and effort to make these capabilities operational.

- **Pros:**

- Market analytical information would be independently and consistently produced.
- The SVO's pricing data would need to include more Level 1 and 2 Inputs for all securities versus primarily Level 3 Inputs for only some securities today.
- Regulators would eventually be able to ask NAIC staff to model the risks or cash flows of any bond security or insurer bond portfolio, including, stress testing those securities and portfolios.
- Regulators would have significantly greater transparency into the risks and characteristics of insurer investments.
- Analytical analysis of insurer investment portfolios could be incorporated into the examination process.
- The overall cost to insurers through any increased fee would likely be much less than each insurer building out its own capability to provide the data.

- **Cons:**

- The NAIC would need to make significant enhancements to VISION, AVS+, and STS, and develop new reporting data bases.
- The NAIC will need to license a security analytic modelling system and provide it with the data it requires, some of which may require new data licenses. This includes full access to vendor applications like Bloomberg or Aladdin.
- The NAIC will incur additional fees for higher level of security pricing data. The NAIC will also need additional staff to develop and support the technology enhancements and to support the on-going modeling of securities and portfolios.
- It may take longer for the NAIC to build this capability.
- Insurers would still need to report some of this information on their Schedule D filings from data published through AVS+.
- Insurers would need to provide the SVO with full security structure modeling and supporting data (e.g. collateral, payments, actions) for any security the analytic modelling system does not have within its data base.

- **Insurer Produced Analytics** – Insurer investment managers should already have the market data fields requested in this proposal. Insurers would need to get this information into their systems that produce their Schedule D filings. This option would require more up-front work on the part of the insurers and less by the NAIC. The uses of the data, however, whether by regulators, the SVO or other interested

NAIC groups, could be significantly more limited than in the first option, because of the inconsistency in data between insurers.

- **Pros:**
 - Insurers already have this information as part of their investment management or risk management processes.
 - State insurance regulators could assess the capabilities of an insurer's investment management or risk management processes by reviewing the quality and accuracy the market data fields.
 - The timeframe to implement would likely be shorter than the SVO having to build out this capability.
- **Cons:**
 - Insurer security pricing is very inconsistent today which will lead to a high degree of variability in these analytical values.
 - The modeling software and assumptions used by insurers to produce these analytical value can vary significantly which will also lead to a high degree of variability in the values.
 - Insurers and their system providers will need to develop new interfaces to ingest this data and produce it in their Schedule D filing. That time frame could vary significantly by vendor and insurer.
 - State insurance regulators would not be able to request the modeling of any investment security or portfolio.
 - Insurers would directly bear the expense of these changes which will likely be greater than it would be if the NAIC produced this information.

Next Steps – The SVO continues to strongly believe that these market data fields are an important first step in finding alternative ways to measure insurers investment risk and reducing the NAIC reliance rating agency ratings. As noted by the RAWG and reflected in the IAO's memo, there persists a situation where *"... ratings are neither consistent nor uniform for individual securities, nor across different types and classes of securities..."* yet the role of the SVO has not been expanded to include using these alternatives in *"... evaluating credit and other risks of securities."* The objective of this request is to begin addressing these investment risk issues but this may not be the only information needed.

Both alternatives will involve a commitment of resources either by the NAIC or industry. The major question before the Task Force is whether it has a preferred source for these market data fields: the NAIC's SVO or insurer reporting? The SVO believes that the first option would provide the most standardization in data and utility to regulators, the SVO and other interested NAIC groups and would be worth the slightly longer time and cost needed to develop the capabilities.

If, as the SVO recommends, the Task Force prefers the NAIC's SVO as the source of this analysis, then the next step would be a referral to the Financial Condition (E) Committee to request their sponsorship for this initiative and, if provided, begin a fiscal request. If Financial Condition (E) Committee declines to sponsor the initiative or if insurer reporting is the preferred source, we would recommend reverting to insurer reporting and directing the SVO staff to prepare the Blanks referral.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

April 11, 2023

Rachel Hemphill
Chair
National Association of Insurance Commissioners (“NAIC”)
Life Actuarial Task Force (“LATF”)

Re: VOS Referral to LATF – Bond Risk Measures

Dear Chair Hemphill,

The American Academy of Actuaries¹ Life Valuation Committee (the “committee”) appreciates the opportunity to provide comments on the VOS Referral to LATF—Bond Risk Measures.

The Securities Valuation Office (“SVO”) has been charged with exploring approaches that rely less on ratings from Nationally Recognized Statistical Rating Organizations (“NRSRO”) and to consider additional processes that will help regulators better understand and regulate insurers’ investment risk. The SVO is considering the disclosure of additional data related to asset holdings with the purpose of developing analytical capabilities within the SVO. The expectation is that these capabilities would allow the SVO to identify securities whose NRSRO ratings fall into a range identified as questionable (i.e., rating outliers). This data would also provide additional risk-related information with respect to an insurer’s investment portfolio.

It would be helpful to understand how the disclosure of the additional data the SVO is considering will be used. For example, with respect to ratings outliers, how will this information be used to identify outliers, how will outliers be reconciled to NRSRO ratings, and what is the impact to Risk Based Capital and potentially reserves? Regarding investment risk, there is a currently information included in insurers’ investment portfolios and related risks from documents such as the Memorandum supporting the Actuarial Opinion (including the recently adopted Actuarial Guideline LIII disclosure), principle-based reserve reports, the Own Risk And Solvency Assessment report, and risk-based capital filings, to name a few. The committee suggests regulators consider identifying the specific information not obtained in documents already produced before creating new risk measures and disclosures.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

The committee also suggests that Valuation of Securities Task Force and other interested NAIC groups work with interested parties to perform a proof-of-concept exercise. The outcome could be informative for all parties of the ability of additional data and processing thereof to meet the objectives, the amount of work involved, and the effectiveness of the outcomes in reducing NRSRO reliance and providing better information on investment risks to regulators.

If the proof-of-concept process demonstrates feasibility, the committee believes it is equally important to understand which groups within the NAIC and state insurance departments may use this information and for what purposes.

Thank you for your consideration of these comments and we look forward to discussing these further with you. Should you have any questions or comments in response to this letter, please contact Amanda Barry-Moilanen, life policy analyst (barrymoilanen@actuary.org).

Sincerely,

Craig Morrow

Rachel Hemphill

Chair, NAIC Life Actuarial (A) Task Force (LATF)

Re: NAIC Valuation of Securities (E) Task Force (VOSTF) Referral to LATF – Bond Risk Measures

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on the VOSTF referral to LATF regarding Bond Risk Measures. ACLI believes that it is premature for LATF to weigh in on the creation of this capacity within the NAIC Securities Valuation Office (SVO).

As stated in the attached joint comment letters, the memorandum from the SVO does not fully discuss or specify how the SVO, VOSTF, and other regulators who would receive the analytic data included in the proposal would utilize that information and why it is of value to them. This is especially important given the costs associated with compliance by the industry.

We also understand some of the data proposed to be gathered would be used to help identify rating agency disparity concerns by the SVO (e.g., “excess yields”), but much of the other data would be used for other means and/or by other parts of the NAIC or individual regulators.

Therefore, given the costs associated with this request, we believe clear articulation on how the data would be utilized by regulators is very important before deciding on the creation of this capacity.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

Re: SVO Memorandum on Alternative to Add Fixed Income Analytical Risk Measures to Investments Reported on Schedule D, Part One, Insurer Credit Obligations (Bonds)

Dear Ms. Mears,

The undersigned (ACLI, PPiA, NASVA, NAMIC, APCIA) appreciate the opportunity to comment on the exposure draft, referred to above, that was released for comment by the Valuation of Securities Task Force (VOSTF) at the NAIC Summer National Meeting.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

PPiA is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPiA serves 63 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace.

NASVA is an association of insurance company representatives who interact with the NAIC Securities Valuation Office ("SVO") to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC's ISIS electronic security filing system, and commenting on year-end processes.

NAMIC membership includes more than 1,500 member companies. The association supports regional and local mutual insurance companies on main streets across America and many of the country's largest national writers. NAMIC member companies write \$323 billion in annual premiums. Our members account for 67 percent of homeowners, 55 percent of automobile, and 32 percent of the business insurance markets. Through our advocacy programs NAMIC promotes public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.

The American Property Casualty Insurance Association (APCIA) is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

The undersigned are also appreciative that the Securities Valuation Office (SVO) and VOSTF took into consideration our concerns and recommendation from our previous letter on this topic dated May 20, 2022, and we will not reiterate any previous points unless they are specifically relevant to additional concerns and considerations within the proposed alternative.

Centralized Aggregation of Data at the SVO

If it is determined by the VOSTF that the members of the VOSTF would like the SVO to collate additional data on investment risk, for a variety of potentially different reasons, we appreciate that the proposed alternative recommends that such data is best aggregated and centralized by the SVO. This is consistent with the recommendation from our previous letter as well as consistent with many of the reasons stated in the proposed alternative.

However, given the significant cost and effort involved, prior to embarking on any effort to aggregate such data, we would encourage the VOSTF to ensure there is broad agreement by regulators on the specific objectives for such data. This would help prevent a situation where, after expending significant cost and effort on aggregating such data and developing the appropriate systems, it is found that both the data and systems subsequently do not adequately fulfill those objectives.

As noted in our previous letter, our understanding was that the data was primarily centered around comparing market yields for securities with rating agency (CRP) ratings in order to identify outlier ratings (of 2x plus variances) where the market (through demanding higher yields) ascribes more risk to a particular security than the CRP rating would imply (e.g., the excess spread above the "risk free", or US Treasury rate, exceeds the expectation for the security's inherent credit risk) and if applicable, for illiquidity and/or complexity premium. The current proposal more specifically states that the benefits of such data would be several, including:

- Assist in SVO identification of securities with credit rating provider (CRP) ratings which may be inconsistent with a security's actual overall risk.
- Greater transparency for regulators into risks and characteristics of insurer investments.
- Incorporation of insurer investment portfolio analysis into the examination process.
- Availability of more Level 1 and 2 inputs which will be included in the AVS+ pricing data for all securities compared to the mostly Level 3 inputs for only some securities today.
- Allow state insurance regulators to assess the capabilities of an insurer's investment management or risk management process by reviewing the quality and accuracy of market data fields.
- Provide NAIC staff with the capability to run cash flow simulations on insurer investments.

This would appear to be a material change to the SVO's current mandate and capabilities. Should this be desired by the VOSTF, and more broadly regulators in general, it would benefit from clear regulatory objectives to ensure the appropriate data is being aggregated and the appropriate systems are being developed, prior to embarking on an admittedly costly undertaking.

Insurance Company Risk Management Practices

We also note the concern stated in the proposal that "these data fields are very common in the management of a bond portfolio, and it would be a significant enterprise risk deficiency if an insurer's investment managers did not have them."

We would caution that insurance companies have very sophisticated risk management practices that monitor investment risk, liquidity risk, as well as company risk related to asset and liability management, among many other risks, that incorporate many factors above and beyond the data fields suggested as well as in a fashion that is not as linearly implied in the current proposal.

These practices, which vary by individual company, and are highly dependent upon each company's overall specific risk management framework which is informed by their industry, product mix, and size, among many other factors, including different emphases based overall philosophy. To suggest that such data should be readily available in the format requested, is a significant simplification that is not necessarily reflective of insurance companies' risk management practices.

In conclusion, we continue to believe it is more cost effective for this data to be aggregated and centralized at the SVO if the VOSTF determines this information will benefit regulators. However, given the significant cost and effort involved, prior to embarking on any effort to aggregate such data, we would encourage the VOSTF to ensure there is broad agreement by regulators on the specific objectives for such data, to ensure the appropriate data is being aggregated.

We stand ready to assist regulators and staff with regards to this proposal. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

Mike Monahan

Re: A Proposed Referral to the Blanks (E) Working Group to Add Fixed Income Analytical Measures to Investments Reported on Schedule D, Part One – Additional Market Data Fields for Bond Investments – Comments Due May 20, 2022

Dear Ms. Mears,

The undersigned (ACLI, APCIA, PPIA, NASVA) appreciate the opportunity to comment on the exposure entitled “Additional Market Data Fields for Bond Investments” that was released for comment by the NAIC Valuation of Securities Task Force (VOSTF).

The undersigned note that the memorandum from the Securities Valuation Office (SVO) does not fully discuss or specify how the SVO, VOSTF and/or other regulators who would receive the analytic

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

acli.com

APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

PPIA is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPIA serves 63 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace.

NASVA is an association of insurance company representatives who interact with the NAIC Securities Valuation Office (“SVO”) to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC’s ISIS electronic security filing system, and commenting on year-end processes.

data included in the proposal would utilize that information and why it is of value to them. This is especially important given the costs associated with compliance by the industry.

The undersigned understand that one of the reasons for requesting this analytic data is to compare market yields for securities with rating agency (CRP) ratings, in order to identify outlier ratings (of 2x plus variances) where the market (through demanding higher yields) ascribes more risk to a particular security than the CRP rating would imply (e.g., the excess spread above the “risk free”, or US Treasury rate, exceeds the expectation for the security’s inherent credit risk, and if applicable, for illiquidity and/or complexity premium).

The undersigned also understand this is especially desired for privately offered structured securities – e.g., as noted under item 10 of the Summary of Referrals from Macroprudential Working Group “Regulatory Considerations Related to but not exclusive to PE” exposure, with comments due June 13, 2022, as well as from comments from various NAIC staff and regulators.

Given the costs associated with this request, the undersigned would appreciate further dialogue on how the data will be utilized and the tangible benefits to regulators. This discussion would allow the benefits to be weighed against the substantial costs associated with providing the data, i.e., compliance with the proposal.

For public securities much, if not all, of this data is already available from other commercially available sources (e.g., Bloomberg, Clearwater, Aladdin, etc.) and it may be more feasible for the SVO to aggregate this data, rather than have each individual insurance company incur the costs to implement systems changes and provide the data. This is especially true when considering that much of the requested data is based on somewhat complex modeling and outputs are heavily dependent upon inputs, which by their nature require significant judgment and therefore will vary by company.

For private securities, the SVO has (or will have) meaningful data from Private Rating Rationale Reports which are likely meant to help address rating agency disparity concerns.

Our comments below are organized into two different sections – 1) Utility of the Data for Regulators and 2) Compliance Costs for Industry. The undersigned’s desire is to help address valid regulator concerns in the most cost beneficial way.

Utility of the Data for Regulators

This section of our letter will address each requested piece of data individually.

Market Yield – The Market Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis. Therefore, Fair Value, which is already reported, is the present value (PV) of all expected cash flows at the Market Yield.

We would not expect this data to be very useful or insightful for the vast majority of securities that will be reported as Issuer Credit Obligations under the new Statutory Accounting Principles Working Group (SAPWG) Proposed Bond Definition (e.g., US Treasuries, US Government Agency, Municipal Bonds, Public Corporate Bonds or Private Corporate Bonds that are designated by the SVO and issued from operating entities). Further, for publicly rated securities, the NAIC has access to analytic data through public information sources, such as Bloomberg.

In addition, the vast majority (~75%) of what will be reported as asset-backed securities (ABS) under the new SAPWG Proposed Bond Definition (e.g., CMBS, RMBS, and potentially CLOs) are, or potentially will be, modeled by the SVO and provided an SVO designation with no weight given to CRP ratings.

For much of the remaining securities, both private credit issuer obligations and private ABS, with a private letter rating, pricing is frequently done via “matrix pricing”. While there is a variety of different methodologies utilized, this pricing methodology often uses some type of yield attributed to internal designations (e.g., use of a CRP rating, and related public index-derived yield, or an internal rating, with a similar index-derived yield). Some companies, in whole or in part, also utilize broker provided spreads or quotes for determining market values. At a minimum, there will be meaningful inconsistencies in the data supplied, as each insurer may bring different methodologies to bear in the market valuation process.

Worse, the data could be of dubious usefulness. For example, if a company internally rates a security as a BBB (based on an external CRP’s BBB rating) and uses a BBB index bond yield to determine fair value, the market yield reflected will closely approximate average BBB yields for public bonds and will not signal whether a security is more or less risky than a typical BBB bond. Said differently, because CRP ratings are a critical variable in determining matrix-based market pricing, it would be a circular process to then use a matrix pricing-derived market yield to identify CRP rating outliers.

The undersigned therefore question the utility of this data to the SVO and regulators.

Market Price – The Market Price per unit of Par Value, which is already reported, is reflected in the Fair Value as of the financial statement date. The Market Price, which excludes accrued interest, multiplied by Par Value and divided by 100 will be equal to the Fair Value.

This information is already currently reported in column 8 of Schedule D. The electronic only columns further identify the source of the market price and the fair value level attributed to it. It is unclear if the SVO is looking for something more on this item.

Purchase Yield – The Purchase Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis as of the Acquired Date. Therefore, Actual Cost is the present value of all expected cash flows discounted at the Purchase Yield as of the Acquired Date.

The undersigned note that the Effective Rate of Interest is already included on Schedule D (Column 17) and defined in the reporting instructions as follows:

For issuer obligations, include the effective rate at which the purchase was made. For mortgage-backed/loan-backed and structured securities, report the effective yield used to value the security at the reporting date. The Effective Yield calculation should be modified for other-than-temporary impairments recognized.

The undersigned note that both of these definitions essentially equate book value to the future expected cash flows, which is the same as NPV = 0. Therefore, it makes sense to align these definitions to ensure the information being utilized by regulators is being efficiently obtained. Further, book yield is an objective yield that may be more beneficial for the stated intent (i.e., yield disparity for an initial CRP rating).

The utility of purchase yield for purposes of identifying excess spread, is the most relevant as it compares the excess spread, to a CRP rating when the deal is committed to. Purchase yield is a fact. For private securities, all valuations assigned subsequent to time of commitment are educated estimates. These estimates may vary for any number of reasons, beyond just the CRP rating including: short-term market movements, impairments, changing circumstances with respect to specific companies or industries, delay in rating agency downgrades, etc. For outliers, the SVO can certainly dig deeper to identify the root causes – e.g., for private securities, note purchase agreements, rating rationale reports, copies of the notes, etc. which the SVO should already have; for public securities, Bloomberg or SEC websites are readily available. In short, in attempting to identify 2x plus variances, the spread over the US Treasury rate (utilizing purchase yield at the time of commitment is going to be the most significant indicator of an outlier CRP rating. The remaining data has very limited additional value in identifying such outliers – e.g., duration matters but is less impactful as it pertains to identifying 2x variances.

Weighted Average Life (WAL) – The Weighted Average Life is the average length of time that each dollar of unpaid principal remains outstanding. The time weightings used in weighted average life calculations are based on payments to the principal. The calculation is "weighted" because it considers when the payments to the principal are made—if, for example, nearly all the principal payments are made in five years, WAL will be close to five years. Weighted average life does not consider payments to interest on the loan. This value is recalculated at each statement date for the remaining principal payments.

WAL can be thought about as a way of estimating the tenor of an investment and is often considered in establishing the interest rate. On a stand-alone basis, the undersigned do not understand why the WAL is particularly useful as other factors related to each investment are considered. The value of WAL as a measure may be diminished when there is potential variability in cash flows due to embedded options or in asset-backed securities. This potential for cash flow variability also increases the likelihood that the WAL measure will vary by company. Therefore, focusing on spread over the US Treasury rate (utilizing purchase yield) should be sufficient to identify outliers. See our discussion on duration below.

Spread to Average Life UST (UST Spread) - The spread is the difference between the interpolated U.S. Treasury bond yield that matches the reported debt security's Weighted Average Life. Spreads between interpolated U.S. Treasuries and other bond issuances are measured in basis points, with a 1% difference in yield equal to a spread of 100 basis points.

Option Adjusted Spread (OAS) - The option-adjusted spread is the measurement of the spread of a fixed income security rate and the risk-free rate of return (typically U.S. Treasury yield), which is then adjusted to take into account an embedded option and expressed in basis points. The spread is added to the fixed income security price to make the risk-free bond price the same as the bond. The option-adjusted spread considers historical data such as the variability of interest rates and prepayment rates. These calculations are complex since they attempt to model future changes in interest rates, prepayment behavior of mortgage borrowers, and the probability of early redemption.

Both the UST Spread and OAS are certainly different ways to calculate the spread over the US Treasury rate, just as with using purchase yield and market yield.

For securities without embedded prepayment or extension risk, we believe spread at time of commitment (e.g., utilizing the purchase yield) will be the most relevant metric and will be most meaningful to the SVO and regulators.

For securities with embedded prepayment or extension risk, while OAS could provide some incremental additional insight, it also has some additional drawbacks. Calculating the OAS involves projecting many future interest-rate scenarios and their probabilities, as well as assumed borrower behavior. To the extent that each insurer has its own proprietary optionality model, OAS for the same security will differ insurer to insurer.

In any case, these are just other forms of spread over treasury which the undersigned believe are unnecessary when trying to identify 2x plus variances, especially considering the costs for each company to comply, and their reliability due to subjective inputs in a complex calculation. Therefore, focusing on spread over the US Treasury rate at time of commitment (utilizing purchase yield) should be sufficient to identify outliers.

Lastly, there is concern among industry that this data would be inconsistent with other data utilized by insurance companies (e.g., the NAIC Valuation Manual for Life and Annuity Reserves requires the use of spreads in very prescriptive form).

Effective Duration - This is a duration calculation for bonds that have embedded options. This measure of duration takes into account the fact that expected cash flows will fluctuate as interest rates change and is, therefore, a measure of risk given the security's Fair Value. As a formula, Effective Duration = $(P(1) - P(2)) / (2 \times P(0) \times Y)$, where $P(0)$ = the bond's Market Price per \$100 worth of par value, $P(1)$ = the price of the bond if the yield were to decrease by Y percent, $P(2)$ = the price of the bond if the yield were to increase by Y percent, and Y = the estimated change in yield used to calculate $P(1)$ and $P(2)$.

Convexity - This is a measure of the curvature, or the degree of the curve, in the relationship between bond prices and bond yields. Convexity demonstrates how the duration of a bond changes as the interest rate changes.

Both Effective Duration and Convexity are interest rate risk measures and are not indicators of credit risk. While such measures are certainly useful for a life insurance company, it is primarily in the context of comparing the duration and convexity of their asset portfolios to the duration and convexity of their liabilities. These data are most useful in estimating prices given changes in interest rates, while the price drivers are based on an investor's view of cash flows, including any embedded options. Because of this, we question their ability to explain a 2x variance in the purchase yield. Additionally, these calculations require very challenging assumptions on volatility which would certainly lead to different outcomes for different companies. Thus, in the context of the varying assumptions on the inputs, and the limited value in identifying 2x variances, the undersigned do not believe there is sufficient value in pursuing the creation of these fields.

VISION ISSUE ID - The NAIC VISION system security ID reported in AVS+.

The undersigned are not aware of any instance in which the VISION ISSUE ID is currently captured by industry, nor included on any reporting schedule. If a company is a filer of a particular security, they typically do not save the VISION ISSUE ID, and if they are not the filer, they would have no reason to seek and retain it.

Due to these factors and our limited understanding of the technical architecture of the NAIC VISION system, the undersigned wonder whether the SVO could utilize the identifiers (e.g., CUSIP) for each investment on Schedule D to cross-reference the VISION ISSUE ID.

Compliance Costs for Industry

The effort and cost of supplying this data is significant. We see the effort broken into two challenges: data capture and creation of the electronic Schedule D:

The data capture challenge fits into one of the following scenarios:

- The data in whole or in part is not utilized by some companies for a variety of reasons, including because some companies do not manage their investment portfolio internally,
- The data is utilized by companies on an ad hoc basis and is not saved or stored, or
- If the data is saved or stored, it is done so on a de-centralized basis and not maintained in the companies' reporting systems.

Capturing the data is only one of the challenges. In order to deliver the requested data fields, the data would need to be included in the electronic Schedule D that is included in a Company's Annual Statement software package. There are several vendors that provide annual statement packages, and they work similarly. Each schedule is loaded to the package as a flat file in the specified format. Flat files are a collection of records in which the data follows a uniform format and follows rules on value types where applicable. The database is flat because every line only holds one data input, depending on the categorization of the columns within the file. The software packages can't take feeds from multiple sources to prepare the schedule. The annual statement software providers likely won't change their requirements to facilitate creation of the schedule that includes these fields so it would be up to companies to create the reporting in the required flat file.

Today, the Schedule D flat files are generated by the investment accounting system used by the company. There are several of these systems in the market. Most, if not all, of these systems do not contain information or programming to calculate the requested fields. Nor do they have a place to store the data with programming to reference such stored fields to facilitate the requested reporting. To do this would be a significant, and likely expensive, development project.

Because of these circumstances, the creation of the requested electronic Schedule D would require a manual process that combines information from multiple data sources. Beyond the cost of creating this manual process and previously stated concerns about data availability, implementing this process in a controlled manner that is required for all financial reporting would require development and testing, which would take considerable time, in addition to the implementation and ongoing cost, given the complexity. Coupled with the other significant NAIC activities, the resources to implement this broad and extensive proposal are very challenging even with a proposed year-end 2023 effective date.

These data capture and schedule creation scenarios present varying degrees of significant challenges in providing the requested information on potentially thousands or tens of thousands of securities for a single company. Each would require companies to develop and maintain processes and internal controls over centralized data capture and financial reporting protocols for data elements which currently don't exist.

Conclusion

Given the concerns expressed above; the data may be available from other sources, the potential lack of utility of the requested data, and the costs and efforts to comply, the undersigned would like to work with regulators to get a better understanding of the actual need for this data, as well as how

the SVO expects to use the data. This would allow us to provide more constructive feedback on this proposal so it can be implemented in the most cost-efficient manner. Due to the significant effort and cost associated with complying with this proposal, for each and every insurance company, it should be evaluated against the actual benefits that will accrue to regulators, especially in the context of other SVO/VOSTF initiatives. The undersigned believe it would be unwise to hastily implement this proposal "as is" only to acknowledge later that the utility of this data is of limited value. Furthermore, we would like to explore whether it is more cost efficient for such data, or a subset of such data, to be centrally aggregated by the SVO for their use in analysis, rather than by insurers individually.

Thank you for considering the undersigned comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

Mike Monahan

RE: Referral regarding a Proposed Purposes and Procedures Manual (P&P Manual) Amendment to Define and Add Guidance for Structured Equity and Funds

DATE: February 3, 2023

Summary – The SVO has processed several private letter rating (PLR) filings for investments in notes issued by special purpose vehicles or other legal entities that operate as feeder funds which themselves then invest, directly or indirectly, in one or more funds or other equity investments. The SVO proposes defining these investments as Structured Equity and Fund investments.¹ The SVO proposed at the 2022 Fall National Meeting the removal of Structured Equity and Fund investments from Filing Exemption, the reliance upon a credit rating provider (CRP) ratings for the assignment of NAIC Designations. The SVO is concerned about this general structure for the following reasons:

¹ Proposed Definition: A Structured Equity and Fund investment is a note issued by, or equity or limited partnership interest in, a special purpose vehicle, trust, limited liability company, limited partnership, or other legal entity type, as issuer, the contractually promised payments of which are wholly dependent, directly or indirectly, upon payments or distributions from one or more underlying equity or fund investments. The inclusion of an intervening legal entity or entities between the Structured Equity and Fund investment issuer and the underlying equity or fund(s), does not change the risk that the insurer investment is ultimately dependent, in whole or in part, upon an investment in equity or one or more funds and its underlying investments. Any design that circumvents this definition, and related examples, through technical means but which in substance achieves the same ends or poses the same risk, shall be deemed a Structured Equity and Fund.

Executive Office | 444 North Capitol Street NW | Suite 700 | Washington, DC 20001 | (202) 471-3990

Central Office | 1100 Walnut Street | Suite 1500 | Kansas City, MO 64106-2197 | (816) 842-3600

Capital Markets & Investment Analysis Office | One New York Plaza | Suite 4210 | New York, NY 10004 | (212) 398-9000

www.naic.com

- 1) Circumvent Regulatory Guidance - The introduction of an intervening entity as debt issuer, when the underlying investment is in substance an equity investment, circumvents regulatory guidance established by the Valuation of Securities (E) Task Force, the Statutory Accounting Principles (E) Working Group and the Capital Adequacy (E) Task Force for the reporting of equity investments because, according to the P&P Manual (i) equity and fund investments are ineligible to use credit rating provider (CRP) ratings in the assignment of an NAIC Designation and (ii), in the case of funds, only the SVO is tasked with determining whether a fund produces fixed-income like cash flows and is therefore eligible for specific classification.

All non-SEC registered funds are required to be reported on Schedule BA. Life insurance entities are permitted to file investments in non-SEC registered private equity funds, partnerships, limited liability companies and joint ventures with the SVO for specific classification on Schedule BA;

- 2) Reliance on Ratings - These investments are being reported as bonds and receiving bond risk-based capital (RBC) factors based upon the mechanical assignment of NAIC Designations that rely upon CRP ratings through the filing exempt process. The use of CRP ratings would not be permitted for the fund or equity investments which underly these notes if the equity or fund investments were held directly;
- 3) RBC / Investment Limit Arbitrage - The structure may permit in-substance equity and fund investments to obtain better RBC treatment than would otherwise be received if the investments had been directly reported. In addition to improved RBC treatment, the structures could permit entities to hold more underlying equity / fund investments than would be permitted under state investment law; and
- 4) Transparency - The structures typically use two or more interconnected private entities through which the privately rated “bond” securities are issued that are backed by investments in non-public assets. The many non-public layers deny regulators, and possibly insurer investors, transparency into the true underlying risks, credit exposure and nature of the investment. The notes issued are described generically as a “senior note” or “term loan” further obscuring their actual structure and complexity. These structures can invest in any asset including affiliate investments, non-fixed income investments, derivatives, borrowings for the purpose of leverage and non-admitted assets.

It is possible that many of the transactions the SVO has processed would not qualify as bonds eligible for Schedule D-1 reporting according to the principles-based bond definition currently being drafted by the Statutory Accounting Principles (E) Working Group, while others likely will qualify. The bond definition requires a review of the substance of the investment to determine whether it has the substance of a bond; significantly, that the ultimate underlying collateral has fixed income cash flows. In either case, however, the use of a fund intermediary has the potential to be abused and requires significant judgment to understand the substance and nature of the ultimate underlying risk. This has already been recognized by the establishment of processes for the SVO to provide NAIC Designations for fixed-income-like funds. It would then follow that debt instruments backed by the types of funds that would ordinarily be required to be filed with the SVO, should follow the same process.

Informational Referral – Given the magnitude of the multiple regulatory arbitrage opportunities, the judgment involved in assessing the nature of the ultimate risk, the lack of transparency, circumvention of regulatory guidance and the reliance on CRP ratings to accomplish these ends, the SVO proposed amending the P&P Manual to include a definition for Structured Equity and Fund and to exclude such investments from Filing Exemption eligibility. The proposed amendment would not change how the investment is classified for reporting by the insurer but it would ensure that the NAIC Designation and Category assigned are appropriate for the risk. This is an informational referral and no direct action is required by the Capital Adequacy (E) Task Force, Life Actuarial (A) Task Force or Risk-based Capital Investment Risk and Evaluation (E) Working Group unless those groups wish to comment on the proposal.

Please contact Charles Therriault or Marc Perlman with any questions.

Re: NAIC Valuation of Securities (E) Task Force (VOSTF) Referral to LATF – Structured Equity and Funds

Dear Ms. Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the VOSTF referral to LATF regarding Structured Equity and Funds that was exposed for feedback on March 2, 2023.

ACLI believes that this informational referral does not warrant formal comment from LATF. ACLI is comfortable continuing the dialogue with VOSTF to address our main technical concerns with the proposal. For your reference, attached to this comment letter is a February 13, 2023, joint comment letter from ACLI, PPIA, and NASVA outlining those concerns.

Were LATF to formally comment, we would ask for an opportunity to present the main concerns described in the joint letter at a future LATF meeting before any such comments were sent to VOSTF.

Thank you once again for the consideration of our feedback and we are looking forward to any future discussions on this subject.

Re: Proposed Amendment to Define and Add Guidance for Structured Equity and Funds to the P&P Manual

Dear Ms. Mears,

The undersigned (ACLI, PPIA, and NASVA) appreciate the opportunity to comment on the exposure referred to above that was released for comment by the Valuation of Securities Task Force (VOSTF) on December 14th, 2022.

The Undersigned’s Response to the Exposure – In Summary

The exposure has a variety of SVO concerns that are somewhat commingled. Our concerns, some of which are addressed in more detail following, are summarized below.

1. It appears some of the SVO’s concerns include:
 - a. Pure regulatory arbitrage, when comparing pre-and post-securitization, while holding the same economic risk,
 - b. What constitutes a “bond” in concept, specifically for eligibility under SSAP No. 26R and SSAP No. 43R, and
 - c. Lack of transparency on the structures and investments held by the underlying fund.

2. Industry is confused by the overlap with other initiatives and exposures, specifically the “Principles-based Bond Definition” initiative, the Risk-Based Capital Investment Risk and Evaluation (E) Working Group (Investment RBC WG) activities, and this Exposure. Projects and other initiatives address those concerns as follows:
 - a. The Investment RBC WG agenda currently includes a project to determine the appropriate risk-based capital charge for residual tranches of structured investments, which will address the arbitrage concerns raised in this proposal,

- b. SAPWG is currently near finalization of a project to define a bond, including determining eligibility for reporting on Schedule D. The SVO already has an avenue to raise concerns on investments that they do not believe meet the definition of a bond,
 - c. Private rating letters are now being filed. These letters are quite substantive and should include significant information about fund structures and their largest underlying investments.
3. The exposure name implies that the SVO is focused on feeder funds and structured equity investments. However, concerns associated with potential PIK interest, maturity extensions or other features that are common among securities appear to be commingled within the feeder fund example. To the extent a security has the potential to PIK or defer interest, where such interest is otherwise not capitalized or required to be accrued, or the potential to extend the maturity without paying interest for that extension, the Undersigned agree such a security has non-payment risk. Otherwise, the potential to PIK or defer interest, or the potential to extend the maturity, has real economic or business benefits, often mitigating risk, and should not be in the purview of the SVO for determining NAIC designations that are ultimately used for risk-based capital purposes.

Presumably, the SVO has concerns related to liquidity risk, but this is not a factor in determining an NAIC designation, nor should it be, and the SVO is not in a position to assess liquidity risk for insurers. The SVO has been focused on securities with the potential to PIK or defer interest, as well as the potential to extend maturity, but we have yet to discern what that concern is other than liquidity risk.

4. The proposed definitional change to the P&P Manual would potentially capture a whole host of more traditional fixed income securities that industry does not believe were intended to be in scope and may be difficult for the SVO to evaluate. The following fixed income securities are explicitly not feeder funds, nor share the same risk profile. Industry notes the following examples potentially captured by the exposure (including but not limited to):
- Senior secured debt issued by a comingled fund, private or public (SEC 40 Act regulated funds, mutual funds etc.)
 - Senior secured debt issued by SPVs that own or invest in debt instrument(s), whether directly or through tax or jurisdictionally required blockers
 - Senior debt issued by REITs
 - Senior debt issued by BDCs
 - Senior debt issued by entities owning stakes in one active corporate subsidiary, or multiple related active corporate subsidiaries (“holding companies”),
 - Senior debt issued by Collateralized Fund Obligations (“CFOs”) through a trust securitization offering
 - Senior debt issued as NAV Loans generally with very low LTVs

In addition to the cost associated with reviewing these additional transactions, the question arises as to whether the SVO can better assess risk than rating agencies. Some of these structures (such as CFOs) are non-homogenous and require substantial modelling resources to evaluate. Certain rating agencies have developed a niche in assessing these risks. We also note these securities often have significant credit enhancement retained by the issuer that are not

part of the securitization (e.g., CFOs) as well as significant overcollateralization (e.g., NAV Loans, often with LTVs at 10%).

5. The exposure mentions that the SVO could use any methodology that it deems appropriate to designate such funds. There is concern about the lack of transparency of SVO methodologies, and related consistency in designations for similar risk. We believe transparency in methodology, as is happening with CLOs, is important and SVO methodologies should be fully transparent. This would accomplish two objectives – 1) Ensure the SVO is applying methodologies consistently and 2) Provide transparency to the market and industry.
6. A 2021 NAIC Capital Markets Bureau Special Report stated, “On average, designations were 2.375 notches higher, with designations 2.4 notches higher at small CRPs and 1.9 notches higher at large CRPs” than SVO’s designations”. This statement implies that SVO designations are conservative, even when compared with larger rating agencies. We believe that conservative designations for their own sake should not be the objective of the SVO. Rather, the pursuit of consistent, accurate, and transparent investment risk assessments should be the joint objective of the NAIC, VOSTF, SVO, and Industry. Excess conservatism and lack of transparency for critical processes within the SVO’s designation methodology have the potential to create a disconnect between the appropriate risk-based capital charges set by the NAIC’s Capital Adequacy’s Task Force and SVO designations. Risk-based capital charges are based upon public rating agency experience and is the foundation upon which the capital charges are ultimately based.

While acknowledging the SVO’s designation process generally works well for most traditional corporate bonds that are filed with the SVO, although not without examples of unsubstantiated deviations, the potential for inconsistency in appropriate risk assessment becomes even greater as structural complexity increases. Additionally, having concentrated critical processes under the SVO’s sole discretionary purview, including choice of rating methodology to apply, application of that methodology, and the lack of a robust and independent appeals process for industry, does not offer appropriate checks and balances. Currently, industry struggles to understand how the SVO might view securities with new, unusual, or outlier risks and what type of designation the SVO might assign to such securities. The potential for inconsistency in appropriate risk assessment becomes even greater as structural complexity increases. If an SVO designation methodology exists for all asset classes, industry does not understand why they cannot be made both public and transparent. If an SVO designation methodology does not exist for all asset classes, that would be concerning as the SVO looks to expand its role for designating even more complex securities.

There is also concern that a lack of transparency and applied consistency with the SVO’s undisclosed designation methodologies will lead to material capital uncertainties and inconsistent designations. Capital certainty may not officially be a component of an NAIC designation, but we believe all should agree that consistent application of, and transparency of, designation methodology is important to all stakeholders, including the SVO and state regulators. Further, capital certainty and timeliness of designations are very important to insurance companies to manage risk-appetites for risk-based capital in a meaningful way, and to ensure that return on investments covers not only expected losses but also an acceptable return on capital.

- The undersigned believe the proposed amendment should focus on what we consider should be mutual areas of agreement in principle.

The SVO should make their methodologies public to help ensure they are applied consistently, the SVO’s powers have appropriate checks and balances, and/or they are not overly conservative when compared to rating agencies’ ratings and upon which risk-based capital charges are based.

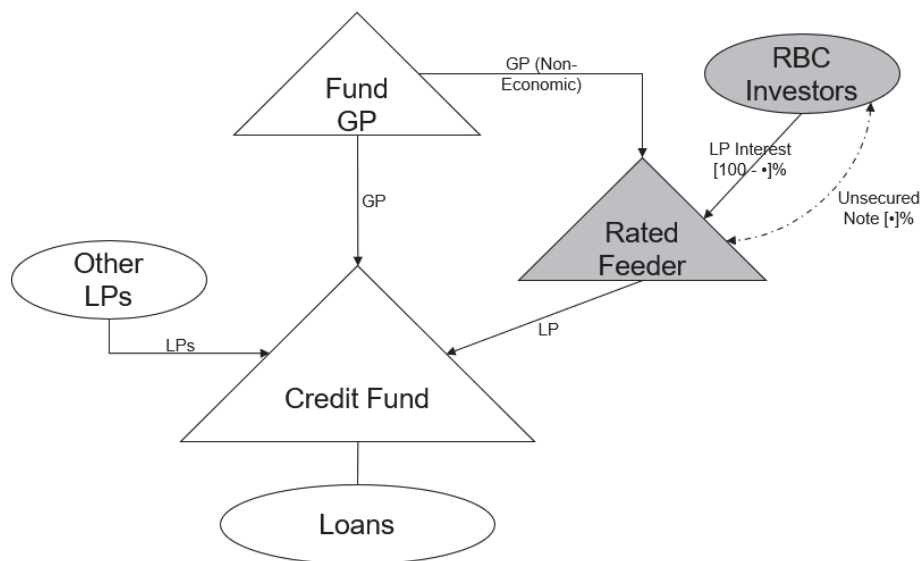

Even the large rating agencies, who have extensive resources (including sizable staff with dedicated teams for specific asset classes with unique characteristics, trained economists, the latest technology, access to tailored seminars/training for specific asset classes, and access to management), are not experts in all areas.

As a result, both large and smaller rating agencies have developed particular niche expertise, and no one rating agency rates every type of debt asset class.

The undersigned would like to work together with the SVO and NAIC to better understand their concerns so approaches more tailored toward those specific concerns can be more efficiently addressed. We look forward to having dialogue with you on these issues and stand ready to help.

Feeder Fund Structures

The remaining part of our letter focuses on the feeder fund structure and the examples included within the exposure. A visual depiction of a feeder fund can be shown as follows:

This type of structure, as well as other structures such as CFOs, were subject to significant discussion during the principles-based bond definition project. Early in the project, complex and unworkable rules were being developed in an attempt to address risk-based capital concerns of structures (i.e., allowing for potential risk-based capital arbitrage without a substantial change in economic risk). It was ultimately decided by SAPWG that such concerns were best addressed by revising the definition of a bond in combination with the Investment RBC WG addressing the

appropriate risk-based capital charges for residual tranches. All residual tranches have subsequently moved to Schedule BA and are in scope for potentially higher risk-based capital charges.

During the bond project, industry also shared with regulators that these feeder fund structures provide valuable benefits to the insurance industry, as well for those outside the insurance industry. Feeder funds allow companies to obtain diverse exposure to mezzanine debt (or junior debt, 1st lien debt, etc.) which investors would otherwise not be able to do individually due to materiality, individual underwriting expertise, lack of diversification, etc.

The feeder fund structure was initially developed, at least in part, for anti-arbitrage reasons and to allow insurance companies to access funds with a capital charge that puts insurance company investors on a level playing field with pension funds, banks, and other non-insurance investors. The key is that some investors cannot commit sufficiently large capital to do a separately managed account directly, and thus must choose between either foregoing attractive credit risk exposure or taking an overstated risk-based capital charge to access a diversified portfolio of ultimately debt instruments via a fund investment. A pension fund, for example, can invest in the limited partnership directly without similar risk-based capital consequences. But for an insurance company, the risk-based capital charge is 30%. Meanwhile, as noted in the SVO example, the real risk-based capital risk on a look-through basis is lower – in the example only 9.5% – resulting in anti-arbitrage.

The Investment RBC WG agenda currently has a project to determine the appropriate risk-based capital charge for residual tranches commensurate with the levered risk of the residual tranche. An interim solution is anticipated in time for concurrent adoption with the principles-based bond project. In the SVO's example, if the residual tranche risk-based capital charge was set at 65% (i.e., half-way between 30% and 100%) the aggregate risk-based capital charge of owning both the debt and equity tranche would be 7.635% versus 9.535%, essentially eliminating the "arbitrage" as laid out in the feeder fund exposure example. However, the SVO's example only has a 10% equity tranche which is substantially lower than a typical equity tranche. A more representative equity tranche of 25% with a 30% risk-based capital charge would yield an aggregate risk-based capital charge of 8.446% essentially eliminating any arbitrage. A risk-based capital charge of 65% on the residual tranche would yield an aggregate RBC charge of 17.196% which would still be significantly anti-arbitrage.

Further, securities issued by feeder funds are often issued as tranches with associated waterfall structures. These more complicated structures allow apportionment of risk potentially between different entities and/or segments to further allocate risk. Often the investment teams at insurance companies that manage fixed income versus equity portfolios are separate entities. To the extent a debt-oriented fund must be evaluated by an equity portfolio team, the fund will generally not gain traction being a "lower returning opportunity" compared to equity asset classes. This can make the access to this attractive asset class effectively fall through the cracks at many insurance companies. Feeder vehicles can assist these companies to shift the evaluation from their equity portfolio teams to their debt-oriented teams.

Not all feeder fund investors are primarily motivated by risk-based capital treatment; some of them are very focused on having the "reliable and predictable income" that debt tranches from a feeder fund would provide. The complex structuring and apportionment of senior/subordinate risk between tranches is both experience and technology intensive. CRPs have invested materially for years in their capabilities to assess credit risk in these tranching waterfall-based securitizations, and their published methodologies are transparent and consistently applied. We question whether the SVO

could evaluate such structures, for all different types of asset classes, in a more efficient, transparent and/or consistent manner than already performed by the CRPs.

The SVO's WARF methodology can work well where it is currently applied such as when there is direct ownership in an LP interest with no debt, but it becomes problematic when there is debt or when multiple tranches exist with a waterfall structure. Absent this already being addressed by the Investment RBC WG, it might be reasonable to have the SVO apply the WARF methodology and utilize that charge, if the SVO would apply the aggregate 9.535% charge they note is appropriate in the exposure. However, this comes with several practical problems:

- 1) The SVO exposure suggests any methodology for a designation could be used by the SVO, in their sole discretion without transparency as to considerations given or to ensure consistency of application. A lack of transparency as to methodology has long been a significant challenge industry has raised regarding the SVO, as designations received from the SVO can sometimes seem variable and inconsistent. This can lead to industry uncertainty regarding assessment of risk. While acknowledging the SVO's designation process generally works well with traditional corporate bonds that are filed with the SVO, although not without examples of unsubstantiated deviations, the potential for inconsistency in appropriate risk assessment becomes even greater as structural complexity increases. Trying to gain an understanding of potential outlier risk assessment is generally not achievable with today's SVO structure.
- 2) The cost of filing such securities with the SVO, which is significant given the proposed scope, could be prohibitively expensive and time consuming given the potential for limited incremental benefits, if any, compared to the status quo. For example, if the underlying debt itself is not rated by a CRP, our understanding is the designation for that underlying bond is automatically deemed a 5B, which is inappropriate, or each individual underlying instruments needs to be filed with an RTAS. The hard cost of filing each security, and each RTAS, combined with the requisite filing requirement for each underlying security (if all such information is even available in the form required), is prohibitive. Rating agencies have devoted significant cost and staff to analyze such securities. For example, industry understands that rating agencies stress each individual CUSIP within the securitization under different scenarios. Many rating agencies also have niche expertise in certain variations of asset backed securities, with different underlying collateral.
- 3) The SVO's exposure questions both the PIKing or deferral and accruing of interest and circumstances where the weighted average life of the underlying junior debt differs from the term of the note. However, there are valid economic reasons for why these structural features exist, and we think it is an oversimplification to assume that such features are inherently risky.

For example, while acknowledging significant variations exist (one example cannot cover all contingencies), it is common that the underlying investments in the portfolios of these funds are not typically traded. While the fund manager has the authority to actively manage the fund, in large part the average fund ends up pursuing a "buy and hold" strategy. During the investment period of the underlying fund, investments are originated and purchased by the fund. After the end of the investment period, the fund goes into a "run-off" mode and no further investments are purchased by the fund. As cash is generated from the underlying investments in the fund is distributed to investors in the fund on a pro-rata basis per their respective commitment to the fund. To the extent the investor has come into the fund via a feeder vehicle, then the waterfall provisions of that vehicle will dictate how the cash is distributed to the tranches of securities

that were issued by the feeder vehicle. The portfolio manager has no discretion to redirect these cash flows, and again they are contractually directed per the waterfall.

Generally speaking, feeder vehicles are structured such that once an underlying fund portfolio has “ramped-up”, given the inherent overcollateralization of these structures from the viewpoint of the rated notes, ample cash flow is generated from the fund’s assets to pay the contractual cash coupons on the rated notes issued by the feeder vehicle. After paying administrative expenses, all cash received during each period is first available to pay the interest due on the Senior Notes of the feeder vehicle, followed by interest due on any Subordinated Note tranches. During the investment period, it is typical that any remaining cash be distributed to the residual or equity tranche of the feeder vehicle, while after the investment period this cash would otherwise be used to pay down principal of the Senior Notes (until fully repaid) and then any Subordinated Notes, prior to being applied to the residual tranche.

Given the structure of a typical feeder vehicle and the waterfall priorities, it is highly unlikely that interest due to the Senior Notes issued by a vehicle would not be paid in cash. For any Subordinated Notes, to the extent there is not sufficient cash flow received on a current basis in a particular period of time to pay the interest due on those notes, then that interest is PIKed or otherwise accrued for the current period. Per the priority structure of the waterfall, that interest will then have to be paid in cash from cash received from the underlying fund investments in subsequent periods. This amount due will remain outstanding and retain its priority in the waterfall until fully repaid.

For an underlying fund that primarily holds private debt investments in its portfolio, these investments may typically have legal maturities of 7-10 years. Given that these investments can generally be prepaid by their issuing companies several years before the legal final maturities, and with the normal life cycle of private equity ownerships of companies generally, it is very common that these investments will only be held by the underlying fund for ~3-4 years.

With a typical structure for a feeder vehicle, the note tranches issued by the vehicle will generally have debt maturities longer than the maturities of the investments in the underlying fund (and practically speaking much longer than the actual hold period for most investments in those funds). Since all cash received from the underlying investments is directed by the feeder vehicle waterfall structure to pay down interest and then principal of the notes issued by the feeder vehicle, this potential mismatch is not problematic. In fact, this is a credit enhancement for the notes issued by the feeder vehicle that ensures there is no need for distributions in kind.

As noted in our previous letter on Subscript S and non-payment risk, there are valid reasons for potential PIK interest (or deferral of interest) as well as for potential maturity extension features, and if structured appropriately, they do not represent non-payment risk. A US Treasury security can be a PIK security, for example. The SVO’s exposure says the interest “could” be deferred without capitalization. It is unclear in the example cited, whether this is the case or “could” is used more generally. However, if the debt interest can be deferred without capitalization or otherwise being accrued, as stated in the deal documents, we agree that is non-payment risk and have no disagreement that it should be filed with the SVO as a non-filing exempt security. Although we are generally not aware of such securities being utilized, we agree that, to extent such securities exist, we are comfortable filing them. However, we do not think the presence of a PIK interest feature that capitalizes interest when used, is problematic.

- 4) The exposure's second example doesn't appear to have an equity tranche, and therefore the analysis presented in the exposure would not be practically appropriate. In any instance, we do not believe the math is correct in the SVO's analysis. To arrive at the SVOs risk-based capital charges, both debt tranches would have to be 50 and 50, not 55 and 55. The "BB Debt" would not be debt and would have an equity charge of 30% resulting in an aggregate RBC charge of 17.6925% in this instance. Should it be 65% the aggregate risk-based capital charge would be 37%. That is greater than the risk-based capital charge of the underlying equity.

Industry believes that feeder fund structures should be left, as originally planned by SAPWG, to be addressed by the Investment RBC WG. Additionally, industry does not deem the presence of PIK interest and principal extension features in securities to automatically translate to higher risks that would necessitate a filing with the SVO. The SVO was recently granted the authority to review private rating letter rationales (which are in-depth reports) and report suspected non-bonds to regulators, and regulators can react accordingly. It is unnecessary to make a large swath of any given asset class non-filing exempt in order to identify instances of potential abuse.

We stand ready to work collaboratively with the Task Force and SVO on this and other matters in the future

Sincerely,

Mike Monahan

Life Actuarial (A) Task Force
and the Life Risk-Based Capital (E) Working Group
Virtual Meeting
April 13, 2023

The Life Actuarial (A) Task Force met April 13, 2023, in joint session with the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Task Force members participated: Cassie Brown, Chair, represented by Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler represented by Sanjeev Chaudhuri (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Scott Shover and Heir Cooper (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT). The following Working Group members participated: Philip Barlow, Chair (DC); Sanjeev Chaudhuri (AL); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Approved the Formation of the Economic Scenarios (E/A) Subgroup and its Associated Charges

Hemphill said a joint Economic Scenarios (E/A) Subgroup was being considered for formation, noting that it was a joint subgroup of the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group due to the impact of economic scenarios on life insurance and annuity reserves and capital. She said charges (Attachment Nine-A) were exposed, and one comment letter from Mark Tenney (Mathematical Finance Company) (Attachment Nine-B) was received. She stated that in response to a portion of Tenney's comments, an additional charge was added to develop and maintain acceptance criteria reflective of history and plausibly more extreme scenarios. Tenney said he agrees with the edits to the charges, but he noted that there were challenges with interpreting the results of the Cox-Ingersoll-Ross (CIR) model. Jason Kehrborg (American Academy of Actuaries—Academy) said the Academy Economic Scenario Working Group approved of the addition to the charges, and it is actively working on developing acceptance criteria.

Hemphill asked Task Force and Working Group members if they approve of the formation of the Economic Scenarios (E/A) Working Group. All responded in the affirmative.

2. Discussed the VM-20/VM-21 GOES Technical Drafting Group Topics Exposure

Hemphill said the VM-20, Requirements for Principle-Based Reserves for Life Products/VM-21, Requirements for Principle-Based Reserves for Variable Annuities Generator of Economic Scenarios (GOES) Technical Drafting Group exposed a series of topics (Attachment Nine-C) that would be discussed at meetings of the Drafting Group.

3. Reported on a Regulator-to-Regulator Meeting of the SPA Drafting Group

Hemphill said the Standard Project Amount (SPA) Drafting Group met April 6 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC's Policy Statement on Open Meetings, to share the results of a confidential survey sent to companies requesting data related to the SPA.

Having no further business, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/LATF Calls/04 13/April 13 Minutes.docx

The **Economic Scenarios (E/A) Subgroup** of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force will:

- A. Monitor that the economic scenario governance framework is being appropriately followed by all relevant stakeholders involved in scenario delivery.
- B. Review material economic scenario generator updates, either driven by periodic model maintenance or changes to the economic environment and provide recommendations.
- C. Regularly review key economic conditions and metrics to evaluate the need for off-cycle or significant economic scenario generator updates and maintain a public timeline for economic scenario generator updates.
- D. Support the implementation of an economic scenario generator for use in statutory reserve and capital calculations.
- E. **Develop and maintain acceptance criteria that reflect history as well as plausibly more extreme scenarios.**

Honorable Rachel Hemphill
Chair, Life Actuarial (A) Task Force (LATF)
Honorable Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)
National Association of Insurance Commissioners

Re: Economic Scenarios (E/A) Subgroup

Dear Ms. Rachel Hemphill and Mr. Philip Barlow,

Please accept this comment on the NAIC LATF Economic Scenarios Subgroup Draft Charges.

Sincerely yours,

Mark S. Tenney

The 3 factor CIR model tuned to the lower bound and moderate negative rates is overly focused on that region. This results in extreme values of reserves and capital. This is an artefact of the model's limitations.

Regime Switching DMRP does not have this limitation. It can model rates trapped at the zero lower bound or negative rate regimes without overweighting to zero or negative rates.

Currently, the Fed is running inflation higher than the two percent target in the past. Prior to the recent increase, the actual value of inflation trended below the target. Greg Mankiw talked to me after a recent Brookings event in February 2023. During the session he indicated that inflation at 3 percent would be treated as being as good as two percent by the Fed.

I brought up the view that the Fed wanted to be relevant. It did not want to be stuck at the zero lower bound and have its policy irrelevant and therefore it was running inflation intentionally higher now in order to have room to lower rates.

The Federal Reserve's model of the economy, FRBUS, is structured very differently from multifactor CIR or the Regime Switching DMRP. In its standard setting, zero is a lower bound on the Fed Funds Rate, but treasury yields can be negative even in this case.

The two models, RS-DMRP and FRBUS both have negative rates but they can have more moderate impacts on pricing in some cases or for some calibrations while still having enough of a tail of negative rates for regulatory purposes. If FRBUS is more moderate on negative rates than is the 3 factor CIR GFF in its current calibration, then the Fed model should guide a recalibration of the 3 factor CIR GFF model to be more moderate on pricing. This is because the GFF does not really contain fundamental economic information on negative interest rate episodes.

It is proposed that the Economic Scenarios Subgroup study using RS-DMRP and the Fed's model as replacements for the 3 factor CIR GFF or to modify its calibration. It is proposed this be added to its list of charges. This could save the industry from having to substantially retrench and remove many product designs. This would result in a huge loss of jobs. This would only be justified if it was based on fundamental economic data and models. The FRBUS model is the best empirically of such models. It is eclectic compared to a more academic DSGE model.

In addition to the above, there should be an effort to explore the Fed agreeing to lend to insurance companies during episodes of negative rates for their cash needs. This could then be modeled. This would result in substantial relief of reserve and capital strain from negative rates. For this purpose, the RS-DMRP or the Fed's own FRBUS will be more useful than the 3 factor CIR GFF model.

Equity models can be linked or be part of the RS-DMRP. These models do not have to have the extreme march down to almost zero wealth ratios. Stock market decline regimes tend to be short is what the published literature has found.

The subgroup should proceed on an evidence based approach. This should be added to its charges or made explicitly part of them. This currently favors the view of less negative rates than in the GEMS calibration in the US and of equity stock market returns that do not have the extreme down movements. The extent of low and negative rates in the 3 factor CIR model arose from limitations in the model's structure. From an evidence based approach, RS-DMRP especially is better at having some negative rate scenarios but not being required to be overweighted to it. In addition, RS-DMRP is easier to understand and control for this purpose. The Fed's model has at times changed, and so use of it as the main economic scenario generator is risky. Along with its other flaws, this favors RS-DMRP. It can provide some low for long and negative rates but it doesn't become trapped into an excessive amount of those. This then reduces the strain on reserves and capital.

Economic Scenario Generator Technical Drafting Group Planned Topics, Tentative Timing, and initial Decision Points

1) Stochastic Exclusion Ratio Test

Timeline: Initially, meetings on 4/12 and 4/26, to finish covering field test results and discuss decision points below. Subsequently, two additional meetings after the second round of field testing, to discuss SERT field test results, pick a version of the SERT (if multiple were tested), and to determine SERT cutoff (assuming this form of SERT is selected).

SERT Goals:

- Practically sort products that may have a constraining SR from those that would not have a constraining SR.
- Give reasonably consistent results over time and in different economic environments.

Comment (Mark Tenney, Mathematical Finance Company): *"The NAIC ESG GEMS generator is calibrated to negative rates and low for long. It has some ability with other rate environments or in transitions, but these are at least partly limited in their scope and accuracy because of the orientation to low for long and negative rates. Pop-up type scenarios are not as strong as in the recent movement starting in 2021.*

These type of scenarios are handled at least partly outside of the ESG in current practice. The exclusion test is to determine whether to exclude testing with the ESG when the ESG by itself is already inadequate for many key tests. This is a sort of paradox. The ESG can not really tell what to exclude, because key risks are not in the ESG. The lack of a more robust ESG thus makes the exclusion test difficult to assess.

At a minimum, a second ESG, a scorekeeper ESG or risk ESG should be used to check the ESG and the exclusion test. This might be an ESG like Regime Switching DMRP. Companies might be encouraged to self-test with their own ESGs or ones they use."

SERT Decision Points:

1. **Decision Point:** Should the SERT be removed entirely, given that it is duplicative of what could be provided for the certification method? This could include moving the primary SERT outline to the examples for a broadened certification method. With a QA certifying as to the risks, a more judgment-based evaluation of the variability could be performed

rather than having a rough cutoff that does not consider the size of the business or the materiality standard.

Advantage for removal: The SERT discourages a holistic assessment and discussion of risk that is more appropriate for PBR. It could potentially be replaced with versions of the certification or demonstration method. One suggested alternative was to run a small, representative scenario set (e.g., 50 scenarios) and show it is not constraining compared to the NPR and DR. This is currently allowable under the stochastic exclusion demonstration test option outlined in 6.A.3.b.iii, except that it is left up to the company to determine “a sufficient number of adverse scenarios”.

Advantage for retaining: The SERT is often used because it is simple to implement. Following the same approach but as part of a certification method would require additional reporting and may trigger follow-up questions.

2. **Decision Point:** What products are generally expected to pass the SERT, what products are generally expected to fail, and what percentage of the time should this single test be able to accurately sort these accordingly?

Proposal: Pass: most Term with 20 year or shorter level period (non-ROP); Fail: most ULSG (unless minimal guarantees); the current SERT appears to fail roughly 10% of the time.

3. **Decision Point:** Do the SERT scenarios need to be at a moderately adverse level?

Proposal: No. The SERT is not a set of scenarios that need to be “passed”. They should reasonably assess whether performing an SR and taking a CTE(70) is likely to produce a higher reserve than the DR. Thus, they should assess whether tail scenarios lead to significant increases. They should generally be representative of the tail, but tail results may not be driven by the 85th percentile. Ultimately, the cutoff, which will be calibrated based on the SERT methodology, is what will determine whether products pass or fail the SERT.

4. **Decision Point:** Should the SERT scenarios be derived directly from the stochastic scenario distribution, as Conning has done or modified, or should they be “stylized” scenarios be created that reflect starting conditions and a level of reversion to a mean? Is there an alternative approach?

Advantages for scenarios based on full scenario set: Direct relationship for goal #1; avoids disconnect between the test and its effectiveness for the intended purpose of determining whether there would likely be a SR excess over the DR. The intent is for economic scenario generator updates to be more gradual over time now that we have a vendor to maintain the economic scenario generator. Each update would require an evaluation and potential update of the stylized scenarios as well.

Advantages for scenarios based on stylized set: Ease of implementation. Being less responsive means being more predictable.

Alternative (suggested by Matt Kauffman, Moody's): *"The alternative approach that I am proposing is similar in nature to the existing SERT methodology, with **prescribed vectors of pre-determined random shocks** to replace the stochastic random shocks. Because the structure of the AIRG model is different than the structure of the GEMS model, however, the existing prescribed vectors of shocks need to be translated somewhat to work with the random drivers used in the new GEMS model. I have done some limited testing that confirms it appears possible to do so in a way that will produce acceptably similar results to the existing SERT methodology (and much more similar results than the targeted percentile methodology that was used in the field test). I will be happy to provide more technical details on my proposal, if requested.*

Advantages for scenarios based on prescribed random shocks:

- *Direct relationship for goal #1.*
- *Ease of implementation; no need to generate 10,000 scenarios and analyze their percentiles to produce the 16 scenarios.*
- *Removes some of the conservatism that was unintentionally added by Conning's proposed methodology of targeting percentiles.*
- *It should adapt/respond fairly well to changes in calibration, as long as the calibration rationale remains consistent (i.e. the 3 CIR factors still roughly correspond to level, slope, and curve shape).*
- *Deterministic Reserve (DR) scenarios can dynamically be re-generated quickly for pricing/sensitivity testing/risk management (i.e. non-valuation) purposes."*

5. **Decision Point:** How do we evaluate whether the SERT is appropriately calibrated, independent of the additional risk reflected in the new scenarios? That is, what must be included in a subsequent Field Test to calibrate an appropriate cutoff?

Proposal: Adequate coverage of different starting conditions, adequate representation of products (Term, ULSG, VULSG, VULnoSG par & non-par WL).

2) Deterministic Reserve

Timeline: Initially, meetings on 5/10 and 5/24. Subsequent to the second round of field testing, two meetings to review DR field test results and to select a version of the DR (if multiple were tested) and confirm DR methodology.

DR Goal:

- Provide a moderately adverse deterministic scenario that will be adequate to capture risk for products that do not have significant interest rate and or equity risk.

DR Decision Points:

1. **Decision Point:** Should this scenario be linked to the stochastic exclusion ratio test or can it be separate?

Proposal: Separate. The DR must primarily be suitable for the DR goal above.

Comment (Matt Kauffman, Moody's): *"A related question is whether the DR scenario should be linked directly to the underlying scenario generating model. If, as proposed, a completely separate DR scenario is devised, then this linkage would no longer exist and there could be undesired side effects.*

If my proposed alternative SERT methodology of using prescribed vectors of pre-determined random shocks were implemented, however, then the linkage could be maintained while also removing some of the unwanted conservatism that existed in the field test DR scenarios. (The new targeted percentile methodology is a more conservative approach to develop the DR scenario because the upward "pull" of mean reversion after year 20 is significantly dampened).

If, after applying my proposal, the resulting DR scenario would still be considered too conservative (i.e. beyond moderately adverse), then I would suggest this is an indication that the calibration of the underlying model producing the SR scenarios is itself too conservative. In other words, if a one standard deviation level of random shocks spread out over a 20 year period is enough shocks for the model to produce a scenario that is considered well beyond moderately adverse, then the model is probably also producing a full distribution of 10,000 scenarios that is unreasonable from a real world probability perspective. Approximately 16% of scenarios would be using stochastic random shocks that produce an even more adverse scenario than the DR scenario over the first 20 years.

In this event, I would recommend revisiting the calibration (and the underlying acceptance criteria that is being calibrated to) to produce a more realistic distribution of stochastic scenarios, rather than designing a separate deterministic scenario to avoid the issue."

2. **Decision Point:** Do we agree with the format of the current deterministic scenario (adverse for 20 years, followed by reversion to mean)?

Proposal: Generally yes, but should consider whether the reversion to mean after 20 years particularly impacts specific products, giving less than a moderately adverse result. The focus for DR reserve adequacy should be policies passing the SET, but we should be mindful that it can be constraining for those with an SR as well.

3. **Decision Point:** Is the deterministic reserve scenario methodology used for the first field test appropriate?

Proposal: The DR scenario used may be beyond moderately adverse. While re-calibration will impact the DR level, ask Conning to develop a form of DR that is more consistent with the current DR.

3) Scenario Picker Tool

Timeline: 3 meetings, 6/7, 6/21, and 7/5

Scenario Picker Tool Goal:

- Provide scenario subsets that are reasonably representative of the full 10,000 scenario set for policies and/or contracts that are sensitive primarily to interest rates, equities, or both.

Scenario Picker Tool Decision Points:

1. **Decision Point:** Should there be a scenario picker that is included as part of the economic scenario generator?
Proposal: Yes.
2. **Decision Point:** Should custom stratifications be allowed, for both VM-20 and VM-21, if the company provides an off-cycle or model office comparison between the subset and full 10,000 to show there is not material understatement or bias?
Proposal: Yes. This may reduce the importance of having a perfect response for items #3-#5 below.
3. **Decision Point:** What size of subsets are needed?
Proposal: 50, 200, 1000, 2000.
4. **Decision Point:** Should there be stratification based on interest rates and/or equity?
Proposal: There should be two or three versions of the scenario picker tool, which stratify scenarios based on interest rate, equity, and/or both.
5. **Decision Point:** For interest rates, what tenor(s) should be used for stratification?
Proposal: This may be a limitation in the current scenario picker tool. Consider multiple metrics based on different tenors.

6. **Decision Point:** What metric should be used for stratification?

Proposal: Evaluate whether the current scenario picker's metric is reasonable, aside from its narrow focus on a specific interest rate tenor.

4) Company-Specific Market Paths (CSMP)

Timeline: Covered as part of meeting on 7/19

CSMP Goal:

- Provide a reasonable alternative to the CTEPA that gives consistent results but is more tractable, if necessary.

CSMP Decision Points:

1. **Decision Point:** Should the CSMP be removed entirely?

Proposal: Yes, with an appropriate phase out if needed, although the need for a phase out is not anticipated based on initial responses from the two companies utilizing the CSMP. The CTEPA is very widely used, provides greater insight into the differences between company and prescribed assumptions, and is more straightforward to implement (although more time-intensive).

~~2. **Decision Point:** Should there be any update to the CSMP Market paths?~~

~~**Proposal:** Primarily, updates would be designed to ensure that the 40 scenarios are likely to bracket CTE70(Adj). May need to replace the 1 bps floor on interest rates with a negative [25 bps] floor on interest rates, given the update to the economic scenarios to allow for negative interest rates. No other changes to magnitude of initial equity/interest rate shocks or subsequent equity returns. Interest rate paths (VM requires "all random variables in the generator are set to zero across all time periods" with the intention that "interest rates revert to the same long-term mean") may be determined as Conning has done for SERT scenario #9 from the initial field test (median path), or we can consider whether Conning can more directly calculate the CSMP subsequent interest rate paths.~~

~~**Comment (Matt Kauffman, Moody's):** "I agree there is a need to replace the floor to allow for negative rates in the starting interest rate conditions. Ideally the flooring would be consistent with whatever flooring approach (generalized fractional floor or shadow rate floor) is applied to the starting conditions in the generation of the 10,000 SR scenarios.~~

~~For the same reasons as was described earlier in the Stochastic Exclusion Ratio Test (SERT) section, I also recommend using **prescribed vectors of pre-determined random shocks**~~

to produce the CSMP interest rate paths, rather than targeting the median of a 10,000 scenario distribution. In this case, the baseline SERT scenario #9 used as the basis for CSMP would be very easy to implement, because the pre-determined random shocks are all 0. I expect the resulting scenario would be acceptably close to the median."

5) Alternative Methodology

Timeline: Primary focus of meeting on 7/19. Note that a request for additional information on the use of the Alternative Methodology has been sent to the nine companies utilizing this approach.

Alternative Methodology Goal:

- Provide a reasonable alternative to stochastic modeling that captures the risk of the guarantee for contracts with GMDBs only. Note that for contracts with no guarantees, the Alternative Methodology simply refers to AG33, so the focus of our consideration is on contracts with GMDBs.

Alternative Methodology Decision Points:

1. **Decision Point:** Should the Alternative Methodology be removed entirely?
Proposal: Potentially, with appropriate reliance on existing Actuarial Guidelines (AG33, AG34) with strengthening for rich GMDBs. In addition, there was a question of whether LATF would look for companies with a material block of "rich" GMDBs to follow full SR modeling. Finally, consider not allowing **new** use of the Alternative Methodology.
2. **Decision Point:** Should there be a significant update to the Alternative Methodology (updating the table of factors)?
Proposal: No. Based on early input from the AAA, an update of the current factor-based approach would be onerous if not impossible. If the equity scenarios materially differ from the AIRG, and the Alternative Methodology is maintained, can consider a crude adjustment as was previously done for mortality during VA reform if the impact for the Alternative Methodology is also likely material.
3. **Decision Point:** The Alternative Methodology uses the current AIRG in VM-21 Section 7.C.8 when describing "typical" adjustments to F and G for product design variations. Can Section 7.C.8 be removed, as it only outlines a possible approach, and it will be left to the actuary's judgment how to adjust results for product design variations?
Alternately, can the "prescribed scenarios" be replaced with the option to use either CFT

scenarios or the updated prescribed (Conning) scenarios rather than the current AIRG (again, since this is an example)?

Proposal: Need input on whether this approach is being relied on. If this is not being used, remove for simplicity since it is not a requirement. If it is being used, and the Alternative Methodology is maintained, update with the option to use CFT scenarios or the updated prescribed (Conning) scenarios.

DRAFT

August 11, 2023

From: Fred Andersen, Chair
The Experience Reporting (A) Subgroup

To: Rachel Hemphill, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Experience Reporting (A) Subgroup to the Life Actuarial (A) Task Force

The Experience Reporting (A) Subgroup has not met since the Spring National Meeting. Upcoming projects include monitoring the plans for collecting life insurance mortality and policyholder behavior data using the NAIC as the statistical agent, starting to develop mandatory reporting of variable annuity data, and continuing to work on evaluating actuarial aspects of accelerated underwriting.

Note that the Valuation Analysis Working Group (VAWG), through its company-specific reviews of asset adequacy analysis will monitor emerging trends, particularly with respect to dynamic policyholder behavior resulting from the rise in interest rates. Findings from VAWG may inform the need for upcoming data collection.

August 11, 2023

To: Rachel Hemphill, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Indexed Universal Life (IUL) Illustration (A) Subgroup (IUL Illustration SG) to the Life Actuarial (A) Task Force

The IUL Illustration SG has not met since the adoption of group's main work product, revisions to Actuarial Guideline 49A, by the Life Actuarial (A) Task Force on December 11, 2022. The revisions to Actuarial Guideline 49A were subsequently adopted by the NAIC's Executive (EX) Committee and Plenary at the Spring National Meeting on March 25. Regulators are reviewing the impact of the Guideline revisions on the market.

The Longevity Risk (E/A) Subgroup

To: Rachel Hemphill, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Longevity Risk (E/A) Subgroup to the Life Actuarial (A) Task Force

The Longevity Risk (E/A) Subgroup has not met since the Spring National Meeting. The subgroup will resume the meetings once the currently exposed VM-22 PBR methodology is finalized and adopted to develop and recommend longevity risk factor(s) for the product(s) that were excluded from the application of the current longevity risk factors.

August 11, 2023

From: Pete Weber, Chair
The Variable Annuities Capital and Reserve (E/A) Subgroup

To: Rachel Hemphill, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Variable Annuities Capital and Reserve (E/A) Subgroup (VACR SG) to the Life Actuarial (A) Task Force

The VACR SG has not met since the Spring National Meeting. At the request of LATF, the Chair has made a request to the Society of Actuaries to expand the work they are currently carrying out for the VM-22 Standard Projection Amount Mortality DG to include variable annuities. More specifically, to develop mortality rates to be used as prescribed assumptions within the VM-21 Standard Projection Amount. Work continues on this project and a report and recommendations are expected later this year.

August 11, 2023

From: Ben Slutsker, Chair
The VM-22 (A) Subgroup

To: Rachel Hemphill, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the VM-22 (A) Subgroup to the Life Actuarial (A) Task Force

The VM-22 (A) Subgroup has been meeting roughly every other week since the beginning of April this year. After several Subgroup calls, nearly 200 comments on the 2022 exposed draft of VM-22 were addressed and reflected in an updated document, which is available on the [NAIC website](#). The updates to the newest draft include guidance related to the VM-22 Exemption, exclusion testing, longevity reinsurance, hedging, rider valuation treatment, and various other items.

Subsequent to developing an updated to draft of VM-22, the Subgroup exposed a draft of the standard projection amount requirements during the July 29 call. The exposure focuses on the structure and methodology of the SPA rather than the assumptions themselves, which only contain placeholders in the exposed draft. For upcoming calls, the Subgroup plans to hear updated presentations from the SPA mortality drafting group, led by Seong-min Eom (NJ), including recommendations from the Society of Actuaries on SPA mortality assumptions for payout annuities, deferred annuities, and structured settlements.

Draft: 8/2/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
July 26, 2023

The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met July 26, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Vincent Tsang (IL); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Exposed the VM-22 SPA Draft

Slutsker walked through the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, standard projection amount (SPA) draft.

Leung made a motion, seconded by Lam, to expose the SPA draft (Attachment Fifteen-A) for a 90-day public comment period ending Oct 24.

Having no further business, the VM-22 (A) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/VM-22 Calls/07 26/July 26 Minutes.docx

****All Redline edits are on top of VM-21, Section 6 (Requirements for the ASPA)****

Section 6: Requirements for the Additional Standard Projection Amount

A. Overview

1. Determining the Additional Standard Projection Amount

- a. The additional standard projection amount shall be the larger of zero and an amount determined in aggregate for all contracts within each reserving category falling under the scope of these requirements, excluding those contracts that pass the exclusion tests in Section 7 and to which VM-A, VM-C, and VM-V are applied, by calculating the Prescribed Projections Amount under the CTE with Prescribed Assumptions (CTEPA) method. The company shall assess the impact of aggregation on the additional standard projection amount.

Deleted: the Alternative Methodology is
Deleted: by
Deleted: one of two methods, the Company-Specific Market Path (CSMP) method or

Guidance Note: The following outlines one method that may be used to assess the impact of aggregation. If a company plans to use a different method, they should discuss that method with their domiciliary commissioner.

The benefit of aggregation is determined using the following steps, using the same scenario used for the cumulative decrement analysis, and using prescribed assumptions and discount rates:

Deleted: If a company uses the CSMP method, t
Deleted: based on Path A
Deleted: used to calculate prescribed amount A

1. Calculate the present value of each contract’s accumulated deficiency up through the duration of the aggregate GPVAD. When determining the contract accumulated deficiency: (a) contract starting assets equal CSV; (b) contract level starting assets include both separate account and general account assets, and exclude any hedge assets; (c) discount rate for the PVAD is the NAER; and (d) for a contract that terminates prior to the duration of the GPVAD, there will no longer be liability cash flows, but assets (positive or negative) continue to accumulate.
2. The impact of aggregation is the sum of the absolute value of the negative amounts from step 1 above.

Apply steps 1 and 2 above to each model point.

Deleted: If a company uses the CTEPA method, it should a
Deleted: .
Deleted: using the same scenario used for the cumulative decrement analysis, and using that scenario’s NAER as the discount rates for discounting the accumulated deficiency from the time of the GPVAD
Deleted: For GMWBs and hybrid GMIBs that use the Withdrawal Delay Cohort Method as specified in VM-21 Section 6.C.5, cash flows for each contract or for each model point shall be determined as the aggregate across all of the constituent cohorts of the contract or model point.

- b. The additional standard projection amount shall be calculated based on the scenario reserves, as discussed in Section 4.B, with certain prescribed assumptions replacing the company prudent estimate assumptions. As is the case in the projection of a scenario in the calculation of the DR and SR, the scenario reserves used to calculate the additional standard projection amount are based on an analysis of asset and liability cash flows produced along certain equity and interest rate scenario paths.

B. Additional Standard Projection Amount

1. General

Where not inconsistent with the guidance given here, the process and methods used to determine the additional standard projection amount under the CTEPA method shall be the same as required in the calculation of the DR and SR as described in Section 3.D and Section 3.E of these requirements. Any additional assumptions needed to determine the additional standard projection amount shall be explicitly documented.

Deleted: either the CSMP method or

2. The company shall determine the Prescribed Projections Amount by following ~~the CTEPA~~ Method below.

Deleted: either the CSMP Method or the

3. ~~For determining the CTE70 (adjusted), the assumptions for hedging programs with hedge payoffs that offset interest credits associated with indexed interest strategies (indexed interest credits) shall be the same as those used for the CTE70 (best efforts), following the requirements in Section 4.A.4.b.~~

Deleted: A company may not change the method used from one valuation to the next without the approval of the domiciliary commissioner.

4. Calculation Methodology

Deleted: 3

a. CTEPA Method:

Deleted: a.

- i. If the company used a model office to calculate the CTE Amount, then the company may continue to use the same model office, or one that is no less granular than the model office that was used to determine the CTE Amount, provided that the company shall maintain consistency in the grouping method used from one valuation to the next.
- ii. Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as the DR and SR following Section 4.A.4.b for a company that does not have a future hedging strategy supporting the contracts other than those supporting index interest credits) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

Deleted: CSMP Method:¶

- i. Calculate the scenario reserve, as defined in VM-01 and discussed further in Section 4.B, for each of the prescribed market paths outlined in Section 6.B.6 using the same method and assumptions as those that the company uses to calculate scenario reserves for the purposes of determining the CTE70 (adjusted),[¶] as outlined in Section 9.C. These scenario reserves shall collectively be referred to as a Company Standard Projection Set.[¶]
 - ii. Identify the market path from the Company Standard Projection Set such that the scenario reserve is closest to the CTE70 (adjusted), designated as Path A. This scenario reserve shall be referred to as Company Amount A.[¶]
 - iii. Identify the following four market paths:[¶]
 - Two paths with the same starting interest rate as Path A, but equity shocks +/- 5% from that of Path A.[¶]
 - Two paths with the same equity fund returns as Path A, but the next higher and next lower interest rate shocks.[¶]
- From the four paths, identify Path B whose reserve value is:[¶]
 If Company Amount A is lower than CTE70 (adjusted), the smallest reserve value that is greater than CTE70 (adjusted).[¶]
 If Company Amount A is greater than CTE70 (adjusted), the greatest reserve value that is less than CTE70 (adjusted).[¶]
 If none of the four paths satisfy the stated condition, discard the identified Path A, and redo steps (ii) and (iii) using the next closest scenario to CTE70 (adjusted) to be the new Path A in step (ii).

b. Once the Prescribed Projections Amount is determined by ~~the method~~ above, then the company shall reduce the Prescribed Projections Amount by the CTE70 (adjusted). The difference shall be referred to as the Unbuffered Additional Standard Projection Amount.

Deleted: For the path designated as Path B, the scenario reserve shall be referred to as Company Amount B.[¶]

c. Reduce the Unbuffered Additional Standard Projection Amount by an amount equal to the difference between (i) and (ii), where (i) and (ii) are calculated in the following manner:

iv. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (i) above, but substitute the assumptions prescribed in Section 6.C and use a seriatim in force. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.[¶]

- i. Calculate the Unfloored CTE70 (adjusted), using the same procedure as CTE70 (adjusted) but without requiring that the scenario reserve for any scenario be no less than the cash surrender value in aggregate on the valuation date.
- ii. Calculate the Unfloored CTE65 (adjusted), which is calculated in the same way as Unfloored CTE70 (adjusted) but averaging the 35% (instead of 30%) largest values.

v. Calculate the Prescribed Projections Amount as:[¶]

$$\text{Prescribed Projections Amount}^{\text{¶}} = \text{Prescribed Amount A} + (\text{CTE70 (adjusted)} - \text{Company Amount A})^{\text{¶}}$$

$$\times \left(\frac{\text{Prescribed Amount B} - \text{Prescribed Amount A}}{\text{Company Amount B} - \text{Company Amount A}} \right)^{\text{¶}}$$
 b

d. The additional standard projection amount shall subsequently be the larger of the quantity calculated in Section 6.B.4c and zero.

Deleted: a

Deleted: c

Deleted: one of the two methodologies

Deleted: d

Deleted: e

Deleted: 3

Deleted: d

Deleted: 4

5. Modeled Reinsurance

Cash flows associated with reinsurance shall be projected in the same manner as that used in the calculation of the DR and SR as described in Section 3.

~~6. Modeled Hedges~~

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a future hedging strategy supporting the contracts other than a future hedging strategy with hedge payoffs that offset interest credits associated with indexed interest strategies.

C. Prescribed Assumptions

1. Assignment of Guaranteed Benefit Type

- a. Assumptions shall be set for each contract in accordance with the contract's guaranteed benefit type, where a number of common benefit types are specifically defined in VM-01 (e.g., GMDB, GMWB, etc.).
- b. Certain **guaranteed living benefit** products have features that can be described by multiple types of guaranteed benefits. If the **guaranteed living benefit** can be described by more than one of the definitions in VM-01 for the purpose of determining the additional standard projection amount, the company shall select the guaranteed benefit type that it deems best applicable and shall be consistent in its selection from one valuation to the next. For instance, if a **guaranteed living benefit** has both lifetime GMWB and non-lifetime GMWB features and the company determines that the lifetime GMWB is the most prominent component; assumptions for all contracts with such a **guaranteed living benefit** shall be set as if the **guaranteed living benefit** were only a lifetime GMWB and did not contain any of the non-lifetime GMWB features. If the company determines that the non-lifetime GMWB is the most prominent component; assumptions for all contracts with such a **guaranteed living benefit** shall be set as if the **guaranteed living benefit** were only a non-lifetime GMWB and did not contain any of the lifetime GMWB features.
- c. If a contract cannot be classified into any categories within a given assumption, the company shall determine the defined benefit type with the most similar benefits and risk profile as the company's benefit and utilize the assumption prescribed for this benefit.

2. Maintenance Expenses

Maintenance expense assumptions shall be determined as the sum of (a) plus (b) if the company is responsible for the administration or (c) if the company is not responsible for the administration of the contract:

- a. Each contract for which the company is responsible for administration incurs an annual expense equal to the Base Maintenance Expense Assumption shown in the table below for each product type, multiplied by $[1.025]^{(valuation\ year - 2015)}$ in the first projection year, and increased by an assumed annual inflation rate of $[2\%]$ for subsequent projection years.

Table 6.1: Base Maintenance Expense Assumptions

Contract Type	Base Maintenance Expense Assumption
---------------	-------------------------------------

Deleted: 5

Deleted: 6. Market Paths for CSMP Method¶
If the company elects the CSMP method described in Section 6.B.3.a, the additional standard projection amount shall be determined from the scenario reserves calculated for the prescribed market paths defined below. Each prescribed market path shall be defined by an initial equity fund stress and an initial interest rate stress, after which equity fund returns steadily recover and interest rates revert to the same long-term mean.¶

All combinations of prescribed equity fund return scenarios and interest rate scenarios shall be considered prescribed Standard Projection market paths. Accordingly, each company shall calculate scenario reserves for a minimum of 40 market paths.¶

a. Equity Fund Returns ¶

Eight equity fund return market paths shall be used. These market paths differ only in the prescribed gross return in the first projection year.¶

The eight prescribed gross returns for equity funds in the first projection year shall be negative 25% to positive 10%, at 5% intervals. These gross returns shall be projected to occur linearly over the full projection year. After the first projection year, all prescribed equity fund return market paths shall assume total gross returns of 3% per annum.¶

If the eight prescribed equity fund market paths are insufficient for a company to calculate the additional standard projection amount via steps (i) through (v) outlined in Section 6.B.3.a, then the company shall include additional equity fund market paths that increase or decrease the prescribed gross returns in the first projection year by 5% increments at a time.¶

b. Interest Rates¶

Five interest rate market paths shall be used. ¶

The five prescribed interest rate market paths shall differ in the starting Treasury Department rates used to generate the mean interest rate path. Specifically, the following five sets of starting Treasury Department rates shall be used:¶

¶ The actual Treasury Department rates as of the valuation date.¶

¶ The actual Treasury Department rates as of the valuation date, reduced at each point on the term structure by 25% of the difference between the Treasury Department rate as of the valuation date and 0.01%.¶

¶ The actual Treasury Department rates as of the valuation date, reduced at each point on the term structure by 50% of the difference between the Treasury Department rate as of the valuation date and 0.01%.¶

... [1]

Deleted: \$100

Contracts in the Payout Annuity Reserving Category	[\$50]
Fixed Indexed Annuities and other contracts in the Accumulation Reserving Category with guaranteed living benefits	[\$100]
All other contracts	[\$75]

Drafting Note: The expense assumptions may be updated closer to adoption, such that the base maintenance expense assumptions are higher and the starting calendar year for accumulating inflation is updated to be more in line with the effective year of VM-22 PBR.

Commented [VM222]: Also coordinate with any updates to VM-21 SPA expense assumption

- b. Seven basis points of the projected account value for each year in the projection.
- c. Each contract for which the company is not responsible for administration (e.g., if the contract were assumed by the company in a reinsurance transaction in which only the risks associated with a guaranteed benefit rider were transferred) incurs an annual expense equal to \$35 multiplied by $[1.025]^{(\text{valuation year} - 2015)}$ in the first projection year, increased by an assumed annual inflation rate of [2%] for subsequent projection years.
- 3. Guarantee Actuarial Present Value

The Guarantee Actuarial Present Value (GAPV) is used in the determination of the full surrender rates (Section 6.C.3) and other voluntary contract terminations (Section 6.C.10). The GAPV represents the actuarial present value of the lump sum or income payments associated with a guaranteed benefit. For the purpose of calculating the GAPV, such payments shall include the portion that is paid out of the contract holder's Account Value.

The GAPV shall be calculated in the following manner:

- a. If a guaranteed benefit is exercisable immediately, then the GAPV shall be determined assuming immediate or continued exercise of that benefit unless otherwise specified in a subsequent subsection of Section 6.C.3.
- b. If a guaranteed benefit is not exercisable immediately (e.g., because of minimum age or contract year requirements), then the GAPV shall be determined assuming exercise of the guaranteed benefit at the earliest possible time unless otherwise specified in a subsequent subsection of Section 6.C.3.
- c. Determination of the GAPV of a guaranteed benefit that is exercisable or payable at a future projection interval shall take account of any guaranteed growth in the basis for the guarantee (e.g., where the basis grows according to an index or an interest rate), as well as survival to the date of exercise using the mortality table specified in Section 6.C.3.h.
- d. Once a GMWB is exercised, the contract holder shall be assumed to withdraw in each subsequent contract year an amount equal to 100% of the GMWB's guaranteed maximum annual withdrawal amount in that contract year.
- e. If account value growth is required to determine projected benefits or product features, then the account value growth shall be assumed to be 0% net of all fees chargeable to the account value.

Deleted: ¶
Guidance Note: The framework adopted by the Variable Annuities Issues (E) Working Group includes the review and possible update of these assumptions every three to five years.¶

Deleted: Withdrawal Delay Cohort Method (Section 6.C.5),...

Deleted: 6

Deleted: , annuitization rates (Section 6.C.7),

Deleted: 1

- f. If a market index is required to determine projected benefits or product features, then the required index shall be assumed to remain constant at its value during the projection interval.
- g. The GAPV for a GMDB that terminates at a certain age or in a certain contract year shall be calculated as if the GMDB does not terminate. Benefit features such as guaranteed growth in the GMDB benefit basis may be calculated so that no additional benefit basis growth occurs after the GMDB termination age or date defined in the contract.
- h. The mortality assumption used shall be the following:

Deleted: follow

- i. Individual annuity contracts within the Accumulation Reserving Category shall use the following adjustment factors applied to the 2012 IAM Table with no mortality improvement applied:

Table 6.2: Mortality for Individual Annuities in Accumulation Reserving Category

Deleted: 3

<u>81 to 85</u>			
<u>86 to 90</u>			
<u>91 to 95</u>			
<u>96 to 100</u>			
<u>101 and above</u>			

Substandard lives shall use the mortality described above for standard lives, with the “Constant Extra Death” (CED) methodology, as described in Actuarial Guideline IX. The factors for rate-up are provided as follows:

Attained Age	Factors for Rate-Up 1 to 20			
	Durations 1 to 10	Durations 11 to 20	Durations 21 to 31	Durations 31 and greater
40 and below				
41 to 80				
81 and above				

Attained Age	Factors for Rate-Up 21 and greater			
	Durations 1 to 10	Durations 11 to 20	Durations 21 to 31	Durations 31 and greater
40 and below				
41 to 80				
81 and above				

iv. Group annuities, international business, and contracts within the Longevity Reinsurance Reserving Category shall use the lower of the 1994 GAM Table with Projection Scale AA applied to the valuation date and the company’s prudent estimate assumptions. The company prudent estimate assumptions for group annuities, international business, and contracts within the Longevity Reinsurance Reserving Category shall be developed separately from each other as appropriate.

Guidance Note: The above tables include implicit historical mortality improvement until Dec 31, 2021. Projecting mortality to a specific date rather than the valuation date in the above step is a practical expedient to streamline calculations. This date should be considered an experience assumption to be periodically reviewed and updated as the Life Actuarial (A) Task Force reviews and updates the assumptions used in the Standard Projection.

i. The discount rate used shall be the 10-year Treasury Department bond rate on the valuation date unless otherwise specified in a subsequent subsection of Section 6.C.3.

4. Partial Withdrawals

Deleted: f

j. For hybrid GMIBs, two types of GAPVs shall be calculated: the Annuitization GAPV and the Withdrawal GAPV. The Annuitization GAPV is determined as if the hybrid GMIB were a traditional GMIB such that the only benefit payments used in the GAPV calculation are from annuitization. The Withdrawal GAPV is determined as if the hybrid GMIB were a lifetime GMWB with the same guaranteed benefit growth features and, at each contract holder age, a guaranteed maximum withdrawal amount equal to the partial withdrawal amount below which partial withdrawals reduce the benefit by the same dollar amount as the partial withdrawal amount and above which partial withdrawals reduce the benefit by the same proportion that the withdrawal reduces the account value.

Partial withdrawals required contractually or previously elected (e.g., a contract operating under an automatic withdrawal provision, or that has voluntarily enrolled in an automatic withdrawal program, on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in Section 4.F, and according to the terms of the contract. However, if a GMWB contract's automatic withdrawals results in partial withdrawal amounts in excess of the GMWB's guaranteed maximum annual withdrawal amount, such automatic withdrawals shall be revised such that they equal the GMWB's guaranteed maximum annual withdrawal amount. However, for tax qualified contracts with ages greater than or equal to the federal required minimum distribution (RMD) age, if the prescribed withdrawal amount is below the RMD amount, the withdrawal amount may be reset to the RMD amount.

- Deleted:** or hybrid GMIB
- Deleted:** or the maximum amount above which withdrawals reduce the GMIB basis by the same dollar amount as the withdrawal amount (the "dollar-for-dollar maximum withdrawal amount")
- Deleted:** or the GMIB's dollar-for-dollar maximum withdrawal amount

Guidance Note: Companies are expected to model withdrawal amounts consistent with the RMD amount where applicable and where practically feasible; however, it is understood that this level of modeling sophistication may not be available for all companies.

For any contract not on an automatic withdrawal provision as described in the preceding paragraph, depending on the guaranteed benefit type, other partial withdrawals shall be projected as follows but shall not exceed the free partial withdrawal amount above which surrender charges are incurred and may be floored at the RMD amount for tax qualified contracts with ages greater than or equal to the federal RMD age:

Commented [VM223]: The PHB drafting subgroup is preparing a set of surrender tables based on the industry experience in 2019-2020. The suggested formula in here serves as a placeholder.

~~5.~~ Full Surrenders

For contracts within the Accumulation Reserving Category, base lapse and full surrender rates shall be dynamically adjusted upward (or downward) when the actual credited rate is below (or above) the competitor rate. For contracts with a guaranteed living benefit, base lapse and full surrender rates shall be further adjusted based on the ITM of the rider value. The following formula shall be used:

$$\text{Total Lapse} = (\text{Base Lapse} + \text{Rate Factor}) \times \text{ITM Factor where}$$

$$\text{ITM Factor} = 1 \quad \text{if } \text{ITM} \leq 1.25$$

$$\text{ITM Factor} = (1.25 \div \text{ITM})^2 \quad \text{if } \text{ITM} > 1.25$$

$$\text{ITM} = \text{GAPV} \div \text{Account Value}$$

$$\text{Rate Factor} = \text{Market Factor} \times \text{Max}(0, 1 - 5 \times \text{SCPercentage}) / 100$$

$$\text{Market Factor} = -1.25 \times (\text{CR} - \text{MR})^{2.5} \quad \text{if } \text{CR} \geq \text{MR}$$

$$\text{Market Factor} = 0 \quad \text{if } \text{MR} > \text{CR} \geq (\text{MR} - \text{BF})$$

$$\text{Market Factor} = 1.25 \times (\text{MR} - \text{BF} - \text{CR})^{2.5} \quad \text{if } \text{CR} < (\text{MR} - \text{BF})$$

$$\text{Minimum Lapse} = 1\%$$

$$\text{Maximum Lapse} = 60\% \quad \text{if other than interest rate guarantee period}$$

$$\text{Maximum Lapse} = 90\% \quad \text{if at the end of the interest guaranteed period}$$

$$\text{CR} = \text{the crediting rate at the time of the projection}$$

$$\text{MR} = \text{the market competitor rate at the time of the projection}$$

$$\text{BF} = \text{a buffer factor where dynamic lapses do not occur}$$

Deleted: 5. Withdrawal Delay Cohort Method¶
To model the initial withdrawal for certain GMWBs and hybrid GMIBs as discussed in Section 6.C.4.h and Section 6.C.4.j, the actuary shall adopt a modeling approach whereby a contract is split into several copies (referred to as "cohorts"), each of which is subsequently modeled as a separate contract with a different initial withdrawal period. The contract Account Value, bases for guaranteed benefits, and other applicable characteristics shall be allocated across the cohorts based on different weights that are determined using the method discussed below in this section.¶
For example, assume that the method discussed below results in the creation of two cohorts: the first, weighted 70%, has an initial withdrawal period of two years after the valuation date; and the second, weighted 30%, has an initial withdrawal period of ten years after the valuation date. The contract shall therefore be split into two copies; the first copy shall have Account Value and guaranteed benefit bases equal to 70% of those of the original contract, and the second copy shall have Account Value and guaranteed benefit bases equal to 30% of those of the original contract. The first copy shall be projected to begin withdrawing in two years, while the second shall be projected to begin withdrawing in 10 years. The cash flows from both copies shall thereafter be aggregated to yield the final cash flows of the overall contract.¶
The following steps shall be used to construct the cohorts and determine the weights attributed to each cohort. These steps shall be conducted for each issue age for each GMWB and hybrid GMIB product that the company possesses in the modeled in force.¶
a. Calculate the GMWB GAPV or the Withdrawal GAPV (for hybrid GMIBs) for each potential age of initiating withdrawals ("initial withdrawal age") until the end of the projection period or the contract holder reaches age 120 if sooner. In each of these GAPV calculations:¶ ... [3]

Commented [VM224]: Buffer Factor needs to be specified

Deleted: The full surrender rate for all contracts shall be calculated based on the Standard Table for Full Surrenders as detailed below in Table 6.3, except for simple 40% ... [4]

Deleted: 7

Deleted: that do not have a GMIB

Deleted: For GMIB contracts, the annuitization rate shall be synonymous with the benefit exercise rate. As such, the annuitization rate is 0% in projection intervals during which the GMIB is not exercisable.¶ ... [5]

~~6.~~ Annuitizations

The annuitization rate for contracts shall be 0% at all projection intervals.

Commented [VM225]: Review whether appropriate to keep this section and apply to index strategy/ fixed account transfers for FIAs

~~7.~~ Index Transfers and Future Deposits

a. No transfers between ~~fixed and index strategies or accounts~~ shall be assumed in the projection unless required by the contract (e.g., contractual rights given to the insurer to implement a contractually specified portfolio insurance management strategy). When transfers must be modeled, to the

extent not inconsistent with contract language, the allocation of transfers to indices, accounts, or funds must be in proportion to the contract's current allocation to funds.

- b. ~~No~~ future deposits to account value shall be assumed unless required by the terms of the contract, in which case they must be modeled. When future deposits must be modeled, to the extent not inconsistent with contract language, the allocation of the deposit to funds must be in proportion to the contract's current allocation to such funds.

Deleted: Except for simple 403(b) VA contracts, n
Deleted: to prevent contract or guaranteed benefit lapse

8. Mortality

The following mortality rates shall be used:

a. Individual annuity contracts within the Accumulation Reserving Category shall use the mortality rates in Section 6.C.3.h.i with Projection Scale G2 mortality improvement factors applied from December 31, 2021 up until each future projection year.

Deleted: <#>For simple 403(b) VA contracts, total deposits to account value in any projected future policy year shall be modeled as a percentage of the total deposits from the immediately preceding policy year. The percentage shall be determined based on the following table:
Table 6.48: Deposit Rates, 403(b)
 Attained Age ... [7]

b. Individual annuity contracts within the Payout Annuity Reserving Category other than Structured Settlement Contracts shall use the mortality rates in Section 6.C.3.h.ii with Projection Scale G2 mortality improvement factors applied from December 31, 2021 up until each future projection year.

Commented [VM226]: SOA will provide the table central date and scale of improvement in their recommendation; reflect the central date in the GAPV section, and then include improvement from the central date to the projection date in this section

c. Individual Structured Settlement Contracts shall use the mortality rates in Section 6.C.3.h.iii with the following mortality improvement factors applied from December 31, 2021 up until each future projection year.

Commented [VM227]: Same comment as above for payout annuities

[Future improvement]

d. Group annuities, international business, and contracts within the Longevity Reinsurance Category shall use the mortality rates in Section 6.C.3.h.iv with Projection Scale AA mortality improvement factors applied from the valuation date up until each future projection year. However, if the company's prudent estimate assumption is used in Section 6.C.3.h.iv and already reflects mortality improvement from December 31, 2021 up until the projection year, then Projection Scale AA mortality improvement factors shall not be used.

Deleted: <#>mortality rate for a contract holder with age x in year (2012 + n) shall be calculated using the following formula, where q_x denotes mortality from the 2012 IAM Basic Mortality Table multiplied by the appropriate factor (F_x) from Table 6.9 and $G2_x$ denotes mortality improvement from Projection Scale G2:
 $q_x^{2012+n} = q_x^{2012} (1 - G2_x)^n * F_x$
Table 6.9
 Attained Age (x) ... [8]

9. Account Value Depletions

The following assumptions shall be used when a contract's Account Value reaches zero:

- a. If the contract has a guaranteed living benefit, the contract shall take benefits that are equal in amount each year to the guaranteed maximum annual withdrawal amount.
- b. If the contract has any other guaranteed benefits, including a GMDB, the contract shall remain in-force. If the guaranteed benefits contractually

Deleted: 10
Deleted: GMWB
Deleted: partial withdrawals
Deleted: ¶
 b. If the contract has a GMIB, the contract shall annuitize immediately. If the GMIB contractually terminates upon account value depletion, such termination provision is assumed to be voided in order to approximate the contract holder's election to annuitize immediately before the depletion of the account value.
Deleted: c

terminate upon account value depletion, such termination provisions are assumed to be voided in order to approximate the contract holder's retaining adequate Account Value to maintain the guaranteed benefits in-force. At the option of the company, fees associated with the contract and guaranteed benefits may continue to be charged and modeled as collected even if the account value has reached zero. While the contract must remain in-force, benefit features may still be terminated according to contractual terms other than account value depletion provisions.

~~9.~~ If the contract has no minimum guaranteed benefits, the contract should be terminated according to contractual terms.

Deleted: d

~~10.~~ Other Voluntary Contract Terminations

Deleted: 11

For contracts that have other elective provisions that allow a contract holder to terminate the contract voluntarily, the termination rate shall be calculated as detailed above in Section 6.C.5 with the following adjustments:

Deleted: based on the Standard Table for Full Surrenders

Deleted: 4 Table 6.3

a. If the contract holder is not yet eligible to terminate the contract under the elective provisions, the termination rate shall be zero.

b. After the contract holder becomes eligible to terminate the contract under the elective provisions, the termination rate shall be determined using assumptions in Section 6.C.5.

Deleted: 4 the "Subsequent years" column of Table 6.3

c. In Section 6.C.5, the ITM of a contract's guaranteed benefit shall be calculated based on the ratio of the guaranteed benefit's GAPV to the termination value of the contract. The termination value of the contract shall be calculated as the GAPV of the payment stream that the contract holder is entitled to receive upon termination of the contract; if the contract holder has multiple options for the payment stream, the termination value shall be the highest GAPV of these options.

Deleted: using Table 6.3

Deleted: 4

d. For contracts with guaranteed living benefits, for all contract years in which a withdrawal is projected, the termination rate obtained from Section 6.C.5 shall be additionally multiplied by 60%.

Deleted: GMWB or hybrid GMIB

Deleted: 4 Table 6.3

~~11.~~ Crediting Rates and Investment Spread

a. For Fixed Index Annuities, the option budget is the assumed crediting rate for quantifying the investment spread between the net portfolio earned rate and the crediting rate.

Deleted: For calculating the ITM of a hybrid GMIB, the guaranteed benefit's GAPV shall be the larger of the Annuityization GAPV or the Withdrawal GAPV.
 e. For contracts with no minimum guaranteed benefits, the ITM is 0%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM < 50% using the "Subsequent years" column of Table 6.3.

b. With respect to setting a limit on the annual spread between the net portfolio earned rate and the crediting rate:

i. The maximum annual spread is [2.25%] for policies without an initial bonus.

ii. For policies with an initial bonus of [B%], the maximum annual spread is [2.25%] + [B%]/SCP during the surrender charge period (SCP). The maximum annual spread is reduced back to [2.25%] after the SCP.

iii. The extra maximum annual spread [B%]/SCP allows the insurer to recapture the initial bonus via higher spread during the SCP.

iv. An insurer may ask the regulators in its state of domicile for special permission if the insurer can justify an exception.

Guidance Note: As it can create non-uniform practices among states, such permission should only be granted with strong supports and may be scrutinized by VAWG. In other words, granting such permission should be a rare event.

Commented [VM228]: Consider whether to remove if companies are allowed to make simplifications/approximations in general?

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
June 13, 2023

The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met June 13, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Tier 3 and 4 Comments on the VM-22 Draft

Slutsker introduced a comment from Chupp relating to a desire for consistency between the error factor language in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and that in the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities draft. He noted that it appeared that language specifying that a series of examples was not exhaustive was dropped from the VM-22 draft. After a short discussion, with Lam noting support for Chupp's comment, the Subgroup agreed to make the change suggested by Chupp. Slutsker then walked through a comment from Brian Bayerle (American Council of Life Insurers—ACLI) that suggested that a list of assumptions where sensitivity testing is needed should be revised to be more reflective of those used in modeling fixed annuities. After some discussion, the Subgroup decided to leave the language in the VM-22 draft as is.

Slutsker then introduced a comment from the ACLI on a section of the VM-22 draft stating that policyholder behavior assumptions should be at least as conservative as company experience unless clear evidence indicates otherwise. He said the ACLI suggested replacing "clear evidence" with "sufficient credibility" and including a reference to materiality. After some discussion, the Subgroup settled on replacing "clear evidence" with "credible evidence." After concluding the Tier 3 comments discussion, the Subgroup resolved some editorial Tier 4 items on which Chupp had commented.

Having no further business, the VM-22 (A) Subgroup adjourned.

Draft: 8/1/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
May 24, 2023

The Valuation Manual (VM)-22 (A) Subgroup of the Life Actuarial (A) Task Force met May 24, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Vincent Tsang (IL); Nicole Boyd (KS); William Leung (MO); Seong-min Eom (NJ), Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Tier 3 Comments on the VM-22 Draft

Slutsker noted that the Subgroup would discuss several comments on the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, draft (VM-22 draft) related to the exemption from the exclusion test for payout annuities. Slutsker described the first comment from Brian Bayerle (American Council of Life Insurers—ACLI) that suggested including a reference to exhibit 7 of the NAIC Annual Statement to reinforce that term certain payout annuities would be eligible for the exemption from the exclusion test and included in the exemption threshold. Chris Conrad (American Academy of Actuaries—Academy), Lam, and Huang all noted support for the ACLI's comment, and the Subgroup agreed to make the suggested changes.

Slutsker then introduced another comment from the ACLI to consider allowing for “plain-vanilla” forms of longevity reinsurance to be eligible for the exemption from the exclusion test. Conrad suggested that the Academy could be supportive of this idea if there was a proposal for a methodology to distinguish “plain vanilla” longevity reinsurance agreements from more complex ones. Bayerle noted that he could take this issue back to his group to provide a proposal. Several regulators approved of the approach to have the ACLI come back with a proposal, but Reedy noted that he would like to see a rigorous methodology applied to distinguishing between “plain vanilla” and more complex longevity reinsurance arrangements. After further discussion, the Subgroup agreed to move forward with having the ACLI draft a proposal.

Bayerle then described the ACLI's next comment, which suggested that if a “plain-vanilla” form of longevity reinsurance could be exempted from the exclusion test, then that business should not be included in the determination of the overall VM-22 exclusion threshold. Slutsker noted that this brings up two issues: 1) contracts with guaranteed living benefits (GLBs) are not allowed to be excluded from VM-22 calculations but are included in the exemption threshold in the current VM-22 draft; and 2) there may be a desire for consistency with exemption language in VM-20, Requirements for Principle-Based Reserves for Life Products. Bayerle noted that broad consistency with other sections of the *Valuation Manual* made sense but that it could also be appropriate for some framework-specific differences. Conrad noted that it was the Academy's position that any business not eligible for exemption not be included in the determination of the exemption threshold. Chupp noted that it may be helpful to look at the definitions for longevity reinsurance and pension risk transfer (PRT) and isolate where the risk is and what should be automatically excluded. Slutsker requested that when the ACLI looks into a proposal that it leverages the definitions available in the VM-22 draft, to which Bayerle agreed.

Slutsker said that the final comment on the exclusion test was from the ACLI and concerned provisions that did not allow for contracts with: 1) changes to benefits in excess of 5% over time; and 2) material policyholder options to automatically pass the exclusion test. Slutsker further said that the commenter was concerned that contracts with cost-of-living adjustments (COLAs) and joint and survivor annuities would not be allowed to automatically pass the exclusion test. Conrad noted that the Academy felt that contracts with a predetermined schedule of increases that are not based on an index or are capped at a predefined level could be allowed to automatically

pass exclusion testing. Chupp said he could support modifying the current VM-22 language to allow for scheduled increases, but he is concerned with the potential for vague enough language to allow contracts with balloon payments to be automatically excluded from VM-22 calculations. After additional discussion from regulators and interested parties, the Subgroup decided to modify the VM-22 draft language to include the examples mentioned in the ACLI comment while maintaining the existing guardrails.

Chupp noted that VM-21, Requirements for Principle-Based Reserves for Variable Annuities, has two additional sentences (compared to the VM-22 draft) that define what the investment policy adopted by the board of directors must include when companies are following one or more future hedging strategies and requested that the additional sentences from VM-21 be added to the VM-22 draft. The Subgroup decided to add these additional sentences into the next version of the VM-22 draft.

Having no further business, the VM-22 (A) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/VM-22 Calls/05 24/May 24 Minutes.docx

Draft: 8/2/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
May 10, 2023

The Valuation Manual (VM)-22 (A) Subgroup of the Life Actuarial (A) Task Force met May 10, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Vincent Tsang (IL); Nicole Boyd (KS); William Leung (MO); Seong-min Eom (NJ), Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Tier 3 Comments

Brian Bayerle (American Council of Life Insurers—ACLI) discussed the ACLI's comment that longevity risk transfer (LRT) premiums are usually predetermined, and therefore language in the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, draft implying otherwise should be removed. Eom asked to confirm that the premium amount for the LRT would not change despite deviations from expectations, such as the number of annuitants remaining. Laura Hanson (Pacific Life) stated that typically a company would pay a set premium to the assuming company that would not vary based on, for example, the number of annuitants remaining on the plan versus expectations. Additional discussion ensued, and it was decided that LRT comments would be lumped together and discussed during a future meeting.

Slutsker noted comments from the American Academy of Actuaries (Academy) and the ACLI on an apparent inconsistency in the language where the projection period was required to be as long as needed until: 1) no obligations remain as in the VM-22 draft compared to 2) when no material business is remaining in VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, and 3) no materially greater total asset requirement would result in VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Hemphill said that each of these specific callouts to the projection period length are unnecessary, as they are already covered by the overarching concept of materiality and that the existing language in the VM-22 draft is appropriate. There was additional discussion from Subgroup members, and then a roll call vote was held, which determined the language should be left as is.

Chris Conrad (Academy) then described the Academy's comment that if a certain portion of assets, beyond a materiality threshold, are held at market value in support of the product, then that portion of cash surrender value should be subject to a market value adjustment (MVA). Carmello said that given that statutory accounting was focused primarily on book value, the MVA should be ignored. After additional discussions from Subgroup members and interested parties, the Subgroup decided to move forward with Carmello's approach and add a guidance note for additional clarity.

Bayerle spoke to the ACLI's comment that a guidance note that discussed longevity reinsurance contracts where a single deterministic assumption would not adequately capture the risk should either be further clarified or removed. Carmello suggested removing the guidance note given that stochastic mortality had not yet been implemented in principle-based reserves, to which Eom agreed. The Subgroup decided to remove the guidance note.

Having no further business, the VM-22 (A) Subgroup adjourned.

Draft: 8/2/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
April 26, 2023

The Valuation Manual (VM)-22 (A) Subgroup met April 26, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Nicole Boyd (KS); Seong-min Eom (NJ), Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Tier 3 Comments

Slutsker discussed the first comment from the American Council of Life Insurers (ACLI) that questioned why “after-issuance” language was included in the section of the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, draft that determined whether to value a rider in combination with the base policy or on a standalone basis. To explain the rationale behind the language, Chris Conrad (American Academy of Actuaries—Academy) gave an example of a waiver of premium rider that may reference the overall premium amount at issue but does not depend on policy values after issue, compared to a long-term care (LTC) combination product where base contract benefits that could vary after issue may be drawn upon in the event of an LTC claim. Subgroup members supported the inclusion of the after-issuance language.

Slutsker noted that the next comment from the ACLI suggested there was an inconsistency in the VM-22 draft with language that stated policyholder behavior efficiency will increase over time unless there was credible experience to the contrary and language elsewhere that said that it may generally be assumed that policyholders elect the most valuable benefit if more than one option exists. Colin Masterson (ACLI) said that the “may generally” should be replaced with “should” for the election of the most valuable benefit to be consistent. Discussion ensued, and the Subgroup decided that replacing “may generally” with “should generally” would make the two sections consistent.

Slutsker said that the next comment from the ACLI concerned the definition of longevity reinsurance and that the ACLI suggested striking the “over the expected lifetime of benefits, paid to specified annuitants” language to allow for more flexibility in the definition. Carmello suggested adding the word “generally” to the language to add flexibility, which Subgroup members approved. Slutsker then said that the next comment from the ACLI suggested removing references to separate accounts in the VM-22 draft. Masterson further stated that a survey question could be asked of the future VM-22 field test participants asking if they had any separate accounts supporting their VM-22 business, and Subgroup members agreed with striking the language and adding a field test question.

Slutsker introduced the next comment from the ACLI that stated that the language in a guidance note, specifying contacts valued under VM-A, Appendix A – Requirements, and VM-C, Appendix C – Actuarial Guidelines, are ones that pass exclusion tests and elect not to use modeling, should be included in the main body of the text rather than a guidance note. Subgroup members agreed to moving the language into the main body from a guidance note. Slutsker then moved on to an ACLI comment stating that reserving categories should be determined in a principle-based fashion rather than prescribed. Masterson added that principle-based reserving (PBR) categories could be included in the field test. Conrad noted that aggregation was going to be looked at as part of the field test.

Masterson spoke to the ACLI’s next comment that suggested including a definition in the *Valuation Manual* for supplementary contracts. Chupp noted that there are several items that are not defined in the *Valuation Manual*

and wondered whether it was necessary to have a definition for supplementary contracts. Additional discussion ensued and a roll call vote was taken, which resulted in the Subgroup deciding not to add a definition for supplementary contracts.

Having no further business, the VM-22 (A) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/VM-22 Calls/04 26/Apr 26 Minutes.docx

Draft: 7/31/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
April 19, 2023

The Valuation Manual (VM)-22 (A) Subgroup met April 19, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Vincent Tsang (IL); Nicole Boyd (KS); Seong-min Eom (NJ), Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed the Tier 2 Item – Combo Product Valuation

Slutsker introduced a question from Chupp regarding whether the nursing home riders and other combo products should be valued under principle-based reserving (PBR) or the prior formulaic reserve method. Chupp pointed out that the reference to nursing home benefits was removed in the October 2022 exposure of the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities, draft, but it was kept in the current exposure. Slutsker asked if there were any comments from the American Academy of Actuaries (Academy) on why nursing home benefits were included or any thoughts on combo products. Chris Conrad (Academy) mentioned that the Academy wanted to include nursing home benefits in the VM-22 draft to ensure that there is an explicit reserve for them. Regarding other combo products, Conrad said that the Academy recommendation is that combo products be included in the model reserves for the base policy. Further discussion ensued, and the Subgroup agreed no changes would be made to the VM-22 draft.

2. Discussed the Tier 2 Item – Reserving Category for GLB with Depleted AV

Slutsker said that the current VM-22 draft places deferred annuities (DAs) with guaranteed living benefits (GLBs) in the payout reserving category once the account value (AV) has been depleted. Slutsker further noted that this can lead to implementation and conceptual challenges given that these contracts start out in the accumulation reserving category. Conrad commented that because this is a principle-based framework, the Academy supports leaving it to the actuary to decide whether to categorize GLB contracts with depleted fund values as either belonging to payout or accumulation reserving categories if they are able to justify that treatment in their VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, report. Colin Masterson (American Council of Life Insurers—ACLI) commented that allowing optionality to align categorization with how business is managed is conceptually and operationally appropriate.

Additional discussion ensued, with state insurance regulators split on whether to allow optionality for GLB contracts with depleted AVs or to categorize the contracts in either the payout or accumulation reserving category. Slutsker then asked Subgroup members to voice-vote on whether to allow optionality for categorizing GLB contracts with depleted fund values. The result of the vote was that the majority of Subgroup members supported not allowing optionality. Slutsker then conducted a second voice vote to decide to categorize GLBs with depleted AVs. Because the result of the voice vote was unclear, Slutsker directed Scott O’Neal (NAIC) to conduct a roll call vote, with the accumulation categorization ending up supported by the majority of Subgroup members. Slutsker noted that based on this vote, there will be an edit to the VM-22 draft where the DA contracts with GLBs whose AV is depleted will be removed from the payout reserving category and included in the accumulation reserving category.

3. Discussed the Tier 2 Item – Frequency of Reviewing PBR Assumptions

Slutsker noted that the VM-22 draft currently specified reviewing experience annually and updating assumptions periodically as appropriate, and that there was a question about whether VM-22 should be more prescriptive with the frequency of assumption updates. Subgroup members discussed options, including: 1) either changing the word “periodically” to “annually” to make assumption updates consistent with annual reviews; or 2) changing periodically to every three years like VM-20, Requirements for Principle-Based Reserves for Life Products, and VM-21, Requirements for Principle-Based Reserves for Variable Annuities. The Subgroup voted to update the language from “periodically” to “annually.”

Having no further business, the Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/2023-2-Summer/VM-22 Calls/04 19/Apr 19 Minutes.docx

Draft: 7/25/23

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
April 12, 2023

The VM-22 (A) Subgroup met April 12, 2023. The following Subgroup members participated: Ben Slutsker, Chair (MN); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Nicole Boyd (KS); William Leung (MO); Seong-min Eom (NJ); Bill Carmello (NY); Rachel Hemphill and Iris Huang (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed the VM-22 Exemption

Slutsker said the purpose of the call would be to go over comments received on the latest exposed version of the VM-22, Requirements for Principle-Based Reserves for Non-Variable Annuities draft (Attachment Twenty-One-A). He noted that the Subgroup voted on the VM-22 exemption threshold for the individual company level, but the group threshold still needs to be determined. Chupp said he supports a \$2 billion threshold level, to which Reedy agreed. Hearing no objections from the Subgroup, Slutsker noted that the \$2 billion level for the group exemption threshold would be included in the revised VM-22 draft.

Slutsker then asked whether business included in the Other Annuities column of the Analysis of the Increase in Reserves exhibit should be included in the determination of the threshold, noting that the column could include business that is out of the scope of VM-22. Carmello said business in the Other Annuities column should be included unless it is valued under VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Leung also noted that there is additional business included in the Other Annuities column that is not in the scope of VM-21 but is also exempt from VM-22. Hearing no objection from the Subgroup, Slutsker noted that the revised VM-22 draft would include business in the Other Annuities column in the determination of VM-22 exemption, with language to exclude business subject to VM-21 or otherwise excluded from VM-22.

Slutsker said the current VM-22 draft does not allow for annuities with guaranteed living benefits (GLBs) to be exempted from VM-22. Arguments for and against allowing GLBs to be eligible for exemption were discussed. The Subgroup decided to leave the current language as is for the next draft, leaving room for future proposals to add language to allow companies that are no longer issuing business exemptions for previously issued GLBs on claim status.

2. Discussed Longevity Reinsurance

Brian Bayerle (American Council of Life Insurers—ACLI) noted that the k-factor approach to determining reserves for longevity reinsurance would be complex, and there is likely a simpler method that would also address regulators' concerns with potential negative reserves. Eom noted that the k-factor could be determined at issue and held constant throughout the life of the contract, therefore reducing complexity. Additional discussion ensued, but the Subgroup agreed to continue with the k-factor approach for longevity reinsurance.

3. Discussed Tier 2 Items

Slutsker said discussions of Tier 1 comments had concluded, and the Subgroup would now move on to Tier 2 comments. For the first Tier 2 item, he said a set of principles exists in the draft (VM Section II) that determines whether business would be scoped into VM-21 or VM-22, and both the ACLI and American Academy of Actuaries (Academy) commented on how prescriptive the language should be. Chris Conrad (Academy) noted a preference

for using the prescriptive “shall” language to strictly delineate VM-21 and VM-22 business, while Bayerle expressed support for more flexible language. Subgroup members voted to include the more prescriptive language in the next version of the VM-22 draft.

Having no further business, the VM-22 (A) Subgroup adjourned.

Valuation Manual Section II. Reserve Requirements

Subsection 2: Annuity Products

- A. This subsection establishes reserve requirements for all contracts classified as annuity contracts as defined in SSAP No. 50 in the AP&P Manual.
- B. Minimum reserve requirements for variable annuity (VA) contracts and similar business, specified in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, shall be those provided by VM-21. The minimum reserve requirements of VM-21 are considered PBR requirements for purposes of the *Valuation Manual*, and therefore are applicable to VM-G.
- C. Minimum reserve requirements for non-variable annuity contracts issued prior to 1/1/2025 are those requirements as found in VM-A, VM-C, and VM-V as applicable, with the exception of the minimum requirements for the valuation interest rate for single premium immediate annuity contracts, and other similar contracts, issued after Dec. 31, 2017, including those fixed payout annuities emanating from host contracts issued on or after Jan. 1, 2017, and on or before Dec. 31, 2017. The maximum valuation interest rate requirements for those contracts and fixed payout annuities are defined in VM-V, Statutory Maximum Valuation Interest Rates for Formulaic Reserves.
- D. Minimum reserve requirements for non-variable annuity contracts issued on 1/1/2025 and later are those requirements as found in VM-22, with the exception of Guaranteed Investment Contracts, Synthetic Guaranteed Investment Contracts, and other Stable Value Contracts which shall follow the requirements found in VM-A, VM-C, and VM-V. The minimum reserve requirements of VM-22 are considered PBR requirements for purposes of the *Valuation Manual*, and therefore are applicable to VM-G.
- E. Annuity PBR Exemption
 - 1. A company meeting at least one of the conditions in Subsection 2.E.2 below may file a statement of exemption for annuity contracts or certificates, except for contracts or certificates in Subsection 2.E.4 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-22. If a company has no business issued directly or assumed during the current calendar year that would otherwise be subject to VM-22, a statement of exemption is not required. For a filed statement of exemption, the statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that at least one of the two conditions in Subsection 2.E.2 was met, and the statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-22 for the annuity contracts or certificates covered by the statement.

If a filed statement of exemption is not rejected by the domiciliary commissioner, the filing of subsequent statements of exemption is not required as long as the company continues to qualify for the exemption; rather, ongoing statements of exemption for each new calendar year will be deemed to not be rejected, unless: 1) the company does not meet either condition in Subsection 2.E.2 below; 2) the contracts contain those in Subsection 2.E.4 below; or 3) the domiciliary commissioner contacts the company prior

Commented [A1]: ACU: Subsection 3 Deposit-Type Contracts also needs to be updated

Commented [VM222R1]: Added reference for VM-V in Subsection 3

Commented [VM223]: In line with ACU edit in paragraph D. See below.

Commented [CC4]: Should VM-V be added?

Commented [VM225R4]: Edits added to address

to Sept. 1 and notifies them that the statement of exemption is rejected. If any of these three events occur, then the statement of exemption for the current calendar year is rejected, and a new statement of exemption must be filed and not rejected in order for the company to exempt additional contracts or certificates. In the case of an ongoing statement of exemption, rather than include a statement of exemption with the NAIC filing for the second quarter of that year, the company should enter "SEE EXPLANATION" in response to the Annuity PBR Exemption supplemental interrogatory and provide as an explanation that the company is utilizing an ongoing statement of exemption.

2. Condition for Exemption:

- a. The company has less than ~~\$1.0 billion~~ of Exemption Reserves, and if the company is a member of an NAIC group that includes other life insurance companies, the group has combined exempted prior year reserves of less than ~~\$2 billion~~; or
- b. The only new contract or certificates that would otherwise be subject to VM-22 being issued or assumed by the company are due to election of contract benefits or features from existing contracts or certificates valued under VM-A and VM-C and the company was exempted from, or otherwise not subject to, the requirements of VM-22 in the prior year.

Drafting Note: Request feedback on whether the reserve threshold for the Annuity PBR Exemption should be determined on a gross of reinsurance or net of reinsurance basis.

Drafting Note: Request feedback on the appropriate level for a reserve threshold. Original proposal was based on gross reserves set to \$3 billion for each company and \$6 billion for a group of companies. Discussion on the NAIC VM-22 Subgroup suggested that a lower threshold may be necessary to limit the majority of companies for being eligible for the exemption, resulting in an initial placeholder of \$0.5 billion for each company.

3. Exemption reserves are determined as follows:

- a. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Individual Annuities, Column 2 ("Fixed Annuities"), line 15; plus
- b. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Individual Annuities, Column 3 ("Indexed Annuities"), line 15; plus
- c. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Individual Annuities, Column 6 ("Life Contingent Payout (Immediate and Annuitizations)"), line 15; plus
- d. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Group Annuities, Column 2 ("Fixed Annuities"), line 15; plus
- e. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Group Annuities, Column 3 ("Indexed Annuities"), line 15; plus

Commented [A22]: Academy: The ARCWG proposed the \$1.0B limit as a reasonable balance between small company PBR compliance burden and companies with a meaningful block of annuities required to hold PBR reserves. Because of the size of annuity deposits, a \$0.5B limit could be easily exceeded with only a few years of sales, even by small companies. Please see the accompanying Academy letter dated January 17, 2023 (Letter) for additional detail.

This limit should be coordinated with and be larger than the limit chosen in (new) section 7.A.1.d.v (as shown in a separate exposure).

Commented [VM2223R22]: VM-22 Subgroup voted on an initial level of \$1 billion.

Deleted: 16

f. The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Group Annuities, Column 6 ("Life Contingent Payout (Immediate and Annuitizations)"), line 15].

g. Adding back in any reserves that were ceded in (a) through (f) above, in order to set the Exemption reserves on a gross of reinsurance basis

Drafting Note: Request feedback on whether to include "Other Annuities" from the Analysis of Increase in Reserve exhibit in the Annual Statement?

Commented [CC34]: Why is this still Line 15?

Commented [VM2235R34]: Edits added in other sections to make consistent

Commented [VM2236]: To put the Exemption threshold on a gross of reinsurance basis.

4. Contracts and Certificates Excluded from the Annuity PBR Exemption:

a. Contracts or certificates with guaranteed living benefits (GMIBs, GMABs, GMMBs, GLWBs).

Drafting Note: Request feedback on whether to render guaranteed living benefits eligible or ineligible for the Annuity PBR Exemption. In addition, feedback is requested for how to treat contracts with guaranteed living benefits where only the guaranteed living benefits are reinsured.

Commented [A37]: ACL: We believe this should only apply to deferred status but not claim status

Commented [A38]: Academy: The ARCWG does not have a consensus opinion. Please see the Letter for arguments for and against GLB's.

5. Each exemption, or lack of an exemption, outlined in Subsection 2.E.1 to Subsection 2.E.4 above applies only to contracts or certificates issued or assumed in the current year, and it applies to all future valuation dates for those contracts or certificates. However, if contracts or certificates did not qualify for the Annuity PBR Exemption during the year of issue but would have qualified for the Annuity PBR Exemption if the current Valuation Manual requirements had been in effect during the year of issue, then the domiciliary commissioner may allow an exemption for such contracts or certificates. The minimum reserve requirements for the annuity contracts and certificates subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality tables as defined in VM-M, and valuation rates in VM-V as applicable.

Should it be decided that GLB's are not eligible for the Exemption, the ARCWG proposes that language is included in the VM to permit case by case exemptions to be granted by the domiciliary commissioner. Such language should encompass all blocks of business as many small requests for exemptions may constitute, in aggregate, material risk.

F. Upon determining whether annuities fall under the requirements in Paragraphs B, C, and D in this subsection, the below principles shall be followed::

Drafting Note: Request feedback on whether the below principles should be phrased as "are generally expected to follow" or "shall follow".

Commented [A41]: ACL: Favor "are generally expected to follow"

Commented [A42]: Academy: The ARCWG proposes the use of "shall" for consistency with the opening sentence and will remove ambiguity.

1. Contracts that do not guarantee the principal amount of purchase payments, net of any partial withdrawals, and interest credited thereto, less any deduction (without regard to its timing) for sales, administrative or other expenses or charges are generally expected to follow the requirements in Paragraph B of this subsection .
2. Contracts that do not credit a rate of interest under the contract prior to the application of any market value adjustments that is at least equal to the minimum rate required to be credited by the standard nonforfeiture law in the jurisdiction in which the contract is issued are generally expected to follow the requirements in Paragraph B of this subsection.
3. Contracts falling under the definition of Index-Linked Variable Annuities provided in VM-01 are generally expected to follow the requirements in Paragraph B of this subsection.

All annuity contracts that do not fall under F.1, F.2, or F.3 in this subsection are generally expected to shall follow the requirements in Paragraph C or D of this subsection, in accordance with the date on which the contract has been issued.

- Deleted: E

Subsection 3: Deposit-Type Contracts

This subsection establishes reserve requirements for all contracts classified as deposit-type contracts defined in SSAP No. 50 in the AP&P Manual.

Minimum reserve requirements for deposit-type contracts are those requirements as found in VM-A, VM-C, VM-V, and VM-22, as applicable.

Commented [VM2245]: Added reference for VM-V in Subsection 3, per ACLI's comment in Subsection 2

Subsection 6: Riders and Supplemental Benefits

Guidance Note: Designs of policies or contracts with riders and supplemental benefits which are created to simply disguise benefits subject to the Valuation Manual section describing the reserve methodology for the base product to which they are attached, or exploit a perceived loophole, must be reserved in a manner similar to more typical designs with similar riders.

- A. If a rider or supplemental benefit is attached to a health insurance product, deposit-type contract, or credit life or disability product, it may be valued with the base contract unless it is required to be separated by regulation or other requirements.
- B. For supplemental benefits on life insurance policies or annuity contracts, including Guaranteed Insurability, Accidental Death or Disability Benefits, Convertibility, or Disability Waiver of Premium Benefits, the supplemental benefit may be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, VM-A, VM-C, and/or VM-V, as applicable.

- Commented [CC46]: should add VM-V?
- Commented [VM2247R46]: Edits added to address
- Deleted: C

- C. ULSG and other secondary guarantee riders on a life insurance policy and any guaranteed minimum benefits on life insurance policies or annuity contracts including, but not limited to, Guaranteed Minimum Accumulation Benefits, Guaranteed Minimum Death Benefits, Guaranteed Minimum Income Benefits, Guaranteed Minimum Withdrawal Benefits, Guaranteed Lifetime Income Benefits, Guaranteed Lifetime Withdrawal Benefits, Guaranteed Payout Annuity Floors, Waiver of Surrender Charges, Return of Premium, Systematic Withdrawal Benefits under Required Minimum Distributions, and all similar guaranteed benefits shall be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, and VM-A, VM-C, and/or VM-V, as applicable.

- Commented [CC48]: should add "VM-V"?
- Commented [VM2249R48]: Edits added to address
- Deleted: C,
- Commented [CC50]: s/b Paragraphs B and C only
- Commented [VM2251R50]: Edits added to address

- D. If a rider or supplemental benefit to a life insurance policy or annuity contract that is not addressed in Paragraphs B or C above possesses any of the following attributes, the rider or supplemental benefit shall be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, and VM-A, VM-C, and/or VM-V, as applicable.

- Commented [A52]: ACLI: Unclear why this change was made, recommend striking ", or D"
- Commented [VM2253R52]: Edits added to address
- Deleted: ,
- Deleted: , or D

1. The rider or supplemental benefit does not have a separately identified premium or charge.
2. After issuance, the rider or supplemental benefit premium, charge, value or benefits are determined by referencing the base policy or contract features or performance.

- Commented [CC54]: should add VM-V?
- Commented [VM2255R54]: Edits added to address
- Deleted: C
- Commented [A56]: ACLI: Unclear why "after issuance" was added; provide clarification or recommend deleting (two instances)

3. After issuance, the base policy or contract value or benefits are determined by referencing the rider or supplemental benefit features or performance. The deduction of rider or benefit premium or charge from the contract value is not sufficient for a determination by reference.

E. If a term life insurance rider on the named insured[s] on the base life insurance policy does not meet the conditions of Paragraph D above, and either (1) guarantees level or near level premiums until a specified duration followed by a material premium increase; or (2) for a rider for which level or near level premiums are expected for a period followed by a material premium increase, the rider is separated from the base policy and follows the reserve requirements for term policies under VM20, VM-A and/or VM-C, as applicable.

- Commented [CC57]: s/b Paragraph D
- Commented [VM2258R57]: Edits added to address
- Deleted: E
- Deleted: E

F. For all other riders or supplemental benefits on life insurance policies or annuity contracts not addressed in Paragraphs B through E above, the riders or supplemental benefits may be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, VM-A, VM-C, and/or VM-V, as applicable. For a given rider, the election to include riders or supplemental benefits with the base policy or contract shall be determined at the policy form level, not on a policy-by-policy basis, and shall be treated consistently from year-to-year, unless otherwise approved by the domiciliary commissioner.

- Commented [CC59]: s/b Paragraphs B through E
- Commented [VM2260R59]: Edits added to address
- Deleted: F
- Deleted: F
- Commented [CC61]: should add VM-V?
- Commented [VM2262R61]: Edits added to address
- Deleted: C
- Deleted: C

Any supplemental benefits and riders offered on life insurance policies or annuity contracts that would have a material impact on the reserve (for VM-20 and VM-22) or TAR (for VM-21) if elected later in the contract life, such as joint income benefits, nursing home benefits, or withdrawal provisions on annuity contracts, shall be considered when determining reserves (for VM-20 and VM-22) or reserves and TAR (for VM-21). The company must assume that policyholders' and contract holders' efficiency will increase over time unless the company has relevant and credible experience or clear evidence to the contrary. For example, policyholders with living benefits and annuitization in the same contract may generally use the more valuable of the two benefits.

- Commented [CC63]: nursing home benefits were taken out in Subsection 6.B above. Should they be removed here? Are Combo Life/Annuity/LTC products valued under VM-20, VM-21 or VM-22?
- Commented [A64]: ACLI: Suggest changing "may" with "should" and make this a separate item G.

VM-01: Definitions for Terms in Requirements

- The term “Deferred Income Annuity” (DIA) means an annuity contract that guarantees a periodic payment for the life of the annuitant or a term certain and payments begin 13 months or later from the issue date if the contract holder and/or annuitant survives to a predetermined future age.
- The term Guaranteed Investment Contract (GIC) means an accumulation-based group annuity contract issued to a retirement plan (defined contribution) under which the insurer accepts a deposit (or series of deposits) from the purchaser and guarantees to pay a specified interest rate on the funds deposited during a specified period of time.
- The term “Guaranteed Minimum Accumulation Benefit” (GMAB) means a guaranteed benefit providing, or resulting in the provision, that an amount payable on the contractually determined maturity date of the benefit will be increased and/or will be at least a minimum amount. Only such guarantees having the potential to produce a contractual total amount payable on benefit maturity that exceeds the account value, or in the case of an annuity providing income payments, an amount payable on benefit maturity other than continuation of any guaranteed income payments, are included in this definition.
- The term “Guaranteed Minimum Death Benefit” (GMDB) means a provision (or provisions) for a guaranteed benefit payable on the death of a contract holder, annuitant, participant or insured where the amount payable is either (i) a minimum amount; or (ii) exceeds the minimum amount and is:
 - Increased by an amount that may be either specified by or computed from other policy or contract values; and
 - Contains either:
 - The potential to produce a contractual total amount payable on such death that exceeds the account value, or
 - In the case of an annuity providing income payments, guarantees payment upon such death of an amount payable on death in addition to the continuation of any guaranteed income payments.
- The term “Guaranteed Minimum Income Benefit” (GMIB) means an option under which the contractholder has the right to apply a specified minimum amount that could be greater than the amount that would otherwise be available in the absence of such benefit to provide periodic income using a specified purchase basis.
- The term “Index Credit” means any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to contract values that is linked to an index or indices. Amounts credited to the contract resulting from a floor on an index account are included.
- The term “Index Credit Hedge Margin” means a margin capturing the risk of inefficiencies in the company’s hedging program supporting index credits. This includes basis risk, persistency risk, and the risk associated with modeling decisions and simplifications. It also includes any uncertainty of costs associated with managing the hedging program and changes due to investment and management decisions

Commented [A65]: ACLI: Consider adding “and/or annuitant” in addition to “contract holder” reference

Commented [VM2266R65]: Edits added to address

Commented [VM2267]: Typo

Commented [VM2268R67]: Edits added to address

Deleted: guaranteed minimum death benefit

Commented [VM2269]: Typo

Commented [VM2270R69]: Edits added to address

Deleted: m

Deleted: i

Deleted: guaranteed minimum income benefit

- The term “Index Crediting Strategies” means strategies defined in a contract to determine index credits for a contract. For example, this may refer to underlying index, index parameters, date, timing, performance triggers, and other elements of the crediting method.
- The term “Index-Linked Variable Annuity” (ILVA) means an annuity contract with an account value where the contract holder has the option for a portion or all of the account value to grow at a rate linked to an external index, in addition to downside risk exposure that may not guarantee full principal repayment. These contracts may include a cap on upside returns, and may also include a floor on downside returns which may be below zero percent.
- The term “Longevity Reinsurance” means an agreement or reinsurance arrangement covering one or more group or individual annuity contracts, under which an insurance company assumes the longevity risk associated with periodic payments made to specified annuitants under one or more immediate or deferred payout annuity contracts. A common example is participants in one or more underlying retirement plans.
 - The reinsurer pays a portion of the actual benefits due to the underlying annuitants (or, in some cases, a pre-agreed amount per annuitant), while the ceding insurance company retains the assets supporting the reinsured annuity payments and pays periodic, ongoing premiums to the reinsurer over the expected lifetime of benefits paid to the specified annuitants. Such agreements may contain net settlement provisions such that only one party makes ongoing cash payments in a particular period. Under these agreements, longevity risk may be transferred on either a permanent basis or for a prespecified period of time, and these agreements may or may not permit early termination.
 - Agreements which are not treated as reinsurance under Statement of Statutory Accounting Principles (SSAP) No. 61R are not included in this definition. In particular, contracts under which payments are made based on the aggregate mortality experience of a population of lives which are not covered by an underlying group or individual annuity contract (e.g., mortality index-based longevity swaps) are not included in this definition.
- The term “Pension Risk Transfer” (PRT) means an annuity, either a group contract or reinsurance agreement, issued by an insurance company providing periodic payments to annuitants receiving immediate or deferred benefits from one or more retirement plans. Typically, the insurance company holds the assets supporting the benefits, which may be held in the general or separate account, and retains not only longevity risk but also asset risks (e.g., credit risk and reinvestment risk).
- The term “Single Premium Immediate Annuity” (SPIA) means an annuity purchased with a single premium amount which guarantees a periodic payment for the life of the annuitant or a term certain and payments begin within 13 months from the issue date.
- The term “Stable Value Contracts” means accumulation-based group contracts that provide limited investment guarantees, preserving principal while crediting steady, positive returns and protecting against losses or declines in yield. Underlying asset portfolios may consist of fixed income securities, which may sit in the insurer’s general account, a separate account, or in a third-party trust. These contracts often support defined contribution or defined benefit retirement plan liabilities.
- The term “Structured Settlement Contracts” are defined as annuity contracts that provide periodic benefits and purchased with a single premium amount stemming from various types of claims pertaining to court settlements or out-of-court settlements from tort actions arising from

Commented [A71]: ACLI: Suggest removing the struck phrase (“over the expected lifetime of benefits paid to the specified annuitants”) to allow for flexibility in how these transactions could be arranged.

accidents, medical malpractice, and other causes. Structured Settlement Contracts may be treated as either annuity contracts or deposit type contracts.

Commented [A72]: ACLI: See comment below about Term Certain Deposit Type contracts. Clarify that Structured Settlements can be annuity contracts or deposit type contracts

Commented [VM2273R72]: Edits added to address

- The term “Synthetic Guaranteed Investment Contract” (SGIC) means contract that simulates the performance of a traditional GIC through a wrapper, swap, or other financial instruments, with the main difference being that the assets are owned by the contract holder or plan trust.

- The term “Term Certain Payout Annuity” means an annuity contract that offers guaranteed periodic payments for a specified period of time, not contingent upon mortality or morbidity of the annuitant. Term Certain Payouts are treated as Deposit-Type Contracts.

Commented [A74]: ACLI: Under SSAP, Term Certain Payouts are Deposit-Type Contracts and this should be clarified in the definition

Commented [VM2275R74]: Edits added to address

Section 1: Background

A. Purpose

These requirements establish the minimum reserve valuation standard for non-variable annuity contracts as defined in Section II of the Valuation Manual, Subsection 2025. For all contracts encompassed by the Scope, these requirements constitute the Commissioners Annuity Reserve Valuation Method (CARVM) and, for certain contracts and certificates, the Commissioners Reserve Valuation Method (CRVM).

Commented [VM2277R76]: Edits added to address

Deleted: .A and issued on or after 1/1/2024

Guidance Note: CRVM requirements apply to some group pension contracts.

Drafting Note: There is a guidance note in VM-21 that explains that the reserve projection requirements are generally consistent with RBC C-3 Phase II requirements. However, it was decided to exclude this guidance note from VM-22 for the time being, though this may be revisited depending on whether further updates are made to the C-3 Phase I capital framework.

Commented [CC78]: Add the word "that" between "VM-21" and "explains"

Commented [VM2279R78]: Edits added to address

B. Principles

The projection methodology used to calculate the SR is based on the following set of principles. These principles should be followed when interpreting and applying the methodology in these requirements and analyzing the resulting reserves.

Guidance Note: The principles should be considered in their entirety, and it is required that companies meet these principles with respect to those contracts that fall within the scope of these requirements and are in force as of the valuation date to which these requirements are applied.

Principle 1: The objective of the approach used to determine the SR is to quantify the amount of statutory reserves needed by the company to be able to meet contractual obligations in light of the risks to which the company is exposed with an element of conservatism consistent with statutory reporting objectives.

Principle 2: The calculation of the SR is based on the results derived from an analysis of asset and liability cash flows produced by the application of a stochastic cash-flow model to equity return and interest rate scenarios. For each scenario, the greatest present value of accumulated deficiency is calculated. The analysis reflects prudent estimate assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions and prescribed guardrails) to allow the natural offset of risks within a given scenario. The methodology uses a projected total cash flow analysis by including all projected income, benefit, and expense items related to the business in the model and sets the SR at a degree of confidence using the CTE measure applied to the set of scenario specific greatest present values of accumulated deficiencies that is deemed to be reasonably conservative over the span of economic cycles.

Guidance Note: Examples where full aggregation between contracts may not be possible include experience rated group contracts and the operation of reinsurance treaties.

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the SR at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the SR, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

Principle 4: While a stochastic cash-flow model attempts to include all real-world risks relevant to the objective of the stochastic cash-flow model and relationships among the risks, it will still contain limitations because it is only a model. The calculation of the SR is based on the results derived from the application of the stochastic cash-flow model to scenarios, while the actual statutory reserve needs of the company arise from the risks to which the company is (or will be) exposed in reality. Any disconnect between the model and reality should be reflected in setting prudent estimate assumptions to the extent not addressed by other means.

Principle 5: A cash-flow scenario model cannot completely quantify a company's exposure to risk. A model attempts to represent reality but will always remain an approximation thereto and, hence, uncertainty in future experience is an important consideration when determining the SR. Therefore, the use of assumptions, methods, models, risk management strategies (e.g., hedging), derivative instruments, structured investments or any other risk transfer arrangements (such as reinsurance) that serve solely to reduce the calculated SR without also reducing risk on scenarios similar to those used in the actual cash-flow modeling are inconsistent with these principles. The use of assumptions and risk management strategies should be appropriate to the business and not merely constructed to exploit "foreknowledge" of the components of the required methodology.

- Commented [CC82]: s/b "cannot"
- Commented [VM2283R82]: Edits added to address
- Deleted: Neither
- Deleted: a
- Deleted: can
- Commented [A84]: ACL: Edit for clarity
- Commented [VM2285R84]: Edits added to address

C. Risks Reflected and Risks Not Reflected

1. The risks reflected in the calculation of reserves under these requirements arise from actual or potential events or activities that are both:
 - a. Directly related to the contracts falling under the scope of these requirements or their supporting assets; and
 - b. Capable of materially affecting the reserve.

2. Categories and examples of risks reflected in the reserve calculations include, but are not necessarily limited to:

a. Asset risks

- i. Credit risks (e.g., default or rating downgrades).
- ii. Commercial mortgage loan roll-over rates (roll-over of bullet loans).
- iii. Uncertainty in the timing or duration of asset cash flows (e.g., shortening (prepayment risk) and lengthening (extension risk)).
- iv. Performance of equities, real estate, and Schedule BA assets.
- v. Call risk on callable assets.
- vi. Separate account fund performance.

Drafting Note: Feedback welcome on whether to remove reference to separate accounts in VM-22. Whether references to separate accounts are retained or removed, consider making the treatment of such references consistent throughout VM-22.

Commented [A86]: ACL: Support eliminating references to separate accounts in VM-22

- vii. Risk associated with hedge instrument (includes basis, gap, price, parameter estimation risks, and variation in assumptions).
- viii. Currency risk.

b. Liability risks

- i. Reinsurer default, impairment, or rating downgrade known to have occurred before or on the valuation date.
- ii. Mortality/longevity, persistency/lapse, partial withdrawal, and premium/fee payment risks.
- iii. Utilization risk associated with guaranteed living benefits.
- iv. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.
- v. Annuitization risks.
- vi. Additional premium dump-ins (high interest rate guarantees in low interest rate environments).
- vii. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.

c. Combination risks

- i. Risks modeled in the company's risk assessment processes that are related to the contracts, as described above.
 - ii. Disintermediation risk (including such risk related to payment of surrender or partial withdrawal benefits).
 - iii. Risks associated with revenue-sharing income.
- 3. Categories and examples of risks not reflected in the reserve calculations include, but are not necessarily limited to:
 - a. Asset risks
 - i. Liquidity risks associated with a "run on the bank."
 - b. Liability risks
 - i. Reinsurer default, impairment or rating downgrade occurring after the valuation date.
 - ii. Catastrophic events (e.g., epidemics or terrorist events).
 - iii. Major breakthroughs in life extension technology that have not yet altered recently observed mortality experience.
 - iv. Significant future reserve increases as an unfavorable scenario is realized.
 - c. General business risks
 - i. Deterioration of reputation.
 - ii. Future changes in anticipated experience (reparameterization in the case of stochastic processes), which would be triggered if and when adverse modeled outcomes were to actually occur.
 - iii. Poor management performance.
 - iv. The expense risks associated with fluctuating amounts of new business.
 - v. Risks associated with future economic viability of the company.
 - vi. Moral hazards.
 - vii. Fraud and theft.
 - viii. Operational.
 - ix. Litigation.

D. Materiality

The company shall establish a standard containing the criteria for determining whether an assumption, risk factor, or other element of the principle-based valuation has a material impact on the size of the reserve. This standard shall be applied when identifying material risks.

Section 2: Scope and Effective Date

A. Scope

Non-variable annuity contracts specified in VM Section II, Subsection 2 “Annuity Products”, Paragraph D and applicable contracts in VM Section III, Subsection B are subject to VM-22 requirements.

Deleted: Contracts

Commented [A87]: ACL: Need to include VM Section III Subsection Deposit Type Contracts

Commented [VM2288R87]: Edits added to address

B. Effective Date & Transition

Effective Date

These requirements apply for valuation dates on or after January 1, 2025.

Transition

A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A, VM-C, and VM-V for business otherwise subject to VM-22 PBR requirements and issued during the first three years following the effective date of VM-22. If a company during the three-year transition period elects to apply VM-22 PBR to a block of such business, then a company must continue to apply the requirements of VM-22 for future issues of this business. Irrespective of the transition date, a company shall apply VM-22 PBR requirements to applicable blocks of business on a prospective basis starting at least three years after the effective date.

Commented [CC89]: should add VM-V?

Commented [VM2290R89]: Edits added to address

Deleted: C

Deleted: C

Commented [VM2292R91]: Edits added to address

Deleted: PBR

Commented [VM2294R93]: Edits added to address

Deleted: PBR

Section 3: Reserve Methodology

A. Aggregate Reserve

The aggregate reserve for contracts falling within the scope of these requirements shall equal the SR (following the requirements of Section 4) plus the additional standard projection amount (following the requirements of Section 6) plus the DR for those contracts satisfying the Deterministic Certification Option, less any applicable PIMR for all contracts not valued under applicable requirements in VM-A and VM-C, plus the reserve for any contracts valued under applicable requirements in VM-A, VM-C, and VM-V.

Guidance Note: Contracts valued under applicable requirements in VM-A and VM-C are ones that pass the exclusion test and elect to not model PBR SRs, per the requirements in Section 3.E.

B. Impact of Reinsurance Ceded

All components in the aggregate reserve shall be determined post-reinsurance ceded, that is net of any reinsurance cash flows arising from treaties that meet the statutory requirements that allow the treaty to be accounted for as reinsurance. A pre-reinsurance ceded reserve also needs to be determined by ignoring all reinsurance cash flows (costs and benefits) in the reserve calculation.

C. The Additional Standard Projection Amount

The additional standard projection amount is determined by applying one of the two standard projection methods defined in Section 6. The same method must be used for all contracts within a group of contracts that are aggregated together to determine the reserve. The company shall elect which method they will use to determine the additional standard projection amount. The company may not change that election for a future valuation without the approval of the domiciliary commissioner.

D. The SR

1. The SR shall be determined based on asset and liability projections for the contracts falling within the scope of VM-22 requirements, excluding those contracts valued using the methodology pursuant to applicable requirements in VM-A, VM-C, and VM-V over a broad range of stochastically generated projection scenarios described in Section 8 and using prudent estimate assumptions as required in Section 3.I herein.
2. The SR amount for any group of contracts shall be determined as CTE70 of the scenario reserves following the requirements of Section 4.

E. The DR

The DR for groups of contracts for which a company elects the Deterministic Certification Option in Section 7.E shall be determined as the DR following the requirements of Section 4. The reserve may be determined in aggregate across various groups of contracts within each Reserving Category as a single model segment when determining the SR.

F. Aggregation of Contracts for the DR and SR

- Commented [CC95]:** Section 7.E uses "SR" for Deterministic Certification Option
- Commented [VM2296R95]:** DR added for clarification in 7.E
- Commented [CC97]:** Should add VM-V?
- Commented [VM2298R97]:** Edits added to address
- Deleted:** C

- Deleted:** C
- Commented [CC104]:** s/b Section 3.I
- Commented [VM22105R104]:** Edits added to address
- Commented [A106]:** Is this the right reference? Maybe 3.I
- Commented [VM22107R106]:** Edits added to address
- Deleted:** G
- Commented [A108]:** ACLI: Is this the right reference?
- Commented [VM22109R108]:** Edits added to address
- Deleted:** ¶
- Commented [A110]:** ACLI: Clarify this statement
- Commented [CC111]:** 3. refers to SR and is misplaced. Section 7.E uses "SR" rather than "DR" for contracts using Deterministic Certification Option.
- Commented [VM22112R111]:** DR added for clarification in 7.E
- Commented [A113]:** ACLI: Numbering is not correct
- Commented [VM22114R113]:** Edits added to address by removing reference to number 1, and combining sentence with preceding paragraph
- Commented [A115]:** ACLI: Consistent with our comments in our November 19, 2021, letter, we are concerned with the need for prescribed reserving categories because we believe the aggregation of contracts for the SR and DR should be principle-based and align with the pricing, operations, and investment management of the assets and liabilities.
- Commented [CC116]:** This entire subsection needs ... [4]
- Commented [VM22117R116]:** DR added for clarifi ... [5]

1. Groups of contracts within different Reserving Categories may not be aggregated together in determining the SR or DR. For the purposes of VM-22, Reserving Categories are classified as the following:

Commented [CC118]: There really is no "DR"
Commented [VM22119R118]: DR added for clarification in 7.E

a. The "Payout Annuity Reserving Category" includes the following categories of contracts, certificates and contract features, whether group or individual, including both life contingent and term certain only contracts, directly written or assumed through reinsurance, with the exception of benefits provided by variable annuities:

- i. Single Premium Immediate Annuity contracts;
- ii. Deferred Income Annuity contracts;
- iii. Structured Settlement Contracts in payout or deferred status;
- iv. Fixed income payment streams resulting from the exercise of settlement options or annuitizations of host contracts issued;
- v. Supplementary contracts, excluding contracts with no scheduled payments (such as retained asset accounts and settlements at interest);
- vi. Fixed income payment streams attributable to guaranteed living benefits associated with deferred annuity contracts, once the contract funds are exhausted;

Commented [A120]: ACLI: For Section 3.F.a.iv and 3.F.a.vi: References to "Host Contracts" and "deferred Annuity Contracts" may cause confusion. VM-21 technically covers all benefit streams emanating from Variable Annuity Contracts. ACLI would like to work with regulators to update the wording in both VM-21 and VM- 22 to codify current accepted practices (such as making it clear that projection of annuitizations and benefits (after AV = 0) should continue to be principle-based and reflect how the business is managed).

Deleted: premium
Deleted: p
Deleted: i
Deleted: premium immediate annuity
Deleted: income
Deleted: i
Deleted: income annuity
Deleted: settlements

Drafting Note: Additional feedback is welcome for whether to permit optionality for categorizing guaranteed living benefit contracts with depleted fund value as either in the payout or accumulation reserving category.

Commented [A121]: ACLI: Need definition of "Supplementary Contract."

Commented [A122]: Academy: The ARCWG believes that this decision should be left up to the actuary, with appropriate justification in the VM-31 report.

Commented [A123]: ACLI: Permitting optionality to align categorization with how business is managed is conceptually appropriate. From a conceptual (principle-based) and operational perspective, living benefit contracts with depleted fund values should be included in payout or accumulation categories based on how the business is managed.

- vii. Certificates, emanating from non- variable group annuity contracts specified in Model #820, Section 5.C.2, purchased for the purpose of providing certificate holders fixed income payment streams upon their retirement; and
- viii. Pension Risk Transfer Annuities.

b. The term "Longevity Reinsurance Reserving Category" refers to includes Longevity Reinsurance as defined under the definition provided in VM-01 of the Valuation Manual.

Deleted: to
Deleted: under Section II of the NAIC Valuation Manual...

c. The "Accumulation Reserving Category" are includes all annuities within scope of VM-22 that are not in the "Payout Reserving Category" or "Longevity Reinsurance Reserving Category".

Commented [A124]: ACLI: Is this referring to section II of VM-22, or is it referring to VM Section II, Subsection 2 "Annuity Products," Paragraph D? The wording should be made clearer.

Commented [VM22125R124]: Edits added to address

2. For the purposes of calculating stochastic reserves, the stochastic exclusion test, and determining the final VM-22 reserves, do not aggregate groups of contracts for which the company elects to use the Deterministic Certification Option in Section 7.E with any groups of contracts that do not use such option.

Deleted: 4

Deleted: D

Commented [A126]: ACLI: Rephrase

Commented [VM22127R126]: Edits added to address

3. To the extent that aggregation results in more than one model segment, the aggregate reserve shall equal the sum of the SR amounts computed for each model segment and DR amounts computed for each model segment for which the company elects to use the Deterministic Certification Option in Section 7.E.

Deleted: 5

Commented [CC128]: Defined as "SR" in Section 7.E

Commented [VM22129R128]: DR added for clarification in 7.E

G. Stochastic Exclusion Test

- To the extent that certain groups of contracts pass the stochastic exclusion test in Section 7.B, these groups of contracts may be valued using the methodology and statutory maximum valuation rate pursuant to applicable requirements in VM-A, VM-C, and VM-V.
- For dividend-paying contracts that pass the Stochastic Exclusion Test, a dividend liability shall be established following requirements in VM-A and VM-C, as described above, for the base contract.
- The company may not group together contract types with significantly different risk profiles when performing the exclusion test.

Commented [A130]: ACLI: Is this statement only applicable if it passes the SET? Propose to add clarity

Commented [VM22131R130]: Edits added to address

Commented [CC132]: s/b "contracts"

Commented [VM22133R132]: Edits added to address

Commented [A134]: ACLI: Consider if additional references than DR are needed (e.g. exclusion test).

Commented [VM22135R134]: This was due to an incorrect reference – the intention is for the only exception is for contracts that pass the exclusion test and use pre-PBR reserves

H. Allocation of the Aggregate Reserve to Contracts

The aggregate reserve shall be allocated to the contracts falling within the scope of these requirements using the method outlined in Section 13, with the exception of contracts valued under VM-A, VM-C, or VM-V following Section 3.G, which are to be calculated on a seriatim basis.

Commented [CC136]: Refers to "SR" contracts using Deterministic Certification Method in Section 7.E?

Commented [VM22137R136]: DR added for clarification in 7.E

Deleted: E

Commented [A138]: Academy: The ARCWG agrees with "at least once every 3 years" as it removes ambiguity around "periodically." The ARCWG also supports that this change be made in conjunction with adoption of a similar APF for VM-20/VM-21.

Commented [A139]: ACLI: Need to clarify "this group"

Commented [VM22140R139]: Edits added to address

Deleted: this

Commented [CC141]: This review is required annually, but the prudent estimate assumptions only need be reviewed periodically, so if the review of the anticipated assumptions shows a need for a change, does the actuary need to change the prudent estimate assumption as well?

Commented [CC142]: s/b "company"

Commented [VM22143R142]: Edits added to address

Deleted: Company

Deleted: CompanyC

Commented [A144]: ACLI: Section 9 is hedging

Commented [VM22145R144]: Edits added to address

Deleted: asset

I. Prudent Estimate Assumptions

- With respect to the SR in Section 3.D, the company shall establish the prudent estimate assumption for each risk factor in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.

Drafting Note: Consider replacing "periodically" with "at least every 3 years" in the paragraph above upon adoption of a similar APF for VM-20/VM-21.

- The qualified actuary, to whom responsibility for a given group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of the review indicate that previously anticipated experience for a given factor is inadequate, then the company shall set a new, adequate, anticipated experience assumption for the factor.
- To determine the prudent estimate assumptions, the SR shall also follow the requirements in Sections 4 and general assumptions including Section 9 for hedging assumptions, Section 10 for contract holder behavior assumptions, Section 11 for mortality assumptions, and Section 12 for general guidance and expense assumptions.

J. Approximations, Simplifications, and Modeling Efficiency Techniques

A company may use simplifications, approximations, and modeling efficiency techniques to calculate the SR and/or the additional standard projection amount required by this section if the company can demonstrate that the use of such techniques does not understate the reserve by a material amount, and the expected value of the reserve calculated using simplifications, approximations, and modeling efficiency techniques is not less than the expected value of the reserve calculated that does not use them.

Guidance Note:

Examples of modeling efficiency techniques include, but are not limited to:

1. Choosing a reduced set of scenarios from a larger set consistent with prescribed models and parameters.
2. Generating a smaller liability or asset model to represent the full seriatim model using grouping compression techniques or other similar simplifications.

There are multiple ways of providing the demonstration required by Section 3.11. The complexity of the demonstration depends upon the simplifications, approximations or modeling efficiency techniques used. Examples include, but are not limited to:

1. Rounding at a transactional level in a direction that is clearly and consistently conservative or is clearly and consistently unbiased with an obviously immaterial impact on the result (e.g., rounding to the nearest dollar) would satisfy 3.11 without needing a demonstration. However, rounding to too few significant digits relative to the quantity being rounded, even in an unbiased way, may be material and in that event, the company may need to provide a demonstration that the rounding would not produce a material understatement of the reserve.
2. A brute force demonstration involves calculating the minimum reserve both with and without the simplification, approximation or modeling efficiency technique, and making a direct comparison between the resulting reserve. Regardless of the specific simplification, approximation or modeling efficiency technique used, brute force demonstrations always satisfy the requirements of Section 3.11.
3. Choosing a reduced set of scenarios from a larger set consistent with prescribed models and parameters and providing a detailed demonstration of why it did not understate the reserve by a material amount and the expected value of the reserve would not be less than the expected value of the reserve that would otherwise be calculated. This demonstration may be a theoretical, statistical or mathematical argument establishing, to the satisfaction of the insurance commissioner, general bounds on the potential deviation in the reserve estimate rather than a brute force demonstration.

Drafting Note: Add back in the WDCM method example in the above guidance note if VM-22 uses this method for the SPA calculation.

Section 4: Determination of SR

A. Projection of Accumulated Deficiencies

1. General Description of Projection

The projection of accumulated deficiencies shall be made ignoring federal income tax in both cash flows and discount rates, and it shall reflect the dynamics of the expected cash flows for the entire group of contracts, reflecting all product features, including any guarantees provided under the contracts using prudent estimate liability assumptions defined in Sections 10, 11, and 12 and asset assumptions defined in Sections 4 and 9. The company shall project cash flows including the following:

- a. Gross premium received by the company from the contract holder or the ceding company in the case of reinsurance (including any due premiums as of the projected start date). For purposes of Longevity Reinsurance, net premium shall be used in the projection and defined as the gross premium multiplied by a “K-factor,” where the K-factor is determined as:
 - i. The present value of the expected future benefits and expenses at contract inception or reinsurance effective date in the case of reinsurance using the prudent estimate assumptions determined at contract inception and an interest rate equal to the prescribed interest rate under VM-A and VM-C, divided by item ii immediately below.
 - ii. The present value of the expected future gross premiums at contract inception or reinsurance effective date in the case of reinsurance using the prudent estimate assumptions determined at contract inception or reinsurance effective date and an interest rate equal to the prescribed interest rate under VM-A and VM-C.
 - iii. The resulting amount is capped at 1, in other words the application of the K-factor shall not result in the net premium exceeding the gross premium.
- b. Other revenues, including contractual fees and charges, and revenue-sharing income received by the company (net of applicable expenses). For purposes of Longevity Reinsurance, it is not expected that any such other revenues will apply. To the extent there are other revenues, they should be included with item ii under a. immediately above so that the calculation of the K-factor includes all expected future revenues from the contract holder.
- c. All material benefits projected to be paid to contract holders—including, but not limited to, death claims, surrender benefits and withdrawal benefits—reflecting the impact of all guarantees and adjusted to take into account amounts projected to be charged to account values on general account business. Any guarantees, in addition

Guidance Note: If due premiums are modeled, the final reported reserve needs to be adjusted by adding the due premium asset.

Commented [A154]: ACLI: Consistent with our comments in our August 19, 2022, letter, we do not support the use of a k-factor to modify the premiums used in the longevity reinsurance reserve calculation because the premiums for these policies are not assumptions that vary. We believe an alternative, principle-based solution with prudent margins could better address regulators’ concerns and wish to work with regulators to craft a better solution. If the k-factor approach is retained, the calculation methodology should be as principle-based as possible (e.g., reflect emerging experience and how blocks of business are managed and aggregated consistent with company practices).

Commented [CC155]: should include Section 12

Commented [VM22156R155]: Edits added to address

Deleted: 11

Commented [A157]: ACLI: Premiums are usually pre-determined. It is not clear how this paragraph is applicable.

Commented [A158]: ACLI: References to “contract holder” and “contract inception” seem to imply directly written business. Suggest replacing “contract holder” with “contract holder or the ceding company in the case of reinsurance” and replacing “contract inception” with “contract inception or reinsurance effective date in the case of reinsurance.”

Commented [VM22159R158]: Edits added to address

to market value adjustments assessed on projected withdrawals or surrenders, shall be taken into account.

- d. Non-Guaranteed Elements (NGE) cash flows as described in Section 10.I.
- e. Insurance company expenses (including overhead and maintenance expense), commissions and other acquisition expenses associated with business inforce as of the valuation date,.
- f. Cash flows associated with any reinsurance, to the extent not already covered above (for example, for longevity reinsurance).
- g. Cash flows from hedging instruments as described in Section 4 and Section 9.
- h. Cash receipts or disbursements associated with invested assets (other than policy loans) as described in Section 4.D.4, including investment income, realized capital gains and losses, principal repayments, asset default costs, investment expenses, asset prepayments, and asset sales.
- i. If modeled explicitly, cash flows related to policy loans as described in Section 10.H.2, including interest income, new loan payments and principal repayments.

Commented [A160]: ACLI: it feels like this should be its own subsection (c.)

Commented [VM22161R160]: Edits added to address

Commented [A162]: ACLI: Hedges are addressed in Section 4 and Section 9. Is this reference sufficient?

Commented [VM22163R162]: Edits added to address

Deleted: .A.4

Guidance Note: Future net policy loan cash flows include: policy loan interest paid in cash plus repayments of policy loan principal, including repayments occurring at death or surrender (note that the future benefits in Section 4.A.1.c are before consideration of policy loans), less additional policy loan principal (but excluding policy loan interest that is added to the policy loan principal balance).

Commented [CC164]: s/b 10.H.2

Commented [VM22165R164]: Edits added to address

Commented [A166]: ACLI: Wrong reference – 10.H.2

Commented [VM22167R166]: Edits added to address

Deleted: I

Commented [A168]: ACLI: If we make the 2nd paragraph of 4.A.1.b a separate reference this needs to be updated.

Commented [VM22169R168]: Added edits to address

Deleted: b

2. Grouping of Index Crediting Strategies

Index crediting strategies for non-variable annuities may be grouped for modeling using an approach that recognizes the objectives of each index crediting strategy. In assigning each index crediting strategy to a grouping for projection purposes, the fundamental characteristics of the index crediting strategy shall be reflected, and the parameters shall have the appropriate relationship to the stochastically generated projection scenarios described in Section 8. The grouping shall reflect characteristics of the efficient frontier (i.e., returns generally cannot be increased without assuming additional risk).

Index accounts sharing similar index crediting strategies may also be grouped for modeling to an appropriately crafted proxy strategy normally expressed as a linear combination of recognized market indices, sub-indices or funds, in order to develop the investment return paths and associated interest crediting. Each index crediting strategy's specific risk characteristics, associated index parameters, and relationship to the stochastically generated scenarios in Section 8 should be considered before grouping or assigning to a proxy strategy. Grouping and/or development of a proxy strategy may not be done in a manner that intentionally understates the resulting reserve.

3. Model Cells

Projections may be performed for each contract in force on the date of valuation or by assigning contracts into representative cells of model plans using all characteristics and

criteria having a material impact on the size of the reserve. Assigning contracts to model cells may not be done in a manner that intentionally understates the resulting reserve.

4. **Modeling of Hedges**

a. For a company that does not have a future hedging strategy supporting the contracts:

- i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company's investment strategy supporting the contracts.
- ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.

b. For a company that has one or more future hedging strategies supporting the contracts:

i. For a hedging program with hedge payoffs that offset interest credits associated with indexed interest strategies (indexed interest credits):

- a) In modeling cash flows, the company shall include the cash flows from future hedge purchases or any rebalancing of existing hedge assets that are intended solely to offset interest credits to contract holders.
- b) Existing hedging instruments that are currently held by the company for offsetting the indexed credits in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
- c) An Index Credit Hedge Margin for these hedge instruments shall be reflected by reducing index interest credit hedge payoffs by a margin multiple that shall be justified by sufficient and credible company experience and be no less than [X%] multiplicatively of the interest credited. This margin is intended to cover sources of potential error due the hedging itself and the ability for the company to accurately model it. In the absence of sufficient and credible company experience, a margin of [Y%] shall be assumed. There is no cap on the index credit hedge margin if company experience indicates actual error is greater than [Y%].

ii. For a company with any future hedging strategies that hedge any contractual obligation or risks other than indexed interest credits, the detailed requirements for the modeling of hedges are defined in Section 9. The following requirements do not supersede the detailed requirements.

Commented [A170]: ACLI: Hedge Modelling, whether index crediting or non-index crediting, should all be consolidated into one section in VM-22. This will help regulators and practitioners.

Commented [VM22171R170]: As discussed in prior VM-22 Subgroup call in response to this comment, the Subgroup is open to any proposals to accomplish this.

Deleted: Existing hedging instruments that are currently held by the company not for offsetting the indexed credits should be modeled consistently with the requirements of Section 4.A.4.a.ii....

Commented [A174]: Academy: The ARCWG proposes that X and Y be determined subsequent to the VM-22 field test. Modeling will help identify the appropriate level for the Index Credit Hedge Margin.

Commented [A175]: ACLI: For Factor determination, will there be documentation on how the X and Y are determined and reevaluated over time?

Commented [CC176]: the X's and Y's need to be filled in.

Commented [VM22177R176]: To fill in based on results of future field test

Commented [A178]: ACLI: All hedging should be in one section.

Commented [VM22179R178]: Comment discussed during prior VM-22 Subgroup call, during which the Subgroup expressed openness to this concept if a proposal is presented to them by the ACLI.

- a) The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
- b) The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and only future hedge purchases associated with indexed interest credited. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (I) determined following the guidance of Section 9.C.4.
- c) Consistent with Section 4.A.4.b.i, if the company has an indexed credit hedging program, the index credit hedge margin for instruments associated with indexed interest credited shall be reflected by reducing hedge payoffs by a margin multiple as defined in Section 4.A.4.b.i.c in both the “best efforts” run and the “adjusted” run.
- d) The use of products not falling under the scope of VM-22 (e.g., variable annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

Commented [CC182]: there is a stray “l” here. Also, in the 2023 version of VM-21, it shows an “l” instead of an “E”

Commented [VM22183R182]: Edits added to address

Deleted: E

Deleted: I

Commented [A184]: ACLI: Consider refining this to reference VM-22 Section 2 Scope

Commented [VM22185R184]: Edits added to address

Deleted: Section 1 through 13 requirements

Guidance Note: Section 4.A.4.b.i is intended to address common situations for products with index crediting strategies where the company only hedges index credits or clearly separates index credit hedging from other hedging. In this case, the hedge positions are considered similarly to other fixed income assets supporting the contracts, and a margin is reflected rather than modeling using a CTE70 adjusted run with no future hedge purchases. If a company has a more comprehensive hedge strategy combining index credits, guaranteed benefit, and other risks (e.g., full fair value or economic hedging), an appropriate and documented bifurcation method should be used in the application of Sections 4.A.4.b.i and 4.A.4.b.ii above for the hedge modeling and justification. Such bifurcation methods may quantify the specific risk exposure attributable to index credit liabilities versus other liabilities such as guaranteed living benefits, and apply such for the basis for allocation.

Commented [CC186]: s/b capitalized

Commented [VM22187R186]: Edits added to address

Deleted: sections

Deleted: sectionss

Guidance Note: The requirements of Section 4.A.4 govern the determination of reserves for annuity contracts and do not supersede any statutes, laws or regulations of any state or jurisdiction related to the

use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

5. Revenue Sharing

If applicable, projections of accumulated deficiencies may include income from projected future revenue sharing, net of applicable projected expenses (net revenue-sharing income) by following the requirements set forth in VM-21 Sections 4.A.5.a through 4.a.5.f.

6. Length of Projections

Projections of accumulated deficiencies shall be run for as many future years as needed so that no material obligations amount of business remain at the end of the projection periods.

7. Interest Maintenance Reserve (IMR)

The IMR shall be handled consistently with the treatment in the company’s cash flow testing, and the amounts should be adjusted to a pre-tax basis.

Commented [A188]: ACLI: Prefer to spell out the requirements to avoid companies needing to review multiple VM chapters.

Commented [VM22189R188]: Consistent with references to VM-20 for spread assumptions. Not copying same text makes it easier to maintain consistency in VM language.

Commented [A190]: Academy: This change is consistent with VM-31 Section 3.D.2.f.

Commented [A191]: ACLI: VM-21 has “no materially greater reserve value would result from longer projection periods” This language should be consistent with VM-21

B. Determination of Scenario Reserve

1. For a given scenario, the scenario reserve shall be determined using one of two methods described below:

a) The starting asset amount plus the greatest present value, as of the projection start date, of the projected accumulated deficiencies; or

Guidance Note: The greatest present value of accumulated deficiencies can be negative.

b) The direct iteration method, where the scenario reserve is determined by solving for the amount of starting assets which, when projected along with all contract cash flows, result in the defeasement of all projected future benefits and expenses at the end of the projection horizon with no positive accumulated deficiencies at the end of any projection year during the projection period.

The scenario reserve for any given scenario shall not be less than the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection. In the case where more than [x%] of assets supporting the liability, excluding derivatives used solely to support index credits, are held at market value, the market value adjustment shall also be applied to the cash surrender value.

Commented [A192]: Academy: Assets backing the reserves may be a combination of assets held at market and at book. X represents an immaterial amount of assets held at market such that a higher percentage requires the market value adjustment to the cash surrender value on the valuation date and amounts below X do not require such adjustment.

2. Discount Rates

In determining the scenario reserve, unless using the direct iteration method pursuant to Section 4.B.1.b, the accumulated deficiencies shall be discounted at the NAER on additional assets, as defined in Section 4.B.3.

3. Determination of NAER on Additional Invested Asset Portfolio

- a. The additional invested asset portfolio for a scenario is a portfolio of general account assets as of the valuation date, outside of the starting asset portfolio, that is required in that projection scenario so that the projection would not have a positive accumulated deficiency at the end of any projection year. This portfolio may include only (i) General Account assets available to the company on the valuation date that do not constitute part of the starting asset portfolio; and (ii) cash assets.

Guidance Note:

Additional invested assets should be selected in a manner such that if the starting asset portfolio were revised to include the additional invested assets, the projection would not be expected to experience any positive accumulated deficiencies at the end of any projection year.

It is assumed that the accumulated deficiencies for this scenario projection are known.

- b. To determine the NAER on additional invested assets for a given scenario:
- i. Project the additional invested asset portfolio as of the valuation date to the end of the projection period,
 - a) Investing any cash in the portfolio and reinvesting all investment proceeds using the company's investment policy.
 - b) Excluding any liability cash flows.
 - c) Incorporating the appropriate returns, defaults and investment expenses for the given scenario.
 - ii. If the value of the projected additional invested asset portfolio does not equal or exceed the accumulated deficiencies at the end of each projection year for the scenario, increase the size of the initial additional invested asset portfolio as of the valuation date, and repeat the preceding step.
 - iii. Determine a vector of annual earned rates that replicates the growth in the additional invested asset portfolio from the valuation date to the end of the projection period for the scenario. This vector will be the NAER for the given scenario.
 - iv. If the projection results contain any extremely negative or positive NAER due to the depletion of assets in the denominator, the NAER shall be reset to a more appropriate discount rate, which may be carried out by imposing upper/lower limits or by using another approach, subject to actuarial judgement, that is appropriately prudent for statutory valuation.

Guidance Note: There are multiple ways to select the additional invested asset portfolio at the valuation date. Similarly, there are multiple ways to determine the earned rate vector. The company shall be consistent in its choice of methods, from one valuation to the next.

C. Projection Scenarios

1. Number of Scenarios

The number of scenarios for which the scenario reserve shall be computed shall be the responsibility of the company, and it shall be considered to be sufficient if any resulting understatement in the SR, as compared with that resulting from running additional scenarios, is not material.

2. Economic Scenario Generation

Treasury Department interest rate curves, as well as investment return paths for index funds, equities, and fixed income assets shall be determined on a stochastic basis using the methodology described in Section 8. If the company uses a proprietary generator to develop scenarios, the company shall demonstrate that the resulting scenarios meet the requirements described in Section 8.

D. Projection of Assets

1. Starting Asset Amount

a. For the projections of accumulated deficiencies, the value of assets at the start of the projection shall be set equal to the approximate value of statutory reserves at the start of the projection plus the allocated amount of PIMR attributable to the assets selected. Assets shall be valued consistently with their annual statement values. The amount of such asset values shall equal the sum of the following items, all as of the start of the projection:

- i. Any hedge instruments held in support of the contracts being valued; and
- ii. An amount of assets held in the general account equal to the approximate value of statutory reserves as of the start of the projections less the amount in (i).

b. If the amount of initial general account assets is negative, the model should reflect a projected interest expense. General account assets chosen for use as described above shall be selected on a consistent basis from one reserve valuation hereunder to the next.

2. Valuation of Projected Assets

For purposes of determining the projected accumulated deficiencies, the value of projected assets shall be determined in a manner consistent with their value at the start of the projection. For assets assumed to be purchased during a projection, the value shall be determined in a manner consistent with the value of assets at the start of the projection that have similar investment characteristics. However, for derivative instruments that are used in hedging and are not assumed to be sold during a particular projection interval, the

company may account for them at an amortized cost in an appropriate manner elected by the company.

Guidance Note: Accounting for hedge assets should recognize any methodology prescribed by a company's state of domicile.

3. General Account Assets

- a. General account assets shall be projected, net of projected defaults, using assumed investment returns consistent with their book value and expected to be realized in future periods as of the date of valuation. Initial assets that mature during the projection and positive cash flows projected for future periods shall be invested in a manner that is representative of and consistent with the company's investment policy, subject to the following requirements:
 - i. The final maturities and cash flow structures of assets purchased in the model, such as the patterns of gross investment income and principal repayments or a fixed or floating rate interest basis, shall be determined by the company as part of the model representation;
 - ii. The combination of price and structure for fixed income investments and derivative instruments associated with fixed income investments shall appropriately reflect the projected Treasury Department curve along the relevant scenario and the requirements for gross asset spread assumptions stated below;
 - iii. For purchases of public non-callable corporate bonds, follow the requirements defined in VM-20 Sections 7.E, 7.F and 9.F. The prescribed spreads reflect current market conditions as of the model start date and grade to long-term conditions based on historical data at the start of projection year four;
 - iv. For transactions of derivative instruments associated with fixed income investments, reflect the prescribed assumptions in VM-20 Section 9.F for interest rate swap spreads;
 - v. For purchases of other fixed income investments, if included in modeled company investment strategy, set assumed gross asset spreads over U.S. Treasuries in a manner that is consistent with, and results in reasonable relationships to, the prescribed spreads for public non-callable corporate bonds and interest rate swaps.
- b. Notwithstanding the above requirements, the aggregate reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of:

- i. ~~5% Treasury~~
15
- ii. 20% PBR credit rating 3 (Aa2/AA)
- iii. 80% PBR credit rating 6 (A2/A)

c. Any disinvestment shall be modeled in a manner that is consistent with the company’s investment policy and that reflects the company’s cost of borrowing where applicable, provided that the assumed cost of borrowing is not lower than the rate at which positive cash flows are reinvested in the same time period, taking into account duration, ratings, and other attributes of the borrowing mechanism. Gross asset spreads used in computing market values of assets sold in the model shall be consistent with, but not necessarily the same as, the gross asset spreads in Section 4.D.3.a.iii and Section 4.D.3.a.v, recognizing that initial assets that mature during the projection may have different characteristics than modeled reinvestment assets.

Guidance Note: This limitation is being referred to Life Actuarial (A) Task Force for review. The simple language above “provided that the assumed cost of borrowing is not lower than the rate at which positive cash flows are reinvested in the same time period” is not intended to impose a literal requirement. It is intended to reflect a general concept to prevent excessively optimistic borrowing assumptions. It is recognized that borrowing parameters and rules can be complicated, such that modeling limitations may not allow for literal compliance, in every time step, as long as the reserve is not materially affected. However, if the company is unable to fully apply this restriction, prudence dictates that a company shall not allow borrowing assumptions to materially reduce the reserve.

- Commented [A193]: ACLI: Incorrect reference
- Commented [VM22194R193]: Edits added to address
- Commented [A195]: ACLI: Incorrect reference
- Commented [VM22196R195]: Edits added to address
- Commented [CC197]: s/b Section 4.D.3.a.iii and 4.D.3.a.v
- Commented [VM22198R197]: Edits added to address
- Deleted: 4
- Deleted: 4

4. Cash Flows from Invested Assets

- a. Cash flows from general account fixed income assets, including starting and reinvestment assets, shall be reflected in the projection as follows:
 - i. Model gross investment income and principal repayments in accordance with the contractual provisions of each asset and in a manner consistent with each scenario.
 - ii. Reflect asset default costs as prescribed in VM-20 Section 9.F and anticipated investment expenses through deductions to the gross investment income.
 - iii. Model the proceeds arising from modeled asset sales and determine the portion representing any realized capital gains and losses.
 - iv. Reflect any uncertainty in the timing and amounts of asset cash flows related to the paths of interest rates, equity returns or other economic values directly in the projection of asset cash flows. Asset defaults are not

subject to this requirement, since asset default assumptions must be determined by the prescribed method as noted in Section 4.a.ii above.

Commented [CC199]: Add "Section" in front of "4.a.ii above"

Commented [VM22200R199]: Edits added to address

- b. Cash flows from index funds and general account equity assets—i.e., non-fixed income assets having substantial volatility of returns, such as common stocks and real estate— including starting and reinvestment assets, shall be reflected in the projection as follows:
 - i. Determine the grouping for asset categories and the allocation of specific assets to each category in a manner that is consistent with that used for index crediting strategies, as discussed in Section 4.A.2.
 - ii. Project the gross investment return including realized and unrealized capital gains in a manner that is consistent with the stochastically generated scenarios.
 - iii. Model the timing of an asset sale in a manner that is consistent with the investment policy of the company for that type of asset. Reflect expenses through a deduction to the gross investment return using prudent estimate assumptions.
- c. Cash flows for each projection interval for policy loan assets shall follow the requirements in Section 10.H.

E. Projection of Annuitization Benefits

1. Assumed Annuitization Purchase Rates
 - a. For payouts specified at issue (such as single premium immediate annuities, deferred income annuities, and certain structured settlements), such purchase rates shall reflect the payout rate specified in the contract.
 - b. For purposes of projecting future elective annuitization benefits (including annuitizations stemming from the election of a GMIB) and withdrawal amounts from GMWBs, the projected annuitization purchase rates shall be determined assuming that market interest rates available at the time of election are the interest rates used to project general account assets, as determined in Section 4.D. ~~h~~
2. Projected Election of GMIBs, GMWBs and Other Annuitization Options
 - a. For contracts projected to elect future annuitization options (including annuitizations stemming from the election of a GMIB) or for projections of GMWB benefits once the account value has been depleted, the projections shall assume the contract will stay in force, the projected periodic payments are paid, and the associated maintenance expenses are incurred.

Commented [CC201]: s/b Section 4.D.3

Commented [A203]: ACLI: Incorrect reference?

Commented [VM22204R203]: Edits added to address

Deleted: 4

F. Frequency of Projection

1. Use of an annual cash-flow frequency ("timestep") is generally acceptable for benefits/features that are not sensitive to projection frequency. The lack of sensitivity to projection frequency should be validated by testing wherein the company should determine

that the use of a more frequent—i.e., shorter—time step does not materially increase reserves. A more frequent time increment should always be used when the product features are sensitive to projection period frequency.

G. Compliance with ASOPs

When determining a SR, the analysis shall conform to the ASOPs as promulgated from time to time by the ASB.

Under these requirements, an actuary will make various determinations, verifications and certifications. The company shall provide the actuary with the necessary information sufficient to permit the actuary to fulfill the responsibilities set forth in these requirements and responsibilities arising from each applicable ASOP.

Deleted: Care must be taken in simulating fee income and expenses when using an annual time step. For example, recognizing fee income

Deleted: at the end of each period after market movements, but prior to persistency decrements, would normally be an inappropriate assumption. It is also important that the frequency of the investment return model be linked appropriately to the projection horizon in the liability model. ¶

Section 5: Reinsurance

A. Treatment of Reinsurance in the Aggregate Reserve

1. Aggregate Reserve Pre- and Post-Reinsurance Ceded

As noted in Section 3.B, the aggregate reserve is determined both pre-reinsurance ceded and post-reinsurance ceded. Therefore, it is necessary to determine the components needed to determine the aggregate reserve—i.e., the additional standard projection amount, the SR, DR, and/or the reserve amount valued using requirements in VM-A, VM-C, and VM-V, as applicable—on both bases. Sections 5.A.2 and 5.A.3 discuss adjustments to inputs necessary to determine these components on both a post-reinsurance ceded and a pre-reinsurance ceded basis.

- Commented [CC207]: There really is no "DR"
- Commented [VM22208R207]: DR added for clarification in 7.E
- Commented [CC209]: Should add VM-V?
- Commented [VM22210R209]: Edits added to address
- Deleted: C
- Deleted: C
- Commented [CC211]: There really is no "DR"
- Commented [VM22212R211]: DR added for clarification in 7.E
- Commented [CC213]: There really is no "DR"
- Commented [VM22214R213]: DR added for clarification in 7.E

2. Reflection of Reinsurance Cash Flows in the DR or SR

- a. In order to determine the aggregate reserve post-reinsurance ceded, accumulated deficiencies, scenario reserves, and the resulting SR and DR shall be determined reflecting the effects of reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance within statutory accounting. This involves including, where appropriate, all projected reinsurance premiums or other costs and all reinsurance recoveries, where the reinsurance cash flows reflect all the provisions in the reinsurance agreement, using prudent estimate assumptions.
 - i. In this section, reinsurance includes retrocession, and assuming company includes retrocessionaire.
 - ii. All significant terms and provisions within reinsurance treaties shall be reflected. In addition, it shall be assumed that each party is knowledgeable about the treaty provisions and will exercise them to their advantage.

Guidance Note: Renegotiation of the treaty upon the expiration of an experience refund provision or at any other time shall not be assumed if such would be beneficial to the company and not beneficial to the counterparty. This is applicable to both the ceding party and assuming party within a reinsurance arrangement.

- iii. If the company has knowledge that a counterparty is financially impaired, the company shall establish a margin for the risk of default by the counterparty. In the absence of knowledge that the counterparty is financially impaired, the company is not required to establish a margin for the risk of default by the counterparty.
- iv. A company shall include the cash flows from a reinsurance agreement or amendment in calculating the SR if such qualifies for credit in compliance with Appendix A-791 of the Accounting Practices and Procedures Manual. If a reinsurance agreement or amendment does not qualify for credit for reinsurance but treating the reinsurance agreement or amendment as if it did so qualify would result in a reduction to the company's surplus, then the company shall increase the aggregate reserve by the absolute value of such reductions in surplus.

- Commented [CC215]: Change to "SR" to be consistent with other references
- Commented [VM22216R215]: Edits added to address
- Deleted: stochastic reserve

- b. In order to determine the SR and DR on a pre-reinsurance ceded basis, accumulated deficiencies, scenario reserves, and the resulting SR and DR shall be determined ignoring the effects of reinsurance ceded within the projections. Different approaches may be used to determine the starting assets on the ceded portion of the contracts, dependent upon the characteristics of a given treaty:

- Commented [CC217]: There really is no "DR"
- Commented [VM22218R217]: DR added for clarification in 7.E

- i. For a standard coinsurance treaty, where the assets supporting the ceded liabilities were transferred to the assuming reinsurer, one acceptable approach involves a projection based on using starting assets on the ceded portion of the policies that are similar to those supporting the retained portion of the ceded policies or supporting similar types of policies. Scaling up each asset supporting the retained portion of the contract is also an acceptable method.

Guidance Note: For standard pro rata insurance treaties that do not include experience refunds, where allocated expenses are similar to the renewal expense allowance, a possible approach may be multiplying the quota share by the present value of future reinsurance cash flows pertaining to the reinsured block of business.

- ii. Alternatively, a treaty may contain an identifiable portfolio of assets associated with the ceded liabilities. This could be the case for several forms of reinsurance: funds withheld coinsurance; modified coinsurance; coinsurance with a trust. To the extent these assets would be available to the cedant, an acceptable approach could involve modeling this portfolio of assets. To the extent that these assets were insufficient to defease the ceded liabilities, the modeling would partially default to the approach discussed for a standard coinsurance treaty. To the extent these assets exceeded what might be needed to defease the ceded liabilities (perhaps an over collateralization requirement in a trust), the inclusion of such assets shall be limited.

Guidance Note: Section 3.5.2 in ASOP No. 52, *Principle-Based Reserves for Life Products under the NAIC Valuation Manual*, provides possible methods for constructing a hypothetical pre-reinsurance asset portfolio, if necessary, for purposes of the pre-reinsurance reserve calculation.

- c. An assuming company shall use assumptions to project cash flows to and from ceding companies that reflect the assuming company’s experience for the business segment to which the reinsured policies belong and reflect the terms of the reinsurance agreement.
- d. The company shall assume that the counterparties to a reinsurance agreement are knowledgeable about the contingencies involved in the agreement and likely to exercise the terms of the agreement to their respective advantage, taking into account the context of the agreement in the entire economic relationship between the parties. In setting assumptions for the NGE in reinsurance cash flows, the company shall include, but not be limited to, the following:
 - i. The usual and customary practices associated with such agreements.
 - ii. Past practices by the parties concerning the changing of terms, in an economic environment similar to that projected.
 - iii. Any limits placed upon either party’s ability to exercise contractual options in the reinsurance agreement.
 - iv. The ability of the direct-writing company to modify the terms of its policies in response to changes in reinsurance terms.
 - v. Actions that might be taken by a party if the counterparty is in financial difficulty.
- e. To the extent that a single deterministic valuation assumption for risk factors associated with certain provisions of reinsurance agreements will not adequately capture the risk, the company shall do one of the following:

- Deleted:** reflecting
- Deleted:** applied to
- Commented [A219]:** ACLI: Consider clarifying this guidance note.
- Commented [VM2220R219]:** Edits added to address
- Deleted:** may be considered as a possible approach to determine the ceded reserves

- i. Stochastically model the risk factors directly in the cash-flow model when calculating the SR.
- ii. Perform a separate stochastic analysis outside the cash-flow model to quantify the impact on reinsurance cash flows to and from the company. The company shall use the results of this analysis to adjust prudent estimate assumptions or to determine an amount to adjust the SR to adequately make provision for the risks of the reinsurance features.

Guidance Note: An example of reinsurance provisions where a single deterministic valuation assumption will not adequately capture the risk is longevity reinsurance.

Commented [A221]: ACLI: Guidance note should be removed or clarified.

3. Reserve Determined Upon Passing the Exclusion Test

If a company passes the stochastic exclusion test and elects to use a methodology pursuant to applicable Sections VM-A, VM-C, and VM-V, as allowed in Section 3.G, it is important to note that the methodology produces reserves on a pre-reinsurance ceded basis. Therefore, the reserve must be adjusted for any reinsurance ceded accordingly.

Commented [CC222]: Should VM-V be included here for maximum statutory valuation rate?

Commented [VM2223R222]: Edits added to address

Commented [CC224]: s/b Section 3.G

Commented [VM2225R224]: Edits added to address

Deleted: C

Deleted: E

It should be noted that the pre-reinsurance-ceded and post-reinsurance-ceded reserves may result in different outcomes for the exclusion test. In particular, it is possible that the pre-reinsurance-ceded reserves would pass the relevant exclusion test (and allow the use of VM-A and VM-C) while the post-reinsurance-ceded reserves might not, or vice versa.

Commented [A226]: ACLI: Are there some words missing? Seems to be carried from VM-21 reference to "Alternative Methodology"

4. Additional Standard Projection Amount

Where reinsurance is ceded, the additional standard projection amount shall be calculated as described in Section 6 to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties. The additional standard projection amount shall also be calculated pre-reinsurance ceded using the methods described in Section 6 but ignoring the effects of the reinsurance ceded.

Commented [VM2227R226]: Edits added to address – eliminated sentence

Deleted: In addition, reserves valued under applicable Sections in VM-A and VM-C, unadjusted for reinsurance, shall be applied to the contracts falling under the scope of these requirements to determine the aggregate reserve prior to reinsurance.

Section 6: Standard Projection Amount

Section 7: Exclusion Testing

A. Stochastic Exclusion Test Requirement Overview

1. The company may elect to exclude one or more groups of contracts from the SR calculation if the stochastic exclusion test (SET) is satisfied for each of the group of contracts. The company has the option to calculate or not calculate the SET.
 - a. If the company does not elect to calculate the SET for one or more groups of contracts, or the company calculates the SET and fails the test for such groups of contracts, the reserve methodology described in Section 4 shall be used for calculating the aggregate reserve for those groups of contracts.
 - b. If the company elects to calculate the SET for one or more groups of contracts, and passes the test for such groups of contracts, then for each group of contracts that passes the SET, the company shall choose whether or not to use the reserve methodology described in Section 4 for that group of contracts. If the reserve methodology described in Section 4 is not used for one or more groups of contracts, then the company shall use the reserve methodology pursuant to applicable requirements in VM-A, VM-C, and VM-V for those groups of contracts.
 - c. A company may not exclude a group of contracts from the SR requirements if there are one or more future hedging strategies supporting the contracts, with the exception of hedging programs solely supporting index credits as described in Section 9.A.1.
 - d. A company not eligible for the Annuity PBR Exemption described in VM Section II 2.E may nevertheless elect to automatically exclude one or more groups of contracts from the stochastic reserve calculation without passing or performing the SET if all of the following are met for all contracts in the group or groups:
 - i. All of the contracts are either:
 - a) Single Premium Immediate Annuities;
 - b) Term Certain Payout Annuities;
 - c) Fixed payout annuities resulting from the exercise of settlement options or annuitizations of host contracts;
 - d) Supplementary contracts (such as retained asset accounts and settlements at interest);
 - e) Fixed income payment streams attributable to guaranteed living benefits associated with deferred annuity contracts once the underlying funds are exhausted;
 - f) Term Certain Payout Annuities; or
 - g) Structured Settlement Contracts
 - ii. None of the contracts are pension risk transfer annuities (PRT) or are covered under a longevity reinsurance agreement;
 - iii. Future scheduled payout benefit amounts are either level or stay within 5% of the initial payout benefit amount over time;
 - iv. There is either no or an immaterial level of policyholder options permitted within the contracts; and

Commented [CC228]: Should add valuation rate requirements in VM-V?

Commented [VM22229R228]: Edits added to address

Deleted: C

Deleted: C

Commented [VM22230]: **ACLI:** This item lists Term Certain Payout Annuities as a possible group able to qualify for the exemption. Should non-life contingent annuities found in Exhibit 7 (Deposit Type Contracts) under the column labeled "Annuities Certain", as well as the column labeled "Supplementary Contracts" be a part of the Payout Annuity Exemption Reserves definition? These are separate from the life-contingent liabilities found in the Analysis of Increase in Reserves, Individual Annuities and Group Annuities pages.

Commented [VM22231]: **ACLI:** This criterion states that neither PRT nor longevity reinsurance agreement is allowed as a category possible for exemption. Certain longevity reinsurance agreements contain only contracts that would meet the remaining criteria (that is, are consistent with other "vanilla" payout annuities); a prohibition on such arrangements seems to violate consistent treatment for similar products. Further, Payout Annuity Exemption Reserves include both longevity and PRT arrangements despite not being eligible for the exclusion; it would be appropriate to remove these from the reserves contributing to the exemption. Otherwise, a company would not be able to exempt business that would otherwise meet the criteria

Commented [VM22232]: Several of our members expressed concern that Section 7.A.1.d.iii and Section 7.A.1.d.iv of the exposure may preclude application to products expected to be in scope (e.g., annuities with a fixed cost of living adjustment, 50% joint and survivor annuities, non-elective changes to contract). Such product cash flows are not impacted by changes in interest rates or current economic conditions, which appears to be the intent of the exclusion. We are suggesting two possible approaches to incorporate these edits [in the ACLI comment letter].

Additionally, we have questions about existing Section 7.A.1.d.iii. Given our proposed edits, is this criterion needed? If retained, how was the 5% developed and how does it compare to the 15% in guideline IX? Perhaps a drafting note could be included to explain the differences.

- v. The company has less than [X] of Payout Annuity Exemption Reserves, and if the company is a member of an NAIC group that includes other life insurance companies, the group has combined Payout Annuity Exemption Reserves of less than [Y] billion.
 - 1. Payout Annuity Exemption Reserves are determined as follows:
 - a) The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Individual Annuities, Column 6 (“Life Contingent Payout (Immediate and Annuityizations)”), line 15; plus
 - b) The amount reported in the prior calendar year life/health annual statement, Analysis of Increase in Reserves During the Year-Group Annuities, Column 6 (“Life Contingent Payout (Immediate and Annuityizations)”), line 15.
- vi. A company shall file a statement of exemption certifying compliance with conditions (i) through (v) above prior to July 1 of the associated valuation year. The domiciliary commissioner may reject such statement prior to Sept. 1.
- vii. If a group of contracts that satisfies the criteria of 7.A.1.d.i to 7.A.1.d.v above for the current valuation year had been valued using the DR or SR of VM-22 for the prior year-end, the company must continue to value the contracts under the DR or SR requirements of VM-22 unless the domiciliary commissioner grants permission to value the contracts under VM-A, VM-C, and VM-V.

Commented [VM22233]: ACLI: Payout Annuity Exemption Reserves include both longevity and PRT arrangements despite not being eligible for the exclusion; it would be appropriate to remove these from the reserves contributing to the exemption. Otherwise, a company would not be able to exempt business that would otherwise meet the criteria

B. Requirement to Pass the Stochastic Exclusion Tests

Groups of contracts pass the SET if one of the following is met:

1. Stochastic Exclusion Ratio Test (SERT)—Annually within 12 months before the valuation date the company demonstrates that the groups of contracts pass the SERT defined in Section 7.C.
2. Stochastic Exclusion Demonstration Test—In the first year and at least once every three calendar years thereafter, the company provides a demonstration in the PBR Actuarial Report as specified in Section 7.D.
3. SET Certification Method—For groups of contracts that do not have guaranteed living benefits, future hedging strategies, or pension risk transfer business, in the first year and at least every third calendar year thereafter, the company provides a certification by a qualified actuary that the group of contracts is not subject to material interest rate risk, mortality and/or longevity risk, or asset return volatility risk (i.e., the risk on non-fixed-income investments having substantial volatility of returns, such as common stocks and real estate investments).

Deleted: across
Deleted:

Guidance Note: The qualified actuary should develop documentation to support the actuarial certification that presents his or her analysis clearly and in detail sufficient for another actuary to understand the analysis and reasons for the actuary’s conclusion that the group of contracts is not subject to material interest rate risk, mortality and/or longevity risk, or asset return volatility risk. Examples of methods a qualified actuary could use to support the actuarial certification include, but are not limited to:

- a) A demonstration that, for the group of contracts, reserves calculated using requirements under VM-A, VM-C, and VM-V are at least as great as the assets required to support the group of contracts and certificates using the company's cash-flow testing model under each of the 48 scenarios identified in Section 7.C.1 or alternatively each of the New York seven economic scenarios under each of the three mortality adjustment factors identified in Section 7.C.1.
- b) A demonstration that the group of contracts passed the SERT within 36 months prior to the valuation date and the company has not had a material change in its interest rate risk, mortality and/or longevity risk, or asset return volatility risk.
- c) A qualitative risk assessment of the group of contracts that concludes that the group of contracts does not have material interest rate risk, mortality and/or longevity risk, or asset return volatility. Such assessment would include an analysis of product guarantees, the company's non-guaranteed elements (NGEs) policy, assets backing the group of contracts, the company's longevity risk, and the company's investment strategy.

Commented [CC236]: Should add VM-V?

Commented [VM22237R236]: Edits added to address

Deleted: C

Deleted: C

C. Stochastic Exclusion Ratio Test

1. In order to exclude a group of contracts from the SR requirements under the stochastic exclusion ratio test (SERT), a company shall demonstrate that the ratio of (b-a)/a is less than the lesser of $x\%$ and the percentage change that would trigger the company's materiality standard, where:

- a. a = the adjusted scenario reserve described in Section 7.C.2.a below using the baseline economic scenario ("scenario 9), as described in Appendix 1.E of VM-20, and 100% as the adjustment factor for mortality.
- b. b = the largest adjusted scenario reserve described in Section 7.C.2.a below under any of the 16 economic scenarios described in Appendix 1.E of VM-20 under 95%, 100%, and 105% of anticipated experience mortality excluding margins. Because mortality variability may differ by company, if the magnitude of the company's margin for mortality exceeds 5%, then the company shall use the baseline mortality and the mortality augmented by plus and minus the company's margin for this exercise.

Commented [VM22239R238]: Edits added to address

Deleted: Paragraph

Deleted: Paragraph

Commented [CC240]: Change the order for clarity as follows: "the baseline economic scenario, as described in Appendix 1.E of VM-20, and 100% as the adjustment factor for mortality."

Commented [VM22241R240]: Edits added to address

Deleted: , the baseline economic scenario, as described in Appendix 1.E of VM-20

Commented [VM22243R242]: Edits added to address

Deleted: Paragraph

Deleted: Paragraph

Guidance Note: Note that the numerator should be the largest adjusted scenario reserve, minus the adjusted scenario reserve for the baseline economic scenario and 100% as the adjustment factor for mortality. This is not necessarily the same as the biggest difference from the adjusted scenario reserve for the baseline economic scenario and 100% as the adjustment factor for mortality, or the absolute value of the biggest difference from the adjusted scenario reserve for the baseline economic scenario and 100% as the adjustment factor for mortality, both of which could lead to an incorrect test result. There are 47 (=16x3-1) combined economic and mortality scenarios that should be compared for the determination of b.

2. In calculating the ratio in Section 7.C.1 above:

- a. The company shall calculate an adjusted scenario reserve for the group of contracts for ~~each of~~ each of the 16 economic scenarios using the three levels of mortality adjustment factors that is equal to either (i) or (ii) below:
- i. The scenario reserve defined in Section 4, but with the following differences:
 - a) Using anticipated experience assumptions with no margins, with the exception of mortality factors described in Section 7.C.1.b of this section.
 - b) Using the interest rates and equity return assumptions specific to each scenario.
 - c) Using NAER and discount rates defined in Section 4 specific to each scenario to discount the cash flows.
 - d) Shall reflect future mortality improvement in line with anticipated experience assumptions.
 - e) Shall not reflect correlation between longevity and economic risks.
 - ii. The gross premium reserve developed from the cash flows from the company's asset adequacy analysis models, using the experience assumptions of the company's cash-flow analysis, but with the following differences:
 - a) Using the interest rates and equity return assumptions specific to each scenario.
 - b) Using the mortality scalars described in Section 7.C.1.b of this section.
 - c) Using the methodology to determine NAER and discount rates defined in Section 4 specific to each scenario to discount the cash flows, but using the company's cash-flow testing assumptions for default costs and reinvestment earnings.
- b. The company shall use the most current available baseline economic scenario and the 15 other economic scenarios published by the NAIC. The methodology for creating these scenarios can be found in Appendix 1 of VM-20.
- c. The company shall use assumptions within each scenario that are dynamically adjusted as appropriate for consistency with each tested scenario.
- d. The company may not group together contract types with significantly different risk profiles for purposes of calculating this ratio.
- e. If the company has reinsurance arrangements that are pro rata coinsurance and do not materially impact the interest rate risk, longevity risk, or asset return volatility in the contract, then the company may elect to conduct the stochastic exclusion ratio test on only a single basis, either pre-reinsurance-ceded or post-reinsurance-ceded.
3. If the ratio calculated in this section is less than % pre-non-proportional reinsurance, but is greater than % post-non-proportional reinsurance, the group of contracts will still pass the SERT if the company can demonstrate that the sensitivity of the adjusted

scenario reserve to economic scenarios is comparable pre- and post-non-proportional reinsurance.

Guidance Note: Further description of non-proportional reinsurance is provided in Paragraph 16 of SSAP 61R.

- a. An example of an acceptable demonstration:
- i. For convenience in notation • SERT = the ratio $(b-a)/a$ defined in Section 7.C.1 above
 - a) The pre-non-proportional reinsurance results are “gross of non-proportional,” with a subscript “gn,” so denoted $SERT_{gn}$
 - b) The post-non-proportional results are “net of non-proportional,” with subscript “nn,” so denoted $SERT_{nn}$
 - ii. If a block of business being tested is subject to one or more non-proportional reinsurance cessions as well as other forms of reinsurance, such as pro rata coinsurance, take “gross of non-proportional” to mean net of all prorata reinsurance but ignoring the non-proportional contract(s), and “net of non-proportional” to mean net of *all* reinsurance contracts. That is, treat non-proportional reinsurance as the last reinsurance in, and compute certain values below with and without that last component.
 - iii. So, if $SERT_{gn} \leq [x]\%$ but $SERT_{nn} > [x]\%$, then compute the largest percent increase in reserve (LPIR) = $(b-a)/a$, both “gross of non-proportional” and “net of non-proportional.”

$$LPIR_{gn} = (b_{gn} - a_{gn})/a_{gn}$$

$$LPIR_{nn} = (b_{nn} - a_{nn})/a_{nn}$$

Note that the scenario underlying b_{gn} could be different from the scenario underlying b_{nn} .

If $SERT_{gn} \times LPIR_{nn}/LPIR_{gn} < [x]\%$, then the block of contracts passes the SERT.
- b. Another more qualitative approach is to calculate the adjusted scenario reserves for the 48 combined economic and mortality scenarios both gross and net of reinsurance to demonstrate that there is a similar pattern of sensitivity by scenario.
4. The SERT may not be used for a group of contracts if, using the current year’s data, (i) the stochastic exclusion demonstration test defined in Section 7.D had already been attempted using the method of Section 7.D.2.a or Section 7.D.2.b and did not pass; or (ii) the qualified actuary had actively undertaken to perform the certification method in [Section 7.B.3](#) and concluded that such certification could not legitimately be made.

Commented [CC244]: For clarity, identify as Section 7.B.3

Commented [VM22245R244]: Edits added to address

Deleted: this section s

D. Stochastic Exclusion Demonstration Test

1. In order to exclude a group of contracts from the SR requirements using the Stochastic Exclusion Demonstration Test, the company must provide a demonstration in the PBR Actuarial Report in the first year and at least once every three calendar years thereafter that complies with the following:
 - a. The demonstration shall provide a reasonable assurance that if the SR was calculated on a stand-alone basis for the group of contracts subject to the SR exclusion, the resulting stochastic reserve for those groups of contracts would not be higher than the statutory reserve determined pursuant to the applicable requirements in VM-A, VM-C, and VM-V. The demonstration shall take into account whether changing conditions over the current and two subsequent calendar years would be likely to change the conclusion to exclude the group of contracts from the SR requirements.
 - b. If, as of the end of any calendar year, the company determines the statutory reserve determined pursuant to the applicable requirements in VM-A, VM-C, and VM-V for the group of contracts no longer adequately provides for all material risks, the exclusion shall be discontinued, and the company fails the SET for those contracts.
 - c. The demonstration may be based on analysis from a date that precedes the valuation date for the initial year to which it applies if the demonstration includes an explanation of why the use of such a date will not produce a material change in the outcome, as compared to results based on an analysis as of the valuation date.
 - d. The demonstration shall provide an effective evaluation of the residual risk exposure remaining after risk mitigation techniques, such as derivative programs and reinsurance.
2. The company may use one of the following or another method acceptable to the insurance commissioner to demonstrate compliance with Section 7.D.1 above:
 - a. Demonstrate that the statutory reserve calculated in accordance with VM-A, VM-C, and VM-V is greater than the SR calculated on a stand-alone basis.
 - b. Demonstrate that the statutory reserve calculated in accordance with VM-A, VM-C, and VM-V is greater than the scenario reserve that results from each of a sufficient number of adverse deterministic scenarios.
 - c. Demonstrate that the statutory reserve calculated in accordance with VM-A, VM-C, and VM-V is greater than the SR calculated on a stand-alone basis, but using a representative sample of contracts in the SR calculations.
 - d. Demonstrate that any risk characteristics that would otherwise cause the SR calculated on a stand-alone basis to exceed the statutory reserve calculated in accordance with VM-A, VM-C, and VM-V are not present or have been substantially eliminated through actions such as hedging, investment strategy, reinsurance or passing the risk on to the contract holder by contract provision.

Commented [CC246]: Should add VM-V? Also in b-d, and 2. below.

E. Deterministic Certification Option

1. ~~Instead of a SR, the company may determine a Deterministic Reserve (DR) for a group of contracts using a single deterministic economic scenario, subject to the following conditions.~~
 - a. The company certifies that economic conditions do not materially influence anticipated contract holder behavior for the group of contracts and certificates. Examples of contract holder options that are materially influenced by economic conditions include surrender benefits, recurring premium payments, and guaranteed living benefits.
 - b. The company certifies that the group of contracts and certificates is not supported by a reinvestment strategy that contains future hedge purchases.
 - c. The company must perform and disclose results from the stochastic exclusion ratio test following the requirements in Section 7.C, and the company must pass the SERT when considering only the 16 economic scenarios paired with the 100% mortality scenario.
 - d. The company must disclose a description of contracts and associated features in the certification.

Commented [VM22248]: Added formal reference to "DR" to address in other sections

- Deleted:** The
- Deleted:** T
- Deleted:** the SR
- Deleted:** S

2. ~~The DR for the group of contracts under the Deterministic Certification Option is determined as follows:~~
 - a. Cash flows are projected in compliance with the applicable requirements in Section 4, Section 5, Section 10, and Section 11 of VM-22 over a single economic scenario (scenario 12 found in Appendix 1 of VM-20).
 - b. ~~The DR equals the scenario reserve following the requirements for Section 4.~~

- Deleted:** SRS

- Deleted:** SR
- Deleted:** SRS

Section 8: To Be Determined (Scenario Generation for VM-21)

Section 9: Modeling Hedges under a Non-Index Credit Future Hedging Strategy

A. Initial Considerations

1. This section applies to modeling of hedges other than situations where the company only hedges index credits. If the company clearly separates index credit hedging from other hedging, then this section only pertains to the other hedging if the index hedging follows the requirements in Section 4.A.4.b.i.
2. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.
3. The company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.
4. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.
5. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

Commented [CC249]: What if the company does not clearly separate the hedging strategies, then what? She we add a sentence such as: "If the company does not clearly separate index credit hedging from other hedging, then this section is applicable for modeling of all hedges".

Commented [A250]: ACLI: Is this meant to read as "this section only pertains"?

Commented [VM22251R250]: Edits added to address

Commented [CC252]: I believe this should say something like "then this section only pertains"

Commented [VM22253R252]: Edits added to address

Deleted: only the

Commented [CC254]: VM-21 has additional wording at the beginning of sentence: "If the company is following one or more future hedging strategies supporting the contracts, in accordance with an investment policy adopted by the board of directors, or a committee of board members". There is also two additional sentences about what must the investment policy include. Should these be added?

B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the SR otherwise calculated. Particular attention should be given to Section 1.B Principle 5 for the modeling of future hedging strategies.
2. The fundamental characteristic of the first type of method, referred to as the "explicit method," is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.
3. The fundamental characteristic of the second type of method, referred to as the "implicit method," is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple

ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company's ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections.

5. A safe harbor approach is permitted for reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.
2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts except those to hedge interest credits, therefore following the requirements of Section 4.A.4.a and 4.A.4.b.i.

However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

- a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
- b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Commented [VM22256R255]: Added edits to address

Deleted: and hedge assets held by the company on the valuation date

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

$$SR = CTE70 \text{ (best efforts)} + E \times \max[0, CTE70 \text{ (adjusted)} - CTE70 \text{ (best efforts)}]$$

4. The company shall specify a value for *E* (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of *E*. The value of *E* may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, *E* must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.
5. The company shall conduct a formal back-test, based on an analysis of the available relevant period of data (but no less than 12 months), to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for *E*.
6. Such a back-test shall involve one of the following analyses:
 - a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge results and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of *E*, the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of *E* by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

- b. ~~Companies~~ that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method”) or

Commented [A257]: ACLI: Recommend getting rid of "for" and starting the sentence with "Companies that model..."

“cost of reinsurance method”), **should** calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

Commented [A259]: ACLI: Recommend getting rid of the comma and changing this to "...should calculate the delta..."

Commented [VM22260R259]: Edits added to address

- i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.
 - ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).
 - iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.
 - iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.
 - v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.
 - vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100 % (e.g., 80–125%) consistently across the back-testing period.
 - vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100 % in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).
- c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with less than 12 months of experience and without robust mock testing, E should be 1.0. **For a material change in strategy with less than 3 months of history, E should be 1.0. However, when a material change in hedging strategy with less than 3 months history is the introduction of hedging for a newly introduced product or newly acquired block of business and is supplemented by robust mock testing, E should instead be at least 0.3.** Moreover, with prior approval from the domestic regulator, material changes in hedge strategy with less than 3 months history but with robust mock testing may have error factors less than 1.0, though still subject to the minimum error factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for additional uncertainty in anticipated hedging experience beyond that of a

Commented [CC261]: VM-21 does not have the word "no"

Commented [VM22262R261]: Edits added to address

Deleted: no

Commented [A263]: ACLI: Appears to be a typo

Commented [VM22264R263]: Edits added to address

robust hedging program already in existence. E may also be lower than 1.0 if the change in strategy is a minor refinement rather than a material change in strategy, though still subject to the minimum error factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for any additional uncertainty associated with the refinement.

Commented [CC265]: VM-21 has "E may also be"

Commented [VM22266R265]: Edits added to address

The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program:

Commented [CC267]: VM-21 also has a sentence following: "These examples are not intended to be exhaustive..." Should this sentence be added?

- The error factor should be temporarily 100% for substantial changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy) without robust mock-testing.
- An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g., moving from swaps to Treasury futures).

8. The company shall set the value of E reflecting the extent to which the future hedging program is clearly defined. To support a value of E below 1.0, there should be very robust documentation outlining the future hedging strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete, the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.

Guidance Note: Companies must use judgment both in determining an E factor and in applying this requirement in the case where there are multiple future hedging strategies, particularly where some may be CDHS and some may not be CDHS. In this case, the SR should be ensured to be no less than the CTE(70) reflecting the future hedging strategies that are CDHS and not reflecting those that are not CDHS. Companies with multiple future hedging strategies with very different levels of effectiveness or with multiple future hedging strategies that include both CDHS and non-CDHS should discuss with their domestic regulator.

D. Additional Considerations for CTE70 (best efforts)

Commented [A268]: ACLI: This should be section "D"

Commented [VM22269R268]: Edits added to address

Commented [CC270]: s/b Subsection D.

Commented [VM22271R270]: Edits added to address

If the company is following one or more future hedging strategies supporting the contracts, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

Commented [A272]: ACLI: This should be section "E"

Commented [VM22273R272]: Edits added to address

Commented [CC274]: s/b Subsection E.

Commented [VM22275R274]: Edits added to address

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for

purposes of reducing the SR, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the non-variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the non-variable annuity and other in-scope products account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the non-variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.
4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:
 - a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
 - b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.
5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.
7. The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor determined for the projection.

Section 10: Guidance and Requirements for Setting Contract Holder Behavior Prudent Estimate Assumptions

A. General

Contract holder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contract holder behavior is difficult to predict accurately, and variance in behavior assumptions can significantly affect the reserves level. In the absence of relevant and fully credible empirical data, the company should set behavior assumptions as guided by Principle 3 in Section 1.B and by Section 12.

In setting behavior assumptions, the company should examine, but not be limited by, the following considerations:

1. Behavior can vary by product, market, distribution channel, index performance, interest credited (current and guaranteed rates), time/product duration, etc.
2. Options embedded in the product may affect behavior.
3. Utilization of options may be elective or non-elective in nature. Living benefits often are elective, and death benefit options are generally non-elective.
4. Elective contract holder options may be more driven by economic conditions than non-elective options.
5. As the value of a product option increases, there is an increased likelihood that contract holders will behave in a manner that maximizes their financial interest (e.g., lower lapses, higher benefit utilization, etc.).
6. Behavior formulas may have both rational and irrational components (irrational behavior is defined as situations where some contract holders may not always act in their best financial interest). The rational component should be dynamic, but the concept of rationality need not be interpreted in strict financial terms and might change over time in response to observed trends in contract holder behavior based on increased or decreased financial efficiency in exercising their contractual options.
7. Options that are ancillary to the primary product features may or may not be significant drivers of behavior. Whether an option is ancillary to the primary product features depends on many considerations, such as:
 - a. The purpose for which the product was purchased.
 - b. Whether the option is elective or non-elective.
 - c. Whether the value of the option is well-known.
8. External influences may affect behavior.

Commented [A276]: ACLI: Think this should say "and by Section 12" in order to make it clear that Principle 3 refers only to section 1.B.

Commented [VM22285R284]: Edits added to address

Deleted: is

B. Aggregate vs. Individual Margins

1. Prudent estimate assumptions are developed by applying a margin for uncertainty to the anticipated experience assumption. The issue of whether the level of the margin applied to the anticipated experience assumption is determined in aggregate or independently for each and every behavior assumption is discussed in Principle 3 in Section 1.B.

2. Although this principle discusses the concept of determining the level of margins in aggregate, it notes that the application of this concept shall be guided by evolving practice and expanding knowledge. From a practical standpoint, it may not always be possible to completely apply this concept to determine the level of margins in aggregate for all behavior assumptions.
3. Therefore, the company shall determine prudent estimate assumptions independently for each behavior (e.g., mortality, lapses and benefit utilization), using the requirements and guidance in this section and throughout these requirements, unless the company can demonstrate that an appropriate method was used to determine the level of margin in aggregate for two or more material behavior assumptions, if relevant to the risks in the product, and thus the approach will not understate the reserve.

C. Sensitivity Testing

The impact of behavior can vary by product, time period, etc. For any assumption that is not prescribed or stochastically modeled, the company shall use sensitivity testing to ensure that the assumption is set at the conservative end of the plausible range. The company shall sensitivity test:

- Surrenders.
- Partial withdrawals.
- Benefit utilization.
- ~~Account transfers.~~
- Future deposits.
- Other behavior assumptions if relevant to the risks in the product.

Commented [A286]: ACLI: Section 10.C and Section 12: Sections should be updated to reflect materiality language consistent with language adopted in APF 2021-11, if applicable. The list of assumptions should be updated to better reflect the material assumptions for fixed annuities; for example, remove account transfers and future deposits.

Commented [A287]: Academy: There appears to be an inconsistency with Section 10.D.2.a. Account transfers are required to be sensitivity tested yet they "might be ignored." The ARCWG suggest either eliminating the sensitivity requirement or changing the language in Section 10.D.2.a.

Sensitivity testing of assumptions is required and shall be more ~~appropriately~~ reflective of the risk of adverse deviations from the baseline assumption. For example, a base lapse assumption plus or minus X% across all contracts ~~may not achieve this objective.~~ A more appropriate sensitivity test in this example might be to devise parameters in a dynamic lapse formula to reflect more out-of-the-money contracts lapsing and/or more holders of in-the-money contracts persisting and eventually using the guarantee. The company should apply more caution in setting assumptions for behaviors where testing suggests that stochastic modeling results are sensitive to small changes in such assumptions. For such sensitive behaviors, the company shall use higher margins when the underlying experience is less than fully relevant and credible.

Commented [VM22288R287]: Edits added to address

Commented [A289]: Academy: The ARCWG proposes changes in this paragraph as complexity is not necessarily the goal of the sensitivity.

Commented [VM22290R289]: Edits added to address

- Deleted:** complex
- Deleted:** than,
- Deleted:** f
- Deleted:** for
- Deleted:** .

The company shall examine the results of sensitivity testing to understand the materiality of prudent estimate assumptions on the modeled reserve. The company shall update the sensitivity tests periodically as appropriate, considering the materiality of the results of the tests. The company may update the tests less frequently (but no less than every 3 years) when the tests show less sensitivity of the modeled reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

1. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.

2. Using data from prior periods.

D. Specific Considerations and Requirements

1. Within materiality considerations, the company should consider all relevant forms of contract holder behavior and persistency, including, but not limited to, the following:
 - a. Mortality (additional guidance and requirements regarding mortality is contained in Section 11).
 - b. Surrenders.
 - c. Partial withdrawals (systematic and elective).
 - d. Account transfers (switching/exchanges).
 - e. Resets/ratchets of the guaranteed amounts (automatic and elective).
 - f. Future deposits.
 - g. Income start date for the benefit utilization.
 - h. Commutation of benefit (from periodic payment to lump sum or vice versa.)

2. However, the company should exercise caution in assuming that current behavior will be indefinitely maintained. For example, it might be appropriate to test the impact of a shifting asset mix and/or consider future deposits to the extent they can reasonably be anticipated and increase the calculated amounts.

3. Normally, the underlying model assumptions would differ according to the attributes of the contract being valued. This would typically mean that contract holder behavior and persistency may be expected to vary according to such characteristics as (this is not an exhaustive list):

- a. Gender.
- b. Attained age.
- c. Issue age.
- d. Contract duration.
- e. Time to maturity.
- f. Tax status.
- g. Account value.
- h. Interest credited (current and guaranteed).
- i. Available indices.
- j. Guaranteed benefit amounts.
- k. Surrender charges, transaction fees or other contract charges.

Deleted: 2

Deleted: It may be acceptable to ignore certain items that might otherwise be explicitly modeled in an ideal world, particularly if the inclusion of such items reduces the calculated provisions. ¶

For example:¶

- a. The impact of account transfers (intra-contract index “switching”) might be ignored, unless required under the terms of the contract (e.g., automatic re-allocation/rebalancing,) or if the contract provisions incentivize the contract holders to transfer between accounts. ¶
- b. Future deposits might be excluded from the model, unless required by the terms of the contracts under consideration and then only in such cases where future premiums can reasonably be anticipated (e.g., with respect to timing and amount). ¶
- c. For some non-elective benefits (nursing home benefits for example), a zero incidence rate after the surrender charge has ended, or the cash value has depleted, may be acceptable since use of a non-zero rate could reduce the modeled reserve. ¶

Deleted: 3

Deleted: 4

I. Distribution channel.

4. Unless there is clear evidence to the contrary, behavior assumptions should be no less conservative than past experience. Margins for contract holder behavior assumptions shall assume, without relevant and credible experience or clear evidence to the contrary, that contract holders' efficiency will increase over time.

Deleted: 5
Commented [A292]: ACLI: Should have a callout here for credibility and/or materiality. Possibly covered by the 'may' in #4 above.

5. In determining contract holder behavior assumptions, the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that is similar to the business segment (i.e., other than direct experience), whether or not the segment is directly written by the company. If data from a similar business segment are used, the assumption shall be adjusted to reflect differences between the two segments. Margins shall reflect the data uncertainty associated with using data from a similar but not identical business segment.

Deleted: 6

6. Where relevant and fully credible empirical data do not exist for a given contract holder behavior assumption, the company shall set the contract holder behavior assumption to reflect the increased uncertainty such that the contract holder behavior assumption is shifted towards the conservative end of the plausible range of expected experience that serves to increase the SR. If there are no relevant data, the company shall set the contract holder behavior assumption to reflect the increased uncertainty such that the contract holder behavior assumption is at the conservative end of the range. Such adjustments shall be consistent with the definition of prudent estimate, with the principles described in Section 1.B, and with the guidance and requirements in this section.

Commented [A293]: ACLI: Why is "empirical" used here? I think this can be deleted for the sake of clarity.
Commented [VM22294R293]: To keep consistent with VM-21 for now, and since this is not a material item, will retain the same wording
Deleted: 7

7. Ideally, contract holder behavior would be modeled dynamically according to the simulated economic environment and/or other conditions. It is important to note, however, that contract holder behavior should neither assume that all contract holders act with 100% efficiency in a financially rational manner nor assume that contract holders will always act irrationally. These extreme assumptions may be used for modeling efficiency if the result is more conservative.

Deleted: 8

E. Dynamic Assumptions

1. Consistent with the concept of prudent estimate assumptions described earlier, the liability model should incorporate margins for uncertainty for all risk factors that are not stochastically modeled.
2. The company should exercise care in using static assumptions when it would be more appropriate to use a dynamic model or other scenario-dependent formulation for behavior. With due allowance for appropriate simplifications, approximations and modeling efficiency techniques, the use of dynamic models is encouraged, but not mandatory. Static assumptions that could reasonably be expected to vary according to a stochastic process, or future states of the world (especially in response to economic drivers), may require higher margins and/or signal a need for higher margins for certain other assumptions.
3. Risk factors that are modeled dynamically should encompass the plausible range of behavior consistent with the economic scenarios and other variables in the model, including the non-scenario tested assumptions. The company shall test the sensitivity of results to understand the materiality of making alternate assumptions and follow the guidance discussed above on setting assumptions for sensitive behaviors.

F. Consistency with the CTE Level

1. All behaviors (i.e., dynamic, formulaic and non-scenario tested) should be consistent with the scenarios used in the CTE calculations (generally, the top 30% of the loss distribution). To maintain such consistency, it is not necessary to iterate (i.e., successive runs of the model) in order to determine exactly which scenario results are included in the CTE measure. Rather, in light of the products being valued, the company should be mindful of the general characteristics of those scenarios likely to represent the tail of the loss distribution and consequently use prudent estimate assumptions for behavior that are reasonable and appropriate in such scenarios. For non-variable annuities, these “valuation” scenarios would typically display one or more of the following attributes:
 - a. Declining, increasing and/or volatile index values, where applicable.
 - b. Price gaps and/or liquidity constraints.
 - c. Volatile interest rates or persistently low interest rates.
2. The behavior assumptions should be logical and consistent both individually and in aggregate, especially in the scenarios that govern the results. In other words, the company should not set behavior assumptions in isolation, but give due consideration to other elements of the model. The interdependence of assumptions (particularly those governing customer behaviors) makes this task difficult and by definition requires professional judgment, but it is important that the model risk factors and assumptions:
 - a. Remain logically and internally consistent across the scenarios tested.
 - b. Represent plausible outcomes.
 - c. Lead to appropriate, but not excessive, asset requirements.
4. The company should remember that the continuum of “plausibility” should not be confined or constrained to the outcomes and events exhibited by historic experience.
5. Companies should attempt to track experience for all assumptions that materially affect their risk profiles by collecting and maintaining the data required to conduct credible and meaningful studies of contract holder behavior.

G. Additional Considerations and Requirements for Assumptions Applicable to Guaranteed Living Benefits

Experience for contracts without guaranteed living benefits may be of limited use in setting a lapse assumption for contracts with in-the-money or at-the-money guaranteed living benefits. Such experience may only be used if it is appropriate (e.g., lapse experience on contracts without a living benefit may have relevance to the early durations of contracts with living benefits) and relevant to the business.

H. Policy Loans

If policy loans are applicable for the block of business, the company shall determine cash flows for each projection interval for policy loan assets by modeling existing loan balances either explicitly or by substituting assets that are a proxy for policy loans (e.g., bonds, cash, etc.) subject to the following:

1850 M Street NW Suite 300 Washington, DC 20036 Telephone 202 223 8196 Facsimile 202 872 1948 www.actuary.org

Confidential

1. If the company substitutes assets that are a proxy for policy loans, the company must demonstrate that such substitution:
 - a. Produces reserves that are no less than those that would be produced by modeling existing loan balances explicitly.
 - b. Complies with the contract holder behavior requirements stated in Section 10.A to Section 10.G above.
2. If the company models policy loans explicitly, the company shall:
 - a. Treat policy loan activity as an aspect of contract holder behavior and subject to the requirements above in this section.
 - b. Assign loan balances either to exactly match each contract's utilization or to reflect average utilization over a model segment or sub-segments if the results are materially similar.
 - c. Model policy loan interest in a manner consistent with contract provisions and with the scenario. Include interest paid in cash as a positive policy loan cash flow in that projection interval, but do not include interest added to the loan balance as a policy loan cash flow. (The increased balance will require increased repayment cash flows in future projection intervals.)
 - d. Model policy loan principal repayments, including those that occur automatically upon death or surrender. Include policy loan principal repayments as a positive policy loan cash flow, per Section 4.A.1.h.
 - e. Model policy loan principal. Include additional policy loan principal as a negative policy loan cash flow, per Section 4.A.1.h (but do not include interest added to the loan balance as a negative policy loan cash flow).
 - f. Model any investment expenses allocated to policy loans and include them either with negative policy loan cash flows or insurance expense cash flows.

I. Non-Guaranteed Elements

Consistent with the definition in VM-01, Non-Guaranteed Elements (NGEs) are elements within a contract that affect contract costs or values and are not guaranteed or not determined at issue. NGEs consist of elements affecting contract holder costs or values that are both established and subject to change at the discretion of the insurer.

Examples of NGEs specific to non-variable annuities include but are not limited to the following: the credited rates on fixed accounts, index parameters (caps, spreads, participation rates, etc.), rider fees, rider benefit features being subject to change (rollup rates, rollup period, etc.), account value charges, and dividends under participating policies or contracts.

1. Except as noted below in Section 10.I.5, the company shall include NGE in the models to project future cash flows beyond the time the company has authorized their payment or crediting.
2. The projected NGE shall reflect factors that include, but are not limited to, the following (not all of these factors will necessarily be present in all situations):

- a. The nature of contractual guarantees.
 - b. The company's past NGE practices and established NGE policies.
 - c. The timing of any change in NGE relative to the date of recognition of a change in experience.
 - d. The benefits and risks to the company of continuing to authorize NGE.
3. Projected NGE shall be established based on projected experience consistent with how actual NGE are determined.
 4. Projected levels of NGE in the cash-flow model must be consistent with the experience assumptions used in each scenario. Contract holder behavior assumptions in the model must be consistent with the NGE assumed in the model.
 5. The company may exclude any portion of an NGE that is not based on some aspect of the contract's experience.
 6. However, if the board has guaranteed a portion of the NGE into the future, the company must model that amount. In other words, the company cannot exclude from its model any NGE that the board has guaranteed for future years, even if it could have otherwise excluded them, based on this subsection.

Drafting Note: Comments are sought for any insight into whether authorization from the board or documentation should be considered in allowing exclusion of NGEs.

7. The liability for contract holder dividends declared but not yet paid that has been established according to statutory accounting principles as of the valuation date is reported separately from the statutory reserve. The contract holder dividends that give rise to this dividend liability as of the valuation date may or may not be included in the cash-flow model at the company's option.
 - a. If the contract holder dividends that give rise to the dividend liability are not included in the cash-flow model, then no adjustment is needed to the resulting SR.
 - b. If the contract holder dividends that give rise to the dividend liability are included in the cash-flow model, then the resulting SR should be reduced by the amount of the dividend liability.
8. All projected cash flows associated with NGEs shall reflect margins for adverse deviations and estimation error in prudent estimate assumptions.

Section 11: Guidance and Requirements for Setting Prudent Estimate Mortality Assumptions

A. Overview

1. Intent

The guidance and requirements in this section apply to setting prudent estimate mortality assumptions when determining the SR. The intent is for prudent estimate mortality assumptions to be based on facts, circumstances and appropriate actuarial practice.

2. Description

Prudent estimate mortality assumptions shall be determined by first developing expected mortality curves based on either available experience or published tables. Where necessary, margins shall be applied to the experience to reflect data uncertainty. The expected mortality curves shall then be adjusted based on the credibility of the experience used to determine the expected mortality curve. Section 11.B addresses guidance and requirements for determining expected mortality curves, and Section 11.C addresses guidance and requirements for adjusting the expected mortality curves to determine prudent estimate mortality.

Finally, the credibility-adjusted tables shall be adjusted for mortality improvement (where such adjustment is permitted or required) using the guidance and requirements in Section 11.D.

3. Business Segments

For purposes of setting prudent estimate mortality assumptions, the products falling under the scope of these requirements shall be grouped into business segments with different mortality assumptions. The grouping, at a minimum, should differentiate between payout annuities or deferred annuity contracts that contain GLBs, and deferred annuity contracts with no guaranteed benefits or only GMDBs. Where appropriate, the grouping should also differentiate between segments which are known or expected to contain contract holders with sociodemographic, geographic, or health factors reasonably expected to impact the mortality assumptions for the segment (e.g., annuitants drawn from different countries, geographic areas, industry groups, or impaired lives on individually underwritten contracts such as structured settlements). The grouping should also generally follow the pricing, marketing, management and/or reinsurance programs of the company.

Guidance Note: This paragraph contemplates situations where it may be appropriate to differentiate mortality assumptions by segment or even by contract due to varying sociodemographic, geographic, or health factors. Particularly, though not exclusively, in the context of group payout annuity contracts, companies may have credible, contract-specific mortality experience data or relevant pooled data from annuitants drawn from similar industries or geographies that may be used to sub-divide inforce blocks into business segments for purposes of setting prudent estimate mortality assumptions.

For example, a company may sell group PRT contracts both to union plans in the U.S. and to private single-employer plans in another country. While both are “PRT contracts,” it would be appropriate to differentiate them for mortality assumption purposes, similar to how payout annuities vs. deferred annuities are distinguished.

4. Margin for Data Uncertainty

The expected mortality curves that are determined in Section 11.B may need to include a margin for data uncertainty. The margin could be in the form of an increase or a decrease in mortality, depending on the business segment under consideration. The margin shall be applied in a direction (i.e., increase or decrease in mortality) that results in a higher reserve. A sensitivity test may be needed to determine the appropriate direction of the provision for uncertainty to mortality. The test could be a prior year mortality sensitivity analysis of the business segment or an examination of current representative cells of the segment.

For purposes of this section, if mortality must be increased (decreased) to provide for uncertainty, the business segment is referred to as a mortality (longevity) segment.

It may be necessary, because of a change in the mortality risk profile of the segment, to reclassify a business segment from a mortality (longevity) segment to a longevity (mortality) segment to the extent compliance with this section requires such a reclassification.

B. Determination of Expected Mortality Curves

1. Experience Data

In determining expected mortality curves, the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that is similar to the business segment (i.e., other than direct experience). See Section 11.B.2 for additional considerations. Finally, if there is no data, the company shall use the applicable table, as required in Section 11.B.3.

2. Data Other Than Direct Experience

Adjustments shall be applied to the data to reflect differences between the business segments, and margins shall be applied to the adjusted expected mortality curves to reflect the data uncertainty associated with using data from a similar but not identical business segment.

To the extent the mortality of a business segment is reinsured, any mortality charges that are consistent with the company's own pricing and applicable to a substantial portion of the mortality risk also may be a reasonable starting point for the determination of the company's expected mortality curves.

3. Little or No Data Requirements

- i. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no less than:

[2021 SOA Deferred Annuity Mortality Table] with [Projection Scale G2] for individual deferred annuities that do not contain guaranteed living benefits

$$q_x^{20XX+n} = q_x^{20XX}(1 - G2_x)^n$$

Commented [CC295]: should this table be in VM-M?

Commented [VM22296R295]: Not yet – will be determined upon settling the standard projection amount calculation, in which case it would need to be added to VM-M in the future

ii. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no greater than:

- a. [The appropriate percentage (F_x) from Table 11.1 applied to the 2012 IAM Basic Mortality Table] with [Projection Scale G2] for individual payout annuity contracts and deferred annuity contracts with guaranteed living benefits

$$q_x^{2012+n} = q_x^{2012}(1 - G2_x)^n * F_x$$

- b. [1983 Table "a"] [for structured settlements or other contracts with impaired mortality]

Commented [CC297]: should this table be in VM-M?

Commented [VM22298R297]: Not yet – will be determined upon settling the standard projection amount calculation, in which case it would need to be added to VM-M in the future

- c. [1994 GAR Table] with [Projection Scale AA] [for group annuities]

$$q_x^{1994+n} = q_x^{1994}(1 - AA_x)^n$$

Commented [CC299]: should this table be in VM-M?

Commented [VM22300R299]: Not yet – will be determined upon settling the standard projection amount calculation, in which case it would need to be added to VM-M in the future

iii. For a business segment with non-U.S. insureds, when little or no experience or information is available on a business segment, an established industry or national mortality table and mortality improvement scale may be used, with approval from the domiciliary commissioner.

4. Additional Considerations Involving Data

The following considerations shall apply to mortality data specific to the business segment for which assumptions are being determined (i.e., direct data discussed in Section 11.B.1 or other than direct data discussed in Section 11.B.2).

a. Underreporting of Deaths

Mortality data shall be examined for possible underreporting of deaths. Adjustments shall be made to the data if there is any evidence of underreporting. Alternatively, exposure by lives or amounts on contracts for which death benefits were in the money may be used to determine expected mortality curves. Underreporting on such exposures should be minimal; however, this reduced subset of data will have less credibility.

b. Experience by Contract Duration

Experience of a ~~mortality~~ segment shall be examined to determine if mortality by contract duration increases materially due to selection at issue. In the absence of information, the company shall assume that expected mortality will increase by contract duration for an appropriate select period. As an alternative, if the company determines that mortality is affected by selection, the company could apply margins to the expected mortality in such a way that the actual mortality modeled does not depend on contract duration.

Commented [VM22302R301]: Edits added to address
~~Deleted: plus~~
~~Deleted: plus~~

c. Modification and Relevance of Data

Even for a large company, the quantity of life exposures and deaths are such that a significant amount of smoothing may be required to determine expected mortality curves from mortality experience. Expected mortality curves, when applied to the recent historic exposures (e.g., three to seven years), should not

result in an estimate of aggregate number of deaths less (greater) than the actual number deaths during the exposure period for ~~mortality~~ (longevity) segments.

In determining expected mortality curves (and the credibility of the underlying data), older data may no longer be relevant. The “age” of the experience data used to determine expected mortality curves should be documented.

d. Other Considerations

In determining expected mortality curves, consideration should be given to factors that include, but are not limited to, trends in mortality experience, trends in exposure, volatility in year-to-year A/E mortality ratios, mortality by lives relative to mortality by amounts, changes in the mix of business and product features that could lead to mortality selection.

Commented [CC303]: s/b “mortality (longevity)” segments

Commented [VM22304R303]: Edits added to address

Deleted: plus (minus)

Deleted: plus

Deleted: minus

C. Adjustment for Credibility to Determine Prudent Estimate Mortality

1. Adjustment for Credibility

The expected mortality curves determined in Section 11.B shall be adjusted based on the credibility of the experience used to determine the curves in order to arrive at prudent estimate mortality. The adjustment for credibility shall result in blending the expected mortality curves including margins for uncertainty with the mortality assumptions described in Section 11.B.3. The approach used to adjust the curves shall suitably account for credibility.

Guidance Note: For example, when credibility is zero, an appropriate approach should result in a mortality assumption consistent with 100% of the industry mortality assumption described in Section 11.B.3 used in the blending.

2. Adjustment of Industry Mortality for Improvement

For purposes of the adjustment for credibility, the industry mortality table for a ~~mortality~~ segment may be and the industry mortality table for a ~~longevity~~ segment must be adjusted for mortality improvement. Such adjustment shall reflect the mortality improvement scale described in Section 11.B.3 from the effective date of the respective industry mortality table to the experience weighted average date underlying the data used to develop the expected mortality curves.

Commented [VM22306R305]: Edits added to address

Deleted: plus

Deleted: plus

Commented [VM22308R307]: Edits added to address

Deleted: minus

Deleted: minus

3. Credibility Procedure

The credibility procedure used shall:

- a. Produce results that are reasonable.
- b. Not tend to bias the results in any material way.
- c. Be practical to implement.
- d. Give consideration to the need to balance responsiveness and stability.
- e. Take into account not only the level of aggregate claims but the shape of the mortality curve.

f. Contain criteria for full credibility and partial credibility that have a sound statistical basis and be appropriately applied.

4. Further Adjustment of the Credibility-Adjusted Table for Mortality Improvement

The credibility-adjusted table used for ~~mortality~~ segments may be and the credibility adjusted table used for ~~longevity~~ segments must be adjusted for mortality improvement using the applicable mortality improvement scale described in Section 11.B.3 from the experience weighted average date underlying the company experience used in the credibility process to the valuation date.

Any adjustment for mortality improvement beyond the valuation date is discussed in Section 11.D.

Deleted: minus

D. Future Mortality Improvement

The mortality assumption resulting from the requirements of Section 11.C shall be adjusted for mortality improvements beyond the valuation date if such an adjustment would serve to increase the resulting SR. If such an adjustment would reduce the SR, such assumptions are permitted, but not required. In either case, the assumption must be based on current relevant data with a margin for uncertainty (increasing assumed rates of improvement if that results in a higher reserve or reducing them otherwise).

Section 12: Other Guidance and Requirements for Assumptions

A. Overview

This section provides guidance and requirements in general for setting prudent estimate assumptions when determining either the SR or DR. It also provides specific guidance and requirements for expense assumptions.

Commented [CC313]: There really is no "DR"
Commented [VM22314R313]: DR added for clarification in 7.E

B. General Assumption Requirements

1. The company shall use prudent estimate assumptions for risk factors that are not stochastically modeled by applying margins to the anticipated experience assumptions if such risk factors have been categorized as material risks by following Section 1.B Principle 3 and requirements in Section 12.C.
2. The company shall establish the prudent estimate assumptions for risk factors in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.
3. The company shall model the following risk factors stochastically unless the company elects the stochastic exclusion test defined in Section 7:
 - a. Interest rate movements (i.e., Treasury interest rate curves).
 - b. Equity performance (e.g., Standard & Poor's 500 index [S&P 500] returns and returns of other equity investments).
4. If the company elects to stochastically model risk factors in addition to the economic scenarios, the requirements in this section for determining prudent estimate assumptions for these risk factors do not apply.

Commented [VM22315]: Reference update
Deleted: modeling

It is expected that companies will not stochastically model risk factors other than the economic scenarios, such as contract holder behavior or mortality, until VM-22 has more specific guidance and requirements available. Companies shall discuss with domiciliary regulators if they wish to stochastically model other risk factors.

Deleted: Guidance Note:

5. The company shall use its own experience, if relevant and credible, to establish an anticipated experience assumption for any risk factor. To the extent that company experience is not available or credible, the company may use industry experience or other data to establish the anticipated experience assumption, making modifications as needed to reflect the circumstances of the company.
 - a. For risk factors (such as mortality) to which statistical credibility theory may be appropriately applied, the company shall establish anticipated experience assumptions for the risk factor by combining relevant company experience with industry experience data, tables or other applicable data in a manner that is consistent with credibility theory and accepted actuarial practice.
 - b. For risk factors (such as utilization of guaranteed living benefits) that do not lend themselves to the use of statistical credibility theory, and for risk

factors (such as some of the lapse assumptions) to which statistical credibility theory can be appropriately applied but cannot currently be applied due to lack of industry data, the company shall establish anticipated experience assumptions in a manner that is consistent with accepted actuarial practice and that reflects any available relevant company experience, any available relevant industry experience, or any other experience data that are available and relevant. Such techniques include:

- i. Adopting standard assumptions published by professional, industry or regulatory organizations to the extent they reflect any available relevant company experience or reasonable expectations.
 - ii. Applying factors to relevant industry experience tables or other relevant data to reflect any available relevant company experience and differences in expected experience from that underlying the base tables or data due to differences between the risk characteristics of the company experience and the risk characteristics of the experience underlying the base tables or data.
 - iii. Blending any available relevant company experience with any available relevant industry experience and/or other applicable data using weightings established in a manner that is consistent with accepted actuarial practice and that reflects the risk characteristics of the underlying contracts and/or company practices.
- c. For risk factors that have limited or no experience or other applicable data to draw upon, the assumptions shall be established using sound actuarial judgment and the most relevant data available, if such data exists. _____
 - d. For any assumption that is set in accordance with the requirements of Section 12.B.5.c, the qualified actuary to whom responsibility for this group of contracts is assigned shall use sensitivity testing and disclose the analysis performed to ensure that the assumption is set at the conservative end of the plausible range.
 - e. The qualified actuary, to whom responsibility for this group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of statistical or other testing indicate that previously anticipated experience for a given factor is inadequate, then the qualified actuary shall set a new, adequate, anticipated experience assumption for the factor.
6. The company shall sensitivity test material risk factors that are not stochastically modeled and examine the impact on the stochastic reserve. The company shall update the sensitivity tests periodically as appropriate. The company may update the tests less frequently, but no less than every 3 years, when the tests show less sensitivity of the stochastic reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

- a. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.
- b. Using data from prior periods.

Guidance Note: Sensitivity testing every risk factor on an annual basis is not required. For some risk factors, it may be reasonable, in lieu of sensitivity testing, to employ statistical measures for margins, such as adding one or more standard deviations to the anticipated experience assumption.

- 7. The company shall vary the prudent estimate assumptions from scenario to scenario within the stochastic reserve calculation in an appropriate manner to reflect the scenario-dependent risks.

C. Assumption Margins

The company shall include margins to provide for adverse deviations and estimation error in the prudent estimate assumptions for ~~all risk factors that are~~ not stochastically modeled or prescribed, subject to the following:

Deleted: each

Deleted: is

- 1. The level of margin applied to the anticipated experience assumptions may be determined in aggregate or independently as discussed in Section 1.B Principle 3. It is not permissible to set a margin less toward the conservative end of the spectrum to recognize, in whole or in part, implicit or prescribed margins that are present, or are believed to be present, in other risk factors.

Risks that are stochastically modeled (e.g., interest rates, equity returns) or have prescribed margins or guardrails (e.g., assets, revenue sharing) shall be considered material risks. Other risks generally considered to be material include, but are not limited to, mortality, contract holder behavior, maintenance and overhead expenses, inflation and implied volatility. In some cases, the list of material risks may also include acquisition expenses, partial withdrawals, policy loans, annuitizations, account transfers and deposits, and/or option elections that contain an element of anti-selection.

- 2. The greater the uncertainty in the anticipated experience assumption, the larger the required margin, with the margin added or subtracted as needed to produce a larger ~~Sr or DR than would otherwise result. For example, the company shall use a larger margin when:~~

Commented [CC316]: s/b "SR" and there really is no "DR"

- a. The experience data have less relevance or lower credibility.
- b. The experience data are of lower quality, such as incomplete, internally inconsistent or not current.
- c. There is doubt about the reliability of the anticipated experience assumption, such as, but not limited to, recent changes in circumstances or changes in company policies.
- d. There are constraints in the modeling that limit an effective reflection of the risk factor.

- 3. In complying with the sensitivity testing requirements in Section 12.B.6 above, greater analysis and more detailed justification are needed to determine the level

of uncertainty when establishing margins for risk factors that produce greater sensitivity on the stochastic reserve.

4. A margin is permitted but not required for assumptions that do not represent material risks.
5. A margin should reflect the magnitude of fluctuations in historical experience of the company for the risk factor, as appropriate.
6. The company shall apply the method used to determine the margin consistently on each valuation date but is permitted to change the method from the prior year if the rationale for the change and the impact on the stochastic reserve is disclosed.

D. Expense Assumptions

1. General Prudent Estimate Expense Assumption Requirements

In determining prudent estimate expense assumptions, the company:

- a. May spread certain information technology development costs and other capital expenditures over a reasonable number of years in accordance with accepted statutory accounting principles as defined in the Statements of Statutory Accounting Principles.

Guidance Note: Care should be taken with regard to the potential interaction with the inflation assumption below.

- b. Shall assume that the company is a going concern.
- c. Shall choose an appropriate expense basis that properly aligns the actual expense to the assumption. If values are not significant, they may be aggregated into a different base assumption.

Guidance Note: For example, death benefit expenses should be modeled with an expense assumption that is per death incurred.

- d. Shall reflect the impact of inflation.
- e. Shall not assume future expense improvements.
- f. Shall not include assumptions for federal income taxes (and expenses paid to provide fraternal benefits in lieu of federal income taxes) and foreign income taxes.
- g. Shall use assumptions that are consistent with other related assumptions.
- h. Shall use fully allocated expenses.

Guidance Note: Expense assumptions should reflect the direct costs associated with the block of contracts being modeled, as well as indirect costs and overhead costs that have been allocated to the modeled contracts.

- i. Shall allocate expenses using an allocation method that is consistent across company lines of business. Such allocation must be determined in a manner that is within the range of actuarial practice and methodology and consistent with applicable ASOPs. Allocations may not be done for the purpose of decreasing the stochastic reserve.
- j. Shall reflect expense efficiencies that are derived and realized from the combination of blocks of business due to a business acquisition or merger in the expense assumption only when any future costs associated with achieving the efficiencies are also recognized.

Guidance Note: For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

- k. Shall reflect the direct costs associated with the contracts being modeled, as well as an appropriate portion of indirect costs and overhead (i.e., expense assumptions representing fully allocated expenses should be used), including expenses categorized in the annual statement as “taxes, licenses and fees” (Exhibit 3 of the annual statement) in the expense assumption.
- l. Shall include acquisition expenses associated with business in force as of the valuation date and significant non-recurring expenses expected to be incurred after the valuation date in the expense assumption.
- m. For contracts sold under a new policy form or due to entry into a new product line, the company shall use expense factors that are consistent with the expense factors used to determine anticipated experience assumptions for contracts from an existing block of mature contracts taking into account:
 - i. Any differences in the expected long-term expense levels between the block of new contacts and the block of mature contracts.
 - ii. That all expenses must be fully allocated as required under Section 12.D.1.h above.

2. Margins for Prudent Estimate Expense Assumptions

The company shall determine margins for expense assumptions following Section 12.C.

Section 13: Allocation of Aggregate Reserves to the Contract Level

Section 3.F states that the aggregate reserve shall be allocated to the contracts falling within the scope of these requirements. That allocation should be done for both the pre- and post-reinsurance ceded reserves. Contracts that have passed the stochastic exclusion test as defined in Section 7.B will not be included in the allocation of the aggregate reserve; however, contracts for which the Deterministic Certification Option is elected in Section 7.E are subject to the allocation methodology described in this Section 13. Allocation calculations shall be done separately for the DR and SR, and for different reserving categories.

Under the allocation methodology described in this section, the reserve held for any contract will be no less than the cash surrender value provided under that contract, after consideration of any reinsurance. Additionally, the reserve held for a Payout Annuity contract (whether life-contingent or not) will be no less than the present value of the liability cash flows provided under the contract, after consideration of any reinsurance, discounted using the NAER described in Section 13.B.1 or 13.B.2 as applicable. The allocation methodology is a formulaic approach that is designed, generally, to allocate the excess aggregate reserves based on a measure of the risk and, therefore, to generally allocate a greater portion of the excess aggregate reserves to contracts that have greater risk. For example, an indexed annuity contract with a high benefit GLWB will typically have a larger allocated excess reserve than an otherwise identical indexed annuity contract with a low benefit GLWB or no GLWB.

A. The contract-level reserve for each contract shall be the sum of the following:

1. The contract's minimum allocation value (MAV), as defined in Section 13.C.
2. The contract's allocated excess reserve (AER), as defined in Section 13.D.

B. Scenario actuarial present value (APV)

1. For a group of contracts for which a company does not elect the Deterministic Certification Option in Section 7.E, the Scenario APV for each contract is equal to the discounted liability cash flows at the NAER, pursuant to requirements in Section 4, for the scenario that produces the aggregate scenario reserve for the group that is closest to, but not greater than the SR defined in Section 3.D.

If the Direct Iteration Method is used to satisfy the requirements in Section 4.B.1, then the company shall:

- a. Determine a path of NAER for each model segment that reflects the net general account portfolio rate in each projection interval (i.e., monthly, quarterly, annually), which will depend primarily on:
 - i. Projected net investment earnings from the portfolio of starting assets.
 - ii. Pattern of projected asset cash flows from the starting assets and subsequent reinvestment assets.
 - iii. Pattern of net liability cash flows.
 - iv. Projected net investment earnings from reinvestment assets.
- b. The company shall calculate the NAER as the ratio of net investment earnings divided by invested assets subject to the requirements in 1 through 4 below. All items reflected in the ratio are consistent with statutory asset valuation and accrual accounting, including reflection of due, accrued or unearned investment income

Commented [CC329]: this is a dangling subsection "a", there is no subsection "b" What if the Direct Iteration Method is not used?

Commented [VM22330R329]: Edits added to address – clarify that the first paragraph above is for non-Direct Iteration Method

Commented [A331]: ACLI: Should be "1 through 4 below"

Commented [VM22332R331]: Edits added to address

Commented [CC333]: there is no "a through e below"

Commented [VM22334R333]: Edits added to address

Deleted: a

Deleted: e

where appropriate.

- i. The NAER for each projection interval is calculated in a manner that is consistent with the timing of cash flows and length of the projection interval of the related cash-flow model.
- ii. Net investment earnings include:
 1. Gross investment income plus capital gains and losses, minus prescribed default costs, and minus investment expenses.
 2. Income from derivative asset programs, subject to the requirements in Sections 4 and 9 of VM-22.
- iii. Invested assets are determined in a manner that is consistent with the timing of cash flows within the cash-flow model and the length of the projection interval of the cash-flow model.
- iv. The annual statement value of derivative instruments or a reasonable approximation thereof is in invested assets.

Drafting Note: The above NAER guidance is in line with the VM-20 NAER methodology, rather than the VM-21/VM-22 NAER methodology under an additional invested asset portfolio. During the exposure period, interested parties are encouraged to provide any feedback on the appropriateness of this approach.

2. For a group of contracts for which a company elects the Deterministic Certification Option defined in Section 7.E, the Scenario APV for each contract is equal to the discounted liability cash flows at the NAER in the single scenario used to calculate the reserve.
 3. For projecting future liability cash flows under either Section 13.B.1 or 13.B.2, as applicable, assume the same liability assumptions that were used to calculate the SR defined in Section 3.D.
- C. Minimum allocation value (MAV)
1. For Payout Annuity contracts, the MAV is equal to the greater of:
 - a. The Scenario APV for the contract, or
 - b. The cash surrender value provided under the contract, if any.
 2. For Account Value Based Annuity contracts, the MAV is equal to the cash surrender value provided under the contract, if any, otherwise zero.
- D. Allocated excess reserve (AER)
1. For each contract in a group of contracts, the AER is determined by allocating the excess, if any, of the group's aggregate reserve over the group's aggregate MAV to the contract in proportion to the excess of the Scenario APV over the MAV for such contract.

2. If the Scenario APV for any contract is less than the MAV, then the excess Scenario APV to be used for allocating the excess aggregate reserve to that contract shall be floored at zero.
 3. If all contracts in the group have an excess Scenario APV that is floored at zero, then use the MAV to allocate any excess aggregate reserve over the aggregate MAV.
 4. If a group's aggregate reserve is less than the group's aggregate MAV, that difference should be allocated to life contingent contracts in proportion to each life contingent contract's MAV to the sum of the life contingent contracts MAV.
- E. As a hypothetical example, consider a company with the results of the following eight contracts in reserving categories:

Table 13.1.A: Hypothetical Sample Allocation of Aggregate Reserve: Group A, Account Value Based Annuity Contracts

Contract	Example Product Type	CSV (1)	Scenario APV (2)	Minimum Allocation Value (MAV) (3) *	Excess	Aggregate Reserve (5)	Excess of	Allocated	Total Contract Reserve (8) = (3)+(7)
					of Scenario APV over MAV (4) = Max[(2)-(3),0]		Aggregate Reserve over Aggregate MAV (6) = Max[(5 Total) - (3 Total),0]	Excess Reserve (7) = (4) x [(6 Total)/(4 Total)]	
1	Individual annuity w/ no GLWB	95.0	91.0	95.0	-			-	95.0
2	Indexed annuity w/ low benefit GLWB	92.0	98.0	92.0	6.0			6.3	98.3
3	Indexed annuity w/ medium benefit GLWB	90.0	104.0	90.0	14.0			14.7	104.7
4	Indexed annuity w/ high benefit GLWB	88.0	111.0	88.0	23.0			24.1	112.1
Total		365.0	404.0	365.0	43.0	410.0	45.0	45.0	410.0

* MAV for Payout Annuity contracts equals Max[(1), (2)]. MAV for Account Value Based Annuity contracts equals (1) if any, otherwise zero.

Commented [CC335]: s/b Table 13.1.A
Commented [VM22336R335]: Edits added to address
Deleted: 12
Deleted: 2

Table 13.1.B: Hypothetical Sample Allocation of Aggregate Reserve: Group B, Payout Annuity Contracts that do not have Cash Surrender Values

Commented [CC337]: s/b Table 13.1.B
Commented [VM22338R337]: Edits added to address
Deleted: 12
Deleted: 2

Contract	Example Product Type	CSV (1)	Scenario APV (2)	Minimum Allocation Value (MAV) (3) *	Excess (floored) of Scenario APV over MAV (4) = Max[(2)-(3),0]	Aggregate Reserve CTE 70 (5)	Excess of Aggregate Reserve over Aggregate MAV (6) = Max[(5 Total) -(3 Total),0]	Allocated Excess Reserve (7) = (3) x [(6 Total)/ (3 Total)] **	Total Contract Level Reserve (8) = (3)+(7)
1	Fixed Life Contingent payout annuity	-	91.0	91.0	-			1.4	92.4
2	Fixed Life Contingent payout annuity	-	111.0	111.0	-			1.6	112.6
3	Fixed Non-life Contingent payout annuity	-	98.0	98.0	-			1.5	99.5
4	Fixed Non-life Contingent payout annuity	-	104.0	104.0	-			1.5	105.5
Total		-	404.0	404.0	-	410.0	6.0	6.0	410.0
* MAV for Payout Annuity contracts equals Max[(1), (2)]. MAV for Account Value Based Annuity contracts equals (1) if any, otherwise zero.									
** Because all contracts have an excess Scenario APV of 0, the AER is allocated in proportion to MAV.									

Guidance Note: The Scenario actuarial present value (APV) in the section above is separate from the Guarantee Actuarial Present Value (GAPV) referred to in the additional standard projection amount calculation in VM-21. The GAPV is only applicable to guaranteed minimum benefits and uses prescribed liability assumptions. In contrast, the Scenario APV in this section applies to the entire contract, irrespective of whether guaranteed benefits are attached, and uses company prudent estimate liability assumptions.

VM-V: Statutory Maximum Valuation Interest Rates for Formulaic Reserves

1. Income Annuities

A. Purpose and Scope

1. These requirements define for single premium immediate annuity contracts and other similar contracts, certificates and contract features the statutory maximum valuation interest rate that complies with Model #820. These are the maximum interest rate assumption requirements to be used in the CARVM and for certain contracts, the CRVM. These requirements do not preclude the use of a lower valuation interest rate assumption by the company if such assumption produces statutory reserves at least as great as those calculated using the maximum rate defined herein.
2. The following categories of contracts, certificates and contract features, whether group or individual, including both life contingent and term certain only contracts, directly written or assumed through reinsurance, with the exception of benefits arising from variable annuities and all contracts not passing the SET covered by Sections 1 through 13 of VM-22, are covered in VM-V:
 - a. Immediate annuity contracts issued after Dec. 31, 2017;
 - b. Deferred income annuity contracts issued after Dec. 31, 2017;
 - c. Structured settlements in payout or deferred status issued after Dec. 31, 2017;
 - d. Fixed payout annuities resulting from the exercise of settlement options or annuitizations of host contracts issued after Dec. 31, 2017;
 - e. Fixed payout annuities resulting from the exercise of settlement options or annuitizations of host contracts issued during 2017, for fixed payouts commencing after Dec. 31, 2018, or, at the option of the company, for fixed payouts commencing after Dec. 31, 2017;
 - f. Supplementary contracts, excluding contracts with no scheduled payments (such as retained asset accounts and settlements at interest), issued after Dec. 31, 2017;
 - g. Fixed income payment streams, attributable to contingent deferred annuities (CDAs) issued after Dec. 31, 2017, once the underlying contract funds are exhausted;
 - h. Fixed income payment streams attributable to guaranteed living benefits associated with deferred annuity contracts issued after Dec. 31, 2017, once the contract funds are exhausted; and
 - i. Certificates with premium determination dates after Dec. 31, 2017, emanating from non-variable group annuity contracts specified in Model #820, Section 5.C.2, purchased for the purpose of providing certificate holders benefits upon their retirement.

Guidance Note: For VM-V Section 1.A.2.d, Section 1.A.2.e, Section 1.A.2.f and Section 1.A.2.h above, there is no restriction on the type of contract that may give rise to the benefit.

3. Exemptions:

- a. With the permission of the domiciliary commissioner, for the categories of annuity contracts, certificates and/or contract features in scope as outlined in VM-V Section 1.A.2.d, Section 1.A.2.e, Section 1.A.2.f, Section 1.A.2.g or Section 1.A.2.h, the company may use the same maximum valuation interest rate used to value the payment stream in accordance with the guidance applicable to the host contract. In order to obtain such

permission, the company must demonstrate that its investment policy and practices are consistent with this approach.

4. The maximum valuation interest rates for the contracts, certificates and contract features within the scope of VM-V Section 1 supersede those described in Appendix VM-A and Appendix VM-C, but they do not otherwise change how those appendices are to be interpreted. In particular, *Actuarial Guideline IX-B—Clarification of Methods Under Standard Valuation Law for Individual Single Premium Immediate Annuities, Any Deferred Payments Associated Therewith, Some Deferred Annuities and Structured Settlements Contracts* (AG-9-B) (see VM-C) provides guidance on valuation interest rates and is, therefore, superseded by these requirements for contracts, certificates and contract features in scope. Likewise, any valuation interest rate references in *Actuarial Guideline IX-C—Use of Substandard Annuity Mortality Tables in Valuing Impaired Lives Under Individual Single Premium Immediate Annuities* (AG-9-C) (see VM-C) are also superseded by these requirements.

B. Definitions

1. The term “reference period” means the length of time used in assigning the Valuation Rate Bucket for the purpose of determining the statutory maximum valuation interest rate and is determined as follows:
 - a. For contracts, certificates or contract features with life contingencies and substantially similar payments, the reference period is the length of time, rounded to the nearest year, from the premium determination date to the earlier of: i) the date of the last non-life-contingent payment under the contract, certificate or contract feature; and ii) the date of the first life-contingent payment under the contract, certificate or contract feature, or
 - b. For contracts, certificates or contract features with no life-contingent payments and substantially similar payments, the reference period is the length of time, rounded to the nearest year, from the premium determination date to the date of the last non-life-contingent payment under the contract, certificate or contract feature, or
 - c. For contracts, certificates or contract features where the payments are not substantially similar, the actuary should apply prudent judgment and select the Valuation Rate Bucket with Macaulay duration that is a best fit to the Macaulay duration of the payments in question.

Guidance Note: Contracts with installment refunds or similar features should consider the length of the installment period calculated from the premium determination date as the non-life contingent period for the purpose of determining the reference period.

Guidance Note: The determination in VM-V Section 1.B.1.c above shall be made based on the materiality of the payments that are not substantially similar relative to the life-contingent payments.

2. The term “jumbo contract” means a contract with an initial consideration equal to or greater than \$250 million. Considerations for contracts issued by an insurer to the same contract holder within 90 days shall be combined for purposes of determining whether the contracts meet this threshold.

Guidance Note: If multiple contracts meet this criterion in aggregate, then each contract is a jumbo contract.

3. The term “non-jumbo contract” means a contract that does not meet the definition of a jumbo

contract.

4. The term “premium determination date” means the date as of which the valuation interest rate for the contract, certificate or contract feature being valued is determined.
5. The term “initial age” means the age of the annuitant as of his or her age last birthday relative to the premium determination date. For joint life contracts, certificates or contract features, the “initial age” means the initial age of the younger annuitant. If a contract, certificate or contract feature for an annuitant is being valued on a standard mortality table as an impaired annuitant, “initial age” means the rated age. If a contract, certificate or contract feature is being valued on a substandard mortality basis, “initial age” means an equivalent rated age.
6. The term “Table X spreads” means the prescribed VM-V Section 1 current market benchmark spreads for the quarter prior to the premium determination date, as published on the Industry tab of the NAIC website. The process used to determine Table X spreads is the same as that specified in VM-20 Appendix 2.D for Table F, except that JP Morgan and Bank of America bond spreads are averaged over the quarter rather than the last business day of the month.
7. The term “expected default cost” means a vector of annual default costs by weighted average life. This is calculated as a weighted average of the VM-20 Table A prescribed annual default costs published on the Industry tab of the NAIC website in effect for the quarter prior to the premium determination date, using the prescribed portfolio credit quality distribution as weights.
8. The term “expected spread” means a vector of spreads by weighted average life. This is calculated as a weighted average of the Table X spreads, using the prescribed portfolio credit quality distribution as weights.
9. The term “prescribed portfolio credit quality distribution” means the following credit rating distribution:
 - a. 5% Treasuries
 - b. 15% Aa bonds (5% Aa1, 5% Aa2, 5% Aa3)
 - c. 40% A bonds (13.33% A1, 13.33% A2, 13.33% A3)*
 - d. 40% Baa bonds (13.33% Baa1, 13.33% Baa2, 13.33% Baa3)*

*40%/3 is used unrounded in the calculations.

C. Determination of the Statutory Maximum Valuation Interest Rate

1. Valuation Rate Buckets

- a. For the purpose of determining the statutory maximum valuation interest rate, the contract, certificate or contract feature being valued must be assigned to one of four Valuation Rate Buckets labeled A through D.
- b. If the contract, certificate or contract feature has no life contingencies, the Valuation Rate Bucket is assigned based on the length of the reference period (RP), as follows:

Table 1.C-1: Assignment to Valuation Rate Bucket by Reference Period Only

Commented [CC339]: all tables 3-1 through 3-4 below should be renumbered to correspond to VM-V Section 1.C

Commented [VM22340R339]: Edits added to address

Deleted: 3-

Deleted: 3

RP ≤ 5 Years	5Y < RP ≤ 10Y	10Y < RP ≤ 15Y	RP > 15Y
A	B	C	D

c. If the contract, certificate or contract feature has life contingencies, the Valuation Rate Bucket is assigned based on the length of the RP and the initial age of the annuitant, as follows:

Table 1.C-2: Assignment to Valuation Rate Bucket by Reference Period and Initial Age

Deleted: 3

Initial Age	RP ≤ 5Y	5Y < RP ≤ 10Y	10Y < RP ≤ 15Y	RP > 15Y
90+	A	B	C	D
80-89	B	B	C	D
70-79	C	C	C	D
< 70	D	D	D	D

2. Premium Determination Dates

a. The following table specifies the decision rules for setting the premium determination date for each of the contracts, certificates and contract features listed in Section 1.A:

Commented [CC341]: s/b Section 1.A

Commented [VM22342R341]: Edits added to address

Table 1.C-3: Premium Determination Dates

Deleted: 3

Section	Item Description	Premium determination date
A.2.a	Immediate annuity	Date consideration is determined and committed to by contract holder
A.2.b	Deferred income annuity	Date consideration is determined and committed to by contract holder
A.2.c	Structured settlements	Date consideration is determined and committed to by contract holder
A.2.d and A.2.e	Fixed payout annuities resulting from settlement options or annuitizations from host contracts	Date consideration for benefit is determined and committed to by contract holder
A.2.f	Supplementary contracts	Date of issue of supplementary contract
A.2.g	Fixed income payment streams from CDAs, AV becomes 0	Date on which AV becomes 0
A.2.h	Fixed income payment streams from guaranteed living benefits, AV becomes 0	Date on which AV becomes 0

A.2.i	Group annuity and related certificates	Date consideration is determined and committed to by contract holder
-------	--	--

Guidance Note: For the purposes of the items in the table above, the phrase “date consideration is determined and committed to by the contract holder” should be interpreted by the company in a manner that is consistent with its standard practices. For some products, that interpretation may be the issue date or the date the premium is paid.

b. Immaterial Change in Consideration

If the premium determination date is based on the consideration, and if the consideration changes by an immaterial amount (defined as a change in present value of less than 10% and less than \$1 million) subsequent to the original premium determination date, such as due to a data correction, then the original premium determination date shall be retained. In the case of a group annuity contract where a single premium is intended to cover multiple certificates, certificates added to the contract after the premium determination date that do not trigger the company’s right to reprice the contract shall be treated as if they were included in the contract as of the premium determination date.

3. Statutory Maximum Valuation Interest Rate

- a. For a given contract, certificate or contract feature, the statutory maximum valuation interest rate is determined based on its assigned Valuation Rate Bucket (VM-V Section 1.C.1) and its Premium Determination Date (VM-V Section 1.C.2) and whether the contract associated with it is a jumbo contract or a non-jumbo contract.
- b. Statutory maximum valuation interest rates for jumbo contracts are determined and published daily by the NAIC on the Industry tab of the NAIC website. For a given premium determination date, the statutory maximum valuation interest rate is the daily statutory maximum valuation interest rate published for that premium determination date.
- c. Statutory maximum valuation interest rates for non-jumbo contracts are determined and published quarterly by the NAIC on the Industry tab of the NAIC website by the third business day of the quarter. For a given premium determination date, the statutory maximum valuation interest rate is the quarterly statutory maximum valuation interest rate published for the quarter in which the premium determination date falls.
- d. Quarterly Valuation Rate:

For each Valuation Rate Bucket, the quarterly valuation rate is defined as follows:

$$I_q = R + S - D - E$$

Where:

- a. R is the reference rate for that Valuation Rate Bucket (defined in VM-V Section 1.C.4);
- b. S is the spread rate for that Valuation Rate Bucket (defined in VM-V Section 1.C.5);

- c. D is the default cost rate for that Valuation Rate Bucket (defined in VM-V Section 1.C.6);
- and
- d. E is the spread deduction defined as 0.25%.

For non-jumbo contracts, the quarterly statutory maximum valuation interest rate is the quarterly valuation rate (I_q) rounded to the nearest one-fourth of one percent (1/4 of 1%).

e. Daily Valuation Rate:

For each Valuation Rate Bucket, the daily valuation rate is defined as follows:

$$I_d = I_q + C_{d-1} - C_q$$

Where:

- a. I_q is the quarterly valuation rate for the calendar quarter preceding the business day immediately preceding the premium determination date;
- b. C_{d-1} is the daily corporate rate (defined in VM-V Section 1.C.7) for the business day immediately preceding the premium determination date; and
- c. C_q is the average daily corporate rate (defined in VM-V Section 1.C.8) corresponding to the same period used to develop I_q .

For jumbo contracts, the daily statutory maximum valuation interest rate is the daily valuation rate (I_d) rounded to the nearest one-hundredth of one percent (1/100 of 1%).

4. Reference Rate

Reference rates are updated quarterly as described below:

- a. The “quarterly Treasury rate” is the average of the daily Treasury rates for a given maturity over the calendar quarter prior to the premium determination date. The quarterly Treasury rate is downloaded from <https://fred.stlouisfed.org>, and is rounded to two decimal places.
- b. Download the quarterly Treasury rates for two-year, five-year, 10-year and 30-year U.S. Treasuries.
- c. The reference rate for each Valuation Rate Bucket is calculated as the weighted average of the quarterly Treasury rates using Table 1 weights (defined in VM-V Section 1.C.9) effective for the calendar year in which the premium determination date falls.

5. Spread

The spreads for each Valuation Rate Bucket are updated quarterly as described below:

- a. Use the Table X spreads from the NAIC website for WALs two, five, 10 and 30 years only to calculate the expected spread.

Commented [CC343]: In VM-22 there is a similar paragraph on rounding for the Quarterly Valuation Rate above. It appears that this paragraph was inadvertently dropped.

Commented [VM22344R343]: Edits added to address

- b. Calculate the spread for each Valuation Rate Bucket, which is a weighted average of the expected spreads for WALs two, five, 10 and 30 using Table 2 weights (defined in Section 3.I) effective for the calendar year in which the premium determination date falls.

6. Default costs for each Valuation Rate Bucket are updated annually as described below:

- a. Use the VM-20 prescribed annual default cost table (Table A) in effect for the quarter prior to the premium determination date for WAL two, WAL five and WAL 10 years only to calculate the expected default cost. Table A is updated and published annually on the Industry tab of the NAIC website during the second calendar quarter and is used for premium determination dates starting in the third calendar quarter.
- b. Calculate the default cost for each Valuation Rate Bucket, which is a weighted average of the expected default costs for WAL two, WAL five and WAL 10, using Table 3 weights (defined in VM-V Section 1.C.9) effective for the calendar year in which the premium determination date falls.

7. Daily Corporate Rate

Daily corporate rates for each valuation rate bucket are updated daily as described below:

- a. Each day, download the Bank of America Merrill Lynch U.S. corporate effective yields as of the previous business day's close for each index series shown in the sample below from the St. Louis Federal Reserve website: <https://research.stlouisfed.org/fred2/categories/32348>. To access a specific series, search the St. Louis Federal Reserve website for the series name by inputting the name into the search box in the upper right corner, or input the following web address: [https://research.stlouisfed.org/fred2/series/\[replace with series name from the table below\]](https://research.stlouisfed.org/fred2/series/[replace with series name from the table below]).

Table 1.C.4: Index Series Names

Deleted: 3

Maturity	Series Name
1Y – 3Y	BAMLC1A0C13YEY
3Y – 5Y	BAMLC2A0C35YEY
5Y – 7Y	BAMLC3A0C57YEY
7Y – 10Y	BAMLC4A0C710YEY
10Y – 15Y	BAMLC7A0C1015YEY
15Y+	BAMLC8A0C15PYEY

- b. Calculate the daily corporate rate for each valuation rate bucket, which is a weighted average of the Bank of America Merrill Lynch U.S. corporate effective yields, using Table 4 weights (defined in VM-V Section 1.C.9) effective for the calendar year in which the business date immediately preceding the premium determination date falls.

8. Average Daily Corporate Rate

Average daily corporate rates are updated quarterly as described below:

- a. Download the quarterly average Bank of America Merrill Lynch U.S. corporate effective yields for each index series shown in Section 1.C.7.a of VM-V from the St. Louis Federal Reserve website: <https://research.stlouisfed.org/fred2/categories/32348>. To access a specific series, search the St. Louis Federal Reserve website for the series name by inputting the name into the search box in the upper right corner, or input the following web address: [https://research.stlouisfed.org/fred2/series/\[replace with series name from VM-V Section 1.C.7.a\]](https://research.stlouisfed.org/fred2/series/[replace with series name from VM-V Section 1.C.7.a]).

Commented [CC345]: s/b VM-V Section 1.C.7.a

Commented [VM22346R345]: Edits added to address

Deleted: Section 3.G.1

- b. Calculate the average daily corporate rate for each valuation rate bucket, which is a weighted average of the quarterly average Bank of America Merrill Lynch U.S. corporate effective yields, using Table 4 weights (defined in VM-V Section 1.C.9) for the same calendar year as the weight tables (i.e. Tables 1, 2, and 3) used in calculating I_t in VM-V Section 1.C.3.e.

9. Weight Tables 1 through 4

The system for calculating the statutory maximum valuation interest rates relies on a set of four tables of weights that are based on duration and asset/liability cash-flow matching analysis for representative annuities within each valuation rate bucket. A given set of weight tables is applicable to the calculations for every day of the calendar year.

In the fourth quarter of each calendar year, the weights used within each valuation rate bucket for determining the applicable valuation interest rates for the following calendar year will be updated using the process described below. In each of the four tables of weights, the weights in a given row (valuation rate bucket) must add to exactly 100%.

Weight Table 1

The process for determining Table 1 weights is described below:

- a. Each valuation rate bucket has a set of representative annuity forms. These annuity forms are as follows:
- i. Bucket A:
 - a) Single Life Annuity age 91 with 0 and five-year certain periods.
 - b) Five-year certain only.
 - ii. Bucket B:
 - a) Single Life Annuity age 80 and 85 with 0, five-year and 10-year certain periods.
 - b) 10-year certain only.
 - iii. Bucket C:
 - a) Single Life Annuity age 70 with 0 and 15-year certain periods.
 - b) Single Life Annuity age 75 with 0, 10-year and 15-year certain periods.
 - c) 15-year certain only.
 - iv. Bucket D:

- a) Single Life Annuity age 55, 60 and 65 with 0 and 15-year certain periods.
- b) 25-year certain only.
- b. Annual cash flows are projected assuming annuity payments are made at the end of each year. These cash flows are averaged for each valuation rate bucket across the annuity forms for that bucket using the statutory valuation mortality table in effect for the following calendar year for individual annuities for males (ANB).
- c. The average daily rates in the third quarter for the two-year, five-year, 10-year and 30-year U.S. Treasuries are downloaded from <https://fred.stlouisfed.org> as input to calculate the present values in Step d.
- d. The average cash flows are summed into four time period groups: years 1–3, years 4–7, years 8–15 and years 16–30. (Note: The present value of cash flows beyond year 30 are discounted to the end of year 30 and included in the years 16–30 group. This present value is based on the lower of 3% and the 30-year Treasury rate input in Step c.)
- e. The present value of each summed cash-flow group in Step d is then calculated by using the Step c U.S. Treasury rates for the midpoint of that group (and using the linearly interpolated U.S. Treasury rate when necessary).
- f. The duration-weighted present value of the cash flows is determined by multiplying the present value of the cash-flow groups by the midpoint of the time period for each applicable group.
- g. Weightings for each cash-flow time period group within a valuation rate bucket are calculated by dividing the duration weighted present value of the cash flow by the sum of the duration weighted present value of cash flow for each valuation rate bucket.

Commented [CC347]: s/b Step c

Commented [VM22348R347]: Edits added to address

Deleted: 3

Deleted: 3

Weight Tables 2 through 4

Weight Tables 2 through 4 are determined using the following process:

- i. Table 2 is identical to Table 1.
- ii. Table 3 is based on the same set of underlying weights as Table 1, but the 10-year and 30-year columns are combined since VM-20 default rates are only published for maturities of up to 10 years.
- iii. Table 4 is derived from Table 1 as follows:
 - a) Column 1 of Table 4 is identical to column 1 of Table 1.
 - b) Column 2 of Table 4 is 50% of column 2 of Table 1.
 - c) Column 3 of Table 4 is identical to column 2 of Table 4.
 - d) Column 4 of Table 4 is 50% of column 3 of Table 1.
 - e) Column 5 of Table 4 is identical to column 4 of Table 4.
 - f) Column 6 of Table 4 is identical to column 4 of Table 1.

10. Group Annuity Contracts

For a group annuity purchased under a retirement or deferred compensation plan (VM-V Section 1.A.2.i), the following apply:

1850 M Street NW Suite 300 Washington, DC 20036 Telephone 202 223 8196 Facsimile 202 872 1948 www.actuary.org

Confidential

- a. The statutory maximum valuation interest rate shall be determined separately for each certificate, considering its premium determination date, the certificate holder's initial age, the reference period corresponding to its form of payout and whether the contract is a jumbo contract or a non-jumbo contract.

Guidance Note: Under some group annuity contracts, certificates may be purchased on different dates.

- b. In the case of a certificate whose form of payout has not been elected by the beneficiary at its premium determination date, the statutory maximum valuation interest rate shall be based on the reference period corresponding to the normal form of payout as defined in the contract or as is evidenced by the underlying pension plan documents or census file. If the normal form of payout cannot be determined, the maximum valuation interest rate shall be based on the reference period corresponding to the annuity form available to the certificate holder that produces the most conservative rate.

Guidance Note: The statutory maximum valuation interest rate will not change when the form of payout is elected.

Page 5: [1] Commented [A26] Author

ACLI: Some of our members have expressed concerns over the VM-22 draft's proposed exemption amount being set too low at \$0.5 billion in reserves. The Draft Note in the exposure indicated the original proposal of \$3 billion for a company and \$6 billion for a group was revised downward, but these higher levels may cover the vast majority of annuity reserves held (not only those subject to VM-22) and would be more appropriate. The Life PBR Exemption uses a \$300/600 million life premium limit; creating a parallel for annuities looking at reserves would inherently be greater than the proposed \$0.5/1.0 billion limits. We would request that the NAIC consider researching and consider implementing "equivalency" between life premiums and annuity reserves. Our hope is that exemption levels will be set so that small annuity writers are not included within the scope of PBR requirements.

Page 5: [2] Commented [VM2227R26] VM-22 Subgroup 4/3/2023 1:07:00 PM

VM-22 Subgroup voted on an initial level of \$1 billion.

Page 5: [3] Commented [A28] Author

Academy: The ARCWG proposes that the exemption limits here and in Section 7.A.1.d.v be based on amounts gross of reinsurance. It is possible that a carrier could have material liability gross of reinsurance and an immaterial liability, ignoring counterparty risk, net of reinsurance.

DR added for clarification in 7.E

Findings from Regulator Reviews of Company Filings for Actuarial Guideline 53

Fred Andersen, FSA, MAAA

8/11/2023

Notice Regarding Confidentiality

AG 53 provides uniform guidance for the asset adequacy testing, and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 3B of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements, and continue to remain confidential in nature.

Data Limitations

- Asset information shown in the slides that follow rely on data submitted by companies in their AG 53 templates. The NAIC took steps to review the data for reasonableness. However, the accuracy and reliability of the results are ultimately dependent on the quality of participant submissions.
- Some of the submitted data was adjusted to make it useable and help ensure greater consistency of reporting across companies. For example: 1) units were changed from dollars to millions where necessary; 2) asset types were mapped to those listed in the standard AG 53 template for companies that substituted different asset descriptions; 3) aggregated initial asset summary templates were created for companies that provided templates by segment but not in total; 4) templates submitted as PDFs were converted to Excel.
- Some companies did not submit AG 53 templates or did not complete all of the AG 53 template tabs.

Summary

1. AG 53 background
2. AG 53 review activities
3. Net yield assumption findings
4. Upcoming review steps

AG 53 Background

- Actuarial Guideline 53 was adopted in 2022
- Main purpose: help ensure claims paying ability even if complex assets do not perform as expected
- Requires disclosures and asset-related information for most life insurers over a size threshold
 - An opportunity for companies to tell their stories regarding:
 - Their complex assets & associated risks
 - How their cash-flow testing models address those risks
- First submissions were due April 2023

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

5

AG 53 Reviews - activity to date

Done:

- ✓ AG 53 filings received from 246 life insurers
- ✓ AG 53 Review Group (within the Valuation Analysis Working Group) formed
 - Team of actuaries, investment experts, and other financial staff to perform reviews
- ✓ Review process started with company prioritization, based on prior knowledge and template information

In Progress:

- AG 53 Review Group meeting frequently, with various state regulators presenting their review findings
- Identifying companies with outlier net yield assumptions
- Engaging with domestic regulators with the goal of decreasing highest net yield assumptions to remove companies from outlier list

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

6

Implications of Higher Investment Net Yield Assumptions

- More favorable asset adequacy analysis results
- Lower amounts of assets needed for reserves to be considered adequate
 - A signal that more money could be released (dividends or other)
- Concern is, if risk is understated and assets underperform, reserves will turn out to be inadequate and that previously released money may have been needed

Amount to fund \$1 Billion liability in 15 years

Company assumption type	Assumed net yield for high- yield assets	Adequate reserve per company's CFT	Adequate reserve per average conservative company's CFT	Amount (in excess of adequate reserve) available to be released per company's CFT
Most conservative	4.5%	\$ 520,000,000	\$ 520,000,000	\$ -
Moderately conservative	5.8%	\$ 430,000,000	\$ 520,000,000	\$ 90,000,000
Fairly aggressive	6.5%	\$ 390,000,000	\$ 520,000,000	\$ 130,000,000
Outlying / aggressive	7.8%	\$ 320,000,000	\$ 520,000,000	\$ 200,000,000

Range of Practice for Net Yield Assumptions

- Some companies are assuming outlier levels of high net yield assumptions. Reducing those outlying assumptions could result in:
 1. Less reliance on sustained high levels of investment returns (e.g., 8% for 30 years) in order to:
 - a. Make reserves adequate
 - b. Pay claims
 2. Not encouraging more companies to assume unreasonably high net yield assumptions to compete
- A vast majority of life insurers have reasonable net yield assumptions

Net Yield Assumptions A majority of companies assumed Net Yields < 7% for Initial Assets, but a sizable number of companies assumed Net Yields ≥ 7%

ELI = Equity-Like Investments/Instruments
*The Equities or ELI asset type and the Schedule BA ELI asset type were aggregated so that, for each company, the maximum yield among the two categories is reflected.

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

9

Net Yield Assumptions For many asset types, a majority of companies assumed Net Yields < 5%

Net Yield for Initial Assets	ABS	Other Private Bonds	Non-Agency CMBS	Non-Agency RMBS	CLO	Schedule BA Non-ELI	All Schedule BA	Equities/ELI & Schedule BA ELI*
Less than 5%	134	129	124	103	58	26	24	12
5%-5.99%	27	31	18	17	38	17	14	6
6%-6.99%	13	11	14	9	28	5	7	8
7%-7.99%	6	4	6	8	9	2	9	16
8%-9.99%	1	5	6	6	7	10	24	23
10%+	2	2	0	4	2	0	8	10

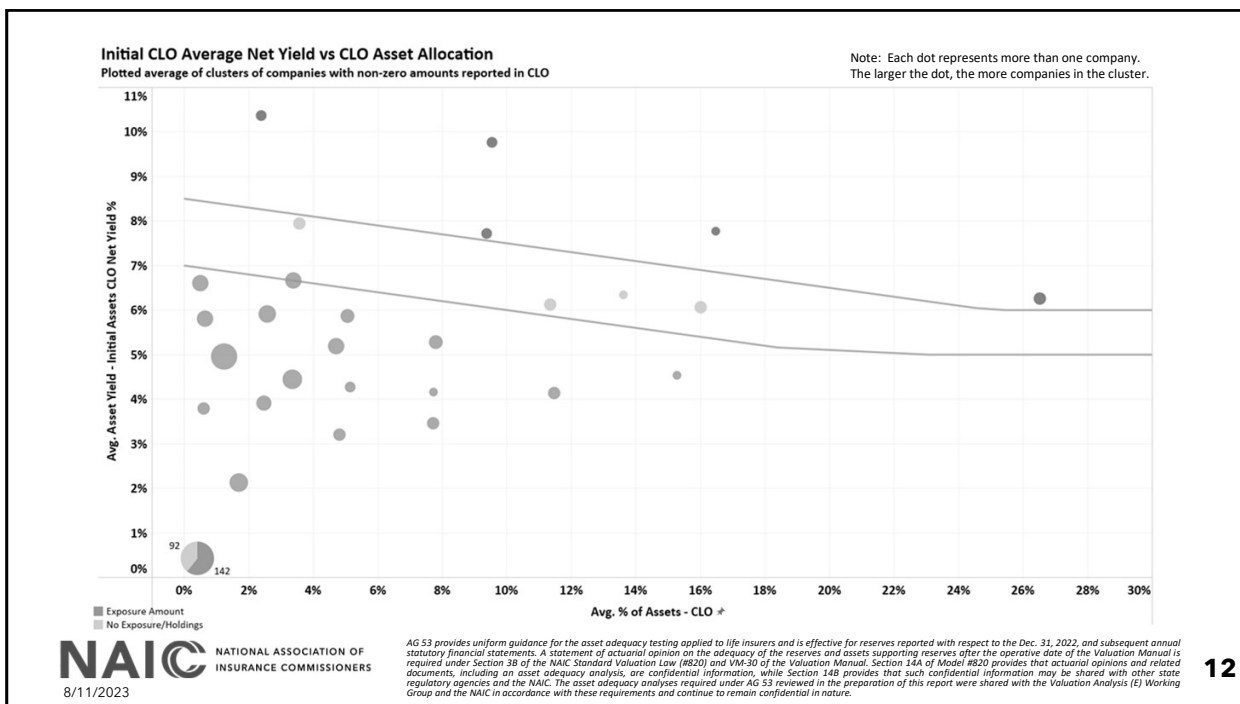

Net Yield for Reinvestments	ABS	Other Private Bonds	Non-Agency CMBS	Non-Agency RMBS	CLO	Schedule BA Non-ELI	All Schedule BA	Equities/ELI & Schedule BA ELI*
Less than 5%	28	129	26	25	11	26	1	1
5%-5.99%	39	31	29	24	21	17	5	2
6%-6.99%	30	11	13	6	14	5	6	4
7%-7.99%	1	4	11	0	17	2	1	6
8%-9.99%	1	5	0	0	8	10	10	16
10%+	0	2	0	0	4	0	3	4

ELI = Equity-Like Investments/Instruments
*The Equities or ELI asset type and the Schedule BA ELI asset type were aggregated so that, for each company, the maximum yield among the two categories is reflected.

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

10

Reinvestment Net Yield compared to Initial Asset Net Yield

ELI = Equity-Like Investments/Instruments
*The Equities or ELI asset type and the Schedule BA ELI asset type were aggregated so that, for each company, the maximum yield among the two categories is reflected.

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

15

Attribution of Guideline Excess Spreads for Initial Assets

- Beyond **Credit Risk** and **Illiquidity Risk**, a wide array of descriptions were used to identify the risk components related to the Guideline Excess Spread
- Risks identified as **other components** included:
 - Spread Widening
 - Call / Prepayment
 - Complexity
 - Convexity
 - Structure
 - Volatility
 - Interest Rate

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

16

Examples of range of general practices

- **Assumptions in 30-year+ cash-flow testing projection:**

- | | |
|---|---|
| <ul style="list-style-type: none"> • Company 1 (reflective of most companies) <ul style="list-style-type: none"> • High performance will <u>continue for a short time</u> • Narrative: as markets increase in efficiency, <u>yields will decline over time</u> • <u>Excess returns</u> over market risk/return expectations <u>not reflected</u> in reinvestment assets | <ul style="list-style-type: none"> • Company 2 (reflective of small number of companies with outlying assumptions) <ul style="list-style-type: none"> • High performance will <u>continue throughout the projection</u> with little downside risk • <u>Little explanation</u> in narrative, <u>risks “too complicated to model”</u> • Attribution analysis: illiquidity or complexity are described as <u>reasons for excess returns</u> • Future <u>reinvestments</u> are projected to continue to have <u>high performance</u> |
|---|---|

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

Regulator reactions to outlying practices

- Work with Company 2 types
 - Plan A: a soft touch - encourage adding conservatism to assumptions
 - Plan B: firmer tone - highly recommend adding conservatism
 - Plan C (if company resists Plans A and B): exercise regulatory authority as appropriate
- Domestic regulator is typically the point person
- If regulators are concerned about more widespread practice:
 - Typically work with LATF for potential consideration of rulemaking
 - Cash-flow testing of equity return assumptions may fit this category

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

Equity return assumptions

- For other asset types, above 7% assumed net returns are bordering on being an outlier
- For equities, it's more common for life insurers to assume returns in excess of 7%
 - While fixed-income securities are subject to interest rate scenarios, equities are typically modeled simplistically, with the return assumed to be the same each year
 - Other standards impacting life insurer products require reflection of volatility
 - e.g., VM-20, VM-21
- Even a small allocation to equities grows to be a substantial allocation over time if equities are assumed to earn excess returns in all scenarios
- Consideration for future LATF discussion - guardrails on assumed equity returns in asset adequacy analysis

Q&A on Reviews of Net Yields

AG 53 Next steps - Reinsurance collectability risk

- Requests for additional information from ceding companies are being sent in targeted situations:
 - Particularly if assuming company does not submit a VM-30 actuarial memorandum to a state
 - Inquiry:
 - Description and reason for significant reinsurance ceded transactions
 - Process and metrics used to evaluate the counterparty's asset risk and financial health
 - Reasons for review:
 - Help ensure future claims are paid and the US insurer's balance sheet is accurate
 - Are significant risks associated with reinsurance ceded appropriately addressed in the actuarial memorandum?
 - A US ceding company should not act like they've wiped their hands and balance sheet of the risk if the assuming company will be some combination of weakly capitalized, under-reserved, or with risky assets supporting reserves.
 - Bottom line: are there enough quality assets at the reinsurer to pay reinsurance claims in moderately adverse conditions?

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

21

AG 53 Next steps - Guidance Document

- Guidance Document for year-end 2023
 - Add clarification / fill in gaps identified during reviews of year-end 2022 filings, including:
 - Sensitivity test for currently-held equities
 - Structured asset information by tranche and related to payments in kind
 - Information about asset allocations in future projection years
 - Help ensure less volatility in classification as a projected high net yield asset
 - Template clarification and updates

AG 53 provides uniform guidance for the asset adequacy testing applied to life insurers and is effective for reserves reported with respect to the Dec. 31, 2022, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 38 of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 144 of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 148 provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 53 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements and continue to remain confidential in nature.

22

AG 53 Reviews - "Phases"

- Transition to "Phase 2" reviews
 - Phase 1 focused on active companies with outlying net yield assumptions
 - Phase 2 will be other issues:
 - Incomplete documentation
 - Focus on narrative answers
 - Identify best / outlying practices (e.g., determination of fair value of internally-valued assets)

Review Smoothing Approach

	Current Method	Recommendation
1. Ages 0-15 (juvenile)	Use adult average (18-84) x 1.5	Use 0-20 average
2. Ages 16-20	Linear interpolation from juvenile rate to adult rate at age 21	Use 0-20 average
3. Ages 21-84	Use Adult Average 18-84	Break into more detailed age groups: 0-20 25-40 45-60 65-85 Linear interpolation between groups.
4. Ages 85-94	Linear interpolation from adult rate to .0025 per year ultimate level at age 95	Linear interpolation from 65-85 average to .001 per year ultimate level at age 95 (use .001 due to COVID considerations)
5. Ages 95 and later	Use constant .0025 (used .001 for 2022 due to COVID impact considerations)	Use constant .001 due to COVID considerations

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

COVID-19 Impact

COVID-19 Impact considerations

- Ensuring COVID-19 impact is considered
- Some companies with high credibility will use their best estimate mortality (including implied historical improvement) for long periods before grading to industry
 - Creates potential disconnect between HMI and the recommended industry FMI scale

Recommendation: COVID impact will be included in the first few years of the FMI scale for 2023 (similar to approach for 2022 scale work)

SEATTLE

NAIC

2023 SUMMER
NATIONAL MEETING

NAIC Model Office Considerations

Scott O’Neal FSA, MAAA

August 11, 2023

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

2023 SUMMER NATIONAL MEETING
NAIC

NAIC Model Office

ULSG

Universal Life with Secondary Guarantees (ULSG) model—long-duration product, larger potential for reserve reduction

- Model office and assumptions same as used in the yearly renewable term (YRT) representative model analysis
- Lifetime shadow account secondary guarantee
- No reinsurance in the model

Component	Values
Issue ages	Decennial issue ages 30 – 70
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)

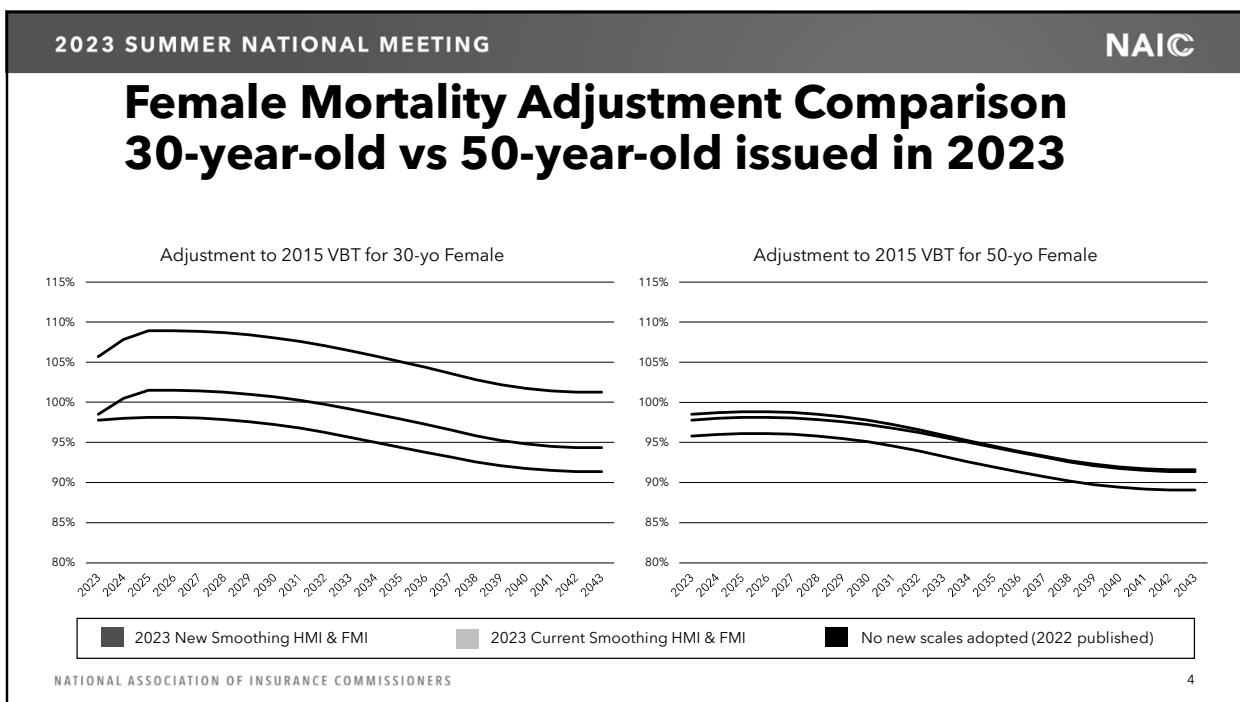

Term

Term Life Insurance Product with 10- and 20-year level premium periods

- Model office and assumptions same as used in the YRT representative model analysis
- Mature at age 95
- 100% shock lapse at end of level term period

Component	Values
Issue ages	Decennial issue ages 20 – 60
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)
Term lengths	10 year 20 year

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
2

NAIC Model Office Considerations

- Model office has an equal weight of each issue age, risk class, gender, face amount which may not be representative of the industry.
- For YE 2023, the scalar applied to the model office: $(1-HMI)^{7.5}$ (6/2015 to 12/2023)
 - The proposed HMI has deterioration for the proposed smoothing method for ages 25-40: **1.08** for a 30-yo male
 - The proposed HMI has slight improvement to mortality for ages 45-60: **0.96** for a 50-yo male
- We apply the HMI factors to both industry and company mortality in the model office, though companies that have highly credible data may not use the HMI to adjust the company mortality.
- GOES Field Test Participation:
 - Term: About half the GOES Field Test Participants for VM-20 had negative Term DR
 - ULSG: All baseline DR was positive

Next Steps

- Compare Term and ULSG model office results to understand the new HMI smoothing methodology impact to reserves
- Analyze model office results of a cohort with mortality deterioration and a cohort with mortality improvement cohorts to illustrate the new smoothing impact to reserves
 - 30-year-olds represent mortality deterioration
 - 50-year-olds represent mortality improvement
- Present findings after summer national meeting

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Rachel Hemphill, FSA, FCAS, MAAA, Ph.D.

Title of the Issue:

Add guidance on consistency of HMI and FMI rates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.C.2.h

January 1, 2023 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

For the last two years, the SOA has been restricted in the form of the historical and future mortality improvement rates that they are able to recommend, as the *Valuation Manual* pairs the industry future mortality improvement with both company-specific historical mortality improvement as well as industry historical mortality improvement. Therefore, the SOA’s future mortality improvement recommendation has not been able to assume a specific treatment of any considerations, such as COVID, in the historical mortality improvement.

Rather than continuing this restricted form of recommendations, this APF proposes to require that companies ensure that they are applying historical mortality improvement rates that are consistent with any considerations specifically identified by the SOA, adopted by LATF, and published along with the mortality improvement factors (e.g., COVID).

Also, because mortality improvement may be negative, the requirement should be that HMI “shall” be applied to the company mortality rates not “may” be applied.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: 2023-09			

VM-20 9.C.2.h

h. Mortality improvement shall not be incorporated beyond the valuation date in the company experience mortality rates. However, historical mortality improvement from the central point of the underlying company experience data to the valuation date ~~may~~ shall be incorporated. The company shall ensure that any specific considerations identified by the SOA, adopted by the Life Actuarial (A) Task Force, and published on the SOA website, at [link/reference to SOA site TBD] are reflected in the development of the company's historical mortality improvement assumption.

Guidance Note: Mortality improvement may be positive or negative (i.e., deterioration).

Interest Rates— Update on proposed Acceptance Criteria

Background

LATF asked the Academy to deliver a series of presentations focused on proposing qualitative **Stylized Facts** and quantitative **Acceptance Criteria** for the three major components of an ESG used for statutory reporting purposes: **Interest Rates, Equity Returns, and Corporate Bond Fund Returns.**

This presentation provides an update on the Academy’s work to propose **Acceptance Criteria for Interest Rates**, including both newly developed criteria and minor changes to previously proposed criteria.

Prior presentations in this series:

- A Framework for Working with ESGs (8/8/22)
- ESG Governance Considerations (8/8/22)
- Equity Returns—Stylized Facts (8/9/22)
- Corporate Credit & Bond Fund Returns—Stylized Facts, Acceptance Criteria, and a Simplified Model (10/27/22)
- Interest Rates—Stylized Facts and Acceptance Criteria (12/11/22)

This and future presentations in this series:

- **Interest Rates—Update on Proposed Acceptance Criteria (8/12/22)**
- Equity Returns—Acceptance criteria, including criteria for the joint distribution of equity returns and interest rates (TBD)

A framework for developing, implementing, and evaluating ESGs and the scenario sets they produce

5

- 1. Define Purpose:** The intended purpose of the ESG informs the economic variables to be simulated and the relative importance of their “stylized facts.”
- 2. Develop Stylized Facts:** Stylized facts describe properties of the economic variables to be simulated. They are based on historical market data and economic theory and are prioritized relative to the defined purpose at hand. The establishment of stylized facts is critical for selecting candidate ESG models and a key prerequisite for the development of acceptance criteria.
- 3. Develop Acceptance Criteria:** A set of quantitative metrics or target values at different time horizons or in different economic conditions that provide a simplified framework for ensuring sets of scenarios produced by the ESG are consistent with key stylized facts.
- 4. Implementation and Governance:** ESG models are selected based on their ability to reflect the stylized facts, then calibrated in accordance with acceptance criteria. Validation reports are produced on each candidate scenario set generated by the ESG. These reports compare scenario set statistics to acceptance criteria and contain other charts and tables useful for evaluation and signoff, which is ultimately a matter of judgement (no automatic “pass” or “fail” based only on acceptance criteria). Implementation is an iterative process. It is important to periodically review and recalibrate the ESG as market conditions change over time.

“Statistical criteria are important in assessing the quality of an ESG. Statistical calibration criteria are usually numerically specified but can also be qualitative in nature. Statistical criteria belong to one of two broad categories: qualitative features and quantitative measures. The issues one must address in both categories are not amenable to a checklist approach, however, and expert judgment plays a role.”
(quote from p. 96 of the 2020 CAS/Conning research paper on ESGs)

Rate level
Criteria for the distribution of steady state interest rates

7

Percentile	20Y Criteria	1Y Criteria	"Buffers" can provide guidance on "too extreme"
99 th	> 13.55%	> 13.86%	[275 bps]
95 th	> 9.35%	> 9.02%	[250 bps]
85 th	> 7.54%	> 6.22%	[225 bps]
50 th	> 3.35% and < 4.88%	> 1.31% and < 3.34%	n/a
15 th	< 2.31%	< 0.16%	[70 bps]
5 th	< 1.78%	< 0.10%	[80 bps]
1 st	< 1.15%	< 0.07%	[90 bps]

- Criteria are based on 15-year half-life PEWs calculated from 1953.04 to 2021.12.
- Scenarios should be "plausibly more extreme" than the PEWs; however, scenarios that exceed the PEWs by more than a "buffer" may be "too extreme".
- Note, the range for the 50th percentile (Median) is based on the [40th] and [60th] PEW.
- Note, other categories of criteria cover rate dynamics in initial periods.

Changes from 12/11/2022 presentation:

- Min/Max criteria moved to new criteria focused on bounds and worse-than-history events.
- Removed 30th/70th percentile criteria.
- Steady state period changed from month [600] to months [961 through 1200] (years [80 through 100]).

© 2023 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Rate volatility
Criteria for the standard deviation of monthly yield changes

8

Bucket	Yield Level (BOM)	1Y volatility		20Y volatility	
		Historical Stat	Desired range for scenario stat	Historical Stat	Desired range for scenario stat
Low	[≤ 3%]	0.59%	0.30% to 0.89%	0.61%	0.31% to 0.92%
Medium	[> 3%, ≤ 8%]	1.16%	0.58% to 1.73%	0.74%	0.37% to 1.12%
High	[> 8%]	3.32%	1.67% to 5.02%	1.54%	0.78% to 2.33%

Notes:

- The relevant statistic is the annualized standard deviation of monthly yield changes across all scenarios, bucketed by the rate level at the beginning of month (BOM).
- Desired ranges use a [50%] buffer on either side of the historical statistic.

Changes from 12/11/22 presentation:

- Steady state period changed from months [600] to months [961] through [1200] (years [80] through [100]). Initial period remains the first [10] years.
- A specific buffer of [50%] has been illustrated.

© 2023 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Yield curve slope

Criteria for the shape of the yield curve

9

Percentiles of [20Y]-[1Y]	Bucketed by level of [20Y] rate		
	<=[3%]	>[3%] to <=[8%]	>[8%]
99 th	2.81% to 3.31%	4.06% to 4.56%	2.76% to 3.26%
95 th	2.64% to 3.14%	3.71% to 4.21%	2.41% to 2.91%
90 th	2.52% to 3.02%	3.44% to 3.94%	2.05% to 2.55%
85 th	2.28% to 2.78%	3.23% to 3.73%	1.94% to 2.44%
15 th	-0.01% to 0.49%	-0.56% to -0.06%	-1.46% to -0.96%
10 th	-0.11% to 0.39%	-0.71% to -0.21%	-1.79% to -1.29%
5 th	-0.23% to 0.27%	-0.97% to -0.47%	-2.06% to -1.56%
1 st	-0.32% to 0.18%	-1.73% to -1.23%	-3.43% to -2.93%

Changes from 12/11/22 presentation:

- Added percentiles further out in the tails.
- Steady state period changed from months 600 to months 961 through 1200 (years 80 through 100). Initial period remains the first 10 years.

Notes:

- Based on historical percentiles using data from [1953.04 to 2021.12] and a [50 bps] buffer.
- Historical statistics are in black.

10

3.

Newly proposed criteria

Description of new categories of acceptance criteria

11

- Criteria for upper and lower bounds and worse-than-history frequencies for rate and slope levels
- Criteria for reversion of median rate and slope levels
- Low-for-long criteria

© 2023 American Academy of Actuaries. All rights reserved.
 May not be reproduced without express permission.

Criteria for upper and lower bounds and worse-than-history frequencies for rate and slope levels

12

	Bucket	Lower Bound	Upper Bound	Historical Min and Max (for reference) ¹	Worse-Than-History Frequencies ²
Rates:					
1Y	n/a	-0.5% to -1%	20% to 24%	0.05% & 16.97%	0.5% to 1.5%
20Y	n/a	0% to 0.5%	17% to 20%	0.95% & 15.78%	0.5% to 1.5%
Slopes:					
20Y-1Y	20Y <= 3%	-0.5% to -1.5%	3% to 4%	0.02% & 2.85%	0.5% to 2%
20Y-1Y	3% < 20Y <= 8%	-2% to -3.5%	4.5% to 6%	-1.38% & 4.15%	0.5% to 2%
20Y-1Y	8% < 20Y	-4% to -5%	3.5% to 5.5%	-3.36% & 2.90%	0.5% to 2%

¹ Historical Min and Max determined using monthly observations from 1953.04 to 2021.12.
² The same Worse-Than-History frequency ranges are proposed for both the left and right tail.
³ These criteria are applied to the steady state period, i.e., months [961] through [1200] (years [80] through [100])

Criteria for reversion of median rate and slope levels

13

Proposed criteria for interim rate levels is expressed in terms of the length of time it takes for initial rates and slopes to revert 50% of the way to their steady state levels (e.g., half-lives).

The Academy is currently using reference models to further explore potential additional interim criteria.

	Proposed range for half-life of median reversion
Rates:	
1Y	[10] to [20] years
20Y	[10] to [20] years
Slopes:	
20Y-1Y	[2] to [8] years

© 2023 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Low-for-long criteria for steady state interest rate levels

14

- Proposed *additional, steady state, low-for-long* criteria uses the concept of “sojourn length,” i.e., the number of years an interest rate stays within a defined corridor.
 - Criteria for [1Y] rate: During months [961 to 1200] (years [80 to 100]), the 1Y rate stays below [0.5%] for at least [5] consecutive years in at least [X%] of scenarios.
 - Criteria for [20Y] rate: During months [961 to 1200] (years [80 to 100]), the 20Y rate stays below [2%] for at least [5] consecutive years in at least [X%] of scenarios.
- This steady state low-for-long criteria can be combined with the NAIC’s current initial period low-for-long criteria to ensure desired low-for-long behavior throughout the simulation. DB0
- Reference models can and should be used to refine the numbers in brackets.

Background

21

LATF asked the Academy to deliver a series of presentations focused on proposing qualitative **Stylized Facts** and quantitative **Acceptance Criteria** for the three major components of an ESG used for statutory reporting purposes: **Interest Rates, Equity Returns, and Corporate Bond Fund Returns**.

This presentation proposes **Stylized Facts** and **Acceptance Criteria** for Interest Rates that (a) are independent of any specific ESG model, (b) can be used to identify and evaluate candidate ESG models, and (c) can be used to evaluate a set of stochastic scenarios.

Prior presentations in this series:

- A Framework for Working with ESGs (8/8/22)
- ESG Governance Considerations (8/8/22)
- Equity Returns—Stylized Facts (8/9/22)
- Corporate Credit & Bond Fund Returns—Stylized Facts, Acceptance Criteria, and a Simplified Model (10/27/22)

This and future presentations in this series:

- **Interest Rates—Stylized Facts and Acceptance Criteria**
- Equity Returns—Acceptance Criteria

A framework for developing, implementing, and evaluating ESGs and the scenario sets they produce

22

“Statistical criteria are important in assessing the quality of an ESG. Statistical calibration criteria are usually numerically specified but can also be qualitative in nature. Statistical criteria belong to one of two broad categories: qualitative features and quantitative measures. The issues one must address in both categories are not amenable to a checklist approach, however, and expert judgment plays a role.”
(quote from p. 96 of the 2020 CAS/Conning research paper on ESGs)

1. **Define Purpose:** The intended purpose of the ESG informs the economic variables to be simulated and the relative importance of their “stylized facts.”
2. **Develop Stylized Facts:** Stylized facts describe properties of the economic variables to be simulated. They are based on historical market data and economic theory and are prioritized relative to the defined purpose at hand. The establishment of stylized facts is critical for selecting candidate ESG models and a key prerequisite for the development of acceptance criteria.
3. **Develop Acceptance Criteria:** A set of quantitative metrics or target values at different time horizons or in different economic conditions that provide a simplified framework for ensuring sets of scenarios produced by the ESG are consistent with key stylized facts.
4. **Implementation and Governance:** ESG models are selected based on their ability to reflect the stylized facts, then calibrated in accordance with acceptance criteria. Validation reports are produced on each candidate scenario set generated by the ESG. These reports compare scenario set statistics to acceptance criteria and contain other charts and tables useful for evaluation and signoff, which is ultimately a matter of judgement (no automatic “pass” or “fail” based only on acceptance criteria). Implementation is an iterative process. It is important to periodically review and recalibrate the ESG as market conditions change over time.

Excerpts from the 2020 Casualty Actuarial Society (CAS)/Conning research paper on ESGs

23

High-level features of a good ESG:

- “It produces simulation results that reflect the economic view of the risk manager.
- Scenarios are consistent with **realistic market dynamics**.
- A large simulation should produce some **extreme but plausible results** (i.e., the simulation covers and moderately exceeds the benchmark stylized facts).
- Component models and architecture must have sufficient flexibility to serve in multiple roles.

If one discusses the essential features of a good ESG with a diverse group of ESG experts, those experts’ lists of features and the relative importance of those features will vary. However, they will set forth a common core of ideas that can serve as a checklist of best practices.”

A good ESG:

1. “has a solid methodological foundation for the way the models are built and the way the variables are interrelated, and models are parsimonious, practical, and comprehensive.
2. provides a comprehensive suite of macroeconomic and financial variables and a multi-economy capability.
3. can accommodate many types of calibration views across a wide range of benchmarks.
4. produces simulation results that reflect a relevant view.
5. produces some extreme but plausible outcomes.
6. embeds realistic market dynamics.
7. is computationally efficient and numerically stable.
8. has fast and robust recalibration capabilities.
9. meets the requirements of regulators and auditing firms.
10. produces sufficient simulation detail for extensive validation.”

The NAIC presented LATF with preliminary goals for interest rates on 12/3/20 and preliminary boundary guidance on 2/17/22

24

Preliminary goal

1. The model’s starting yield curve should fit the actual starting yield curve as closely as possible.
2. The model should produce a variety of yield curve shapes, and they should change over time.
3. Interest rates can be negative.

Preliminary boundary guidance

- Yield curve fit and Yield curve shape (priority 4)*
- a) Review initial actual vs. fitted spot curve differences for a sampling of 5 dates representing different shapes and rate levels for the entire curve and review fitted curves qualitatively to confirm they stylistically mimic the different actual yield curve shapes
 - b) The frequency of different yield curve shapes in early durations should be reasonable considering the shape of the starting yield curve (e.g., a flatter yield curve leads to more inversions).
 - c) The steady state curve has normal shape (not inverted for short maturities, longer vs shorter maturities, or between long maturities)
- Negative rates (priority 3)*
- a) All maturities could experience negative interest rates
 - b) Interest rates may remain negative for multi-year time periods
 - c) Rates should generally not be lower than -1.5%

© 2023 American Academy of Actuaries. All rights reserved.
 May not be reproduced without express permission.

The NAIC presented LATF with preliminary goals for interest rates on 12/3/20 and preliminary boundary guidance on 2/17/22 (continued)²⁵

Preliminary goal	Preliminary boundary guidance
4. The model should be capable of producing a reasonable range of results for very long simulations.	<p><i>High rates (priority 2)</i></p> <p>a) The scenario set should reasonably reflect history, with some allowance for more extreme high and low interest rate environments</p> <p>b) Upper Bound:</p> <p>i. 20% is >= 99th percentile on the 3M yield fan chart, and no more than 5% of scenarios have 3M yields that go above 20% in the first 30 years</p> <p>ii. 20% is >= 99th percentile on the 10Y yield fan chart, and no more than 5% of scenarios have 10Y yields that go above 20% in the first 30 years</p>
5. The ESG should be capable of producing low interest rates for an extended period of time.	<p><i>Low for long (priority 1)</i></p> <p>a) For scenarios generated as of 12/31/20, at least 10% of scenarios should have a 10-year geometric average of the 20-year US Treasury yield that is below its current level (e.g., 1.45% at 12/31/20)</p> <p>b) For scenarios generated as of 12/31/20, at least 5% of scenarios should have a 30-year geometric average of the 20-year US Treasury yield that is below its current level (e.g., 1.45% at 12/31/20)</p>

Stylized Facts

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

28

Groupings for stylized facts about interest rates

Stylized Facts have been grouped into the following three categories:

1. Level of Interest Rates
2. Volatility of Interest Rates
3. Term Structure of Interest Rates (shape of yield curve)

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

*Stylized Facts***1. Level of Interest Rates**

29

The level of interest rates (the cost of borrowing money) changes due to a variety of complex and interrelated factors (e.g., supply of and demand for financing, business cycle, GDP, inflation, central bank actions to stimulate the economy or control inflation).

- a. Short-term rates (which the Fed has more control of) have generally fallen within a range of 0% to 20% and have most often been within the lower part of that range. Long-term rates have generally been within 300 bps of short-term rates.
- b. Negative interest rates are possible (have been observed outside the U.S.) but unlikely due to structural and market differences between the U.S. and other economies.
- c. Interest rates can exhibit multi-year trends (e.g., up, down, low-for-long). Interest rates can stay at very low levels for several years. Short-term rates can stay very near their lower bound for several years while higher long-term rates continue to fluctuate.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

*Stylized Facts***2. Volatility of Interest Rates**

30

The volatility of interest rates varies over time, with periods of both high and low volatility.

- a. Monthly changes in interest rates are generally limited in size (less than 80 bps) but changes tend to be greater when the level of interest rates is higher.
- b. Monthly changes in short-term rates tend to be larger than monthly changes in long-term rates when short-term rates are not near their lower bound, but the opposite relationship tends to hold when short-term rates are near their lower bound.
- c. Volatility tends to increase in stressed markets.

© 2023 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

*Stylized Facts***3. Term Structure of Interest Rates (shape of yield curve)**

31

The yield curve embodies the term structure of interest rates and takes a variety of shapes.

- a. The normal yield curve shape is upward sloping (long-term rates greater than short-term rates) and concave downward. Normal yield curve shapes can persist for extended periods of time.
- b. Non-normal yield curve shapes include inversions (downward sloping), humps, and valleys. Inversions (and other non-normal yield curve shapes) are often associated with key points in the business cycle (e.g., recession indicator) but generally don't persist for extended periods of time.
- c. The slope of the yield curve tends to be lower (even negative/inverted) when short-term rates are at relatively high levels.

32

3.

Acceptance Criteria

Unless otherwise specified, tables and charts on the following slides are based on two primary data sources:

1. Historical U.S. Treasury yields from the "Historical Curves" tab of the August 2022 Academy Interest Rate Generator (AIRG) located at <https://soa.org/resources/tables-calcs-tools/research-scenario/>
2. Simulated U.S. Treasury yields from "10000_Path_Set_1a_Conning_GFF_Baseline_Equity_123121" located at <https://naic.conning.com/scenariofiles>

This section discusses acceptance criteria around four key properties of interest rates identified in the stylized facts 33

1. Rate level

- Includes criteria around high, low, and negative rates.
- Only **steady state** criteria is being proposed at this point. **Interim** rate level criteria, which depend heavily on initial conditions, are being developed and will be proposed later.

2. Rate volatility

- Criteria varies by rate level (applies to interim and steady state).

3. Yield curve shape

- Criteria varies by rate level (applies to interim and steady state).

4. Low-for-long

- Although the ESGWG has not finalized its proposal for this key property of interest rates, we present our qualitative understanding of low-for-long for discussion and feedback.

Acceptance criteria provide a simplified framework for validating key scenario properties but are only part of a larger validation exercise that includes other charts, statistics, and of course, judgment.

Criteria were developed with the following principles in mind:

- The scenario set should include some extreme but plausible scenarios.
- Pathwise behavior is as important as point-in-time distributions.
- Scenarios should be consistent with realistic market dynamics over both short- and long-term horizons.

"The importance of pathwise model behavior is that it is the simulated path that represents the way an insurance company will experience the evolution of the economy. In other words. The pathwise behavior is the only thing of interest when we want to investigate simulation dynamics. If the overall distribution of returns for an asset class is correct but the pathwise behavior does not correspond to the nature of the fluctuations that we see in the historical record, then there is a potential model issue." (p. 107)

"A good ESG will be capable of being calibrated to coherent targets across multiple simulation horizons." (p. 106)

(quotes from the 2020 CAS/Conning research paper on ESGs)

Rate level

Historical PEWs (see appendix for additional information on PEWs) 34

- Selected 15-year half-life “Percentiles Exponentially Weighted” (PEWs) on historical month-end interest rates are proposed as steady state acceptance criteria for rate level (high, low, and negative).
 - *Ideally, corresponding percentiles on scenario sets are “plausibly more extreme” than the PEWs.*
- Calculated using data from April 1953, but unlike typical percentiles where data is weighted equally, PEWs give exponentially less weight to older data.
- PEWs are defined by their “half-life.” A half-life of 15 years means data that is 15 years older receives half the weight.
- A half-life of 15 years is suggested to give more weight to recent data while not overreacting to short-term fluctuations.

“Stability versus responsiveness: As a common trade-off and concern in general actuarial work, it is important to consider where the happy medium is between a long period of data (enhancing stability) and a recent shorter data period (that promotes responsiveness to more recent conditions).”
(quote from p. 129 of the 2020 CAS/Conning research paper on ESGs)

15-year half-life PEWs at 12/31/21	20Y	1Y
Max	15.52%	16.97%
99 th PEW	13.55%	13.86%
95 th PEW	9.35%	9.02%
85 th PEW	7.54%	6.22%
70 th PEW	5.77%	4.88%
60 th PEW	4.88%	3.34%
50 th PEW	4.33%	2.11%
40 th PEW	3.35%	1.31%
30 th PEW	2.83%	0.49%
15 th PEW	2.31%	0.16%
5 th PEW	1.78%	0.10%
1 st PEW	1.15%	0.07%
Min	0.98%	0.05%

Rate level
Criteria for the distribution of steady state interest rates

35

	20Y Criteria	1Y Criteria	"Buffers" could provide guidance on "too extreme"
Max	> 15.52%	> 16.97%	[300 bps]
99 th Percentile	> 13.55%	> 13.86%	[275 bps]
95 th Percentile	> 9.35%	> 9.02%	[250 bps]
85 th Percentile	> 7.54%	> 6.22%	[225 bps]
70 th Percentile	> 5.77%	> 4.88%	[200 bps]
50 th Percentile	> 3.35% and < 4.88%	> 1.31% and < 3.34%	n/a
30 th Percentile	< 2.83%	< 0.49%	[60 bps]
15 th Percentile	< 2.31%	< 0.16%	[70 bps]
5 th Percentile	< 1.78%	< 0.10%	[80 bps]
1 st Percentile	< 1.15%	< 0.07%	[90 bps]
Min	< 0.98%	< 0.05%	[100 bps]

- Criteria is based on 15-year half-life PEWs.
- Scenarios should be "plausibly more extreme" than the PEWs.
- But scenarios that exceed the PEWs by more than a "buffer" may be "too extreme".
- Test statistics:
 - Percentiles of the [20Y] and [1Y] rate distributions at month [600] (year [50]).
 - Max and Min of the [20Y] and [1Y] rate distributions are from projection months [480] through [720] (years [40] through [60]).
- Note, the range for the 50th percentile (Median) is based on the 40th and 60th PEW.

Rate volatility
Historical statistics and Criteria

41

Historical volatility statistics

Annualized standard deviation of monthly yield changes from 1953.04 to 2021.12, bucketed by yield level at beginning of month (BOM):

Bucket	Yield Level (BOM)	1Y	20Y
Low	[≤ 3%]	0.59%	0.61%
Medium	[> 3%, ≤ 8%]	1.16%	0.74%
High	[> 8%]	3.32%	1.54%

Note that short (1Y) rate volatility tends to exceed long (20Y) rate volatility, except when rates are low.

Volatility criteria

- » For the relevant test statistics on the candidate scenario set, calculate the annualized standard deviation of monthly yield changes across all scenarios, bucketed by the rate level at the BOM.
 - Calculate the above test statistics for both the first [10] years and steady state, e.g., years [40] to [60].
- » The above test statistics should be “reasonably close” to the historical volatility statistics in the table to the left.
 - For example, the above test statistics should be within [X]% of historical volatility statistics.

Rate volatility
Illustrative application of rate volatility criteria to field test scenario set #1a

42

Tabular comparison of annualized standard deviation of 1Y and 20Y UST rates to history

	Bucket	Yield Level (BOM)	History	First [10] years		Steady state*	
				Simulated	Difference	Simulated	Difference
1Y UST	Low	[≤ 3%]	0.59%	1.06%	47 bps above	1.05%	46 bps above
	Medium	[> 3%, ≤ 8%]	1.16%	1.88%	72 bps above	1.85%	69 bps above
	High	[> 8%]	3.32%	2.31%	101 bps below	2.31%	101 bps below
20Y UST	Low	[≤ 3%]	0.61%	0.66%	5 bps above	0.68%	7 bps above
	Medium	[> 3%, ≤ 8%]	0.74%	1.00%	26 bps above	1.11%	37 bps above
	High	[> 8%]	1.54%	1.61%	7 bps above	1.69%	15 bps above

* Years [40] to [60]

Rate volatility

Illustrative application of rate volatility criteria to field test scenario set #1a

43

Graphical comparison of annualized standard deviation of 1Y and 20Y UST rates to history

Observations on Set #1a:

- Initial and steady state volatility are similar
- Volatility is generally higher than history
- In the Low bucket:
 - 1Y volatility roughly double history
 - 20Y volatility roughly equal to history

*Years [40] to [60]

**Yield curve slope
Historical statistics**

44

Historical yield curve slope statistics

Selected percentiles on the distribution of slope (month-end [20Y] less month-end [1Y] yields) from 1953.04 to 2021.12, bucketed by [20Y] rate:

Bucket	Yield Level (BOM)	% Inverted	Min	5%	15%	30%	Median	70%	85%	95%	Max
Low	[≤ 3%]	0%	0.0%	0.3%	0.5%	1.1%	1.6%	2.0%	2.3%	2.6%	2.9%
Medium	[> 3%, ≤ 8%]	17%	-1.4%	-0.5%	-0.1%	0.4%	0.9%	1.8%	3.3%	3.8%	4.3%
High	[> 8%]	25%	-3.4%	-1.5%	-0.8%	0.3%	1.2%	1.8%	2.1%	2.7%	3.9%

Criteria

- For the test statistics on the candidate scenario set, calculate selected percentiles on the distribution of slope ([20Y] less [1Y] yield) across all scenarios, bucketed by the level of the [20Y] yield level.
 - Calculate above for both the first [10] years and steady state, e.g., years [40] to [60].
- The [15th] and [85th] percentiles should be “plausibly more extreme” than history.

Historical data indicates the distribution of curve shapes (particularly inversions) varies by rate level.

4. Low-for-long Qualitative understanding

49

Although the ESGWG has not finalized its proposal for this key property of interest rates, we present our qualitative understanding of low-for-long for discussion and feedback.

Historical observations on low-for-long interest rate behavior:

1. (a) The long rate [20Y] stays below a threshold [3%] for an extended period of time [5+ years]. (b) During this time, the long rate continues to fluctuate as usual.
2. (a) The short rate [1Y] is “stuck” in a very narrow range [50bps] above zero. (b) During this time, short rate volatility (which normally exceeds long rate volatility) drops to near zero.
3. Low-for-long is a relatively recent phenomenon (post-2000 in the US; limited historical data).

PEWs

Additional information on Percentiles Exponentially Weighted (PEWs)

53

The development of historical statistics for economic variables such as interest rates and equity rates involves subjective decisions such as how much history to include. One way to make use of all available data, but to focus more heavily on more recent data, is to develop exponentially weighted averages and percentiles.

An AWE is an Average Weighted Exponentially, with parameter Alpha. The most recent historical period, typically a month, gets an initial weight of 100%. Each prior historical period gets (1- α) times the weight of the next most recent period. Based on the number of historical periods of available data, the weights are then normalized so that their sum is 100%. The AWE is simply the weighted average of all the available or selected data. The "half-life" is then the period of time for which the cumulative weight reaches 50%.

PEWs apply the same concept to develop exponentially weighted percentiles. The historical values are unchanged, but their relative weight is dependent on when they occurred. Values are rank-ordered, with percentiles based on the sum of the relative weights up to the particular value. It may be desirable to assign percentiles at the center of each value's weight range, especially if extreme values are important or statistical distributions will be fitted to the percentiles.

Yield curve slope (bucketed by 20Y rate) Historical Slope Data (4/1953 - 12/2020)

Observations:

- No inversions for UST 20-year yields below 3%
- Severity of inversions generally increases with rate levels
- Other variations in curve steepness by rate level
- Recommend slope criteria based on simplified Low / Medium / High 20Y yield buckets to capture historical dynamics while not being overly constraining
- Also considers alignment with volatility buckets

Yield curve slope (bucketed by 1Y rate) Historical Slope Data (4/1953 - 12/2020)

Observations:

- No inversions for UST 1-year yields below 3%
- Severity of inversions generally increases with rate levels
- Other variations in curve steepness by rate level
- Recommend slope criteria based on simplified Low / Medium / High yield buckets to capture historical dynamics while not being overly constraining
- May bucket by 20Y instead of 1Y yields based on preference

2023 SUMMER NATIONAL MEETING **NAIC**

Agenda

1. Background and Purpose
2. Limitations
3. Field Test Participation
4. High-Level Observations
5. Quantitative Results
 - A. Baseline Comparisons
 - B. Valuation Date Comparisons
 - C. Additional Metrics
6. Next Steps

Appendix: Field Test Run Descriptions

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 2

2023 SUMMER NATIONAL MEETING
NAIC

Background and Purpose

- The purpose of this presentation is to summarize quantitative information from the C3 Phase I field test participants to:
 - Understand the impact on capital,
 - Review the range of results across field test participants,
 - Compare the stability of results over time,
 - Evaluate the use of alternative metrics, and
 - Inform regulator decision-making on model and calibration choices.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
3

2023 SUMMER NATIONAL MEETING
NAIC

C3 Phase I Background

Calculation Details

- Cash flow models that are used for asset adequacy analysis (or other consistent models) are used. The greatest present value of a deficiency at any point in the projection is calculated for each scenario.
- 50 or 12 interest rate scenarios generated from an older version of the Academy Interest Rate Generator (AIRG) are used in the calculations. The 50 or 12 scenarios are selected from a larger 200 set and are meant to contain the most adverse scenarios so that a tail measure metric can be calculated with a smaller number of scenarios.
- This version of the AIRG has a 6.55% interest rate mean reversion parameter (MRP) which does not change, compared with the current version of the AIRG which has a dynamic MRP that resets annually based on a weighted average of past interest rate levels.
- From the 50-scenario set, a weighted average centered around the 95th percentile scenario is determined, and that is the C3 RBC amount.
- In the C3 Phase I RBC worksheet, the scenario level and final results are also shown as a "C3 Factor" percentage, which is the capital amount divided by the statutory reserve at the start of the projection.

Product Scope

Deferred and Immediate Annuities

Guaranteed Separate Accounts*

* excluding guaranteed indexed separate accounts following a Class II investment strategy 4

2023 SUMMER NATIONAL MEETING
NAIC

Limitations

- The NAIC took steps to review the quantitative results for reasonableness, including reviewing qualitative survey responses, sending questions to participants, and asking participants to confirm that the NAIC compilations matched their intended result submission. However, the accuracy and reliability of the results are ultimately dependent on the quality of participant submissions.
- The field test analytics (average C3 Factors, range of impacts, etc.) can be strongly dependent on a subset of the participants. Results shown today for the different field test runs will include varying numbers of participants corresponding to the levels of participation for that run. The lack of participation in some of the runs will limit their applicability to the overall industry.
- There are two basic types of comparisons of the field test results in this presentation; 1) comparisons of field test runs to their respective baseline run, and 2) comparisons of field test runs across the two tested valuation dates. These comparisons are limited to the participation of whichever run had the least participation. For example, as Baseline 2 (as of 12/31/19 + 200 BP) had significantly lower participation than run 2A, many of the 2A results will not be included in the baseline comparison.
- Some participants mentioned that they would assess the need for changes to their assumptions prior to implementation of the new Generator of Economic Scenarios (GOES) but had not done so for the field test.
- The C3 Phase I portion of the qualitative survey did not ask companies to specifically comment on the drivers of their results as was done for VM-21/C3 Phase II. Most participants did not comment on the drivers of their results.
- Detailed information on the products included in the C3 Phase I results was not asked for in the qualitative survey data. Therefore, it is not fully understood exactly what products were included in each participant's C3 Phase I submission.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

2023 SUMMER NATIONAL MEETING
NAIC

Field Test Participation

- Looking at overall numbers for the industry, at the end of 2021 there were 752 legal entities that reported using the Life RBC blank. Of those 752, 613 legal entities reported industry C3 Phase I capital (line 33, LR027) less than or equal to \$1. That group of 613 companies includes both legal entities that are in scope for C3 Phase I (and determined their C3 Phase I capital to be zero) as well as companies that do not have products that are in scope for C3 Phase I.
- The total amount of industry C3 Phase I capital was approximately \$3 billion at the end of 2021. The largest ten legal entities (by C3 Phase I capital amount) accounted for over \$2 billion of this total. Of those ten legal entities, two of them participated in the field test.
- The chart below shows the number of legal entities that submitted C3 Phase I GOES Field Test results. It also shows the share of the 12/31/21 total industry C3 Phase I capital (line 33, LR027) that is reflective of the participation in each field test.
- C3 Phase I results will be shown for 24 legal entities that represent approximately 19% of the industry when looking at their share of the 2021 industry C3 Phase I capital.

2023 SUMMER NATIONAL MEETING NAIC

High-Level Observations

- The field test results for the scenario sets produced from the Conning economic scenario generator (1A, 2A, 1B, 2B) showed significant increases on average compared to the respective 12/31/21 or 12/31/19 + 200 BP baseline. However, many of the field test participants held little to no C3 Phase I capital in their baseline runs.
- The participant results for field test 7 (200 scenarios from the latest version of the AIRG prescribed in VM-20 and VM-21) were mixed, with increases for some companies mostly offset by decreases for others.
- When producing capital results using a limited number of scenarios, outlier scenarios that are included in the scenario sets can have an outsized impact on the results - particularly with scenario sets that have increased volatility/broader distributions (e.g. 1A, 2A).

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 7

12/31/21 Baseline Comparisons

8

2023 SUMMER NATIONAL MEETING **NAIC**

Field Test 1A: US Treasury Overview

- Field Test 1A (as of 12/31/21) included a recalibration of the Conning GEMS® US Treasury model that was designed to meet the acceptance criteria related to low for long, the prevalence of high interest rates, upper and lower bounds, initial yield curve fit, and yield curve shape. The frequency and severity of negative interest rates were controlled using a generalized fractional floor.
- The 1A UST scenario set as of 12/31/21 had a much higher prevalence of low UST rates, including negative interest rates, compared to the scenarios produced by the C3 Phase I Generator.
- The 1A UST scenario set included a frequency and severity of high 1-yr UST rates that was comparable at certain percentiles and projection periods but deviated in others. The limited number of scenarios typically used among field test participants for B1 and 1A may not be fully reflective of the distribution produced by either scenario generator with a greater number of scenarios.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 9

2023 SUMMER NATIONAL MEETING **NAIC**

Field Test 1B: US Treasury Overview

- Field Test 1B (as of 12/31/21) included a calibration of the Conning GEMS® US Treasury model that was designed to meet regulator acceptance criteria but placed additional emphasis on maintaining realistic term premiums throughout the projection. Towards that end, there was a significantly lower frequency of inversions (e.g. ~5% of 1B scenarios had 10 year/2year UST inversions at the end of year 30 compared to ~12% seen in 1A). The average level of inversion was also significantly lower (e.g. in 1B 10 year/2 year UST inversions average ~30 BP at the end of year 30, compared to ~90 BP average inversion level for 1A).
- The 1B UST scenario set as of 12/31/21 had a much higher prevalence of low UST rates, including negative interest rates, compared to the scenarios produced by the C3 Phase I Generator.
- The 1B UST scenario set included a frequency and severity of high 1-yr UST rates that was typically lower than that produced by the C3 Phase I scenario generator.

2023 SUMMER NATIONAL MEETING **NAIC**

Field Test 7: US Treasury Overview

- Field Test 7 (as of 12/31/21) was a C3 Phase I specific test designed to use the current version of the AIRG (prescribed in VM-20 and VM-21) to understand what the impact would be of moving to the latest version of the AIRG with a mean reversion parameter that is dynamic based upon historical data. For 12/31/21, the latest version of the AIRG had a mean reversion parameter of 3.25% compared to 6.55% for the C3 Phase I ESG.
- The field test 7 UST scenario set as of 12/31/21 had a much higher prevalence of low UST rates, but the current version of the AIRG has a soft floor of 1 BP, effectively eliminating negative interest rates.
- The field test 7 UST scenario set included a frequency and severity of high 1-yr UST rates that was much lower than those produced by the C3 Phase I generator, particularly at the later projection periods.

- For the 12/31/21 Baseline 1 (B1) field test run, approximately half of the participants had C3P1 RBC amounts (C3 factor * statutory reserve) close to zero. The 75th percentile for the Baseline 1 C3 factor was 0.23%, and the average C3 factor (weighted by statutory reserve) was 0.14%.
- For each of the 12/31/21 field test runs shown, there was an increase to the average C3 factor, with 1A (Conning calibration with GFF) coming in at the highest followed by the 1B (Alternative with Shadow Floor).
- Both 1A and 1B saw a larger proportion of the field test participants with non-zero C3 Factors.
- Field test run 7 (200 Scenario VM-20 AIRG) had a small average C3 factor increase, with some participants seeing higher, lower, or no changes at all to their capital.

C3 Phase I Factor: Range and Percentile Statistics

2023 SUMMER NATIONAL MEETING **NAIC**

Field Test 2A: US Treasury Overview

- Field Test 2A (as of 12/31/19 + 200 BP) used the same calibration as 1A (Conning Calibration with a Generalized Fractional Floor) but with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities.
- Compared to the C3 Phase I generator with a 12/31/19 + 200 BP starting interest environment, the 2A scenario set has a much greater frequency and severity of low (and negative) UST rates. The 2A scenario set has a comparable severity of high 1-yr UST rates at the 95th percentile, but somewhat higher 1-yr UST rates at the 99th percentile.

2023 SUMMER NATIONAL MEETING
NAIC

Change in Capital Amount by Legal Entity - 12/31/19 + 200 BP

Field Test	B2	2A	2B
Wtd. Average C3 Phase I Factor	0.46%	1.50%	0.93%
Average % Change		226%	103%
# of Participants	10	10	10

C3 Phase I Factor: Range and Percentile Statistics

- There was more limited participation for the optional Baseline 2 run.
- For the 12/31/19 + 200 BP Baseline 2 (B2) field test run, approximately half of the participants had C3P1 RBC amounts (C3 factor * statutory reserve) close to zero. The 75th percentile for the Baseline 2 C3 factor was 0.87%, and the average C3 factor (weighted by statutory reserve) was 0.46%.
- A similar pattern to the 12/31/21 field test runs holds for the 12/31/19 + 200 BP field test baseline comparisons, where the Conning Calibration w/ GFF (2A) has the largest increase to capital from the baseline with the Alternative Calibration with a Shadow Floor (2B) representing a significant but smaller increase.
- Both 2A and 2B saw a larger proportion of the field test participants with non-zero C3 Factors.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS 16

2023 SUMMER NATIONAL MEETING NAIC

Change in Capital Amount by Legal Entity - 12/31/19 + 200 BP compared to 12/31/21

Field Test	B1	B2	1A	2A	1B	2B
Wtd. Average C3 Phase I Factor	0.14%	0.46%	1.35%	1.72%	1.01%	1.15%
Average % Change		229%		28%		15%
# of Participants	10	10	22	22	20	20

C3 Phase I Factor: Range and Percentile Statistics

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- For each of the valuation date comparisons, the average C3 Factor increased from 12/31/21 (low interest environment) to 12/31/19 + 200 BP (higher interest environment).
- There was more limited participation for the optional Baseline 2 run, limiting the comparison between valuation dates. The average % change in the C3 Factor between valuation dates was the greatest for the baseline runs.
- Of the field test runs, the Conning calibration w/ GFF showed a higher average % change between valuation dates (28%), compared to the smaller (15%) change for the alternative calibration with shadow floor.
- Because of the large difference in legal entity cohorts between the baseline and field test runs, it is hard to conclude that the field test scenario sets produce more stable results than the C3 Phase I generator used in the baseline runs.

18

2023 SUMMER NATIONAL MEETING **NAIC**

Additional C3 Phase I Metrics

- The table below shows the range statistics and weighted average of the legal entity results for C3 Phase I factors (C3 Phase I Capital Amount/Statutory Reserve) computed using different metrics.
- The results for the "C3 Phase I Weighted Average" are for 24 legal entities, whereas the results shown for the other metrics are only for 23 legal entities. One of the legal entities was removed due to one scenario out of their C3 Phase I calculation producing a very large C3 Phase I factor (e.g. 3,000%) that distorted the metrics. This scenario result was not included in the C3 Phase I weighted average or the range statistics.
- Once the outlier was removed, the CTE 90 metric had very similar results to the C3 Phase I metric. However, the 25% * (CTE 98 - CTE 70) metric produced smaller C3 Factors overall.

Range Statistic/Average	C3 Phase I Metric		CTE90		Mean Factor		Max Factor		25% * (CTE98 - CTE70)	
	B1	1A	B1	1A	B1	1A	B1	1A	B1	1A

NATIONAL ASSOCIATION OF INSURANCE

2023 SUMMER NATIONAL MEETING

Next Steps

- The Generator of Economic Scenarios (GOES) (A) Subgroup will develop recommendations to LATF for reserve and capital framework-specific implementation issues and a GOES model governance framework.
- A more comprehensive set of GOES acceptance criteria will be reviewed by regulators and exposed in September. Once regulators decide on a new set of acceptance criteria, additional candidate scenario sets will be produced that are designed to meet the acceptance criteria.
- Regulators and the NAIC are considering how model office testing can supplement and/or replace components of industry field testing to efficiently evaluate the new scenario sets. A second-round industry field test of the new scenarios would occur no sooner than Spring of 2024.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

22

Appendix: Field Test Run Descriptions

NAIC NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

23

2023 SUMMER NATIONAL MEETING		NAIC
Field Test Run Descriptions		Note: Bold = Required Run
Run #	Description	Purpose of Run
Baseline #1	Scenario set(s) the company used for 12/31/21 statutory reporting	Baseline used as comparative basis for 12/31/21 runs
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with a 12/31/19 yield curve modified using a 200 BP increase across all maturities	Baseline used as comparative basis for 12/31/19 + 200 BP runs
Test #1a	GEMS Baseline Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	Tests Conning Treasury model w/ GFF and Baseline Equity at YE 2021
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	Tests Alternative Treasury model with shadow floor and Baseline Equity at YE 2021
Test #2a	Same as Test #1a, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities. All other initial market conditions are unchanged. The Equity model parameters would be adjusted from #1a so that the year 30 median Large Cap Equity gross wealth factors remain consistent with #1a.	Stresses the starting Treasury rates using the same calibration as 1a to evaluate whether the model produces appropriate results in different economic environments
Test #2b	Same as Test #2a, but with the Alternative Treasury model calibration with shadow floor instead of the Conning Treasury model calibration with generalized fractional floor	Same as 2a, but designed to stress the 1b calibration
Test #7	12/31/21 scenarios from the ESG prescribed in VM-20 with a Mean Reversion Parameter (MRP) set to 3.25%	Attribution analysis to understand the impact of moving from the current C3 Phase I MRP of 6.55% to a lower MRP that incorporates recent UST history.

SOA Experience Studies Regulator Input on Prioritization

3

Experience Studies Pro

In 2021, LIMRA and the SOA Research Institute entered into a partnership to support the industry with a **comprehensive program of industry experience studies**.

This program will provide timely, consistent, and comprehensive releases of industry experience data — providing you with the necessary tools for addressing **product development, pricing, and regulatory** strategies.

Together, We have Unmatched Breadth & Depth of Experience

Expertise

We are both associations dedicated to this industry, with a long history of conducting large data-intensive efforts

Trust

Strong reputation for unbiased research, analysis, and industry relationships

Value

Together we provide unparalleled value while delivering cost-effective insights

Benefits to the Industry

Credible, robust, benchmarking, and strong industry representation:
70% market participation is typical

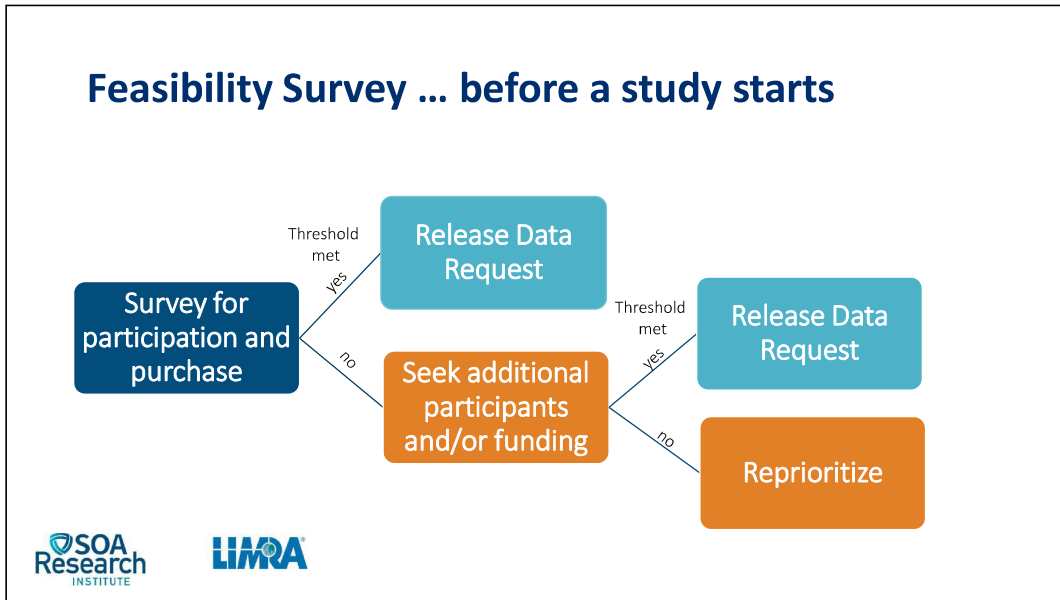

Comprehensive and timely: updates of industry data on a regularly published schedule

Detailed and deeper analytics: to support product development, inform management, reserving, and growth strategies

Studies at Risk for Participation and Funding

Product	Contingency Studied	Funding Concerns
Long-term care	claim incidence, claim termination, claim utilization, active life lapse and mortality	Blocks in run-off; complicated study/higher cost
Individual disability	claim incidence, claim termination	Few carriers; complicated study/higher cost
Group annuity	mortality	Few carriers; niche line of business
Structured settlements	mortality	Few carriers; niche line of business

Results Regulator Interest Survey - LATF	Experience Study	
	Individual Payout Annuity – mortality	★
	Individual Fixed Indexed Annuity – premium deposits, withdrawals, surrenders	★
	Individual Variable Annuity – premium deposits, withdrawals, surrenders	★
	Individual Life – mortality	★
	Individual Fixed Deferred Annuity – surrenders	★
	Individual Universal Life – premium persistency	★
	Individual Universal Life – lapse, surrender	★
	Individual Term Life – post level term lapse and mortality	
	Individual Term Life – term conversion, lapse, mortality	
	Individual Fixed Deferred Annuity – mortality	★
	Group Life – mortality	★
	Group Annuity – mortality	
	Structured Settlement Annuity – mortality

Results Regulator Interest Survey - LATF

Tables/Projects

Individual Payout Annuity – mortality
Individual Life – mortality
Individual Fixed Deferred Annuity – mortality
Group Annuity – mortality
Structured Settlement Annuity – mortality

Comments

- LATF
 - Surrender information following a rise in rates will be available for the first time in decades.
 - A "return to normal" (or not) will be indicated by mortality data.
 - Guaranteed Issue Life Mortality - not a high priority but in the middle.

What can regulators do to help?

For studies, tables, project desired by regulators

- Help us clarify the prioritization
- Support/encourage voluntary participation in Experience Study Pro studies
- Support/encourage potential funding through NAIC, where funding through direct sales is not feasible

Discussion

Experience Studies

Project Name	Objective	Link/Expected Completion Date
COVID-19 Individual Life Mortality Study - Experience Study Report - 2022 Q2	Complete a mortality study assessing the impact of COVID-19 on Individual Life Insurance.	https://www.soa.org/resources/research-reports/2023/ind-life-covid-mort-finding/
COVID-19 Reported Claims Study - 4Q 2022 Update	Draft a research study reviewing Covid-19 reported deaths by quarter.	https://www.soa.org/49c0c12/globalassets/files/resources/research-report/2023/covid-reported-claims-analysis-o4.pdf
Economic Scenario Generator - 2023 Update	Update the AAA Economic Scenario Generator Annually.	https://www.soa.org/resources/tables-calcs-tools/research-scenarios/
Group Life COVID-19 Mortality Survey Update - through December 2022	Complete an update on a mortality study assessing the impact of COVID-19 on Group Life Insurance.	https://www.soa.org/resources/experience-studies/2022/group-life-covid-19-mortality-12-2022/
COVID-19 Individual Life Mortality Study - Experience Study Report - 2022 Q3	Complete a mortality study assessing the impact of COVID-19 on Individual Life Insurance.	7/27/2023
2019-20 Fixed Indexed Annuity Study - Report	Examine lapse and the utilization of guaranteed living withdrawal benefit options on fixed index annuity policies under a Joint SOA/LIMRA project and release Tableau visualizations with the observations from the study.	8/8/2023
COVID-19 Cause of Death Study - 2022 Q1 Update	Publish a semi-annual cause of death study for individual life insurance.	8/15/2023
COVID-19 Individual Life Mortality Study - Experience Study Report - 2022 Q4	Complete a mortality study assessing the impact of COVID-19 on Individual Life Insurance.	8/15/2023
COVID-19 Reported Claims Study - 1Q 2023 Update	Reviews Covid-19 reported deaths by quarter.	8/15/2023
2009-2015 Individual Life Experience Committee Lapse and Mortality Study	Study mortality and lapse experience in the database of 2009-2015 individual life experience data and release a report with the findings.	8/30/2023
GRET for 2024	Develop the Generally Recognized Expense Table (GRET) for 2024.	9/15/2023
2019 Quintile Analysis	Ranks individual company experience into quintiles.	9/28/2023
2023 Life Mortality Improvement	Develop AG38 mortality improvement assumptions for YE 2023.	9/29/2023
2019-21 Variable Annuity Guaranteed Living Benefit Utilization Study - Report	Examine the utilization of guaranteed living benefit options on variable annuity policies under a Joint SOA/LIMRA project.	9/30/2023

Practice Research & Data Driven In-house Research

Project Name	Objective	Link/Expected Completion Date
Reimagining Pharmacy	18/11 Style Gathering to discuss pharmacy.	https://www.soa.org/resources/research-reports/2023/reimagining-pharmacy-finance/
International Comparison of Regulatory Requirements Study Note; 2021.08	Capital Adequacy Regulatory Requirements in Life Insurance across 4 key models in the US, Canada, EU and Bermuda.	6/30/2023
Expert Opinion on Impact of COVID-19 on Future Mortality - Survey 2	Survey panel of experts on short and mid term thoughts on future population and insured mortality.	8/15/2023
Maternal Mortality	Study maternal mortality in US and compare to other countries.	8/15/2023
Mortality and Race	Summarize available literature on mortality and race and discuss actuarial aspects.	8/15/2023
Unhealthy Longevity	Examine differences in mortality/longevity between impaired vs healthy lives.	8/15/2023
Accelerated Underwriting Survey and Impact of COVID in Underwriting	Update prior survey and explore the way insurers have adapted their underwriting practices.	8/31/2023
Challenges with Defining Fairness for Life Insurance	Summarize the challenges and complexities with defining and measuring fairness for life insurance products and processes.	8/31/2023
2023 Living to 100	Produce body of research to help with old age mortality modeling and projection and research to support the needs of an increasing aging population.	9/15/2023

The Evolution of the FSA Pathway

NAIC presentations

Stuart Klugman, FSA, CERA, PhD
SOA Senior Staff Fellow

August 2023

We've heard your feedback

FSA candidates encounter significant challenges along the pathway

Lack of flexibility or customization

Less relevant to global markets

Little guidance on what to study

Slow grading process

No exam feedback

Difficult source materials that lack focus

Introducing a range of improvements for a better candidate experience

3

Regulatory Material Shift

Current Challenge

- In-depth U.S. and Canadian regulatory material lacks relevance to global markets

SOA Shift

- Detailed local regulatory material moved outside of the current FSA requirements
- Fundamental regulatory principles and frameworks will still be covered in the FSA pathway
- FSA will qualify actuaries to sign General Statements of Actuarial Opinion

CERTIFICATES:

- Stand-alone, optional regulatory certificates will be offered. Certificates can be taken when needed.
- The SOA is collaborating with regulatory bodies to develop the certificates

4

Flexible Pathway

Current Challenge

- Forced track structure lacks flexibility and customization
- Highly specialized tracks are less relevant for developing markets

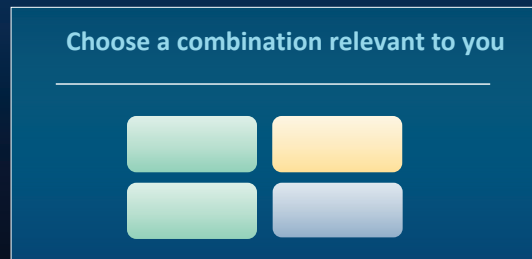

SOA Shift

- Shifting from “tracks” to a flexible pathway
- Flexibility to focus on a single practice area or create a combination of courses relevant to you
- 5 courses required:
 - 4 Technical courses (one must build on another)
 - 1 Decision Making and Communications (DMAC) Course
 - + Fellowship Admissions Course (FAC)

5

Choose from About 20 Courses

2024 GRET Recommendation

Tony Phipps, FSA, MAAA
Chair SOA Research Institute Committee on Life Insurance Expenses
August 12, 2023

Mortality and
Longevity

Agenda

- Methodology
- Recommendation
- Comparison to Prior Years
- Information on Companies in Study

Presentation Disclaimer

The material and information contained in this presentation is for general information only. It does not replace independent professional judgment and should not be used as the basis for making any business, legal or other decisions. The Society of Actuaries Research Institute assumes no responsibility for the content, accuracy or completeness of the information presented.

3

Methodology

1. Calculate Actual to Expected Expenses
 - Gather data points from company Annual Statement submissions provided by NAIC
 - Seed factors used to calculate expected expenses.
2. Determine Distribution Channel
 - Survey sent by SOA Research Institute to companies to determine primary distribution channel.
 - This channel is used or the historical distribution channel for those companies that did not respond.
3. Remove outlier companies
4. Analyze data to derive unit expense factors by those Distribution Channels

4

Seed Values

Expenses allocated to acquisition and maintenance categories using the same seeds as has been previously used:

- Acquisition/Policy: \$200.00
- Acquisition/Face Amount: \$1.10
- Acquisition/Premium: 50%
- Maintenance/Policy: \$60.00

Recommendation for 2024 GRET Factors

Proposed 2024 GRET Factors Based on Average of 2021/2022 Data					
Description	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Company Count
Independent	\$198	\$1.10	50%	\$59	140
Career	206	1.10	52%	62	90
Direct Marketing	217	1.20	54%	65	23
Niche Marketing	132	0.70	33%	40	31
Other*	162	0.90	41%	49	95
					379

* Includes companies that did not respond to this or prior year surveys

Current 2023 GRET Factors Based on Average of 2020/2021 Data					
Description	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Company Count
Independent	\$180	\$1.00	45%	\$54	141
Career	203	1.10	51%	61	84
Direct Marketing	197	1.10	49%	59	21
Niche Marketing	147	0.80	37%	44	30
Other*	153	0.90	39%	46	106
					382

* Includes companies that did not respond to this or prior year surveys

Comparison to Prior Years

Acquisition per Policy					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$198	10%	\$180	-2%	\$183
Career	206	1%	203	-4%	212
Direct Marketing	217	10%	197	-2%	200
Niche Marketing	132	-10%	147	-3%	151
Other*	162	6%	153	10%	139

* Includes companies that did not respond to this or prior year surveys

Acquisition per Unit					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$1.10	10%	\$1.00	0%	\$1.00
Career	1.10	0%	1.10	-8%	1.20
Direct Marketing	1.20	9%	1.10	0%	1.10
Niche Marketing	0.70	-13%	0.80	-11%	0.90
Other*	0.90	0%	0.90	13%	0.80

* Includes companies that did not respond to this or prior year surveys

Comparison to Prior Years

Acquisition per Premium					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	50%	11%	45%	-2%	46%
Career	52%	2%	51%	-4%	53%
Direct Marketing	54%	10%	49%	-2%	50%
Niche Marketing	33%	-11%	37%	0%	37%
Other*	41%	5%	39%	11%	35%

* Includes companies that did not respond to this or prior year surveys

Maintenance per Policy					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$59	9%	\$54	-2%	\$55
Career	62	2%	61	-5%	64
Direct Marketing	65	10%	59	-2%	60
Niche Marketing	40	-9%	44	-2%	45
Other*	49	7%	46	10%	42

* Includes companies that did not respond to this or prior year surveys

Survey Results

- Percent of survey respondents that that responded that GRET factors are used for individual life sales illustration purposes:

Percentage of Companies that use GRET Factors	
Survey Year	Percentage
2022	44%
2022	35%
2021	31%
2020	29%
2019	26%
2018	28%
2017	30%
2016	26%

- We believe variation is a result of the mix of respondents and the limited number of responses

Information on Companies in Study

- NAIC Data extracts included:
 - 2022: 749 companies
 - 2021: 766 companies
- Total ordinary policies issued saw a decrease of 8.45% (850k) in 2022 after seeing an increase of 3.1% (312k) in the previous year.
- The final companies used in the GRET calculation was 379 in 2022, a decrease of 3 from the previous year after seeing an increase of 7 in the previous year.
- This year's survey, a record of 44% of respondents indicated they use GRET factors for individual life sales illustration purposes, continuing the increasing trend.

RE: 2024 Generally Recognized Expense Table (GRET) – SOA Research Institute Analysis

Dear Ms. Hemphill:

As in previous years, the Society of Actuaries Research Institute expresses its thanks to NAIC staff for their assistance and responsiveness in providing Annual Statement expense and unit data for the 2024 GRET analysis for use with individual life insurance sales illustrations. The analysis is based on expense and expense-related information reported on each company's 2021 and 2022 Annual Statements. This project has been completed to assist the Life Actuarial Task Force (LATF) in considering potential revisions to the GRET that could become effective for the calendar year 2024. This memo describes the analysis and resultant findings.

NAIC staff provided Annual Statement data for life insurance companies for calendar years 2021 and 2022. This included data from 766 companies in 2021 and 749 companies in 2022. This decrease resumes the trend of small decreases from year to year. Of the total companies, 379 were in both years and passed the outlier exclusion tests and were included as a base for the GRET factors (382 companies passed similar tests last year).

APPROACH USED

The methodology for calculating the recommended GRET factors based on this data is similar to that in the last several years. The methodology was last altered in 2015. The changes made then can be found in the recommendation letter sent to LATF on July 30, 2015.

To calculate updated GRET factors, the average of the factors from the two most recent years (2021 and 2022 for those companies with data available for both years) of Annual Statement data was used. For each company, an actual-to-expected ratio was calculated. Companies with ratios that fell outside predetermined parameters were excluded. This process was completed three times to stabilize the average rates. The boundaries of the exclusions have been modified from time to time; however, there were no adjustments made this year. Unit expense seed factors (the seeds for all distribution channel categories are the same), as shown in Appendix B, were used to compute total expected expenses. Thus, these seed factors were used to implicitly allocate expenses between acquisition and maintenance expenses, as well as among the three acquisition expense factors (on a direct of ceded reinsurance basis).

Companies were categorized by their reported distribution channel (four categories were used as described in Appendix A included below). There remain a significant number of companies for which no distribution channel was provided, as no responses to the annual surveys have been received from those companies. The characteristics of these companies vary significantly, including companies not currently writing new business or whose major line of business is not individual life insurance. Any advice or assistance from LATF in future years to increase the response rate to the surveys of companies that submit Annual Statements to reduce the number of companies in the "Other" category would be most welcomed.

The intention is to continue surveying the companies in future years to enable the enhancement of this multiple distribution channel information.

Companies were excluded from the analysis if in either 2021 or 2022, (1) their actual to expected ratios were considered outliers, often due to low business volume, (2) the average first year and single premium per policy were more than \$40,000, (3) they are known reinsurance companies or (4) their data were not included in the data supplied by the NAIC. To derive the overall GRET factors, the unweighted average of the remaining companies' actual-to-expected ratios for each respective category was calculated. The resulting factors were rounded, as shown in Table 1.

THE RECOMMENDATION

The above methodology results in the proposed 2024 GRET values shown in Table 1. To facilitate comparisons, the current 2023 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount (\$000s) per policy issued.

To facilitate comparisons, the current 2023 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 2, including the average premium per policy issued and the average face amount (\$000s) per policy issued.

TABLE 1

PROPOSED 2024 GRET FACTORS, BASED ON AVERAGE OF 2021/2022 DATA

DESCRIPTION	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Companies Included	Average Premium Per Policy Issued During Year	Average Face Amt (000) Per Policy Issued During Year
Independent	\$198	\$1.10	50%	\$59	140	3,433	222
Career	206	1.10	52%	62	90	2,325	196
Direct Marketing	217	1.20	54%	65	23	767	122
Niche Marketing	132	0.70	33%	40	31	347	10
Other*	162	0.90	41%	49	95	917	80
* Includes companies that did not respond to this or prior year surveys					379		

TABLE 2

CURRENT 2023 GRET FACTORS, BASED ON AVERAGE OF 2020/2021 DATA

Description	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Companies Included	Average Premium Per Policy Issued During Year	Average Face Amt (000) Per Policy Issued During Year
Independent	\$180	\$1.00	45%	\$54	141	3,073	204
Career	203	1.10	51%	61	84	2,296	197
Direct Marketing	197	1.10	49%	59	21	899	57
Niche Marketing	147	0.80	37%	44	30	507	14
Other*	153	0.90	39%	46	106	853	72
* Includes companies that did not respond to this or prior year surveys					382		

In previous recommendations, an effort was made to reduce volatility in the GRET factors from year to year by limiting the yearly change in GRET factors to about ten percent of the prior value. The changes from the 2023 GRET were reviewed to ensure that a significant change was not made in this year's GRET recommendation.

All GRET factors for the Independent and the Direct Marketing distribution channel experienced changes greater than ten percent, so the factors for these lines were capped at the ten percent level (or slightly above/below 10% due to rounding of the factor) from the corresponding 2023 GRET values. The volatility occurred due to an increasing median actual-to-expected ratio for each distribution channel, which allowed for additional companies with higher actual-to-expected ratios to be included in the calculation that were previously dropped. The driving force behind the notable increase in median actual-to-expected ratios for Independent and Direct Marketing were several significant outlier companies. Niche Marketing experienced the opposite, with lower median actual-to-expected ratios allowing several additional companies with lower actual-to-expected ratios, and the factors need to be capped at a ten percent drop.

USAGE OF THE GRET

This year's survey, responded to by each company's Annual Statement correspondent, included a question regarding whether the 2023 GRET table was used in its illustrations by the company. Last year, 35% of the responders indicated their company used the GRET for sales illustration purposes, with similar percentage results by company size; this contrasted with about 31% in 2021. This year, 44% of responding companies indicated they used the GRET in 2023 for sales illustration purposes. The range covered all distribution methods, including 48% for Independent, 32% for Career, 40% for Niche Marketers, and 60% for Direct Marketing. Based on the information received over the last several years, the variation in GRET usage appears to be in large part due to the relatively small sample size and different responders to the surveys.

We hope LATF finds this information helpful and sufficient for consideration of a potential update to the GRET. If you require further analysis or have questions, please contact Pete Miller at 847-706-3566.

Kindest personal regards,

Life Insurance Company Expenses

APPENDIX A -- DISTRIBUTION CHANNELS

The following is a description of distribution channels used in the development of recommended 2023 GRET values:

1. Independent – Business written by a company that markets its insurance policies through an independent insurance agent or insurance broker not primarily affiliated with any one insurance company. These agencies or agents are not employed by the company and operate without an exclusive distribution contract with the company. These include most PPGA arrangements.
2. Career – Business written by a company that markets insurance and investment products through a sales force primarily affiliated with one insurance company. These companies recruit, finance, train, and often house financial professionals who are typically referred to as career agents or multi-line exclusive agents.
3. Direct Marketing – Business written by a company that markets its own insurance policies direct to the consumer through methods such as direct mail, print media, broadcast media, telemarketing, retail centers and kiosks, internet, or other media. No direct field compensation is involved.
4. Niche Marketers – Business written by home service, pre-need, or final expense insurance companies as well as niche-market companies selling small face amount life products through a variety of distribution channels.
5. Other – Companies surveyed were only provided with the four options described above. Nonetheless since there were many companies for which we did not receive a response (or whose response in past years' surveys confirmed an "other" categorization (see below), values for the "other" category are given in the tables in this memo. It was also included to indicate how many life insurance companies with no response (to this survey and prior surveys) and to indicate whether their exclusion has introduced a bias into the resulting values.

APPENDIX B – UNIT EXPENSE SEEDS

The expense seeds used in the 2014 and prior GRETs were differentiated between branch office and all other categories, due to the results of a relatively old study that had indicated that branch office acquisition cost expressed on a per Face Amount basis was about double that of other distribution channels. Due to the elimination of the branch office category in the 2015 GRET, non-differentiated unit expense seeds have been used in the current and immediately prior studies.

The unit expense seeds used in the 2024 GRET and the 2023 GRET recommendations were based on the average of the 2006 through 2010 Annual SOA expense studies. These studies differentiated unit expenses by type of individual life insurance policy (term and permanent coverages). As neither the GRET nor the Annual Statement data provided differentiates between these two types of coverage, the unit expense seed was derived by judgment based this information. The following shows the averages derived from the Annual SOA studies and the seeds used in this study. Beginning with the 2020 Annual Statement submission this information will become more readily available.

2006-2010 (AVERAGE) CLICE STUDIES:

	Acquisition/ Policy	Acquisition/ Face Amount (000)	Acquisition/ Premium	Maintenance/ Policy
Term				
Weighted Average	\$149	\$0.62	38%	\$58
Unweighted Average	\$237	\$0.80	57%	\$76
Median	\$196	\$0.59	38%	\$64
Permanent				
Weighted Average	\$167	\$1.43	42%	\$56
Unweighted Average	\$303	\$1.57	49%	\$70
Median	\$158	\$1.30	41%	\$67

CURRENT UNIT EXPENSE SEEDS:

	Acquisition/ Policy	Acquisition/ Face Amount (000)	Acquisition/ Premium	Maintenance/ Policy
All distribution channels	\$200	\$1.10	50%	\$60

RE: Guidance on Allocating Negative IMR (PIMR) In VM-20, VM-21, and VM-30

Executive Summary

While the potential admittance of some portion of negative Interest Maintenance Reserve (IMR) is being considered by the Statutory Accounting Practices (E) Working Group (SAPWG), continued guidance on the proper practice for allocating IMR for principles-based reserving (PBR) and asset adequacy testing purposes may be helpful for companies in the near term.

Background

LATF issued guidance on November 17, 2022 (Attachment A) on allocating negative IMR (PIMR) in VM-20, VM-30, VM-31. Since then, SAPWG has continued to discuss the potential admittance of some portion of negative IMR. In light of these ongoing discussions, continued guidance is needed to ensure consistent treatment for negative IMR in PBR and asset adequacy testing. Due to the timing of Valuation Manual updates, the earliest that such guidance can practically be added to the Valuation Manual is for year-end 2025. Therefore, LATF is issuing additional guidance for 2023 and 2024.

Recommendation

In order to assist state regulators and companies in achieving uniform outcomes for year-end 2023 and 2024, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, “appropriate”, and “reasonable”. Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the non-admitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, any portion of negative IMR that is an admitted asset, should be allocated for purposes of VM-20, VM-21, and VM-30, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset.

This recommended guidance is for year-end 2023 and 2024, to address the current uncertainty and concerns with the “double-counting” of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. This guidance is expected to be incorporated in the 2025 Valuation Manual.

Attachment A

November 17, 2022

To: Members of the Life Actuarial (A) Task Force

From: NAIC Staff

RE: Guidance on Allocating Negative IMR (PIMR) In VM-20, VM-21, and VM-30

Executive Summary

With the rapidly rising interest rate environment, companies selling fixed income assets for a loss are seeing their Interest Maintenance Reserve (IMR) balances decrease or even become negative. Current statutory accounting treatment makes negative IMR a non-admitted asset. While a longer-term evaluation of IMR is being considered by the Statutory Accounting Practices (E) Working Group (SAPWG), additional guidance on the proper practice for allocating IMR for Asset Adequacy Testing and Principle-based Reserving purposes may be helpful for companies in the near term.

Background

The letter to SAPWG from the American Council of Life Insurers (ACLI) (Attachment 1) notes that "...with the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR can result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency)." There are several sections of the Valuation Manual and RBC instructions where IMR is referenced in the letter. Some of these references contemplate allocating negative IMR (or pre-tax IMR (PIMR), as applicable) at the level of business that is being analyzed/reserved for. However, these references do not detail what to do when the total company IMR balance is negative – and therefore a non-admitted asset under current statutory guidance.

Other references do provide additional insight as to the allocation of IMR when the total company balance is negative/disallowable. VM-20 Section 7.D.7.b notes that "...the company shall use a reasonable approach to allocate any portion of the total company balance that is disallowable under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)." Question 22 of the AAA's Asset Adequacy Practice Note (Attachment 2) states that "... a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis." However, Question 22 also notes a 2012 survey data that showed varying practices across companies, including some companies that allocated negative IMR.

Recommendation

In order to assist state regulators and companies in achieving uniform outcomes for year-end 2022, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, "appropriate", and "reasonable". Companies are not required to allocate any non-admitted portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the non-admitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, if a company was granted a permitted practice to admit negative IMR as an asset, the company should allocate the formerly non-admitted portion of negative IMR, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset. This recommended guidance is for year-end 2022, to address the current uncertainty and concerns with the "double-counting" of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. Refinement of this guidance may be considered beyond year-end 2022.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Bruggeman:

Re: Proposal for the NAIC to Fulfill the Original Intent of the Interest Maintenance Reserve

The American Council of Life Insurers (ACLI) would like to request urgent action on an issue that was never fully resolved by the NAIC and has become a pressing matter for the industry due to the rapid rise in interest rates—the allowance of a net negative Interest Maintenance Reserve (IMR) balance.

The ACLI proposes the allowance of a negative IMR balance in statutory accounting. Negative IMR balances are expected to become more prevalent in a higher interest rate environment and their continued disallowance will only serve to project misleading optics on insurers' financial strength (e.g. inappropriate perception of decreased financial strength through lower surplus and risk-based capital even though higher rates are favorable to an insurer's financial health) while creating uneconomic incentives for asset-liability management (e.g. discourage prudent investment transactions that are necessary to avoid mismatches between assets and liabilities just to avoid negative IMR).

ACLI believes the necessary changes can be implemented quickly and with minimal changes to the annual statement reporting instructions.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

The remainder of this letter expands upon these points.

Historical Context and Background

The IMR, first effective in statutory accounting in 1992, requires that a realized fixed income gain or loss, attributable to changes in interest rates (but not gains or losses that are credit related), be amortized into income over the remaining term to maturity of the fixed income investments (and related hedging programs) sold rather than being reflected in income immediately.

Since statutory accounting practices for life insurance companies are the primary determinant of obtaining an accurate picture for assessing solvency, it was imperative that the accounting practices be consistent for assets, liabilities, and income and that they be reported on a financially consistent basis. If assets and liabilities were not reported on a financially consistent basis, then the financial statements would not be useful in determining an accurate assessment of solvency or whether there were sufficient assets to pay contractual obligations when they become due.

Amortized cost valuation of fixed income investments reflects the outlook at the time of purchase and amortization reflects the yields available at time of purchase. Policy reserve liabilities are established at the same time, and the interest rate assumptions are consistent with the yields at that time. But if fixed income investments are sold, with the proceeds reinvested in new fixed income investments, a new amortization schedule is established which may be based on an entirely different yield environment, which may be inconsistent with the reserve liabilities when they were established.

IMR was created to prevent the timing of the realization of gains or losses on fixed income investments, related to interest rates changes, to affect the immediate financial performance of the insurance company. This recognized that the gains and losses were transitory without any true economic substance since the proceeds would be reinvested at offsetting lower or higher interest rates.

For example, without the IMR, if a company sold all bonds in a declining interest environment (e.g., from 4% to 2%), and reinvested in new bonds, surplus would increase through significant realized gains. The increased surplus would inappropriately reflect increased financial strength that is illusory, due to a now lower yielding portfolio, as there would be no change to the income needed to support the liabilities.

Likewise, if a company sold all bonds in an increasing interest rate environment (e.g., from 2% to 4%), and reinvested in new bonds, surplus would decrease through significant realized losses. The decreased surplus would inappropriately reflect decreased financial strength that is similarly illusory due to the reinvestment at higher yields relative to when the bonds were originally purchased.

A net negative IMR is currently disallowed in statutory accounting. This handling is contrary to its original intent which recognized that interest related gains and losses are both transitory without any true economic substance since the proceeds would be reinvested at offsetting lower or higher interest rates, respectively. See attachment I to this letter that illustrates the financially consistent

treatment of assets, liabilities, and income and how IMR is needed to achieve that objective for both realized gains and losses.

That IMR should conceptually apply to both realized gains and losses was recognized by the NAIC during and after IMR development. The below is a quote from a 2002 report by the NAIC AVR/IMR Working Group to the E-Committee:

*“The basic rationale for the IMR would conclude that neither a maximum nor a minimum is appropriate. If the liability values are based on the assumption that the assets were purchased at about the same time as the liabilities were established, then there should be no bounds to the reserve which corrects for departures from that assumption; **if a company has to set up a large reserve because of trading gains, it is in no worse position that if it had held the original assets. As for negative values of the IMR, the same rationale applies. However, the concept of a negative reserve in the aggregate has not been adopted.**”*

While realized losses can offset realized gains in IMR, the IMR instructions require the disallowance of a net negative IMR balance (e.g., as noted in the last sentence of the aforementioned quote). See attachment II to this letter, which includes the pertinent IMR instructions where negative IMR balances are currently disallowed and in need of amendment.

When IMR was originally developed, it was intended to achieve its purpose in both a declining and rising interest rate environment. The originally adopted disallowed status of a negative IMR was expected to be addressed in subsequent years. However, over time with the persistent declining interest rates, the issue lost urgency since a negative IMR would not have been a significant issue for any company. The NAIC AVR/IMR Working Group ultimately disbanded without ever addressing this longstanding item on their agenda.

With a rising interest rate environment, it is important that the allowance of a negative IMR be addressed to fulfill its original purpose. In general, rising interest rates are favorable to the financial health of the insurance industry as well as for policyowners.

Without a change, the rising interest rate environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital and worse, create incentives for insurance companies to take action, or not take actions, to prevent uneconomic surplus impacts where the actions (or lack thereof) themselves may be economically detrimental.

Symmetrical treatment of a negative IMR (i.e., the allowance of a negative IMR balance) would appropriately not change surplus as a sale and reinvestment would not affect the underlying insurance company liquidity, solvency, or claims paying ability, just like with a positive IMR. See attachment III to this letter that illustrates that the sale of a fixed income investment, and reinvestment in a new fixed income investment, has no bearing on a life insurance company's liquidity, solvency, or claims paying ability.

As it was initially recognized by the NAIC that IMR should apply to both gains and losses, adequate safeguards were already built into the IMR instructions for asset adequacy, risk-based capital, and troubled companies.

Negative IMR – Reserve Adequacy and Risk-Based Capital

When IMR was developed, it was anticipated that a negative IMR balance would be reflected in asset adequacy analysis. This inclusion ensures that the assets, with the appropriate allocation from the IMR (whether negative or positive), would be adequate to fund future benefit obligations and related expenses of the company.

From the standpoint of reserve adequacy, the inclusion of a negative IMR balance appropriately reduces the investment income in asset adequacy testing. Without the inclusion of negative IMR, reserve inadequacies would potentially not be recognized.

Further, with the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR can result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency). The Actuarial Opinion that covers asset adequacy analysis requires the appropriate assessment of negative IMR in its analysis.

If a negative IMR balance is used in the asset adequacy analysis, its allowance is appropriate. Likewise, if only a portion of a company's negative IMR balance is reflected in the asset adequacy analysis, only the allowance for that portion of the negative IMR balance reflected is appropriate. If a negative IMR balance is disallowed, it would be inappropriate to include in asset adequacy analysis. It is imperative there is symmetry between both reserving and accounting considerations, and there is already precedent in the asset adequacy analyses for inclusion of IMR.

Below are the current references to IMR in the valuation manual and risk-based capital calculations.

Regulation	Use	IMR references
Actuarial Opinion and Memorandum Regulation (VM-30)	Asset adequacy analysis for annual reserve opinion	An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis.
Life principle-based reserves (VM-20)	Calculation of deterministic reserve	Calculate the deterministic reserve equal to the actuarial present value of benefits, expenses, and related amounts less the actuarial present value of premiums and related amounts, less the positive or negative pre-tax IMR balance at the valuation date allocated to the group of one or more policies being modeled
Life principle-based reserves (VM-20)	Calculation of stochastic reserve	Add the CTE amount (D) plus any additional amount (E) less the positive or negative pre-tax IMR balance allocated to the group of one or more policies being modeled
Variable annuities principle-based reserves (VM-21)	Reserving for variable annuities	The IMR shall be handled consistently with the treatment in the company's cash-flow testing, and the amounts should be adjusted to a pre-tax basis.
C3 Phase 1 (Interest rate risk capital)	RBC for fixed annuities and single premium life	IMR assets should be used for C3 modeling.

Additional IMR Safeguards

The IMR instructions do provide additional safeguards in situations where it would be appropriate to recognize interest-rate related gains and losses immediately rather than be included in the IMR.

They were established to prevent situations where the liability the IMR supports, no longer exists. Examples noted in the annual statement instructions include:

- Major book-value withdrawals or increases in policy loans occurring at a time of elevated interest rates.
- Major book value withdrawals resulting from a “run on the bank” due to adverse publicity.

As a result, the IMR instructions include an IMR Exclusion whereby all gains or losses which arise from the sale of investments related to “Excess Withdrawal Activity” are to be excluded from IMR and reflected in net income. In short, Excess Withdrawal Activity is defined as 150% of the product of the lower of the withdrawal rate in the preceding or in the next preceding year calendar year times the withdrawal reserves at the beginning of the year.

Summary

With a rising interest rate environment, it is important that the allowance of a negative IMR be addressed to fulfill its original purpose. In general, rising interest rates are favorable to the financial health of the insurance industry as well as for policyowners. Without a change, the rising interest rate environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital.

The inability to recognize negative IMR could also impact the rating agency view of the industry, or worse, incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. Furthermore, there are adequate safeguards in place to ensure that allowing a negative IMR does not cause any unrecognized reserve or capital inadequacies or any overstatement of claims paying ability.

Current statutory accounting guidance creates two equally objectionable alternatives for insurers and their policyowners. Following the current statutory guidance will improperly reflect financial strength through understating surplus, so additional surplus may need to be retained. Alternatively, one could take steps to manage the current situation by limiting trading of fixed income investments and related hedging programs, which would diminish significant economic value for policyowners, as well as create a mismatch between assets and liabilities.

Both scenarios encourage short-term non-economic activity not in the best long-term interest of the insurance company’s financial health or its policyowners. For insurers with diminishing IMR balances due to the rapid increase in interest rates, this dilemma is either here or fast approaching and can only be resolved now with certainty of the appropriate treatment of IMR by the NAIC.

The ACLI looks forward to urgently working with the NAIC toward fulfilling the original intent of IMR. It is imperative that insurers receive relief for year-end 2022.

Attachment I

Simplified Example – Need for Reporting Assets, Liabilities, and Income on a Consistent Basis:

- This example shows the appropriate interrelationship of IMR on assets, reserve liabilities, and income.
- Assume a bond is held with the following characteristics:
 - Par Value: \$1,000
 - Coupon: 3%
 - Term-to-maturity: 10 years
- Assume the bond is then sold at “time zero” and the proceeds are immediately reinvested in a bond with the same characteristics (e.g., term-to maturity, credit quality, coupon equivalent to market rate, etc.).
- Assume a simplified example with no existing IMR balance, where the bond supports a fixed insurance liability with the same duration as the original bond, as well as a present value of \$1,000.

Table 1: Market Interest Rate Scenario			
	Same	Lower	Higher
Market interest rate	3%	2%	4%
Bond’s market value	\$1,000	\$1,090	\$919
Realized gain/(loss) if sold	\$0	\$90	(\$81)*

Realized gain/(loss) deferred to balance sheet IMR and amortized into income over remaining life of bond sold (i.e., 10 years).

Table 2: Statutory Investment Income			
IMR amortization	\$0	\$9	(\$8)
Interest income on new bond	\$30	\$21	\$38
Total annual stat income	\$30	\$30	\$30

On average, future income is approximately the same in each interest rate scenario as the IMR gets reduced through amortization to income.

Table 3: Statutory Balance Sheet			
Balance Sheet Bonds	\$1,000	\$1,090	\$919
IMR	\$0	(\$90)	\$0*
Stat assets net of IMR	\$1,000	\$1,000	\$919*
Reserves	\$1,000	\$1,000	\$1,000
Surplus	\$0	\$0	(\$81)*

Even though the sale of the bond (and subsequent reinvestment) is non-economic, and the same income is being produced to support the liability, a negative surplus position makes it appear there is now a deficiency. Allowing the negative IMR appropriately would show no surplus impact, as is shown when a gain occurs, as there is no change in reported reserve liabilities. Appropriately consistent financial results require the allowance of negative IMR

***The negative IMR balance is currently disallowed and directly reduces surplus. This treatment is not supported by theoretical rationale and gives a distorted view of solvency.**

Attachment II

Pertinent Annual Statement Instructions

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned “Interest Maintenance Reserve” on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the “Change in Disallowed Interest Maintenance Reserve” in the write -in line, in the Surplus Account on Page 4 of the Separate Accounts Statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (see rule a)
Negative	Negative	Negative (see rule b)
Positive	Negative	Positive (see rule c)
Positive	Negative	Negative (see rule d)
Negative	Positive	Positive (see rule e)
Negative	Positive	Negative (see rule f)

Rules:

- a. If both balances are positive, then report each as a liability in its respective statement.
- b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.
- c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.
- d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.
- e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.
- f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

Attachment III

IMR Illustration – Liquidity, Solvency and Claims Paying Ability

Essentially, a negative IMR balance from an individual trade represents the present value of the future positive interest rate differential, from the new investment compared to the old investment, that puts one in the same economic position, when compared to before the trade, including total liquid assets available to pay claims.

This phenomenon can be illustrated in the following table where a 10-year bond is sold, one year after purchase, and immediately reinvested in another 10-year bond with equivalent credit quality in an interest rate environment where market interest rates increased from 2% to 4% in the intervening year.

	Coupon Rate of Bond	Market Interest Rate @ Purchase	Par Value of Bond	Fair Value @ Purchase	Fair Value @ Time of Sale	Loss on Sale	Claims Paying Liquidity
Old Bond	2%	2%	100	100	85.13	14.87	85.13
New Bond	4%	4%	85.13	85.13	85.13	N/A	85.13

The short-term acceleration of negative IMR to surplus (e.g., its disallowance) is strictly a timing issue and not a true loss of financial strength or claims paying liquidity, but it does present a temporary and inappropriate optics issue in surplus/financial strength until the IMR is fully amortized.

This phenomenon can further be illustrated by comparing two separate hypothetical companies. Assume Company A and B both have the exact same balance sheets. Then assume Company A keeps the old bond and Company B affects the trade mentioned above.

With the disallowance of a negative IMR balance, Company B now has a balance sheet that shows a relative decline of financial strength of \$14.87. This weakened balance sheet contrasts with both the principle behind the development of IMR, the relative actual economic financial strength, and claims paying ability of the two entities.

There is no difference in balance sheet economics of the two entities. The negative IMR balance for Company B essentially represents the difference between cost and fair value of the investment sold, that is already embedded on Company A's balance sheet based on the existing interest rate environment. The negative IMR balance should be recognized as there is no change in economics pre and post trade (or in this instance between Company A and Company B) which is consistent with the overall principle behind IMR.

Attachment 2

Some actuaries test the option risk in assets (e.g., calls) by assuming an immediate drop in the discount rate used in the GPV. The drop test is often set as severe as needed to represent a drop in earned rate that would occur if all options were exercised.

Q22. The AOMR states that the interest maintenance reserve (IMR) should be used in asset adequacy analysis. Why?

The IMR is part of the total reported statutory reserves. The IMR typically defers recognition of the portion of realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are amortized into investment income over the expected remaining life of the investments sold, rather than being recognized immediately. This amortization is after tax.

The purpose of the IMR usually is to maintain the original matching between assets and liabilities that might be weakened by the sale of an asset. Originally, it was anticipated that the IMR would be allowed to become negative, as long as the asset adequacy analysis showed that the total statutory reserves, including the negative IMR, were sufficient to cover the liabilities. However, a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis.

In the 2012 survey of appointed actuaries, more than 80 percent of the respondents indicated they include the IMR in their testing. Some actuaries use a starting IMR of zero if IMR is negative. Other actuaries use negative IMR to adjust starting assets and therefore model future lower asset yields than if zero IMR were assumed. Half of the respondents who indicated they used IMR in testing also indicated they lower assets by the absolute value of a negative IMR balance; the other half indicated they use a value of zero for the starting IMR if it is negative at the beginning of the projection period. There is no prohibition regarding the use of negative IMR within asset adequacy analysis. So, a number of actuaries allow the IMR to fall below zero within the testing period. About 60 percent of actuaries responding to the survey indicated they do not have to deal with a negative IMR.

Q23. How does the actuary determine which portion of the IMR can be used to support certain products? How is the portion of the IMR used?

If the actuary allocates the assets and IMR by line, then one possible approach is line of business-level inclusion of starting assets in the amount of the unamortized portion of the IMR relating to those assets that were owned by the line prior to being sold. Another possible approach is the allocation of company-level IMR proportionately to starting assets. An advantage of this second approach is that it is generally simpler, while a disadvantage is that longer liabilities probably have longer assets, which usually produce higher capital gains when sold, after a given drop in interest rates, than shorter assets do,

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Rachel Hemphill, FSA, FCAS, MAAA, Ph.D.

Title of the Issue:

Clarifying guidance for allocation of negative IMR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM- 20 Section 7.D.7, VM-30 Section 3.B.5

January 1, 2023 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Clarify allocation of negative IMR for VM-20 and VM-30; in particular, non-admitted IMR is excluded. Note that VM-21 Section 4.A.7 currently requires a treatment consistent with VM-30, and so additional guidance is not needed for VM-21.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

Dates: Received	Reviewed by Staff	Distributed	Considered
<u>05/22/23</u>	<u>SO</u>		
Notes: <u>APF 2023-08</u>			

VM-20 7.D.7

7. Under Section 7.D.1, any PIMR balance allocated to the group of one or more policies being modeled at the projection start date is included when determining the amount of starting assets and is then subtracted out, under Section 4 and Section 5, as the final step in calculating the modeled reserves. The determination of the PIMR allocation is subject to the following:

- a. The amount of PIMR allocable to each model segment is the approximate statutory interest maintenance reserve liability that would have developed for the model segment, assuming applicable capital gains taxes are excluded. The allocable PIMR may be either positive or negative.
- b. In performing the allocation to each model segment, ~~the company shall use a reasonable approach to allocate~~ any portion of the total company IMR balance that is ~~disallowable not admitted~~ under statutory accounting procedures ~~(i.e., when the total company balance is an asset rather than a liability)~~ shall first be removed. The company shall use a reasonable approach to allocate the total company balance, after removing any non-admitted portion thereof, between PBR and non-PBR business and then allocate the PBR portion among model segments in an equitable fashion.
- c. The company may use a simplified approach to allocate the PIMR, if the impact of the PIMR on the minimum reserve is minimal.

VM-30 Section 3.B.5

5. An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis. In performing the allocation, any portion of the total company IMR balance that is not admitted under statutory accounting procedures shall first be removed. Analysis of risks regarding asset default may include an appropriate allocation of assets supporting the asset valuation reserve; these AVR assets may not be applied for any other risks with respect to reserve adequacy. Analysis of these and other risks may include assets supporting other mandatory or voluntary reserves available to the extent not used for risk analysis and reserve support.

In addition to providing general feedback on the IMR Template and Instructions, commenters are requested to address the following questions:

1. Does there need to be any disclosure about C3 Phase 1 and C3 Phase 2? If responding affirmatively, please suggest specific disclosures.
2. Are there any summary tables that may be useful standard documentation for the free-form responses on excess withdrawals or bond sales?

The template contained in this spreadsheet is part of the company's PBR Actuarial Report and/or Actuarial Memorandum. The PBR Actuarial Report and Actuarial Memorandum are considered to be confidential information under Section 14A of the Standard Valuation Law (Model #820), and may only be disclosed by a commissioner pursuant to Section 14B of Model #820.

General Instructions for Completing Optional IMR Template

- 1) Instructions for specific fields are provided on tab "Instructions Template IMR". Please review all instructions. Then complete the template in this workbook.
- 2) Fields that must be completed are shaded in blue.
- 3) Do not add, remove, or move rows or columns.
- 4) Use the Comments column if further explanation is needed.
- 5) This template is part of the PBR Actuarial Report and/or Actuarial Memorandum. Although this workbook is formatted for printing, templates must be provided in [Excel](#) format.

**Instructions for Completing Optional AOM and PBR Actuarial Report Template IMR
Supplemental IMR Reporting**

IMR and Relevant Annual Statement Reporting

Column	Instructions
1	General Account IMR "Interest Maintenance Reserve" on Annual Statement Page 3, Line 9.4 of the General Account Statement.
2	Separate Account IMR "Interest Maintenance Reserve" on Annual Statement Page 3, Line 3 of the Separate Accounts Statement.
3	RBC RBC ratio, where the denominator is the authorized control level. Reporting entities with a 300% or lower RBC are not permitted to admit net negative (disallowed) IMR.
4	General Account Capital and Surplus General account capital and surplus, as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted net negative IMR. This amount should reconcile to the note disclosure for IMR included with the annual statement.
5	Admitted negative (disallowed) IMR Reported as a write-in to miscellaneous other-than-invested asset, named as "Disallowed IMR" and included in special surplus. Should be entered as a positive amount. This amount should reconcile to the note disclosure for IMR included with the annual statement.
6	Comments Any additional commentary needed to explain the entries in Columns 1-5.

Automatic Verifications

- RBC Flag**
If the RBC is under 300%, it is expected that the Admitted negative (disallowed) IMR will be 0. Provide an explanation if this is not the case.
- Capital and Surplus Flag**
The Admitted negative (disallowed) IMR is limited to 5% of General Account Capital and Surplus. Provide an explanation if this is not the case.

IMR and Relevant 9/30 Statement Reporting (to be completed if 9/30 data is used for AAT)

Repeats Columns 1-6 above, but as of 9/30. Automatic verifications are repeated for the 9/30 table. This table only needs to be completed if 9/30 data is used for AAT.

Reflection of IMR in Asset Adequacy Testing and Principle-Based Reserving

Column	Instructions
1	Reporting Basis All potential reporting bases for the template are listed. Columns 2-7 should be completed for all rows for which the company has business.
2	As of Quarter Enter Q3 for 9/30 data or Q4 for 12/31 data.
3	Amount of IMR Allocated Enter the total amount of IMR that is allocated and included in starting assets (after being adjusted to a pre-tax basis for PBR) for the given reporting basis. Report IMR, not PIMR.
4	Amount of negative (disallowed) IMR Allocated Enter the amount of net negative (disallowed) IMR that is allocated and included in starting assets (after being adjusted to a pre-tax basis for PBR) for the given reporting basis. Should be entered as a positive amount. Report IMR, not PIMR.
5	IMR Allocation Basis Enter the allocation basis used to allocate IMR for AAT or PBR. For example, this may be proportional based on starting assets or may be specific to the assets included in the reserving or testing.
6	Included in Starting Assets? (Y/N) Verify whether the allocated admitted net negative (disallowed) IMR was reflected in the starting assets, thereby reducing the amount of starting assets.
7	Allocated IMR generates future income? (Y/N) Verify that the allocated admitted net negative (disallowed) IMR included in the starting assets does not generate future income.
8	Comments Any additional commentary needed to explain the entries in Columns 1-7. In particular, if reserves are not modeled, and so allocated IMR is not reflected via starting assets, explain how IMR is reflected in the calculation. For the AAT line, if a book value projection was used to evaluate reserve adequacy, disclose whether ending surplus was adjusted for any remaining negative IMR (i.e., reduced surplus).

Automatic Verification

- AAT IMR Flag**
If the amount of negative (disallowed) IMR reflected in AAT is less than the amount of admitted negative (disallowed) IMR, provide an explanation why the admitted IMR is not fully reflected in AAT.

Excess Withdrawals

SAPWG's referral to LATF included a request with assistance "Ensuring that excessive withdrawal considerations are consistent with actual data." Input is appreciated on how LATF could best respond to this portion of the referral. To date, feedback has suggested that A/E analysis on withdrawals would be an appropriate actuarial item responsive to this request.

Bond Sales

SAPWG has proposed a restriction on the types of sales that may generate admitted net negative (disallowed) IMR. At this point, it is unclear what responsive information could be requested to verify this restriction. ACLI has suggested that this item is more suited for a CFO attestation and should not be included with the other actuarial items. Input is requested on whether this item should be included in this template and whether there is information that could be provided by actuaries to support this item or if an alternate verification should be suggested to SAPWG.

AAT IMR Flag:

Admitted negative (disallowed) IMR should not reflect asset sales due to excess withdrawals, either historical excess withdrawals or anticipated future excess withdrawals (where the company anticipates future withdrawals that are "excess" as defined by IMR instructions - above 150% of the prior two years). First, discuss and support with Actual to Expected analysis the level of historical excess withdrawals and anticipated future excess withdrawals. This discussion may be supplemented by other analysis and A/E's, such as for lapse data. Second, please confirm and support that any admitted net negative IMR is not due to asset sales related to excess withdrawals. Note that if the company cannot provide strong support, then the Admitted Negative (disallowed) IMR shall be 0.

(Enter summary here, and attach additional documentation as necessary.)

Admitted negative (disallowed) IMR is limited to IMR generated from losses incurred from the sale of bonds, or other qualifying fixed income investments, that were reported at amortized cost prior to the sale, and for which the proceeds of the sale were immediately used to acquire bonds, or other qualifying fixed income investments, that will be reported at amortized cost. Please confirm and support that any admitted net negative IMR is generated by losses that satisfy that requirement. Note that if the company cannot provide strong support, then the Admitted Negative (disallowed) IMR shall be 0.

(Enter summary here, and attach additional documentation as necessary.)

Vice-Chair, NAIC Life Actuarial (A) Task Force (LATF)

Re: LATF Interest Maintenance Reserve (IMR) Template

Dear Chair Hemphill,

The American Council of Life Insurers (ACLI) appreciates the opportunity to comment on the IMR Template which was exposed by LATF during their meeting on June 15, 2023, and we are especially appreciative of the changes to the template made by regulators to date. ACLI members have a few questions and suggested edits for consideration that would go a long way towards making the Template as meaningful and effective as possible for both industry and regulators alike.

The template will need to be updated to be consistent with the work Statutory Accounting Principles (E) Working Group (SAPWG) is doing on this topic. The July 5th SAPWG exposure had significant updates. Notably, the 5% limit has increased to 10% (with adjustments), which will need to be reflected on the "Instructions Template IMR" and "Template IMR" tabs. Additionally, "Bond Sales" (rows 69-70) on the "Instructions Template IMR" and "Template IMR" tabs may no longer be necessary given the most recent SAPWG exposure. We would also request that LATF adjust the template (particularly the free response questions) to remove any data and questions that are already being captured by SAPWG (e.g., the attestation requirements).

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

General Comments/Confidentiality Tab:

- The template combines concepts from both PBR and the Actuarial Opinion and Memorandum (AOM).
 - The parts relevant for PBR would be in the purview of the Qualified Actuary, but the PBR Report is not due until 4/1.
 - Further, the information requested in lines 45 and 60 is not currently the responsibility of the Appointed Actuary and should be collected elsewhere. It does not seem appropriate for this piece to be part of the AOM. Further, it does not seem appropriate to include this information before the audited financial statements are completed.
 - If the template were considered part of the AOM, how is it referenced? AG 53 was attached to the memorandum as an appendix and was separately provided to domestic regulators as a request. To work similarly to that process the template could be due at or the same time the Regulatory Asset Adequacy Issue Summary (RAAIS) is due.
- ACLI requests that IMR template submissions not be due on 2/28 and are deferred until after the RAAIS and PBR Report are submitted.
- Is it the intent that the file is on record at the company and is available upon request?

Instructions Template IMR Tab:

- The instructions reference a “note disclosure for IMR.” We request clarification on what this wording entails as some members have expressed confusion. There is no IMR Note or IMR Disclosure but there is a form for calculating IMR; is this last item what regulators intended companies to use?

Template IMR Tab:

- Row 16: For column 3, RBC, consider including reference to the following annual statement items for the RBC ratio (= TAC/Authorized Control Level RBC)
 - TAC: Five-Year Historical Data, Line 30, Column 1
 - Authorized Control Level RBC: Five-Year Historical Data, Line 31, Column 1
- Row 16: For column 4, General Account Capital and Surplus,
 - Consider including references to the location in the annual statement for each item in the adjusted amount:
 - General Account Capital and Surplus: Page 3, Line 38
 - Net Positive Goodwill: <location>
 - EDP Equipment and operating system software: Page 2, Line 20, Column 3
 - Net deferred tax assets: Page 2, Line 18.2, Column 3
 - Admitted net negative IMR: <location>
- For column 5, Admitted negative (disallowed) IMR, how does this item differ, if at all, from “admitted net negative IMR” referenced in column 4, General Account Capital and Surplus?
- For column 7, Allocated IMR generates future income? (Y/N)?, consider re-stating the instructions to read as follows: Does the allocated admitted net negative (disallowed) IMR included in the starting assets generate future income? The current language is open to interpretation.
- The following cells do not allow for a zero entry:

- Cell E16 – Admitted negative (disallowed) IMR in Annual Statement
- Cell E26 – Admitted negative (disallowed) IMR in 9/30 Quarterly Statement
- The following cells do not allow for a free-form text entry:
 - Cell E35 (IMR Allocation Basis – VM-30)
 - Cell E36 (IMR Allocation Basis – VM-21)
 - Cell E37 (IMR Allocation Basis – VM-20 Term)
 - Cell E38 (IMR Allocation Basis – VM-20 ULSG)
 - Cell E39 (IMR Allocation Basis – VM-20 All Other)

Thank you once again for your consideration of our comments and we look forward to discussing the IMR Template at a future session of LATF.

Sincerely,

Colin Masterson

Rachel Hemphill
Chair, NAIC Life Actuarial (A) Task Force (LATF)

Re: APF 2023-08 and the NAIC Staff Memo on Interest Maintenance Reserve (IMR)

Dear Chair Hemphill:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the two LATF exposures from the June 1st meeting related to IMR: APF 2023-08 and the NAIC Staff Memorandum on Allocating Negative IMR (PIMR) In VM-20, VM-21, and VM-30. Overall, ACLI has no objections to the language and proposals presented in the exposures.

ACLI would like to clarify whether the regulators' intention is to require that all admitted negative IMR be fully allocated in PBR and AAT, including admitted negative IMR arising from assets in a segmented surplus portfolio. ACLI notes that positive IMR amounts arising from assets in a segmented surplus portfolio are not allocated in PBR and AAT.

Thank you very much for the consideration of our request for clarification and we look forward to further discussion on these exposures at a future LATF session.

Sincerely,

Two handwritten signatures in cursive script. The first signature is 'B Bayerle' and the second is 'Colin Masterson'.

Draft: 8/22/23

Health Insurance and Managed Care (B) Committee
Seattle, Washington
August 14, 2023

The Health Insurance and Managed Care (B) Committee met in Seattle, WA, Aug. 14, 2023. The following Committee members participated: Anita G. Fox (MI), Chair; Jon Pike, Co-Vice Chair (UT); Mike Kreidler, Co-Vice Chair (WA); Trinidad Navarro represented by Jessica Luff (DE); John F. King (GA); Dean L. Cameron (ID); Kathleen A. Birrane (MD); Grace Arnold (MN); Mike Chaney represented by Bob Williams (MS); D.J. Bettencourt (NH); Glen Mulready (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); and Allan L. McVey represented by Erin K. Hunter (WV). Also participating were: Paul Lombardo (CT); LeAnn Crow (KS); Troy Downing (MT); Eric Dunning and Martin Swanson (NE); and Scott A. White (VA).

1. Adopted its June 29 and Spring National Meeting Minutes

The Committee met June 29 and March 23. During its June 29 meeting, the Committee took the following action: 1) heard presentations on the Maryland, Michigan, and Nebraska state appeal programs; and 2) received an update on the Consumer Information (B) Subgroup's work to educate consumers on their claim appeal rights.

Williams made a motion, seconded by Commissioner King, to adopt the Committee's June 29 (Attachment One) and March 23 (*see NAIC Proceedings – Spring 2023, Health Insurance and Managed Care (B) Committee*) minutes. The motion passed unanimously.

2. Adopted its Subgroup, Working Group, and Task Force Reports

Williams made a motion, seconded by Commissioner King, to adopt the following reports: 1) the Consumer Information (B) Subgroup, including its May 25 minutes (Attachment Two); 2) the Health Innovations (B) Working Group, including its Aug. 14 minutes (Attachment Three); 3) the Health Actuarial (B) Task Force; 4) the Regulatory Framework (B) Task Force; and 5) the Senior Issues (B) Task Force. The motion passed unanimously.

3. Discussed Referrals to the Health Actuarial (B) Task Force

Director Fox said the Committee received a referral from the Financial Analysis (E) Working Group, asking the Committee to engage in a discussion with the federal Centers for Medicare & Medicaid Services (CMS) about state insurance regulators' concerns with how the risk adjustment formula impacts the current or prospective financial solvency position of new health insurers entering the health insurance marketplaces. She said that from the NAIC groups under the Committee, the Health Actuarial (B) Task Force is the group best suited to work on this referral. She said that assuming the Committee agrees to refer this issue to the Task Force, the referral will ask the Task Force to: 1) reach out to the CMS to discuss the issue; and 2) identify the changes, if any, in the formula to address the issue identified in the Working Group's referral to the Committee.

Director Fox said the second referral to the Health Actuarial (B) Task Force concerns how possible changes to the cost-sharing reduction subsidy, such as changes to silver loading, could impact plan options and costs to consumers. She said the Task Force has already heard from the American Academy of Actuaries (Academy) and other actuarial groups that silver loading has created odd incentives in the market. Because of this, Director Fox said she believes it would be beneficial for the Committee to know more about how changes in state silver loading policies or other changes, such as the elimination of the enhanced subsidies in 2026, could affect consumer

choices and the affordability of coverage. She said assuming the Committee agrees to this referral, the Committee would be asking the Task Force to review this issue and report its findings to the Committee.

Commissioner Stolfi made a motion, seconded by Commissioner King, to refer the issues identified in the Financial Analysis (E) Working Group referral letter to the Committee and the issue on how possible changes to the cost-sharing reduction subsidy could impact plan options and costs to consumers to the Health Actuarial (B) Task Force. The motion passed unanimously.

4. Received an Update on Market Regulation and Consumer Affairs (D) Committee Work of Interest to the Committee

Director Fox said that in accordance with the Committee's charge to coordinate with appropriate Market Regulation and Consumer Affairs (D) Committee groups, as necessary, on health benefit plan and producer enforcement issues, she asked Commissioner Pike, chair of the Market Regulation and Consumer Affairs (D) Committee, to provide an update on the work of that Committee of interest to this Committee. Commissioner Pike asked Swanson to provide an update on the work of the Improper Marketing of Health Insurance (D) Working Group concerning revisions to the *Unfair Trade Practices Act* (#880). Swanson said that after several meetings and numerous discussions, during its meeting on Aug. 14, the Working Group adopted revisions to Model #880 to address regulatory and enforcement issues with health insurance lead generators.

5. Received an Update on the Consumer Information (B) Subgroup's Work Related to Educating Consumers on Claim Appeal Rights

Crow provided an update on the work of the Consumer Information (B) Subgroup related to educating consumers on their claim appeal rights. She said the Subgroup's small drafting subgroup, which the Subgroup established to review the Subgroup's previous work in 2021 on claims, has met three times since the Committee's July 29 meeting and plans to meet again after the Summer National Meeting. She said the small drafting group includes an array of stakeholders, including state insurance regulators and consumer representatives. She said the small drafting group decided to update its series of consumer guides on claims: 1) codes and claims; 2) explanation of benefits; 3) filing health insurance claims; 4) how to appeal a denied claim; and 5) understanding medical necessity. She said the 2021 version of these guides are available on the Subgroup's webpage on the NAIC website under the "Documents" tab.

Crow said the Subgroup hopes to have updated versions of the guides completed within the next few months. She said the Subgroup's goal is to create content that allows states to incorporate it into their own materials and to use it as-is with no additional configuration needed. The Subgroup is also considering ways to break the content into pieces that can be used in social media posts or in videos. She said that for the updated complete guides, the Subgroup wants to make them more interactive rather than the static PDF format. Crow said the NAIC Communications Division staff have been participating in the small drafting group meetings. She said the Subgroup plans to use their expertise and assistance in making the guides attractive and more accessible to consumers.

Crow said that as mentioned during her update to the Committee during its June 29 meeting, the Subgroup recognizes that developing documents like the guides is only one part of engaging consumers with health insurance issues. Consumers will only find its documents if they seek them out or if they come across communication from a state insurance department that engages them and inspires them to learn more. She said the Subgroup encourages the Committee and the NAIC to consider additional strategies for building knowledge among consumers and establishing state departments of insurance (DOIs) as a go-to source for assistance and education on health insurance.

Williams asked if the Subgroup’s consumer guides could be shared with the Mississippi Insurance Department to possibly supplement the information it currently has on its website about health insurance. Crow said she would share this information with him. Director Fox agreed that one of the main goals of the Consumer Information (B) Subgroup’s work is to be able to share the guides with state DOIs to better assist them with helping their consumers.

6. Heard a Panel Discussion on Preventive Services

Carl Schmid (HIV + Hepatitis Policy Institute), Amy Killelea (Killelea Consulting), and Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) gave a panel presentation on preventive services from a consumer-focused perspective. The presentation also discussed the methodology, findings, and recommendations included in the recently issued NAIC consumer representatives’ report, *Preventive Services and Coverage and Cost-Sharing Protections Are Inconsistently and Inequitably Implemented: Considerations for Regulators*. Schmid provided an overview of the federal Affordable Care Act’s (ACA’s) preventive service requirements and the recent court case, *Braidwood v. Becerra*, challenging those requirements. He also discussed the health equity implications of increasing access to preventive services. Schmid cited the four preventive services examined in the NAIC consumer representatives’ report that have such health equity implications: 1) smoking cessation; 2) pre-exposure prophylaxis (PrEP) for the prevention of human immunodeficiency virus (HIV); 3) colorectal cancer screening; and 4) postpartum depression screening. He explained that the NAIC consumer representatives commissioned the report because despite the ACA preventive care requirements for coverage and no cost-sharing for such services, compliance with such requirements has been a challenge for certain preventive services, particularly with respect to HIV preventive care services, including prescription drugs needed to manage the virus.

Killelea discussed the NAIC consumer representatives’ preventive services report’s methodology and findings. She said the report found that: 1) consumer-facing documents lack comprehensive preventive services descriptions; 2) plan formularies did not always describe zero-dollar cost-sharing preventive medications clearly and accurately; and 3) payer guidance documents that inform claims adjudication policies were often incomplete. She provided examples for each of these findings. She also explained why payer guidance matters because incomplete, unarticulated specific coverage payer policies that fail to inform claims adjudication policies for providers lead to arbitrary coverage decisions.

Howard discussed the recommendations included in the report for state insurance regulators to address the issues in the report’s findings, which include using data calls and market conduct examinations to assess compliance, ensuring continued preventive protections with state legislative and regulatory action, establishing uniform billing and coding standards, and holding plans accountable for educating consumers and providers on preventive services requirements.

Schmid asked if the Consumer Information (B) Subgroup has developed materials on preventive services, and if not, if the Subgroup would consider developing such materials. Crow said that the Subgroup has not developed specific materials on preventive services, but because the Subgroup also believes this is an important consumer issue, she would ask the Subgroup to develop consumer education materials on it.

7. Heard an Update on the Medicaid Redetermination Process

Miranda Motter (America’s Health Insurance Plans—AHIP) provided a status update on the Medicaid redetermination process following the end of the COVID-19 public health emergency (PHE). She discussed key findings from the first batch of Medicaid redeterminations data the CMS reported last month in accordance with the federal Consolidated Appropriations Act, 2023. She said that as of April 2023, based on 14 states, more than 2 million people have gone through the full renewal process. Of those, nearly half (45.5%) were successfully

reenrolled in Medicaid and Children’s Health Insurance Program (CHIP), and more than half (55%) of those renewed were done automatically. She said that approximately, one-third (32.2%) lost their Medicaid and/or CHIP coverage and within that group, 79% of those terminations were for procedural reasons. Motter said that it is anticipated that the next CMS update will provide data on coverage transitions for those who were determined no longer eligible for Medicaid.

Motter discussed updated state renewal timelines. She also discussed new state flexibilities the U.S. Department of Health and Human Services (HHS) recently announced to help keep Americans covered as states resume Medicaid and CHIP renewals. She also provided information on federal, state, and health industry resources for consumers and employers to assist them with transitioning through the renewal process and maintaining coverage. She highlighted AHIP’s Medicaid redetermination toolkit designed to assist consumers transitioning from Medicaid coverage because of redetermined ineligibility for such coverage to other types of coverage, such as employer-based health insurance and health insurance marketplace plans. She also discussed the work of the Connecting to Coverage Coalition (Coalition), which is a coordinating community for stakeholders working to minimize disruptions in coverage associated with Medicaid redeterminations. She said the Coalition includes broad representation from seniors, disability groups, patient groups, provider associations, employer-related organizations, consumer advocacy groups, and Medicaid trade associations.

8. Received an Update on the Work of the Special (EX) Committee on Race and Insurance Health Workstream

Commissioner Arnold and Commissioner Birrane provided an update on the Special (EX) Committee on Race and Insurance Health Workstream work since its last update to the Committee.

Commissioner Arnold said that after the Spring National Meeting, the Workstream met in a regulator-only session to discuss its activities and meetings for 2023, during which, the Workstream decided to: (1) continue its education on benefit design relating to specific areas of focus, such as preventative care and mental health coverage beyond pure parity; (2) explore the evolution of the ACA section 1332 waivers and innovative uses of them that can be implemented to lower the uninsured rate in states; and (3) continue to provide a forum for sharing innovative programs and initiatives that states are doing that are designed to promote health equity. She said the Workstream met July 24 to hear presentations focusing on preventative care and lowering barriers to such care, particularly with respect to chronic diseases. The presentations discussed the impact of lowering barriers to such care in increasing health equity and reducing disparities. The Workstream plans to hold a follow up meeting on this topic sometime in October or early November. Commissioner Arnold said the Workstream plans to meet sometime in late September or early October to hear presentations on initiatives and programs to reduce mental health disparities. The Workstream hopes to hear from a variety of stakeholders, including industry and consumers.

Commissioner Birrane said the Workstream plans to meet Sept. 19 to hear presentations on innovative uses for ACA section 1332 waivers and other market reforms, aimed toward lowering the uninsured rate in the states. She said during this meeting, the Workstream will hear from states that have found success in amending their state benchmark plans, what they changed, and what that process looked like. Further, the Workstream will hear from states that have implemented other market reforms to make health insurance more accessible. She said the Workstream looks forward to hearing what has proven successful, what challenges arose, and what recommended best practices emerged as these efforts were undertaken to assist the uninsured population in respective states.

Commissioner Arnold said the Workstream is also piloting a new collaboration space on the NAIC Connect platform to allow Workstream members and other NAIC members to discuss issues related to health equity and other related topics. She said this effort will provide a platform that Workstream members can use to share the information that has and will be captured during its past and future meetings on removing barriers to health insurance for historically disadvantaged communities with each other and other NAIC members. She said the

Workstream's NAIC Connect page will be a living resource for the NAIC membership on which the Workstream can continue to build content and resources for states seeking to address the equity gap in health insurance access and utilization.

Commissioner Arnold said that due to the hard work of the NAIC Member Services Division, the Workstream's NAIC Connect platform page is scheduled to go live within the next few weeks as part of the initial pilot rollout along with the Innovation, Cybersecurity, and Technology (H) Committee. She encouraged anyone interested to visit the Workstream's page and test it out during the pilot phase. The Workstream has planned a meeting on Sept. 21 to walk Workstream members through the features and content on the page.

Lastly, Commissioner Birrane said that the Workstream has been working in collaboration with the Committee and the Big Data and Artificial Intelligence (H) Working Group to prepare a survey of artificial intelligence (AI) use by health insurers. She said Maryland has been doing the initial coordination of this work with the assistance of the Johns Hopkins Bloomberg School of Health. She said Maryland expects to have a draft survey form soon to share with the collaborating groups as it finalizes a draft to share with the industry for refinement. She said Maryland's goal is to solicit participating states and have the survey out this year.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/2023 Summer National Meeting/08-Bmin.docx

Draft: 8/1/23

Health Insurance and Managed Care (B) Committee
Virtual Meeting
June 29, 2023

The Health Insurance and Managed Care (B) Committee met June 29, 2023. The following Committee members participated: Anita G. Fox, Chair, and Laura Hall (MI); Jon Pike, Co-Vice Chair (UT); Mike Kreidler, Co-Vice Chair, represented by Jane Beyer and Ned Gaines (WA); Trinidad Navarro (DE); John F. King (GA); Dean L. Cameron represented by Shannon Hohl (ID); Kathleen A. Birrane and Louis Butler (MD); Grace Arnold represented by Julia Dreier (MN); Chris Nicolopoulos represented by Jason Dexter (NH); Glen Mulready (OK); Michael Humphreys (PA); and Allan L. McVey (WV). Also participating were: LeAnn Crow (KS); Troy Downing (MT); Maggie Reinert (NE); and Larry D. Deiter (SD).

1. Heard Presentations on State Appeals Programs

Director Fox said that during the Committee's meeting at the Spring National Meeting, it heard a presentation from the Kaiser Family Foundation (KFF) on findings from its issue brief "Claims Denials and Appeals in ACA Marketplace Plans in 2021." She said one piece of data from the presentation raising the Committee members' attention was that consumers rarely appeal claim denials. She said that because of that, the Committee wanted to have a broader discussion on: 1) what support the states offer to consumers in this area and how they are raising awareness to consumers of their options to appeal; and 2) what more the Committee and the groups reporting to it can do as well to raise consumer awareness.

Director Fox said that during today's meeting, the Committee would hear from Maryland, Nebraska, and Michigan on their work to raise consumer awareness of their claim appeal rights.

Butler discussed Maryland's work, including statistics supporting the KFF's findings about the low percentage of consumer claim appeals. He said the Maryland Insurance Administration (MIA) has a dedicated unit, the Consumer Education and Advocacy Unit (Unit), whose mission is to educate Maryland residents about various insurance products and explain to consumers their rights and obligations under the terms of their insurance policies. The Unit travels to fairs, trade shows, and other events across the state to provide educational materials to consumers. It answers questions on various insurance issues, including health insurance and the right of consumers to appeal claim denials.

Butler noted that based on questions during these events, it is shocking the low number of consumers who are aware of the MIA and their right to appeal claim denials. He said many consumers, who may know of their claim appeal rights, do not file internal appeals with their insurer because of a fear of retaliation. Butler explained how the Unit will walk a consumer through the process of filing an internal appeal with their insurer. He also discussed Maryland's external independent review process.

Reinert discussed Nebraska's work to educate and assist consumers in appeals of claim denials focusing on its external review program. She provided a history of the program and its steps toward implementation, including developing denial letter templates and working with major medical carriers on the language that the carriers must include in the appeals and grievances sections in their policies and certificates to ensure consumers have notice of their internal and external appeal rights.

This information is also posted on the Nebraska Department of Insurance's (DOI's) website.

Reinert also discussed the Nebraska DOI's best practices with respect to external appeals, including recommending that consumers assign their doctor to be their authorized representative because provider participation is a vital part of the appeal process.

Reinert provided an overview of the Nebraska DOI's Health Division's efforts to raise consumer awareness of their appeal rights, including highlighting information on its website detailing the steps consumers can take to appeal claim denials first internally through their insurer and then, if necessary, externally through an independent reviewer. She said that in addition, the Nebraska DOI Health Division conducts an annual "road show" during which it holds community meetings and makes presentations throughout the state to educate consumers on an array of insurance issues, including a consumer's right to appeal claim denials.

Reinert also discussed the Nebraska DOI Health Division's use of social media—Facebook and LinkedIn—to educate consumers and increase awareness. Reinert highlighted the Nebraska external review program's successes. She said that since 2014, 786 internal claim denials were overturned. She said that in the past five years, Nebraska has consistently averaged about 250 external appeal cases per year. From that number, approximately 47% of eligible cases were overturned, and about 23% of those cases were not eligible for external review.

Hall discussed Michigan's efforts to educate and increase consumer awareness of their right to appeal claim denials beginning with changes to the Michigan DOI's website to make it more consumer-friendly. She said it was hard for consumers to find information on the old website, and the information on it was highly technical and hard for the average consumer to understand. She said the new website resolves these challenges. It has a modern look and feel and is mobile-friendly. She said the new website includes a step-by-step guide at a 7th-grade reading level with links for consumers to use and follow to appeal claim denials.

Hall also discussed the Michigan DOI's proactive outreach efforts. She said the Michigan DOI plans to continue these efforts and access other means to educate consumers, such as leveraging social media, public service announcements, and sharing information with stakeholders.

Director Fox asked the presenters about their consumer outreach efforts, including how it evaluates the success of those efforts and keeps track of what works. Butler said the MIA's Unit travels around the state to various events, which in many cases, it does not create, but it piggybacks on already planned events. He said the MIA recently did a podcast on medical necessity. He said that following that podcast, the MIA saw an increase in the number of appeals filed, which he believes is a direct correlation to the podcast's airing. He said that in addition, the MIA saw an increase in telephone calls from consumers asking for more information about their claim denial appeal rights and the internal and external appeal processes. He also noted that the MIA is on all the social media platforms, including Nextdoor.

Reinert said that to increase awareness of planned events during its annual roadshow, the Nebraska DOI places advertisements in local newspapers and on the radio, and it posts information on social media. She said the Nebraska DOI has found that posting on Facebook produces the most engagement from the public, particularly if it does paid pushes that target certain areas in the state where it plans to host an event. She said the Nebraska DOI also reaches out to industry, such as the Independent Insurance Agents & Brokers of America (IIABA) and the National Association of Health Underwriters (NAHU). In addition, it sends out an email blast to insurers.

Hall discussed how Michigan evaluates its success in reaching out to consumers. She said Michigan tracks the number of attendees at its in-person events and has great participation in its virtual events. She noted that

because of the COVID-19 pandemic, in-person events were eliminated for a few years, but in-person attendance is beginning to increase since it has recently restarted those events. She said that Michigan has experienced the most success in reaching consumers by using air media—local news station reporters and radio stations—interviews with Director Fox during which she discusses various insurance issues, including consumer appeal rights.

Commissioner Birrane discussed additional approaches the MIA uses to reach consumers. She described the MIA's LinkedIn platform profile. She also discussed the MIA's creation of an emoji character called MIA that it uses to interact with the public on Facebook and, as appropriate, other social media platforms.

Commissioner Birrane also noted that the MIA gives more than 600 presentations a year and specifically emphasizes to the public that the MIA is available 24 hours a day, seven days a week to assist consumers, providers, and other stakeholders. She also noted the MIA's high reversal rate related to medical necessity determinations due to its involvement in assisting the consumer in navigating the appeals process.

2. Received an Update from the Consumer Information (B) Subgroup on its Work Related to Consumer Education on Claim Appeal Rights

Crow discussed the Consumer Information (B) Subgroup's work related to educating consumers on their appeal rights. She said that after the Committee's discussion of the issue at the Spring National Meeting, the Subgroup accelerated its work in this area. She said the Subgroup's most recent meetings have been devoted to this topic. Based on the discussions during these meetings, the Subgroup formed a small drafting subgroup to review the Subgroup's previous work related to this issue to determine whether the Subgroup needs to develop additional resources on the issue. She said that in 2021, the Subgroup developed a series of consumer guides on claims. The five guides were: 1) codes and claims; 2) explanation of benefits; 3) filing health insurance claims; 4) how to appeal a denied claim; and 5) understanding medical necessity.

Crow said the small drafting subgroup has met three times since the Spring National Meeting. During these meetings, the small drafting subgroup started reviewing the guides to see if additional content should be added. She said the small drafting subgroup is also interested in changing the format of the guides from a PDF document to a format that is more interactive for consumers. Crow explained that one example of such interactive content is the Subgroup's "How to Understand Your Insurance Card" document. She said that because of its interactive format, the document has been well received. Crow said the Subgroup has also been working with the NAIC Communications Division as it develops ideas for making the content of the guides more user-friendly. She said as Maryland, Michigan, and Nebraska discussed during their presentations, the Subgroup is exploring ways to leverage social media to let the public know about these resources.

Crow noted that the Subgroup's charge from the Committee is to develop information or resources that would be helpful to state insurance regulators and others in assisting consumers to better understand health insurance. She said it might be useful for the Committee to consider additional strategies for engaging consumers on claims and appeals and possibly other health topics. She said she would be happy to provide an update to the Committee on the Subgroup work during the Committee's meeting at the Summer National Meeting.

Director Fox said that with respect to letting the public know about the guides and other resources the Subgroup has developed, the Subgroup could consider developing a tool kit with this information and making it available to NAIC members for them to use in their states because many NAIC members do not know this information exists.

Carl Schmid (HIV+Hepatitis Policy Institute) said the NAIC consumer representatives suggested that the Committee invite the KFF to present its findings to the Committee at the Spring National Meeting because they felt it was important for the Committee hear those findings. He said the NAIC consumer representatives believe this issue is of the utmost importance. Reflecting its importance, he said the NAIC consumer representatives have established a subgroup of NAIC consumer representatives focusing on prior authorization, medical necessity, and appeals and denials. The subgroup is developing recommendations for the Committee to consider addressing the low number of consumer appeals of claim denials and other issues related to prior authorization and medical necessity.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/2023 Summer National Meeting/B Cmte 6-29-23 MtgMin.docx

Draft: 6/14/23

Consumer Information (B) Subgroup
Virtual Meeting
May 25, 2023

The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met May 25, 2023. The following Subgroup members participated: LeAnn Crow, Chair (KS); Anthony L. Williams (AL); Debra Judy (CO); Randy Pipal (ID); Alex Peck (IN); Judith Watters (ME); Joy Hatchette (MD); Carrie Couch (MO); Susan Brown (MT); Rebecca Ross (OK); Jill Kruger (SD); Scott McAnally (TN); and Christina Keeley (WI). Also participating was: Cynthia Cisneros (NM).

1. Adopted its April 25 and April 17 Minutes

The Subgroup met April 17 to discuss a guide on Medicaid redeterminations, titled *Resuming Medicaid Redeterminations: State Insurance Regulator Guide*, and it adopted the guide during an e-vote that concluded April 25.

Couch made a motion, seconded by Keeley, to adopt the Subgroup's April 25 (Attachment Two-A) and April 17 minutes (Attachment Two-B). The motion passed unanimously.

2. Discussed Consumer Assistance on Claim Denials and Appeals

Crow said the Health Insurance and Managed Care (B) Committee had asked the Subgroup to look into claim denials and appeals in response to a recent KFF report on the subject. She said the Subgroup had last addressed appeals in 2021 when it developed a guide for consumers on appealing denied claims.

Crow asked Subgroup members how departments of insurance (DOIs) assist consumers with appeals, how consumers find out about the assistance available, and what barriers prevent consumers from appealing. She also asked about the 2021 guide and whether states use it, including the template letter to request an appeal. Crow said that in Kansas, consumers must first appeal internally. She said most insurers include contact information for the DOI in denial letters. She said many consumers do not believe it is worth it to appeal. She said working with providers and asking them to encourage patients to appeal is one route Kansas has used. Couch said Missouri does not require exhaustion of internal appeals before external review and does not have time limits. She said Missouri also faces obstacles in making consumers aware that assistance is available from the Missouri Department of Commerce and Insurance. She said information in denial letters is one way they find out. Watters said Maine has a similar process to Missouri. She said a consumer advocacy group (Maine Consumers for Affordable Health Care) also provides information and assistance to consumers in filing appeals.

Harry Ting (Health Consumer Advocate) questioned whether all states require explanations of benefits to include contact information for DOIs. He said the 2021 guide is written with medical necessity denials in mind, but denials occur for many other reasons, including missed premium payments and late billing by providers. He suggested that the guide include language to address other denial reasons.

Lucy Culp (The Leukemia & Lymphoma Society—LLS) said consumers should also be directed to their employers when they have employer-sponsored coverage. She said consumer representatives had originally requested that the Health Insurance and Managed Care (B) Committee consider the KFF report. They have formed their own ad hoc group to examine denial and appeals issues. She said the consumer group would be willing to partner with the Subgroup on any work in this area.

Crow said consumers need assistance navigating complicated processes, so it is important to develop a document that is usable and easy to understand. She said the 2021 guide is a good start. She said consumers often do not understand what type of plan they are enrolled in or whether they are eligible for state-based external review.

Crow said the guide could be revised into two separate documents, one shorter and one longer. Bonnie Burns (California Health Advocates—CHA) said many consumers struggle with written communications and do not know how to respond to a denial letter. She said shorter and longer versions would be helpful. She said help should be provided in a very simple way, and when possible, consumers should be connected with an organization like the one in Maine to assist.

Eric Ellsworth (Consumers' Checkbook) said consumers may not know anything about their medical bills. He said the Subgroup should consider the first communication consumers receive that tells them about denials or other forms of nonpayment. He said there is a need for better billing information earlier in the process, including explanations of benefits.

Brenda J. Cude (University of Georgia) said the existing guide makes assumptions, such as that consumers know what denial means. She said a more basic piece could help consumers understand what to look for to know that a claim is denied. She said one basic question for the Subgroup is whether it will develop a formatted guide or content that states can take and use to develop their own materials. Crow said she liked the idea of taking it back to the basics.

Keeley said having two versions would allow more examples and images. She said the term "grievance" should be included, as well as a link to the NAIC glossary. Brown said Montana performs a triage before a consumer files an appeal to ensure an appeal is appropriate or whether a coding issue means the consumer should go back to the biller. She said there are things consumers can do before an appeal to get things corrected.

Culp said her organization assists consumers in navigating care and coverage, and it often takes significant work to uncover the problem, which could be a denial or something else. She said there is high engagement with denial questions on social media and suggested that in addition to shorter and longer guides, bite-sized pieces geared toward social media may be helpful.

Crow said the Subgroup should consider a series of documents that starts pre-denial and walks consumers through the process.

Ellsworth said about 15% of claims face some kind of rejection, including denials and other types. He said over half of rejected claims are eligible for additional work but are not reworked. He asked whether states have authority over contracts that influence billing practices. Brown said it is beyond the insurance department's scope of authority, but they can refer consumers out for consumer protection from the attorney general's office.

Crow said the Subgroup should include something on prior authorization requests, as well as denials. She said the Subgroup may want to update all the documents in its series on claims from 2021. She asked for volunteers to identify gaps in the series and develop revised versions. Brown said the appeals guide may not need to be updated significantly, but all the documents should be reviewed at once.

Hatchette said the Subgroup should not think only about a written document. She said departments should meet consumers where they are with videos and social media. She said the key point to make is that there is somewhere to go for help and that consumers have a right to appeal. Dr. Cude said the first step should remain considering

what consumers need to know. Crow said the Subgroup should figure out its message first and potentially work with the NAIC's communications department to develop videos or other materials like snippets for social media.

Dr. Ting said no document will be as useful as assistance from the staff of an insurance department or State Health Insurance Assistance Program (SHIP). He said increasing the awareness of insurance departments, in general, should also be pursued.

Having no further business, the Consumer Information (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Committees/B Committee/National Meetings/2023 Summer National Meeting/Final Minutes/Cons Info 5.25.docx

Draft: 5/8/23

Consumer Information (B) Subgroup
E-Vote
April 25, 2023

The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee conducted an e-vote that concluded Apr. 25, 2023. The following Subgroup members participated: LeAnn Crow, Chair (KS); Anthony L. Williams (AL); Randy Pipal (ID); Judith Watters (ME); Carrie Couch (MO); Nichole Faulkner (NC); David Buono (PA); Vickie Trice (TN); Shelley Wiseman (UT); and Christina Keely (WI).

1. Adopted a Guide on Medicaid Redeterminations

The Subgroup conducted an e-vote to consider adoption of the document titled *Resuming Medicaid Redeterminations: State Insurance Regulator Guide* (Attachment Two-A1). The guide is a resource for department of insurance (DOI) staff in understanding the return of eligibility redeterminations in Medicaid. The motion passed unanimously.

Having no further business, the Consumer Information (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Committees/B Committee/National Meetings/2023 Summer National Meeting/Final Minutes/Cons Info 4.25 evote.docx

Resuming Medicaid Redeterminations

State Insurance Regulator Guide

Background

In March of 2020, and as part of the Families First Coronavirus Response Act, Congress created an incentive for state Medicaid programs to keep consumers continuously enrolled during the COVID-19 pandemic. As a result, states suspended redeterminations of eligibility and Medicaid now covers over 20 million more people than it did in 2019. On December 29, 2022, President Biden signed into law the Consolidated Appropriations Act, 2023 (CAA), which put an end to the Medicaid continuous enrollment provision on March 31, 2023. The CAA allows for states to resume redetermining the eligibility of Medicaid enrollees and to take up to 14 months to complete redeterminations. It also provides for a phased down approach for enhanced Medicaid funding for the States. When redeterminations resume, many Medicaid enrollees will remain eligible, but some will be disenrolled and need to find other coverage from an employer, a Marketplace plan, Medicare, or another source. Many will be eligible for other state or federal assistance with costs, such as premium tax credits or a Medicare Savings Program.

The NAIC's Consumer Information (B) Subgroup developed this resource to help state insurance regulators and their Departments plan for the impact of resumed Medicaid redeterminations. The information and answers below may also be helpful in responding to questions and concerns consumers may have, particularly those who have recently lost Medicaid coverage and are shopping for health insurance for themselves and their family.

State-specific Information on Medicaid Redeterminations

What is happening in my state and when?

- [Unwinding Medicaid Continuous Coverage](#) (Georgetown University)
 - Use this page to find information and resources, including a [50-State Unwinding Tracker](#) with [links to state plans, FAQs, and communications toolkits](#).
- [State Approaches to the Unwinding Period, January 2023](#) (KFF & Georgetown University)
 - KFF lists the timeframe for each state to begin and complete redeterminations.
- [Anticipated 2023 State Timelines for Initiating Unwinding-Related Renewals As of February 24, 2023](#) (CMS)

How many people may be impacted in my state?

- [The Impact of the COVID-19 Public Health Emergency Expiration on All Types of Health Coverage](#)
 - This Urban Institute report provides national estimates and state tables in Appendix B.
- [Coverage Transition Modeling Dashboard](#) (.xlsx file)

- With funding from AHIP, NORC at the University of Chicago developed estimates for each state of the number of people expected to transition to other coverage sources. Methodology is discussed in [a companion report](#).

Messages and Advice for Consumers

How can my department assist consumers if they receive notice they are losing Medicaid coverage?

- Many individuals who leave Medicaid or CHIP will be eligible for employer coverage. Deadlines for electing employer coverage have been extended. Those who lose Medicaid coverage before July 10, 2023, will have a special enrollment right to elect employer plans until September 8, 2023. After that, the standard special enrollment period of 60 days from the loss of other coverage will apply.
- Shopping for coverage
 - Marketplace. Some consumers may already be aware of the Marketplace; however, there may be some consumers who will need guidance on how to access the Marketplace. Marketplace plans or ACA plans on healthcare.gov are guaranteed issued. Some plans will have \$0 premium after tax credits. Most will have either copays or deductibles.
 - A number of special enrollment periods (SEPs) for Marketplace coverage may be relevant for consumers leaving Medicaid.
 - The SEP for loss of minimum essential coverage (including Medicaid and CHIP) has been extended from 60 days before through 90 days after the coverage loss.
 - A separate SEP is available for those who lose Medicaid or CHIP through July 31, 2024.
 - Individuals with income less than 150% of the federal poverty level may enroll in Marketplace plans in any month.
 - <https://www.healthcare.gov/medicaid-to-marketplace/>
 - Agents, brokers, navigators, and assisters are available to assist consumers.
 - Confirm that the agent is licensed to sell the product.
 - Use [Find Local Help](#) for help with Marketplace plans.
 - NAIC [Health Insurance Shopping Tool](#)
- Tips to offer to consumers (taken from the 2019 "[What to ask when Shopping for Health Insurance](#)" document)
 - Is it a Short-Term, Limited Duration plan, a Sharing Ministry plan, or other limited-coverage plan? Is it sold through an association that requires a membership fee? If so, it could cover less than Marketplace plans.
 - Is the person selling the plan licensed in [STATE]? If so, ask for his/her state license number and contact [STATE DOI] at [phone number] to confirm.
 - What is the insurance company and is it licensed in [STATE]?
 - Does the plan require enrollment in an association or as a limited partner?
 - Does the plan cover your pre-existing conditions? Does it cover your medications?
 - What are the deductibles? There may be different deductibles for different services.
 - Does the plan set a limit on how much I have to pay out of pocket in a year (maximum out of pocket or MOOP)?

- What services DOESN'T the plan cover? Always ask about Exclusions and Limitations on non-ACA policies and whether a claim can be denied or not paid after the fact.
- For services that ARE covered, how much will the plan actually pay? Is there a limit on the total amount the plan will pay per person, per service, or per year?
- How long will the coverage last? Will you be able to keep or renew your coverage if you get sick?
- Does the plan have a provider network? If yes, how do you access the directory of providers and can you review the directory before signing up? Is your doctor or hospital in the network? If not, will doctors and providers agree not to bill for amounts above what the plan pays?

What messages are federal agencies using and recommending related to Medicaid redeterminations?

- [Medicaid and CHIP Continuous Enrollment Unwinding – Toolkit](#)
 - This toolkit includes key messages, drop-in articles, social media and outreach products, call center scripts, and more. A .zip file contains [supporting materials and graphics](#). Materials are available in languages in addition to English on the [CMS Unwinding page](#).

Medicare Issues

Where can I find a review of Medicare enrollment considerations for those losing Medicaid?

- ADvancing States published [a brief guide](#) for counseling Medicare-eligible individuals whose Medicaid benefits changed due to the end of the continuous coverage requirement.

Can states assist individuals who missed a period of guaranteed issue for Medicare supplement coverage while they were enrolled in Medicaid?

- A number of states (including [Alaska](#), [Delaware](#), [Idaho](#), [Kentucky](#), [Maryland](#), [New Hampshire](#), and [Oklahoma](#)) have issued bulletins to direct issuers to offer guaranteed issue of Medicare supplement plans for those who exhausted their open enrollment period as a result of their continued enrollment in Medicaid and who experience a change in Medicaid eligibility.

Additional Resources

- [Connecting to Coverage Coalition](#) has issued a set of resources.
 - The Coalition has compiled resources on redeterminations, including information on [fraud prevention](#), [guidance on texting consumers](#) from the Federal Communications Commission, and [How Health Insurance Providers Are Supporting Americans Through Medicaid Unwinding](#)
- [Unwinding and Returning to Regular Operations after COVID-19](#) (CMS)
 - CMS guidance and resources
- [Unwinding resources for American Indians and Alaska Natives](#) (CMS)

Draft: 5/8/23

Consumer Information (B) Subgroup
Virtual Meeting
April 17, 2023

The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met April 17, 2023. The following Subgroup members participated: LeAnn Crow, Chair (KS); Anthony L. Williams (AL); Randy Pipal (ID); Alex Peck (IN); Mary Kwei (MD); Carrie Couch (MO); Cuc Nguyen (OK); David Buono (PA); Jill Kruger (SD); Shelley Wiseman (UT); and Christina Keeley (WI). Also participating were: Susan Brown (MT); and Cynthia Cisneros (NM).

1. Adopted its March 2 Minutes

The Subgroup met March 2 to discuss potential Subgroup activities for the year.

Couch made a motion, seconded by Pipal, to adopt the Subgroup's March 2 minutes (*see NAIC Proceedings – Spring 2023, Health Insurance and Managed Care (B) Committee, Attachment One*). The motion passed unanimously.

2. Discussed a Regulator Guide on Medicaid Redeterminations

Crow said the Subgroup identified a guide on Medicaid redeterminations as a top priority during its March 2 meeting. She said millions of people will leave Medicaid in 2023 and need to find new coverage. She said a small group met to draft a guide for state insurance regulators to aid in understanding the resumption of redeterminations. She said many other groups have developed materials aimed at consumers.

Crow said the guide focuses on providing links to existing useful tools. Couch said the guide is a good resource for those who take calls from consumers. She said the draft guide lacks information on navigators and assisters.

Bonnie Burns (California Health Advocates—CHA) said she applauds the group for developing the document. She said people dropped from Medicaid may not know they remain eligible for Medicare Savings Programs or other state-based assistance with health costs. She recommended that the guide refer readers to State Health Insurance Assistance Programs (SHIPs) to check into other programs that may offer benefits. Harry Ting (Health Care Consumer Advocate) agreed that SHIPs should be referenced and provided a suggested resource for assisting Medicare-eligible individuals.

Crow said other emailed suggestions included adding references to enrolling in employer-sponsored plans. Kris Hathaway (AHIP) also recommended adding information on employer coverage. Burns said individuals who lose Medicaid after a redetermination may not have a total loss of assistance due to eligibility for other benefits. She added that not all insurance departments have SHIPs within their departments, so it would be useful to link to them.

Crow asked whether the guide should mention coverage of preexisting conditions since it is not an issue under plans under the federal Affordable Care Act (ACA), but it is for other plans. Subgroup members agreed that there should be information on preexisting condition exclusions.

3. Discussed Other Matters

Crow said the Health Insurance and Managed Care (B) Committee had discussed statistics on claim denials and appeals. She said they showed that consumers appeal very few denials. She said the Subgroup may wish to consider how to assist consumers in understanding denials and making appeals. She reminded the Subgroup that it has already produced a guide for consumers on how to appeal denied claims.

Dr. Ting said it would be a good idea to refresh the denials guide and also to encourage consumers to appeal denials because there is a good chance that a denial would be overturned. He said communications outreach around the value of appealing would be useful in addition to updating the guide. Couch said social media can be a good avenue for reaching consumers.

Cisneros said overall health insurance literacy is also important and that the appeals guide could be part of a larger set of resources. Crow said the Subgroup had put out a more comprehensive guide to using insurance in the past. Buono said Pennsylvania uses a similar comprehensive guide.

Katie Dzurec (Regulatory Insurance Advisors) said information on coverage for preventive services may be useful for state insurance regulators and consumers after the recent *Braidwood* decision.

Crow asked Subgroup members and interested parties to suggest over email other topics for the Subgroup to take up.

Having no further business, the Consumer Information (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Committees/B Committee/National Meetings/2023 Summer National Meeting/Final Minutes/Cons Info 4.17.docx

Draft: 8/29/23

Health Innovations (B) Working Group
Seattle, Washington
August 13, 2023

The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met in Seattle, WA, Aug. 13, 2023. The following Working Group members participated: Nathan Houdek, Chair, and Jennifer Stegall (WI); Amy Hoyt, Vice Chair (MO); Sarah Bailey (AK); Jimmy Gunn (AL); Debra Judy (CO); Andria Seip (IA); Alex Peck (IN); Julie Holmes and Craig VanAalst (KS); Jamie Sexton (MD); Marti Hooper (ME); Chad Arnold and Sarah Wohlford (MI); Chrystal Bartuska (ND); Paige Duhamel (NM); Daniel Bradford (OH); TK Keen (OR); Rachel Bowden (TX); Mike Kreidler and Ned Gaines (WA); and Joylynn Fix and Erin K. Hunter (WV). Also participating were: Michael Muldoon (NE); and D.J. Bettencourt (NH).

1. Adopted its 2023 Spring National Meeting Minutes

Keen made a motion, seconded by Peck, to adopt the Working Group's March 22 minutes (*see NAIC Proceedings – Spring 2023, Health Insurance and Managed Care (B) Committee, Attachment Two*). The motion passed unanimously.

2. Heard Presentations on Prior Authorizations

Commissioner Houdek said health plans are using new methods to review prior authorizations, and providers are calling for more consistency and certainty in the process. He said gold-carding allows plans to recognize providers with a high rate of successful prior authorizations and reduce prior authorization requirements for them. He said some states have adopted gold card programs in law.

Bowden presented on Texas' gold card law and its implementation. She said Texas passed its gold card law in 2021. She said the law applies to state-regulated health plans and state employee plans. She said health plans are obligated to provide an exemption from prior authorization to providers who receive approval more than 90% of the time. Plans are required to evaluate and provide exemptions even without a request from a provider. She said many providers believed they would qualify, but often they did not meet the threshold of providing the same service five times in a six-month period under a state-regulated plan.

Bowden said Texas conducted a survey of prior authorization practices before and after the law took effect. She said three out of four providers who met the evaluation threshold received exemptions. However, because many providers did not meet the threshold, only 3% of providers received an exemption.

Bowden said the law's impact could be increased by extending the evaluation period, aggregating services, or looking to claims across all affiliated entities, not just state-regulated plans. Bowden said the law does not carve out any types of providers or services. She said services are defined at the Current Procedural Terminology (CPT) code level, so it is very granular. Also, providers are defined based on the billing National Provider Identifier (NPI) number.

Bowden said that once an exemption is issued, a plan may not deny claims for medical necessity. However, retrospective reviews are permitted, which can impact the provider's exemption. Plans may rescind exemptions, but providers may request independent reviews of rescissions.

Commissioner Houdek asked if providers may appeal a plan's decision not to grant an exemption. Bowden said providers may complain to both the plan and the Texas Department of Insurance (DOI) in such cases.

Duhamel asked how many staff are dedicated to the program in Texas. Bowden said no additional staff were assigned under the law. She said the number of requests so far has not significantly affected workloads, and existing staff handled an ad hoc data call and reporting on it.

Houdek asked about stakeholders' views on the law. Bowden said health plans did not support passage of the bill and needed to make complicated updates to their systems to comply. She said providers are disappointed by the limited impact.

Gaines asked whether information on exemptions appears in provider directories. Bowden says it does not, and such information may not be helpful for consumers because the exemption only applies to particular services, not all services delivered by a provider.

Fix presented on West Virginia's prior authorization laws, one passed in 2019 and an update in 2023. She said West Virginia requires prior authorization on episodes of care rather than specific services. She said the initial law required all insurance companies to create online portals for prior authorization, and the updated law requires providers to use the electronic portal for all prior authorization requests. She said the portal must stay updated with the current status of the request. The law also sets timelines for insurers to respond to requests. She said West Virginia has a gold-carding program. She said gold cards are available when a provider averages 30 procedures per year and achieves 90% success in prior authorization requests. Fix said the initial law required 100% prior authorization success, but the state found no providers qualified and the threshold was reduced to 90%. She said there is a procedure for revoking gold cards if warranted. Fix said insurers must report quarterly on prior authorization statistics, broken down by provider. She said one staff member works on prior authorization implementation, and a contractor collects quarterly report filings.

Miranda Motter (AHIP) presented on prior authorization. She said AHIP has partnered with doctors, hospitals, and pharmacies to reduce the administrative burden. She said a 2018 consensus statement with the American Medical Association (AMA) and hospital and pharmacy groups recognizes that prior authorization can be burdensome for all involved. The statement also notes variation in medical practice and adherence to evidence-based practice standards. The statement identified five areas for improvement in prior authorization.

Motter said the industry has taken many steps since the 2018 statement, including increasing the adoption of electronic prior authorization. AHIP launched Fast PATH, a program to place technology in provider offices to streamline prior authorization. She said low quality care can increase costs and can harm patients. She said a 2020 study showed about 10% of physicians provided care inconsistent with evidence-based standards.

Motter said AHIP surveyed its members on prior authorization in 2022. She said the survey asked about gold-carding due to recent laws and proposals. She said the survey showed more plans are using more evidence-based resources to guide their prior authorization programs. She said the services most subject to prior authorization include genetic testing and specialty drugs. The survey also showed plans streamlined prior authorization in a variety of ways, including using electronic prior authorization. She said barriers to electronic prior authorization include providers using systems that do not have electronic prior authorization functionality and compatibility between systems. She said the use of gold-carding has increased since the last survey in 2019, and 62% of members have gold card programs. Motter said health plans have refined their gold card programs to target the

right services and the right providers, so they do not have negative impacts for patients. She said opportunities for further improvement include moving to electronic prior authorization and value-based relationships.

Duhamel asked how reliably plans apply their own clinical review criteria and provided an example of a plan asking providers for three years of history on infants in order to receive a certain benefit. She said failures of inter-rater reliability cause frustration. She also asked how plans can comply with mental health parity laws if gold card programs only apply to physical health services. Motter said there is a huge opportunity in electronic prior authorization to reduce burden on providers. She said gold card programs have the most impact when there is consistent review.

Commissioner Houdek said providers continue to complain that getting prior authorization is more challenging than it has ever been and asked how that aligns with the improvements cited in the presentation. Motter said plans continue to evaluate where prior authorization is warranted. She said new drugs and therapies require prior authorization reviews. She said prior authorization also serves as a touch point for communication between plans and providers. She said utilization management techniques like prior authorization are reduced when providers enter into value-based arrangements where they are accountable for the quality of care they provide.

3. Heard a Presentation from ArrayRx on Multistate Prescription Drug Purchasing

Trevor Douglass (ArrayRx) presented on his organization's purpose and development. He said ArrayRx is operated for states, by states and has long incorporated transparency into its practices. He said the organization began in 2003, before Medicare Part D existed, to provide seniors with discounts on prescription drugs. The Northwest Prescription Drug Consortium (NW Consortium) grew from an intergovernmental agreement between Washington and Oregon. The Consortium wanted to provide its benefits to other states, so it has expanded, changed its name to ArrayRx, and now can serve any state or public entity. He said Nevada is also a member, and Connecticut is in the process of joining.

Douglass said ArrayRx is an expert in the field of prescription drugs and public servants. He said other states can trust that their values align with the organization. He said the organization is committed to accountability and auditability and requires contractors to allow audits to the claim level. He said public sector experts in the pharmacy space are the ones who create contract terms.

Douglass said ArrayRx oversees the entire contract process and works with state Departments of Justice (DOJ) to review terms and conditions of contracts. He said ArrayRx provides states with predictability, transparency, and auditability. He said the organization's goal is to work with the rest of the states. It does not impose one solution but works with states to mold solutions to meet their needs. He said ArrayRx does not capture or allow spread pricing and does not charge a fee to its partner states.

Douglass said pharmacy benefit managers (PBMs) usually capture spread prices, but ArrayRx's contracts have allowed it to avoid \$155 million in such costs and generated about \$100 million per year in rebates. He said public programs have struggled with PBMs capturing spread, but ArrayRx's terms and conditions protect its partners. He said the organization allows states to leverage best practices from other states and modern technology from contractors. He said the PBM status quo is not useful, and his organization is pushing for innovations.

Duhamel asked about incorporating point-of-sale (POS) rebate reimbursement into member cost sharing. Douglass said he has not worked on this previously but would be happy to engage with New Mexico on the issue.

Seip asked about the process for purchasing drugs and distributing them to pharmacies. Douglass said ArrayRx does not make bulk purchases. Instead, it contracts with a PBM under its own specific terms.

4. Heard a Presentation from PhRMA on Health Equity Efforts

Courtney Christian (Pharmaceutical Researchers and Manufacturers of America—PhRMA) presented on the organization's efforts to advance health equity in clinical trials. She defined equity as the absence of avoidable, unfair, and remediable differences, such as everyone having a fair opportunity to achieve their full health potential. She said PhRMA has 800 drugs in development that are intended to treat diseases that disproportionately affect racial and ethnic minorities. She said common conditions, as well, have a disproportionate impact on black communities.

Christian said PhRMA is working to increase diverse representation in clinical trials. She shared statistics on representation in current trials, which showed lower participation from minority communities. She said structural racism underlies social determinants of health and drives inequities in health care. She said income and education, the digital divide, and environmental factors are all social determinants of health. She described barriers to equity in health care.

Christian said one way to improve access is to share drug rebates directly with patients. She said reducing patient costs by sharing rebates can improve their adherence to medications.

Christian said the drug industry is not immune to systemic racism. She said PhRMA's work for solutions includes clinical trial diversity, health equity, and talent in member companies. In clinical trial diversity, PhRMA is seeking to stay invested in communities, providing resources to providers, and setting up a network of community ambassadors to encourage participation in clinical trials. Other solutions include grants to historically Black schools of medicine and grants to community-based projects on the treatment of chronic disease and access to COVID-19 vaccines. Christian said PhRMA developed a Pathways to Success Summit to help diverse students discover career pathways within the industry.

Christian shared statistics on the savings available from reducing disparities and improving health outcomes, including \$3.8 trillion from reducing the effects of chronic conditions.

Sylvia Yee (Disability Rights Education and Defense Fund—DREDF) asked about efforts to include people with disabilities in clinical trials. Christian said PhRMA is working to provide materials in accessible formats to attract a broader universe of individuals into clinical trials.

Having no further business, the Health Innovations (B) Working Group adjourned.

Health Actuarial (B) Task Force
Seattle, Washington
August 12, 2023

The Health Actuarial (B) Task Force met Aug. 12, 2023. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Anita G. Fox, Vice Chair, represented by Kevin Dyke (MI); Mark Fowler represented by Sanjeev Chaudhuri (AL); Gordon I. Ito represented by Kathleen Nakasone (HI); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Marti Hooper (ME); Grace Arnold represented by Fred Andersen (MN); Eric Dunning represented by Michael Muldoon (NE); D.J. Bettencourt represented by Jennifer Li (NH); Justin Zimmerman represented by Seong-min Eom (NJ); Judith L. French represented by Craig Kalman (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Jodi Frantz (PA); Cassie Brown represented by Aaron Hodges (TX); Jon Pike represented by Ryan Jubber (UT); and Mike Kreidler represented by Lichiou Lee (WA). Also participating was: Anna Krylova (NM).

1. Adopted its Spring National Meeting Minutes

Muldoon made a motion, seconded by Trexler, to adopt the Task Force's March 21 minutes (*see NAIC Proceedings – Spring 2023, Health Actuarial (B) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Long-Term Care Actuarial (B) Working Group

Andersen said the Working Group met Aug. 12 and took the following action: 1) adopted its July 19, June 7, and May 1 minutes; 2) discussed drafting changes to VM-25, Health Insurance Reserves Minimum Reserve Requirements, of the *Valuation Manual* to add tables from the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute's final *Long-Term Care Insurance Mortality and Lapse Study*; 3) discussed a referral from the Health Risk-Based Capital (E) Working Group regarding *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51); 4) heard a presentation on public/private long-term care (LTC) funding solutions; and 5) heard an update on a single long-term care insurance (LTCL) multistate rate review approach.

Andersen made a motion, seconded by Trexler, to adopt the report of the Long-Term Care Actuarial (B) Working Group (Attachment One), including its July 19, June 7, and May 1 minutes. The motion passed unanimously. Note that the July 19, June 7, and May 1 minutes will be referenced in the Working Group's August 12 minutes.

3. Heard an Update on SOA Research Institute Activities

Cindy MacDonald (SOA) gave an update (Attachment Four) on SOA Research Institute activities. Lombardo said he is concerned that the results of the SOA's state insurance regulator interest survey indicate that the studies regulators have given the highest priority to are the ones that are the most difficult to get industry support for participation and funding. He said he and Dyke would like to meet with the SOA and LTCL industry representatives to discuss industry difficulties with providing study data and to determine if there is anything regulators can do to assist them.

4. Heard a Presentation on SOA Education Redesign

Stuart Klugman (SOA) gave a presentation (Attachment Five) on changes to the educational pathway to attaining the Fellow, SOA designation. Lombardo asked if the SOA can give a more detailed presentation of changes to the educational pathway during a future Task Force meeting. Klugman said the SOA will do so.

5. Heard an Update from the Academy Health Practice Council

Matthew Williams (Academy) gave an update (Attachment Six) on Academy Health Practice Council activities.

6. Heard an Update on Academy Professionalism

Dyke said the Actuarial Standards Board (ASB) currently has 18 Actuarial Standards of Practice (ASOPs) open for revision. He said of the 18, there are two general, four casualty, two enterprise risk management, three health, two life, three pension, and two multipractice. He said the ASB has begun work on a diversity, equity, and inclusion (DE&I) initiative and has developed a statement of the importance of DE&I to the ASB. He said the statement is available on the ASB website. He said the ASB has an initiative underway to determine if current ASOPs are sufficient to cover the use of general and generative artificial intelligence (AI) in actuarial practice.

Dyke said the following ASOPs are currently or will soon be exposed for comment: ASOP No.7, Analysis of Life, Health, or Property/Casualty Insurer Cash Flows; ASOP No. 12, Risk Classification (for All Practice Areas); ASOP No. 28, Statements of Actuarial Opinion Regarding Health Insurance Assets and Liabilities; ASOP No. 41, Actuarial Communications; ASOP No. 45, The Use of Health Status Based Risk Adjustment Methodologies; and ASOP No. 49, Medicaid Managed Care Capitation Rate Development and Certification. He said a proposed ASOP for reinsurance pricing for life and health insurance is being developed, and work is being done to determine if health insurance should be included.

Shawna Ackerman (California Earthquake Authority—CEA) said the Actuarial Board for Counseling and Discipline (ABCD) has two primary functions. She said the first is to respond to member requests for guidance on professional or ethical issues they face at work. She said the second is to consider complaints of alleged violations of the Academy's Code of Professional Conduct. She said the ABCD receives about 100 requests for guidance each year, and approximately 30 of these each year are related to health practice issues. She said requests for guidance typically center on Precept 1: An actuary shall act honestly, with integrity and competence, and in a manner to fulfill the profession's responsibility to the public and to uphold the reputation of the actuarial profession. She said another issue requests for guidance are received for is qualification standards.

7. Discussed an Inadequate Risk Adjustment Issue

Jubber said the Utah Insurance Department was recently approached by two insurers that claim the risk adjustment formula used for federal Affordable Care Act (ACA) marketplace plans is inadequate, particularly in specialty drug prescriptions. He said the insurers stated that insureds taking these drugs do not receive a risk score that adequately reflects the high cost to the insurers for the drugs. He said he would like to discuss what other states have experienced with this issue. Lombardo said a meeting will be scheduled for Task Force members and interested state insurance regulators to discuss the issue.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Draft: 8/21/23

Long-Term Care Actuarial (B) Working Group
Seattle, Washington
August 12, 2023

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met in Seattle, WA, Aug. 12, 2023. The following Working Group members participated: Paul Lombardo, Co-Chair (CT); Fred Andersen, Co-Chair (MN); Sanjeev Chaudhuri (AL); Thomas Reedy (CA); Wes Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); Kevin Dyke (MI); William Leung (MO); Michael Muldoon (NE); Jennifer Li (NH); Anna Krylova (NM); Michael Cebula (NY); Craig Kalman (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Aaron Hodges and R. Michael Markham (TX); and Tomasz Serbinowski (UT).

1. Adopted its July 19, June 7, and May 1 Minutes

Lombardo said the Working Group met July 19, June 7, and May 1. During these meetings, the Working Group took the following action: 1) discussed comments received on a request for comments on various long-term care insurance (LTCI) rate increase review methodologies; 2) discussed comments received on exposures of ideas for a single LTCI rate increase review methodology for use in multistate actuarial (MSA) filing reviews; and 3) discussed comments received on proposals to revise the Nationally Coordinated LTCI Rate Increase Review Checklist and comments received on an exposure of the Minnesota and Texas LTCI rate increase review methodologies.

Dyke made a motion, seconded by Schallhorn, to adopt the Working Group's July 19 (Attachment One-A), June 7 (Attachment One-B) and May 1 (Attachment One-C) minutes. The motion passed unanimously.

2. Discussed Drafting Changes to VM-25

Lombardo said drafting changes to VM-25, Health Insurance Reserves Minimum Reserve Requirements, of the *Valuation Manual* to add tables from the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute's final Long-Term Care Insurance Mortality and Lapse Study were last discussed during the Working Group's Oct. 17, 2022, meeting. Serbinowski said he has begun drafting language for VM-25 and Appendix A-010, Minimum Reserve Standards for Individual and Group Health Insurance Contracts of the *Accounting Practices and Procedures Manual* (AP&P Manual) to incorporate the tables. He said the Working Group will schedule a meeting soon to discuss this draft language and work towards exposing changes to incorporate the tables from the Academy and SOA Study into VM-25 and Appendix A-010.

3. Discussed a Referral from the Health Risk-Based Capital (E) Working Group

Lombardo said the Working Group has received a referral (Attachment Two) through the Health Actuarial (B) Task Force from the Health Risk-Based Capital (E) Working Group regarding *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51). He said the Health Risk-Based Capital (E) Working Group is developing criteria for insurers that file their annual statements on Life/Accident/Health & Fraternal Blanks to potentially file on Health Blanks in the future, and concerns were raised that it needs to be made clear that a move to the Health Blank does not remove an insurer's obligation to submit an AG 51 filing if the criteria for filing under AG 51 is still met. He said the Working Group will discuss the referral at its next meeting.

4. Heard a Presentation on Public/Private LTC Funding Solutions

Steve Schoonveld (FTI Consulting) gave a presentation (Attachment Three) on public/private collaborations to increase consumer access to long-term care (LTC) financing, services, and support.

5. Heard an Update on a Single LTCI Multistate Rate Review Approach

Andersen said the Working Group has discussed developing a single LTCI rate increase review methodology for use in MSA filing reviews at its past few meetings. He said the MSA Team does not want to continue to use the Texas and Minnesota approaches if they produce illogical results and result in untimely rate increase approvals, and the Working Group wants to have a single methodology in use soon. He said Serbinowski provided a draft of a proposed methodology that builds on the Minnesota approach structure that allows an insurer to receive a rate increase in earlier product years that gets the insurer closer to its original economic expectations, and then in later product years ensures that policyholders do not pay more than the value of their expected claims and related expenses. He said the proposed methodology would diverge from an increase that returns the insurer to its original expectations more quickly than the Minnesota approach, and it would result in a lower rate increase. He said he modeled modifications to the Minnesota approach that will produce higher rate increases than it yields as is but does not grade down from the insurer's original expectations as quickly as Serbinowski's proposal. He said the MSA Team examined the Texas approach and found that it does not work well for older blocks of business, especially those that have had rate increases that predate the use of the Texas approach.

Andersen said members of the MSA Team agree that older policyholders that have experienced past rate increases should have lower future rate increases than shorter-duration policyholders that have not experienced as many rate increases. He said large rate increases for older policyholders do not seem appropriate, as they have fewer remaining premiums to be paid than younger policyholders, and the effect of large increases on few remaining premiums does not create much of a financial impact on the insurer.

Andersen said he wants the Working Group to discuss the following issues, which need to be addressed in order to develop a single methodology to present to the Long-Term Care Insurance (EX) Task Force in a timely fashion: 1) whether adjustments to the Minnesota approach's cost-sharing formula can result, generally, in older age/higher duration/higher past rate increase policyholders having their future rate increases be more limited than under the current approach; 2) whether such an adjusted Minnesota approach would align with key principles such that it could be considered a candidate for the single actuarial approach; and 3) whether interest rate history and expectations should be a part of a single actuarial approach like it is with the Minnesota approach.

Andersen asked if members of the Working Group, interested state regulators, or interested parties share the concern for a need for limiting future rate increases for older age/higher duration/higher past rate increase policyholders. Lombardo said he and Connecticut, and he imagines all of the states, do not have an expectation that a policyholder who has paid 20 to 25 years of premium already and is not expected to pay a significant number of future premiums should receive as high of a rate increase as a policyholder who is expected to pay future premiums for 25 to 30 more years. He said he understands that different insurers have different distributions of policyholder attained ages within their blocks, and any formula to reduce increases for older policyholders would depend on these distributions. Trexler said he agrees with Lombardo, and he wants to see if such a formula can be integrated into Serbinowski's proposal.

Serbinowski asked how a closed block of policies should be defined. He asked if a block is considered closed after the last policyholder dies or lapses, or if it is when a specified percentage of total premiums have been paid. He said with few remaining policyholders, a 50% rate increase may only result in a loss ratio decrease of 0.1%. He said his proposal for a single approach does not require there to be a definition of when a block is closed.

Lombardo said he has seen a growing support from insurance department commissioners for the use of a single approach in MSA reviews. He said a single approach is easier to explain, and more supportable. The weighting of the Minnesota and Texas approaches that varies depending on characteristics of the block does not translate well to commissioners. He said he believes having a single approach will allow the MSA Team to reach better outcomes more quickly than with the current blending of approaches.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ supports a single approach. He said it may be better to consider the dynamics of small, closed blocks of business rather than differences within a block. He asked how likely it is that a particular block of policies will have age differences of 30 years, as well as how many blocks of business and consumers will be affected. He asked how the age where rate increases would be reduced will be determined, whether it will be a specified age or if the age would be determined based on a percentage impact on premium. Lombardo said the Working Group has been considering these issues as they relate to how a single approach will treat reduced increases for older policyholders. Birnbaum asked if the reduction in increase formula will be applied consistently from state to state and if there is a risk of legal action being taken for unfair discrimination against certain classes of policyholders. Andersen said he does not believe there is a risk of legal action, as the adjustment will only be a change to the slope of rates by attained age. He said ideally, all states will apply the formula consistently, but the final rate increase determination is at each state's discretion.

Jan Graeber (American Council of Life Insurers—ACLI) said any single approach recommendation needs to be grounded in actuarial science. She said ACLI members believe modifications to rate increases based on attained age and duration cannot be a one-size-fits-all solution due to the variance in block characteristics. She said the ACLI asserts that rate increases at older attained ages affect insurers' financial status. She said the ACLI reviewed a rate increase filing for a block with over 3,000 policyholders and grouped the seriatim data by whether a policyholder was on the claim, of policy issue age, and attained the age at the time of the claim. She said the ACLI found that almost 50% of premiums were attributable to policyholders over age 80, and roughly 25% of premiums were attributable to those over age 85. She said the present values of future premiums were calculated for attained ages 80 and 85. She said some of these policyholders may pay premiums for only two years, but some may pay premiums for seven to 10 more years. She said there was a 100-year-old active policyholder who was still paying premiums. She said many policyholders continue to pay premiums after a rate increase because they realize there is a potential benefit that is far greater than the cost of increased rates. She said the ACLI has concerns that administering rate increases that vary by attained age will be burdensome for insurers, as systems for policies that were sold on an issue-age basis will need to be modified to use attained age-based rating.

Ray Nelson (America's Health Insurance Plans—AHIP) said he agrees with Graeber that a one-size-fits-all approach is not appropriate.

Andersen said the Working Group will schedule a meeting dedicated to the discussion of the attained age rate increase modification issue. He said information that Graeber said the ACLI found for premiums attributable to older issue ages will be helpful for this discussion, as will similar information from any other interested parties. He said the Working Group will schedule another meeting to address removing the cost-sharing component of the Minnesota approach for consideration in using a modified Minnesota approach as a basis for the single approach.

Lombardo said there is a great sense of urgency in developing a single approach, and the Working Group is willing to dedicate a significant amount of time over the next few months to developing a single approach.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Meetings/Member Meetings/BCMTE/HATF/2023_Summer/8-12-23 HATF_ NM/HATF_Minutes_08-12-23

Draft: 8/2/23

Long-Term Care Actuarial (B) Working Group
Virtual Meeting
July 19, 2023

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met July 19, 2023. The following Working Group members participated: Paul Lombardo, Co-Chair (CT); Fred Andersen, Co-Chair (MN); Ahmad Kamil (CA); Lilyan Zhang (FL); Weston Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); Kevin Dyke (MI); William Leung (MO); Michael Muldoon (NE); Jennifer Li (NH); Anna Krylova (NM); Bill Carmello (NY); Craig Kalman (OH); Jim Laverty (PA); Andrew Dvorine (SC); Aaron Hodges and R. Michael Markham (TX); and Tomasz Serbinowski (UT).

1. Discussed Comments Received on a Request for Comments on Various LTCI Rate Increase Review Methodologies

Andersen said the Working Group exposed a request for comments on the Minnesota and Texas approaches, as described in the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework) and the Utah proposal for an alternative approach to LTCI rate increase reviews. He said the comments received will be discussed in the context of developing a single actuarial approach to multistate long-term care insurance (LTCI) rate increase reviews and that the Working Group will continue this discussion during its Aug. 12 meeting. He said the Utah proposal reflects adjustments to the Minnesota approach, with the primary adjustments being the absence of an explicit cost-sharing provision and a faster grading by duration of the lower if-knew premium from the higher make-up premium during the blending process. He said initial informal testing of the Utah proposal indicates higher rate increases early in a product's life and lower increases later when compared to the Minnesota and Texas approaches.

Andersen said comments were received from the Colorado Division of Insurance (Attachment One-A1), the Texas Department of Insurance (DOI) (Attachment One-A2), and the American Council of Life Insurers (ACLI) and America's Health Insurance Plans (AHIP) (Attachment One-A3). Markham gave an overview of the Texas DOI comments.

Jan Graeber (ACLI) gave an overview of the ACLI/AHIP comments. Lombardo said that if a single actuarial approach is ultimately adopted, there will still be flexibility to modify it in the future if state insurance regulators and interested parties determine it needs to be. Andersen said any proposed single approach will need to be adopted by the Working Group and the Long-Term Care Insurance (EX) Task Force before it will be implemented as part of the LTCI MSA Framework. Serbinowski said he is concerned that adequacy of premiums may be given too much weight in assessing an actuarial approach and that by using this as a criterion, rate increases may be denied due to the inadequacy of resulting premiums. He said that rate adequacy can be achieved by increasing active life reserves for the block of policies. Leung said that if what is considered an excessive premium cannot be objectively defined, applying whether a premium is excessive as an evaluation criterion will be difficult. Andersen said the Minnesota approach, and he assumes the Texas approach, verifies that the total of premiums paid over time do not exceed the expected benefits and expenses to be paid over time. Lombardo said there should never be a situation where potential benefits paid are less than potential premiums. He said there needs to be a mechanism in any approach used that lessens the increase for policyholders at later policy durations, as they have likely paid more in cumulative rate increases than policyholders at earlier durations. Andersen said it is possible to modify the Minnesota approach to account for this by increasing the cost sharing for insurers for policies at later durations and decreasing insurer cost sharing at earlier durations. He said the Working Group will discuss this further during

its Aug. 12 meeting. Serbinowski said the Working Group should also discuss the impact of waiver of premium and the interest rate to be used in the approach.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Colorado's responses in **Bold**:

Please provide comments on the following:

The Minnesota and Texas approaches, as described in the Long-Term Care Insurance Multistate Rate Review Framework [MSA Framework Final Adopted 2022](#).

No comment.

The Utah Proposal for an Alternative Approach to LTCI Rate Increase Reviews [LTC –ncrease - Utah](#).

At this time, we do not have a complete response. We should have a response available by next Monday if that is acceptable.

Among the options for the form of comments being sought are:

A scorecard assessing the approaches' success in meeting key principles. These principles can be from the list provided on June 2, 2023 by ACLI / AHIP [Final ACLI-AHIP Comment Letter June 2, 2023](#), or as developed or thought of by the commenter.

Agree with ACLI that principles should be established for evaluation but the guidelines presented seem too generic to be useful in evaluating LTC approaches (MN, TX and the suggested Utah method).

Disagree with ACLI regarding differing analysis if filing is pre- or post-rate stability. The same method should be applied to pre- or post-rate stability filings. Propose that rate increases be determined on best estimate assumptions for both pre and post-rate stability.

Also disagree with principle #8: The approach should not apply subjective, arbitrary, or discretionary caps, factors, or limitations. At some point, limitations should exist especially if policyholders are 80+ and have had substantial past rate increases.

Assessment of the rate increase amounts resulting from the approaches, including for various types of situations, e.g., older and newer business, blocks with short or lengthy rate increase histories.

Subject: RE: LTC Working Group Comments

Can I have my comments from the June 7th email below included in the discussion related to a combined approach for LTC rate review discussion?

Also comments that I sent to the MSA Team in the May 4th email may also be relevant; particularly shortcomings in the MN and TX Approaches, copied below:

TX PPV Formulas

Description

The TX PPV formulas compare differences in the Contract Reserves between the old and new assumptions, holding contract reserves fixed at the point of valuation and distributing any deficit over the remaining available future premium. The method ensures the block is profitable using 58/85 for rate stabilized block and 60/80 pre-rate stabilized prospectively assuming contract reserves were held at a responsible level using the prior assumptions. Interest rates are set at the conservative Statutory Valuation Rate which supports larger rate increases and requires insurers to bear the interest rate risk. By bearing the interest rate risk, insurers are permitted to gain additional profits when yields exceed the statutory valuation rate which is almost always the case, but may suffer loss if the yields fall below the statutory valuation rate or if the company assumed a higher yield in pricing.

The PPV formulas ignores the impact of the historical lapse, though in both cases this is favorable to insurers:

- If lapses are higher, the company can retain the additional profits
- If lapses are lower than assumed, the increase in projected benefits is passed to the consumers via the increase in required contract reserves.

The TX Method by focusing on contract reserve deficiency and taking a prospective approach filters historic losses.

Issues with this Method

- Impact of shock lapses, non-forfeiture lapse, and benefit buydowns from the prior rate increase is not considered in the formulas
- Policyholders are required to bear the full brunt of any contract reserve deficiency without any cost sharing from the company
In the later durations, the formulas will justify excessive rate increases
- Using the Statutory Valuation Rate permits the company to sustain additional profits when yields exceed the statutory valuation rate.
The formulas do not give relief to insurers when the yields fall below the statutory valuation rate or assumed pricing yield.

One additional note, approving a rate increase in excess of that permitted by the PPV formulas permit insurers to realize an immediate profit by releasing contract reserves.

MN Approach

Description

The MN Approach is different from the TX Approach in that this method looks at the Lifetime Loss Ratio. The method determines an “IF-Knew” rate increase based on original target loss ratio, and calculates an additional “Make Up” increase to permit insurers to share the costs of prior losses and contract reserve deficiencies with policyholders, though requiring insurers to bear some of the loss. Deficiencies are spread across remaining available premium. By looking on historical performance, this method does adjust for favorable historical experience including shock lapses, benefit buydowns, and nonforfeiture lapses. The MN Method also assumes the Statutory Valuation Rate.

Issues with this Method

- By not adjusting the gross premium to net premium when reviewing historical experience, companies are permitted recoup non-existent historical expense losses* in both the “IF – Knew” and “Make-up” tables
- Companies are permitted to recoup historical losses
- Using this Statutory Valuation Rate historically permits companies to aggregate the losses when the yield falls between the pricing and the statutory yield
- Using the Statutory Valuation Rate historically and prospectively, the company would be permitted a rate increase at issue reflecting the difference between the pricing and statutory yield
- In the later durations, the formulas will justify excessive rate increases
- When the MN Method “justifies” a rate increase above the TX Method, companies are permitted an immediate profit by the release of contract reserves.

* - Historical administrative expenses such as acquisition costs and commissions are based on the premium and do not need to be recouped.

Finally, I want to address a legitimate concern regarding the TX Method in Utah's Comments.

A criticism of the TX method, especially when applied to legacy blocks with prior rate increases, was that it may result in counterintuitive results, and reliance on Original Pricing Assumptions.

- Contract Reserves are required to be calculated based on original pricing assumptions by Health Insurance Reserves Model Regulation (MDL-10)- Section 4 with the following exceptions.
 - a. One-Year Preliminary Term,
 - b. Mandated low statutory interest rate, and
 - c. Lapse restriction on the decrement calculation.

These assumptions should not change over the lifetime of the contracts. This includes morbidity, changes in underlying assumptions are addressed in the annual adequacy test (i.e. Gross Premium Valuation)

- Adequacy of Contract Reserves are required to be reviewed annually also by Health Insurance Reserves Model Regulation (MDL-10)- Section 4 – D using current assumptions.

The Texas PPV Formulas by definition pass any deficiency in contract reserves to the policyholders over the available future premium, with the exception that insurers are required to bear the interest rate risk.

- If the full rate increase as authorized by the prior assumptions are not given, “counterintuitive” results may result.

These factors must be taken into account, when reviewing subsequent rate increases.

Some concluding comments on LTC in general

- The sustainability of LTC blocks is dependent on the level and sustainability of contract reserves
- The Texas PPV Formulas takes a prospective approach focusing directly on contract reserve adequacy at the time of valuation.
The Texas method assumes current rates reflect the most recent assumptions which may not be the case
- The MN Approach takes a lifetime loss ratio approach but is highly dependent on the assumed discount rate.
- The MN Approach does not consider the current level of contract reserves.

An underlying issue regarding LTC, is the unsustainability of LTC policies with inflation protection.

Texas would prefer a LTC product that is sustainable over the lifetime of the contract with proper oversight and management of contract reserves including rate increases as needed to contain the premiums particularly in the later durations.

Thanks,

R. Michael Markham, FSA MAAA

Subject: LTC Working Group Comments

Good Afternoon,

Some comments related to developing a combined approach for LTC rate review.

The TX PPV Approach takes a prospective view of rate and contract reserves adequacy and would benefit from taking a lifetime view of the block of business that the MN Approach presents.

I would like to present some topics that would be obstacles to TX approving a combined approach

Contract Reserve Adequacy – The sustainability of Long Term Care blocks is dependent on having sufficient contract reserves. The TX approach focuses on contract reserves and the strengthening of contract reserves. The TX PPV formulas basically set a cap on rate increases based on contract reserve levels using prior assumptions. When the TX PPV formulas produce a negative value and when rate increases exceed the TX PPV “justified” rate increase, the company would experience an immediate profit from the rate increase.

Skewness when Low Interest Rates are assumed – The MN method by assuming a discount rate below market yields “justify” excessive rate increases. The MN method is also volatile based on yields assumed prospectively. Setting historical yields equal to a standard such as the Moody’s Corp Avg Yield would remove this distortion historically. The prospective yield is more tricky, but setting this yield equal to the company’s pricing yield would be consistent.

I am reluctant to considering interest rates, because I fear that it will generally work against the industry. Though consideration due to the historical low yields may be temporarily appropriate.

Distortion from Waiver of Premium – The TX Approach only considers active premium paying lives which removes the waiver of premium distortion. For disabled lives, companies using the “Total Claims” approach consider non-existent premium offset by “lost” premium resulting in an additional 100% loss ratio claim.

The disabled life reserve set up at the time of incident can contain a component for recovery addressing the contract which must be set up upon recovery.

The MN Approach appears to depart from the 58/85 requirement of Rate

Stabilization – This is inconsistent with requirements of the LTC Model Regulation (MDR 641). For states that have adopted rate stabilization, this would make the rate increase out of compliance. It would also make MSA recommended rate increases out of compliance with recommended NAIC regulations.

Inflation Protection – Automatic inflation protection policies which is required in compliance LTC Model Regulation is a major contributor to the large rate increases we are seeing with LTC blocks. Inflation protection can result in exponential growth of expected liabilities (claims) while available premium is shrinking as the block ages. This is perhaps the greatest challenge we face in order to stabilizing the costs of LTC contracts. One potential solution is to permit an optional annual adjustment to premium based on the age at the time of inflation adjusted benefit (I can elaborate in another email).

Addressing Inflation Protection would also require revisions in the LTC Model Regulation. Texas also has inflation protection consistent with MDR 641 in our code.

The Guiding Principles presented by ACLI appear consistent with TX objectives. Texas has no objection to accepting these principles.

Finally there are practical considerations when utilizing the TX PPV formulas such as reliance on initial and prior assumptions as well as the cumulative rate increases. Though initial assumptions are required by Health Insurance Reserves Model Regulation (MDL-10) (and Texas Code) in order to determine statutory contract reserves, many companies simply do not have them. There are also legitimate industry concerns when prior rate increases are below TX PPV formula recommendations. It is a reality that we face when reviewing rates particularly for older blocks. TX addresses these issues as they arise on a case-by-case basis.

Out of respect for time, I don't want to press these issues, but am available to discuss as needed.

Thanks,

R. Michael Markham, FSA MAAA

July 10, 2023

Paul Lombardo, Co-Chair, NAIC Long-Term Care Actuarial (B) Working Group
Fred Andersen, Co-Chair, NAIC Long-Term Care Actuarial (B) Working Group

Dear Paul and Fred,

The American Council of Life Insurers (ACLI)¹ and the America's Health Insurance Plans (AHIP)² appreciate the progress the working group has made with respect to evaluating appropriate methods for determining actuarially justified rate increases on long-term care blocks of business.

We have analyzed the three actuarial approaches under discussion in light of the overarching principles proposed in our June 2nd letter. In our analysis, we considered the fact that two of the methods are familiar to companies and regulators. These two methods have been the topic of significant discussion at the NAIC and are currently used by the multistate actuarial (MSA) team in reviewing filings through the MSRR process.

The attached chart highlights advantages and challenges associated with each method. The comments contained in the chart are applicable only to filings submitted through the Long-Term Care Insurance Multistate Rate Review (MSRR) Framework for the purpose of recommending a long-term care national premium rate schedule as described in the MSRR Framework adopted by the NAIC on April 8, 2022. The comments are not applicable to rate increase filings made with an individual state and outside of the MSRR process.

In evaluating the extent to which each method aligns with the principles, we recognized that in certain situations, some methods are more complicated to apply and create more challenges than others. We also recognize the MSA team's desire for a method that produces actuarially appropriate rate increases, while also acknowledging that such results could be perceived by some as inappropriate or unreasonable, creating challenges for regulators.

¹ The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

² AHIP is the national association whose members provide health care coverage, services, and solutions to hundreds of millions of Americans every day. We are committed to market-based solutions and public-private partnerships that make health care better and to help create a space where coverage is more affordable and accessible for everyone.

Overall, we believe that reasonable adjustments can be applied to parts of the Blended/If-Knew (MN) method to address these challenges, while recognizing the regulatory desire for:

- a single approach for review,
- premium equity between states,
- an appropriate balance between policyholders and insurers, and
- preserving our state-based regulatory framework.

Potential Revisions to the Blended/If-Knew (MN) Method to Address Certain Challenges Regulators have indicated their desire for a single approach for the purpose of reviewing filings submitted through the MSRR process. In addition, this single approach should acknowledge, and address challenges associated with situations where a significant rate increase is proposed on policyholders at advanced ages and durations and who have already experienced a large cumulative increase.

While actuarial modeling will be necessary to avoid unintended consequences, a potential strategy to address this challenge is to consider revisions to certain aspects of the Blended/If-Knew (MN) methodology (e.g., rate increase implementation, cost sharing) that reflects some combination of attained age, duration, cumulative rate increase, and benefit level. To achieve rate equity among states, adjustments would not be applied to policyholders in states that have not approved past rate increases until the policyholder reaches the national target rate recommended by the MSA team.

We want to emphasize that, prior to the formal adoption of any method, it is important that the working group and industry work together to model any specific modifications under consideration. This step will help ensure that any unintended consequences can be avoided. We stand ready to assist you in any capacity needed.

Thank you again for the opportunity to comment. We look forward to discussing our comments with you.

Sincerely,
Jan Graeber, ACLI

Ray Nelson, Consultant for AHIP

Attachment

The comments below are applicable only to filings submitted through the Long-Term Care Insurance Multistate Rate Review (MSRR) Framework for the purpose of recommending a national premium rate schedule for long-term care policies, as described in the MSRR Framework adopted by the NAIC on April 8, 2022. The comments are not applicable to rate increase filings made with an individual state outside of the MSRR process. The points made below are not intended to be considered when solvency is a concern.

For rate-stabilized policies, all results are limited by the rate table that would be produced in accordance with Section 20.1(C) of the NAIC LTC Model Regulation.

Principle	PPV (TX)	Blended Make-up/If-knew (MN)	Revised Blended Make-up/If-knew (Proposal by Utah)
<p>1. The approach should result in premiums that are:</p> <ul style="list-style-type: none"> not inadequate, not unreasonable, and not excessive in relation to the benefits provided, and not unfairly discriminatory between individuals of the same actuarial risk class, or between risks of essentially the same degree of hazard. 	<ul style="list-style-type: none"> Produces actuarially sound results. From an MSA perspective, results are not inadequate, unreasonable, or excessive in relation to the benefits provided. <i>(Note: Application on an individual state basis, with a history of insufficient approvals, requires the use of the catch-up provision to avoid inadequate premiums).</i> Can become unstable for older blocks in later durations when the resulting increase percentage can be significant compared to the percentage increase in future claims, resulting in premiums that could be viewed by some as excessive. 	<ul style="list-style-type: none"> Generally, this method achieves a balance of the various features and creates a reasonable result in most durations when the cost-sharing provision is excluded. Cost-sharing factors can be viewed as arbitrary. The longer the company waits, the more weight is placed on the if-knew premium, potentially resulting in inadequate premiums. Produces significant increases for certain demographics, which could be mitigated by modifying the cost-sharing adjustment to reflect age and duration. 	<p>In addition to the comments to MN:</p> <ul style="list-style-type: none"> The proposed blending moves to If-Knew very quickly, which could be viewed as actuarially unsound by creating inadequate rates and result in potential solvency concerns. With a different blending, it is possible this could be alleviated. Method would not allow the future loss ratio for the make-up premium to fall under a specified target, preventing lifetime loss ratios from achieving levels closer to original pricing loss ratios, which could result in inadequate premiums.

Principle	PPV (TX)	Blended Make-up/If-knew (MN)	Revised Blended Make-up/If-knew (Proposal by Utah)
2. The approach should result in premiums charged to policyholders that do not allow remaining policyholders to be responsible for excess claims associated with past policyholders.	<ul style="list-style-type: none"> This approach ensures that remaining policyholders are not responsible for excess claims associated with past policyholders by considering only future projections, and only for those policyholders still paying premium. Does not account for situations where experience has been better than expected. More favorable experience should accrue and offset any rate increase for remaining policyholders. 	<ul style="list-style-type: none"> This approach uses a weighting of the if-knew and make-up premiums based on the percentage of policyholders remaining. As shown through prior testing of the MSRR methodologies, the weighting addresses this principle in a reasonable manner; however, the weights can be viewed as arbitrary. Any approach that considers past claims in the calculation of the rate increase, may be viewed as allowing remaining policyholders to be partially responsible for excess claims associated with past policyholders 	<ul style="list-style-type: none"> See MN comments
3. The approach should be designed to ensure the long-term financial stability of the insurance company by ensuring that any cost-sharing adjustment strikes an appropriate balance between the policyholders and the company.	<ul style="list-style-type: none"> Company assumes all past losses. Policyholders are responsible for paying the appropriate premium corresponding to their existing coverage moving forward. Method ensures financial stability when considering only future projections; however, an inappropriate balance between policyholders and the company could result if there have been past gains. 	<ul style="list-style-type: none"> May result in an inappropriate balance for products where the lifetime loss ratio after the increase exceeds 100%. Overall, cost sharing can be reasonable with this method; however, discretion may be needed to adjust blending/cost-sharing factors. 	<ul style="list-style-type: none"> This method does not have any explicit cost-sharing aspects but does implicitly apply cost-sharing to the weight applied to the If-knew premium. The new weighting using the present value of lives does not strike a balance and may result in potential solvency and long-term financial stability concerns for insurance companies.
4. The approach should be transparent and easily understood by actuaries	<ul style="list-style-type: none"> When there have been multiple assumption updates, this method 	<ul style="list-style-type: none"> Method can be calculated from traditional calendar year exhibits, 	<ul style="list-style-type: none"> Method can be calculated from traditional calendar year exhibits,

Principle	PPV (TX)	Blended Make-up/If-knew (MN)	Revised Blended Make-up/If-knew (Proposal by Utah)
experienced in pricing and reserving long-term care products.	becomes more complicated and relies on prior modeling, which makes it difficult for regulators to validate.	making it easier to work with in practice. <ul style="list-style-type: none"> Regulators have stated that legislators understand this method much better than the other methods under review. 	making it easier to work with in practice; however, the method has not been finalized and cannot be scored completely.
5. The approach should not require an unreasonable amount of time or unreasonable degree of effort.	<ul style="list-style-type: none"> Method is subject to more complications. For example, in order to correctly utilize the method, one needs a projection of current active lives under both current and prior filing assumptions, the latter of which can be prohibitively difficult for some carriers to do, especially when the needed calculations and projections rely on assumptions and modeling that are not as robust and detailed as current assumptions. Method requires maintaining old assumptions, which can be challenging due to changes in models, changes in pricing systems, etc. 	<ul style="list-style-type: none"> Method is straight-forward from a calculation perspective. 	<ul style="list-style-type: none"> Method is straight-forward from a calculation perspective.
6. The approach should not impose unnecessary complications that do not significantly change the resulting calculated rate increase.	<ul style="list-style-type: none"> When there have been multiple assumption updates, this method becomes more complicated and relies on prior modeling. 	<ul style="list-style-type: none"> The core calculation is straight-forward; however, some aspects outlined in the MSRR framework are complicated and need clarification (e.g., calculation and definition of the benchmark premium and sample policy verification). 	<ul style="list-style-type: none"> The core calculation is straight-forward.

Principle	PPV (TX)	Blended Make-up/If-knew (MN)	Revised Blended Make-up/If-knew (Proposal by Utah)
7. The approach should allow for predictable results when applied consistently.	<ul style="list-style-type: none"> Base method is straight-forward from an actuarial perspective. 	<ul style="list-style-type: none"> The core calculation is straight-forward; however, some aspects outlined in the MSRR framework may contribute to unpredictability of results and need clarification (e.g., calculation and definition of the benchmark premium and sample policy verification). 	<ul style="list-style-type: none"> See MN comments.
8. The approach should not apply subjective, arbitrary, or discretionary caps, factors, or limitations.	<ul style="list-style-type: none"> The calculation does not include any such factors. 	<ul style="list-style-type: none"> The weights applied to blending the make-up and if-knew premiums, along with the cost-sharing percentages can be viewed as arbitrary rather than actuarial. 	<ul style="list-style-type: none"> See MN comments.
9. The approach should allow for any variation in premiums or rate increases between classes of insureds that are based upon sound actuarial principles reasonably related to actual and anticipated loss experience.	<ul style="list-style-type: none"> The change in present value of future incurred claims can be run on as granular level as needed; however, this creates challenges if past rate increase filings were at less granular levels. Method does not correct for class subsidization if proposed increase request is on a more granular level than past rate increase requests. 	<ul style="list-style-type: none"> Method can be applied by cohort; however, the original lifetime loss ratio is often unavailable at the same level of granularity (especially if original pricing models are no longer usable or limited in functionality), and results in the aggregate original lifetime loss ratio being usable for this purpose. 	<ul style="list-style-type: none"> See MN comments.
10. The approach should allow for consideration of whether a product was priced with a margin for moderately adverse experience required under rate stability or whether the product was priced under pre-rate stability regulations.	<ul style="list-style-type: none"> Yes, separate formulas exist for pre-rate stabilized and rate stabilized blocks. 	<ul style="list-style-type: none"> Yes, calculations can be done with or without margins to address this principle. 	<ul style="list-style-type: none"> Yes, calculations can be done with or without margins to address this principle.

Principle	PPV (TX)	Blended Make-up/If-knew (MN)	Revised Blended Make-up/If-knew (Proposal by Utah)
11. A desired outcome of the approach is rate equity.	<ul style="list-style-type: none">• Yes	<ul style="list-style-type: none">• Yes	<ul style="list-style-type: none">• Yes

Draft: 7/3/23

Long-Term Care Actuarial (B) Working Group
Virtual Meeting
June 7, 2023

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met June 7, 2023. The following Working Group members participated: Paul Lombardo, Co-Chair (CT); Fred Andersen, Co-Chair (MN); Ahmad Kamil (CA); Weston Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); William Leung (MO); Michael Muldoon (NE); Anna Krylova (NM); Bill Carmello (NY); Craig Kalman and Laura Miller (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Aaron Hodges (TX); and Tomasz Serbinowski (UT).

1. Discussed Comments Received on Exposures of Ideas for a Single LTCI Rate Increase Review Methodology

Andersen said the Working Group exposed a request for comments on ideas (Attachment One-B1) for a single, improved long-term care insurance (LTCI) rate review methodology approach for use in multistate actuarial (MSA) filing reviews. He said a methodology that the Utah Insurance Department (Attachment One-B2) proposed was also exposed for comment. He said comments were received from the American Council of Life Insurers (ACLI) and America's Health Insurance Plans (AHIP) (Attachment One-B3), as well as from the Virginia Bureau of Insurance (Attachment One-B4).

Serbinowski gave an overview of the Utah proposal. Andersen said the Utah proposal will need to be tested to compare its results to the currently used Minnesota and Texas approaches.

Jan Graeber (ACLI) gave an overview of the ACLI/AHIP comments. Serbinowski said that a metric will need to be established to evaluate whether an approach satisfies ACLI/AHIP's proposed guiding principle 1 and that it is difficult to say what is intended. Graeber said the intent is not to have specific criteria for evaluating this, but rather to determine what a given approach uses to judge the reasonableness of premiums in relation to benefits and use this as the evaluation standard. Miller said that if these principles are to be used to evaluate an approach, the criteria for principle 2 will need to be elaborated upon.

Miller said that there will need to be more detail as to what is considered an appropriate balance for principle 3. Andersen said that any difference between the makeup premium and the approved increased premium is a cost-sharing element in the Minnesota approach.

Andersen said the ACLI/AHIP guiding principles will not be exposed for comment, but may be used by the Working Group in developing a set of principles if it is decided it is needed.

Serbinowski said defining "classes of insured" as used in principle 9 could be difficult.

Referring to principle 10, Trexler and Boyd said it needs to be determined if rate increases should continue to be allowed to include a margin for moderately adverse experience.

Andersen said comments from the Virginia Bureau of Insurance will be addressed at the Working Group's next meeting. Serbinowski said he can address in writing questions asked about the Utah approach in the comments.

Andersen said he is hesitant for the Working Group to adopt a set of principles for evaluating LTCI rate review methodology approaches. He asked if the Working Group should further examine the proposed Utah approach, including comparing its results to the Minnesota and Texas approaches, and if it is helpful and necessary to produce a set of principles before it produces a single approach. Lombardo said the Working Group should focus on evaluating whether the Utah approach is one that could be adopted for use in MSA reviews. He said he does not think the Working Group necessarily needs to adopt a set of principles, but that it should ask questions similar to those that the ACLI/AHIP proposed when an approach is evaluated.

2. Exposed Three MSA Actuarial Approaches

Andersen said the Working Group will expose the Minnesota, Texas, and Utah approaches for a 30-day public comment period ending July 10. He said one option for the form of comments being sought is a scorecard assessing the approaches' success in meeting key principles. He said these principles can be from the list provided in the ACLI/AHIP comment letter or as developed or thought of by the commenter. He said the other option is assessment of the rate increase amounts resulting from the three approaches, including for various types of situations, such as older and newer business, or blocks with short or lengthy rate increase histories.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Meetings/Member Meetings/B CMTE/HATF/2023_Summer/06-07-23 LTCAWG/Minutes_LTCAWG_06-07-23.docx

Ideas for a single, improved MSA actuarial approach

As the Long Term Care Actuarial Working Group evaluates the two actuarial approaches embedded in the Multi-State Actuarial (MSA) Framework, there could be an opportunity to apply the evaluation to move towards a single, improved MSA actuarial approach.

Clarifying principles applied to develop the Texas and Minnesota approaches, key goals will continue to be:

1. The present value of lifetime premiums should not exceed the present value of lifetime benefits and related expenses for a class of policies.
 - a. This addresses the issue of “past losses” which can be a confusing concept related to a long-term insurance product.
 - b. This also addresses the shrinking block issue, ensuring a small number of remaining policyholders are not responsible for past excess claims associated with past policyholders.
 - c. The Minnesota and Texas approaches currently address these issues.
 - d. The Texas approach currently contains additional aspects regarding past losses.
2. Practical
 - a. The resulting rate increase should be reasonable.
 - b. The approach should be calculated in a reasonable amount of time with a reasonable amount of effort.
 - c. The approach should avoid unnecessary complications that don’t significantly change the resulting calculated rate increase.
3. Appropriate cost sharing
 - a. Recognition that in many cases, the lifetime loss ratio approach, an aspect of many states’ laws, leads to excessive rate increases that could be in conflict with other aspects of states’ laws.
 - b. Cost sharing should be balanced, considering consumer fairness and avoiding further company financial distress.
 - c. Any cost-sharing formula should allow for potential flexibility if concerns exist regarding an insurer’s financial solvency.

Note that the above-mentioned principles are in addition to the typical, professional approach applied by states, including review of insurer and industry experience; assessments of reasonability of assumptions; validation of projections; and professional judgment, where appropriate.

Here are aspects of the Minnesota approach where improvements may be considered:

- I. Is the “if-knew” the appropriate premium to blend with the makeup premium to achieve the results in item 1 above? If not, is it appropriate to achieve the practicality goals in item 2 above?
- II. Should the weighting towards the makeup premium continue to be the percentage of policyholders remaining to help achieve the goals of items 1 and 2 above?
- III. For simplicity, does it make sense to remove the investment component, perhaps adjusting the cost-sharing formula to calibrate the results to the current Minnesota approach?
- IV. Is the catchup approach of determining a rate increase from inception and removing past rate increase approvals effective?
- V. Is the aggregate application of the Minnesota approach working as intended, where the makeup premium is such that the resulting lifetime loss ratio does not exceed the pricing lifetime loss ratio?

Here are aspects of the Texas approach where improvements may be considered:

- I. What are features of the Texas approach not accounted for in the MN approach that could be part of a single, improved approach?
- II. How are transitional and catch-up provisions planned to be handled, including situations where the previous rate increase was applied prior to the implementation of the Texas approach or the company voluntarily reduces a past rate increase?
- III. Evaluation of the potential high sensitivity of mature blocks of business to later duration factors (and older assumptions) while placing less emphasis on past experience
- IV. Evaluation of the balance between fairness to consumers and avoiding further insurer financial distress.

Note that the stated goal of the MSA approach is rate equity. States and companies can still pursue a more equitable approach where the present value of premiums would be similar between states, i.e., recognize timing differences of past rate increase approvals.

Utah Proposal for an Alternative Approach to LTCI Rate Increase Reviews

Background

Over the last several years, the Multistate Actuarial LTCI Rate Review Team (MSA) team has used two methodologies to evaluate the appropriateness of LTCI rate increases:

- A blended if-knew and make up with cost sharing method (MN method); and
- A prospective present value method (TX method).

Each method has its strengths and weaknesses. Criticisms of the MN method included arbitrariness of the cost sharing formula. A criticism of the TX method, especially when applied to legacy blocks with prior rate increases, was that it may result in counterintuitive results.

I'd like to propose a method that could be considered a modification of the MN method that, in my opinion, is preferable to either of the two methods mentioned above.

The method still uses a blend of if-knew and make-up premium. However, there are some additional bounds on the make-up premiums. More importantly, the method puts more weight on the if-knew premium and foregoes cost-sharing adjustments.

Outline of the New Method

First, an if-knew increase and a make-up increase need to be calculated. At a high level, they represent the low and high of the range of "reasonable" rate increases.

An if-knew increase is an increase from the original rates that, if applied from inception (retrospectively), would result in a specified target loss ratio.

My initial proposal would be to use a target loss ratio of 60%, regardless of the actual initial pricing target, and to calculate all present values using the applicable valuation rate.

A make-up increase is an increase from the original rates, that if applied to the future premiums (prospectively), would result in a specified target lifetime loss ratio. The make-up increase could not result in a future loss ratio lower than the specified target loss ratio.

The last condition prevents the company that already has a high past loss ratio from using the make-up increase to result in a lower future loss ratio (recouping past losses).

My initial proposal would be to not allow the future loss ratio to drop below 60%.

Second, the two increases would be blended with the weight applied to the make-up premium being the fraction (on a present value basis) of the life-years remaining. This is a departure from the MN method. The MN method uses:

Percentage of lives remaining = policies in-force / all policies issued

My alternative proposal would use:

Percent of life-years remaining = PV of future life-years / PV of total life-years

Finally, the approvable rate increase (from current rates) would be such that it would result in a cumulative increase equal to the blended increase calculated above.

General Observations

Unlike the TX method, this method does not require much information with regard to the original pricing assumptions. This is also my reason for proposing a 60% target loss ratio rather than the company's actual target loss ratio at the time of the pricing. The actual pricing target loss ratio is often unavailable or poorly documented, and typically is calculated using assumed investment returns that are higher than the applicable valuation rates.

Most regulators would not allow an increase that results in a very low future loss ratio. This approach uses a make-up increase that would generally pass the requirement that both future and lifetime loss ratios exceed the statutory minimum.

The blending factor accounts for the stage of life of the block even if persistency is very high. To the extent that future life-years correlate with future premium, this approach limits the company's ability to increase rates when most premium was already collected and future premiums make up only a small percentage of lifetime premium.

Items That Would Need to be Specified

The minimum lifetime and future loss ratios used in the definitions of the if-knew and make-up increases.

The interest rates used to calculate present values. These could be valuation rates applicable to the block or rates based on available yields.

Paul Lombardo, Co-Chair, NAIC Long-Term Care Actuarial Working Group
Fred Andersen, Co-Chair, NAIC Long-Term Care Actuarial Working Group

Dear Paul and Fred,

The American Council of Life Insurers (ACLI)¹ and the America's Health Insurance Plans (AHIP)² appreciate the opportunity to comment on exposure relating to "Revised Ideas-Improved MSA Actuarial Approach."

The ACLI and AHIP continue to fully support a consistent national approach for reviewing current LTC rates that results in actuarially appropriate increases being granted by the states in a timely manner. Actuarially justified rates are fundamental to insurers' ability to fulfill future benefit promises made to their policyholders.

After reviewing the exposure, we believe that a productive first step would be to develop several overarching principles that can serve as the basis in the evaluation of any approach for determining an actuarially justified LTC rate increase, without reference to any specific method. The goal would be to come to a consensus on these overarching principles and then use them as guidance as we evaluate specific methods. Our attached comments on the exposure are based on this perspective.

We look forward to discussing our comments at the next call of the NAIC LTC Actuarial Working Group.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Jan Graeber', is shown above a horizontal line.

Guiding Principles for Actuarial Approaches for Evaluating Long-Term Care Rate Increases

The following principles are guidance and do not carry the weight of law or impose any legal liability. This guidance can serve to inform and establish actuarial approaches for evaluating longterm care premium increases.

1. The approach should result in premiums that are:
 - a. not inadequate, not unreasonable, and not excessive in relation to the benefits provided, and
 - b. not unfairly discriminatory between individuals of the same actuarial risk class, or between risks of essentially the same degree of hazard.
2. The approach should result in premiums charged to policyholders that do not allow remaining policyholders to be responsible for excess claims associated with past policyholders.
3. The approach should be designed to ensure the long-term financial stability of the insurance company by ensuring that any cost-sharing adjustment strikes an appropriate balance between the policyholders and the company
4. The approach should be transparent and easily understood by actuaries experienced in pricing and reserving long-term care products.
5. The approach should not require an unreasonable amount of time or unreasonable degree of effort.
6. The approach should not impose unnecessary complications that do not significantly change the resulting calculated rate increase.
7. The approach should allow for predictable results when applied consistently.
8. The approach should not apply subjective, arbitrary, or discretionary caps, factors, or limitations.
9. The approach should allow for any variation in premiums or rate increases between classes of insureds that are based upon sound actuarial principles reasonably related to actual or anticipated loss experience.

10. The approach should allow for consideration of whether a product was priced with a margin for moderately adverse experience required under rate stability or whether the product was priced under pre-rate stability regulations.
11. A desired outcome of the approach is rate equity. States and companies should pursue an approach where the present value of lifetime premiums, for a given level of benefits, would be similar between states and achieves premium equity over the lifetime of the policy.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good Afternoon Eric,

Virginia has the following questions and comments on the 2 attached documents.

Utah Proposal for an Alternative Approach to LTCI Rate Increase Reviews

Questions that we would want answered to more fully evaluate this method:

1. How are past rate increases taken into account in the UT method?
2. In some cases, a company has certified under rate stability at a previous rate increase that it will not seek further increases unless experience deteriorates. How would the UT method take this into consideration?
3. How do the allowable rate increases under this method compare to the TX and MN method for real-life examples?
4. What do you do in those circumstances where the data to calculate historical “life-years” is not available?

Ideas for a single, improved MSA actuarial approach

- Item 1: This excludes any type of disabled or active life reserves, correct?
- Item 2: What does “The resulting rate increase should be reasonable” mean?
- Integrated factoring for a company’s financial condition should either be omitted or broken out separately for optional consideration. This approach may enhance the reception of the MSA by those states who do not endorse approving additional amounts for financial condition.
- Items 2 & 3. Subjectivity on a state level remains a potentially divisive topic. Considerations such as average age, state enrollment, previous submissions, etc. can be difficult to ignore in the final decision. There are several terms in sections 2 and 3 that can be interpreted subjectively so any technical expansion on these terms may be helpful whether it be by offering a definition, calculation of a range of action, etc.
- VA is generally in favor of moving toward a single MSA actuarial approach and looks forward to future discussions to develop this concept further.

We look forward to the discussion next week.

Draft: 5/12/23

Long-Term Care Actuarial (B) Working Group
Virtual Meeting
May 1, 2023

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met May 1, 2023. The following Working Group members participated: Paul Lombardo, Co-Chair (CT); Fred Andersen, Co-Chair (MN); Charles Hale (AL); Ahmad Kamil (CA); Lilyan Zhang (FL); Nicole Boyd (KS); Marti Hooper (ME); Kevin Dyke (MI); Michael Muldoon (NE); Anna Krylova (NM); Bill Carmello (NY); Craig Kalman and Laura Miller (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Aaron Hodges (TX); and Tomasz Serbinowski (UT). Also participating was: Eric UngeCO).

1. Discussed Comments Received on Proposals to Revise the Nationally Coordinated LTCI Rate Increase Review Checklist and Comments Received on an Exposure of the Minnesota and Texas LTCI Rate Increase Review Methodologies

Andersen said the Working Group exposed a request for comments on the Nationally Coordinated Long-Term Care Insurance (LTCI) Rate Increase Review Checklist and the Minnesota and Texas approaches as used in the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework). He said comments were received from the Colorado Division of Insurance (Attachment One-C1), the American Academy of Actuaries (Academy) (Attachment One-C2), and the American Council of Life Insurers (ACLI) and America's Health Insurance Plans (AHIP) (Attachment One-C3).

Unger gave an overview of Colorado's comments on the Checklist and the Minnesota and Texas approaches. He said a large discrepancy between the results of the Minnesota and Texas approaches has been observed in some multistate actuarial (MSA) filings, and he suggested considering using a single approach in the LTCI MSA Framework reviews. Lombardo asked Unger to elaborate on the suggestion for producing a less technical version or an additional section of the MSA Advisory Report. Unger said non-actuarial audiences within an insurance department may find it difficult to understand the MSA Advisory Report as it is currently structured. Andersen said the use of a single approach for LTCI MSA Framework reviews will be discussed later in the meeting.

Jamala Arland (Academy) gave an overview of the Academy's comments. Andersen said the Academy issue brief, *Long-Term Care Insurance: Considerations for Treatment of Past Losses in Rate Increase Requests*, mentions past persistency in excess of what was expected and past claims in excess of what was expected as potential sources of past losses. He said the Minnesota and Texas approaches treat past losses associated with excess persistency in significantly different ways. He said the Minnesota and Texas methods treat past losses associated with excess claims in a similar manner. He asked if past persistency in excess of what was expected should be considered to be a past loss for the purpose of LTCI MSA Framework reviews. Serbinowski said part of the problem with addressing past losses comes from framing them in terms of loss ratios. He said excess claims contribute to loss ratio calculations, but the calculation does not accurately reflect variances in persistency. He said the Texas approach provides no relief for higher-than-expected persistency. He said if variances from expected investment returns are to be included, the loss ratio formula needs to be adjusted to account for this. Lombardo said he believes it is very difficult to define past losses in a way that all actuaries will agree on.

Jan Graeber (ACLI) and Ray Nelson (AHIP) gave an overview of their organizations' comments. Miller referenced the ACLI/AHIP's comment on the Checklist, "... we recognize that an individual state might be interested in

information specific to their state, we suggest that the checklist clarify that state-specific information is not needed or used for purposes of an MSA review,” and she said Ohio has an interest in seeing its state-specific

cumulative increase and would also want to be able to compare it with that of other states. She said she agrees with that, and she would like to see a deeper analysis of the Minnesota and Texas approaches. Lombardo said Connecticut has seen insurers report implemented cumulative rate increases that are less than the rate increases approved in Connecticut. He said the MSA Advisory Reports attempt to identify such situations for each state, and he believes improvements in how the MSA Advisory Reports show and detail cumulative rate increases should be considered.

2. Exposed Ideas for a Single Improved MSA Actuarial Approach

Andersen said given the comments received on the Minnesota and Texas approaches, combining features of both to develop a single rate increase review approach for use in the LTCI MSA Framework may be warranted. He gave an overview of a draft principles document (Attachment One-C4) that outlines potential considerations and principles for evaluating proposals for a single approach. He said the prior evaluation performed on the Minnesota and Texas approaches can also be used in the consideration of a single approach.

Andersen said the Working Group will expose the draft principles document for a public comment period ending June 2.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Meetings/Member Meetings/B CMTE/HATF/2023_Summer/05-01-23 LTCAWG/Minutes_LTCAWG_05-01-23.docx

As of 4/20/2023 | Colorado Division of Insurance

Tab	Contents
New in MSA checklist	Items which Colorado thinks should be in data received from companies for rate increase request evaluation.
New for MSA report	Items which Colorado thinks should be added to the MSA report.

Item #	Description
1	How many policies were sold in each of [our state] and Nationwide
2	What was average issue and attained age in [our state] and Nationwide
3	What % of policies are on claim in [our state] and Nationwide
4	In what year was block opened and closed
5	Claims retrospective test showing how claims paid compares to initial DLR and IBNR set up.
6	Describe any reinsurance contract
7	In addition to A/E, need ratio of Actual / Projection for each of lapse, mortality, morbidity
8	State by State rate increase prior to this round, request in this round and approved in this round
9	On level premium projection
10	Investment income % received in each of historic years for assets backing the active life reserve
11	Show projections without margins
12	Show split out of incurred claims into paid, disabled life reserve and IBNR
13	Are special RBO options available for inflation policies (such as landing spot)?
14	Require this item from Supplemental Information for all filings: 3. RBOs a. Provide the history of RBOs offered and accepted for the block. b. Provide a reasonability analysis of the value of each significant type of offered RBO.
15	Inform the company they need to file all this information with each State. If information is only in objection response in MSA filing, company need to put in the body of information submitted in SERFF to States.

Item #	Description
1	Write MSA report for an non-actuarial audience with actuarial details in appendix.
2	Pick one methodology to review the filings; Large discrepancies between MN and TX methodologies reduces confidence in final conclusion
3	More thorough discussion of reasonability analysis done in evaluating RBO's. Was analysis qualitative or quantitative.

Re: Definition of “past losses” in the context of recouping past losses for long-term care (LTC)

Dear Co-Chairs Andersen and Lombardo,

On behalf of the Long-Term Care (LTC) Reform Subcommittee (“the subcommittee”) of the Health Practice Council of the American Academy of Actuaries (Academy),¹ we are reaching out to you to follow up on a concern you raised during the NAIC LTC Actuarial (B) Working Group Meeting on February 17, 2023, about the lack of a consistent definition of “past losses” in the context of recouping past losses for LTC.

We refer the LTCAWG to a specific Academy issue brief, [Long-Term Care Insurance: Considerations for Treatment of Past Losses in Rate Increase Requests](#) (October 2018), on considerations for treatment of past losses in rate increase requests for LTC insurance. That issue brief notes that there are many possible sources of past losses, including past persistency in excess of expected, past claims in excess of expected, delays in the request or approval of necessary premium rate increases, companies pricing different from industry standards, investment returns being lower than expected, and shortfalls in past premiums. As regulators review requested rate increases and consider how to and how much to adjust for past losses, there are a variety of approaches one might reasonably take depending on the source.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

We would welcome the opportunity to speak with you to provide more detail regarding past losses or on other issues. For example, the committee has offered comments to the Long-Term Care Insurance Multi-State Rate Review Framework.²

If you have any questions or would like to discuss further, please contact Matthew Williams, the Academy's senior health policy analyst, at williams@actuary.org.

Sincerely,

Jamala M. Arland, MAAA, FSA

April 24, 2023

Paul Lombardo, Co-Chair, NAIC Long-Term Care Actuarial Working Group
Fred Andersen, Co-Chair, NAIC Long-Term Care Actuarial Working Group

Dear Paul and Fred,

The American Council of Life Insurers (ACLI)¹ and the America's Health Insurance Plans (AHIP)² appreciate the opportunity to comment on the following two exposures:

- Suggested improvements to the Health Actuarial Task Force-adopted Consolidated, Most Commonly Asked Questions – States' LTC Rate Increase Reviews checklist and MSA Supplemental information checklist.
- The Minnesota and Texas actuarial approaches as described in the NAIC Long-Term Care Insurance Multistate Rate Review Framework document.

The ACLI and AHIP continue to fully support a consistent national approach for reviewing current LTC rates that results in actuarially appropriate increases being granted by the states in a timely manner.

Our comments on each exposure are outlined in the following sections.

Suggested Improvements to Checklists

ACLI and AHIP members continue to support and encourage a general checklist that reduces the number of additional requests from states during the individual state review of the rate filing. While we understand that each state is responsible for the final review and approval of the filing in their state, additional information that is not included in the checklist may be warranted. We encourage the checklist to clarify that if a state believes that there are additional requests needed that are not included in the checklist, the state should provide the company with the reason that the additional item is needed.

Comments and suggested changes to specific sections of the checklists are outlined in Appendix A.

Comments to the Actuarial Approaches for Rate Increases

Our comments to the actuarial approaches for rate increases are more general in nature. It is our understanding that a detailed review of these methods, along with consideration of alternative methods, will occur after any modifications needed to the checklist are complete.

¹ The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

² AHIP is the national association whose members provide health care coverage, services, and solutions to hundreds of millions of Americans every day. We are committed to market-based solutions and public-private partnerships that make health care better and to help create a space where coverage is more affordable and accessible for everyone.

Insurers best protect their policyholders when they can fulfill the obligations they made to these policyholders. This is accomplished when insurers have some level of predictability in their ability to effectively manage their current and future LTC business over time. At its core, this level of predictability can only be achieved through transparency and consistency with respect to the methodology used to calculate the increase recommended by the MSA Team. We firmly believe that companies need to understand how regulators are using the methodologies before submitting their rate filing to the MSRR, including why the MSA team would give more weight to one method over the other.

The Minnesota (Blended If-Knew/Make-Up) and Texas (Prospective Present Value) approaches, as described in the 2018 NAIC LTC Pricing Subgroup's paper – Long-term Care Insurance Approaches to Reviewing Premium Rate Increases ("NAIC Pricing Subgroup's Paper"), were the result of a deliberate and collaborative effort on the part of regulators and industry in 2018, during which each method was fully vetted. We believe that any change or clarification of the methods outlined in that document should occur only after the same robust discussion and review.

As was done in 2018, we encourage the NAIC LTC Actuarial Working Group to engage in another fulsome discussion of whether the current methodologies are still appropriate, along with the items used in each method so that regulators and companies are on the same page regarding how each component is used in the review process. This should include a discussion of all components of each method rather than the inclusion of only certain components of the methodologies. For example, under the Texas method, the catch-up and transitional provisions are not included in the framework. We believe these are valid and important adjustments that should be considered when applying the Texas method. The catch-up provision is intended to account for necessary additional premiums in a new rate increase related to assumptions provided to the department at the time of a previous rate increase request that were not approved in conjunction with the prior filing(s). Likewise, the transition provision, for pre-rate stability products and other products where the last rate increase request was voluntarily reduced by the company, provides the ability to make a single filing to provide the full amount of premium necessary to meet the actuarial certification.

Thank you for the opportunity to comment. We look forward to discussing our comments at the next call of the NAIC LTC Actuarial Working Group.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Jan Graeber'.

Appendix A

Information Checklist	
Item Number	Comment/Suggestion
<p>Pages 18-19, Item 2b:</p> <p>2. New premium rate schedule, percentage increase for each rating scenario such as issue age, benefit period, elimination period, etc., from the existing and original rates.</p> <p>b. Provide the cumulative rate change since inception, after the requested rate increase, for each of the rating scenarios.</p>	<p>Comment: Due to differences in historical rate increase approvals by state, the "cumulative rate change since inception" will most likely vary by state.</p> <p>Suggestion: Remove this item from the checklist or clarify how the cumulative increase should be determined when historical rate increases have varied by state and clarify how the MSA team will use this information in its review.</p>
<p>Page 19, Item 3a and 3b</p> <p>3. Rate increase history that reflects the filed increase.</p> <p>a. Provide the month, year, and percentage amount of all previous rate revisions.</p> <p>b. Rate increase history that reflects the filed increase. Provide the SERFF MSA numbers associated with all previous rate revisions</p>	<p>Comment 3a: The date a rate revision is approved differs from the date the increase is implemented by the company.</p> <p>Suggestion: Clarify whether the date provided should be the approval date or the implementation date.</p> <p>Comment 3b: The MSA review process will assign a SERFF number to the MSA SERFF filing; however, this differs from the SERFF number assigned to the filing when it is submitted to the individual states. Therefore, the rate revision is actually associated with the state's SERFF number and not the MSA SERFF number. (i.e. clarify that this item refers only to prior MSA filings.)</p> <p>Suggestion: Add "if applicable" to clarify that this item refers to any prior MSA SERFF filing.</p>
<p>Page 19, Item 4.a.iv:</p> <p>4. Actuarial memorandum justifying the new rate schedule, which includes:</p> <p>a. Lifetime loss ratio projection, with earned premiums and incurred claims discounted at the maximum valuation interest rate.</p> <p>iv. Provide a comparison of state versus national mix of business. In addition, a state may request separate state and national data and</p>	<p>Comment: While we recognize that an individual state might be interested in information specific to their state, we suggest that the checklist clarify that state specific information is not needed or used for purposes of an MSA review.</p>

<p>projections. The insurer should accompany any state-specific information with commentary on credibility, materiality, and the impact on requested rate increase.</p>	
<p>Page 19, Item 5a: 5. Reasons for the rate increase, including which pricing assumptions were not realized and why. a. Attribution analysis - presents the portion of the rate increase allocated to and the impact on the lifetime loss ratio from each change in assumption</p>	<p>Comment: We believe this information is duplicative of the information requested in Item S2 of the Supplement checklist, which states: "Attribution of rate increase a. Provide the attribution of rate increase by factor: morbidity, mortality, lapse, investment, and other. b. For the morbidity factor, break down the attribution by incidence, claim length, benefit utilization, and other. c. Provide information on the assumptions that are especially sensitive to small changes in assumptions." Suggestion: Remove this item from the supplemental checklist.</p>
<p>Page 20, Item 10c: 10. Information from the Guidance Manual Question and Answer (Q&A): Morbidity, Lapse, Mortality, Interest. a. Provide actuarial assumptions from original pricing and most recent rate increase proposal and have the original actuarial memorandum available upon request.</p>	<p>Comment: Providing this information is challenging due to the fact that the most recent assumptions may vary by state. For example, timing differences between filings may vary by state. In addition, the original actuarial memorandum could vary by state as well. Suggestion: This item should be revisited after the review and discussions of the methodologies are complete in order to incorporate how the MSA will treat situations when the "most recent rate increase" assumptions vary by state.</p>
<p>Page 20, Item 11: 11. Provide the following calendar year projections, including totals, for current premium paying nationwide policyholders only, prior to the rate increase, all discounted at the maximum valuation interest rate: a. Present value of future benefits (PVFB) under current assumptions b. PVFB under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing). c. Present value of future premiums (PVFP) under current assumptions.</p>	<p>Comment: The data requested is only for base rate increase calculation. We believe the Texas method should utilize the catchup and transition provisions and therefore additional data should be requested in this checklist to accommodate those provisions. Suggestion: This item should be revisited after the review and discussions of the methodologies are complete to incorporate modifications made due to those discussions.</p>

<p>d. PVFP under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing).</p>	
<p>Page 20-21, Item 16: 16. Policyholder notification letter should be clear and accurate. a. Provide a description of options for policyholders in lieu of or to reduce the increase. b. If inflation protection is removed or reduced, is accumulated inflation protection vested? c. Explain the comparison of value between the rate increase and policyholder options. d. Are future rate increases expected if the rate increase is approved in full? If so, how is this communicated to policyholders?</p>	<p>Comment: We agree that the policyowner notification letter should be clear and accurate; however, different states have different definitions of what is clear and accurate. Suggestion: Remove this item from the MSA information checklist and leave it to the review of the individual state when the filing is made with that state.</p>
<p>Supplement Checklist</p>	
<p>Page 21, Items 3a and 3b 3. RBOs a. Provide the history of RBOs offered and accepted for the block. b. Provide a reasonability analysis of the value of each significant type of offered RBO.</p>	<p>Comment: Because historical rate increase approval amounts and timing could vary by state, the offer and acceptance data will vary by state as well. In addition, new/innovative approaches, like landing spots or cash buyouts are not approved by all states. Suggestion: Clarify how companies should provide this information when it varies by state.</p>
<p>Page 21, Item 5: 5. Expected loss ratio: a. With respect to the initial rate filing and each subsequent rate increase filing, provide the target loss ratio. b. Provide separate ratios for lifetime premium periods and non-lifetime premium periods and for inflation-protected and non-inflation-protected blocks.</p>	<p>Comment: This item does not take into account whether a company certified to rate stability. Will all companies be treated as if they did certify to rate stability even when they did not and even when the target loss ratio could not have been achieved because the state didn't approve the rate increase associated with that target loss ratio?</p>

Ideas for a single, improved MSA actuarial approach

As the Long Term Care Actuarial Working Group evaluates the two actuarial approaches embedded in the Multi-State Actuarial (MSA) Framework, there could be an opportunity to apply the evaluation to move towards a single, improved MSA actuarial approach.

Clarifying principles applied to develop the Texas and Minnesota approaches, key goals will continue to be:

1. The present value of lifetime premiums should not exceed the present value of lifetime benefits and related expenses for a class of policies.
 - a. This addresses the issue of “past losses” which can be a confusing concept related to a long-term insurance product.
 - b. This also addresses the shrinking block issue, ensuring a small number of remaining policyholders are not responsible for past excess claims associated with past policyholders.
 - c. The Minnesota and Texas approaches currently address these issues.
 - d. The Texas approach currently contains additional aspects regarding past losses.
2. Practical
 - a. The resulting rate increase should be reasonable.
 - b. The approach should be calculated in a reasonable amount of time with a reasonable amount of effort.
 - c. The approach should avoid unnecessary complications that don’t significantly change the resulting calculated rate increase.
3. Appropriate cost sharing
 - a. Recognition that in many cases, the lifetime loss ratio approach, an aspect of many states’ laws, leads to excessive rate increases that could be in conflict with other aspects of states’ laws.
 - b. Cost sharing should be balanced, considering consumer fairness and avoiding further company financial distress.
 - c. Any cost-sharing formula should allow for potential flexibility if concerns exist regarding an insurer’s financial solvency.

Note that the above-mentioned principles are in addition to the typical, professional approach applied by states, including review of insurer and industry experience; assessments of reasonability of assumptions; validation of projections; and professional judgment, where appropriate.

Here are aspects of the Minnesota approach where improvements may be considered:

- VI. Is the “if-knew” the appropriate premium to blend with the makeup premium to achieve the results in item 1 above? If not, is it appropriate to achieve the practicality goals in item 2 above?
- VII. Should the weighting towards the makeup premium continue to be the percentage of policyholders remaining to help achieve the goals of items 1 and 2 above?
- VIII. For simplicity, does it make sense to remove the investment component, perhaps adjusting the cost-sharing formula to calibrate the results to the current Minnesota approach?

- IX. Is the catchup approach of determining a rate increase from inception and removing past rate increase approvals effective?
- X. Is the aggregate application of the Minnesota approach working as intended, where the makeup premium is such that the resulting lifetime loss ratio does not exceed the pricing lifetime loss ratio?

Here are aspects of the Texas approach where improvements may be considered:

- V. What are features of the Texas approach not accounted for in the MN approach that could be part of a single, improved approach?
- VI. How are transitional and catch-up provisions planned to be handled, including situations where the previous rate increase was applied prior to the implementation of the Texas approach or the company voluntarily reduces a past rate increase?
- VII. Evaluation of the potential high sensitivity of mature blocks of business to later duration factors (and older assumptions) while placing less emphasis on past experience
- VIII. Evaluation of the balance between fairness to consumers and avoiding further insurer financial distress.

Note that the stated goal of the MSA approach is rate equity. States and companies can still pursue a more equitable approach where the present value of premiums would be similar between states, i.e., recognize timing differences of past rate increase approvals.

MEMORANDUM

TO: Commissioner Andrew N. Mais (CT), Chair of the Health Actuarial (B) Task Force and Fred Andersen (MN), Chair of the Long-Term Care Valuation (B) Subgroup

FROM: Steve Drutz (WA), Chair of the Health Risk-Based Capital (E) Working Group

DATE: Feb. 25, 2022

RE: AG 51 – Asset Adequacy Testing

The Health Risk-Based Capital (E) Working Group established the Health Test Ad Hoc Group in 2018 to review the health test language within the *Annual Statement Instructions* due to inconsistencies in reporting of health business across the different blanks, as well as a significant amount of health business reported on the life and fraternal blank. Currently, a company passes the health test if the following requirements are met:

- The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

AND

- The entity passing the Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

AND

- At least 75% of the entity's current year premiums are written in its domiciliary state.

OR

- The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

The intent of the Ad Hoc Group was to evaluate if changes were warranted to the health test because of industry changes since its original development. The Ad Hoc Group has drafted a phase 1 proposal that will delete the requirements for an entity being licensed and actively issuing and/or renewing business in five states or less and at least 75% of the entity's current year premiums being written in their domicile state. The Ad Hoc Group is continuing to evaluate the current 95% premium and reserve ratios.

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509

p | 202 471 3990

Kansas City 1100 Walnut Street, Suite 1500, Kansas City, MO 64106-2197

p | 816 842 3600

New York One New York Plaza, Suite 4210, New York, NY 10004

p | [212 398 9000](tel:2123989000)

www.naic.org

Through the evaluation and discussion of the 95% reserve ratio, there was a question brought up as to whether an entity would still be required to perform asset adequacy testing of long-term care (LTC) business if the entity moved from the life blank to the health blank. It is the Ad Hoc Group's understanding that asset adequacy testing is required, regardless of the blank if the criteria for asset adequacy testing are met. The Working Group is asking the Health Actuarial (B) Task Force to consider adding a sentence to *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) that would indicate that regardless of the blank the entity files, asset adequacy testing is required by the entity if the criteria are met.

This clarification would help to make it abundantly clear that all companies with LTC exposure that are subject to asset adequacy testing would still be required to meet these requirements, regardless of the blank they are filing on.

If you have any questions regarding the suggested clarification, please contact Crystal Brown (cbrown@naic.org).

cc: Eric King, Crystal Brown

	Hybrid	1,720,727			

Source: LIMRA 2022 US Individual Life Combination Product and Long-Term Care Insurance Product Sales and In Force Surveys. *NAIC Form 1 1

Long-Term Care Insurance Products

Observations from NAIC form 1:

- Were 120+ carriers “truly” writing LTC?
 - 5,981,777 total policies in force over 114 holding companies,
 - 35 have More than 10,000 policies with an average inforce of 167,380, and
 - 79 have Less than 10,000 policies with an average inforce of 1,563
 - Of the top 20 carriers:
 - Average inforce is 277,237 policies,
 - **14/20** continue selling long-term care solutions (Standalone LTC/Riders/etc.)

In addition, there are dozens more carriers placing worksite, Life/LTC riders, Life/Annuity riders, Chronic Illness riders, Short-Term Care, and supplemental health policies covering LTSS needs.

About 600 Medicare Advantage plans cover LTSS benefits including Adult Day Care, Transportation and Meals

Minnesota DHS: Options to Increase Access to Long Term Care Financing, Services and Supports in Minnesota

Primary Objective and Goals of the Study :

- Improving access to LTSS for Minnesotans that typically do not qualify for Medicaid,
- Examining and evaluating integrated LTSS funding options, and
- Transforming the LTC funding system.

Provide **Stakeholder-led** comprehensive recommendations addressing the needs of individuals, families, caregivers, government programs, insurance programs, and many others.

An emphasis on options that; enable older adults to receive care in their homes, improve the caregiver supply, and develop a broad base of support for positive recommendations.

Encourage **simplicity**, system **integration**, **equity**, and **accessibility** of LTSS services.

Considers **revised roles** for private LTC insurance, for Minnesota's Medicaid program and for other funding sources including Medicare LTSS and Older Americans Act programs.

Explores new and innovative models of LTC financing and service delivery.

4

Building Upon What Works in MN: It's All About the Supports!

Minnesota's existing LTSS approaches:

Partners including the Area Agencies on Aging, Counties, Tribal Nations, and Managed Care Organizations

A "no wrong door" approach: Senior LinkAge Line, Office of Ombudsman for Long-Term Care, MN Adult Abuse Reporting Center, etc.

A provider capacity that taps all revenue streams, including private pay.

Reaching older adults and family caregivers further upstream from Medical Assistance (Medicaid).

Minnesota Medicaid - Managed Care for Seniors:

- PMAP: Over 35 years experience with managed care for Medicaid seniors.
- 65,000+ Medicaid seniors currently required to enroll statewide.
- PMAP for seniors changed to Minnesota Senior Care (MSC) and MSC+ statewide during 2005.
- Minnesota Senior Care Plus (MSC+): Adding Elderly Waiver and 180 days of nursing home services to managed care. Statewide phase in completed in 2009
- MSHO: 25+ years experience with integration of Medicare/ Medicaid and primary/acute/LTC service delivery

5

Public/Private Coordinated Plan Designs from the MN RFP

Range of Policy Options:

“Back End Catastrophic” Public Program Option

- Financial support for longer duration care situations (i.e. 3 or more years). It would require a waiting period (or deductible dollar amount) be met before people could begin accessing benefits. Enables integration with other potential funding sources to fill the initial waiting period gap.

Home and Community-Based Services

- A public program providing funding for care and services for middle income older Minnesotans similar with more modest benefit levels and caps on the benefit duration to keep the program costs down. Like Option 1, this program will have a waiting period or dollar deductible.

Early Intervention Benefit for Medicare Recipients Option.

- A public program providing modest, capped dollar, at-home benefits to Medicare recipients to delay or mitigate their need to spend out of pocket funds for paid care or spend down to be eligible for Medicaid. Provides care coordination and preventative support services before they first begin to evidence the need for LTSS.

Private Long-term Care Insurance Incentives Option

- Strengthen the appeal and encourage innovation within private long term care insurance to help address gaps in funding. Includes regulatory or legislative modifications that can make private long term care insurance more affordable and more accessible to middle income adults.

6

A Sampling of Potential Designs Under Consideration based on Minnesota Stakeholders:

Option 1: Early Intervention and Support

A state developed program to provide a care support structure that leverages existing services, provides strong awareness and education, and supports informal caregivers. This option would also provide modest, capped, at-home benefits with the goals of delaying or mitigating their need to spend down to be eligible for Medicaid. A Care Navigation service will also focus on obtaining access to community services offered by waiver and alternative care programs and be the platform to support residents and their caregivers. The aim is to maintain a safe home environment and preserve the safety net.

Option 2: Medicare MLTSS

A mandatory state sponsored LTSS program of 1 year of coverage, purchased by non-Medicaid eligible residents during Medicare enrollment or earlier. Participants receive care support and preventive services coordinated with their Medicare plans. The program will also offer additional options to buy-up for more than a year of coverage. Purchase/funding options prior to age 65 and with employer support may be offered. The approach is modelled after the comprehensive care coordination approaches of MLTSS plans.

Option 3: Catastrophic Coverage

A mandatory state insurance program to help pay for long-lasting, long-term care expenses that exceed 2 years, without Medicaid's income and asset restrictions. The program will be self-funded by a state specific payroll deduction for all workers 21 years of age and over. The deductions will go into a restricted fund for this program's use only.

7

THE Essential Criteria 2.0 – A MN Version

Quantitative:	
Access	Improves access to and usage of LTSS by Minnesota’s older adult population.
Costs and Efficiency	The system improves efficiency and generates savings for public programs, consumers and their families/caregivers.
Benefits	Total benefits are reasonable in relation to the total costs borne by the consumers across the system of public/private/ personal approaches.
Sustainable	The funding mechanism is sustainable and adjusts to changing economics, demographic eras, changes in family composition, and care support conditions. Sustainability applies across all stakeholder groups including consumers (out of pocket costs), public and private programs (solvency), and care providers (reasonable reimbursement).
Qualitative:	
Systemic Change	Provides fundamental positive changes to the way LTSS funding and service delivery is coordinated in Minnesota.
Feasibility	Implementation of the financing program is feasible and with limited obstacles and limited administrative costs to implement.
Integration	The care and supports, financing, and care coordination/management between private, public and other sources should be part of an integrated system.
Incentivization	The financing approach encourages support for care, prevention, and wellness initiatives. The approach aligns stakeholder needs. The system promotes consumer responsibility.
Supportive:	
Adaptable and Supportive	The system is flexible and adaptable related to market conditions, demographic shifts, and availability of care providers and resources. The system is responsive to cultural needs and embraces caregiving approaches of different cultures and family composition.
Understandable and Marketable	Eligibility for LTSS benefits, the financing approach, and the processes are simpler, clearer, and more understandable to consumers and their families/caregivers, providers, employers, and other stakeholders.
Equity of Access	Equity of access applies across urban and rural areas and across demographic and ethnic groups.

Experience Studies Pro

In 2021, LIMRA and the SOA Research Institute entered into a partnership to support the industry with a **comprehensive program of industry experience studies**.

This program will provide timely, consistent, and comprehensive releases of industry experience data — providing you with the necessary tools for addressing **product development, pricing, and regulatory** strategies.

SOA Experience Studies
Regulator Input on Prioritization

Benefits to the Industry

Credible, robust, benchmarking, and strong industry representation:
70% market participation is typical

Comprehensive and timely: updates of industry data on a regularly published schedule

Detailed and deeper analytics: to support product development, inforce management, reserving, and growth strategies

Together, We have Unmatched Breadth & Depth of Experience

Expertise

We are both associations dedicated to this industry, with a long history of conducting large data-intensive efforts

Trust

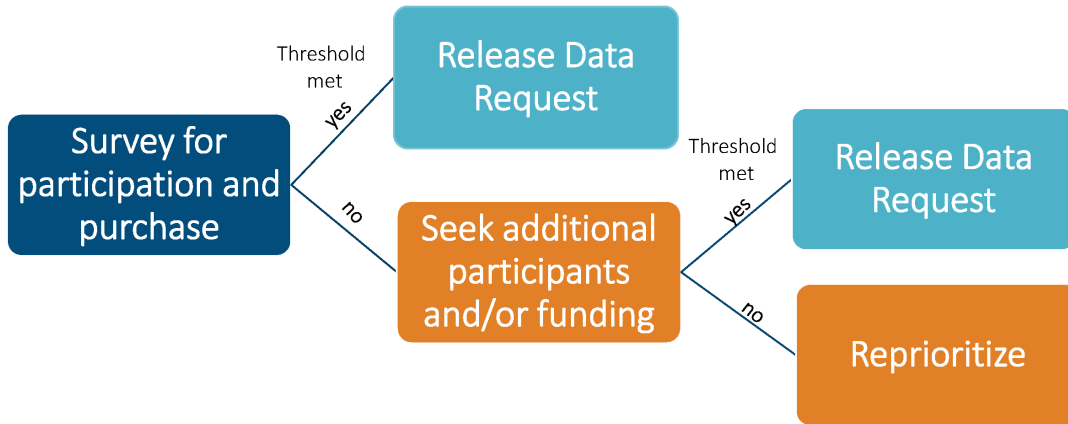

Strong reputation for unbiased research, analysis, and industry relationships

Value

Together we provide unparalleled value while delivering cost-effective insights

Feasibility Survey ... before a study starts

Studies at Risk for Participation and Funding

Product	Contingency Studied	Funding Concerns
Long-term care	claim incidence, claim termination, claim utilization, active life lapse and mortality	Blocks in run-off; complicated study/higher cost
Individual disability	claim incidence, claim termination	Few carriers; complicated study/higher cost
Group annuity	mortality	Few carriers; niche line of business
Structured settlements	mortality	Few carriers; niche line of business
